Two by two, according to their importance, the men approach in order to drink the kaxpí, and soon after also caxirí, in order to take away the unpleasant flavor of the first drink, so it seems. They come equipped with the cipo shield (VII - 2, e (1) /see VI - 2, e (1b)/) and the stick-of-the-onça /see yaí-gõ above/, if these are in the maloca. The kaxpí will yet again be served twice more, the same ritual being observed. It is no longer obligatory, however, to drink it, and many, in fact, abstain from it. The individuals begin to feel besotted. Some, perhaps, fall on the ground, others vomit. This one seems to see in front of his feet a stick, a snake, /349/ or a lizard; he wants to jump over it and falls down. The inebriating effect varies with the individuals; and it is a satisfaction for those of the maloca to verify that the kaxpí was strong and the guests are dizzy. Some, in this condition of inebriation, give cries, throw down objects, break vessels, bows, arrows, whatever they find at hand. The Kõmũ who "blew" the drink "will blow" now over the drunken and excited individuals, in order to neutralize the effect of the
[115] drunkenness. This is information from the Tukano Antônio Barreto. The last one to drink it will be the local tuxáua, who, with the lance at the ready, takes three turns, saying some unintelligible words. Meanwhile, an Indian beats on the entrance door with a stick, likewise shouting out some words.

In observing such a ritual, the kaxpí is served three times, the vessel that contains the drink being put outside the maloca in the sun after each time. The last time is already in the middle of the night.

[184] According to the Wanana custom, at the first time two cuias are served to each individual, at the second time just one cuia, and at the third one two cuias again. When there are several types of kaxpí, one begins with the weakest one.

/349 cont./

796 [354] Between the last columns of the maloca a fire burns, which an old Indian stirs up frequently (58).

[554] 58. In the subdivisions of the tribes (cf. IV-2, a (2) ) it fell to those of the last category to keep the fire lighted.

"It is to illuminate the earrings of the dances," they explain to us.

So they spend the night, and one after the other falls from drunkenness, tired and sleepy, while the stronger ones continue dancing. At given moments there is a noise like a fight; the men will beat again on the entrance door. Under the effect of the alcohol there are heard at intervals disorderly shouting, noisy laughter, animated discussions, not infrequently fights and violence or even murders. That atmosphere of excitement and [833] darkness is most conducive to immoral practices (59).

59. Already at the end of the eighteenth century the Cônego /Canon/ André Fernandes de Souza, vicar of S. Gabriel, was complaining: -- "During their banquets and feasts, there are always spirituous beverages, which they call caxiri, mucururú, pajaauarú and caeçuma, made out of mandioca, batatas, and fruits, with which they get drunk to the point of crapulence" (o. c. p. 486).

[833] At first they perform them more discreetly, going outside the maloca for these relations; later, when they are drunker, they do it even inside the maloca, in the hammocks or on the floor. Generally, however, there is no fecundation in these relations (60).

60. So they assured us, and they attribute

796
842

/349 cont./

/footnote 60 cont./ it to the quality of certain plants that they use in these caxirís. It is possible that their state of intoxication makes fecundity difficult; just as it is likely, moreover, that the affirmation of infecundity results only from the lack of means of verification or of attention to the problem.

831
[115]

/350/ We thought that these immoral practices were a consequence of the intoxication. The Missionaries also thought this, although one of them pointed out to us that the inebriation was intentionally promoted for libidinous satisfactions. We nevertheless had many and categoric affirmations that these sexual practices, even the incestuous ones, are not only licit, but even established by the customs, and for this reason recommended by the "Old Ones," in order to ensure the happiness of the people and the fecundity of nature (cf. VII - 5, c).

5) Legendary commemorations -- Rite of the cigar.

796
538

Legendary commemorations. We have the impression that to the original elements of these feasts, let us call them the ritual elements, with the passing of time, were introduced other profane ones, such as the musical intermezzi performed by the individuals of the younger generation to the sound of the flautas-de-pã /Panpipes/ and the japurutús. Among the ritual elements must appear the Legendary Commemorations. After the first dance numbers, representatives of the tribes who are participating in the Wãx-tĩye baxsá detach themselves from the natives and sit down on little seats, one in front of the other, in the nave occupied by the men. These individuals are chosen from among the Komũã, and they must, naturally, show the qualities necessary for their function, that is, knowledge of the legends, a good memory, a lively imagination, facility with words.

/350 cont./

796 538 [123] At the various times that we had the opportunity to attend these feasts, we did not see any initial ceremony. Each one seated in front of his antagonist, at a distance of a meter perhaps, they start to narrate in a singing tone accompanied by broad gestures and alternately with the right and the left arm. They unravel the legends of the origin of the world and of the tribes, as well as the exploits of their ancestors. They speak alternately and sometimes also simultaneously, breaking off only take a breath and perhaps, at a given time, to recall some further episode. The event told by his competitor will sometimes serve to remind him of another episode. So it seems to us.

If, by any chance, they carry to him the cuia of caxirí, he receives it without looking; he will keep it in his hand until he finishes the episode that he is narrating, and then he will swallow it rapidly, returning it empty to the one who brought it, and who remained patiently waiting.

It seems to be a matter of a true challenge. A competition of oratory and also of time, of rapidity of locution, of physical or, better, pulmonary endurance. During all this time they do not concern themselves about the audience, though there may perhaps be an indiscreet white who has come closer to observe better. At a certain point, however, /351/ one of the old men of the maloca intervenes and interrupts one of the narrators (we do not know whether he does it only to one of another tribe or maloca who came for the poosé, as in the case that we had a chance to observe), directing some words to him in a rapid dialogue. They informed us that it is the practice, and it is a thanks for his activity. But soon afterwards the competition proceeds with the same rhythm and intonation.

276 796 538 The Rite of the Cigar. The principal act of the Legendary Commemorations is the Rite of the Cigar, which takes place around 9 or 10 o'clock in the morning, and which marks, moreover, the official ending of the poosé. Two enormous cigars, each tied to its fork (VI 2, b (5) ), starting with the tuxaua and one of the Kõmũã, will pass simultaneously from mouth to mouth,

796 /351 cont./
276 to the least important of the men who have participated in the
538 dances, and who arrange themselves in two lines, one in front of the other, all, however, sitting down. Each man takes some puffs and passes the cigar to his neighbor, and thus everybody
*[192] smokes several times, until the cigars are consumed. The tuxaua and the bayá alternate with the Komũã the episodes of the history of the origins, dõxporó-kase kextí, recalling the different places from where their ancestors came, and the exploits that marked this ascent. They do it, however, in a singing rhythm, prolonging the final syllables of each part that they narrate.

796 Once this rite is concluded, the sticks and snappers are
574 gathered up, the men take off their ornaments, which are carefully kept in the box for this purpose (VI - 2, d (7) ). The guest
576 tuxaua gives thanks in a loud voice: -- "The poosé was very good. We enjoyed ourselves very much, etc."

796 As the conclusion of this rite and of the fast that they must observe at these feasts, the Kõmũã who prepared the kaxpí puts in the mouth of each man a roasted pepper. For the young ones there is prepared a broth with lemon juice and pepper (and sometimes also salt), and this is applied to their noses with a funnel of leaves. The young man must draw this broth into the mouth and swallow it. After this ceremony, they can take their mingau or any food whatsoever.

The entertainment might continue, principally among the younger persons. Ordinarily, however, they adjourn to the ham-
[513] mock (often two persons in the same hammock) and rest, in order to start the amusements again in the cool of the afternoon, around 4 o'clock.

5) /sic; 6)/ Games.

[524] We have spoken of the number of games that take place between the dances, but occur principally in the prolongation of the feast, that is, from the second day on.

574 /352/
796 1st. -- Some of the guests come buzzing, like the carapanã
524 (crepuscular mosquitos /Culex fatigans/), and, with a little stick in the hand, they start stinging the others, who try to shoo them away.

2nd. -- Afterwards others come, pretending to be ku'síro (an animal perhaps legendary, similar to the dog, some say, and which makes a clamor in the forest), making noise, dragging pot or stick, doing this up to the center of the house. Those of the maloca beat on the ground with a stick in order to chase them away.

We have watched a similar challenge for two hours, finally leaving the competitors, who went on with the same enthusiasm.
[178] Nowadays many of the younger generation, instead of listening to
[535] those monotonous narrations, prefer to dance enthusiastically with their female companions to the sound of the flauta-de-pã /Panpipe/.

[273] 3rd. -- The caxirí is served; some no longer want it. The companions force them to take it, always in jest.

796 4th. -- The chief of the guests comes in with a torch of turí
574 (VI 5, a (4a) ), lighted, because it is already dark. His companions come in, throwing down objects, taking fruits, beijú, eating them. All feigning an attack on the maloca. A simulation so well done by the way that the civilized present become frightened, believing that it is a matter of an enemy attack and that a fight is about to start. In reality many feasts degenerate into fights and are intentionally taken advantage of for reciprocal vengeance.

524 5th. -- Some of the guests now come hopping, squatting,
796 imitating the toad, and making the characteristic sound with the
574 mouth: "uão... uão... " They enter the maloca, and those who are there ask the toads: -- "Where are you going?" "I am going to visit my relatives." -- "Your relatives have all died." And the toad, at this news, faints.

/352 cont./

796 524 6th. -- Afterwards some approach equipped with tipitís /mandioca presses/, in order to pretend they are snakes. Upon reaching those of the maloca, they maneuver the tipití, shortening it and lengthening it over them, as though to eat the toads (61).

796 524 535

61. Wallace (Viagens pelo Amazonas e Rio Negro /Travels on the Amazon and Rio Negro/, p. 379) describes the "dance of the snake" which he attended at a feast in Iauareté. Two enormous snakes of 30 to 40 feet long, made of cipo, hay, and straw, and painted bright colors. Each one held by 12 to 15 persons, they performed dance movements, as though trying to attack each other, which actually happened after some recoiling and weaving about, to the great liking of the spectators.

/353/ 7th. -- Young men and boys, eight or ten in number, arranged more or less in order of size, starting with the taller ones, position themselves in Indian file, each one holding with his hands the shoulders of the one who precedes him, and half bent over. That whole human column advances step by step, alternately swaying to the right and to the left. The tallest young man, who leads the line, sounds the instrument called "deer head" (see VII - 3, c (3c) ): pẽru wá:tya (bring caxirí) repeatedly. Unexpectedly this standard-bearer of the procession backs up, sounding kéro, kéro, kéro (quickly, quickly, quickly), forcing the whole column to back up. Sometimes the movement is so abrupt that some, generally the last ones, fall to the ground, the game provoking general hilarity. Thus the amusement proceeds.

*[192] [534]

796 /353 cont./
574 Those who feel tired go to sleep. In the morning they take their bath, drink their mingau, and leave freely, that is, not all at once, but without a formal farewell, in small groups. Stradelli (Vocabulário Nheengatú-português, entry Tauúcurí) tells that he saw them all leave solemnly in another procession as far as the landing place, as at their arrival.

b) Poosé with the mysterious instruments -- flagellation.

*192 According to the statements by the Tukano pajés Henrique
796 from Japú-igarapé and Marcelino from Juquira (river Uaupés), the
534 sacred instruments, or mĩriá (jurupari's) (62),
778
[115]

> 62. A young man gave us the following explanation: "This instrument is very old; the one who found it was a man who had a son and two daughters. The daughters stole the instrument, and a bird played it very well. Now fearful that they might steal it again, they do not let it be seen, nor do they tell this story in the presence of the women." This deficient information reminds one of the legend of Uaracapá (cf. "Lendas do Uaupés /Legends of the Uaupés/").

are used only during the poosé (dabacurís) of fruit (cucura, patatuá, cunurí ucuquí, etc.), therefore not during those of fish (waí poosé). Even during those poosé, instead of the mĩriá, one might sound the flute mawáko (cf. 3, c (3c) ), as the Christian povoados closer to the Missionary Centers generally do. As we have indicated above, there are two types of mawako, both of imbauba, the larger one of about 30 to 40 centimeters, like a common fife, and blown by the upper orifice; the smaller one of 10 to 15 centimeters, with an orifice in the middle, laterally, by which one makes it sound. Two of the dâbacurís that we attended in Iauareté were held with the latter.

/353 cont./

796 534 *778 [192] [562] [858]

Very early in the morning, perhaps around 3 o'clock, some men make the mysterious instruments sound at intervals at the landing place. It is the bath of the dawn, or wá-wa'kãsé.

/354/ The women and children who came to the feast, barely disembarked, go at once to the maloca and shut themselves in (63),

[343]

63. Koch Grünberg reports (Zwei Iahre, 217) that at a feast on the Umarĩ-igarapé (tributary of the Tiquié) there had been built a hut of palms where the women and children took shelter, while in the maloca 25 men, arranged in pairs, sounded the mĩriã.

while the men go to prepare the procession of Wãx-tĩ.

796 534 778 562 688

The guests then go toward that local landing place to which the instruments that are usually kept hidden from the women, submerged in the river or in some igarapé, were taken. The sounds of the sacred instruments echo. No person of the female sex may see it. If they saw it, Wãx-tĩ would cause them the same misfortunes as before. In fact such a woman must die (64).

64. One of the informants (Felisberto, Kumãdene of Urubucuara, river Uaupés) stated clearly: -- "If any woman sees it, they will kill her." Several women stated to us that they may not see such an instrument, because, if they saw it, they would get sick and would have to die.

[593] [278] *[192]

The execution will be done by her own father or husband, with poison (rarely violently), seeming to be the vengeance of Wãx-tĩ. Upon hearing the instruments, they respond with cries inside the maloca: "ayu! ayú! mĩrĩ, mĩrĩ mĩrĩ!" (There! There! It is the jurupari, jurupari, jurupari!)

796 /354 cont./
534 They organize the procession of Wãx-tĩ, which will take
778 the offering, as was described above, from the landing place
562 to the maloca, a procession in which only those of the masculine
786 sex who have gone through the puberty initiation rite participate. They walk naked, all painted, in front, hanging from the waist, the waxsó-ro (or tanga of tururi, see VII 3, d (2) ), sounding the instruments, which at the same time are shaken up and down, and with lateral movements and contortion of the body. The
*[192] shape of the instrument (65),

> 65. It is elongated, wrapped in the inner bark of tururi, which in Tukano is called waxsó-kõ (perhaps from the same root as waxsó, semen; see Note 41, VI-3, a).
> [532] Koch Grünberg (Zwei Iahre, 69) tells that on the rocks of the cachoeira of Hipada (Uaupuim-cachoeira, on the river Aiarí, tributary of the Içana) he found a representation of Kúay, son of Yaperikuli, with a long penis. It is proof, it seems to us, of the connection between the cult of Kóay, or Wãx-tĩ of the Tukano, and that of the phallus. Perhaps one is even justified in seeing a phallus in the instrument, and for this reason it might be a symbol of Wãx-tĩ or Kóay.

the movements they give to it, the body contortions of the participants, all the circumstances of this procession and the sexual liberties that go on during the feast, bring it close to the phallic processions of classical antiquity in the cult of Bacchus, and these native feasts well deserve the name of "Phallustanzen" /Ger. "phallus dances"/. There is even a similarity to the paroxysmal flagellations of the cult of Cybele of Greece and Rome, and of the Mediterranean civilization in general.

/355/

292
301
534
778

Indian playing the mīrĩ (jurupari)

534
562
778
796
858

Always playing the mīrĩã, the men surround the maloca where the women and children are shut in. All of them leave by the back door, while the men enter the maloca by the main door. Now the men shut themselves inside and for about half an hour play the mīrĩã. Other instruments are not played in these circumstances. Afterwards the mysterious instruments are hidden in another hut, or in the forest, from where, at intervals, some men play them during the dances.

796 /355 cont./
562 Then the doors of the maloca are opened, and the women
858 and children come back to it, and the feast and the ritual banquet take place as was seen above.

785 /356/ Before the dances, the flagellation of the boys who
562 have not participated in the procession proceeds. They beat with
796 a reed or with ingá bark. One of the men takes the child by the legs, another by the arms, and the leader of the dances applies some strokes on his back and belly. They explain that it is to make them grow fast, and for this reason they also stretch the child during the flagellation.

The flagellation of the men will be done without interrupting the dances. Each one, standing up, receives three blows on
*[192] the back and then, as retribution, gives them to his neighbor. The instrument for this flagellation is the adabí, in Tukano wã'sõ-rí; it is a stick almost two meters long, but the ligneous part was extracted from its upper end, and it thus became very flexible (66).

[184] 66. Among the Wanãna and Kubewana the
[178] adabis are well made, and because of this they are kept for similar circumstances. In the other tribes nowadays any stick is used for the flagellation. They assured us that sometimes they even omit the flagellation. It seems to us that they might really do so, at least when some civilized is present. The Kubẽwana of Ambaíba (river Querarí) showed us how they customarily applied the flagellation. In order for the blows to be more violent, the flagellator swings two or three times before delivering the blow. Some of the ones flagellated, as if they were boasting of their advantage, showed us deep scars from the flagellation that they had endured.

/356 cont./

*192 776 c) Conclusion: What to think of Wãx-tĩ and of Wã:kõ?

In asking the Indians of the present young or adult generation who Wãx-tĩ is, they will answer at once: -- "He is the demon!" -- They will tell us about his appearances and tremendous feats, as we reported above. They will add ancestral traditions, and the laws given by him, which constitute the customs of the tribe and cannot be violated, in order not to irritate his spirit, which still survives, and incur his punishments.

On the other hand, these same Indians will say that Wã:kõ is "God." But the old ones (and some old men present whom we [178] were able to become acquainted with and listen to) know nothing about him, they neither think nor talk about Wã:kõ.

There is in these tribes a religion or cult of the spirits. They are, then, animists. There are many spirits, a true legion of them. "Wãx-tĩ maxsã" (Wãx-tĩ people) is an expression that we hear. There is Wãx-tĩ of this cachoeira, of that cave, of this igarapé. They admit wai maxsã, fish people (67),

[823] 67. There are caves near Piracuara (river Papurí, Colombia), and the natives are afraid of going in there, because of the wai maxsã.

as if they were mermaids or spirits who live /357/ in the water.
775 There are some spirits who have been incarnated, and others, not.
776 They indeed assert that the dead person is transformed into Wãx-tĩ.
And they greatly fear the Wãx-tĩ of the pajés, of inimical persons,
756 and also of the civilized (because they regard them likewise as
829 inimical, and, perhaps, the greatest enemy (see note 54, VII 4, e (2, a, 3) ). For this reason they are afraid to sleep where some civilized was buried, out of fear of his spirit, or of his Wãx-tĩ.
[825] They say about a nocturnal bird, called urukã-tutú, due to the
*[192] similarity to its chirp, that one should not imitate its chirp, because it will come, throw a stone, and do harm to the one who imitated it. This bird, according to their beliefs, is the soul of
*[192] a deceased civilized person, pexkã-sã wẽ'ri Wã-tĩ. There are good and bad spirits.

/357 cont./

776 It seems that we are faced with some confusion between
777 the primitive notions and the ideas that the travelers, colonizers, and Missionaries brought and even taught them in different epochs.

*192 Wãx-tĩ, we have concluded, is a general term to designate these various beings, like our word "Spirit." The term
776 also occurs in the plural, Wãx-tĩa baxsá, dance of the Wãx-tĩ. Probably it is derived from the root wax, and from the substantivizing determinative tĩ. As a matter of fact, there is in the Tukano language the root wax, which would indicate: to imagine, idea, to form ideas, model. Wax-kũ means to think, perhaps from the root wax and the verb kũ, to put.

776 Among the different Wãx-tĩ or spirits, there is one par excellence, the "Wãx-tĩ," as we say "The Supreme, Most Perfect Spirit," or simply the Spirit.

Wãx-tĩ, as follows from the Uaupés legends (which we
776 shall examine in more detail in another study, "Lendas do Uaupés
782 /Legends of the Uaupés/"), is not only a Hero of the tribe, he is the Legislator, therefore the Supreme Lord. He punishes or will punish transgressions. In order to conjure away his punishments, it is important to propitiate him with particular rituals.
*[192] It can be seen in the poosé or wãx-tĩye baxsasé, sacrifices of fish, beijú, or fruits. And there is also communion of the group in the drinking and the smoking. The lyrics of the songs, today
[533] corrupted and without meaning, might perhaps have been the sacrificial hymns (68).

[115] 68. One of the students of the Mission of Parí-cachoeira (river Tiquié), José Barreto, told that his father, one of the most famous bayá, or singers at the feasts, and dance master, had taught him that the songs during the dabacurí or poosé recalled the creation of the human beings.

/357 cont./

776 [533] Those inserted words and shouts are perhaps ritual words and exclamations. We thus have a cult of the deity.

Later there was confusion between the Legislator Spirit and other spirits, that is, between the Wãx-tĩ and the wãx-tiá or wãx-tĩá maxsã. /358/ What could have been the cause? It is certain that religious instruction that was not very deep could give rise to great confusion, even among the civilized. It is likewise beyond doubt that they had successive contacts with the Christians, and there was not perenniality in the Missionaries' work of Christianization. Who knows but that the concept of one true God, who is Jesus Christ, the "God of the whites" (69),

[115]

69. Dr. Pereira Nunes told us of an interview that he had with an old Indian on the Ilha-das-flôres (mouth of the river Uaupés) when he found out that they were celebrating the feast of Jurupari or Wãx-tĩ at a short distance, deeper in the interior of the forest. -- "Do you believe in the Jurupari?" he asked him. -- "Yes," he answered, "he is our God!" -- "And Jesus Christ?" -- "Jesus Christ is the 'God of the whites,' " was the answer.

as opposed to the false gods, idols, or demons, is what brought such entanglement and identification of Wãx-tĩ with the demon (70).

70. "They have generally called him Yurupari," wrote Paulo Ehrenreich (Revista do Instituto Histórico e Geográfico de S. Paulo, 1908, Vol. II, p. 303), "solar or cultural hero, a designation taken from the língua geral and falsely identified with the devil by the Missionaries." The identification

/358 cont./

776

[103]

/footnote 70 cont./ of Wãx-tĩ or Jurupari with the demon dates back to the evangelization of the coastal tribes. For example, the Hollander Gaspar Barleus or Van Baerle (1647), describing the journey of Elias Harchman, apropos of a mountain of Copaóba, states: "nomen monti erat polyssyllabum et terríbile Iurupari bakau, id est, hic respéxit diábolus" (the name of the mountain was strange and terrible, "Iurupari bakau," that is, the demon looked here). Barbosa Rodrigues, "Poranduba Amazonense /Amazonian History/," p. 94. Anais da Biblioteca Nacional do Rio de Janeiro, 1882. As for the identification of Wãx-tĩ with Jurupari, see above, Note 8, VII-4, c) /see note 7 in VII-4, c), and note 8 in VII-4, d)/.

*[192] The term that the catechesis uses to designate God, Wá:kõ, which means "the one who is gone," seems to confirm it. It thus makes one think of Jesus Christ who went up to heaven (71).

71. We have just finished reading (May of 1956) in the Revista Colombiana de Antropología, Vol. III, year of 1954, an article by Marcos Fulop, under the title: "Aspectos de la cultura tukana. Cosmogonia /Aspects of Tucano culture. Cosmogony/." This article seems to confirm the above opinion, which we had already voiced in 1948. After describing the creative activity and that of social organization exercised by Yepá Huake (this is the way the name of the personage Wá:kõ is written), according to the account of the pajé Marcos Sierra from the povpado Guadalajara, on the river Paca, in

/358 cont./

776

/footnote 71 cont./ June of 1953, it ends: "Entonces Yepá Huake dijo a todos los que estaban en Diawí: di pié todo el mundo. Y Yepá Huake desapareció. Y allí se terminó. Y se subió al cielo Yepá Huake." /Then Yepá Huake said to all those who were in Diawí: stand up, everybody. And Yepá Huake disappeared. And there it was finished. And Yepá Huake went up to heaven (al cielo, "to heaven," or "to the sky")./ It should be noted that the native group to which Marco Sierra belongs, as Marco Fulop has it, a group about which we, too, have some knowledge from one of our excursions along the river Paca, are dissidents from the Mission of the Montfortian Padres of the Papurí. As was to be expected, and follows from the narration obtained by Fulop, the whole account by Marco Sierra is a combination of the tradition of the tribes of the Uaupés and of the Catholic Catechesis.

776 They can say nothing about Waskõ except what the younger gen-
797 eration learned from the Missionaries of Dom Bosco and of /359/ Montfort (72):

72. It was the well-deserving Padre Pedro Kok, Hollander, from the Congregation of Montfort, who in the beginning of this century first studied the Tukano language, and, in this idiom, he left the first books of Catechesis (Catechisms, prayers, gospels, etc.). His confreres, Missionaries in the Território Nacional do Waupés (Colombia), and later the Salesian Missionaries in the adjacent Brazilian area, followed his

[CONTINUED ON PAGE 544]

/359 cont./

797
776

/footnote 72 cont./ orientation with regard to the idiom and, consequently, also with regard to the catechetical language. When we dedicated ourselves to the present studies and sought an interview with this wise linguist who doubled as a Missionary, we learned that he had died a short time before. Of course there remained unanswered the first question that we had asked him by letter, anticipating a promised visit, that is: the origin of the word Wá:kõ. 1st. -- Would it have been of his coinage? And, in this case, would it be derived from the verb wá:, to go? Had he adopted this word (properly speaking, it is the singular Masculine Past Participle of wá:) to indicate Jesus Christ? Why should it be given as the translation of the word God? It is certain that the natives of these tribes have absolutely no idea of the divinity; why did he not adopt, in his catechesis, the Latin word Deus (or Spanish Diós) for the new concept that he was going to teach, as he had used so many Latin or Spanish words (Virgo, gracia, pecado, Santu, Anjo, misterio /Virgin, grace, sin, Saint, Angel, mystery/, etc.)?

2. -- Did wa:kõ come from a confusion of his with the legendary personage O'ã-kõ?

On a second trip that we made to the Papurí in 1948, we expressed to the veteran Montfortian Missionaries, Pe. Humberto Limpens and Pe. Afonso Kuipers, the opinion that we explain in these pages and about how it seems to us that "Wá:kõ" meant "the one who is gone," that is, Jesus Christ, who went up to heaven. And we verified that both of them were of the same opinion.

/359 cont./

797
776

/Footnote 72 cont./ When they repeat an idea that the Catechist made them nearly learn by heart, the children of the Mission schools say Wá:kõ. In other circumstances they say O'ã-kõ, especially those who have already left the schools years ago. This verification, which dates from our first trip to the Uaupés (in 1947), is what put us in search of the history or legend of O'ã-kõ (and which today we also possess recorded in the voices of two xamãs /shamans/), and what led us to infer the dilemma: either the natives are identifying the God of the Catechesis, the Christian God, or, more concretely, Jesus Christ, with the legendary personage O'ã-kõ; or, perhaps, Padre Kok, with an imperfect knowledge of the Uaupés legends, thought that O'ã-kõ was the God of these tribes and, because he did not observe the pronunciation very well (perhaps because of poor pronunciation by the informant), he began to write erroneously Wãke, as it appears in his books.

*[192]

It is to be noted that the Christian natives who gave God the name of Wá:kõ make up a feminine Wá:ko (thus Goddess) to designate the /this footnote is continued on the next page in the original source/ Most Holy Virgin, Mother of Jesus, and the plural Wá:mãra (Uaupés Wá:mãna), gods, in order to indicate the Saints. The Bishop of Manáus, Dom Frederico Benício Costa, in his interesting "Carta Pastoral" /Pastoral Letter/ (Fortaleza, Ceará, 1909), remarks on p. 166 that the caboclos of the Rio Negro, who spoke the Língua Geral, also used the name Tupana to indicate the Saints, and, when they wanted to distinguish them from God, they called the latter Tupana uaçú.

/359 cont./

797 they do not think about him nor are they interested in him. The
776 conclusion would be, not that they do not know God and do not worship him. But that they do not know Wã:kõ, that is, Jesus Christ, the "God of the whites." They only know, fear, and worship Wãx-tĩ, the Legislator who punishes their transgressions, permitting them to have misfortunes, sicknesses, lightning bolts.

771 /360/ This is what we were also able to conclude from a
[115] conversation with an old Indian, almost one hundred years old (1947), Casimiro from Ipanuré.

f) Their rules of conduct -- Magic practices.

The native is convinced of the existence of extrahuman or mysterious forces, both personal and impersonal or cosmic, which can be useful or harmful to him, and which it is possible for him to dominate and take advantage of. This is what is understood by magic, considered subjectively.

The entire life of the natives is, for this reason, filled with so many positive and negative prescriptions (73)

> 73. These prescriptions, or rather, prohibitions, forbidding one to enter a certain place, to look at, to touch some object or person, is what is today called tabooism.

proceeding from this belief of theirs: or, in other words, it is saturated with magic practices. This is magic considered objectively.

Here and there we have indicated some of these magic practices; there are many others, however. Due to the number of superstitious practices that have come to our knowledge (and how many others might there be?), due to their frequency and application to the most common events of each day, perhaps it would not be an exaggeration to conclude that the mentality of the Uaupés Indians is dominated by the magic fears and beliefs as if this were an obsession, and which, naturally, is reflected and manifested in a large part of native activity.

/360 cont./

771 The evil that can come from an event, an action, a person,
*[192] animal, or thing is called wé-boxátise, or wá-boxkátise.

The magic practices can be divided into groups: practices related to places, to things, to animals and to persons.

We shall first indicate some of these superstitious or magic beliefs.

1) Superstitions and magic beliefs.

776 Some of their beliefs have been revealed in connection with various subjects. At this point we have collected others:

a) There is a general belief in the existence of the wai maxsã or "fish people," as literally translated. They not only admit that people can be permanently or temporarily transformed into fish, /361/ but they also cite episodes of such transformations, with indication of the names of persons, the place, the date, and other individualizing circumstances. On certain occasions such persons again assume their human aspect.

They affirm that the botos /boutos/ (cetaceous mammals of the Delphinidae) are "people," "maxsã"; and that on many occasions they appear in the form of handsome young men, in order to have sexual relations with the women, especially with the unmarried maidens.

Not infrequently the female botos appear in the form of seductive women, in order to attract the young men. When such apparitions happen at night to the young men and women, it seems to them as though it was only a dream; nevertheless they actually happened, asserts the Indian.

*[192] The headless snake (Cecilidae) or two-headed snake (Lacertidae), õxsõ, as is said in Tukano, may appear as a pleasant young man and fecundate the women. See the legend of õxsõ. But it is not only a matter of an event that happened in the past (and they admit it with the certainty of a historical event), it can still happen, and, therefore, the women avoid looking at the two-headed snake, in order not to feel its attraction.

/361 cont./

776 823 b) Tamanduaí is a locality situated on the bank of the Rio Negro, in an elevated position, with the bank forming a barrier or slope. They affirm that in the vicinity of this point, but deep in the water, is located the city of the wai maxsã.

776 539 823 They tell that, a few years ago, a woman lived on the bank opposite Tamanduaí. Soon after delivery, against the traditional prescriptions, she cooked and ate cará /yams, Dioscorea/. Later, upon going to the landing place, she saw there a young man, who asked her: -- Why are you there ? -- I want to go away, the woman said to him, because my husband is very rough and often hits me. -- Come with me, the man invited her. And he took her into the water. There, in the depths, she saw that there was a large city with pretty houses, factories of thirst (1) /Port. fábricas de sêde/, and also gardens and forest. She stayed there, living with this young man. On a certain day, she told him: -- I am longing for my son, I am going to get him. The young man took her out of the water. She was covered with algae. She washed herself well, went to her own house, prepared milk (1) for the son. Then the husband asked her: -- Where have you been all this time? It has been a week since you went away. She, however, did not answer him. On the following day she took her child and went to the landing place, went into the river, and did not return again. She remained as wife of the young wai maxsã man.

c) We further heard another episode told about Tamanduaí. A young man from the Uaupés, settled in Tamanduaí (and there are many who, /362/ searching for better lands, leave the Uaupés and go to settle in this region of the Rio Negro), left one day to go fishing. He was going down along a large beach. At a certain moment he saw, at the edge of the nearby forest, a very pretty hammock, and, sitting in the hammock, a blonde girl, very beautiful, with a child in her arms and singing in order to put the child to sleep. The youth paid attention to the harmonious song and could hear that is said: -- "I am

776 /362 cont./
539 going away to my land, it is so beautiful... nothing is lacking
823 there"..., etc. He looked closely and saw that the cords of the hammock were sucuruju /anaconda/. At night the blonde girl appeared to him in a dream and told him: -- "Today I sang for you, and it did not please you."

776 d) Near Bela-Vista, on the river Uaupés, an alumna of
787 the Mission of Taracuá dreamed at night that she had amorous relations with a young man. Then in the morning, when she went to take a bath, she saw close to her a blowing bouto, throwing itself about in the water, agitating it, and wanting to have relations with her. The young woman also heard shots under the ground, smelled the perfume that the "bouto" youths use. She even felt a desire to go to live with the boutos forever.

776 5. /sic/; e)/ -- Patrícia Vasconcelos tells that her grand-
[115] mother was still a young woman when she went looking for turtle eggs on a beach near Pinú-pinu (river Uaupés) with other girl
[222] companions, among them one who had just finished the puberty initiation rite. They started to dig in the sand and found many eggs. At a certain point, however, the sand started to sink with a great noise, and the newly initiated girl disappeared. A little later the sand reappeared. The mother of the maiden who had disappeared went to look for her, shouted everywhere, but the
[192] maiden never returned. The poor mother then understood that the waí maxsã had stolen her daughter: "waí maxsã mĩsa-wapã yõõ maxkõ-ré, the fish people came to get my daughter."

2) Magic practices.

823 a) Places. -- There are places (the most remote parts of the forests, caves, headwaters of the igarapés) where they should never go. If by chance they pass in the vicinity of these places, they will turn their faces to the opposite side.

There is a lake below the Ira-igarapé (middle Uaupés); the old ones did not look at it, in order not to have a weak and whining child.

/362 cont./

823 In Ira-igarapé there are some potholes in the water. When an individual dives into these potholes, if he is lazy, he will then hear claps of thunder and feel an electric shock (the resounding of the waters in the concavity? shocks from the electric eel?). If he is not lazy, nothing happens to him.

Three flat rocks arranged in a triangle are to be seen near Jandiá (left bank of the river Papurí). The women /363/ must not [784] look at these rocks, so that their children will not be born with a flat head.

825 One must not step in the track of the onça /jaguar/, because, without being seen, he will come after the one who did it.

There is a high rock on the left bank of the river Papurí, 823 near the mouth of the stream Cuiú-cuiú, called Bará õxtã. If a young woman goes up onto that rock, and some young man, passing there, looks at the young woman, he will feel attracted and *[192] will end up joining her. This attraction, however, disappears if the young man immediately puts in his eyes drops of the infusion of the cipo called yõx'kwá-dá (star cipo).

[103] Below the "island of the cuiubí," in the cachoeira of the Bacaba (river Uaupés), in the place called Ã'á-fiõá (point of the louse), there is a rock called muhi-pũ õxtã (rock of the sun or of [782] the moon). Those who navigate the river, when they pass there, deposit dried fish, beijú, banana, or other fruit. According to the Wanana Tomás Paiva, the offerer, upon leaving his offering, presents the following supplication: "My grandfather, make it so that the day will be good, will not be hot, will not have banzeiro (agitation of the waters by the winds).

754 There are various processes of casting malefices (dohasé) in the road or in the clearing:

*[192] 1st. -- They bend some stick by the road where the disliked individual must pass, and they "blow" on the stick; it is the yuxkõ dohó-kõ; the malefice will reach the person merely passing there.

/363 cont./

754 2nd. -- He can also, knowing that a person must pass by way of a trail, close the passage to him, putting across it a stick
*[192] over which he has "blown"; it is what is called kã pe-vyó-kõ.

3rd. -- Nẽ'kã-yusé is said when he has "blown" over a fruit or a plant; if any person (74)

> 74. These local malefices can harm, by mistake, even the one who prepared them. Patrícia Vasconcelos told us that her uncle Marcos had cast a malefice on a cacuri /fish trap/ (see VI-5, a (2b) ) against anyone who went there to steal fish. In the morning he forgot to neutralize the malefice, took some fish, and ate them. Soon he began to feel ill: dizziness, darkening vision, stomach-ache. He then called his own son and said to him: --"My son, I am going to die! I 'blew' on the cacurí, and by accident I ate some of the fish without removing the dohasé." Fortunately he escaped, having recourse to other magic practices.

eats some of this fruit, or even touches this object, he "will become crooked." They believe that all cases of stupor, with paralysis of the facial muscles and contortion of the mouth, are due to the malefices of some enemy.

The Tukano of Parí-cachoeira prepare their jequí /fish trap/ (see VI - 5, a (2a) ) on a certain rock of the cachoeira; if they did it at home, they would not be able to catch any fish.

789 /364/ b) Things. -- Stradelli, in his Vocabulário Nheengatú-português (entry Uirá-purú), speaks of the belief in the protective quality of certain charms. It is probable that he is not referring to the tribes of the Uaupés. Among them we not only did not find them, but they could not tell us whether the ancients had used them. In very rare cases we found necklaces of triangular
[301] sheets (see -- 3, d (1) ), with the character, it seems, solely of feminine adornment.

/364 cont./

789 They put seeds of certain plants inside the shotgun, in
[224] order to attract game. The eggs of fish, on the hook, have
[226] similar efficacy.

They believe in the magic efficacy of certain potions
*[192] which are called oxkó ("puçanga" in the Língua Geral). Some are prepared by the pajé or kõmũ; others, by any individual. There are puçangas for washing the parí and the cacurí, and to guarantee them abundant fish.

The powders for the preparation of the puçangas are kept inside certain nuts, like the tucumã (bextá) and the ucuqui (puxpyá).

[514] They show a particular aversion toward human excrement (75);

> 75. We have observed that, in practice, the toilet is that part of the landing place that is less deep, where they customarily take their bath. Since they are already immersed in the water, the personal cleaning is facilitated.

for this reason they do not mow that part of the povoado that serves as toilet.

[832] The women prepare a puçanga and give it to the young men to drink, in order to attract them for amorous purposes.

During the new moon the mothers give tea from a plant
789 called tá:-dõxká (in Nheengatú peri-pirioca; cyperus piperioca)
824 to the children to drink; and the child "comes to know everything," that is, will be intelligent.
*[192]

There are many varieties of this plant, all endowed with magic virtues:

[241] 1st. -- The woman grates the root from one of them, or rubs it in her hands, before going to the clearing; and thus the mandioca will yield very well.

/364 cont./

789 2nd. -- Another variety is rubbed on the fishing line in
824 order to attract the tucunaré (bu'ú) and aracú (bo'téa) fish.

*[192] 3rd. -- With a third variety the young woman rubs the
[226] face, hands, and breasts, in order to attract young men to her.
[832]

The first time they wear a new pair of pants, it must be on top of others already old.

789 In relation to the atmospheric phenomena, there are many
291 practices and prescriptions:

1st. -- One must not point at the rainbow with the finger;
821 if one does so, the finger will rot.

/365/ 2nd. -- When there is a lunar eclipse, and while the phenomenon lasts, everyone will set to work very noisily; the man will split firewood, the woman will noisily clean her house, etc.; the purpose of these noises, as Wallace has already revealed, is to chase away Wãx-tĩ, whom they believe to be killing the moon.

3rd. -- When the new moon appears, the children do gymnastics, open the legs, stretch the arms, etc. They say that they do so in order to grow.

They set themselves to blowing toward the sky, in order to drive away the storms or the rain.

When the women do not want to work in the clearing, they beat on the ears with the open hand, for the purpose of calling the rain.

789 c) Animals. If the serẽ'rõ (Uaupés sene'nõ) (a small wood-
825 pecker) sings while they are planting, they say that the clear-
*[192] ing will be very luxuriant: "serẽ'rõ uukã, kõmã-ro a'tĩrosa (when the woodpecker sings, summer will come).

They throw into the river the snakes that they kill; to bury them would attract other snakes.

When they find a young bird without feathers from the wings up, they believe this is because it saw the curupira.

/365 cont./

825 When the women see a blind snake or a headless snake, õxsó, they turn their faces to the side, so that it will not come at night to fecundate them.

[752] [784] When someone is bitten by a snake, his relatives must abstain from salt, pepper, and fish.

[192] [856] When a child is slow in learning to talk, they give the smoked meat of the toad nãxterõ to it to eat, affirming that thus he will soon begin to talk (76).

76. Patrícia Vasconcelos, Tukano from S. Luzia, river Papurí, states that this happened with her. And soon after having eaten the meat of such a toad, she started to talk.

* [192] [304] They make some cuts on the children's bodies, when they are still young, with fish teeth, especially from the piraíba, so that they will become mõ'sĩgõ̃ (in Nheengatú marupiára), that

[224] [226] is, lucky in fishing and hunting.

Uruká-tutu is the onomatopoeic name, in the Língua Geral and in Tukano, of a nocturnal bird, whose chirping must not be imitated, because it will come to avenge itself against the one

* [192] who did this, throwing stones at him. They affirm that this bird is the disembodied spirit of some white or civilized, pexká-sã wẽ'rĩ wãx-tĩ.

[752] /366/ They burn the house of the termite and put the ashes on wounds, so that they will not leave a scar. They explain that just as the termites repair their nest perfectly when it is broken open, the ashes of their nest will produce the same result in the human wounds.

If a dog goes in the water in which timbo has been spread for fishing, the poison will no longer have any strength.

[843] The ladies in a state of pregnancy must not eat the pirarucú and pirandira fish, or the pirara; because "this eats dead people" is the explanation that they provided.

/366 cont./

843 *[192] [226] d) Persons. Every pregnant woman, nihĩ-paxkó (after the fourth month, more or less), is a dangerous being. There are various prescriptions referring to the gestating woman. For example, she cannot eat the fish from the espinhel /line with many hooks/ (VI - 5, a (4 d) ), from the cacurí, nor participate in the large-scale fishing with timbo. If she does so, the fishing will be fruitless, and the espinhel or cacurí will no longer catch fish (77).

> 77. They ruined the espinhel of Dom José Domitrovitsch. The Missionary complained and asked the reason. The espinhel "is no good," the Indian said to him, because my wife ate some of the fish caught in that espinhel and she is pregnant.

She must not touch the bow or arrow, so that she does not "ruin them."

846 *[192] About the father of a newborn baby, it is also said that he is in a state of pregnancy, nihĩ-paxkõ or nihĩ-pkõ. He must, then, take care of himself, "sihyógõ" (cf. "Couvade," VIII -- 1, b (3) ), so that the child will grow strong.

844 It is permissible only for women to attend the delivery; the men must withdraw. If by any chance there are male guests in the maloca, then the woman giving birth will remain in some tightly closed apartment, if there is one. Or she will leave, in order to give birth in some isolated hut or even in the forest. Before taking her puerperium bath, the woman may not see a bow or any instrument of iron (machete, ax, assagai, etc.).

843 If the husband stops with open arms in the door of the house during the pregnancy of his wife, she will have a difficult delivery.

If during her own pregnancy the woman sits down to eat, or sits in a hammock with her legs dangling, her delivery will be difficult.

/366 cont./

846 The first time they go to the clearing after the birth of any child, they practice a special ritual called "mixpĩ purĩ-ré dõ̃ tekũsé," that is, the entwining of the leaves of the açaí /assai/. The father goes in front, and behind, the mother carrying the child. The father, at more or less every ten meters or steps, ties two by two the leaflets of the açaí, and throws them on the road. If they must cross any stream, and the child is of the male sex, he makes a kind of canoe with the leaves and puts it on the /367/
*[192] water. The purpose of these practices is to ensure that the child and those of his house never lose their way, wi'seri-khã̃ra-re mĩx'pĩ pũrĩ-ré dõ̃xté-kũsé.

837 The newly married woman who seeks out many other men becomes transformed during the night into an anta and goes out through the forest to graze (78).

78. There were indicated to us two cases of similar transformations, both having happened shortly before this information was given (1953), one that was supposed to have taken place in Urubucuara and another in Iauareté, the name of these wives "without shame," according to the expression of one of the informants, being cited to us.

*[192] It is what is called "wexkõ dohogó" (literally: ruined into an anta). At dawn she is again transformed into a woman and returns, still taking bits of grass from her teeth. An indication of this event is the paleness of the wife. When she goes out at night, however, she leaves her legs in the hammock. When the husband sees this, he turns the legs in the opposite position, that is, toward the head of the hammock. For this reason, on the following day the woman will feel strong pains in her hips. On the following night the husband turns them in the direction opposite that of the first time, and the wife's pains will cease.

/367 cont./

824 *[192] In order to make marupiara, mõ'sĩgõ̃, for their own child, soon after the giving of the name, they start giving it to drink, at each new moon, the infusion of the leaves of some plants, such as the bará, perí-pirioca, and of a variety of Araceae (with smaller leaves than those of the taioba). The same result is obtained by rubbing the hands with such leaves on the same occasion of the new moon.

824 843 *[192] [515] There is a plant called kã'rá pũrĩ (Uaupés kã'ná pũnĩ), the leaves of which have a long peduncle and are used to dry the hands, as we do with a towel. When the wife is in the period of gestation, neither she nor her husband may eat the small black fruit of this plant, because the child will be born with a long neck. Both will likewise be careful during the pregnancy to cut off the apex of these leaves that they might use. If they do not do this, the child will be born with long hair over the face along the ears.

576 The young men and women, when they meet outside the maloca, turn their backs and say insults to each other (79).

[797]

79. Even the boys and girls of the Mission schools exchange insults when they meet in groups on walks. For example, they were heard to say: -- You are lazy girls! And they retaliate: -- You dirty your clothes (the girls also help to wash the clothes of the boarding-school boys of the Mission).

They spit to the side when they pass near someone with whom they are not sympathetic.

582 /368/ If those of the same tribe marry one another they will not have children (80)!

[797]

80. Pe. Afonso Kuipers from Teresita (Colombia, Papurí River) promoted two marriages of Pirá-tapúya couples, and they were fecund, giving birth to healthy children. In spite of this, they did not lose their own belief.

[178]

T /368 cont./
755 They grant a particular strength to the "blowing," capable of effecting cures (81).

> 81. In September of 1947, during a fight among the Makú on the occasion of a feast in the vicinity of Iauareté, an Indian received five large and deep machete blows (on the two shoulders, forehead, hand, and right buttock). A month later they were almost healed, and they explained to us that the only curing procedure was the following: before taking his mingau, every man blew over the food which the patient would eat.

T
843 In order to have children of the male sex, the woman must not take a bath during the last pregnancy.

The pregnant woman, when she works, tries not to make much noise (for example, she avoids the noise of the cuia /shell of Crescentia cujete/ in the pot when she goes to fetch water).
T Otherwise, her child will be a whiner.
501 While the man is burning out his canoe, he must not eat,
784 drink, or go to the toilet, so that his craft will not crack.
T When the parí is being prepared, one must not eat meat.
262 The Makú must fast on the day on which they prepare the
M "curare"; otherwise, the poison will not have any strength.
278 The dead are transformed into wãx-tĩ (cf. below, Funeral
T Feast). These disembodied spirits, when they are that of a pajé,
756 of individuals of a hostile tribe, or of the civilized, are very
775 dangerous. For this reason they do not sleep near the place where
829 some civilized person was buried.

g) The cult of the dead.

T As a consequence of the two beliefs so firmly rooted, that of
621 the union of the individuals of each group, who consider and call one another "brother," and that of the existence and immortality

/368 cont./

621 of the soul, a social cult of the dead would be foreseen. Manifestations of this cult are the elegy-weeping, the interment, the banquet and funeral feast.

758 1) The elegy-weeping. The coldness and insensitivity (82)

> 82. Sometimes, it seems to us, even cruelty, denying them even food and drink (cf. V-17).

with which these natives of the Uaupés see any member of the family waste away, even if it is their own father, mother, or child, is striking. The sick one is found in a hammock hung in a darker corner, and a few meters away the occupants of the maloca or house /369/ laugh, talk, eat, amuse themselves, as if no sick person was there (83).

[797]

> 83. We have already noted that, to the question by the Missionary as to whether anyone is sick (see V-16) in the maloca or povoado, they systematically answer no. Perhaps the silence or the denial has its cause in a belief or some magic concept unknown to us. And from this same concept might be derived the insensitivity, perhaps only apparent, which gives rise to our opinion. To the Padre who scolded a native who left his old father without food, he responded: -- "Why should I give him food? He is going to die!"
>
> Pe. João Marchesi writes (ap. "Os Tucanos /The Tucano/," by Pe. Antônio Giacone, p. 13): "In the same house, sometimes a relative is in agony, but nevertheless they will not take the least care to spare him

/369 cont./

758
[763]

/footnote 83 cont./ the commotion of an infernal orgy of two days. In front of their own dead brother they will burst out in a desperate cry, and with the same aptness they will pass to the noisiest and most indecent laughter."

763
*[192]

Nevertheless, as soon as they notice that he has died -- (perhaps the catastrophe already happened some time ago, and they did not notice it; or there has been a mistake, he has not died yet) -- the men and women present start the elegy-weeping, uxtisé (84).

[797]
[756]

84. Pe. Humberto Limpens, Montfortian, in the early days of the Mission of Teresita (Colombia, river Papurí), saw a "weeping," in which primarily the pajés blew smoke for a long time over the dead woman, who was married, while the men shouted threats against the enemies who were the cause of the death. Afterwards the women came, and, placing themselves in a semicircle, began the lamentations.

[797]

The weeping that took place on June 24, 1956, in the hospital of the Mission of Parí-cachoeira (river Tiquié) and which two Sisters in charge of nursing witnessed was also interesting. A young wife had died as the result of a stillbirth. She was the stepdaughter of the late tuxáua of Parí-cachoeira, Júlio, father of the present local chief. There had been previous treatment with the pajés; and even after she was already in a condition of extreme gravity and she had been taken to the hospital, her mother, of the Tuyuka tribe, had tried to take

/369 cont./

763 /footnote 84 cont./ her out of there in order to subject her again to the rites of the pajés. As soon as the catastrophe happened, in the very room of death, in the hospital, the weeping by men and women, accompanied simultaneously by dancing, began at the sides of the hammock that contained the body. Among the participants in the wailing and dances was a young Tukano woman who had taken the course in midwifery in Manaus. The dancers were distributed in pairs of the same sex, and the dances were intermixed with small hops, beating at this moment, first the arms, then the legs. The husband, also present, did not participate in the dances, but he did participate in the weeping. Later, once the body had been moved to the entrance room of the hospital, the old mother lay down on the floor, under the hammock where the daughter had died, with her legs and arms open, singing the elegy-weeping.

[874] [177] [535] [593]

[761] The men utter cries and imprecations against those who caused the death; because every death, so they think, is a true murder perpetrated by some enemy by means of a malefice. The women too, appropriately called uxtĩra (Uaupés uxtĩna), mourners, between exclamations and with /370/ very sentimental thoughts, do the eulogy of the dead and imprecate against the pajés or persons who cast the spell, the alleged

*[192]

/370 cont./

763 causa mortis. They lower their heads, draw the hair over the face, the tears come in abundance, and they constantly collect them with the index finger of the right hand and shake them to the ground. And they proceed in this way for a long time, in a characteristic intonation, in which they go from the lowest notes to the shrillest ones. And the mourners succeed one another in turn in this panegyric-imprecatory weeping. The last notes of their wailing have hardly been lost in the air and their last tears filtered into the floor of the maloca before the shadows of emotion clear away from their faces, and the mourner will go on to talk gaily with her companions, with her habitual good humor and noisy laughter.

[593] The mother or wife, during the wailing, will be squatting or seated on the little seats beside the deceased, and with the right hand drawing lines on the ground. At other times they rub the hands on the cadaver and then stretch the arms in the direction of space, as if they were casting there the curses or the malefice that took the life of the deceased.

*[192] At times three or more women gather in a closed circle, in which their heads touch, and the principal mourner extends her arms, as if to embrace them all by the nape of the neck; it is what is called ʊe'ɛ-kea-uxtisé, weeping embraced. The first mourner then starts to do the eulogy of the dead one, as if directing a dialogue with the others, who repeat her final words; or they address interlocutions, all of it intermixed with sobs and cries.

Once the panegyric-weeping is performed, which may last minutes or whole hours (85),

85. The weeping for the death of Júlio, tuxáua of Parí-cachoeira, on

/370 cont./

763 /footnote 85 cont./ July 5, 1954, lasted from 3 o'clock in the early morning until 10 o'clock in the day, when the burial was concluded.

calm is restored, as if nothing abnormal had happened (86).

86. If it is a husband or child who died, the sorrow at times is sincere and prolonged, and, in order to distract themselves, they go around to other malocas.

They resume their jobs, meal, or conversations with the habitual typical laughter.

If by chance it was during the night that the death took place, they customarily, after the weeping, stay up during the night, but talking gaily and drinking chibé, without concerning themselves about the dead one any longer.

764 The relatives, as they arrive to visit the family, casually or because they have learned of the death, have the same relief of noisy and laudatory wailing. On the occasion of the burial they /371/ reinitiate the weeping.

765 When some relative who lives farther away, even if it is months later, meets the widower or widow for the first time after the death of the spouse, he places his hands on the shoulder and not infrequently the scene of the wailing is renewed.

The simple news of some death is also apt to provoke the official wailing. It is to be noted that, although the dead person might be from the husband's tribe, many times the latter will not show any sign of grief, will calmly continue his gay chatting, leaving to his wife (who is from another tribe) the duty of wailing for the dead.

/371 cont./

765
539
[115]

Here is one of these elegies (87).

87. It has been furnished to us by the Salesian Missionary Pe. João Marchesi.

Paxkó uxtígo
the mother who mourns

Yöö max-kõ! yöö max-kõ! yöö max-kõ!
o my son! my son! my son!

Derowégo yöö döxporó wẽ'rĩtohati mãã!
why I before not die you?

Mãã añũ-buxtyágõ, tuxtwágõ nĩtohapõ.
you very good (handsome), strong were.

Mãã yöö yukése. yöö ekatisé, yöö maisé-mẽra.
you my hope, my joy, my love-also (you were).

Mãã dyápo-a-ré, yöö ĩ'ãsomé, mãã buhisé-ré,
your face, I shall not see, your smile,

Mãã böxsösé-ré töosomé!
your voice I shall not hear!

De'ró mãã marĩsé-mẽra a'té nãxkã-pö, a'té dyá-pö?
how you without (also shall I live) in these forests, on these rivers?

A'té wi'i-pö ỹa'ã-buxtyasé-mẽra kaxtí-maxsĩsari?
in this house so sad to live will I be able?

Mãã maigõ oxkó-ré, pexká-mẽ-ré yöö-ré axpo-yúgõ.
you lovingly water, fire for me prepared.

Mãã pax-kö wẽ'rise-re nãxkãtise-re darétohapa.
of your father the death not heavy you made for me.

Mãã yöö-ré wai-re dyá-pö-ré oógõ.
you for me fish from the river brought.

Mãã nãxkã-pö yuxkö-döxká-ré oógõ
you from the forest the fruits brought.

Mãã marĩsé-mẽra ỹeé-ré wé bósari?
you without what thing shall I do (now)?

ö'mã-kori nãxkã uxtígo, mãã-mẽra maxsã-pé-pö sooseré.
the days all to weep, with you in the grave to rest.

Yöö max-kõ! yöö max-kõ! yöö max-kõ!
o my son! my son! my son!

/372/

764 2) The interment. There is no fixed interval between the verification of the death and the burial. One even notices a certain anxiety to bury the corpse as soon as possible. And the cases
763 in which the preparations for this start when the individual is still
764 alive, and even has use of his senses, are not infrequent (88).

[797] 88. One of the Salesian Missionary Sisters, passing through Umarí (river Uaupés), saw in the maloca four holes in the floor. Surprised she asked the reason. It was that there were four children with whooping cough, and, foreseeing their death, they had already prepared the graves.

Another striking episode took place in Taracuá (river Uaupés) in 1934. The tuxáua Miguel, of the Tukano tribe, was near death, and his subjects prepared the coffin-canoe and placed the sick man there, almost suffocating him with his clothes, hammock, eating cuia, etc. The Missionaries arrived still in time, and, noticing that he was still alive, they moved him to the hospital, and actually he did not die until three days later.

[323] Although they are familiar with ceramics and know how to make vessels of large dimensions, they are not in the habit of burying the cadavers in vessels, nor are there any indications of their having had such a custom.

764 The burial is permanent, and the traditional form is the canoe-
501 coffin, yuxkõ-sõ-korõ, that is, in a canoe (89).

*[192] 89. Occasionally, lacking a canoe, we have heard of burial in the caxirí tub in Teresita (Colombia, river Papurí). Pe. André Linssen, Missionary of the Monfort Congregation, did a burial in a mat in Acuaricuara (Colombia,

/372 cont./

764
501
*[192]
[797]
[177]

/footnote 89 cont./ river Paca). Today one often hears "yuxkõ-sõ mãrĩ," there is no canoe (since they do not want to render useless the good canoes that they have), and they bury the dead in some hollow piece of timber, or they ask the Missionaries for a casket.

It will be the old canoe, fruit of his work, companion of his travels and of his fishing trips, or one obtained for this purpose. They saw it into two parts. We were unable to find out what they would have done in the old days, before they had a saw or machete, in order to divide the canoe into two halves. Whether they then did it with the help of fire, or whether they used two small canoes as a coffin. On one half they place the corpse with his hammock, bow, arrow, his cuia with a little flour, a cigar, and some coals on a piece of a pot (nowadays a box with some matches). They cover this with the other half of the canoe, closing the orifices, at present with pieces of wood, rags, or anything, and tie the two parts with strong cords of tucum.

764 The burial with part of the utilitarian objects is usually a survival from nomadism. Today the Indians explain to us that it is "to be used in the other life." Other objects (canoes, machetes, axes, hammocks, etc.) are inherited by the family, or, more accurately, by the /373/ oldest son. It is the symbol of a bond that still endures among the members who are living and those already dead (84) /sic; 90/.

[184]

90. Koch Grünberg says of the Kubẽwãna that they burn and throw away the objects that belonged to the dead person, so that his spirit does not come to punish the survivors for their negligence and greediness (Zwei Iahre, p. 314).

/373 cont./

764 although the apparent motive is the ambition and the interests of the Indian. And they have been seen to take long trips in order to acquire some object that belonged to the deceased.

[412] The grave, sufficiently long and not very deep, opened formerly with a simple pointed stick and the hands, is made in the central nave of the maloca (91).

> 91. In January of 1948 in Ambaíba (Colombia, river Querari) the Kubẽwãna were preparing a new maloca, when the death of an Indian took place. They buried him, then, in the area of the new maloca. Since this was still without any covering, however, they improvised a little roof of straw over the grave, a meter above the ground, "so that the dead one will not get the rain."
>
> Near Matapí (river Uaupés) there is an island known precisely as the "island of the cemetery," because the Wanana buried their dead there. We do not know whether this was due to the influence of the civilized.

without any obligatory orientation. On that place, precisely, where he spent the happiest hours of his life, preparing his bow and arrow, adorning himself with the ornaments, in endless talks with his tribal brothers, and danced during the long nights of the poosé (dabacuri); as if the living wished to maintain union with the dead.

The canoe is then placed in the grave, there being renewed among those present, collectively, the "panegyric-weeping (92).

[797]

> 92. This is verified even for the burials that take place in the cemeteries of the Missions, with the assistance of the Missionary, who many times finds himself obliged, after a few minutes, to ask that they cease the weeping

764
[797]

/373 cont./

/footnote 92 cont./ in order to proceed with the liturgical absolution. Upon leaving the cemetery, the women were seen making broad gestures with the arms, as if to chase away the malignant spirit, or to cast curses over the one who caused the death. Moreover, they were observed burning nettles around the house where the death had taken place.

Everyone will throw handfuls of earth over the coffin, until the grave is completely filled. In a short time, because of the treading of those passing over it, the ground will be as firm as the rest of the floor, and nothing will reveal that anyone was buried there (93).

93. What Wallace tells (Viagens pelo Amazonas e Rio Negro /Travels on the Amazon and Rio Negro/, 637) is not likely: "In some of the larger houses there are, at times, more than a hundred graves, and when the houses become too small and are already full, they then make the graves outside." In fact it is a matter of small human groups, which very rarely exceed one hundred persons; therefore, as a rule, there will not be half a dozen /this footnote is continued on the next page in the original source/ deaths a year. The hot and humid climate promotes the rapid disappearance of the mortal remains. And, besides, no sign indicating graves remains.

/374/ One does not perceive any manifestation of fear from viewing or contact with the body.

/374 cont./

764 3) Funeral libation and feast. Soon after the burial (perhaps the following night), according to the circumstances and the length of time needed for the preparations, a feast takes place in the maloca. Obligatorily consisting, as always, of abundant [535] libations of caxirí and the traditional dances, over the tomb of their companion.

It has not been reported, however, that at this funeral caxirí there might be particular mention of the late one. Perhaps one [628] of the guests will be the one to whose malefice the death is attributed. They invite him in order, in the alcoholic exaltation, to avenge the death of the "brother."

765 It is to be noted that there is no repugnance in speaking of the "dead," mihĩ (the late one).

*[192] There is therefore no evidence either of any external sign of mourning that would be observed for some time, or of traces of commemoration of the dead, as we might expect from so much union in life and from some circumstances of the burial, which we have already pointed out. Unless this occurs in the dances and songs of the poosé. Our native informants, however, did not know or did not want to clarify this for us.

[775] In contradiction with this closeness or bond with the dead, there is the belief that the dead become transformed into Wãx-tĩ (disembodied spirit) and can frighten them or even harm them, as was said previously (cf. VII -- 4 e (2 c -- What to think of Wãx-tĩ?) ).

[115] Formerly among the Taryana, stated Felisberto from Urubu-
[535] cuara, six days after the death of a tuxáua, or of some kõmũ, the caxirí (funeral feast) with the "dance of the masks" or the "great weeping" was held.

## CANNIBALISM

121 The practice of eating human flesh is called cannibalism or anthropophagy.

266 In America it is a custom verified among the Karaíba, hence the tendency to include in this group all the cannibal tribes.

/374 cont./

121 It is probable that such a practice, in origin, is due to the
266 lack of food. Nevertheless, later, because of the whole orientation of the mentality of primitive man, it came to take on a magical character. One must, then, distinguish economic cannibalism and ritual cannibalism.

/375/ 1. Economic cannibalism.

In economic cannibalism the flesh of enemies, fresh or preserved by various processes that they know, is usually consumed: this is exoanthropophagy. Hence expeditions of war to provide human flesh.

266 This is what Wallace tells us (o. c. 638) about the Kubewana:
--"On the Uaupés only the Cubeus /Cubeo/ are truly cannibals.
721 They eat those of the other tribes whom they kill in battle. In order to obtain human flesh still fresh, they even make war for this single purpose. When the meat exceeds what they can eat at one time, they dry it and smoke it on the fire, and thus it can be stored for a long time. They burn the heads of the dead ones and drink their ashes with caxirí in the same way that has already been described above."

As for the Kubewana or other tribes of the Uaupés, this information obtained by Wallace seems false to us. Perhaps in turn
[727 567] based on Wallace is Bento de Figueiredo Tenreiro Aranha, Director of the "Archivo do Amazonas" (1907, Vol. 1, No. 3, p. 80), in his article entitled "As explorações e os exploradores do Uaupés /The explorations and the explorers of the Uaupés/," where he also affirms: -- "When they take a prisoner in war, if it is a man, they massacre, if it is a woman or a young man, they sell, when they find a buyer, otherwise they kill and eat, dividing the pieces among everyone in the tribe."

266 The encounters and reprisals that took place about twenty
648 years ago between the Colombian seringueiros /rubber workers/ and the natives of the banks of the Cananari, tributary of the
726 Pirá-paraná, are still remembered (information by the Colombian Napoleão Estrada, in November of 1953, and by others). Still

/375 cont./

266 in 1954 we heard mention of four Colombians murdered, "smoked,"
648 and eaten by the Pamõã-maxsã (Tatú-tapuya) Indians of this
726 region; and of how they particularly coveted the legs and feet of the victims. Accepting the accuracy of the news, however, it seems that it is a matter of special irritation and vengeance, and not of anthropophagy as a traditional habit, much less of bellicose attempts for the purpose of obtaining human flesh.

266 Koch Grünberg in various passages of his work Zwei Iahre speaks of the cannibalism of the Hyanakoto. He is, however, only reporting information by natives, and the Hyanakoto are Karaíba and reside outside the area that we are studying here. We have
266 also heard natives of various tribes speak of anthropophagous
829 Indians (94).

94. The Kumãdene tuxaua of Urubucuara, Mandú, knowing that we had made a long excursion by way of the headwaters of the river Tiquié, presented two very interesting questions: whether we had met the /this footnote is continued on the next page in the original source/ anthropophagous Indians and whether we had seen the tailed Indians. We answered both questions negatively, and we took the opportunity to ask him whether by chance he too had already seen them, who they were, and where they lived. He also answered us that he did not know, he had only heard such things mentioned.

An old Tukano /376/ from Pari-cachoeira, Gabriel Costa, informed us that there are three cannibal tribes, or Baári-maxsã-ré, that is: 1st -- the Yai-peri maxsã, 2nd -- the Píti-yároa, 3rd -- the Yõũrwá, and that they live "up there," that is, on the headwaters of the river Tiquié.

/376 cont./

829 Other natives designated for us the ferocious Indians of the
266 river Cauaburi, tributary from the left of the middle Rio Negro, as being the famous Yai-peri maxsã or Onça /jaguar/ Tooth People. These, however, seem to be only legendary beings (cf. "Lendas do Uaupés /Legends of the Uaupés/").

Concerning the Pinao Indians of Colombia, we read that they sold the human flesh of their war slaves in their markets. This refers to the Panches, also from Colombian territory, who sold their own children to be eaten. It is said of these anthropophagous tribes that they fattened up the victims intended to serve as food. They ate them boiled with maize in large pots, or, more commonly, roasted them alive on a spit that pierced them through the anus.

2) Ritual cannibalism.

Among the tribes who practice anthropophagy, magic or participative cannibalism is more frequently found.

It is derived from the belief that through the eating of the flesh of an individual comes the most intimate union possible with him, and, therefore, participation in his good qualities: courage, vigor, dexterity, etc., and even in his psychic qualities or his magic power. Hence the sacred repasts, at which were eaten (not infrequently with preceding feasts, homages, and solemn immolation) the personages taken as superior: the chief, the pajé, the brave warriors, the heroes. More commonly, they are personages of their own tribe; this is endoanthropophagy.

765 Among some primitives, the cult of the dead came to be impregnated with such a magic concept. In order to provide themselves with the desired qualities that their own ancestors possessed, there appeared the custom of ingesting their ashes with special drinks on the occasion of particular funeral commemorations.

Wallace affirms (o. c. 638) that "The Tarianos and Tucanos, as well as some other tribes, about a month after the funeral, disinter the corpse, which is already in a very advanced state of decomposition, and place it in a large pot or oven over the fire, until the soft parts are destroyed, which is done with the

/377/

765 most horrible stench, there remaining at the end only the carbonized bones, which are immediately ground up and reduced
[415] to powder. This powder is then placed in various enormous tubs (vats or vessels made out of wood) full of caxiri. The group present then drinks the caxiri until the last drop is finished. They believe that by so doing the virtues of the dead are transmitted to everyone who takes this drink."

171 It is a custom that is found among other tribes of America,
765 and even of the Amazon, according to the information from the ancient explorers, for example, among the Warekena of the rivers Içana and Xié, the Šomena of the river Japurá, etc. (cf. "Roteiro /Logbook/" of Pe. Noronha, 222). And, according to what was told us in Urubucuara, river Uaupés, this custom was in force until the end of the last century among the Taryana, until the beginning of this one among the Kubewãna, according to what Koch G. states and, moreover, what the Wanãna of Carurú-cachoeira told us in 1955, and it is the present practice of the tribes of the river Cauaburi, among whom Pes. Miguel Ghigo and Antônio Goes were present at such events.

[115] The same custom also existed among the Wanãna, we were assured by Tomás Paiva, son of the tuxawa /sic/ of Carurú-cachoeira, and other young Wanãna, but it fell into disuse as early as two generations ago.

765 Among the Kubewãna Koch G. (Z. I. 316) was present at one of these events in the maloca of Namacoliba (?). The Tuxaua disinters the remains of his predecessor, dead for 15 years, and burns it in front of the maloca. The carbonized bones are later cleaned and placed in a pot on the fire day and night for a month, until they are reduced to ashes. These, on the occasion of a solemn caxiri, which is held with a large crowd of people, are pounded, sifted, and mixed with a thick drink, prepared in great abundance with maize. The Tuxaua, with a stick, tries to spread the ashes well in the drink, and afterwards, with a large cuia, distributes it to the men standing around him. It is a drink reserved for the old ones and the fathers and mothers of families, who, although they might not be old, already have three children.

765 /377 cont./
53 Koch concludes that at this cannibalistic feast there were dances of masks on which he could verify the following details: the participants wore a band of yellow bark as a stole on the neck, and on the left arm a banner of bark, in the right hand a rhythm tube (VII -- 3, c (3 c) ) of imbauba, with paintings representing fish. They advance and back up and, marking time with the right foot, carry on a monotonous song with innumerable repetitions.

171 We could seek the origin of this peculiar custom, which is
765 also found among other tropical tribes of South America, teaches Koch, in the belief that the bones that remain after death are the /378/ last place in which the spirits reside. And with the ingestion of the ashes the individuals incorporate in themselves the substance and the spirit of the ancestors.

5. Morality.

121 When we deal with this subject, the necessity of some warn-
831 ings beforehand is imposed:

1st. -- We limit the breadth of the term morality to the common and vulgar meaning, as if it were a synonym of moderation of carnal concupiscence, or further as a synonym of customs in force in sexual relations.

2nd. -- We present, naturally, those points in discrepancy with the norms of Christian morals and which, for this very reason, impress one more.

797 3rd. -- Many of the customs that we were able to collect
831 are not in force, obviously, in those groups or among those individuals who are under the influence of the Catholic Missions. But the Missionaries themselves are the first to confess that the modifications of the ancestral customs that they achieve in the field of morality are the fruit of many exhortations, vigilance, and the frequency of the sacraments and religious practices.

/378 cont./

831 a) Concept of procreation and marriage.

842 The concept of procreation through the participation of the two sexes, and both among human beings and among animals, is known by everyone, even the children.

843 It seems, on the other hand, that the space of nine months as the gestation period is not likewise so well known (95).

[115] 95. A Tukano girl about 20 years old from S. Tomé, river Tiquié, answered us that the period of gestation was five months.

842 And they do not know how fecundation takes place or how the
843 fetus becomes animated and develops.

The most rigorous law of tribal exogamy is in force (VIII --
582 1, a (1) ). Marriage Between tribal "brothers and sisters" is considered bad and impossible (96).

[797] 96. Pe. Afonso Kuipers from Teresita, river Paurí /Papurí or Papury/, Colombia, performed two marriages among Pirá-tapuyas who, through religious instruction, had liberated themselves from these prejudices and wanted each other as spouses. Nevertheless, there was great reaction from the Indians, who tried to burn the house of the Missionary. But, under the protection of the latter, the two couples continued to live in Teresita (1947) and with healthy children.

and a fortiori between blood brothers and sisters. If one asks them the reason for this prohibition they simply answer: -- "Because it is bad." /379/ Some add: -- "Because he will not have children," or: -- "Because the children will die."

/379 cont./

581 In marriage, they conceive the relations between husband and wife as natural, and, as the purpose of these relations, or, better, as the purpose of marriage, the procreation of children for the tribe.

836 They do not recognize, however, the exclusive right of one spouse over the other with regard to these relations. There is
837 then nothing to say about conjugal fidelity (97),

[115] 97. One of the Missionaries, with 30 years of residence among the Indians, in conversation with the author of this work, appeared impressed by episodes involving an individual who went so far as to abuse the wife of another, without this causing repulsion on the part of the husband or surprise on the part of the others.

just as there is nothing to be said about virginity (98)

[115] 98. In putting together a vocabulary, we noticed several significant facts. Many natives consulted by us, among them the most educated alumni of the Missions, could not find an equivalent for the Portuguese term fornicação /fornication/, that is, one which would express illegitimate sexual relations. They indicated the same terms as for the legitimate relations between the spouses, affirming positively that different terms for these diverse relations did not exist. Likewise they did not know of a word corresponding to the Portuguese adultério /adultery/, affirming, moreover, that
*[192] it does not exist in the Tukano language. The Veteran Missionary Pe. Pedro Kok, out of need for his ministry, created two terms descriptive of the act, that is, Wõakĩsé manapõ-tígo-ne and Wõakĩsé nõ'mõ-tígõ-ne, in order to express,

/379 cont./

*192
836
837

/footnote 98 cont./ respectively, adultery on the part of the man or of the woman. According to consultations held with nine persons of both sexes, in different places, the result is that these terms combined constituted an inexpressive redundancy. Wõãkĩe or Wõãkahĩe means simply relation of the sexes, without the qualification of legitimate or illegitimate by our Christian morals. The addition to the word Wõãkĩe of the specific term "with one who has a husband," manapõ-tigo-ne, or "with one who has a wife," nõ'mõ-tígõ-ne, does not give it the idea of illegitimacy, which the natives do not even comprehend. Just as there also does not exist in the Tukano language (and moreover in the other native idioms) a term corresponding to the concept of virginity. Already during our first stay among those tribes, in 1947, the Irmã Superiora /Sister Superior/ of one of the girls' schools of the Mission told us how some of the students, upon hearing so much talk about virginity, but having difficulty in learning this concept, came to ask her for more clarification.

[797]

836
837

of the bride. Legally virginity can not exist, as will be seen below (VIII -- 1, b (7) ). The Catechesis, in referring to the Most Holy Virgin, Mother of God, uses in Tukano the Latin expression "Maria Virgo" /Virgin Mary/.

837

We thought at first (and so manifested) that the acts characterized by us as conjugal infidelities were not punished because the husband feared the vengeance of the rival or that his wife might leave him. We must change this opinion, in the face of numerous and categorical affirmations by natives of eight different tribes (Tukano, Taryana, Pirã-tapuya, Ipeka, Tuyuka, Barã, Desãna, and Wanãna), /380/ some of whom, well informed about

/380 cont./

837 other tribes, with whom they live in the same maloca or povoado, promised us that the same happens among all the tribes of this region.

881 After the individuals of both sexes have gone through the pu-
836 berty initiation, -- be they married or single -- sexual relations with a large number of persons of the tribe and, under some conditions, also with those of other tribes, and with the civilized themselves, are permissible for them.

833 They conceive the sexual relations between the two sexes (99)

[838] [881]

> 99. Male or female homosexualism, it seems, has always been regarded as something reprovable and, for this reason, always practiced secretly. Officially, as far as is reported, it only exists in the puberty rite of the boys.

as a normal pleasure for the individuals who have reached legal majority by the puberty rite, and therefore such relations are practiced publicly, in front of their own parents or their own spouse (100),

> 100. It is understandable that the relations, although legally permissible, might not always be prudent and thus are not practiced publicly. Such is the case for the individual who, having fought with the husband, does not touch his wife in his presence. This comes from positive information obtained.

just as the various physiological acts of eating, drinking, or anything else are performed in front of any person (101).

[829]

> 101. Out of mixed feelings of distrust and hostility toward the civilized, or even because they know directly or indirectly that their morals condemn these liberties, they do not

833
829

/footnote 101 cont./ practice licit or illicit sexual relations in front of them. Perhaps, yes, in front of some who are better acquainted with them, and with whom they might have had relations. Cf. what will be said about the female initiation.

835

There is only one interdiction, but a strict one, against sexual relations (and the same for the different tribes that we mention in this study), those that take place between blood brothers and sisters, or brothers and sisters in the strict sense, that is, between children of the same parents. These, as well as relations between parents and children, take on a religious character, for this reason are licit, or even advisable and imposed in given circumstances (puberty rite, eclipse, new moon, caxiris, and in the clearing), and outside of that only secretly.

[833]

The woman, legally, can take the initiative in these relations, which happens frequently among single persons. In practice, especially between married persons, due to the feeling of inferiority which dominates her, the woman almost always waits for the invitation of the men. She can never, however, peremptorily refuse, even in the face of prostration of her physical state and the multiplicity of the suitors.

It must further be mentioned that the Australian Pirraúru is also in force among the Uaupesinos. That is, when the husband must /381/ go away, he invites one of his blood brothers (he is the first one designated, unless the husband has had a fight with him, as comes from the information) or a tribal brother to replace him in the habitual conjugal relations (102).

102. Two informants stated that it fell to the wife to invite this brother-in-law. It seems that this information may be based on events perhaps explained by the forgetfulness or sudden departure of the absent husband. The official notice to his substitute falls to him.

/381 cont./

835 All the informants agreed in stating that this substitute could beget children with the wife of the one absent (103).

[115]
[797]

103. In September of 1955 the Salesian Missionary Pe. João Marchesi, on a trip of religious and sanitary assistance on the river Papuri, encountered, among the Christian natives of the locality called Melo Franco, an episode that confirms the above information which we had obtained two years before. That is, a married Tukano Indian had been absent for two years, in order to work in the seringals of Colombia. During his absence his brother maintained sexual relations with the absent man's wife, a child being born out of these adulterous relations.

835 As for the paternity, however, the answer was not in agreement.
851 Two asserted that the child would be regarded as the child of the true father; while the rest stated that it would be considered the child of the absent husband. Some even added that if he is "good" (sic) he will give thanks for the service that the substitute rendered him, satisfying his wife and giving him a child. It must be pointed out clearly that no financial obligation for supporting the family of the absent husband intervenes for the substitute.

842 It seems to us that one can conclude that this partial discrep-
847 ancy of the information is explained by knowing: 1st -- that formerly the absences must not have been very prolonged, so as to create the problem whose solution we had asked for; 2nd -- that there is frequent use of sterilization and abortive agents, and that the woman regularly seeks to make the interval between her deliveries a space of two or more years.

581 From the above information we think it is to be inferred that the official marriage only aims at the determination of paternity and, therefore, the determination of the tribe to which the child belongs and which attends to (father and mother) its rearing.

/381 cont./

581 Marriage, then, in the regime that is in force among these tribes, is a social institution intended to ensure the perpetuity of the tribe. Its aim is not to consider the particular interests of the individuals: tendencies to perpetuate themselves, affectionate inclinations, sedatio concupiscentiae, or others. For this reason, in the realization of the matrimonial act, it would be more accurate to say of the matrimonial contract, the will of the individuals, which in the rest of native life has such an ample field, is not consulted. /382/ On the subject of marriage, one again has a great deal of evidence of the "absorption of the individuals by the group," which characterizes the tribes of the Uaupés. Almost every act of native practice gives confirmation that among them there are no individuals, there are only members, there are no persons, there are only cells of the social body. The individual's own will does not seem to know how to want anything except what the group wants!

b) Concept of modesty.

291 834 829 562 It is difficult to answer these three questions: 1st -- whether the Indian really has an idea of modesty; 2nd -- how he shows it, whether through clothes or paintings; 3rd -- which might be the delicate part.

In front of the civilized, the attitude of respect and circumspection that they show, especially the women, is remarkable. An attitude all the more perfected the more frequent their contact with the civilized.

While the men appear, with the utmost ease and without any shame, with only their "Waxsó-ro" or sex-cover in front of the whites, be these men or women, the Indian women nowadays only appear clothed, or at least with a skirt, rarely a short petticoat /Port. saiote/ or tanga /covering hanging from the waist/. Among themselves, however, they do not observe such circumspection. The civilized has many proofs that the woman has dressed in order

/382 cont./

291 562 834 829

to receive him (104):

> 104. In Montfort, river Papurí, an old woman, upon returning from the clearing dressed in a skirt and loaded with her aturá /carrying basket/ full of mandiocas, thinking that she was not observed, took off the skirt, jumped out of the canoe, washed the roots on the beach, and later, with the skirt in her hand, she proceeded toward her house, bending under the weight of the aturá.

Wallace already pointed that out a century ago. Many times, upon approaching unexpectedly, the civilized perceives a scurrying of women toward some dark corner of the maloca or to the neighboring forest, in order to get dressed. During the work in the clearing the women are ordinarily naked. Frequently they leave their skirts in the canoe, at the landing place on some stream where they disembarked in going to the clearing.

291 562

Many tribes went around completely naked, testify the first explorers, such as Padre Acuña (1637). The Vigário Geral /Vicar-general/ Pe. José M. de Noronha (1759), speaking about the Tecuna nation, writes: -- "Their women do not have any modesty. The males, however, cover the parts intended for generation, with wide fringes made out of thread twisted from certain white tow which they extract from the bark of wood" ("Roteiro /Logbook/," n. 139). *[192] The Poet Gonçalves Dias, who was a School Inspector in Amazonas, writes: -- "The men, who among them seem to be the most modest, wear on the Uaupés something like suspensories, to which they give the name of cueios, similar to or an imitation of the tocamboba: /383/ of the primitive Tupis. In imitation of them, the women also wear today some cueios of beads (puericueios)." (Manaus, October 23, 1861 -- Relatórios da Presidência da Província do Amazonas, Vol. II, p. 760.) /In the original source, the end of the last sentence of footnote 104 is repeated here as the last sentence of the paragraph. This sentence is omitted here in the translation./

/383 cont./

291 534 562 As we have already said (VI-3), the Waxsó-ro does not seem to be a "dress of decency" for the men. As a matter of fact, one finds big boys without the Waxsó-ro, with only the cord as a belt. The men readily take it off in the presence of other persons. Some have it so small and imperfect that it hardly covers them, and one does not perceive any concern about adjusting it well. Therefore we conclude that it is only dress for protection in the forest (105).

[115] 105. In May of 1954 we made known to a Karapanã Indian, Vicente by name, a resident for several years in Uaracapá (river Papuri), our desire to visit the region of the Karapanãs, of the headwaters of the Áua. Spontaneously, as though to warn us, he told us that over there they still did not wear any clothes. After this excursion, talking to a Tukano lady, already Christian and who since 1926 has been living with the Irmã Missionárias /Missionary Sisters/, in answer to the question as to why the men wore the Waxsó-ro and the women nothing, we heard her respond that the women "did not need a protection," physically, like the men.

[796] [302] As for the feminine Waxsó-ro, in our opinion it might be a "dress of adornment" or "of attraction." 1st. not so much because those of tucum, such as those of beads in particular, are artistic; 2nd. as because of the fact that they are so small that they do not cover sufficiently; 3rd. and that they are wom exclusively during the feasts, together with the paintings (106).

178 562 292 106. We were informed by the natives themselves that, while the men at the feasts, besides the small Waxsó-ro, also adopt the large one, appropriate for the dances, the women

/383 cont./

178
292
562
*[192]

/footnote 106 cont./ nowadays rarely wear Waxsó-ro, not even as a dance ornament. Some persons declared to us that they had never seen a feminine Waxsó-ro made of glass beads, the Yaxkẽ Waxsó-ro, and that the women always walked around destitute of clothing.

302 About the paintings, we know that they consider them only as adornment.

As for the delicate parts, it does not seem that they are the
291 breasts. As a matter of fact, some appear with the bust uncovered
302 without bashfulness. During the dances they decorate the breasts
834 with red circles, which still remain for several days. And there is no great circumspection with the legs either, because, when they sit down or squat, they draw the skirt between the legs, but leave the legs and thighs uncovered.

[178] It seems that they are impressed more by the persons' bust, hence the greater care on the part of the natives, even those who already have /384/ relations with the civilized, in having it uncovered and painted for the dances (107),

107. Without perceiving that she was being observed (so it seems to us), we were able to note a young Bará woman, soon after the rite of her puberty initiation, absorbed in painting her own breasts, with the red powder of carajurú /carajura/, which she had wrapped in a leaf. A little girl of about 5 or 6 years of age at once tried to imitate her, with similar designs.

perhaps while the rest of the body is covered with pants or skirt.
[832] Some natives assured us positively of the attraction that the men feel by the women's bust.

/384 cont./

c) Extramarital incontinence.

831 The freedom with which the Indian deals with some subjects, with a realism at times crude, is well known. And this not only among themselves, but also with the civilized. Equally well known is the immorality of the conversation among themselves on trips, as in the interior of their malocas, in the hours of rest, interlaced with frequent and lewd laughter. There are not only ambiguous words in their vocabulary, but a whole assemblage of words and sentences of immoral caliber.

[521]

*[192] Moreover there are more than enough proofs of premarital and extramarital incontinence, Wõãkĩẽ, wõãkahĩẽ, yõãsé or ñõãsé (108).

108. Cônego /Canon/ André Fernandes de Souza, Vigário /Vicar/ of S. Gabriel, already revealed this in 1793: --"With respect to the two vices of incontinence and gluttony, vices so natural to the Indian people, that it seems that they have already stifled and destroyed all their freedom" (o. c., p. 499). The same was reported by Frei Gregório de Bene, Apostolic Missionary of the Uaupés from 1850 to 1852, explaining the reason why, especially in some places, he had to delay administering the sacraments.

1) Premarital liberties.

836 One notes some vigilance by the parents, especially the mothers (at least in front of the civilized), over the daughters who have reached a certain age. It is not enough, however, especially if the circumstances of their life, their works, and customs are considered. And a greater sexual impulse is manifested in the girls who have reached a certain physiological development,

/384 cont./
836 inducing them, not infrequently, to provocation (109)

[832]
[515]

109. While bathing, the girls agitate the water, with the hand cupped, from below upwards, with a characteristic noise. The boys respond to this signal by fanning their open hands in front of the chest, one higher than the other, so that they are crossed without meeting, and, since they are almost on the surface of the water, they produce a noise that is heard at a distance of two hundred meters or more. This provocative noise is called Pixtwasé.

*[192]

and invitation to the boys.

832 /385/ Although the old customs state that the bathing of the
836 women precedes that of the men and should be before the break of day, sometimes the Indians are surprised in mixed bathing
[515] during the warm hours of the day.

The young women prepare philters or potions, known by the
*[192] Nheengatú name of Puçanga (in Tukano Ox-kó), which they give
[278] to the young men to drink in order to attract them to them; or, in front of their eyes, they wear or rub on themselves roots and plants to which is attributed an aphrodisiac virtue.

842 The cases of illegitimate pregnancy of maidens are not rare,
847 although they know (110)
848

110. We had gathered for the "centro de Pesquisas" /Research Center/ of Iauareté some plants considered as sterilizing and abortive. While organizing the herbarium, some identifying labels fell off. We called on three maidens, and with the greatest facility, upon seeing the plants, they indicated the name and the purpose, exactly as was stated on the labels.

842 /385 cont./
847 and use contraceptive and abortive methods. Their own mother
848 (or mother-in-law when it is a matter of a newlywed) will teach these methods.

The illegitimate son is called Ko-boxkákõ (literally it means
848 "found by her or hers"; in the feminine Ko-boxkáko), and it does
*[192] not constitute an obstacle to marriage for the unwed mother (111)

> 111. In Pari-cachoeira in April of 1954, we were able to see a young Tukano woman (later married to a Desana of Iraiti, river Tiquié) carrying an illegitimate child from her relations with a young Tuyuka man, who at Easter of this year married a young Tukano woman from Pari-cachoeira.

or create a problem for the married mother (112).

> 112. With the greatest ease, Maria Gama, a young Ipeka woman of Urubucuara, speaking to us about her family, told us about having a younger ko-boxkákõ brother.

581 It is considered shameful to have children at once in the
842 first year of marriage, Pe. Humberto Limpens of Acuaricuara,
183 river Paca, informed us. They want children only two or three years after the marriage, and this is also the interval between
[797] children. A demonstration that this is artificial is given by the good Christian mother, alumna of the Mission, with successive children and at once from the first year. One understands the
[462] difficulty of the native mother who, besides the care and nursing of the child, is pressed with the work of the house and of the clearing, if she does not have the help of older daughters.

/385 cont./

563 Because of the high concept that they have of the Branco /White/, without excluding the influence of their magic beliefs and because of the gifts that they can /386/ give them, the women easily give in to the desires of the civilized and are even proud of having children by them (113).

[115]

[611]

113. In Urubucuara and Carurú-cachoeira, river Uaupés, two women told us, in conversation, with some pride, that they were not daughters of Indians, but of civilized. We observe here that for the purpose of social classification and of future marriage they were regarded as belonging to the tribe to which their mother belonged. For example, Antônia of Carurú-cachoeira, who died in 1956, daughter of a man from Pará and considered Taryana, later married a Wanana.

Unfortunately among the civilized who reach those regions there are adventurers without any moral concepts, without an established family (114)

114. Not infrequently their unions with Indian women are of some duration, that is, all the time that they remain among the Indians, perhaps in public service, or they are casual relations.

or with a regular family from whom they have been away for a long time.

881 In the rite of puberty initiation, the maiden not only has
833 theoretical instruction on her matrimonial duties, but also immediate practice with the pajé or Kõmũ and with another young man
[756] of her choice or of her own father's choice (according to tribe).

/386 cont./

881 All these premarital relations (115)

833

*[192]

115. Since 1947 we have known about this official and public character of the relations of the maidens with the pajé, the Komũ, the young man of her amõsé (VIII-1, b (7b) ), and her fiancé, Mã-ra-põ nỹãkhõ. And we have spoken of this since that time. Today we know that these legal licenses have a much greater extension.

take place in public and officially in the maloca or house, thus like the marital ones. They commonly happen between elements of the same tribe, and in some cases also between different tribes.

[628]

The Makú maidens and women, while they are working for the occupants of the maloca, find themselves in the legal position of concubines of all of them. It is a kind of service that they must render, without being able to refuse or receiving any pay for it.

567 831 648

When, as an exception, an Indian of another tribe served for the amõsé of the maiden (we know of various cases in Urubucuara, Pinú-pinú, Pari-cachoeira), or some civilized person (we have likewise been told of cases with Colombian and Brazilian individuals), the relations are permitted indefinitely with this one, too, and not only on the part of the maiden. "He became one of the family" was the expression that we heard.

588 628 648 833 881

The affinity with the wife's tribe that the legal marriage entails, moreover, makes sexual relations with the "relatives /387/ of the woman" legal; relatives in the broad sense of the native expression, that is, covering all those of her povoado or "Gens."

588 835

/387 cont./

628 At times there are individuals of different tribes participat-
831 ing in the caxiris and dabacuris, and then the same sexual
648 liberties regularly take place between them (116).

116. Koch Grünberg in various circumstances sets forth the sexual liberties of the girls, even with individuals of another tribe (Z. I. 189). A Tuyuka tells him without reserve the intentions of the pairs who leave the maloca: it is the satisfaction of their appetites (Z. I. 372). A young Tukano woman volunteered that in the Dabacuris, when a girl is invited at the same time by men of different tribes, she will first consider those of another tribe. It is perhaps a form of courtesy toward visitors.

[574]

592 In the modern regime of family houses (and the problem
582 obviously could only be posed for this regime) the cases of an
836 open and enduring conjugal life outside of the official marriage
797 are rare (117).

117. Although there are also known exceptions in which the Missionary intervenes in order to hasten the marriage. In Acuaricuara, 1946, river Paca, a fatherless young woman of the Suryana tribe went to live with a young man of her tribe, in his house, where he lived in company with his widowed mother. Faced with such a well-known fact, the Missionary observed to her that they should have the religious marriage. The young man appeared favorably disposed and asked the Padre to speak to his mother. The latter, however, not only did not consent, because the young people were from the same tribe, but she immediately expelled the girl from her house. (Event reported

592
582 /387 cont./
797 /footnote 117 cont./ by the Monfortian
836 Missionary, Pe. Humberto Linpens /sic/.)

835 Even more infrequent (it is true that they practice so many sexual liberties and are such small groups that such cases could not be numerous) is incestuous concubinage between parents and children (118).

118. A public case in Teresita (river Papuri) between a Desana individual, who would not find a wife, and his own mother.

[842] [847] In these cases they always avoid children, not only with the help of the puçangas /potions/, but also through physical and mechanical processes (119).

119. We learned of a man in Urubucuara, river Uaupés, who had two children from the relations with his own daughter: one was aborted in a few months, and the other one lived only a short time after its birth.

2) Extramarital liberties.

831 We thought at first, and so did the Missionaries, that the licentiousness of the periodic caxiris was merely an eclipse in the upright and normal sexual life of the natives.

It has already been noted that in the most solemn ones, the Dabacuris, the body paintings are executed by persons of the other sex.

[797] /388/ In any caxiri, when excited by the drinks, liberties take place. Outside of the caxiri, testifies Pe. Afonso Kuipers from Teresita, "they are aware (120)

120. This concept of the Missionary can

/388 cont./

831
[797]

/footnote 120 cont./ only be applied, obviously, to the Christian Indians, instructed in Christian morals; but not at all to the others.

that it is bad, ya'ĩ, and, on the other hand, are very full of shame (?), for this reason they try to hide their miseries and become intoxicated in order to act with more freedom."

[115] They are not embarrassed, however (confirmed another veteran and equally well-deserving Montfortian Missionary, Pe. Humberto Limpens, of Acuaricuara, who has spent almost 40 years among those tribes), about the immoral occurrences in these circumstances. Sometimes they even boast of them as being conquests.

As a conclusion from the testimony and inquiries made in various circumstances and in different places among the most reliable individuals in them, we can affirm that they judge licit, good, and recommended the sexual relations during the caxiris, as well as those that we characterize as incestuous (121).

[835]

121. Incest by the father with his own daughters is narrated in the legend of the mysterious instruments. And the same is found in other legends. We did not hear, in the legends, about cases of concubinage between "blood brothers and sisters" or brothers and sisters by the same parents. It seems that this does cause them horror.

They even take on, according to what they think and testified, a religious character. As a matter of fact, some informants answered that these sexual liberties used to take place "for the good fortune of the tribe," "in order that the clearing would yield better."

/388 cont./

831 Confirming this opinion is, first, the fact that the relations
833 during the caxiri must take place on the ground, outside the maloca (122),

> 122. When they are more intoxicated and excited, they also violate this custom, relations taking place even inside the maloca. So reported some of the natives.

and that in some tribes the woman must first kiss the ground; whereas the ordinary relations take place inside the maloca and in the hammock.

[241] Another confirmation of this sacred character, it seems to
[835] us, is the opinion that they regard as good and recommended the relations, even incestuous ones, when the women go to the clearing. The relations are even compulsory when it is a matter of a new clearing to which the woman is going for the first time.

[821] Finally, the religious character of the public incestuous
[835] relations is further documented by the circumstance of their indication on the occasion of the new moon and lunar eclipses.

One can conclude, then, that sexual liberties in these cir-
831 cumstances, incestuous or not, have the character of a rite in connection with /389/ the fertility of the soil and of nature in general. We have, thus, among the tribes of the Uaupés, the notion and practice of the intichiuma, which is also in force among other human groups, that is, sexual liberties are magic ceremonies in order to guarantee the reproduction of the animal or vegetable nature. They are, by the way, very common practices, proclaiming lunar beliefs and cults of matriarchalist origin.

And they constitute, in turn, proof of the religious character of their feasts.

/389 cont./

864 d) Sexual education.

With regard to this subject, the precocity of the children, especially of the female sex, is remarkable. It surprises us to see how individuals who on the outside still look like children are subjected to the rite of the puberty initiation (see photo).

How much they appear to know is an even greater surprise. Children still quite young know perfectly all the mystery of life, like any adult.

[797] The girls enter the mission schools at seven or eight years of age, and at this age they not infrequently reveal full knowledge [581] of this subject. Sometimes the thought that already absorbs and preoccupies them is that of marriage, a Missionary Sister Superior revealed to us. They talk of that often, and perhaps they might already even know whom they are going to marry, according to the customs of the tribe and the desires of the parents.

The school of this discipline -- is the maloca with its regime of life, where there are no partitions between the families, where all the licentiousness takes place before the eyes of all and thus the intimate life of each one is known by all. According to the information obtained, the mother herself will give explanations to the daughters and will teach them the sterilizing and abortive resources.

[276] For example, in the intimacy of the malocas or huts during [593] the warm hours of the day, destitute of any clothing at all, the husband will not infrequently amuse himself by blowing the smoke from his cigar over his wife's body. We say he amuses himself, because he does it amidst noisy laughter, as we were able to hear, without excluding the fact that they admit some magic virtue in this rite.

831 The nudity, especially along with the dirtiness, appears somewhat repugnant. Besides, the psychological axiom "ab assuétis non fit pássio" /passion does not arise from what one is accustomed to/ is quite true. And so the influence of the nudity seems somewhat attenuated.

/389 cont./

831 Perhaps, however, nudity alternating with periods in which
291 they are clothed, always renewing the degenerating action of the nudity, aggravates this state of things. Thus their own clothes become transformed into excitation, especially some poorly fitted to the body.

192 /390/ One will not be surprised, then, that on this ground
838 thrive, moreover, unnatural habits, such as masturbation (swesé,
839 pa-daresé, dará-ỹãsé, bestiality (dyayõ-mẽra wõrátise (123),

123. Dyayõ-mẽra wõãrátise means, properly speaking, intercourse-with-dog, perhaps because of being the only form of bestiality that they practice.

sodomy (ná-sirotúse), homosexualism, male (õ'mã-se'saró) (124)

124. It is to be lamented that some of these episodes take place in the piassava groves, in which groups of young men spend months, often in the company of the civilized, engaged in the extraction of the piassava, or other products, in places far from their povoados and where only once a month, if that often, a launch comes to bring merchandise ("aviamento" /preparation, provision/ they say) for their food, etc.

and female (nũ'myó se'saró), and pederasty. And it seems that similar acts are verified even where the instinctive natural satisfaction is possible.

5) Conclusion.

000 In conclusion, grave degeneration of the customs is verified among these tribes, in contrast with the so-called "primitive" peoples.

648 /390 cont./

466 Nowadays more or less numerous and frequent groups of Indians, men and women, are taken, especially the single ones, for the extraction of the cuquirana, balata, chicle, rubber, Brazil nut /Port. castanha, "chestnut," various species of trees yielding edible nuts/, piassava, in both Brazilian and Colombian territory, or as sailors for the launches. They see, hear, and practice vices and immoralities (125).

[837] [797]

125. The Missionary was scolding a Christian Indian from Urubucuara, river Uaupés, because, in spite of being married, he was living with another woman. And when he reminded him of the commandment of God, he heard from the Indian this expression, certainly learned from some civilized: -- "Commandment does not hurt."

166 One observes a tendency to go down to S. Gabriel (present city of Uaupés) and Tapurucuara. To Manaus, not so much. So far nostalgia periodically brings them to the natal places. How long will this state of things last? The known cases of venereal

164 diseases are very rare, although the legends already allude to them. This rarity is perhaps explained by the simple spontaneous malario-therapy (cf. VII - 2, e (4 i) ).

It is certain that for centuries they have been in more or less frequent and enduring contact with the civilized. It is difficult to determine whether some responsibility falls on them in such a state of things, and up to what point. The problem is serious.

797 One also understands from this that there cannot always be good harmony in the relations between the Missionaries who live among the Indians, trying to bring them to the bosom of civilization and to the practice of /391/ Christian truth and morals (126).

126. The difficulty that the Missionary faces in order to implant Christian morals is great.

/391 cont./

797

/Footnote 126 cont./ Pe. Antônio Giacone recalls: "This belief (immortality of the material life, VII-2, e (1) ) makes them almost insensitive and apathetic to the teachings of the eternal truths. They abandon with difficulty the corruption in which they live" ("Os Tucanos /The Tucano/," p. 31).

and some civilized person who, for other reasons (perhaps in contraposition to those of the Missionaries), appears or resides around those regions. Which is the truly humane and patriotic attitude? What will the responsible persons decide?

6. Feasts and Amusements.

a) Feasts or Caxirís.

527

1) Caxiri. We have presented the "poosé" or Wãx-tĩye baxsá (in the Língua Geral, Dabacurí) as a religious rite. It does not seem, however, that all their feasts and dances are religious ceremonies. Rather, some evidently are simple entertainments and are called pêru-sĩrĩrĩ-nãmã̃ (Uaupés, pêru-sĩnĩ-nã̃mã̃) or caxiri (in the Língua Geral) (127).

*[192]

127. This is also the opinion of Koch Grünberg (cf. Zwei Jahre, p. 372; cf. Note 39 /see p. 502/, VII-4 e) 2 a 2nd).

Actually, in some cases they are almost improvised; any reason at all, or even a simple request by a civilized visitor, is enough for a feast. Participation in such dances is not required; but, while some pass the time entertaining themselves, the others remain seated on the small seats or lying in the hammocks, talking and laughing, and at times making fun of those who are dancing, because of some inaccuracy in the movements.

/391 cont./

527 Some of these dances are strictly familial amusements, in
535 which only those of the family (maloca or house) participate, and there are no invitations to strangers. For others, strangers to the family are also invited, without, however, the importance or the number of participants of the "Poosé."

[273] Corresponding to the importance of such entertainments will also be the preparation, the ornaments, the paintings, and the quantity of the drinks, Pẽru (caxirí, see VI - 4, h). The latter will never be missing; the ornaments might be missing, or they might use the simpler ones. Once the feast starts, it goes on uninterruptedly until the drink is finished. Those who are overcome by sleep doze a little, but, barely awake, they continue to dance. It is a
[562] question of pride and conceit, for the persons of the two sexes, to show the greater endurance.

*[192] 2) "Bayá." -- At the dances, both in the Dabacurís and outside of them, appears a personage of distinction, called Bayá. Almost /392/ always he will have an official assistant, with the name of baya-re we-tamõgõ (helper of the Bayá).

The position of Bayá is a lifetime one, in which the son almost always succeeds him, because he learns with his own father, for whom, perhaps, he was already the official assistant. The function of Bayá might be put together with that of tuxáua or wyogõ. This is the case for Júlio from Parí-cachoeira (river Tiquié); for Vicente, Desana from the Umari-igarapé, for Henrique, Tuyuka from the stream of the onça /jaguar/ (trib. of the Tiquié), for Mandú, Makú from the vicinity of Iauareté, etc. There are no examples, however, of its having been exercised by the pajé.

It falls to the Bayá to direct the songs and dances at the feasts, both religious and profane. He must, then, know them very well and be zealous about the exactness of the dances, teaching them to the younger generation and correcting the mistakes. And we have seen him exercise with authority and grace his function as master of ceremonies in solemn dabacurís.

*[192] When he is not the tuxáua, he ordinarily will be one of the ko-mũ (see VII - 2, e (3) ), and to him falls the first place immediately beside the tuxáua. Like the latter, he will have the most

/392 cont./

527 beautiful ornaments, and in certain dance numbers, in the right
535 hand, the "yu-yú" (see below, dances, 5th part), the significance of
*[192] which it was not possible for us to obtain. It consists of a small stick, having on the tip a cord from whose end hangs a loop of cipo about 15 centimeters in diameter. Cord and loop are decorated with delicate and striking tucano /toucan/ feathers. With this instrument he "beats time for the dances," that is, he shakes it rhythmically, more or less as the conductor who directs an orchestra does with his baton.

*[192] 3) Variety of dances. -- One does not notice variety in the dance steps; they are precisely the same for the most solemn Poosé as for the simplest baxsarí-nãmã (literally it means dance day).

527 There are no distinct terms equivalent to song and dance. The
533 word baxsasé translates their ideas, because they always sing during
535 the dances; and the words correspond to the rhythm of the feet and to the choreography of the movements executed.

They distinguish varieties of baxsasé, according to the musical instrument that they use; each one will have its lyrics or song. In the religious dances they are words or sounds articulated without any meaning, and they are repeated many times for the duration of the movement of the steps. The tuxáua-bayá from Parí-cachoeira,
[115] Júlio Silgueira Machado, declared to us, and many others with him, that they do not understand what they are singing.

They also vary the melodies, which are ordinarily slow, sad, although some might be pleasant and quite melodious. For /393/ this reason different names for the dances, sometimes even poetic names, appear.

[184] In different tribes we have verified the similarity in the feasts, the same ornaments and instruments. One must point out this detail: the melodies of the instrumental music are almost identical, whereas those of the song-dances differ a little more. In the steps of the dances one does not perceive any difference from tribe to tribe. That is, even in the two extremes of the native Uaupésina hierarchy, to wit, the noble tribe of the Tukano, and the slave tribe of the Makú from the outskirts of Iauaretê.

535 The tuxáua-bayá Júlio gave us the following names of dances that are performed in the most solemn Poosé:

/393 cont./

*192
535

1st. With the rhythm tube or ahũwõ:
Ixki pũrĩ bõrõasé baxsá -- song-dance "the falling of the leaves of the inajá" or
Ixki pũrĩ baxsá -- "song-dance of the leaf of the inajá."

2nd. With the maracá or yaxsã (ya'sá or ñaxsã):
pexká baxsá -- "song-dance of the firewood"
ka'i baxsá -- "song-dance of the mass of the umarí"
kenõ baxsá -- "song-dance of the jatobá."

3rd. With a simple rhythm stick or yuxkõ:
Poori baxsá -- "song-dance of the offering" (of the dabacurí)
wai baxsá -- "song-dance of the fish"
Wãx-tiá baxsá -- "song-dance of the Wãx-tĩ."

4th. With the small flute called bwá (cotias /agoutis/):
bwá baxsá -- "song-dance of the cotias."

115
533

Júlio, the tuxáua-bayá from Parí-cachoeira (river Tiquié), sang for us the various songs whose words or articulations we give in the following, revealing once more that all the "verses" were repeated many times (128).

[126]

128. We lament not having had a recording machine at the time when this tuxaua, with the best state of mind, furnished us this information. Later, in the possession of such apparatus, we went twice to Parí-cachoeira, where we waited for a long time for the opportunity of listening to him and recording his songs. It was not possible, however; the old Tuxáua was in the last months of his life, afflicted, it seems, with an internal ulcer, dying on July 5, 1954. We were able, however, to witness and film the solemn funeral of a highly esteemed Tuxáua. We nevertheless obtained other precious recordings, and, among these, the various songs of the Wanana, performed by the tuxáua Mandú from Carurú-cachoeira (river Uaupés), and of the pajés of various tribes (cf. the "Discoteca Etno-linguístico-musical" /Ethno-linguistic-musical Record Collection/).

*192 /394/
533
539
[124]
[126]

1. Song-dance with the rhythm tube, ahĩ-wõ: 1st part (129):

129. We have tried to be quite accurate in the reproduction of the sounds. According to what seemed to follow from the pronunciation of Júlio, we separated the words and differentiated the verses. It might be that some separation has been the fault of the singer. And they commit it many times, taking a breath or breathing unduly between articulations that should be connected, and vice versa. We have verified, with singers from other places, even though they repeat Júlio's melody, that there is not perfect agreement with the articulated sounds that we publish here. This fact should not be surprising, if we recall that they learn by hearing and that the articulated sounds are without meaning. When one pays close attention, it is noted that in the same dance there is not strict agreement among the dancers. A little difference in the beat and discrepancy in the articulated sounds are observed.

Yá, yá, kapikwá
Yaká perí kapikwá
Nuyaká perí
Dwíká pẽrí deyú deyú ayá
I iroyé.
Mã i-i, i-i-i (final whistle) (he explained that the whistle is to indicate that he is about to finish)

2nd part

Mã-ri-á i-i-i (whistle)
Dẽ-yá ya-yõ mari
Ikawẽ yo
Yóa mari ikawẽ yó
Yó mari ikawẽ dyakó
Dyakú i-i
Yõ yõ yõ mari
Kawẽ mari i-i-i (whistle)

/394 cont./

3rd part

*192
533
539

Mã i-i, i-i-i (whistle)
Yéé marwé kaná
Kawá do mariwí akawó-ro
Mariwi mariwí akawó-ro
Yé mariwi a-a-a akawó inawé
A mariwi a-a-a akawó inawé
Yuú kawá inawé
Yuú kawá inawé uu uu
Mari mari
Mari akawá inawé mari i-i-i (whistle)

2. Song-dance with the yaxsã (large maracá)
Ee-yá éeyá má

/395/

Dyaká a pi kapi
Wamá kapi kapi yuamá
Ya mari wemã a-á kapi kapi
Ya kapi nemã yá wamã
Kapi kapi nemã ya wamã
Ye kapi kapi nemã wamã
Ey-á ey-á (whistle)

3. Song-dance with the yaxsã in the other dances (outside the poosé)
Dyá yá i-i-i dyá yá i-i-i
Yé a marikẽna
Mariwé mariwé ya mariwé
Marikenõ ka-yá yá
Marikenõ mariwé marikenõ mariwé
Mariwé mariwé mariwé
Marikenõ ka-yá (he lowers his voice, very low sounds)
Mariwé yá-yá i-i-i
Mariwé yá-yá i-i-i (he observes to us that this song ends without whistles)

4. Song-dance with the rhythm stick, yuxkõ
Yá-yá yá-yá (whistle)
Yé kapité
Mari kwá yá kuyá-yari
Kapité mari kwá yakoró yalima

/395 cont./

*192 Koró dikúya ayá kwá-yarí

Kapité marí kapité marí kuyá-yá kuya-arí
539 Kapité marí kuyá-yá yá yá-yá (whistle)

5. Song-dance with the yuxkõ (130)

[171]

130. These sounds Perikuli (7th) and kwai (5th) are precisely the names of the principal personages of the Arwáke legends, corresponding, respectively, to Bũxpó and O'ã-kõ of the Tukano legends. Would it be a mere coincidence of sounds in different languages? Would they be Arwáke songs learned by the tribes of the Tukano group? Might all the dances of these tribes be of Arwáke origin?

Yá yá-yá yá-yá (whistle)
E yá yá perikú êê perikwê
Yaká yõ kayó yuaí
Yá piré-ku-li nomé-nõ
Perikwé pyaká wamé tyá
Pamí kwai peri-dikú êê yó
Perí-ku-li yá-yá yá-yá (whistle)

/396/

6. Song-dance with the yuxkõ

Ma dyá pa-wõ (whistle)
Dyá diká apyá kapí akapyá
Kapí pawí diká yukú kapyá
Kapyá dewá yukú
Wapyá yukú deyé-wé
Kapyá kapí pawí dewá yukú
Kapyá kapí pawí dewá jukú
Wapí-a yukú nomã-a yaví
Wapí yá yú mã-di-yá
Wapí yá yú mã-di-yá
Sawé sawé (whistle)

/396 cont./

*192 7. Song-dance with the bwá (flute or small fife)
533 Mã-ã-ã. Eyarí mamã eyarí mamã kapinã
539 Perikũ yaví-i-i davyá (Yaví = long, slim?)
Davyá yavi
Davi kawá-á nomã yavi-nõ
Davi kawá yaú; davi kawá yaú.
Kapiná perikúli
Davyá yavi yú
Kawá-yavyá mã-ã-ã (he blows the flute at length)

[115] 8. Song-dance with the yaxsã or small maracá
[534] (For example, said Júlio, "Tuyuka invites Tukano for the feast. The Tuyuka sing in the maloca, when they are finished singing, the Tukano, from outside, sing" the following:)
Yẽ-ẽ dyá yakẽ mari
Kemẽ maryé-é
Kemẽ maryé-é kenani
Wekã-ni kená amỹá
Weká kená maryé pyá
Kenã yá marỹé
Wekã-ne ma-yá axpekã ané
Wekã-re kenani wekã-re
Kená tše! tšá!
(They repeat alternately, now the Tuyuka sing, now the Tukano.)

4) The dances.

535 a) Preparation. We shall describe one of the dances for simple
[115] amusement, performed, however, with great solemnity, and how the most important personage of the group, the tuxaua /397/ Mandú from Iauareté, and the humblest of the extras, a young man of 18 to 20 years old, Marcelino by name, appeared.

535 Mandú (131)

237 131. The tuxáua, who had received us dressed in
301 pants, although without a shirt, in order to prepare
[291] for the dances, took off the pants and continued with his Waxsó-ro of cloth; he did not put on, as on other occasions, the large Waxsó-ro of hanging inner-bark.

/397 cont./

535 wore on his head a wide acangatara /head ornament/ with arara
237 feathers; a wig with braids of monkey skin and with two long, red
301 arara feathers and an onça /jaguar/ bone. From the wig, leaning toward each ear, there was a long, white heron feather. Hanging over the back the cangatá, a cord with tucano /toucan/ feathers. Also on the wig, close to the nape, the crest, or rectangular woven piece with long heron feathers. On the neck three long necklaces of beads and a necklace of seeds with the stone of command. From the ears, earrings made out of a burnished half of a gun cartridge.
[302] As painting on the forehead, a red semicircle turned upward and a large cross from the neck to the waist (132),

[123] 132. At a dance that we attended in the maloca of the Tuyuka in the igarapé of the Onça /jaguar/, upper Tiquié, from the painting of the Kõmũ resulted a cross on the face with a broad stroke from the forehead along the nose and upper lip, and the arms of the cross curved upward almost in a semicircle.

also in the color red. On the left elbow, a bracer of monkey skin. In the form of a belt, over the buttocks, a necklace of teeth, to which he later attached two branches of that magic and intensely
*[192] aromatic shrub called bará. In the course of the dance he fitted to the right ankle a necklace of seeds (Kixtyõ).

Marcelino wore a small, denticulated wreath of fine straw, with yellow down from the arara; at the nape the crest with white plumes and a long feather surrounded by a string of colorful plumes. On the left elbow the armband of monkey skin. Hanging at the back, braids of monkey skin decorated with arara down.

*192 b) Execution. A small rehearsal took place in order to verify whether the japurutús /long flutes/ were in tune with each other, as
534 well as the cariços /Panpipes/. A little caxiri was drunk.

The tuxaua executed the yaí-gõ paasé, that is, he made the
534 rhythm stick, called "stick-of-the-onça /jaguar/," decorated with
535 feathers, vibrate several times on the right muscle of the arm. He
*[192] took some steps in rhythm with the pestle-tube of imbauba, and he

/397 cont./
534 took up a position in front of the second post at the left, in the
535 /398/ central nave (133).

[342]

133. Their rectangular maloca, although not of large dimensions, corresponded to a division of five naves: the central high nave, under the ridge, two side spaces, and, along the side walls, the space reserved for the families. It is to be noted, however, that there is no interior partition between family and family.

The men imitated his steps and, on his left, formed an open semicircle.

*[192] 1st Part: Each one places the left hand on the right shoulder of the companion (Pá-bwasé is the Tukano name for this gesture). They execute some rhythmic beats with the pestle-tube (it is what is called yuxkõ-mẽra doxkesé) and some steps with the right foot forward and back (du'tisé). Then the line moves (nikã-ká eheanõ-kátyãra baxsasé) to the right and to the left until the circumference is closed, making some turns from the left to the right (sũtõasé) (134).

134. They explained to us that they are imitating the bavarí fish, which, before depositing its eggs, makes a few turns.

533 At the same time the men slowly sing unintelligible words, with a
535 frequent burden in which are sounded many times the syllables "paia-paia." The rhythm is accelerated at the end, and a cry and a heavy stroke with the rhythm tubes end the first part. During this
[562] part the women remained seated in conversation near the door, to the left of anyone who enters (135).

[123]

135. We, the three civilized observers, were to be found on the opposite side, at the right.

/398 cont./

533 535 *[192] 2nd Part: Position taken, as in the first part. The left hand on the right shoulder. The dance starts with an accelerated rhythm, a sharp cry and loud whistle (Wyisé) (136).

136. I had found it strange that up to then I had not heard the Indians whistle, when I always expected to hear them whistling in the forest, on walks, on trips, when they were rowing, and there was only silence or conversation in a discreet tone.

*[192] Afterwards the singing takes a slow rhythm, the syllables "kapii-kapii" being heard frequently in the burden. A circle from the right broken up by another from the left. *[192] The women start entering, one by one: the first one places herself to the left of the tuxaua, with the nape she touches his left arm (yohoasé), extended to the right shoulder of the neighbor, and she embraces by the waist the two men between whom she is located. Thus successively. They give only two complete turns, and the women leave. The dance ends with an accelerated rhythm of the singing, of the steps, and with a final whistle. Then follow minutes of rest and of caxirí.

[534] 3rd and 4th Parts: These are numbers in which only the younger ones participate, playing the flauta-de-pã /Panpipe/ (3rd part) or the japurutú (4th part), /399/ with an interval during which they smoke and drink caxirí. These intermezzo numbers are very pleasant. Each young man brings his instrument, which harmonizes well with the others, one of them playing the contracanto, or response to the theme that the first one plays. These themes are very melodic short canons, in a florid scale, with ascending and de-*[192] scending notes. Sometimes the young men only dance, and then they go in pairs, the one on the right a little farther behind, holding his instrument with the right hand and, with the left one, the right shoulder of the other (pábwasé), who also plays his own instrument and has the left hand on the hip. Upon reaching the back, they make an evolution and exchange positions, the right one coming in front, with the left hand on the hip, and his companion farther back, with the left hand on the right shoulder of the first one.

/399 cont./

*192 If there are also women, the couples are arranged in such a way
535 that the young man holds the instrument with the right hand, and,
with the left hand above his own shoulder (it is what is called
[534] iñatusé), he holds the right hand of the girl, who rests her left hand
on her own waist (pá-su'sũsé). The dancers start with only the men
advancing toward the interior of the maloca, and, as snappers, a
necklace of small tucum nuts on the right ankle in order to mark the
rhythm. They go around in a circle, one after the other, to the
right, then in the opposite direction to the left; then, opening the
circle wider, they advance four times with the right foot toward the
center, and they come back to the initial position. When the
young men decide to walk, their companions present themselves.
The couples are arranged. Sometimes the couples, one after the
other, make evolutions describing the number eight (baxsá-mãhãmi
betoá) or a spiral (baxsá sõ'tõá) to the right or to the left. At other
times they are arranged in circles that become elongated or tighter,
they turn to the right or to the left. During this entire evolution,
they mark the rhythm with a stronger stroke with the right foot
*192 (dõ'pó-tisé). The women withdraw before the ending. The per-
formances always end with a fortissimo of all the instruments.
533 They are very pleasant melodies, but not infrequently the evo-
535 lutions are so prolonged that they seem to be a contest of endurance.
The spectators watch complacently from their hammocks, laughing
and making comments, probably about the inaccuracy of the steps
of the clumsier ones.

5th Part: While these numbers were displayed, one of the
dancers went to prepare the "Yu'yúri-tiró." The tuxaua with his
rhythm tube takes his position, and this time the men are dis-
tributed symmetrically on his right and on his left, in a semicircle.
They start with an accelerated rhythm, then whistle, a slow dance
following, to the singing of a funeral song. One of the Indians
brings two yu'yú and gives /400/ one of them to the tuxaua, who is
also the Bayá, the other to the latter's brother, bayá-re wetamõgõ,
who is immediately to the left of the tuxaua. They hold the

/400 cont./

533 yú-yú with the left hand, and with the right one they beat the
535 rhythm tube.
*[192]

The yu-yú of the dances

Tobacco form

*[192] The dancers are divided into two groups, who execute the movement by advancing and retreating (baxsá poterí), one in front of the other. Afterwards they place themselves in line, each one with his lady, describing circles. They again divide themselves into two groups, who advance and retreat. Now they turn their backs to one another, always with advances and retreats. It seems that the new song consists of several verses, each one ending with cries and whistles. At given moments some say words in a loud voice, just as the caller of square dances does. Would they be ceremonial words or a simple command for the evolutions to be performed? The women, finally, leave the dance, and the men continue in Indian file, with the left hand on the right shoulder of the preceding one. This file goes to describing circles, stopping from time to time, always, however, singing and beating the rhythm with the strokes of the rhythm tube.

[562] 6th Part: Performed only by the men, as in the first part.
[273] After this part, one of the dancers advances in order to distribute
[276] the caxirí with a cuia in each hand, mumbling some words and stamping the right foot harder, in a winding progression, like that of the snake. He gives one cuia to the tuxaua and the other to the most important person. The second time he brings some to two more, and thus to everyone. Also the long cigar of leaves goes from mouth to mouth.

/400 cont./

*192 7th Part: The tuxaua ties to his right ankle a necklace of dry
533 nuts (kixtyó). He then takes a position with his rhythm tube. The
534 men are arranged on his right and on his left, each one with his
535 rhythm tube in the right hand and the left one on his neighbor's
right shoulder. The yu'yús are brought to the tuxaua and to his
/401/ neighbor. It starts with a rhythm of strokes and steps in the
same place, cry, whistle, and afterwards a funeral song in
pianissimo, which goes crescendo slowly, while they move some
steps to the right and to the left. They stop sometimes to take a
step inside the circle and another backwards and to the side. This
part was more prolonged, and the syllables "tyúko-malía" were
heard many times in the burden. The group of dancers go outside
the maloca, in the yard of which they perform the same steps as
inside (yohá-wihyá). They come back again to the maloca, the
*[192] women abandon their position. At the finish there were only the
men, who, after a small evolution, take the initial position, in a
semicircle, and end the singing with small jumps (bu'pusé) and
somewhat comical cries.

5) Wanãna song-dances.

115 The Wanãna Tomás Paiva, oldest son of Mandú, the present
(1957) tuxáua of Carurú-cachoeira (river Uaupés), and his probable
533 successor, confirmed that the ritual songs were "ancient language,"
and, for this reason, they did not understand them. Through the
desire to learn them well, and to maintain the old traditions, he
tried to make inquiries from his father, esteemed local tuxáua-
bayá, and from the "elders," and to write about them. There
might perhaps be about 45 songs, he told us. We are of the opinion
that this number would cover not only the songs, but indeed all the
parts or verses; or perhaps even the repetitions of one and the same
part or verse. It happened, however, that when he went to work
as a carpenter in Venezuela those in his house used his writings for
cigarette paper.

*192 With the collaboration of another Wanãna, Maximiano from
534 Sá, he indicated to us the following order for the dances:

535 1st Dance -- with the bwá flute, hence the name bwá baxsá
[115]

/401 cont./

*192 (dance of the cotias /agouti/) (137).

534

535

137. A big feast was held in Carurú-cachoeira (river Uaúpés) on the 24th and 25th days of April of 1955, with the participation of about 250 persons of both sexes and of all ages and representatives of various tribes, especially Wanãna, Kubêwana, and Huhúdene (the latter from the Arwáke group, from Uaupuim-cachoeira, river Aiarí, tributary of the Içana). During this feast the first dance numbers were to the sound of the bwá. They were small taquara flutes of about 30 centimeters in length by about two in diameter, only one side opening, at about 10 centimeters from the mouthpiece, which was vertical. The lower part of these fifes ended with two small sticks of taquara, with two points or horns (perhaps symbolizing the teeth of the cutia /agouti/). As a decoration on this flute there were two strings of white plumes, tied to the flute by the upper extremity and free at the other extremity. In certain dance numbers some individuals would throw their flute to the ground, picking it up immediately afterwards.

In the interval between the verses or parts, the dancers /402/ sound their flutes. It consists of four parts, that is: 1st) õnõfla baxsá (song-dance of the carajurú /carajura/); 2nd) pĩnó baxsá (song-dance of the snake); 3rd) kaxpí baxsá (song-dance of the Caapí); 4th) no-phĩ baxsá (song-dance of the hook for collecting fruits).

2nd Dance -- with the rhythm tube, ahũ-wõ̃ (in Wanãna wanẽ (138).

138. During this same feast of the Wanana of Carurú-cachoeira, the rhythm tubes, measuring approximately a meter in length and 10 centimeters in diameter, were painted white (with sorva), having a black lower bar of about 10 centimeters and the handle, by which it is held, decorated with a crest of hawk feathers in the shape of a Greek epsilon.

x 192 /402 cont./
535 It also consists of several parts, the principal ones are: sawároa baxsá (song-dance of the water lizard); ahũ-a baxsá (song-dance of the beijú); ki baxsá (song-dance of the mandioca).

3rd Dance -- with the maracá, yaxsã. It is called pwá baxsá (pwá is the name of a fish that the Wanãna call ñũxkwãna in their idiom). All the men, from the beginning to the end of this long dance, shake the maracá continually and rhythmically with the right hand (the left one holds his own lady by the shoulder, and the latter embraces him by the waist). They also rhythmically sound a whistle of two tubes, which they will let hang from the neck when they must sing. It is the most interesting number of the native dances that we have attended. They first do a movement outside in the yard, then they enter the house, and, after a few minutes of choreography inside, they again go to the dance yard. There is an evolution in a row, which little by little closes into a circle, which now becomes tighter, now larger. At a given moment the pairs of dancers, each man with his lady, are arranged in a column turned toward the east, later in the opposite direction, toward the west. Thus arranged in a column, the last pair goes zigzagging between the other pairs, from the penultimate one to the first one, as if they were sewing. They explained that it is the "dance of the harvest of the caroá" (fiber that is used as fishing line). When their evolution is finished, the last pair returns to their initial position, and then the pair from the other end, that is, the first one, does the same stitching and returns to their position. It falls, now, to the penultimate pair to do the movement, and then to the second one, and thus all the pairs pass by, in turn, performing the stitching or the harvest of the caroá. During this they vibrate only the whistles and the maracá. At other times during this dance there is also singing.

4th Dance -- called "Bwá of the night," because night has already fallen. They again go out, as homage to the night and
[821] to the moon, /403/ muhĩ-pũ (said Tomás Paiva). The tunes vary for these songs, all of which are composed of several parts, with many repetitions.

/403 cont./

533 6) Songs of the women.

562 We have already observed (cf. VII -- 3, c (2 b) ) that the songs of the women are profane, or, with more accuracy, bacchic songs; that is, they regularly sing them when they distribute the caxirí, or in the intervals when they take their drink. Besides being more lively, there are more varied themes than in the religious songs of the men. Another quite striking difference is that, while the latter nowadays are articulations without any meaning, those of the women present a clear meaning. They are recitatives of longer or shorter sentences, with opportune arguments and allusions to her own person or to the one with whom she is having the dialogue.

By the law of exogamy, in one and the same povoado there are women of the tribe of the local inhabitants, and of one or more different tribes, taken as wives. And, by chance, in transit or out walking, still others, their relatives or "sisters." For this reason [184] and also because of the frequency of the dabacurís with the participation of dancers from different tribes, one and the same song might be known and performed by women of various tribes. There follows from this the difficulty in determining from which tribe the melody of a song might originally have come. The question, properly speaking, is about the melody, and not the lyrics. Because, as we have said, the latter is a timely recitative which the singer can say in her own idiom or in that of her husband or of the tribe where the poosé is held. And since nowadays the Tukano language is becoming generalized, many times it will be in thât idiom; just as the songs that we recorded are actually in Tukano, although performed by young women not only from the Tukano group of tribes, but even by a maiden of the Arwáke group, from the Kumãdene tribe.

b) Amusements.

000 The Indian leads a life in contact with the majestic and silent nature of the Amazon forest, cut by innumerable streams. This explains to us why he appears so strong, agile, cheerful, although reserved.

/403 cont./

481 He almost daily walks great distances through the forest, to his clearing, which not infrequently is located several kilometers away from the maloca, or to hunt or to search for fruits. The woman, besides the great movement inside the maloca, which is forced on her by the preparation of the food, will take a long walk through the forest almost every day /404/ to reach her clearing, where, in the sun, she will walk three or four hours without stopping. There is no mountain climbing, because the region, in gen-
[526] eral, is flat. Gymnastic exercises or corporal contests, such as in other human groups, are not known (139).

> 139. We have seen children who, playing, seize one another as though it were for open wrestling, without, however, throwing the companion to the ground.

492 And horseback riding is known just as little. There are as yet no horses around these altitudes, even for use by the civilized.

The sports practiced daily are the aquatic ones, that is, swim-
481 ming and rowing. In the morning, before daybreak, everyone,
515 without exception, goes to the river, a short distance from the maloca or povoado, and takes his bath. Even the babes in arms are taken along by the mothers and bathed. This bath is quick, one immersing oneself in the water three or four times and passing the hand over the body. Sometimes they steady themselves by the arms on some canoe tied up, and kick the feet in the water. Later, at midday, that is, during the warm hours, when they come back perspiring from the forest or from the clearing, they take another bath. This frequency at the river makes everybody learn how to swim. They swim well, but without much endurance. They never cross great distances by swimming. Perhaps no one would even swim a hundred meters for mere exercise.

/404 cont./

481 One of the aquatic amusements of the children is the one
524 called Wãx-tĩ-wãx-kõ, the son of Wãx-tĩ, an obvious reference
*[192] to the legend of Nhamacurú (cf. "Lendas do Uaupés /Legends of the Uaupés/"). To wit: two children placed one in front of the other, with the arms toward the back, immerse themselves in the water simultaneously. Moments later, emerging at the same time, they embrace each other quickly. Then, again with the arms to the back, they immerse themselves, in order to emerge again, embrace each other, and sink into the water. This is done a certain number of times, until they become tired, and the entertainment ceases.

501 Another frequent exercise is that of rowing. From childhood
868 on, from about three or four years of age perhaps, they learn how to row and have their small oars. Not infrequently a child alone or two go rowing and travel kilometers from their own home.
[226] Many times it is the children who row, while the men attend to fishing from the canoe. This habit gives them surprising skill
[147] and endurance. They are capable of rowing ten or more hours a day and for six or eight consecutive days on long trips.

501 The striking of the oar handle on the side of the canoe marks the rhythm, and, when there are several rowers, they take pride in the accuracy /405/ of the strokes, as if they were one single stroke. Three different rhythms are to be observed: 1st -- one faster, when they have need to reach some point, and in the currents; there are more or less three deep strokes in two seconds; 2nd -- when there is no current, they change to a slower rhythm: one measure yes and two no, so that one hears two sounds in the water (of two waves which form and strike against the canoe), having three strokes in five seconds; 3rd -- at times they take up another rhythm: two fast strokes and a slow and deeper one.

The following detail can be observed: the hand that holds the handle of the oar describes a perfect circle; and after they give a blow on the edge of the canoe, the oar remains for a moment lying over it, parallel to the water. In order to rest from the effort, they go to rowing from the other side of the canoe;

/405 cont./

501 it now falls to the hand that was holding the handle to pull the blade of the oar. When someone feels tired, he interrupts the exercise, letting his companions proceed with the work. On the calm stretches of the river, or when they go downstream with the current (it is what is called to go downstream floating), it might happen that all stop rowing and entertain themselves in animated conversation.

505 The continuous traveling by way of rivers with dangerous cachoeiras not only gives them extraordinary endurance, but makes them brave and turns them into highly skilled navigators. A superior and serene courage, of someone who relies on his knowledge of the dangerous places and of the process to use in each one of the currents or whirlpools, and, therefore, does not fear surprises. Of someone who relies on his own strength, tested so many times at the most difficult moments; of someone who knows that, in the worst of the possibilities, if the canoe capsizes with the shock of a wave, it will still continue to float, and he will [574] be able to catch it, swimming, a few meters farther on. If some cargo is lost in this accident, he will have beijú and smoked fish at the first maloca, until his wife can prepare beijú for him again and until he catches some fish or kills some game. It is the most excellent control of the nerves that can be imagined, in any danger that the navigation presents. With these qualities it is understandable that they are the indispensable navigators of these rivers, and infuse us with great tranquility when we have them as crewmen. Frequently in the vicinities of the cachoeiras there exist native dwellings or there are Indians engaged in fishing, always ready to give help if they are asked.

According to the level of the waters, they know whether the canoe must seek one channel in preference to another, whether a rock is sufficiently covered, whether one needs to use the pole. In some cases the Indian /406/ will jump quickly from the canoe to a rock (140)

140. Those who are already dressed sometimes

/406 cont./

505 /footnote 140 cont./ take off the shirt and quickly leap into the water with their pants or trunks. Those who are still in a more primitive condition do not have any fear of wetting their own clothes...

that appears nearby and, with a push on the edge, makes it overcome the current, and then, in an agile jump, comes back again inside the canoe and grasps his oar. In other circumstances all the passengers must coast among the indentations of the bank, while the crew pushes the canoe upstream; or, by means of tow-ropes, pulled strongly from the rocks, they force it to go up the small cachoeiras. Or further, they unload all the baggage, and both the load and the canoe will be transported across difficult shortcuts as far as the upper part of the cachoeiras, and from there they resume normal navigation.

/407/

## Chapter VIII

## Social Organization

### 1. -- Family Group

594 The native family of the Uaupés, in the most strict and perfect sense, consists of husband, wife, and children. Indissoluble monogamy is in force among them, that is, each man will have his legitimate wife, and they are joined until death by an indissoluble bond, once the conditions prescribed by the law of the tribe are satisfied.

[592] Such will be the family, whether each one lives in its house, according to the modern tendency, or whether several families are united in the communitarian life of the maloca.

/407 cont./

592 Frequently, the mother who has been widowed, or some single or orphaned relative, might live as added to a family, or, better, incorporated into it, and therefore the family group becomes larger than the family. As we shall see (VIII -- 2), the local group was originally constituted by the family, therefore being identical with the family group. The need for defense and help with the work (construction of the maloca, fishing, etc.) is what favored the local or family group over the isolated family.

On the other hand, among the Uaupesina nations there are some factors that strengthen the family organization or group:

593 428 1st. -- In first place there are the instinct and the right of ownership. There are, indeed, some goods (canoes, hut, pottery, etc.) that constitute family property and pass to the children as an inheritance.

593 583 2nd. -- As among the primitive Romans, the Uaupesino fathers have an exaggerated power over the children. This pátria potéstas reserves exclusively for the father the matrimonial negotiations, through the exchange of the maidens, as wives, from one tribe to another, and, moreover, strengthens the family regime.

3rd. -- Besides the exchange of the daughters, there is also in force an offering of nuptial gifts to the father of the future wife. These gifts, in turn, consolidate the paternal power and the family regime.

593 /408/ 4th. -- The nonexistence of a strong and organized political power is, in turn, an effect and cause of the increase of the paternal powers and a factor of consolidation of the family group.

a) Marriage.

581 We have already pointed out that among all these tribes marriage is a social institution that aims immediately (and it would perhaps not be exaggerated to say exclusively) at the perpetuation of the group. 582 It is the group that is primarily interested in its realization, not the individuals who marry, since their inclinations

/408 cont./

582 are not observed, their wishes are not consulted, and their age is not a matter of concern (1).

[797]

1. Not infrequently the Missionaries have to intervene, even among Christians, in order that the marriage of children who have not yet reached nubile age, according to Brazilian and canonical legislation, will not be performed.

Virginity is not required, since, as we shall say, it can not legally exist; and there are no other conditions, except the agreement of the parents of the ones marrying, once the laws of the tribe, which we shall present in the following, have been observed.

1) The laws of marriage.

*[192] a) The first and inviolable law that is observed in native marriage on the Uaupés is that of tribal exogamy, Axpé maxsã nõ̃mõtise.

We noted (IV -- 2, a (2) ) that there are subdivisions in the tribes. However, at least in the present regime, there are no subdivisions for matrimonial purposes (2).

2. As far as the tradition goes, it can be affirmed that tribal exogamy has always been in force. And, according to the legends, it seems that it can be advanced that the obligation of exogamy goes back to the origin of the tribes, or at least to the establishment of these nations in their present habitat.

Those of one tribe must obligatorily look for wives in another tribe. We are not facing, for now, the question as to whether this law has been imposed as a political measure, in order to avoid wars and murders between the tribes. We know, indeed, that, in spite of the exchange of women between two tribes, the contentions between them are frequent.

T
M
582
[101]

/408 cont./

There are, as we have seen (IV -- 2), three groups of tribes, which we call Tukano /Tucano/, Arwake /Arawak/, and Makú /Macu/. The serious obligation is that of exogamy. Once the interdictions that we listed in the Classification of the tribes are observed, however, the woman may be from another tribe of the same group or from another group of tribes. Out of a question of pride, no tribe will marry a Makú, who is considered slave and inferior; /409/ he is not "people," they say (3).

3. We know of a few cases of marriage by men of other tribes (Tukano, Tuyuka, Desana, Ipeka) with a Makú woman. None of a Makú man with a woman from another tribe. Among these few cases, that of a young woman, although already orphaned in 1947, a resident of the Tuyuka maloca of the locality of S. Pedro, river Tiquié, whose father was Tukano and the mother, Makú. We were not able to verify whether her mother was a legitimate wife or simply a concubine; or, further, whether she had been born from a casual relationship. We do not know either, under the first hypothesis, for what reasons such a marriage had taken place. Perhaps a lack of women? Or due to a physical defect of the man (it is to be noted that the girl was cross-eyed)? Or because of living among the Makú of the Gí-paraná or Komé-ya (trib. of the Pirá-paraná)?

T
M
851
563

If they nevertheless manage to catch some young Makú girl, they might have her as a concubine, along with the legitimate wife. They will avoid, however, having children with the Makú; and if, in spite of this, they do have them (for example, the grandmother of Maria Gama from Urubucuara), they are considered

T
M
851
563

/409 cont./
legitimate and belong to the father's tribe (4).

4. In Paraíba-poço, river Tiquié, a Tukano, upon presenting to be baptized a child he had had with a Maku, at first denied his paternity, saying that it "did not have a father."

T
101
582
563

Marriages between Taryana and Desãna do not take place. We do not know the reasons, however; it does not seem to be because of pride, because the Tukano themselves, considered the most noble group, marry Desãna, as well as Taryana. It is to be noted that the Taryana and Desãna idioms, belonging to different linguistic families, make us think in terms of a great distance between these tribes. Nevertheless they tell us that there is no marriage between them because they are "brothers."

T
582
563
614
[601]

Likewise, the Tukano do not marry the Bará. The Tukano explain that the Bará are their grandparents, Pax-kõ-Ro. Nor the Pirã-tapuya the Wanana and Arapásu; or the Arapásu the Miritĩ, Wanana, and Desana; nor the Taryana the Ipeka-tapuya; nor, finally, the Desana the Taryana, Tuyuka, Pira-tapuya, and Arapásu.

It is among the Miritĩ-tapuya that the largest number of interdictions is in force, that is, they cannot marry the Desana, Tuyuka, Arapásu, Pirã-tapuya, Ipeka-tapuya, and Taryana.

T
582
614

b) The second law is that of the exchange of the women of one tribe for the women of another one. Or, with more accuracy, a father will give his daughter as a wife to the son of another family, in order to have a sister of the latter as a wife for his son.

T
*[192]
[601]

It is what is called Põãperi or põãpeseri. And the young woman will call such a fellow bridegroom /Port. noivo/, that is, Mã-rapõ nỹãkhõ (future husband) or even Põrã-kõ nỹãkhõ (future genitor); and, vice versa, he calls her Nõ'mõ nyãkho (future wife) or Põrã-ko nỹãkho (future genitress).

/409 cont./

000 Such a custom is imposed by the desire of the tribe to perpetuate itself.

/410/ The ambilian marriage is not known, that is, it is
591 not the young man who comes to live in the house of the in-laws;
614 but it is the young woman who, through marriage, leaves hers and comes to constitute a family in another tribe.

They desire, then, that a woman from another tribe come to their povoado in order to constitute a new family. The exchange, it seems to us, is not equivalent to a depreciation of the woman or reducing her to the condition of an article of trade. It is a measure of precaution, so that the group will not become extinct, but, on the contrary, the men always remain united, and the tribal traditions and the cordial relations among its components are kept alive.

From this concept and practice some consequences follow:

582 1st. -- The first one is that in fact the so-called preferential
614 marriage is in force among them. The exchanges not only estab-
[611] lish social relations between two malocas, but, as we shall see
[601] later, they conceive kinship as bilateral. But not only the maternal cousins in the strict sense (that is, the nephews and nieces of the mother herself), but all those of their generation of the maternal Gens (IV -- 2, a (2) ) are called brides and bridegrooms /Port. noivos/, Baxsú-kãra (those who are destined for marriage with us).

Let us concretize an example: the Tukano from Parí-cachoeira customarily seek their wives among the Tuyuka of the headwaters of the Tiquié. Then, for the young people of Parí-cachoeira, brides and bridegrooms, or Baxsúkãra, are all the Tuyuka of the
[601] younger generation of the maternal povoado. Or, more exactly, all the young persons of the maternal Gens are their brides and bridegrooms, -- because to each povoado ordinarily corresponds a different Gens, -- and among themselves they call each other "brothers" /Port. irmãos, brothers, brothers and sisters/ (Mamí or Axkabí, see VIII -- 1, c).

As a rule, it is a boy or a girl among the Baxsúkãra who will be the Mã-ra-põ nỹákhõ or the Nõ'mõ nỹakho.

/410 cont./

582
601

Those who belong to the generation of the parents of the Baxsúkãra (that is, all those who are considered "brothers" /Port. irmãos, brothers, brothers and sisters/ of the mother herself) are called "uncles," Mẽx-kã (if a man) (5),

5. Notice that the niece must be called Mẽx-kã-sa.

or Mã-gõ (if a woman).

All the Baxsúkãra, in direct discourse, that is, talking among themselves (see Kinship Nomenclature below), are called "cousin," Méõ-kõ (child of the aunt, contraction of Waméõ max-kõ), and the female cousin, Méõ-kõ. It is to be pointed out that the girl may not take the liberty of saying abbreviately Méõ-kõ, Méõ-kõ; she will always say Waméõ max-kõ, Waméõ max-kõ, in full.

After an individual has been married, all the cousins or Baxsúkãra (6)

6. It is to be remembered that within the tribe the individuals who belong to the same generation are called "brothers" /Port. irmãos, brothers, brothers and sisters/.

naturally become his cunhados /brothers-in-law, brothers- and sisters-in-law/, and he actually /411/ calls them this when he expresses himself in Portuguese. When he expresses himself in Tukano, he prefers to continue to call them Méõ-kõ or Méõ-kõ; and the brothers-in-law in the strictest sense, that is, the blood brothers of his own wife, he will call Pẽ-ñã (7).

7. The woman will use the term Nihĩ-so pax-kõ to the brothers-in-law older than her husband, and Buhĩ-bakõ to those younger than he.

/411 cont./

582 601 As an exception, the individual, instead of marrying a girl from the generation of the Baxsúkãra, perhaps will marry someone from the class of the "uncles" /Port. tios, uncles, uncles and aunts/, Mẽx-kã-sa or Mã-gõ. It is the components of this class who are now his brothers-in-law, Pẽ-ñã. In Tukano he may continue to call them "uncle," Mẽx-kã, or (if it is a matter of the niece) Mẽx-kã-sa, and in direct discourse he will use the name Pirĩ for the brothers-in-law in the strict sense.

584 2nd. -- A second one is that the negotiations and agreements are realized between the parents, without the ones to be married interfering or being consulted (8).

[797]

> 8. It has happened that the father has brought a wife for his son who is a student in the Mission school, forcing him to leave the school bench in order to marry.

It is highly reprehensible that, while the children enjoy enough freedom in the native family (it can be affirmed that those of the male sex enjoy absolute independence from the parents), on this subject, so serious because the marriage is indissoluble, they do not have any freedom at all (9)

> 9. "Slave marriage" was the expression of one Missionary, citing examples of the absolutism of the parental will against the manifest wishes of the young people.

and show the greatest docility toward the wishes of their parents.

581 [584] Neither marriage for love nor the practice of courtship is known among them. It even seems that they are indifferent to physical beauty; it is certain that in all human groups there are individuals who are more or less sympathetic. No doubt these personal reasons might have an influence in premarital and

/411 cont./

581 extramarital relations, but never in the marriage (10).

[797]
[177]
[584]

10. Through the influence of the Missionary they have been freeing themselves from these ancestral prejudices, and already cases of marriage through the initiative of the ones getting married, alumni of the Missions, are known. Nevertheless it happens (narrator Pe. Afonso Kuipers from Teresita, river Papuri) that the young man asking for the intervention of the Padre in order to help him find a wife will prove to be indifferent concerning the person. He will say, for example: "Padre, please do me the favor of asking Joaquina, Amélia, or Maria whether one of them wants to marry me."

Marriage does not represent the satisfaction of the sexual instinct, as we had thought and wrote in the beginning, because we found out that this satisfaction has the fullest opportunity imaginable. Marriage, for the individual, is the solution of his economic problem: to have someone who will provide him with food. But it is especially the solution of the social problem: the continuation and propagation of the tribe.

/412/ It is surprising that, in spite of this, family life goes on normally enough. The only plausible explanation is the great respect for the traditional laws establishing the relations between the spouses, and their duties; laws which are faithfully observed.

584 3rd. A third one is that, in order to obtain a wife for an older son nowadays, perhaps a newborn child (11)

11. It does not seem that there are any agreements between the parents about children to be born, because it is contrary to the psychology of the Indian, who is a man of reality.

584 /412 cont./
584 will be promised in marriage to another family. In practice, they
836 will be bride and bridegroom, with the right to relations between them (with precautions, however, in order not to have children), perhaps for many years and with a great difference in age between the ones being married. And the child, once it has barely reached the age of reason, knows that it must marry such a person.

584 4th. A fourth one is that a widowed father will give up a
587 daughter in order to arrange for a second wife for himself, although with a great disproportion between their ages, before he procures one for his son.

587 5th. A fifth one is that a woman, becoming a widow, can pass to her brother-in-law as a wife, if he is a widower or a bachelor and without a bride, from which his father has an obligation to give a woman to such a family, in exchange for the other one whom he obtained from there. Although the law of the levirate (12)

12. That is, the duty of an individual to marry the sister-in-law who was widowed without children, in order to resuscitate the lineage of his late brother, a custom that was in force among the Jews.

does not exist among our Indians, we thus have its practice.

582 6th. A sixth one is that, from this exchange of women of a
611 tribe A with those of tribe B, since the children are regarded as belonging to the father's tribe, cousins can marry each other. For example, of two pairs of brothers and sisters, M and N from tribe A and P and Q from tribe B, the woman M married P, whose sister Q was joined in matrimony to N. The children of these two couples are, obviously, "cousins-german" or "cousins in the first degree." Nevertheless the children of P belong to the tribe B, and those of N, to the tribe A. They consider themselves reciprocally Baxsúkãra, and they may marry each other.

/412 cont./

582 In conclusion, the preferential marriage of these tribes is between cousins in the first degree.

583 *[192] c) The lack of women might render the exchange, or Põãperi, impossible. As might also an excess of women over the number of male children. The acquisition of a wife will then be done with the donation of some material goods; this is what is called Nõ'mõ duusé (purchase of the wife).

/413/ It seems to us, however, that this is not a matter of a true purchase of the spouse, in spite of the term Duusé, which was given to us by a Tukano interpreter. One tribe was enriched by one family, while the other one lost an element: compensation is just. With the absence of the maiden daughter, the father, and above all the mother, has lost an element of value through her work for the domestic economy; there will be economic indemnification on the part of the future son-in-law.

There are two reasons for such a deduction. The first one is that even when there is Põãperi, or exchange of women, the young man will give some gift to the future father-in-law. The second reason is that there does not exist, as in other human groups, a fixed price of indemnification; or a table of prices according to the category of women. The young man will give according to his means and the wishes of the father-in-law. Always utilitarian objects: ornaments, canoe, machete, trousers, ax, tobacco, salt, etc. (13).

582 13. Wallace presents a detail for which we do not find any confirmation or reminiscence on the Uaupés. "In some tribes," he says, "such as that of the Uacarás, the young man must submit to a test, which consists of a demonstration of his ability to shoot the bow and arrow. If the young man does not hit the target, the girl refuses him, because he thus proves to be incapable of shooting fish or of hunting for the sustenance of the family." We have

/413 cont./

582 /footnote 13 cont./ already said (II-6, b) that we were unable to locate any tribe under the name of Wakará, in order to investigate their customs. However, the affirmation by Wallace (who did not visit the Wakará either) is in absolute opposition to the Uaupesino customs. Actually marriage is a business between the two fathers, not between the ones getting married. In any case the diet does not depend on handling the bow well. Among the tribes of the Uaupés, on the contrary, hunting is light, and fish are more rarely caught with arrows. The basis of the diet is mandioca, and the one who supplies it is the woman, and not the husband. It can be affirmed that among these tribes it is the woman, and not the husband, who supports the family.

584 It is in these cases that one notes the greater freedom of the boy who is looking for a wife, and frequently the initiative in choosing the young woman and in the dealings with her father is his. At times the parents and brothers help him in obtaining the gifts that the father-in-law demands, but with the right to be indemnified later (one more proof of the instinct of ownership).

In general the girl's father will enter into an agreement. He always fears that the young man will take revenge with some malefice. And the youth will certainly do so; or at least he will spread it abroad that the girl has the dohasé (malefice) of sterility, and nobody will seek her as a wife. It is a dreadful revenge, because this cuts short the young woman's future and also sacrifices the economic interests of the father.

/413 cont./

581 It is natural that self-interest (innate and exaggerated in the Indian) takes advantage of these customs. For example, a father who might have more than one daughter perhaps will try to give one of them to some Tuyuka youth (in order to have a /414/ good canoe, because they are specialized canoe-makers), a second one to a Pirá-tapuya (skillful makers of nets and fishing baskets), demanding from them the products of their specialties.

[606] Moreover, these relations of affinity give him a chance to spend part of the year traveling: a sojourn in the house of each son-in-law. Because marriage creates close relations of affinity, all the more singular, since it is known that they are persons from different tribes and all of them with such a deeply racist mentality.

2) The Abduction -- Nũ'myó ỹe'ẽsé or Nũ'myó myãsé.

583 In spite of these precedents of negotiations, there is still
*[192] preserved today a symbolic abduction of the girl, a survival, one might think, of ancient customs in which the young man had to give proof of courage, kidnapping his wife, after having fought against those who tried to protect her.

Or, who knows (it is most probable when one talks about other human groups; not, however, those of the Uaupés), they were clans of one and the same tribe, transformed into enemies because of the dissidences, and who, in this period, had to have recourse to abduction in order to maintain the ancient law of clan exogamy.

'Among our Indians of the Uaupés, there is no fighting at all, although cases of disputes and possible excitation of animus are remembered. The young man's father, with a few more oarsmen, appears in the povoado of the girl. Perhaps the latter, already informed, will be in the vicinity of the landing place
[115] and will then be carried to the canoe. Or the men ask permission from the father, who says nothing (so relates Dorotéia Brito), and seize the girl. The mother, on the other hand, will protest with loud screams and imprecations, recalling the tasks of the

/414 cont./

583 daughter (always the aspect of self-interest), that she is the one who takes care of the children, works in the clearing, makes beijú, etc. No one, however, will stop the abduction.

3) The Act of marriage.

583
585
[115]

The abductors (14),

> 14. Some natives informed us of sexual relations which take place between the abductors and the maiden, and some of them added that such relations are always licit in the future. It might be that originally it was a matter of a privilege of the abductors. A privilege, however, that today has lost its justification, being leveled in practice in the great general freedom.

perhaps after several days of traveling by canoe, bring the young woman to the young man's maloca and hand her over with this formula and request (which was given to us by Dorotéia Brito): -- "We went looking for a girl for you; now take care of her; that she may be a good mother, that she does not run away." They do not perform any other rite on this occasion; this was the positive statement made by all of them.

/415/ Frequently for this circumstance a feast takes place in the maloca. It does not seem that such a feast is a religious rite of marriage. Not only does it not have a well-determined date, but perhaps the marriage is not realized either. And in the unfolding of the feast there are no allusions to the marriage. They greatly enjoy feasts, and the one on this occasion has the psychological aim of settling the girl's mind so that she will not greatly feel the distance from her family. All the more since she finds herself in a tribe different from her own, with whose language she is perhaps entirely unfamiliar.

/415 cont./

583 If the girl cannot take any initiative directly, by showing
584 her preferences, she at least enjoys the "right of veto." That is, speaking in thesis: she will not marry someone she does not like. It is true that she will think carefully beforehand, because, rejecting this proposal, perhaps another will not come. And, besides, she will suffer bad treatment from her people, who, according to the compromises of the Põáperi, must give a wife to the other family.

Who knows even whether she will be a victim of malefice, dohasé? Nevertheless, if she absolutely does not want to marry such a youth, two courses are left to her: first, she does not let herself be abducted, and sometimes she flees to another maloca nearby, when she knows that they are coming to fetch her. Or to flee from the young man's house (15).

[115] 15. A Taryana woman, Teodora from Iauareté, informed us that the woman can not say anything. But, if she likes the young man, she lets herself be abducted; in the opposite case she will flee from the maloca of the young man.

4) Stability.

585 The existence of the marriage and its stability are not yet assured. The young woman will give proof of her good will and ability to be the lady of the house.

[591] If they do not live in the regime of a maloca, perhaps later
[606] the young man might build his independent dwelling; for now he will remain in his parents' house, and the mother-in-law orders the girl to prepare the manicuera /fermented manioc-juice/ and the drinks for the nuptial feast.

/415 cont./

585 [241] Many times, principally in the modern regime of family habitations, the young man, as preparation for marriage, has already made a clearing with the help of friends. He will then take the girl to see the spot and will say: "I made the clearing, it is for you to do the planting" (16).

[115] [226]

16. These were the expressions of the Taryana Teodora from Iauareté. Whereas the Tukano Antonio Barreto stated that the father, when he gives the wife to the young man, says to him: "I brought you a woman. Go fish for her." And he added: "He goes, hands her the fish, she takes, which means that she accepts the young man." Might not one perhaps see in these different formulations an allusion to the fact that originally the Taryana Civilization was essentially agricultural, and the Tukano one, a fishing civilization?

/416/ During these first days the young wife will have not only the assistance of the mother-in-law, but the husband will try to ingratiate himself, offering her good fish or good game. If, however, she does not want to adjust to this new order of things, she will then resort to flight (17).

17. It will happen, the Tukano Dorotéia Brito informed us, that they will go looking for her a second time. It is understood that this is so on account of the agreements that preceded the marriage and its conveniences for both of the families. If, however, she flees a second time, she will not be sought any more. But in this case her father will return to the young man the gifts received.

In the environment in which they live and with their way of life, this is not difficult for her.

/416 cont./

585 If the flight does not take place, the marriage is considered realized.

[606] [431] A short time later they customarily take a nuptial trip, on which the young man, accompanied by his wife, goes to visit the father-in-law, taking him presents (smoked fish, fruit, etc.), and thus the friendly relations will be strengthened. These nuptial trips, moreover, appear in the legends.

*[192] The wife will take with her, for the new home, as dowry or property, her pi'ĩkamõ, that is, a small cipo basket, with her ornaments, utilitarian objects, and a cluster of leaves containing õnõñã powder (carajurú /carajura/).

Immediately in the first days of the marriage the husband will give the wife a beating. He will hit her, however, with the hands, so they assured us; and she cannot react. Although it is a matter of a custom that aims at finding out the good will of the girl and her capacity for suffering, it seems, nevertheless, that it is the circumstance of some misunderstanding between the spouses that will provide the opportunity for this beating.

a) /sic; 5)/ Relations between the spouses.

593 The relations between the spouses are normal enough. Perhaps they might be called friendly (18),

[123] 18. We had the opportunity to travel with a Karapanã family from the headwaters of the Papurí and to see the wife in a long and cordial conversation with the husband.

although without caresses and other displays of affection, since it is certain that some familiarity will arise from their living together. The husband will fear that bad treatment will drive [586] away the wife (19),

19. Several episodes have been reported to us. In the beginning of 1954, during our stay in

/416 cont./

593
586
[797]

/footnote 19 cont./ Pari-cachoeira, a Desana woman married to a Tuyuka from Cabari (a little above Pari-cachoeira), in view of the bad treatment by the husband, abandoned him and a little child a few months old and returned to her povoado on the lower Tiquié. Up to July of this year the Missionary had not yet managed to have her return to her husband.

especially if they do not yet have any children, because the marriage is not yet stabilized. And, finally, it is she who works for him in the clearing and in the house.

593
[587]

/417/ Although there is no law that obstructs divorce or that makes it impossible for the divorced person to go on to other nuptials, both always have before their eyes the difficulty of a second marriage.

That will not keep them from having misunderstandings, or the husband, especially if he is drunk, from beating the wife. Of the many whom we questioned on this subject, all affirmed to us the bad treatment and even cruelties on the part of their husbands.

The woman, however, will never react, because this is what the tribal laws command (20).

20. We have had news, moreover, of some episodes of reaction on the part of the woman, especially when she perceives that the husband is weakened by drunkenness. It is one more blow that their customs and beliefs have started suffering.

593
521
[115]

There is an original and somewhat strange custom, as follows from the report by the Taryana Indian Teodora from Iauareté, confirmed by natives of other tribes. During the day and in the early hours of the night the spouses maintain long conversations with each other in the maloca, each one, for example, lying in

/417 cont./

593 his hammock; nevertheless, they will not talk to each other
521 through the night inside. At night only conversations of man with
[784] man and woman with woman are permitted. If the husband has arrived from his fishing or hunting already late at night, he will hang up the fish or the game in the space between two poles or on the wall, or in some other place, without saying a word to his wife, to whom he will not make delivery of the fruit of his labor until morning.

6) Polygamy and Polyandry.

178 Whether we understand these terms as the possibility for an
595 individual to have several wives simultaneously or successively, and, vice versa, a woman more than one husband, they are not in force nowadays among the tribes of the Uaupés.

[622] In conversation, several among them affirmed that in the old days a man could have two or three wives, particularly the tuxaua (21).

21. In 1849 Wallace attested (o. c. 636): -- "The men as a rule, have only one wife. There is not, however, for this reason a special limit, because many of them have two or three. Some chiefs even have still more." It is what still happens in some tribes, for example, the Karútana of the Içana, the Káwa of the Aiarí, affirms the author of Pelo Rio Mar /Along the Rio Mar [Sea River]/, (p. 19). The statement of the Cônego /Canon/ André Fernandes de Souza is in agreement, when he says (o. c. 486): -- "They are given to polygamy or plurality of wives, and there are chiefs among them with two or three wives, and sometimes sisters of one another."

178 /418/
595 but a woman could never have several husbands. In the legends there are examples not only of polygamy, but also of polyandry.

It is true that, having procreation as its purpose, the marriage is not considered perfect until after the conception of the first child. From the time of the first signs of pregnancy the marriage was established.

595 If after two or three years of living together the woman has
842 not given birth to a child, the husband will consider her the victim of the malefice of sterility (22)

587 [115]

22. It seems that there is no possibility of rehabilitation for the woman, that is, marriage to another man, although a Tukano man, Mário Chaves by name, in answer to our question, affirmed the possibility of new nuptials for the woman regarded as sterile.

and will look for another wife.

Ordinarily, however, the woman considered sterile prefers to remain with her husband. All the interests of the latter lead him to keep her, even though he has already contracted a second marriage. We are thus confronted with a polygamy, not by right, but de facto. Nor does such an event seem to cause surprise (23).

[178]

23. These events are known nowadays (1947) in Taracuá and Urubucuara.

611 The fact that they regard the children as belonging to the father's tribe seems to reveal, as in other nations, the concept that all the generative capacity belongs exclusively to the father. Nevertheless, the inability to procreate will always be attributed to the mother, never to the men.

/418 cont./

797 These licenses already existed in the historical period, as
595 follows from the first explorers. The great revolt of the year 1757, during which the povoados of Moreira and Thomar were destroyed by the Indians, and that of Barcelos threatened, had its origin in the anger of the Indian Domingos Lamalonga, from whom the Missionary had made a concubine separate (cf. Xavier Sampaio, "Diario /Diary/," n. 553). On the map of his activities, dated from Carurú-cachoeira the first of April of 1853, Frei Gregório de Bene states: -- "It will be very difficult for some time to unite in Holy Matrimony and even to convert these Indians because they live in polygamy and others in concubinage" (Archivo do Amazonas, Vol. II, n. 2, p. 32). Even at the beginning of
595 this century Koch Grünberg (Z. I. 178) testifies that polygamy
622 is a prerogative of the tuxaua and cites the example of José, Tukano tuxaua of Pari-cachoeira, with two wives, one Tuyuka and the other Taryana.

7) Domestic-social position of the woman.

562 During an early contact with the natives of the Uaupés, we were surprised at the position of the woman, seeming to us to be of evident inferiority.

551 /419/ Her name might not even be known (24).

[852] [797] 24. It frequently happens that the Indian man may bring a child to be baptized. When, in order to make the registration, the Padre starts to ask the names and asks what the child's mother is called, the husband will answer: -- "I do not know, ask her."

There is observed in some human groups, for example, those of the river Canaburi (not, however, those of the Uaupés, see below, VIII-1, b (4) ) a prohibition against pronouncing the name of some persons. Some explain this taboo of the name by the "ontological mentality" of the primitives, that is, the name is not something secondary, external, but essential, and is

/419 cont./

551 /footnote 24 cont./ identified with such a person (or object). To pronounce this name is to render present that person or sacred object, which is not licit (religious taboo, properly speaking). Or to pronounce the name of a person (for example, that of one's own husband, among tribes of southern India -- cf. Gordon, o. c. 132) will make him die (it is the magic taboo).

551 They will simply say to identify her: -- "The wife of such-and-
593 such a person" or "The mother of such-and-such a person." The
*[192] husband will use this expression: "Yõ põrá-kó," "the mother of my children," or "the one who gives me children," or "the mother of N" and says the name of the oldest child.

Her tasks are constant, heavy, and of great responsibility. Per-
462 haps in a precarious state of health, for example, during gestation and the delivery, even so, she does them perfectly, without complaining, because they are tribal regulations, therefore they come from a superior will (25).

[593] [123] 25. If, in front of the husband, we purposely show surprise at her great tasks, the woman smiles and says nothing.

[241] The planting and the cleaning of the clearing fall to her. She will spend whole hours in the sun amid the fire and the smoke,
*[192] preparing the piles of branches to be burned, digging and burying the mandioca shoots, cleaning the clearing by the process of pull-
[252] ing out the weeds by hand. Taá kuresé. She is the one who pulls the mandioca, collects it in the aturás /carrying baskets/, and brings it home, where, afterwards, she peels it, grates it, squeezes it, and strains it, in order to make flour. It is she who prepares the foods and the caxiris, takes care of the house and of the rearing of the children. All this while the husband perhaps is idle in

/419 cont./

462 conversation with other men for long hours (26).

[517] 26. At other times she might be gaily conversing while the man is working.

611 She is a foreigner, without any right over her children. They
736 belong to the husband, or rather to the tribe of the husband. If by chance she becomes a widow, she may continue to live in the maloca, and she will ordinarily do so, especially if she is aged and cannot expect another marriage. Or she will return to her tribe, without, however, taking the children with her. With the hypothesis that her husband had a separate house or one in the vicinity of another tribe, the relatives from the husband's tribe will come to take the orphans to their own maloca. If any of the orphans are still /420/ babies at the breast, perhaps they will await until the child can dispense with maternal care, and then they will irrevocably take them away.

587 When it was a matter of her marrying, an exchange or indemnification was negotiated, without her being consulted. Upon establishing her new home, she had the customary test of a beating, and perhaps, due to the bad character of the husband, many others might follow, against which she could never react. Accord-
264 ing to the tribal customs, she will never eat with the husband; she
593 takes out her portion and it is only after he and his friends and guests are satisfied and leave the place that she will take her food.

All this causes surprise, especially if we observe the importance
462 of her "atelier": that is, it is she who performs the tasks necessary for life: she plants the clearing, works with the mandioca, which constitutes the indispensable daily dish, weaves the hammocks for sleeping, makes the vessels for water, prepares the caxiris and the cooking.

593 We leave, Deo volente, for a monograph the study of the indications of a matriarchalist civilization among the Uaupesina tribes. For now we shall say, with the students who have

/420 cont./

593 passed through this region, that to the husband fall the honor and the responsibility of head of the family group. Concerning
462 the tasks, however, more attentive observation will attenuate the
593 impression of the woman's inferiority.

In reality there is a division of labor between the man and the woman, established by the customs. The concepts of importance and gravity, weight and responsibility of these tasks cannot be considered according to the criteria of our culture, but, indeed, of the native mentality.

As the ancient impositions that they are, perhaps they were easier to understand formerly than today, because of the change in the circumstances. At present they are still observed with great strictness, due to the spirit of attachment to the traditions, characteristic of the natives, although the present conditions might counsel a new revision of the customs and a different distribution of the tasks.

It is understandable that the husband, in more difficult times of fighting between the groups or against animals, should always have been in a physical condition to be able to do it and to have available the necessary time, without his family lacking anything because of it. Hence the convenience of having these urgent daily chores assigned to the woman. This also provides, besides the indispensable rest, the physical robustness of the male, who, at given times, would be subjected to difficult tests.

This observation makes us understand the division of labor better. Those tasks that require dexterity, courage, and, up to a certain /421/ point, physical strength belong to the husband. It is the men who select, cut, and transport trunks, beams, poles, and palms for the construction of the residence, as well as performing all the work of building the house of residence and other auxiliary huts. Moreover, the making of barriers in the rivers, with thick trunks, for the large-scale fishing falls to the man. To him, the hunting, exclusively, and in large part the fishing, to which the women are only admitted as helpers. Previously the

/421 cont./

462 man manufactured weapons and implements for one thing and
593 another: canoe, baskets, nets, bows, arrows, traps, etc. In the clearing there fell to him the preliminary work of choosing the spot and felling the trees. The defense of the clearing against the harmful animals or other persons is also his duty. Of the domestic utensils he is the one who manufactures the tipití /manioc press/, hampers, and strainers for the treatment of the mandioca, as well as the little seats. As for the diet, he is the one who supplies the game, fish, and who brings the fruits from the forest for the caxirís. And he has prepared the ornaments and the musical instruments for the social and religious manifestations. Recognizing, then, the great weight of work that falls upon the woman for the maintenance of the family, we think that it alone does not demonstrate an inferior position for the woman.

593 The Põãperi, in itself, is not a depreciation of the woman,
[583] as we have already noted. The nuptial gifts, more than the dowry of the European customs, properly represent a valorization of the wife. She is really considered greatly useful, not only under the aspect of maternity, so desired and appreciated, since the Indian wishes to have children, but even in the economic one.

[551] As for not knowing the wife's name and the ways of referring to her, they do not seem to be indicators of inferiority. She came from another tribe and another language, perhaps a strange name. In any case they are not accustomed to calling anyone by name, as we shall see. In general, in referring to the wife, the husband uses the expression: -- "The mother of N" and says the name of the first-born child, and this seems to be an affectionate association. She will also say of the husband: "The father of N," which, on her lips, has a particular meaning, as affirmation that it is a legitimate child.

[611] As for the children, this affirmation is of value: the children belong to the tribe more than to the parents. Both the wife and the husband exert little authority over the children, since they are raised with great autonomy. Perhaps she has an ascendancy even greater than the husband, because, at least when they are small, they are exclusively in her care, and they go so far as to learn her idiom.

/421 cont./

593 Even already grown, the daughters are always at her side,
[857] helping her in the tasks.

/422/ One more proof of a certain equality with the husband,
[611] although the children belong to his tribe (27),
[601]

> 27. The European custom presents something similar: the woman, upon marrying, loses her family name, in order to adopt that of her husband, whose name will also be that of all their children.

is that bilateral kinship is established, as the kinship nomenclature proves (28).

> 28. The nomenclature can be characterized as bilateral, and, therefore, kinship as well. As a matter of fact, to certain terms of consanguinity correspond others of affinity.

This fact is all the more remarkable if we consider the spirit of these nations, and how the parents-in-law, the brothers-in-law and sisters-in-law, etc., among whom there are friendly relations, are necessarily from another tribe.

[421] It is recognized that the wife has the right of ownership of her
[178] trousseau and what she makes; and such a right has started having
[177] an ever larger field in which to be exercised. Nowadays it is
[439] common to see the woman selling to the civilized the flour that she made and buying for herself fabrics, thread, buttons, needles, scissors, and even objects that we would call luxuries, ribbons, hairpins, hairdressing, etc.

622 The woman can even exercise the functions of Tuxaua (29),
562
756
[124]

> 29. Upon presenting such a question to the natives, some answered yes, and others, more numerous, no. Since there are no written laws, they can only deduce from the facts. Now

/422 cont./

562
622
756
[797]

/footnote 29 cont./ many of them have never in fact heard of any woman Tuxaua. Someone answered us precisely that she can be Tuxaua, but they had never heard of a woman Tuxaua. It is to be noted that in the Tukano language there is the feminine Wyógo, a term that is ordinarily applied to the wife of the Tuxaua (Wyogõ) and, in the Missionary centers, also to the Irmã Superiora /Sister Superior/ of the girls' school. The example of Caridade (p. 709) seems to authorize our affirmation above.

not, however, those of pajé. This exclusion perhaps expresses, not so much contempt, but the concept that she is not endowed with the magical power necessary for the exercise of the office of pajé.

593
[586]

In marriage she seems to enjoy even greater freedom than the young man, being able to leave her husband. It must be concluded then that, although recognizing the primary of the husband (as also happens in our civilization), considered from the domestic-social point of view the wife is on a plane of equality with the husband (30).

30. We recently verified that this is also the opinion of Koch Grünberg, who, after prolonged contact with the Kubewana, was able to conclude that the woman is not the beast of burden, but the intelligent lady of the house (Z. I. 354).

8) Moral condition of the woman.

562
[115]

We once heard from a maiden the expression: "the woman is not worth anything." We questioned many other women, single and married, and all confirmed the accuracy of this concept, without knowing how to give further /423/ explanations. Only one added: "the woman must leave her own tribe."

/423 cont./

562 It is not a matter of inferiority, it seems to us, resulting from her tasks, more constant than those of the men, or, under the political aspect, from not exercising a politico-social authority more in name than in fact, such as, at present, the tuxauaship.

We verified, it is true, a strong feeling of their own inferiority in the minds of the women. I would not know whether it is correct to apply to them an expression so much to the liking of Freudian psychoanalysis, saying that they are dominated by an "inferiority complex."

The obligation to work beside her own mother every day, as soon as she reached the age of reason, while her brothers spent the whole day in idleness and amusements, might have generated in her the envy of this privileged masculine situation.

562 591 Among peoples of an exaggeratedly racist mentality, as all of them are, she must leave her tribe. Who would be able to evaluate this sacrifice? She must live among strangers, whose language she perhaps does not know in the beginning, and maybe never will succeed in mastering. Hearing, because of this defect of hers, gibes and sneers against her tribe, who knows how many times. Frequently episodes of hostility take place between her relatives and those of her husband, and she suffers with the news of these episodes and with the exprobrations.

The feeling of the weakness of the feminine psyche itself is heightened by the knowledge that she is separated from her people, perhaps in an environment of frank hostility to her tribe (since there are no marriages for love, by the choice and arrangement of the ones getting married). Perhaps the bad treatment will be manifestations of the rude character of her husband and of these racial hostilities.

562 All this, well known and experienced by the married women, exaggerates in the feminine soul the concept of her own weakness. The girl who has not yet experienced it witnesses it, hears it, and anxiously awaits a like fate, and her spirit starts weakening and becoming more and more abject.

/423 cont./

534 At the great feast of Wãx-tĩ, the most solemn part is forbidden
562 to her. She can not witness it, she can not see the mysterious
778 instrument, under the penalty of death.

She must not know the great tidings about the origins of the
784 tribe. We have the impression that the most perspicacious of the
796 women might know almost all that the most accomplished men know about the legends, but with the conviction, painful for them, of not knowing a great deal and the principal part. As a matter
[123] of fact, we have heard the same legends told by /424/ men and women (31).

> 31. No woman could tell us the origin of the instrument Mĩrĩ. In order not to wound the susceptibilities of the natives, we did not let them read this legend, which the men had told us in confidence, or see the instrument tabooed for them.

The totality of the men know nothing more than the women. They have only one advantage: having seen the mysterious, sacred instrument, the Mĩrĩ, and having made it sound. For their part, perhaps all the women imagine that the instrument that the men sound is really Wãx-tĩ.

562 More than anything, however, the moral decadence, this
831 indeed, is maximal in the native woman of the Uaupesina tribes. Carrying the defects of a moral perversion perhaps millennial, she feels the sexual impulses commandingly. The customs facilitate their satisfaction and, therefore, also their aggravation. But, for this same reason, they put them at the mercy of the males, whom they must always heed.

[835] Daughter, and later mother, the customs go so far as to impose on her incest with a religious character. In the exercise of these relations, of course, degrading practices will not be lacking.

/424 cont./

562 This moral decadence is not likely to generate in the masculine mind respect (as in fact there is none) for the woman, be she his sister, his wife, or his mother. Any woman represents for them only a worker for the daily tasks and an instrument of very cheap and common pleasures.

The woman senses this real situation, and the more prodigal she is, out of intimate impulses, out of obedience to the customs, because of a desire to please, or out of fear of punishment, the more she is degraded in her own eyes.

The habit of considering situations, rare or none at all, the busy life of work and feasts that she leads, the knowledge that the situation of every woman is identical and that it is a matter of a fact not susceptible to change, because created by the inviolable laws of the tribe, somewhat mitigate her suffering, almost producing conformity and acceptance of this state of things.

When one of them comes into contact with the civilized, however, she gets an idea of a better situation for the woman, she perhaps hears appeals for virtue and her own improvement, she then starts to evaluate the state of decadence of the Indian woman, and she exclaims sorrowfully: "the woman is not worth anything."

9) Division of labor.

462 There is in force among the tribes of the Uaupés a strict division of labor, such that those of one sex will not do the tasks /425/ designated for those of the other one (32).

[177] 32. This statement holds, without any doubt, for the traditional tasks and for the natives with little or no contact with civilization. In the acculturation that is in process, this concept of division of occupations is beginning to evolve. With all naturalness nowadays a young man serves as cook for the civilized. It is very common, likewise, to see a man wash his own clothes, as well as to fit a carrying basket on his back, as the women do, in order to transport a load for the whites.

/425 cont./

462 It is likewise to be noted that, although one task might complement the other, they do not perform them together, but one sex will do its part before or after the other one.

1. It falls to the man: to build his own house and to provide all the material involved in the construction;

the choice of the terrain for the clearing, felling the trees and the burning;

the hunting and fishing;

the preparation of the weapons (bow, arrows, sarabatana /blowgun/);

the making of the tipití /manioc press/, hampers, and strainers for the preparation of the foods made out of mandioca;

the preparation of the grater (33);

33. We saw on the Içana that the preparation of the plank for the grater fell to the man, and the incrustation of the small stones to the woman.

the making of the dance ornaments and musical instruments;

the manufacturing of the fishing nets and baskets and the traps;

the making of the trocano /signal drum/ and of the caxirí tubs;

the collecting of arumã and the gathering of the splints for the making of the basketry, of the leaves for the extraction of the tucum fibers; as well as of the clay for pottery;

the collecting of the poisonous plants and their preparation for fishing.

2. It falls to the woman: to plant and clean the clearing and the harvesting of the mandioca;

the cleaning of the ground adjacent to the maloca;

to carry the aturá /carrying basket/ with the load;

to make and to fire the pottery;

to manufacture the hammocks for sleeping;

to perform the domestic services (to light the fire, to prepare the food, to bring the water, the firewood, to carry the children, to look for lice, etc.).

/425 cont./

858 b) The Children.

The natives want children, hence the general fact that all constitute regular families. The fertility of the marriage is an essential condition for its validity. The birth of the first child seals the implicit contract of marriage and stabilizes the marriage, changing wives no longer being possible.

[842] /426/ They desire, however, male and female children alternately; the former are the perpetuators of the group, the latter, besides the work that they will perform, facilitate the marriage of the male children by the exchange process. If three girls are born consecutively, the Indian will blame the wife, thinking that it is her fault (34).

[847] 34. An example was mentioned to us in Teresita, river Papuri, Colombia. At the birth of the fourth child of the female sex, the mother buried it alive. The Missionary asked: "Why did you do that?" -- "Because my husband reviled me."

[797]

As to the number of children, due to the difficulties in raising them (especially because the whole burden falls on the mother), numerous progeny are not found. Six or seven children occur with some frequency (35).

[145] 35. It is to be noted that the girl does not always marry young. And, on the other hand, the type of life ages her precociously, and perhaps her fertility ceases quite prematurely. It was not granted us to verify at which age the menses stop for the woman.

[841] We know, to be sure, that menstruation begins around 14 years of age and that they know and use plants for the regulation of the monthly courses.

/426 cont./

842 The interval, as we have already noted, is regularly two or three years between deliveries.

1) Abortion and infanticide.

847 In spite of the fact that they want children, they induce abortion and practice infanticide. When the sterilizing potions have not been enough, they resort to abortion; for this there are the Puçangas, which the woman herself or her mother-in-law prepares. When these are not successful either, the mechanical process is tried, in order to kill the fetus and abort it, going so far as stepping on the belly of the pregnant woman. And if, in spite of this, the unwanted child is born alive, it is eliminated, being buried alive (36).

[115] 36. The Missionary Pe. João Marchesi, with a tirociny of almost 40 years among the tribes of the Uaupés, stigmatizes "the cynicism with which they bury alive the newborn children, suffocating them as if it were being done to any little animal" (ap. Os Tucanos /The Tucano/, p. 26).

And as a rule it will be the mother herself who will do it. Perhaps the burial alive indicates a certain feeling, conceiving it as a pleasanter death. In fact they line the grave delicately with banana leaves (37).

[115] 37. Among the most repugnant is the episode narrated by Pe. Afonso Kuipers, which happened in the povoado of Africa, left bank of the Papúri,
[732] Colombia. A child of about eight years of age, deformed with a huge head, was buried standing up; and since the grave was small, the mother stepped on the head, out of the ground, "in order to bury more and not continue crying."

/426 cont./

847 There are four regular cases of infanticide: 1st. -- That
848 of the illegitimate child. Such are all those who are born outside of the legitimate conjugal union. The reason is the shame which it gives rise to (38).

38. /This footnote is on p. 427 in the original source./ It does not constitute, however, a matrimonial obstacle for the unwed mother. It is a sign that she does not have "malefice of sterility."

The children can only come from a legitimate marriage. It is a grave insult to tell someone /427/ that he does not have a
[829] father. There is one exception: the children of the civilized are in general spared (39).

39. Cases are known in which the child's grandparents were proud because their grandchildren were "children of white."

Objects of the greatest shame are the incestuous children. With the utmost secrecy abortion will be induced or infanticide performed.

562 2nd. -- That of the fourth or fifth consecutive child of the
847 same sex. Especially if they are females (40).

40. In March of 1957 a woman, still young, was taken to the hospital of Pari-cachoeira, river Tiquié, in serious condition as a consequence of an abortion. Further investigation showed that it was a matter of criminal abortion, with the expulsion of the fetus in two pieces, with an interval of two days. And the cause was the fear of having a child of female sex, like the two previous ones. We could not find

/427 cont./

562
847

/footnote 40 cont./ out whether some pajé, who foresaw the sex of the child to be born, might have intervened in the case.

845
847

3rd. -- That of twin children. One of the two will be eliminated; usually the second one, unless another reason counsels the contrary. For example, they will preferably eliminate the defective one, or the girl. It seems that the reason for this crime is the difficulty, for the mother, of raising two children simultaneously, with all the work that falls to her; and no other reason of magical or superstitious character (41).

[797]

41. The Missionaries have managed to save and raise some twins, and, when grown, that is, after four or five years, the parents receive them willingly, or rather they demand them.

Patrícia Vasconcelos said that the husband beats the wife when she gives birth to twin children.

[736]

Nevertheless this different way of acting causes surprise: when a child becomes orphaned by losing its mother, it will not be killed, but will pass into the care of another woman. When, on the other hand, it is a matter of twins, no woman will take on the burden of raising one of the newborn children, even when there is some newly lactating mother who has just lost her child (42).

[115]
[231]

42. Pe. Antonio Giacone confirms this, saying that he saw new mothers emptying their breasts, or nursing some little dog, rather than feed someone else's child (Os Tucanos /The Tucano/, p. 53).

Even in these cases there does not appear to be any superstitious motive, but only the selfishness of the women and no friendship at all between them. If they take care of the orphan, it is due to the inviolable imposition of the irrevocable customs of the tribe.

[736]

/427 cont./

845 4th. -- That of the defective children. Any noticeable
847 physical defect is fatal to the newborn child. And it can not be believed that it is a matter of a magical reason, but rather, on one hand, the great vanity of the parents, above all of the mother, and, on the other, the thought that it will be a burden to the tribe, which /428/ needs perfect and strong individuals and desires only those. The deaf-mutes escape more easily (as was confirmed) because it is not until much later that they manage to verify their defect.

2) The delivery.

844 The delivery is considered a physiological operation of the woman, like any other, and will not excite attention or care. In spite of the lack of hygiene and of preventive measures, these daughters of Eve seem to have the most normal delivery in the world. Many times they keep on working until that moment (43),

[797]

> 43. There was related to us by the Salesian lay Brother, the Agronomist Teotônio Ferreira, the case of an Indian woman in S. Gabriel, who worked in the clearing in the morning, bore a child in the afternoon, and on the following day came to resume her work. There are frequent cases in which the Missionaries order them to take a rest and they refuse.

and shortly afterwards they begin their normal working life again.

The men, however, will leave the maloca (or wherever the delivery takes place), perhaps leaving the parturient woman in pain, because it is ordered that they cannot witness it. For this reason, if there are guests in the maloca, the parturient woman will withdraw in the some apartment, if there is any, or they will prepare it in time for this purpose, or else she will leave the maloca in order to give birth in the forest. Just as she must also not have in the place any ax, machete, or any other object of iron or metal.

/428 cont./

844 Nevertheless, in the majority of cases, the mother will have
[608] invited another woman to assist her. The latter, as if she were the godmother of the parturient woman, acquires some rights over her: she will call her Max-kõã (goddaughter), and she, in turn, will call her Pax-koá (godmother) and must render her the services requested.

[852] In order to conjure away any evil for the newborn child, the
[276] pajé or a Komũ will come to "blow on it," and on its mother, with the smoke from his cigar, said Dorotéia Brito. As a preventive against sickness, he will mark the child's face with numerous, but small red spots with the magical substance carajurú /carajura/.

846 3) Nihĩ-pkõ ("Couvade" or chôco /hatching/).

*[192] The chôco (Couvade) is in force among the tribes of the Uaupés (44).

44. From some legends of obvious patriarchalist origin it follows that the chôco did not always exist. And that it was the woman who used to
[115] take to the hammock during her discomfort. The narrator, Dorotéia Brito, at a certain point in the legend, /this footnote is continued on the next page in the original source/ added spontaneously that "formerly it was the woman who lay in the hammock."

844 As soon as the child is born, the mother, with the help of the
[178] Pax-koá, cuts the umbilical cord. Formerly they did it by hitting it between two stones, nowadays with a cutting grass, the tiririca /Scleria tenacissima/, or a splinter of taquara, or /429/ even scissors (45),

[123] 45. The tuxaua of the Íde-masã tribe of the headwaters of the Komé-ya, tributary of the Pirã-paraná, urgently asked us to bring him some scissors, whose usefulness he had heard mentioned, on our next visit.

/429 cont./

844 and takes the child to the river for the bath.

Except in rare cases of a difficult delivery (or very rarely
846 those of death), the mother soon takes up her household cares and tasks again. The husband, however, considers himself in a state
*[192] of pregnancy, Nihĩ-pkõ from Nihĩ, child, and pax-kõ, father. For this reason he must rest or be sheltered, Sihyogõ, for six days (46):

[797]

> 46. We have seen some of the Indians who have attended the Mission schools subject themselves to such a custom. And they answer the words of the missionary who tries to show the uselessness of the custom: "The old ones want it this way."

he will not work, he will avoid leaving the house, taking the sun, he will spend the greater part of his time in the hammock and subject himself to a strict diet. "If the father works, the child will get sick, will cry day and night," so they explained to us.

593 It is the concept of the bond between the father and his child, as though the father himself were being reproduced. Everything, then, that happens to the father can not fail to affect the child. Since effort or a heavier diet would harm the child, the father must abstain from these things (47).

593
755

> 47. This belief in the intimate connection between the health and well-being of the father and of the son holds not only during the first days of the newborn child, but also during its whole life. D. José Domitrovitsch, when superior
[115] of the Mission of Pari-cachoeira, was able to witness the following episode: Julio, the local Tukano tuxaua, upon learning that his son Mandú (the present tuxaua, 1956) had been bitten by a jararaca, left work, went to his house, put

/429 cont./

593
755

/footnote 47 cont./ himself in the hammock and on a diet, in order that his son's condition would not be aggravated; the latter was saved, thanks to the antiophidian injection that was immediately applied to him by the Missionary.

846 The wife, then, is the one who will carefully serve the husband. For four days both the father and the mother will nourish themselves only with mingau, being forbidden the use of fish. This is the diet taboo.

[842] The newborn child is a reproduction of the father. The mother plays only the role of the ground in which the seed germinated; the one who produced the seed was the tree, whose nature the seed will reproduce. From this concept (48)

48. It is a concept evidently patriarchalist. It is to be noted that Pe. João Marchesi affirms that he has heard from the Tukano Tuxaua Julio, from Pari-cachoeira, expressions similar to those of the Jews (who were patriarchalists): "The children of my womb."

logically come two consequences: the first is the chôco or protection of the father, the second is that the child belongs to the paternal tribe and not to the one of its mother.

553 4) Giving the name.

Around three years of age, when the child already walks freely and begins to talk and to give the first indications of understanding, /430/ they proceed with the rite of giving the name, a rite which ends with a caxiri.

*[192] Until that moment the child is Oẽ, that is, "without name." This is how they translate it for us, not knowing how to give any other explanation for this term.

/430 cont./

553 It falls to the father, according to the report by the Taryana Teodora, to choose a name. Any circumstance of the moment or a certain peculiarity noticed in the child will inspire the name. It is seen that thus the names may be repeated, and, as a matter of fact, they are repeated with great frequency, although there is no obligation to give the name of the ancestors (49).

> 49. The obligation to give the newborn children the names of the ancestors is a custom of those who admit reincarnation, and those of these tribes are not such.

With the realistic mentality of the native, there can appear not only beautiful and poetic names, but also ridiculous and even indecorous ones.

At the invitation of the father, two older men, possibly the pajé and Komĩ, or two Komĩã, equipped with a cigar, and one of them also with a pot (as Dorotéia Brito said) with live coals and resin, at the place of the birth itself, blow the smoke and perfume the environment round about, as well as the child's mother, "in order for her not to get sick," they explain. For this reason it is called "Blown Name, Baxséke Wamẽ." It is a rite which gives value to the name given and has the magical power to conjure away from the child any malefice.

*[192]

This function lasts an entire day from sun to sun (50).

> 50. In July of 1955 the seringalista Armando Sarmento was able to witness a similar ceremony among the Kubẽwana of the upper Uaupés. He then observed that between the cuias of caxirí and the smokings of the ritual cigar, the Komĩã would narrate the story of the origins of the group, with the peculiarity that, if it is a matter of a child of the female sex, the narrators omit the passages referring to Wãx-tĩ.

[562]

/430 cont./

553 There further appears in this rite a woman with the function of
[608] Pax-koá, which they translate for us as Madrinha /Godmother/.
[302] The child is left to its own devices, amusing itself inside the
[824] maloca, but at intervals its pax-koá pours over it abundantly a
black dye, prepared with the plant ve'é, letting it run down over
the head and body of the baby. The Komũã and all those present
[273] help themselves in a profusion of the drink (caxirí) prepared for
this event and which is also given to the child.

[115] Later we learned what Stradelli had written about the giving
[178] of the name, and we read it to Dorotéia Brito, who confirmed
that everything takes place still today just as it was written by
that author at the end of the last century. For this reason we
transcribe what one reads in his Vocabulário Nheengatú-Português
in the entry Mucera (p. 537):

"That of giving the name is one of the charming native ceremonies, which I have witnessed more than once. The giving of the name is done /431/ when the child who is to receive it has already started to talk and already walks by itself -- between two and three years of age. On the appointed day the neighbors all gather from early morning, soon after the morning bath, in the house of the parents. The pagé, the father of the child, and the oldest one of the relatives, who have taken a bath earlier, have been shut up since before sunrise in a special compartment
[276] prepared ad hoc, at the end opposite the entrance. Each one has in his hand a cuia of carajurú /carajura/ of the light, and in the ground, amidst the three of them, is thrust the ceremonial cigar. Those who arrive sit down on seats arranged in such a way as to leave in the center, between the front door and the back door, a free and unobstructed passage. The women go to the kitchen.
[782] The three who are shut up in the small room, after each of them has filled his cheeks with smoke, soon after sunrise blow over the cuias of carajuru in all directions, invoking by their names the mothers of the things that live in the sky, in the waters, and on the land to come and pay attention to the name which the child is about to receive, in order to protect him and accompany him

/431 cont./

553 through life, as they have protected and accompanied his parents
782 and grandparents, who never failed to provide what is due the
[562] mothers of things. The litany is not short, and they spend hours in the invocation, made in a loud voice, but without accompaniment on the part of those attending, who, seated on the seats, in the hammocks, on the ground, wherever they can, fill the house, and drink cachiry, which is served abundantly by the women, who are in the kitchen and come only for this service. When the sun reaches the highest point, that is, at midday, the officiants, who remained smoking and drinking silently since the first invocation ended, start again. The third invocation begins about two hours before sunset; but then there are already found in the house not only the men, but also all the women and all the children, and everyone repeats in loud voices the name of each mother of things
[821] that the three elders invoke. The child who is to receive the name is left to play as it wishes in the middle of the room with the other children, if there are any, and when the last ray of the sun is about to disappear, the pagé, who with the child's father and the oldest relative has come out of the little room where he spent the day, holds it in his arms and, presenting it to the sun in such a way as to make it receive the last rays, says the name, and this is then repeated by everyone in loud voices. The name that the child
551 receives is often the name which one of the grandparents already
553 bore or some other name which might be pleasing at the moment, and this especially if it is a matter of the chief's child. Many times, however, the child's name is chosen and given to it in consideration of the object that it was holding at the moment when the pagé held it to present it to the sun, to the gesture that it made, to the word that it said, because then it is as if the sun itself /432/ had given it the name. This, then, explains how in many cases, when one looks for the meaning of the native names, one has the surprise of finding the most foolish meanings."

[177] It is observed at present that, even before the baptism, besides the Baxséke Wamẽ given by the pagé, it receives another Christian name, or, better, a name which the civilized customarily use. In general they are not called by name, except by this Christian name.

/432 cont./

177 Many times they refuse to reveal to the civilized the "blown name." It is not probable that a superstitious fear (the taboo of
551 the name) enters into this refusal (51).

[171]

51. Pierre Gordon (L'initiation sexuelle et l'évolution réligieuse /The sexual initiation and religious evolution/, p. 132) explains "teknonymy," that is, the custom (incidentally quite widespread: Asia, Africa, America, Oceania) of not uttering the father's name and designating him by the expression: "the father of So-and-So" (saying the child's name), by means of the taboo of the name. The omission of the name would be a sign of respect, just as among many tribes the name of the sacred objects and, among the Jews, that of Javé /Yahweh/ are omitted. And thus he points out that among the Gold there is an interdiction against mentioning the father's name, while being able to say that of one's own mother or wife, because they are in an inferior position. Likewise among the tribes of the Caburí the woman never pronounces the husband's name, she will always say "the father of N."

as if the name represented part of the personality and, for this reason, to reveal it would be harmful to the individual. As a matter of fact, they call each other by the Christian name, and they indicate their own "blown name" and those of their companions with relative ease. The children at school call their companions by the Baxséke Wamẽ in fun and mockery. They hide it in shame, be it indecent or not, in order to seem civilized.

One notices a tendency to abbreviate the names: Candí (for Cândido), Beré (Bernardo), Mandú (Manoel). And many of them, due to the difficulty of pronunciation, corrupt the names:

/432 cont./

177 Sabá (Sebastião), Putucho (Protásio), Burigúrio (Gregório), Duí
551 (Luiz), Inhú (João), Baria (Maria), etc.

They moreover like to give grotesque nicknames to their companions, especially in the schools.

551 Here are some of the names most commonly used among the tribes of the Uaupés:

| Men's Names | Women's Names |
|---|---|
| Dyákoro | Anosáro |
| Dopíno (a black bird) | Bu'ú (the Tucunaré fish) |
| Dö'nö-sũ (foot flea) | Dixsíro |
| Hakíto | Duhígo (seated) |
| Henã (a fish) | Dumáha |
| Köomãno | Koõ |
| Ñáhuri | Ñamá paxkó (mother of the deer) |
| Ñamá saaró (deer horn) | Ñyĩgõ (black, Negress) |
| Ñyĩgõ (black, Negro) | |
| Ömõsĩ | |

/433/

| | |
|---|---|
| Õre-buru (athlete's foot) | Óri pax-kó (mother of the flowers) |
| Pahíro (large, stout) | Pĩrõ döhöo (seated snake) |
| Pĩrõ döhögö (seated snake) | |
| Poá mãri (bald, without hair) | |
| Sapó-ro (foam) | Semé (paca) |
| Sẽribi | Somé |
| Sibyá põrá (children of the sibyá) | Supyá |
| Sonã toãmi | |
| Umũpo | |
| Ũ'ré (nightingale) | |
| Ũ'ré-tõ (bunch of pupunha) | |
| Wĩrõ (wind) | Wexkoryó (a bird) |
| Yepá-sõnyá (legendary person) | |
| Yuxkó-ro (a wood) | |
| Yupúri | Yu'sío |
| Among the Tuyuka also: | Among the Bará: |
| Tunú (flute?) | Bwénomyo |
| Iñafihĩ | Kamoõ |
| Dèpo (foot) | Neñõ |
| | Nomĩ |
| | Yawíra |
| | Yexpádwa |

/433 cont./

*192
858

5) Designation of the children according to age.

The nomenclature that they use to designate the child varies according to its development:

1st. -- Until the day of the giving of the name, it is called ōẽ;

2nd. -- Maní, it seems, is a term used in some places, equivalent to baby;

3rd. -- During the first months, in view of the fact that the baby has a lighter and reddish skin, they call it Soãgõãkã, that is, little red one (Fem. Soãgõãkã; pl. Sõarã:kã);

4th. -- When its little body is already a little steadier, so that it can already remain seated on the lap, held in the arm, or leaned against the shoulder, they call it Duhigõ (F. Duhigõ, pl. Duhĩrã) (which means "one who sits down") or Dõxpõ-peõgõ (F. Dõxpõ-peõgo, pl. Dõxpo-peõra), that is, "leaning on the shoulder";

5th. -- It is called Bõagõ or Bũagõ (F. Bũagõ or Bõagõ, pl. Bũãrã or Bõãrã), when it is already creeping (from bõa, to creep); that is, "the one creeping";

6th. -- When it already begins to steady itself on its legs, they call it Nũ'kũgõ (F. nũ'kũgõ, pl. Nũ'kũrã), that is, "the one who is standing up" (from nũ'kũ, to be standing up);

/434/ 7th. -- When it is already walking, they call it, for this very reason, Syagõ or Sihyagõ (F. Syagõ or Sihyagõ, pl. Saãrã or Sihyãrã), that is, "the one walking" (from sihyã, to walk);

8th. -- Around two or three years old it is called Bũxkõãkã or Bõxkõãkã (F. Bũxkõoãkã or Bõxkõoakã, pl. Bũxkõrãkã or Bõxkõras kã), that is, "grown a little" (from bõxkõã, to grow), or Bũxkõ-põ, pl. Bũxkõrã-põ;

/434 cont./

*192 858 9th. -- After the giving of the name it is Buxtuyágõ or Buxtuyégõ (F. Buxtuyágo, Buxtuyégo, pl. Buxtuyãra, Buxtuyẽra);

10th. -- From six years of age more or less, until the initiation, it is Wi'mãgõ (F. Wi'mãgõ, pl. Wi'mãrá);

11th. -- From the time of the puberty initiation, the boy is called Ma'mã, and the maiden, Nõ'myó (this should not be confused with nũ'myó, woman);

12th. -- In order to indicate that it is already beginning to fill out in body, they use the expressions Nĩrí-bũxkõ or Nĩnĩ-bõxkõ for the young man, Nĩrí-bũxkõõ for the maiden (pl. M. and F. nĩrí-bũxkõrá).

6) Education of the children.

854 Throughout early childhood the children of both sexes are in the mother's care. The baby will go from the hammock to the maternal arms, or of an older sister, and will sleep in the same hammock with its mother. The latter will give it her milk, later mingau of flour or of banana.

She takes her child to the bath in the morning, later to the clearing, where it will remain lying in a small hammock in the shade of a tree, or of some branch stuck in the ground, or under the eyes of some little sister, while the mother works.

Sun, rain, baths, insect bites, all will contribute toward enriching the delicate complexion and habituating that organism to resistance.

*[192] Returning home, with an aturá /carrying basket/ filled with mandioca roots on her back, the mother will carry her child against her chest, with the help of a wide embira hanging from her neck (it is the process that is called sã-wõã), or riding on her hip, sã-rẽã.

/434 cont./

855 Being always in the company of its own mother, the child
191 will learn her language first (52),

> 52. It is true that the boys will soon follow the father and will forget the maternal tongue. The mother herself, after having been married for some time, will perhaps speak only the idiom of the inhabitants of the maloca. For this reason the children will rarely know the maternal idiom. We have verified that, at most, they know only some words of it.

if the mother has not yet learned the idiom of her husband. The
866 boys, as soon as they have grown to about five years of age, free themselves from maternal care and will preferably follow the father /435/ hunting or fishing, or remain playing in groups in the forest, in the search for fruits, or around the rivers, swimming and fishing.

The girls, on the contrary, continue at the side and under the vigilancy of the mother herself (53),

[797]

> 53. One Missionary noted that for the girl, used to being at the side of her own mother all the time, the life of the student living in the Mission school is very difficult, whereas the boys adapt more easily, without thinking of returning home.

helping her, according to their capacity, in her tasks. They go with the mother to the clearing, pull mandioca roots, return with their load of mandioca or firewood, or carrying some younger brother or sister, take care of the children, and even help in the preparation of the food.

/435 cont./

858 The girl, although destined to leave the nation and, as a wife, to establish a family in another tribe, is, however, an element of great economic value for her parents. In some cases [648] the parents hand her over to the civilized for domestic service, [466] in exchange for suitable recompense; upon her reaching puberty, however, they will go fetch her for the initiation rite and later for marriage, according to the customs of the tribe (54).

[115] 54. Pe. Humberto Limpens mentioned to us a case that happened shortly before 1947. Until the time of the marriage the girl remained working with the whites. The father had permitted this as payment for a shotgun.

736 If, by chance, an individual dies, leaving children in another povoado or maloca, one of his "brothers" (it might be a close relative, the tuxaua, or someone else), undertaking a long trip, if necessary, will go to look for the orphans, whose support and education will be entrusted to him.

866 The spirit of freedom in which the children are raised is extraordinarily great. They go wherever they desire, without permission from the parents or even notice beforehand (55).

[115] [648] 55. Frei Laureano da Cruz narrates how an imprudence by the capitão João Palácios, in the so-called "Província dos Encabelados" /Province of the Hairy Ones/ (because the Indians wore very long hair), aroused the resentment of the natives, who killed the capitão and many civilized. And he explains: "They are such a noble people that they will not tolerate a snap of the fingers, even from their own parents" ("Descobrimentos /Discoveries/," p. 99).

/435 cont./

866 They act as they please. They do not listen to the requests that the parents direct to them. They do not perform the tasks requested. The slightest whims of the child (56)

> 56. The child is the one who decides whether he is going to board in the school, whether he will not return the following year, whether he wants to leave during the course of the year, etc. The parents do or say nothing concerning these decisions.

are considered. From an early age they officially smoke and drink the fermented drinks at the caxirís. With such independence one might foresee the development of rebellious and quarrelsome types, which, in fact, does not happen. This is because, counterbalancing the spirit of autonomy, there is that of absolute adherence to the disciplinary laws of the tribe, a spirit that is developed with /436/ the beliefs and becomes firmly established through the example of the elders and the ceremonial practices.

Actually there is no school or official instruction, except for the "course of puberty initiation." The maloca, however, with its habitual life or the extraordinary one of the feasts, is a practical and social school in everything.

562 868 The daughter takes a "course in the domestic profession" at the side of her mother, watching her work, helping her, receiving her corrections. Upon reaching nubile age, she will be perfectly prepared to organize and supervise the new home, whereas a contemporary of hers among the civilized would manage this with difficulty. At present, in the educational establishments [797] of the Missions, they not only attend a real "course in home economics," but some even become skilled at tasks that are specialties of another tribe (57).

> 57. These tasks, however, which are outside the primitive pattern of the tribe, constitute knowledge that the mother either will not

/436 cont./

562
868

/footnote 57 cont./ teach or perhaps the daughter does not want to learn. It is a fact that we verified many times: the daughters do not know everything that their mother knows and does.

By preparing their small bows and arrows for amusement or by watching the men work, and sometimes by helping them spontaneously, the boys also become skilled in the different masculine tasks (58).

[462]
[797]

58. Never, however, in the feminine ones. They used to laugh in the beginning, Pe. João Marchesi told us, when they saw the Missionary light the fire and prepare his own food, because "it is woman's work." Nowadays one already sees a man of the younger generation, who went through the Mission schools, carrying one of his small children, while the wife is loaded with an aturá on her back or other great burdens.

It is all an intuitive process of apprenticeship, arousing the interest of the children, developing the capacity for imitation that they possess, deeply rooted, in an environment of freedom, happiness, and well-being. A conjunction, finally, of conditions in accord with the native psyche, and, for this reason, assurers of a happy result. Not infrequently the young men become more skilled than their own fathers.

476 There are many tasks that they perform collectively, or at least with the help of others, such as felling trees, cleaning the clearing, building houses, making the canoes. These are done with the display of a greater cheerfulness and emulation, which favor the growth of love of the work and of doing it nicely.

/436 cont./

868 It can be affirmed without fear that the parents are interested in the material education of the children. It is the father's ambition that his son will be a competent fisherman, boatman, or hunter (59).

[797] [829]

59. Today many parents are already interested in something more, and they bring their children to the Mission in order for them to be made "whites." A parent, bringing a girl of about eight years old to the school, recommended to the Directress that she "educate her, teach her Portuguese, in order that later she might be able to marry /this footnote is continued on the next page in the original source/ a white." After he has spent some years in school, the child considers himself superior, and is regarded as such by the others. He has become "white."

For this reason he will not deny him his advice and his experience.

/437/ 7) Puberty initiation.

881 By puberty initiation or "rite of passage" is understood the official entrance of the individual, who has reached puberty, into the social life of the tribe, coming to take responsibility for his actions. For this he will also receive the necessary instruction on the "customary law" of the group to which he belongs, the obligations and rights of the individuals. And also, only for the boys, the explanation of certain customs and the legends which constitute the historical and cultural patrimony of the group.

[562] [869]

Both those of the male sex and those of the female sex must be subjected to the "puberty initiation rite" (60).

[797]

60. The Missionaries, with patient and prudent action, have managed to alter the native customs, although slowly, with the adoption of Christian

/437 cont./

881
[797]

/footnote 60 cont./ customs and the extirpation of those which are contrary to the morality of the Gospel, retaining only those that do not harm this morality. For example, many of the young men are boarding in the Mission schools at the time of the puberty initiation. There are few cases in which the young men at such a time of life fail to return to the school, in order to go through the "rite of initiation." And some affirm that the youth can marry even without having been subjected to such a rite.

562 after a theoretico-practical course. It is a matter of a religious function, as if it were the consecration or sanctification of the
881 individual, who is integrated into the group of the worshipers of Wãx-tĩ.

*[192] a) Course of male initiation -- Mĩrĩ-mẽra, a'mõ-yesé (61).

[115]

61. These data are based on descriptions made by natives of the Tukano, Wanana, Pirá-tapuya, Taryana, Tuyuka, Desana, Bará, Kumãdene, and Baré tribes. This last informant did it accord-
[171] ing to recollections of his initiation, more than thirty years before, in Tamanduá. It is, however, a general custom of all the tribes of the region, of the Tukano group as well as of the Arwáke and of the Makú, as the natives themselves affirmed.

According to the number of inhabitants of a maloca, the young men, upon reaching puberty (62)

[115]

62. The Baré Plácido from Melo informed us that at his initiation there were 20 young men in all, and about ten persons, between pajés and Komũã, instructed them. It was, however,

/437 cont./

562
881

/footnote 62 cont./ tremendously boring. When one pajé had finished talking, another one would come, repeating the same things, some already drunk. They would listen in fear, believing everything. He recalled /this footnote is continued on the next page in the original source/ an old pajé who knew many stories and told them, much to the delight of the children. In the smaller povoados there might be perhaps a single candidate for the initiation, as was the case for Felisberto from Urubucuara, and for the youth Graciliano Carvalho, Pirá-tapuya from Tatá-punha. The latter remained isolated for two months in a house, and the old men came there to give him the lessons and to tell him stories, which he would have to repeat on the following day.

(in practice whenever their voices start to change), are gathered together in groups, in a distant spot, for the initiation course, which is called Mĩrĩã-mẽra a'mõ-yesé, that is, "initiation rite with the sacred instruments or Mĩrĩã." In many cases huts are improvised in the interior of the forest for this.

/438/ The course, which lasts several weeks or even two and three months, according to the progress of the students, is directed by one or more pajés and Komũã simultaneously. There is an assemblage of painful tests (63)

63. It seems that there is opportunity for the inventive faculty in the application of the tests. In a Tiquié povoado we came across two young men who bore on each arm a wound around the wrist, as if it had been produced by handcuffs.

in order to verify the spirit of sacrifice and endurance of the youths. Deprived of clothes, they remain exposed to bad weather, they

/438 cont./

881 562 are flogged on the back with reeds four times by the Komũã, keeping their arms crossed on the chest, and they can not cry (64).

[183]

64. We were told of a young man who could not stand the blows and, feeling humiliated and scorned by those of the tribe, had to leave and place himself at the service of the whites in S. Gabriel.

Some child may hide in order to dry his tears, said an informant.

Handfuls of pepper are put in their mouths, and they are ordered to chew them. When there are several, they are arranged in a line, and with a stick they dig a hole, into which they are later going to spit. Not hitting the hole will be a reason for punishment. At dawn they take a bath in the river; upon returning, they drink a little Kaxpí.

*[192]

They are obligated for the great fast, be'tisé, and their obligatory food is the larvae of the wasps.

562 869 881 They spend whole hours sitting on the ground, listening to the pajés narrating the traditions, telling the legends, teaching the obligations as members of the tribe, husbands, and fathers, giving advice, fixing the relations with the neighboring tribes. These instructions are intermingled with caxiri and with the apprenticeship in the fabrication of the baskets, fishing nets, and other tasks of the men.

[534] [778] While narrating the stories of the Mĩrĩã, they place one of the mysterious instruments beside each boy, so that he can observe it well (65).

*[192]

65. The instrument is an essential element for the male initiation. Besides the positive information obtained, it says the very name of the rite: "Na porá-ré mĩrĩã-mẽra a'mo-yẽrá," as the natives express themselves, that is, initiation of the sons with the mĩrĩã. This is also the opinion of Koch G. (Z. I. 220).

562
869 /438 cont./
881 It has not been reported that these Indians might have the instru-
[534] ment "berra-boi" (bull-roarer).
[778] They must show proof of benefit from these instructions; otherwise they are beaten by the Komũã. This course, although short, is nevertheless intensive and exerts a great influence on the
[756] young men. /439/ Fear of the pajé grows in them (66),

> 66. One of the informants strongly insisted on this great fear of the pajé, because, although he does not beat them directly, he would order that the elders, the Komũã, do it.

they realize that they have ceased to be children, become serious, grave, showing a certain pride in their behavior, because now they are perfect citizens and able to form a family.

562 The end of this course is the incest with their own mother,
835 in the presence of the father and the pajé or Komũ, so testified
881 natives of several tribes. This rite marks the start of the public sexual life, because up to this time they can only practice it secretly.

b) Course of female initiation -- Mõ-yõãsé (67).

562
881
*[192]
[171]
[126]

> 67. It has been reported that it is also practiced, and with special solemnity, among the Caboclo descendants of the Coianá Indians in the interior of the forest about three kilometers from S. Joaquim do Coané (mouth of the Uaupés). We heard the description that follows directly from persons who went through the rite, two of them immediately after the initiation, being able not only to photograph one of them with her hair cut off, but even, through the offer of a dress, obtaining the hair. Since the informants belonged to
> [115] ten different tribes (Tukano, Pirá-tapuya, Taryana, Kumãdene, Karapanã, Tuyuka, Desana, Wanana,

/439 cont./

562
881
[115]

/footnote 67 cont./ Bará, and Makú) we were able to verify that the process is the same. Whatever was peculiar in one narration became harmonized in the whole, and perhaps had happened with all, although some might have forgotten to narrate that detail. Moreover, they assured us that in all the tribes the mõ-yõĩse was performed in a similar way.

In a similar way the girl, "when she becomes a young woman," according to the native expression, that is, when she reaches the age of the menses (68)

*[192]
[145]
[841]

68. They call it "sickness of the moon, Mũhĩ-pũ dux"ti." It is one more proof, among the many that we have had, of how the intimate life of each one is known perfectly by the entire community. The first menstruation takes place around 12 years of age, although the child, from her physical development, looks only about ten. For children of both sexes, it is not until some years after the age of puberty that their bodies fill out, that is, it is only after 14 or 15 years of age that the development of the body takes place, and in an almost perceptible way "they become young men and women." With the onset of menstruation, as in the critical age of the woman and puberty for the man, one does not notice abnormal physiological disturbances. Menstruation, like conception, comes regularly throughout the year. Ordinarily the monthly courses are not very abundant and do not last more than one day.

and the first menstruation, a mõsé, comes, must go through the puberty initiation rite.

/439 cont./

562 881 Naturally one can not mark the date for this beforehand. It is likewise understandable that it is practically impossible to perform this rite with an entire group, as in the male initiation, if we consider that they are small povoades or only a maloca.

*[192] /440/ The first menstruation is a dangerous event for the young woman; she may be a victim of Bisíu (VII -- 4, d (5 c) ), Bisíu a'mõsé-re baásamĩ, they say, that is, Bisíu eats the menstruation. As they explain, to eat means that he will come to fecundate her (69).

[177] [797]

69. A singular phenomenon of acculturation or adaptation has been taking place. A girl, for example, is in school at the time of the first menstruation. She will perform the rite perhaps many months later, when she returns to her povoado. She does not wait, according to information from the young women themselves, until the next menstruation comes to perform the rite. As for the rest, she follows exactly what the customs dictate.

[756] (See Lendas do Uaupés /Legends of the U[illegible].) The maiden then will be the first to announce the fact and to request the intervention of the pajé or Komũ (70).

70. One of the young informants asserted that the maiden will be happier if she does this rite with a stronger pajé. Another added that she will be still more so if it has been with a white.

[829]

Besides, the rite is desired by the girl, not only because it gives her freedom for the public sexual relations, but also because, according to her convictions, this rite is going to assure her happy deliveries, as various young women testified. For this reason no maiden would dare to marry without the puberty rite and the mõ-yoãsé (coitus of initiation). Some nubile maiden, especially

/440 cont./
those educated in the schools, might perhaps say, out of shyness (71).

562
881
[115]
[997]

71. The young Tukano Patrícia Vasconcelos, an orphan raised in the Mission of Iauareté, and who, until she was 25 years of age (1956), spent the greater part of her life in the schools of the Salesian Missions, has always denied having submitted to the puberty rite. Although in a conversation on March 9, 1956, apart from any subject, she came out with the statement: "Now the rite of initiation is not done any longer," on many occasions she has affirmed that the natives "all, even people of confession and communion, continue to do all these ancient practices, even the alumni and alumnae of the Mission." In September of 1955 in Taracuá, apropos of the puberty initiation rite, she said literally: -- "Even the Christians do this." Around the fourth or fifth of March of 1956, she related an episode that had happened to her the last time she had been with her relatives in S. Luzia, from September of 1955 to February of 1956, an episode which documents how even from the Christian natives one only slowly manages to eradicate the primitive beliefs. One day she felt somewhat ill (the common discomforts of women). Her uncle Marco, who, although Christian, continues, as pajé, to practice the "blowing" and the other Xamã /shaman/ rites, asked her whether she had already performed the puberty rite. Answering that she had not as yet, her uncle went on: "That is it, my daughter (sic), that is because you have not undergone the rite. Shall we do it now?" She did not accept (she told us). Then the uncle gave her the explanation about the discomfort and about the usefulness of the puberty rite, which we transcribe.

/440 cont./

562 that she has not performed the rite. Nevertheless, she herself
881 will affirm, in agreement with the others, that a woman can not marry without having submitted to these practices.

[115] Patrícia Vasconcelos gave the following explanation of the necessity for the rite, according to the instruction obtained from
*[192] her uncle Marco from S. Luzia, river Papuri. /441/ "The maiden has the nihĩ-koró (vagina?) inverted, and for this reason the child cannot come out. /The final quotation marks are missing./ The pajé or Ko-mũ is going to put it "in the proper position" by means
*[192] of the rite and the coitus. The rite, besides this, makes "the nihĩ-su'ti-ro, uterus, not grow very much, because in this case she would have two children at a time and this is a disgrace for the woman."

This rite is essentially equivalent to the "religious deflora-tion" that other human groups practice. However, due to the previous liberties, although without an official character (rather they must be hidden), which take place even between children and adults, the girl, upon reaching menstruation, already has the hymen ruptured. This, then, is of no importance in the rite. An official coitus, mõ-yoãsé, however, takes place on the first day (and in some povoados also on the following days) with a young man chosen by the girl or by her father (72).

72. The choice of the young man is made by the girl herself in some places, and in others, povoados and malocas, by her father. A young Tukano from Pari-cachoeira declared that she did not like the young man whom her father had chosen. It seems that where there are more Komũã the choice of the executor of the rite is
[835] always by the father of the maiden. If the father is Komũã, he himself will execute the rite with his daughter. We do not know whether this is also an obligation of his. From a Komũã of Juquira, river Uaupés, we found out that he personally did it with his three daughters, as one of them informed

/441 cont./

562
881
[835]

/footnote 72 cont./ us. The services of the pajé or Komũ are always remunerated, as well as those of the mõ-paxkoá; not, however, those of the young man. He is not the future husband, who must belong to another tribe, and the young man of the a"mõsé regularly is of the same tribe as the maiden. A young Makú added that the young man was her obligatory partner at dances, as we were later able to verify.

[115]
[648]

and, on the last day of the rite, with the Komũ or pajé (73).

73. It is to be noted that, according to the descriptions that we obtained, the first coitus is not with the pajé or Komũ, as one might expect, but with the young man.

The concept that the one chosen should be the hero of the group, recognized after a fight with others, as is done among some tribes, has declined. Among the Uaupesinos there is no test to determine the choice; there is only one quality in favor of the chosen one, his youth. Some maidens affirmed that he was a "strong young man." On the rivers visited by the civilized, the latter may be chosen for such a function, and they have done it. For such a choice, we think that not only does the native's instinct of self-interest enter in, but also the white is supposed to have a special nature (74).

[829]

74. Many times and under different circumstances the native has manifested the opinion that the civilized person is endowed with a nature different from that of the Indian. This was the answer that the tuxaua from Paricachoeira, Julio, gave to Pe. João Marchesi, who assured him that he should not fear the

562
881
[829]

/441 cont./

> /footnote 74 cont./ Dohasé (malefice), just as the Missionary did not fear it. "The white is of a different nature," he answered, "for this reason he does not catch our dohasé."

a connection with which might bring benefits for the girl. This opinion was expressed by several young women.

/442/ The girl must then be separated from the inhabitants of the maloca. The maidens do not know (and this seems to us the most probable hypothesis) or did not want to give the reason for this segregation. It is that in these circumstances she is considered dangerous (75),

> 75. It is to be pointed out that she is dangerous not only during the days of the menstruation, but until the rite has been completed. As a matter of fact, the seclusion might take place outside the menstrual period and might last for an entire moon. It seems that only the first three monthly courses are considered dangerous and thus subject to a special rite. If one is to believe the information, during the subsequent menstruations the woman is not obliged to abstain from sexual relations, as the Jews observed.

for the others, once she has been sought by Bisíu.

*[192]

In the regime of the maloca, an enclosure for the young woman, called a'mõ tuxkũ, is made inside of it. In the regime of the povoado, she might perhaps be isolated inside a hut (76).

> 76. In October of 1947 a young Makú from Iauareté retreated to the hut of the pajé himself for the initiation.

/442 cont./

881 During this time, which runs from three days to four weeks,
562 according to the tribe, the young girl will always be shut in, she cannot take a bath, she will go out only when necessary and quickly, trying not to meet anyone.

562 There, while the girl is kept seated on a stool, her hair will
881 be cut by a woman who is called mõ-paxkoá, that is, godmother
302 of initiation (77).
608

77. This godmother will call the girl Yõ-se:ko, my hair-cut; and the maiden will call her Yõõ-ré se:ko, the one who cut me (my hair).

"It is in order to exchange for new hair" was the only explanation. According to information obtained by Koch G. (Z. I. 357), the girl's hair was used for making the masks of Wãx-tĩ. Thus one more element of connection between the puberty rite and the cult of Wãx-tĩ appears.

*[192] The face and especially the body are liberally painted with black dyá-wé dye by another woman, who is likewise considered Paxkoá. Both of the godmothers will receive some gift from the girl and also have a right to her services. The body painting is done as usual, by means of the molongó cylinder (VII-3, b(2) ).

For the haircut they used the sharp teeth of the piranha (Serrasalmo of different species) and other animals. For this reason, wrote Stradelli, the tribes of the Rio Negro, who spoke Nheengatú, when the use of scissors was introduced, called them Piranha. The artifact for the cutting of the hair among the Tukano is called Dõxpóse:ró.

*[192] The Mõ-paxkoá or the mother herself in some tribes pours water with pepper through her nose, using a funnel of the leaf of
/443/ õhoá pũrĩ or yõxsõ-pũri, "in order to become illuminated" (78).

78. "To have the face or skin become illuminated" is an expression that we have heard frequently among the young female informants. It seems

/443 cont./

562
881
[302]
[608]

/footnote 78 cont./ to mean a healthy coloring of the face, and in some cases it seems to us to have the meaning of "illuminátio vultus" /vultus, "look, appearance"/ of the Jews.

"the fat to go from the face, and to remain always young."

When the cutting of the hair and the painting of the face have been done, no person may enter the place of seclusion except the pajé or Ko-mũ, the young man, and the girl's mother (and, lacking the latter, the grandmother or woman on whom the young woman depends), and the Mõ-paxkoá herself. She will fast a great deal; the only foods permitted are beijú, small fish (jacundá, pirámirim), ant, mexkã (manivara /termite queen/), and sirákaro (beijú of tapioca). She uses the manivara (explained Patricia Vasconcelos) "because it does not have fat and the pajé has broken its stinger."

[262]
[192]

She will, moreover, be subjected to painful tests: she will spend long hours seated on the floor and all of the last night in vigil. The pajé or the Ko-mũ, bending over the fire, covers her with a strainer, and he will "blow" over her, while she remains seated, with her head bowed upon her crossed arms.

During this ceremony he brings her a cuia with pepper and gives it to her to smell, "in order for the face to remain always smooth," that is, not to be left early with a wrinkled face. Simultaneously he instructs her concerning the duties of a wife and mother.

[756]
[867]

Some of these instructions by the pajé, as the informants related to us, are: "to have good behavior toward her own mother -- to work hard -- not to do as the others do (?) -- when young to work harder -- to be kind toward the elders, to stay away from the piraboto /bouto/ -- to avoid the great snake because it swallows (that is, fecundates) the woman -- she must prepare food for the man -- work in the clearing -- not to get much sun, because otherwise she will quickly grow old -- to

562 /443 cont./
881 work rapidly -- to return home at once" (79).
[756]
[867]
[177]

79. These recommendations against the piraboto, the great snake, and the peculiar interdiction against eating paraíba fish are indications of a penetration of the Tupi legends in the Uaupesina civilization. As proof and for a better understanding of these recommendations, some legends should be recalled, especially those of Tincuam and those of the Jurupari of the Baré versions, the Taryana of Izi ("Lendas do Uaupés" of the author).

[756] Nevertheless, he will not tell her anything about the origin
[869] of the tribe. After having blown over her with the smoke of his
[833] cigar, pronouncing at the same time a long and unintelligible exorcism, the copulation takes place (80).

80. Among the Tukano, according to what the pajé Marco of S. Luzia, river Papuri, revealed, the purpose of the copulation is to place in position the nihĩ-koró, which is inverted. But ordinarily, in similar rites, it has the symbolism of a union of forces and properties preserving the /this footnote is continued on the next page in the original source/ evils that the rite is aimed at conuring away. Perhaps because of that, both the pajé, or Komũ, and the young man practice copulation on this occasion not only with the girl, but also with her mother and her paxkoá, as the several informants of the Uaupés stated.

562 /444/
881 The rite ends with a bath of the dawn, Wáwa-'kāsé, which
783 makes us think of the bath of the dawn of the men at the feast of
*[192] Wāx-tĩ (VII-4, e (2 b); cf. Legend of the seizure of the mĩrĩã instruments). A procession of these women who have been associated with the rite, perhaps also other close relatives of the
*[192] maiden, is organized. In front goes the pajé, smoking the path
[776] with a piece of cooking pot, Ki-pu-tõ koró, with hot coals, pitch /Port. breu, a kind of resin/, and pepper, and he will exorcise the river, throwing in it the contents of the pot, in order to "chase away the beast that is in the river" (81).

81. They explained that this beast was the piraboto /bouto/. Now such a mammal does not exist in the upper Uaupés, much less in the small igarapés. We are thus confronted with a transplanting of beliefs and legends.

562
881 The mother pushes the daughter into the water, and everyone will
785 take a bath (82).

82. Wallace (o. c.) further brings in here a detail which was not confirmed to us. It is the following: "When this time has passed (one month), the relatives and friends of the parents, who are invited for this, gather there on the designated day, each one of them bringing a piece of cipo (flexible climber). The girl is then taken outside the house, completely naked, to the center of the group, which is in the yard in front of the dwelling. Each one of those present on this occasion is obliged to give her five or six strong lashes with the cipo on the chest and on the back, crosswise, until she falls prostrate, unconscious, this sometimes resulting in her death; if,

562 /444 cont./
881
785

/footnote 82 cont./ however, she recovers her spirits, the operation is further repeated some four or five times with an interval of six hours. It is considered a great offense to the parents if the blows are not given with much force. During this test, all kinds of meats and fish are prepared in huge pots. Following that, those present dip into these the cipos, which immediately afterwards are given to the girl to lick. From then on she will be able to eat everything she wishes. And from this moment on she is considered a woman. She is thus ready for marriage" (o. c. 634).

[184]

There perhaps is confusion with what happens among the tribes of the Içana and among the Kubewana of the upper Uaupés on the occasion of the dabacuris. According to what the Kubewana of the Ambaíba maloca, mouth of the Querari, told us, when the father of a youth decides to look for a wife for his son, he takes advantage of the dabacuri and applies to the chosen girl three lashes with the adabi (VII-4, e (2b) ). If she stoutly endures the blows, it is an indication that she is already mature for dealing with the responsibilities of a home.

[584]

562
881
527
171
*[192]

In some Arwake tribes a caxiri is held later; it is the feast called Karyamã (83),

83. Karyamã is the name of the type of beijú prescribed for this circumstance.

which may last as long as four days (it seems that it is the same number of days as the seclusion of the girl). Then she will dance with everyone, including the pajé, and will smoke with them on the cigar made of banana leaves and tobacco. It seems that on

562 /444 cont./
881 this /445/ occasion there are games and entertainments among the
527 young individuals of the maloca (84).
171

84. One of the informants spoke to us about the "game of the lemon" for this circumstance. We heard about a Makú girl, Teresa by name, who on this occasion ran away with the youth, with whom she spent a few days. It seems that this is a matter of a conventional flight, because in reality they withdrew to a hut about 20 or 30 meters from the maloca.

562
881 Abstention from work for some days is verified; for example,
784 she will not light the fire, "in order not to be burned." Then the young woman resumes her normal life; she will work in the clearing and in the house with her mother. For another month, accord-
[115] ing to information by Dorotéia Brito, she may not taste salt or eat either piraíba or the flesh of large animals, "in order not to ruin the teeth" (85).

85. Concerning a young Bará, sister-in-law of a Karapanã, in whose maloca, on the headwaters of the Áua, she submitted to the puberty rite, we were able to observe that she did in fact subject herself to a severe alimental diet, not accepting our salted foods, nourishing herself with beijú, tapioca, and fruits. We saw her, however, approach the fire, stir it up, and put some green bananas on to roast for herself.

881 During the following menstruation the rite of the seclusion of
562 the young woman is renewed. This second stage of the puberty
*[192] initiation is called Mahã-mĩ-nõsé. It is identical to the first one,

562 /445 cont./
881 without the cutting of the hair, however. At the following men-
*[192] struation, Məhẽka-nĩsé, the practices of the puberty initiation are done again. This time, however, there is no segregation of the young woman, and all the acts take place with more solemnity, in view of everybody.

c) Nomenclature of kinship and of affinity.

1) Kinship.

611 Among the tribes of the Uaupés it is generation /Port. geração,
[601] generation, procreation, descent/ that establishes true kinship. They recognize it not only between ancestors (ñõx-kãkõra, grandparents) and descendants (marĩ-bero-maxsã), but also in the collateral line. And kinship imposes two very grave obligations, that is, that of defense (vengeance) and that of matrimonial interdiction.

602 The components of the same tribe, although born and living
619 in different malocas or povoados, are considered axkawerẽra (86),
[601]
[178]

> 86. The term axkawerẽra is beginning to be extended also to the individuals of another tribe connected by ties of affinity and of blood.

a term translated by those who speak Portuguese by "parentes" /relatives/ and sometimes also by "irmãos" /brothers/. For this reason we are of the opinion (VIII-2, a) that initially the local group coincided with the family.

*192 Those of another tribe, even those connected by some degree
609 of affinity, or consanguinity, and also the civilized are all axpẽra (87),

> 87. Axpẽra, properly speaking, is the plural of the pronoun and adjective axpĩ (masculine) and axpego, feminine, other.

that is strangers, foreigners.

602 /446/
619 True kinship, therefore, exists only between the individuals of the same tribe, and with all of them.

2) Affinity.

582 Although strict tribal exogamy is in force, marriage establishes between the children and the relatives of both their father and their mother relations of affinity, similar to those of kinship (not, however, the obligations of vengeance and of matrimonial interdiction) and with a special nomenclature, although not as rich in terms as that of kinship.

582 Since "preferential marriage" is in force (usually with the first cousins of another tribe), that is, with the first cousins on
601 the mother's side, or baxsú-kãra (Masc. sing. baxsukõ, Fem. sing.
602 baxsuko), they admit the relation of affinity of the baxsukãra among themselves, as well as between the parents and the class of the "possible spouses" of the children. There are appropriate terms for these "possible spouses," "possible parents-in-law," and "possible children-in-law."

601 There might perhaps not even exist a term to express the relation of affinity; then they use a term for the relation of kin-
602 ship. For example, the native idioms of the Uaupés do not have terms corresponding to stepfather, stepmother, stepson, stepdaughter. In indirect discourse they describe the relation that exists, that is, one is called: "husband of my mother" (stepfather), "wife of my father" (stepmother), "son or daughter of my husband, or of my wife" (stepson, stepdaughter). And in direct discourse one is called by the name of the relation (uncle, grandfather, etc.), and they will call the stepchildren "children."

601 There are indeed terms, although also classificatory, that is, applicable to a whole class of individuals, corresponding to son-in-law and brother-in-law, but used almost solely for indirect discourse. For direct discourse they prefer the terms of social kinship; of these terms we shall indicate only the most common

/446 cont./

601 one, that is, the one that occurs in the generality of the cases. For example, ordinarily the father-in-law, "ma-ñĩx-kã," belongs to the class of the "maternal uncles" and will be called mẽx-kã. As an exception he might be in the class of the "cousins" (meõ-kõ or tẽ-nõ) or of the grandparents (ñõx-kã) and would then be called by these terms, and not by mẽx-kã.

Likewise the "son-in-law," buhí, in direct discourse is called pakhõ by the father-in-law, and para-maxkõ by the mother-in-law, because ordinarily he is one of the nephews (whose mother is "sister" of the father-in-law, and the father, brother of the mother-in-law).

In the same way the "brother-in-law," pẽ-ñã, as a rule is one of the baxsukãra or cousins, and thus in direct discourse will be called a cousin, meõ-kõ (or tẽ-ñõ, bridegroom). As an exception he might belong to the class of the "uncles," mẽx-kã, or of the "grandparents," ñõx-kã. We shall not /447/ indicate, for reasons of brevity, those other terms which are already listed among those of kinship.

N.B. The wife in indirect discourse uses a special term, nihĩ-so-paxkõ, to designate the brothers-in-law who are mamí of the "Gens" of her husband. Whereas the term nihĩ-so-paxko (pl. nihĩ-so-paxko-nũ'mya) is the equivalent of "concunhada" /co-sister-in-law," wife of husband's brother/.

3) Classificatory nomenclature.

The kinship nomenclature used not only by the Tukano, but also by the other tribes of the Uaupés, is essentially a classificatory nomenclature. With more accuracy, it is a matter of kinship which could be qualified as social or tribal, rather than as personal relations (88).

88. We began by verifying several times that a youth would call some individual of his tribe his "uncle," "mẽẽ," when, through later questioning, the latter proved not to be a brother of his father.

/447 cont./

601 The only terms actually individualizing seem to be those which correspond to father, "pax-kõ," and mother, "paxkõ" (89).

89. That means, then, that "pai" /father/ and "mãe" /mother/ are the only kinship terms in the Portuguese language that have perfect equivalents in Tukano and in the other native languages of the Uaupés. All the rest, whether of consanguinity (such as grandfather, grandmother, brother, sister, uncle, cousin, nephew, etc.) or of affinity (father-in-law, son-in-law, brother-in-law, etc.), do not have a precise translation in these native idioms. To the wife, for example, "ma-ĩĩ-kõ," which we have translated as "sogro" /father-in-law/, is not only the father of her husband; it is all the men of the tribe of the husband who make up the category of those whom the latter calls "mẽẽ" (uncle). The very terms corresponding to "son," "max-kõ," "daughter," "max-kõ," are also applied to a whole class of persons.

which are applied to one's own genitors in the strict sense. All the other kinship terms, such as brother, uncle, brother-in-law, etc., are applied to a class of individuals, whether they might be connected to one another by a bond of consanguinity or affinity, or not. It is enough that they are of the same tribe and of the same generation (even though with a great difference in age) as one who is really a brother, uncle, brother-in-law, etc.

For example, within the tribe, all the individuals of the male sex in one's own generation are called mamí or axkabí (they translated them into Portuguese as "irmão" /brother/). They call "mẽẽ," uncle, those of their father's generation, that is, the brothers of their own father (that is, all the mamí or axkabí of

/447 cont./

601 their own father) and are called by them "mẽ-kõ," nephew. And those of their grandparents' generation they call grandfather, "pax-kõ-ro," and are called by them "paramĩ," grandchildren, or max-kõ-kõ, "child-of-my-child."

/448/ As for the "brothers," if they are such in the strict sense (that is, children of the same father and the same mother), the older one is called mamĩ (they translate it "bigger brother") and the younger, axkabĩ ("smaller brother").

When it is a matter of "tribal brother," that is, of the individuals of the tribe who make up one and the same generation or layer, the terms mamĩ and axkabĩ are independent of age; they are, instead, a function of the group. That is, all those of the more important "Gens" (see VIII-3, c /see VIII-3, d/) (we use the Latin term "gens" in order to designate the subdivisions of the tribe or sib of the American Ethnologists), whatever their ages might be, are mamĩ; all those of the inferior "Gens" are axkabĩ. That is, an entire "Gens" (without taking into account the ages of its members) is called mamĩ or axkabĩ of another.

Let us imagine the case of the individual X, who has five children, successively A, B, C, D, E; of which B, C, D are of the male sex, and A, E of the female sex. It is to be observed: 1st, that five is actually the average number of children, according to our "anthropometric file cards"; 2nd, that they wish to have children of both sexes, and that an older daughter is a valuable helper of the mother in raising the younger children. The older daughter A will be mamyõ of all the brothers and sisters; the younger daughter E will likewise be axkabyõ of all. If we consider the son C, he will be mamĩ of D and E and axkabĩ of A and B.

[126] [162]

Let us further suppose that the brothers B, C, D marry (90)

[582] [611]

90. A and E will obligatorily marry husbands, baxsukõ, from another tribe; their children, however, do not belong to tribe X (grandfather), but to that of the father himself. The children of A and E

/448 cont./

601

/footnote 90 cont./ (and all the young people of their tribe and layer) make up in turn the class of the baxsukãra or "possible brides and bridegrooms" (that is, of those who can be taken as spouses) of the children of B, C, and D.

and likewise come to have five children each; the children of B: Ba, Bb, Bc, Bd, Be, those of C: Ca, Cb, Cc, Cd, Ce, those of D: Da, Db, Dc, Dd, De.

We would have the following tree:

Genealogical Tree

/449/ a) X in this tree, in relation to the first generation, is pax-kõ, father; in relation to those of the second generation he is pax-kõ-Ro (literally old-father, that is, grandfather).

b) The first generation A, B, C, D, E among themselves are mamí, mamyó, axkabí, axkabyó, as we saw above.

In relation to X, they will be: "max-kõ," son, or "max-kõ," daughter (in the plural "põra," sons, daughters).

Relative to the second generation, they are "pax-kõ," father, or "mẽẽ," uncle; that is, B, for example, is "pax-kõ" for those of the series B, and "mẽẽ" for those of the series C and D; these

/449 cont./

601 will call B "mẽẽ," and B will call them "mekõ," nephew (N.B. He will call the niece "max-kõ," daughter, and the niece will call him "mã-gã," because "mẽẽ" is a term used by the men, and "mã-gã" only by the women).

c) In the second generation (Ba, Bb, Bc, Bd, Be, Ca, Cb, Cc, Cd, Ce, Da, Db, Dc, Dd, De), they distinguish one another among themselves with mamí, mamyó, axkabí, axkabyó, according to their ages, within the same series. Independently of the ages, however, those of series B are all mamí (or mamyó if a woman) for those of the series C and D, because B is mamí of C and D. Those of the series D are all axkabí (or axkabyó, being a woman) for those of the series B and C, without taking into account the ages of the individuals, because D is axkabí of B and C. Those of the series C, also independently of their ages, are mamí for those of the series D, and axkabí for those of the series B.

In relation to X, all are called "paramẽra," grandchildren (paramẽra is plural; Masc. sing. paramaí; F. sing. paramyõ). It is to be noted that all the men of the generation of X (his mamí or axkabí) are considered pax-kõ-Ro, grandparents, of the second generation.

4) Variations in the nomenclature.

d) /sic/ The nomenclature of kinship and affinity, as will be seen later, varies according to:

1st. -- The relationships of consanguinity or affinity between the persons named and naming;

2nd. -- The hierarchical position of the "Gens" to which the persons named and naming belong;

/449 cont./

601

3rd. -- The sex of the persons naming and named (the letter m indicates that the term is used exclusively by persons of the male sex; f, only by persons of the female sex; m, f, when by both sexes).

4th. -- The social age, or, better, the generation of the one who names.

/450/ 5th. -- There are, in some cases, different terms for direct discourse (appelative or vocative), that is, between the two relatives; or for indirect discourse (designative or nominative), that is, between the relative who speaks, referring to his relative, and a third person. For example, "axkabí" is the term that means "smaller brother" (younger); nevertheless, in direct discourse, that is, in calling the younger brother, the older one will say: "a'tyá nĩhỹã" (come here, nĩhỹa, dear brother /Port. mano/). Likewise axkabyó means "smaller sister" (younger); nevertheless, the older one calls her: "a'tyá nũmyó" (come here, nũmyó, dear sister /Port. mana/).

6th. -- In many cases, speaking with someone about some relative (indirect discourse), the relation of consanguinity or of affinity is described; for this reason we also record the descriptive nomenclature.

When there is no proper term to indicate the relation of kinship and especially of affinity, one has recourse to the descriptive term. Many individuals, either out of ignorance or for facilitation, have recourse to the descriptive terms even when there are proper or adequate terms.

From these concepts arose a nomenclature that is quite complex and richer in terms than that of the Portuguese language (or of the European customs), although it does not attain perfect logical rigor.

/450 cont./

601

5) The terms of kinship and affinity

(according to the Tukano customs)

Prior observations:

1st. -- According to the native pronunciation, the terms seem to us to be compound (cf. Observações Gramaticais, da língua Daxseyé ou Tukano /Gramatical Observations of the Daxseyé or Tucano language/); for this reason we separate with a hyphen (-) the various elements that make up the words.

2nd. -- Besides the descriptive (or explicative) term, we shall give the nominative (indirect or designative), that is, when in conversation with a third person one wants to indicate the relative (ex. "N. is my cousin"), and the vocative term (direct or appelative), that is, when one calls the relative (ex. "O cousin, come here").

3rd. -- The Tukano tribe (like all those of the Uaupés in general) is divided into groups (cf. IV -- 2, a (2 b) ); it is these that we denoncinate with the Latin term "Gens."

4th. -- They did not know how to explain to us why they call the "cousin" of the same tribe mamí max-kõ or axkabí max-kõ, that is, "son of the brother." They only answered that it is the custom. There are confused, then, the /451/ descriptive terms of "cousin" and "nephew." It is true that in practice they never use the term described for the "cousins."

5th. -- The nomenclature below is in force in the Tukano tribe and does not always correspond to the similar term (with regard to the radical) in another tribe of sister language.

593
601

6th. -- The spouses call each other mãã-ba (you) when they do not have any children. After the birth of the first son (or daughter) and until the death of this one, they call each other, respectively: "N (name of the child) pax-kõ or N. pax-ko, that is, "Father (or mother) of N." When the first child dies, they say the name of the next one. If they no longer have any children, they go back to calling each other mãã-ba.

| Kinship | Descriptive Term | Descriptive Term | Descriptive Term | |
|---|---|---|---|---|
| Father | | Pax-kõ (pl. pax-kõ-s'ömõa) | yõõ pax-kõ (my father) | m,f |

91. According to the information obtained, the term piri is recent and used in all the native languages of the Brazilian Uaupés. It seems to us that it is a corruption of the Portuguese term "primo" /cousin/, which, due to faulty pronunciation, they customarily distort into "pirimo." The following are the arguments that authorize this opinion: 1st, some of the informants do not know the term piri; still more numerous are those who do not know piri-mo or piri-mõ and piri-ma; 2nd, of those who have indicated these terms, no one was able to indicate the plural of piri-mo and of piri-ma, and rare were those who presented that of piri; 3rd, according to the spirit of the Tukano language, piri-mo should be the feminine form.

This acceptance of terms from another language is easy. For example, Antônio Barreto (Tukano) informed us that one of his maternal aunts (mã-gõ), who in her first marriage had a Tukano (mẽẽ of the informant) for a husband, married a man from the Yebá-maxsã tribe in her second marriage. Not being able to call him "mẽẽ," of course, he called his new uncle "yõ-ti," a term unknown to the other informants and which in all probability is a corruption of the Portuguese "tio" /uncle/ (yõ-ti would be an abbreviation of yõõ tio, my uncle).

| | c) married into a tribe different from that of the "brides and grooms" | syõ or buhi-bako | yõõ piri-ma | f |
| Co-brother-in-law | yõõ nõ'mõ pẽ-ñã (my wife's brother-in-law) | pesu (pe'su) (pl. pesu-s'ömõa) | | m |
| | yõõ mã-ra-põ buhi-bakõ (my husband's brother-in-law) | | | f |
| Co-sister-in-law | yõõ nõ'mõ buhi-bako (my wife's sister-in-law) | | | m |
| | yõõ mã-ra-põ syõ (my husband's sister-in-law) | nihi-so-paxko (pl. + sa-nũ'mya) | | f |

92. Some mentioned the term "sêi-mõ (F. sea-mõ) as equivalent to brother-in-law from a tribe different from that of the baxsukãra. They do not know, however, what the plural form would be. According to another informant, "sêi-mõ" would be a term taken from the Nheengatu language and equivalent to "compatriot," i.e., member of the same tribe or nation.

/458/

619 2) Local or Territorial Group.

628 a) Local group.

The natives of the Uaupés demonstrate a great spirit of sociability. Tribes differing in origin and in language live a short distance from each other, connected by the ties of exogamous marriage, the cordiality (93)

> 93. It seems that we can advance this statement, even though knowing that not only individuals bear resentment and harbor desires for vengeance against other individuals, even of their own tribe, but recalling besides that there are groups hostile toward other groups of the same tribe. The vengeances and fights, especially on the occasions of the caxiri, reveal these enmities and aversions that the natives know how to hide under the mask of an external cordiality.

in their social relations, inviting each other reciprocally for the great feasts and maintaining the tradition of generous hospitality. Moreover, there are found today in one and the same povoado individuals or families from another tribe, almost always in order to facilitate the application of exogamy. One and the same tribe, as was seen (Ch. III), is found scattered along the rivers in a vast territory, subdivided into groups that are alternated with those of another tribe.

614 592 621 Originally each group or Gens lived in a community, in a large dwelling called maloca, Wi'ĩ pahirĩwi, which means great house, collective dwelling. Besides the advantages of an economic nature, this would facilitate defense against animals and human beings.

[177] With the advance of civilization, security has grown and increased, and, on the other hand, likewise the demands for comfort. For this reason, the primitive malocas have been disappearing and are succeeded by the povoados or groupings of family residences.

[178]

4: Silva--698 M-4,5 (1947-1958) 1962 SQ19 Tucano SQ19

/458 cont./

621
592
614

Not rarely the dissension within a group provokes schisms, bringing as a result the departure of the dissidents, who go to build a new maloca or povoado farther away.

It is probable that originally each maloca was, in a strict sense, a family, in which the sons remained beside the father, and under his direction, even after they were married. We thus conceive the local group as being originally an agnatic community. There is, as a matter of fact, an expression current among the natives: "I am a person of N," and he says the name of the tuxaua himself.

[178] At present the two forms of local grouping are found: either everyone lives under one and the same roof, the maloca; or each family has its own residence, the povoados resulting. It is to be noted, however, that there are povoados only on the banks of the large rivers and through the influence and under the protection of the catechesis.

[594] /459/ In one form or another, however, the families constitute distinct groups and, what is even more remarkable in the regime of the maloca, autonomous ones. One understands the reason for this autonomy: there is in the tribes of the Uaupés a fusion of the two "ateliers," the masculine one (of fishing) and the feminine one (tiller), which complement each other and are sufficient for the maintenance of the family.

b) The social organization.

The gregarious life that the forest dwellers live demands the observance of certain norms establishing the relations among the individuals, or a certain social organization is necessary.

These relationships are, besides, quite natural, due to the very simplicity of the life they lead; and, on the other hand, are religiously observed. They are all customary, that is, practiced by custom, and it can not be learned whether they were given by a legislator, Wãx-tĩ, as the legends teach; or whether, on the contrary, they were customs introduced naturally and which experience approved, established, and made inviolable. Or whether

/459 cont./

621 perhaps one should distinguish between the different relations,
592 some of which, for example, that of exogamous marriage, might
614 have had a positive origin, and the others might be of consuetudinary origin.

Even in small groups, although perfectly and smoothly harmonized, the distinction of social assemblages, with their duties, their characteristic attributes, their peculiar directives, is easily perceptible. In each local group we can distinguish four categories of individuals: 1st, the tuxáua; 2nd, the Komũã (elders); 3rd, the men (more or less scaled by their ages and experience); 4th, the women and children.

These different categories, however, are closely connected to one another by unifying and stabilizing principles: 1st, a common house, the regime of the maloca, which, at least in the beginning, was in force as a general norm and without exception; 2nd, the provisions in common: a custom that is maintained in the maloca regime and, in a more attenuated way, also in the povoado system; 3rd, the common inheritance of the maloca, of zones for fishing and hunting, and of everything that is the property of the group; 4th, the fear of the spirits, with great unitive power, corresponding to the native mentality; 5th, vengeance, which the group will exercise against the one suspected of having caused the death of one of its members.

A further word about the first two categories of individuals is advisable.

c) "Bũxkõrá-kurá" -- (Council of elders).

622 Watching over the observance of the customs and the feasts is
623 a Council of elders, the Bũxkõrá-kurá (called Moacaretá in Nheengatú). It is made up of the Tuxaua, who is its hereditary president and also speaker and executor of its decisions, the Pajé, and two or three more /460/ men of greater ascendancy. These men are the Komũã (pl. of Komũ), as the natives express themselves, whom we saw appear (VII - 2, e (3) ) as "initiates" and, up to a certain point, helping the pajé.

/460 cont./

623 "The elders desire it this way" is an expression that is frequently heard when one asks the native the reason for some practice that causes us surprise. This expression is the manifestation of an impersonal will (the name of some of the components, as responsible for the decision, is never revealed), which is always
*[192] respected. This term "elder," "Bũxkõ," applied to the Komũã, is indicative of authority rather than of age, because one sees individuals of perhaps 30 years of age or a little more making up part of the Council.

*[192] The Council acts as electoral college of the Tuxaua, Wyõra bexsesé, and as a tribunal which passes judgment on the omissions and transgressions of the customs.

[115] Vice versa, as follows from the Tukano narrator Antônio Barreto, the choice of the members of the Council falls to the Tuxaua. The zeal of someone from the maloca with regard to the interests of the group, his love for the traditions, his facility in remembering them, are, it seems, the qualities required to be admitted among the Komũã. It is nevertheless necessary for him to be presented by some member of the council, perhaps the candidate's father himself. His admission, however, depends on the favorable opinion of the Council, after the candidate has given proofs of his aptitude, for example, repeating the legends of the tribe, or the songs of the dances, or showing the efficacy of his "blowings." For this a prolonged course at the school of the old Komũã has been necessary, as we saw above (VII - 2, e (3) ).

The title of Komũã is a lifelong one and procures for them the
[756] respect of their contributors. The Komũã, moreover, practice their
[755] activities as "blowers," especially at the delivery and at the giving of the names, as instructors at the puberty rites, and as helpers of the Pajé in treating the sick. The meetings are frequent. The
[115] Tukano Patrícia Vasconcelos assured us that sometimes they meet almost every night.

/460 cont./

622 d) "Wyógõ" or Tuxáua (local chief).

*[192] In each maloca or povoado there is a chief or Tuxaua, in Tukano Wyógõ (or Vyógõ), a term that is probably derived from Wi'í, house (94).

[648] 94. The title of Capitão was granted, at the time of the Capitanias, by the provincial Government to the Tuxauas, as a stimulus for attracting them toward contact with the civilized and to take advantage of their influence in order to obtain Indians for the services of public utility. At certain times it went so far as to give them a military uniform, sword, and a monthly salary.

/461/ Originally he would be the head of the family, continuing his paternal power or domestic authority. His is an authority directive and as guardian over the local group of families.

Besides his power and his obligations, as husband and father of his family (and he will do all the tasks, like any other head of a family), it is incumbent upon him to watch over the execution of the traditional laws, to preside and direct the social functions. It falls to him, then, to supervise the construction of the maloca, the cleaning of the adjacent grounds, of the landing place, and of the roads giving access to it (tasks sometimes performed by the women of the maloca under the supervision of the chief's wife), the general and collective fishing, as well as the religious and profane feasts and the periodic dances.

He is the representative of the local group in its relations with other groups, with other tribes, or with the civilized. He stipulates the conditions and, afterwards, chooses and sends the men requested for the services of the whites. He is always obeyed, and, perhaps for this reason, he never uses an imperious, threatening tone.

/461 cont./

622 [595] Nevertheless he does not acquire from his position exemption from work or the right to demand tribute or payment in kind or in work from the other components (cf. Note 102 below /see p. 710 /) or to have more wives (95).

95. We have already noted the polygamy of other times (VIII-1, a (6) ). Still more recently there have been cited cases (information by Pe. João Marchesi) in which, besides their wife, they kept as a concubine some woman who had become widowed. As well as taking a second wife, because "his wife was sick, and he wanted to have children." There is also recalled the case of one, with a healthy wife and two daughters, who took another wife, impelled by the desire to have a male child, "so that his family will not decay with him." As a matter of fact, after the birth of a male child, he sent back its mother. We could not find out whether this attitude was spontaneous or not.

The power of the Wyógõ depends not so much on custom as on his personal influence, and this can come to him from several qualities: oratorical resources, prudence, technical skill, intelligence, knowledge of several languages (Portuguese, Nheengátú, etc.).

[178] Formerly they were invested with greater power (96).

[175] [648]

96. It seems that the same can be said of a more distant past. The reports of the eighteenth century (Pe. Noronha, Ribeiro Sampaio, Rodrigues Ferreira) show them as principals moving large groups, founding new places at the invitation of the civilized, organizing among themselves defensive and offensive alliances. Hence the interest of the Governadores in having them as allies, granting them the title

/461 cont./

622
175
648

/footnote 96 cont./ of Capitão. Caboquena, Ajuricaba, Camanaus, Comandre, Carunamá, Cabacabari, etc. became famous. During the first years, as well as in the middle of the last century, the Governador, /this footnote is continued on the next page in the original source/ as well as the Diretores Gerais dos Indios /General Directors of the Indians/, proceeded with the official appointment of several Principals on the river Uaupés itself, and they took advantage of their authority over the Indians. We found, for example, in the "Archivo do Amazonas," Vol. 1, n. 2, p. 29, the Diretores Gerais dos Indios do Gram-Pará, Brigadeiro Honorário /Honorary Brigadier/ João Henrique de Mattos and the Tenente Coronel Graduado /Graduate Lieutenant-Colonel/ Albino dos Santos Pereira, as well as the Encarregado dos Indios do Rio Uaupés /Agent for the Indians of the Uaupés River/ Capitão Francisco Gonçalves Pinheiro, appointing Tuxauas on the Uaupés River:

1848 -- 1. Alexandre, Principal of Carurú-cachoeira, from the Wanana tribe.
2. Domingos Dias dos Santos, Tukano, Principal of Carurú-rapecuma.
3. João de Mattos (son of the late Excellent Tuxaua Raymundo José), Tukano, Principal of S. Joaquim.
4. Calisto Antonio, Taryana, Principal of Iauareté.

1850 -- 5. Manuel Calisto, Wanana, son of the late Tuxaua Alexandre, Principal of Carurú-cachoeira.

District of Marabitanas:

6. The Indian Mathias Antonio, Principal of S. Francisco.
7. The Indian João Bernardo, Principal of Tucurimachi.
8. The Indian Angelo José, principal of Cuyiari.

/461 cont./

622
175
648

/Footnote 96 cont./

Principals of the river Içana:

9. The Indian Silverio Antonio of Tunuí.

1851 -- 10. The Indian Alexandre Correia of S. Bento.

They mention names of Tuxauas known, respected, and obeyed, not only in the /462/ respective malocas or povoados, but also in more distant malocas and povoados. For example, still at the beginning of this century, José of Pari-cachoeira (father of Julio and grandfather of Mandú, the present local chief, 1959) among the Tukano, respected and feared on the entire river Tiquié, and Leopoldino of Iauareté among the Taryana.

One understands the need of greater power, the malocas having a large population and being more isolated than they are today. The natural evolution that the tribe follows explains to us the weakening of the power of the Tuxaua. Natives who spend several years at the Mission, where they complete a primary course, learn Portuguese, to read, to write, to count, and a trade, and are guided toward civilization, and the civilized, who are advancing and who many times have direct relations with the Indians, are other such events that start undermining the authority of the native chief. The Chief of the SPI (Serviço de Proteção aos Indios /Service of Protection for the Indians/) and the Missionary are hereditary tuxauas, by the very concept that the Indian has of the white.

[138]
[177]
[829]

622
592
*[192]

The wife of the tuxaua also enjoys a certain primacy and authority among the other women, and at times they call her Wyógo. She has precedence at the social receptions (97)

[574]

97. Even when she receives some civilized visitor, she is the first and sometimes the only woman who comes to provide for his needs.

592 /462 cont./
622 and directs the collective work of the women, especially the
574 preparations for the caxiris and dabacuris. It is incumbent on her to greet and to thank, in the name of the women, the guests
[535] /463/ who came to the feast in the maloca. In certain dances
*[192] she has the distinctive role of soloist, Yõhõgõ or Nõ'mõ-Bayá (VII - 4, e (2 a 2) ). /Footnote 98 apparently belongs here, although the index number is missing./

[123] 98. At a great feast which we had the opportunity to attend among the Wanana of Carurú-cachoeira, river Uaupés, we saw the wife of the Tuxaua in one of the intervals of the dances approach the group of women who were seated and rebuke them. We suppose that it might have been due to the women's indecision in appearing for the preceding dance number.

797 On the occasion of the death of the Tuxaua of Parí-cachoeira,
622 the Tukano Júlio, on July 5, 1954, we had the opportunity to see some documents carefully kept by the deceased and his family, that is, a manuscript with the appointment successively of his great-grandfather, João Silgueira, and grandfather, Manoel Silgueira, for the position of Capitão of Parí-cachoeira, appointment made by the Capuchin Missionary Frei Venâncio Zilocchi, on December 5, 1882, with the visa, dated August 7, 1923, of Padre João Bálzola, Salesian. Another letter of appointment with printed heading, signed by the Capuchin Frei Gesualdo Marchetti, on May 30, 1885, also with the visa of Padre João Bálzola, of August 7, 1923. The following are the contents of these documents:

I, below signed, Frei Venancio Zilocchi, Apostolic Franciscan Missionary of the Rio Tiquih., tributary of the Rio Uaupés, and Director of the Missions established on it, appoint Capitão of the Mission of S. Pedro d'Alcantara the Senhor principal of the said Mission, João Silgueira, and in his absence the Older

/463 cont./

797
622

son, Manoel Silgueira, imposing on him the following conditions:

1st. -- To care for the Chapel and the Missionary's house.

2nd. -- To oblige the residents of the said Mission to finish making the houses started, even to make those which they have not had made.

3rd. -- To divide the Mission into streets, during the building of the houses.

4th. -- Every three months, to send (if the Missionary P. is not present) a resident from here to where the Padre is, in order to report the deaths, births, and the usual news during the said three months.

5th. -- To oblige everyone to make their clearings for their own maintenance, and in order to provide for their necessities.

[567]

6th. -- To forbid absolutely the sale of the Macú natives, as well as to impede, in any way possible, the so-called pega-pega /Port. pega, fetters for fugitive slaves/.

/464/ 7th. -- Finally, in case of necessity, to provide people for public service, that is to say, when the Missionary arrives, he must give the people whom he wants for his passage.

In the firm conviction that the said Sr. Principal will fulfill the conditions indicated above, I pass to him this document, in the Mission of S. Pedro d'Alcantara on the fifth day of the month of December of 1882.

Sgd. Frei Venancio Zilocchi
Miss. Ap. Fno.

To Capitão João Silgueira, Sr. Principal of the Mission of S. Pedro d'Alcantara (a lapis).

FRIAR GESUALDO MARCHETTI

of the order of the Minor Observantists of St. Francis, Prefect of the Missions, etc. Considering the good qualities and good behavior of the neophyte João Silgueira -- we appoint him Capitão of the Mission of S. Pedro d'Alcantara, having to fulfill the orders of the respective Rendo Missionário or of the nearest one.

This appointment will last one year, when the year is finished the above-mentioned Missionary will again confirm it, not having any reasons to the contrary.

Hospice of the Propaganda Fide in Manaus May 30, 1885 (Prefecture of the Missions. Provincia do Amazonas, Fr. Gesualdo Marchetti)

(Manuscript) The below signed, in view of the death of Capitão João Paicana Silgueira of the Mission of S. Pedro d'Alcantara, passes the above-mentioned patent to the Indian Manoel Iépassonia, legitimate son of the above-mentioned Capitão.

With faith in what I sign

Mission of S. Pedro d'Alcantara of Pary Cachoeira January 29, 1886

Frei Matheus Canioni

Miss. Apost. Franc.

(a lapis) Visa Pe. João Bálzola August 7, 1923

622 e) The succession.

The tuxauaship has always been a lifelong position and title, and the deposition of one and election of another has never been reported. The latter happened only after the death (perhaps caused) of the former tuxáua. In case of recognized /465/ disability, he still continues to retain the title, and his oldest son will exercise the functions in the meantime.

/465 cont./

622 [115] Rules establishing the succession of the tuxaua or his choice are not known. The only strict norm would perhaps be the observance of the hierarchy of the subdivisions in the povoados in which there are families belonging to various subtribes (IV 2, a (2) ), according to the information by Patrícia Vasconcelos and Antônio Barreto. The democratic-aristocratic spirit of these small groups demands this. A very natural process, with such a spirit, is the succession of the father by the son, especially the first-born, a process which is verified in the greater frequency of the cases. This event was determined by the ascendancy, perhaps great, of the father, as well as the circumstance that the son, while the father was alive, often helped him or replaced him on many occasions.

The recognized ascendancy, the personal qualities, and among them regard for the traditions and respect for the authorities, are what point to the son as a candidate. Or, in the absence or the lack of aptitude of the latter, anyone else, preferably from the family of the deceased Tuxaua.

Violation of the old customs and disobedience toward the father have not infrequently been the cause of passing over some young man, otherwise well qualified, to succeed his own father in the office of tuxaua.

[623] Such a choice is one of the principal functions of the council of Elders, the Būxkōrá-Kurá (99),

[115]

99. On the occasion of the death of the Tukano tuxaua of Parí-cachoeira, Julio Silgueira, on July 5, 1954, the Council of elders remained for three days deliberating on the qualities and merits of Mandu, the eldest son of the deceased chief, before recognizing him as the successor.

according to the information obtained from some tuxauas (Júlio, Tukano of Pari-cachoeira; Henrique Resende, Tuyuka of the Iaísa igarapé; Fernando, Yurupari of S. Ana on the river Içana; Mandú, Kumãdene of Urubucuara; José, Huhúdeni of Uapuim-cachoeira on the river Aiarí).

/465 cont./

562 The social power of the tuxaua being thus attenuated and
622 with this native democratic mentality, it is to be inferred that
there would be no repugnance toward a female Tuxaua. There
159 is mentioned the example of Caridade (or Carí, according to
562 the common designation) from the Tukano tribe, who exercised
the tuxauaship in Piracuara (river Papurí, Colombia), recognized
622 by all and in very singular circumstances, because she succeeded
her brother Estevão, who, upon his death, left two sons (100).

100. Carí previously had been a prostitute in S. Gabriel on the Rio Negro and never married. It was not possible to verify whether her ascendancy had an origin of such an order. It would be a problem similar to that of the Hetaerae. Or whether, on the contrary, as seems more probable, it was due to her intelligence, by being a very shrewd woman with the advantage of knowing Portuguese well.

/466/ The situation of Cari can perhaps be explained by her having lived for a long time with the civilized in such a way that she was considered such, being, on the other hand, the daughter of the old and esteemed tuxaua (101).

[648]

101. In Piracuara there were some misunderstandings between Colombians and natives. The Colombian authorities ordered the maloca destroyed, and Cari was manacled, as well as the local pajé. Some time later Pe. João Marchesi, who furnished us this information, was called in order religiously to assist Cari, who appeared in good spirits, in her hour of death.

/466 cont./

622 f) Government and justice.

Even in olden times the tuxaua's power was tempered by the power of the heads of each family, which, as we said, is autonomous regarding its normal life, its trading, its clearing, etc.

622 It was, likewise, moderated by the ascendancy of the Komã̃ã, the "Elders," who still today preside over the dances, take part in
623 the giving of the name to the child, in the initiation of the young men, practice the "blowing," etc. The "Elders" constituted a true Council or Senate of the Tuxaua, the Bũxkõrã-kurã; and even today continue with such function and choose the new tuxaua.

622 The absolute chiefs have always been an exception, which sometimes provoked reaction by his subordinates (102).

[159] [648]

102. José, Tukano tuxaua of Parí-cachoeira, died poisoned by those of his maloca; properly speaking, by his second wife, a Tuyuka, with the connivance of the other inhabitants of the maloca. During the time of the encarregado dos índios /Indian Agent/ Higino Albuquerque, of the SPI, José exercised in truth a despotic power: he forced the Indians to work for some of the civilized, thrashed the women so that they would make the flour more quickly, etc.

797 Among all the tribes of the Uaupés a democratic regime has always been in force. It is remembered, however, that some tuxauas, in
622 contracting for service with the whites, -- one of the functions of
648 the tuxauaship, -- demanded payment without work, or even keeping almost everything for themselves and distributing little to the others, so that the natives came to ask the Missionary to make the distribution of the payment to them himself.

627 The administration of justice, in the strict sense, does not fall to the tuxaua. There is not even a judiciary or customary penal Law. The questions that arise among the components of the group are resolved among them under the dictates of reciprocal vengeance

627 /466 cont./
[623] or fear. The tuxaua, nevertheless, frequently acted as an arbiter, reprimanding the guilty ones, threatening them, imposing on them restitution of the object stolen or an indemnity, and, as maximum punishment, expelling the undesirables from the maloca; always, however, in accordance with the Komũã components of the
[681] Bũxkõrã-kurã. They have never known the penalty of prison /467/ or corporal punishment. It should be kept in mind that with their type of life, and with the native mentality, innumerable cases that fill our penal codes do not arise.

g) Associations.

797 In the Mission schools it is observed that, although the various
857 tribes with representatives among the school children live together in friendly fashion, the groups of each tribe readily separate in order to play among themselves. A Religious Superior of the Filhas de Maria Auxiliadora (Salesian Sisters), with more than 25 years (103)

103. A similar statement was given by the Superior of the newly founded Salesian Mission of Assunção among the Arwake of the Içana, located in the place known as Carará-poço, in August of 1957, therefore after only five months of the functioning of the local girls' boarding school.

of residence among those tribes, informed us that there was always a girl with ascendancy over the rest, a true "tuxaua," whose orders the others obeyed promptly, although transgressing school regulations and the orders of the Irmãs Superioras /Superior Sisters/; and they brought to this classmate the gifts received. Such deference, however, did not seem to be the fruit of friendship, but of fear. The Indian girl, who hardly cries, did it when admonished

/467 cont./

797 by this companion, whose rebuke (104)

857

> 104. Among the reciprocal insults, someone said: -- "You do not have a father," and another answered her: -- "Your mother is a thief."

she feared more than that of the Religious Superiors.

575 We have already mentioned the great sociability of these tribes, but nevertheless there do not seem to exist among the Uaupesinos secret Societies or more or less public ones of the various kinds that proliferate among the North American tribes, especially among the matriarchalists. The causes might be several: 1st, they ordinarily live in small human groups; whereas it is the large groupings that favor the subdivisions into smaller societies; 2nd, they live the common life of a maloca, each one being observed in all his acts; 3rd, the family life is quite autonomous, even when several families live in the same maloca, without partitions of any kind; 4th, the almost nonexistence of a taboo separating the men from the women.

562 1) We have an indication of a great separation of the sexes, and of a society that gathers together few times and quickly today, in
796 the feasts of Wãx-tĩ. The men congregate for the phallic procession, as we have described (VII - 4, e (2 a 1) and the women remain outside the maloca, with the prohibition, under the penalty of death, against looking at the instrument.

623 2) We have noticed in the malocas and povoados the existence of a Senate, the Bũxkõrãkurá, which meets frequently, enjoying /468/ great ascendancy, imposing and demanding the observance of the ancestral customs, with the competence to choose the chief.

756 3) Another existing society, it seems, is that of the Xamãs /shamans/ or Pajés. The training process of the pajé always is attending the school of another pajé, even by class of student-xamãs. Even after graduating and in the exercise of their profession, they meet periodically, invited to resolve the most difficult

/468 cont./

756 cases. It is not known, however, whether there are more frequent meetings, at certain times, whether there are rites, or which acts [622] they practice then. It is known, indeed, that the pajé often convenes the Komũã, in order to resolve the sanitary problems of the maloca or povoado (see VII - 2, e (3) ).

562 4) A Tukano informant, Dorotéia Brito, spoke of womens' meet-
578 ings inside the maloca, during which they reveal among themselves
[115] the bad treatment that they receive from the men. We were not able, however, to verify whether it is a matter of true meetings of a secret society, as defense of class. Or instead, as seems more likely, casual, although frequent meetings of women, during which they open their hearts, revealing their own complaints. It is certain that at times, by the law of exogamy, all the women are from a certain tribe, to which they go to relate anything bad their husbands say against it, from which arise disputes and vengeance. This happens in a very regular way, and with a previous understand-
*[192] ing of the women among themselves. These tales by the women are called ukhá.

h) Social classes.

565 Among these Indians there is no true social stratification or social Classes, in the sense that there are privileged positions, perhaps lifelong and hereditary, with differentiation of tasks, diversity of rights and even of peculiar customs (in the dwelling, clothing, badges, emblems, etc.), as happens in more complex cultural forms. Within the maloca there are no lords and nobles, just
565 as there are no slaves (105);
567

105. In practice the Makú serve as slaves. It is a matter, however, of another tribe, racially, linguistically, and culturally different. Perhaps one can not even truly say slaves, since in exchange for work they receive protection and food. Once the tasks are finished (clearing, aturás /carrying baskets/, etc.) the Makú may leave, just as they may also constitute their maloca with their tuxaua.

/468 cont./

565 but an admirable equality of rights and duties, as well as of prop-
567 erty and of work.

Various circumstances justify such inexistence of classes: 1st, it is a matter of numerically small groups; 2nd, the warm and humid climate, if it facilitates a supply of the necessary food at all /469/ times of the year, it does not allow an abundant pro-
[578] visioning and the development of riches. Now, where there are no rich people, there are no classes, neither masters nor slaves;
[692] 3rd, the life in common, which the conditions introduced and tradition established; 4th, the fear of the envy that the well-being of one might cause in the others, and that so many times is manifested even in connection with the small inequalities (see V - 14); 5th, the lack of a tribunal to restore rights and indemnify damages.

3) Linguistic group.

a) Linguistic group.

619 Above the local Group, among the populations of the Amazonian Northwest, there is only the linguistic group. It is made up of several local groups, forming at times a total of thousands of individuals, with the following elements in common: 1st, they claim to be from one and the same tribe or nation and, therefore, consider themselves "brothers"; 2nd, they speak the same language; 3rd, marriage between them is definitely forbidden.

It is, then, a matter of an ethnic unit only. The groups that constitute it never gather together, they do not own property that might be said to be in common: house, land, fishing waters of such a tribe, etc. Because of the distances the relations between groups from different tribes are more frequent than between groups of the same tribe.

There is, then, no social or political organization of an entire tribe; and the elders do not recall of ever having heard of such an
[622] organization. There has indeed been some tuxaua with greater ascendancy and whom other tuxauas consulted and whose advice

/469 cont./

619 they followed in the more serious questions that involved relations
622 with other tribes or with the whites. Each one, however, judging himself perfectly independent and even with very little power over the other men of his own maloca.

701 It consists, indeed, of the temporary union of several groups
622 for an aggressive or defensive military expedition under the orders of a single chief (106).

175 106. Thus the renowned Ajuricaba of the Manao
721 nation, with his two thousand bows, navigating
648 true fleets under the flag of Holland, hunted Indians
701 of other tribes in order to sell them as slaves to the Hollanders of Guiana (cf. Xavier Sampaio, "Diario," n. 336). In 1858 Pe. Romualdo Gonçalves de Azevedo (Archivo do Amazonas, Vol. II, n. 7, p. 86), narrating the episode of the "Cristo de Juquira" (cf. VII-4, b), estimates that a thousand persons from various localities and tribes gathered in Juquira in declared hostility to the civilized. Alexandre R. Ferreira ("Diário" of 1785), apropos of the legendary city of Manoa, vast captial of the Mamao, explains to us that on the river Urubaxi where the Manao formerly were: "the reported aldeia /this footnote is continued on the next page in the original source/ (irananauoca) did not have the qualities and greatnesses that the city of Manoa paraded, because, notwithstanding that all these were confederated, their aldeias were nevertheless independent of one another and many of them as populous as Irananauoca."

622 /470/ There has never been a true authority, but only the
797 ascendancy of one tuxaua over the others. This is more or less the present situation of a Missionary, and, with certain reservations, we can speak of a hypertuxauaship.

/470 cont./

b) Tribe or Nation?

619 Three elements, that is, a certain degree of political cohesion, a concentration of powers in the hands of the chiefs, and an identity of culture, are included and associated under the concept of Tribe, as commonly understood. Now the first two elements are not found among the human groups in the Amazonian Northwest. One can not, then, speak in terms of Tribe. Perhaps it would have been better to call them Nation. We have, in reality, various national groups, each one with its language, presenting characteristic somatic features, in spite of the regime or exogamy in force among them.

All of them, however, constitute a single cultural group. As a matter of fact, they possess common traditions and practices, that is, a similar pattern of life and assemblage of observances that, strange to us, are common to all, such as the rules of marriage, of exogamy, of puberty initiation, etc.

c) Linguistic Families.

197 We await the decision of the specialists on various linguistic questions: 1st, do those that are generally listed as languages deserve to be called this? or might some of them perhaps be merely dialectical variations? 2nd, what is the relationship between them, perhaps one derived from another? which ones would be the derived ones? 3rd, would the present idioms be sister languages, originating from ancient idioms that have already disappeared? which ones would these be? 4th, and, with this last hypothesis, which of the present idioms of the Uaupés comes closest to the original mother tongue?

Attributing a "Language" to each of the "Tribes," as a temporary and hypothetical assumption, we can say (as we have done passim in the present study) that the tribes of the Brazilian Uaupesina area are divided into three distinct and irreducible Families of Languages: the Tukano family, the Arwake family, and the Maku family.

/470/

197 Concerning the components of these linguistic families and their location, as well as their comparative vocabularies, see our work Idiomas Indígenas da Amazônia.

/471/ d) Kurá or Gens.

614 We have indicated in a previous chapter (IV - 2-a(2) ) the divisions of the tribes, divisions that are called Kurá in the Tukano language. According to native ideas, these divisions date back to the time of the origin of the tribe, by the will of Wãx-tĩ himself. We shall give in another place (cf. the work by the author, [115] "Lendas do Uaupés /Legends of the Uaupés/") the legend of the origins according to the account of the old Komũ Gabriel Costa of Parí-cachoeira.

614 So many questions awaiting solution arise: When did these
121 subdivisions take place? For what reason? What was their basis or foundation? We have verified for today a phenomenon of dispersion of a nation in small groups; would there have been a fusion in the past, or can we foresee a future one? The two first questions are of historic nature, and we lack the data to answer them. We might be able to add elucidative elements to the last two.

1) From the time that a human group settles in a locale that will provide it with the necessary or even abundant means of subsistence, it will naturally become prolific. It is nomadism, at the same time cause and effect of a deficient diet, that lowers the birth rate: 1st, by the organic depauperation of the parents; 2nd, by forcing a prolonged nursing of the children (up to four or more years); 3rd, favoring certain criminal practices (abortion, infanticide, cannibalism of the children).

The human groups, growing in number, cannot remain in the same maloca. Besides the difficulties of nourishment, which we have already mentioned, the real technical difficulty of enlarging the existing maloca or the building of new and larger ones demands

/471 cont./

614 the division of the original group (107).
121

107. It is possible that other reasons might have intervened, such as the misunderstandings that are still verified today.

While the first-born son, with his family, would remain beside the old couple, the other sons of the founder would become, in turn, founders of new malocas, which would grow with the natural fecundity of the native woman. This hypothesis, more in agreement with the nature of things, is confirmed, it seems, by the customs.

614 1st. -- A first one is the denomination of "brother" for all the
601 individuals of the same nation (that is, who are recognized as from such-and-such a tribe and speak the same language), a denomination corresponding, besides, to their feelings (they can not marry each other, mutual aid and understanding, lamentation for a death, and vengeance for the brother who has been a victim of another tribe).

All of them are brothers, but there is a distinction between Mamí (bigger brother) and Axkabí (smaller brother). Among the brothers-german, that is, /472/ children of the same father, the terms mamí and axkabí correspond to the ages. Outside of this case, they no longer correspond. For example, one hears an
614 adult characterize a child as mami. It is, therefore, a matter of a hierarchic classification.

554 An I'ra-pé Tukano said that he regarded the Waú-ro and Oyê
[115] as Mamí; in relation to the Waú-ro we heard the expression
*[192] "Tukano of the head," Dexseá ná dõxpoá," as equivalent to the
[601] principal branch, as was soon explained to us by Patrícia Vasconcelos. We have here, then, indications of an aristocracy (108).

[175] 108. The existence of this aristocracy was already known in 1755 by Pe. Noronha. Xavier de Sampaio

/472 cont./

614
554
[301]

/footnote 108 cont./ in his "Diario" /Diary/ of 1774 (n. 381) says: "The most famous one (of the nations of the Uaupés River) is the Uaupés because of the difference of various degrees of nobility that they admit among them; what serves as the distinction, like a military order, is a very smooth, white stone, cylindrical in shape and pierced in order to pass through it a cord, with which they wear it hanging at the neck. Those of the principals reach up to half a span in length. Those of the nobles are smaller, and those of the common people much smaller. The Uaupés also wear the ears and lower lips pierced."

[304]

the principal consequence of which at present seems to be precedence, whether in the dances, whether in the preference for the tuxauaship, in the case of the coexistence of various subdivisions in the same maloca or povoado. On the basis of such a custom, one can arrange a classificatory chart, which, for the Tukano tribe, for example, would be made up as was seen in IV - 2-a(2), according to the enumeration given in December of 1953 by the octogenarian Tukano of Parí-cachoeira, Gabriel Costa (belonging to the eleventh division of the Ba'ti-tõrõ), an order which, besides, corresponds to information that we obtained from other sources and in different places (109).

[115]

614
554
829

109. When one talks about the last subdivisions with individuals from the first ones, one frequently hears this expression: "They are our slaves." Would they perhaps be groups of different origin which were dominated and absorbed? In some cases this seems to us admissible. For example, the Juruá display quite noticeable somatic differences from the other Tukano. According to the legends they would not have come out of Tõmpa-duri, but

/472 cont./

614
554
829

/footnote 109 cont./ out of another hole at the mouth of a nearby igarapé. The rivers with dark waters, like the Uaupés, form characteristic and abundant foam when they beat against the stones of the cachoeiras. Upon asking a certain individual why there were these inferior divisions, he answered that it is because they did not come out of the water, but from the foam, as if it were from the dregs of depuration.

2nd. -- A second one is that they attribute to themselves a juridical superiority, deriving from the priority in time, something corresponding to the proverb: "qui prior est témpore pótior est jure" /one who is first with regard to time is better with regard to rights/. Whoever has settled more recently in a povoado is in a [192] certain inferior position; he is a "transient, Sihyári-maxsã," as they say.

/473/ The two customs indicated harmonize perfectly; we 173 might think that the second one is a derivation from the first. Upon 554 asking a Tukano Indian from a povoado on the lower Tiquié as to the inhabitants of which povoado he considered Mamí, he answered 614 those of S. José. Further inquiries made among other Indians came to clarify this answer. One of them said he had heard his own grandfather narrating that the Tukano formerly did not live there, but resided on the Papurí. They were expelled from this river by the Taryana, still being a child, therefore, about 100 or 120 years ago, and came to settle in S. José. This information makes S. José the first Tukano nucleus on the river Tiquié.

[103] One more argument in favor of the probability is given to us by the Tukano name of the locality, which is Maxkã, the town, as if it were the urbs par excellence of these Tukano. All the more probable, since such a designation, besides not being attributed to any other locality, escapes the custom of the names according to the geographical accidents (point, igarapé, stone, cachoeira, hole, etc.), or other circumstances. In the vicinity of S. José,

/473 cont./

173 there is a place that in Tukano is called Bũxkõrã bathã, literally
554 "swimming of the elders," that is, where the elders crossed the
614 river by swimming, fleeing from their enemies. In the vicinity of this spot, about 30 years ago, the elders showed Pe. João Marchesi a section of less dense forest as being the place through which passed the first Tukano coming from the Tiquié on their expeditions of war.

In conclusion, we give the opinion:

174 1st. -- The natural multiplication of the Indians imposed a
554 division into groups which have established themselves in closer
614 or more distant places, according to the circumstances; for this reason we today find groups of one and the same nation dispersed along the three rivers (Uaupés, Tiquié, and Papurí).

2nd. -- The denominations (110)

[829] 110. The distance between these groups has more and more accentuated the separation. If it is true that each individual, even the children, knows the name of his own and of the neighboring subdivisions (and even of other tribes), few of them know how to make a more complete list of the Gentes that make up their tribe.

that characterize each group (Waú-ro, Oyẽ, etc., cf. IV-2-a (2) ) are names or nicknames by which the respective stipites, or some late more famous descendant who provoked the separation or built the new maloca or performed any other deed, were known.

[628] 3rd. -- The relations between the malocas, and the social situation of those who /474/ inhabit them today, are the same as those that existed among the founders, hence the present hierarchy that is in force among the Indians.

/474 cont./

554 614 [601] 4th. -- The malocas do not date from the same time, some are earlier and others later, having originated perhaps from some schism. The groups that have been organized more recently always respect the primacy of the older ones, calling them Mamí.

554 614 829 5th. -- The large number of groups that began to appear, however, complicated this hierarchization, hence the practical doubt that assails the Indian in some cases, not being able to say who would have precedence.

797 177 614 2) With the advance of civilization toward those regions, the division is accentuated, and one can discover a double cause for such a fact. The first is the tightening of the family ties and its valorization becoming ever greater, thanks to the support of the religious and civil authorities, and for this reason the family group can already be strong enough by itself. The second is the povoados that appear, consisting of families of different subtribes or even of different tribes. One can foresee, if things go on as they are, that there will no longer be any fusion of tribes, but, instead, a leveling and amalgamation into Brazilian nationality.

This amalgamation is favored not so much by the marriages with the civilized, which up to the present are very rare events, but by the traditional exogamy and knowledge and love of the Brazilian homeland, which has gained ground among these children of the forest, thanks to the work of the Religious Missions and of their schools.

e) Phratrics (sibs) or totemic clans?

619 Just as the Tribe, better called Nation, does not have a chief, neither do its subdivisions, or Subtribes (111),

> 111. Obviously the term Subtribe is improper; just as that of Tribe does not strictly apply to the national assemblage of these natives.

such as we find today, have one. They are not political units, but only ethnic ones.

/474 cont./

614 If by Phratry we understand any subdivision of the tribe (even if it does not constitute a true community, because it does not have a chief), these Subtribes or Kurá could be called Phratries (or Sibs, as some modern ethnologists prefer). They correspond to the Phratries of ancient Greece, while, like those, they are also exogamous and of paternal descent. It is to be noted, however, that marriage between one phratry and another of the same tribe is not permitted.

/475/ The Phratry or Kurá, which at first is identified with the maloca, with the passing of time unfolds into several local groups. In these, however, there is no trace that this might be a matter of a totemic clan; they are only territorial family groups or agnatic kinship groups, which we could call, using the Latin term, Gens.

f) Totemism?

There are different indications that make one think of the operation of totemism with its totemic clans and customs.

1st. -- The groups (tribes and subtribes) bear names of animals (Tucano /toucan/, arapaço /Dendro colaptidae/ or pica-pau /woodpecker/, jurití /dove/, jibóia, etc.) or of plants (miriti, cunuri /Cunuria/, etc.), as is the custom of totemic clans.

[237] [301] [535] 2nd. -- There appear in the dance ornaments feathers of the garça /heron/, arara, tucano /toucan/, gavião /hawk/; fur of the macaco and onça /jaguar/, teeth of the onça or of other animals; snake vertebrae, etc. These ornaments recall to memory the place in which the animal was wounded, as if it were an exaltation of the animal sacrificed and an identification between the individual and the animal formerly sacrificed by God or (?) to God.

[535] [532] 3rd. -- In the dances there are personages and masks (where they wear them, that is, among the Kubewãna of the Uaupés and the Arwake of the Içana), which represent the borboleta /butterfly/, the cotia /agouti/, etc., and these personages try to imitate the movements of these animals and there are also corresponding chirps or songs.

[825] 4th. -- The tucano /toucan/, due to the disproportionate weight and volume of its beak, does not have great autonomy of

/475 cont./

614 flight, which tends to become lower and lower. When it wants to
825 cross a river, it goes up one of the highest trees on the bank, so they assure us, and from there starts its flight, which little by little loses height, and sometimes, on the rivers that are too wide, they do not manage to reach the other bank. It was observed that the Tukano Indians, seeing a tucano /toucan/ fly over the river Uaupés at one of the widest points, uttered cries, as though of apprehension, in fear that the bird might not succeed in reaching the opposite bank.

They are only traces that at most might lead one to infer an earlier social form of totemic clan, if they are not elements acquired by borrowing (the instinct of imitation of the Indians is so re-
[824] markable) from other groups. One does not note, however, any attention (respect, fear, pleasure) toward the animal or plant whose name they bear; names, besides, without economic importance (except the Baniva or another one), contrary to what happens as a rule in connection with the totemic names.

It has not been noted that they avoid killing it or, on the contrary, try to eat it in some special circumstances. If they find it dead, /476/ no sign of surprise. It is certain that at times they kill it in order to use its feathers in the dance ornaments. But, at least in the present form (112),

[178]

> 112. We so often insist on the idea that these are present customs. This is because it becomes difficult or impossible to verify how they proceeded in other times. And the Indians respond to our questions: -- "It has always been this way."

the ornaments are the same for the various tribes, be they called Tukano, Arara, Tuyuka, Pirá-tapuya, etc. It can even be asserted that their attitude is one of perfect indifference before the animal with their own name, more or less just as before any other animal.

There are no tucano /toucan/, pica-pau /woodpecker/, jurití
614 /dove/, etc. clans, either. They are and they are considered
619 nations or different tribes, each one with its own language and peculiar somatic features. It is true that one and the same tribe is subdivided into groups with names that might seem clanlike (cf. IV-2-a(2) /see a(3)/ ). But they indeed are not the animals that appear

/476 cont./

614 in the dance ornaments. Besides, such groups, or Gentes, are far
619 from the classic type of clan. For example, marriage is not permitted between the Gentes, but only between one and another Nation.

The ornaments with feathers of the tucano /toucan/, arara, garça /heron/, or monkey fur are bound up with the legend of Wãxtĩ, which, due to the mutual relationship between the tribes, has figured in the history of each tribe. The ornaments, however, are
[438] not distinctive for family or clan. They are essentially the same for all the tribes, being an object of trade of one tribe with another. This circumstance alone already speaks against a clan interpretation.

[532] It is absolutely not noted that any tribe or group has any pictorial representation by incision or sculpture of any animal whatso-
[825] ever, and even less of its titular.

As for the dance masks and personages, it is to be observed first
[53] that there is the one of the borboleta /butterfly/, and nevertheless there is no human group with this denomination, and nothing reveals its having existed. In the second place there are mask, dance, and song of the cutia /agouti/, and a subdivision among the Tukano, the Bwá-põrã, children of the cutia, and an Arwake tribe of the Içana, Awadzuranai or cutia-tapuya, are known under this name; and nevertheless there is no such mask among the Tukano, but there is among the Arwake.

It seems that the same personage now does the borboleta /butterfly/, now the cutia, etc. Now one, now another will do such a role; within the same maloca there are the various personages, and it is not a matter of a function inherited from father to son either. All this testifies against the hypothesis of the existence of clan subdivisions.

/477/ As for the episode of the concern for the tucano
[825] /toucan/ that was crossing the river, it could be a manifestation of simple curiosity, which among the Indians comes so many times accompanied by exclamatory noises. The elders relate nothing that might prove to be a matter of a clan totem. At least by what we know up to now.

/477 cont./

614 Just as there is no indication of clan totemism, there is none
532 of individual or personal totemism either. The objects that they make do not represent animals; they are of simple workmanship, according to the purpose. In some quite rare cases the paintings of the walls are anthropomorphic; they seem, however, to have only a sportive character. /Page 478 is blank./

/479/

## Chapter IX

## The Life of the Indian

### 1) Daily cycle.

512 The type and the standard of life of the Indian seem patterned. Even in distinct tribes we find the Indians doing the same things in the same way, and even with a very close timetable. It is indeed a very methodical life, not, however, monotonous. On the contrary, quite varied, in a perfect nature in which daily rest, work, meals, baths, physical exercises succeed one another.

[592] "The Tukano lives in the maloca, which serves him as bedroom, kitchen, dining room in the morning and in the afternoon. The maloca is, in succession, laboratory for the domestic chores, meeting place at times of rain, and ballroom during the great feasts. It is the place where the Tukano lives, dies, and is buried. For the Tukano the maloca is the world" (Report by the First Superior of the Salesian Missions of the Rio Negro, Mons. Lourenço Giordano -- Boletim Salesiano -- Feb. 1918, p. 31).

The ordinary family life can be summarized in this way: the Indian sleeps little, eats much, talks a great deal, works when it is necessary.

From three o'clock in the morning, the maloca still closed, one hears inside quite an animated conversation, noisy and frequent laughs. And many times the noise of the graters at work:
[462] it is the women who are preparing the mandioca for the beijú.
[252] Before five o'clock, with rain or without it, always dark in those
[515] latitudes, the women leave through the back door, individually

/479 cont./

512 [515] [854] *[192] or in small groups of two or three, ordinarily a child riding on her hip and with a vessel on her head, in the direction of the river. Or, more precisely, that point of the river called Pextá, landing place, with suitably prepared access, where the canoes are tied. There they take their quick morning bath, Wa-wa'kãse, of immersion, rubbing the hand quickly over the body, face, and hair. The same is done by the smaller children who accompany them; and they take the opportunity, moreover, to bathe the suckling infants, whom they have left on the bank. Afterwards they fill [312] the vessels with water and, putting them on their heads, go up with the water to the maloca. Then they prepare the morning meal.

[521] [515] /480/ The men and the boys continue to lie down for an hour more or less, conversing from hammock to hammock and, still before six o'clock, go for their bath. Then the mats that closed the two doors of the maloca are lifted.

*[192] [264] The pots of Bɨá-tõ (it is the quinhapira or sauce of fish broth with pepper) or of Yumũ-ku (mingau) of tapioca, and the baskets in the shape of sieves, heaped high with Ahũ-a (beijú), are put on small mats on the floor. -- "Baãra a'tyá," come to eat, is the invitation by the woman. Those of the male sex place themselves in a circle, squatting, and, starting with the chief, eat heartily, amidst conversation and noisy laughter.

The rule of civility is to serve oneself slowly and to eat without voracity. This, besides, is greatly in agreement with the whole attitude of the Indian, normally calm and serene. The women are in charge of the serving, bringing whatever there is, as it becomes necessary. There are no eating implements: one breaks off a piece of beijú with the hand, dips it in the quinhapira, and carries it to the mouth. The mingau is drunk (1)

*[192] 1. To drink is the expression that they use, although this is not very appropriate, because it is more or less thick. -- "Yumũ-ku sĩrɨ̃áti? Did you drink mingau?"

/480 cont./

512 with the beijú or in small cuias, like a spoon. At the end, the woman presents a large cuia with Ñõxká (manicuera /drink made out of manioc juice/) or the Po'ká peosé (the chibé /manioc flour and water/ of generalized use on the Amazon). Like our coffee, they thus ordinarily end their meals with the indispensable chibé, of which as much as is wanted is taken, the cuia then being passed to the neighbor on the right. Finally the women and children simultaneously take their food.

*[192] [264]

The noisy exodus for work starts: it might perhaps be seven or eight o'clock. The men and women leave in groups. The former for the forest, for hunting, to procure textile fibers, wood for building, or to search for fruits, or for the river, with the proper equipment for fishing or in order to prepare the traps.

*[192] [241]

The women with the older daughters and the children (small ones) go to the clearing, taking the Pi'í (aturá), hanging from the forehead on the back, in order to carry mandioca and firewood. In order to reach the field they almost always have to take the canoe, and for this reason they leave with oars of different sizes, some quite small for the children. Some old or sick person (many times nobody) will stay as guard of the deserted and silent maloca.

[462] [854]

The work will last until after eleven o'clock. Around one o'clock the maloca starts to become animated again. The women arrive with their aturás filled with mandioca and, on top, bundles of firewood; the smaller children on their hips or held in front of the chest, and others holding on to their skirt. They are perspiring, with the face flushed, if they did not /481/ touch it with carajurú /carajura/, as a precaution, in order not to suffer so much from the heat of the sun. Little by little the men also begin to arrive with the results of their labor: fruits, fish, game, or fibers and timber.

Another bath will come, with its freshness, to renew their well-being. The woman will grill the fish or the game, will prepare fresh, tasty beijú, the quinhapira, the mingau, some insect, and the chibé. Soon will come the "Baãra a'tyá" and the afternoon meal.

*[192]

/481 cont./

412 There are still a few hours of daylight: the man goes to prepare his arrows, to separate the tucum for the fishing nets or to work on his little seat or on his sieve. The woman will weave a new hammock or will attend to the preparation of the mandioca for the following day. Each one at his task.

[177] [296] Among the individuals of the new generation, the man will perhaps mend or wash his own clothes, as the woman does hers. All tasks done with tranquillity, in the intimacy of family life, to the rhythm of an animated conversation, with noisy laughter.

When the sun goes down, the wood is already piled up inside the house and the vessels are filled with water. Men and children *[192] settle down in their hammocks, while the woman is busy boiling the Ñõxká, with some wild fruit, and all help themselves with their cuias, like evening tea.

The conversation continues more briskly, the episodes of the day are picturesquely narrated, the visitors who appeared, the launches they passed, the news of other malocas. When the night is further advanced, it will perhaps be nine o'clock, the doors of the maloca are lowered. Sleep first conquers the children, later the older ones. Around 11 o'clock or later, however, one will hear a question that comes from a hammock, an ãã and an answer from another hammock. Afterwards the silence is interrupted only by the crackling of so many small fires in each apartment of the large dwelling. The fire never goes out inside the maloca; at any time of the night one may see some figure jump out of a hammock in order to stir up the fire, indispensable for the cooler hours of the dawn, and to scare away snakes or other animals.

178 412 With the advance of civilization the phenomenon of acculturation takes place, new tasks occupying the time and the attention of the Indians. The rhythm of daily life, however, is always the same, in the maloca as well as in the povoado, for the Indians who have always lived there as well as for those who have spent long years in the boarding schools and have returned to their homes.

/481 cont./

2) Annual cycle.

132 221 The climate of those regions does not seem to offer marked changes in order for the rhythm of the daily life of the Indian to be altered. As /482/ a matter of fact, the thermometer, the barometer, and the hygrometer will show the same average throughout the year. Owing to the rains of the headwaters of the rivers, however, a season of high waters and another of low ones are distinguished. And the annual cycle is perhaps more varied for the Indian than it customarily is among the civilized.

476 621 Besides the labor that is incumbent upon every individual for his home life, there are others that concern the entire community and that for this reason are performed collectively under the direction of the tuxaua. They might perhaps be the repairs of the maloca or the building of a new one, in the same place or perhaps quite far away from the old one. Or again it might be the cleaning of the areas adjacent to the maloca, of the common paths or of the landing place. It might be a matter of some clearing for some Indian, who will obtain the help of his tribal brothers, although for his private use. The individuals are advised in advance, in order to make their arrangements. If it is a matter of work for the collectivity, everyone is obliged to participate in it. If, instead, it is help for some brother, one can reasonably excuse oneself; one would not do it, however. And in either case there is only one conventional, sufficient, and agreeable payment: a caxiri, which has also been prepared beforehand. The collective work is done without even any need for a technical director, because it is always done according to the traditions, under the simple directions of the tuxaua or of the individual concerned. It is noisy and cheerful work, true competitions of strength and activity, as well as of good humor and cheerfulness. It is what is called Dará-serẽsé, in Nheengatú ajurí or mutirão (2). [192]

2. Ajurí would properly be the invitation, and putirum (from which the term made into Portuguese, mutirão), the collective work. Stradelli, in his

*192 /482 cont./

621 /footnote 2 cont./ Nheengatú-Portuguese
476 vocabulary, points out: -- "Aiuri. It is the same as what is called mutyrum on the lower Amazon."

527 With the high waters the piracema, that is, the schools of
221 fish that go up to spawn, occur. During the low waters the fish
of the igapós want to return to the rivers. During these periods
226 the "large-scale fishing" takes place, which is a collective task, a sport, and a feast at the same time, as we have indicated (VI-a(1) /see p. 341/).

221 At different times of the year great quantities of insects
222 appear, larvae or flying, whose capture and preparation alter the
527 daily rhythm of life.

The trees yield fruit in different seasons, in which the Indian will get more abundant harvests; and from many he will prepare flavorful drinks, invariably consumed amidst music, songs, and dances.

527 /483/ Besides these "feasts of the trees" or "of the fruits," annual and regular, others will not be lacking, due to the birth, initiation, marriage of some member of the group. There will perhaps be some dead person to lament with the social wailing and the funeral feast of tradition.

484 An index of a nomadic character, during the year opportunities for trips of amusement will occur. They will be in search of a bride, for reasons of trade, to make fishing expeditions, Poose to which they were invited, visits to other malocas, even to those of a tribe different from the one to which he is connected by affinity. And the Indian, with his whole family, hammocks, aturás, and other gear, and even some small dog, fills up one or several canoes and goes on for hours or even days looking for other povoados where they will spend carefree days or weeks (3).

797 3. Nowadays two or three times a year the
527 Indians of the different povoados, move to

/483 cont./

797
527

/footnote 3 cont./ the seats of the Salesian Missions, not infrequently several days by canoe, in order to attend there the great religious celebrations (Christmas, Easter, etc.). They spend happy days and weeks in contact with civilization, being instructed in the religious truths and amusing themselves, as if they were school children, with collective games. Processions, songs, luminous projections, theatrical representations, even the food, sweets, presents which they receive on these occasions, everything agrees with their psychology and makes these feasts acceptable and indispensable to them.

484 Anyone who navigates those rivers invariably meets canoes, up river and down river, of tourist Indians. Some spend months visiting acquaintances and relatives in the various povoados.

3) Life cycle.

145 We know the rites that accompany the birth of the children. Under the care and attention of their mother, in contact with nature, they start growing and becoming strong. Upon reaching the use of their muscles, they will try to walk and are put down on the ground to crawl. They will then suffer the attacks of [164] verminosis. They become pale, swollen, big-bellied, and many die. Those who manage to conquer the sickness and reach adolescence are saved.

Lacking positive statistical data about the organic development of the native child, one has the impression that this proceeds by more characteristic jumps than among the civilized of the south of the country.

/483 cont./

562 The girl must get used to work and, with the mother's train-
868 ing, will learn the several skills that someday will make her a good mother of a family. The boys will run loose in the forest, looking for fruits, will wander along the rivers, entertained by swimming or fishing, practicing at shooting arrows at fish or birds, and thus they will become able to provide the subsistence of the /484/ family. In the ajurís, in the traditional tasks, they will acquire beside the father that skill which will make them great oarsmen or expert basketmakers.

881 Children of both sexes start being conscious of themselves as members of the tribe, of which they will learn to be proud. They will eagerly desire to become a member integrated into its life and traditions, that is, they dream of the "initiation."

581 Once the instincts are developed, they understand that it falls to them to perpetuate the existence of the group, and they aspire to marriage. The national customs indicate to them the means of realizing it; for that step they will not lack the intervention and help of the father.

593 He has naturally experienced up to now the love and the attention of his parents and the camaraderie of his contemporaries. Now he is joined to a companion for his entire life. Unknown perhaps and a foreigner, but their cares, their spirit of work, their long life together, vicissitudes, shared joys and sadness, everything ends by making uniform the spirits of the spouses, connected especially by the bond of love for their children in common. Under more difficult conditions, because she is forced to leave the paternal home and go to another nation as a wife, the woman will still feel very actively connected to her tribe of origin, as well as to the new maloca in which she is a wife and mother.

621 With the years the ties that join the Indian to the group in which he was born, which educated him, which gave him assistance and support, for which he has also worked cheerfully on the collective enterprises, are strengthened. The group that provided him with frequent joys with its traditional feasts and, with its mysterious legends, gave satisfaction to his intimate aspirations toward something that he does not understand, but feels will exist beyond the grave.

/484 cont./

888 The old Indian will become a zealous continuer of the ancestral traditions, and he will find himself surrounded by the young men, who will listen with pleasure (4)

> 4. The Irmã Diretora /Sister Directress/ of one of the Missionary schools revealed to us with what surprising attention her young girl students drank in the words of some old Indian woman when she appeared at the school, being immediately surrounded by the school girls.

to his words describing the olden times, his feats, the life and history of the maloca, of the povoado, or of the tribe. And, with the respect of the new generation, he will preside over the births, warding off from the tribe, which is reborn in the children, misfortunes and sicknesses with the smoke of his cigar; he will instruct the young people in the duties and mysteries of the life of the group; he will be an outstanding figure in the sacred dances.

With age, his stout fibers break, and old age comes, with its train of sorrows, more pronounced for the Indian than /485/ for the civilized. He becomes useless to the group and a burden for the family. He then retreats to a dark corner of the maloca, lying in his hammock, perhaps without the strength to get up and sit on a seat. There, in silence, he will take his meal and spend long hours, remote from the noisy cheerfulness of the maloca, which perhaps is burning with life in the orgies of the Pooses.

A sole companion, which has never abandoned him since he saw the light of life, will still be at his side, giving warmth and comfort to his limbs, which are getting cold; it is the fire that burns near his hammock.

When his strength is insufficient for him to take his food by himself, forgotten, abandoned, with no one being concerned about him, he will waste away by starvation, resigned, without a word of complaint, without a moan of pain, until death comes to open for him the mysterious doors beyond the grave, where

/485 cont./

888 he will face Wãx-tĩ, the great Idea, the great Spirit, in which he has always believed, whom he has respected and feared and tried to propitiate, as his ancestors taught him.

764 When they become aware of the quiet and solitary catastrophe, the maloca will be agitated by the clamorous wailing of the nation for the member who has just passed away.

121 This, however, does not complete the cycle of native life.
797 All of those tribes of the Caiarí are nowadays in direct or indirect relation with the "Civilização de Cristo" /Civilization of Christ/. The parents, under the impulse of paternal love, dream of making their child a civilized person, child of Brazil and of the Church. This sacred fire is kindled deep inside each youth, and for this reason he enrolls in the Catholic schools. They spend long and happy years there, without dissociating themselves, however, from their nation. And they return to their "brothers" with their minds more enlightened, greater material comfort, a belief in the Creator God of heaven and earth, Lord, Judge and Father, and a hope of a less sad old age, nourished by the hopes of a happy future life without end.

And the elders, to whom such a chance was not presented, will perhaps have assistance in the hospitals that the charity of Jesus Christ has erected in each Missionary center, and the maternal care of a Religious who tries to alleviate the physical pain and to comfort the soul. And, above all, they will have the hope of the assistance of a Missionary who, in the last moments of life, through the infinite efficacy of the Sacraments, will make him a child of God, will enrich his soul with grace and will open for him the doors of eternal blessedness. /Page 486 is blank./

000 Bibliography ..... 736

104 For the proper reading of the words from the Tukano language, one should keep in mind the following convention:

1. Vowels: a, e, i, o, u, -- open as in Portuguese and Latin
   ã -- like the English o in word
   õ, ũ -- respectively like the corresponding ones in German, that is, more or less like the French eu in peu, and u in lune
   y, w -- respectively like short i and u
2. Consonants: like the corresponding ones in Latin or Portuguese, with the following exceptions:
   x -- velar aspirate, before a consonant
   h -- surd glottal fricative, before a vowel
   bh, kh, gh, ph, th -- after the ordinary sound of these consonants, a slight aspiration follows
3. Symbols: (') the glottal stop (interruption of the pronunciation)
   (-) hyphen, separation of the elements in the compound word
   ( ) indicates the nasal sound /a tilde seems to be missing between the parentheses in the original source/

## GLOSSARY

ahũ-wõ -- rhythm tube or stick (musical instrument)
a'mõ tuxhũ -- enclosure within the maloca for a girl undergoing the puberty rite
a'mõ-yesé -- initiation rite for boys
axkabí -- "brothers" - address to persons belonging to same gens
axkawerẽra -- components of the same tribe although born or living in different malocas
axpẽra -- people of another tribe, even when connected by some degree of affinity
Baári-maxsã-ré -- alleged cannibal tribes
baxséke wamẽ -- name-giving rite
baksúkãra -- "those who are destined for marriage with us" (all maternal cousins)
bayá -- master of ceremonies at various kinds of feasts
baxsasé -- dance and soup at a feast
beijú -- manioc bread
be'tise -- fast during initiation rite
boraró curupira -- spirit of the woods
bũxkõrá-kurá -- council of elders
bwá -- flute or small fife

cowá -- fermented drink
cachoeira -- turbulent place in the river with rapids and sometimes waterfalls
cariços -- panpipes
caxiri -- celebration with drinking; the drinks themselves
descimentos -- voluntary migrations of the Indians
igarapés -- smaller streams that empty into the rivers
japurutús -- long flutes
karyamã -- entertainment feast at girl's puberty initiation rite
komũ -- men of greater ascendancy who belong to community council
kurá -- gens or sib
lingua geral -- the Tupi language of Amazonia
lugares -- place, village, town
mã-gõ -- term of address for female of parental generation of gens with whom bride-exchange is practiced
mahã-mĩ-nõsé -- 2d stage of girl's puberty initiation rite
maloca -- communal house
mamí -- "brother" - address to persons belonging to same gens
macupiára -- lucky in fishing or hunting
mã-ra-põ-nỹákho -- "future husband" "future genitor" - address to young man of marriage exchange group

maxsã -- "people" - actually spirit people
mẽx-ká -- term of address to male parental generation of gens with whom bride-exchange is practiced
mĩrĩa -- sacred flute
mĩrĩ-mẽra -- initiation rite for boys
mõ-paxkoá -- godmother of girl's initiation
mõ'sĩgõ -- lucky in fishing and hunting
mõ-yõãsé -- puberty initiation rite for girls
montarias -- canoes made largely by fitting planks along the sides
nãxkã̃-wax-tĩ -- spirit
Nheengatú -- the Tupi language of Amazonia
nihi-korõ -- vagina
nõ' mõ duusé -- purchase of wife by bride price
nõ' mõ nyãkho -- "future wife" "future genitrix" (address by young man to girl of marriage exchange group)
o'a-kõ -- god, supreme being
o'mõaro wax'ti -- spirit
onça -- jaguar
oxkó -- magic potion
õxsó -- two-headed snake spirit

pajé -- curer-sorcerer
pax-koá -- godmother
pêru -- fermented drink
pi'îkamõ -- small basket for a girl's or woman's ornaments
piraboto -- "beast of the river" - apparently a spirit
píti-yároa -- alleged cannibal tribe
ponta -- usually in proper names, indicates a geographic accident
poóse -- feast of offerings
po'rá-ko nỹákho -- "future genitrix" (address by a young man to a girl of the marriage exchange group)
põrã-kõ nỹákhõ -- "future genitor" (address by girl to young man of marriage exchange group)
povoado -- populated place
principal -- chief of a tribe or subdivision of a tribe, or of a povoado
pupunha -- fermented drink
quinhapira -- a fish dish
tropas de resgate -- bands of men who searched the country for Indians to enslave, and for natural products
tuxáua -- chief of a tribe or subdivision of a tribe, or of a povoado
uxtá-seri -- leg bands as dance decorations
uxtisé -- ritual wailing at death
varadoiros -- passages opened in the forest along unnavigable stretches of rivers, or as shortcuts between bends in a river

verões -- periods of dry weather permitting burning
vila -- town
wá:kõ -- god
wã'sõ-rĩ -- instrument for flagellation at bacchanal feast
wãx-tĩ -- soul, incorporeal element
wé-boxátise -- evil that can come from an event, action, person, animal, or thing
wyógõ -- local chief
yai-peri maxsã -- alleged cannibal tribe
yõũrwá -- alleged cannibal tribe
yaxkẽ waxsó-ro -- women's festive loincloth embroidered with beads
yaxsã -- large maracá (musical instrument)
yuxkõ -- rhythm stick
yu-yú -- dance rhythm stick

## UMA EXPLICAÇÃO

*Estou por dizer que êste é um livro anônimo. Pois êle não traz o nome dos seus principais colaboradores. O nome que capeia êstes estudos é apenas um endôsso. Cabe-nos, pessolmente, pouco mais que a responsabilidade da redação, como lhe assumimos as canseiras. Os verdadeiros autores, ou, ao menos, os seus principais colaboradores são os beneméritos Missionários que há várias dezenas de anos mourejam no meio da selva quase inhóspita da Amazônia, no afã de incorporar os pobres silvicolas na civilização brasileira e cristã.*

*O título impõe uma explicação. Como se verá, ao passar das páginas, a bacia do Uaupés, compreendendo seus dois principais afluentes, o Tiquié e o Papuri, é povoada por numerosos grupos humanos que vulgarmente se conhecem por Tribos, com densidade demográfica vária. Diferenças somáticas e linguísticas por vêzes bem notáveis, estão denunciando origens étnicas diversas. No entanto, a aproximação e comércio, que, numa ação desgastadora de séculos não conseguiram limar aquelas diferenças, operaram uma fusão nos costumes. O mesmo standard ou padrão de vida que se nota num povoado do baixo Uaupés, encontra-se nas cabeceiras do Papuri ou do Tiquié e dos seus pequenos afluentes. Ao perlongarmos os rios, muda-se o nome da tribo, encontram-se tipos fisionômicos diversos, falando idiomas muitíssimo diferentes, porém residindo em malocas semelhantemente construídas, tomando os mesmos alimentos, executando os mesmos trabalhos, divertindo-se da mesma forma; nota-se, enfim, uma identidade perfeita na maneira de rir e de gesticular. Estamos, pois, diante de um mesmo grupo cultural. Podemos, assim, tomar em conjunto aquelas vinte ou mais tribos, para cuja civilização e cristianização desde 1916 desdobram suas atividades os Filhos de S. João Bosco, dirigidos, vai para 40 anos, nesse seu heroísmo anônimo, pelo dinamismo inteligente a caridade apostólica de Dom Pedro Massa.*

*Em princípios dêste século o conhecido etnólogo alemão Teodoro Koch Grünberg visitou parte da área cujos estudos aqui apresentamos, e condensou suas observações em várias obras, especialmente a que traz por título «Dois anos entre os índios do noroeste Bra-*

[p.5]

4: Silva SQ19 Tucano

silcíro» (1). Estamos, agora, em condição de aquilatar não só os incômodos da sua viagem, como suas dificuldades de «Branco» e «Estrangeiro», devendo tratar com os índios fechados na sua desconfiança, prevenções e, digamo-lo, hostilidades contra os civilizados; desconhecendo, além disso, os idiomas das tribos do Uaupés (2) e devendo, por êsse motivo, socorrer-se dos préstimos sempre deficientes de intérpretes de emergência.

A nossa tarefa, de redação, em comparação com a de Koch G. ficou grandemente facilitada. Coube-nos o prazer intelectual, patriótico e religioso de quatro excursões pelo amplo e penoso campo do Apostolado Salesiano no Amazonas, e admirar a obra de patriotismo e caridade evangélica que lá realizam os Filhos de Dom Bosco. E servindo-nos da sua companhia, do seu conhecimento dos idiomas indígenas (3), do ascendente que desfrutam não só entre os indígenas que gozam da sua assistência material e moral, mas até entre os outros que só os conhecem de fama, fomos recolhendo os preciosos dados da sua observação e experiência. O material etnográfico que estas páginas encerram pôde ser recolhido em prazo relativamente curto, embora o triplo do de Grünberg. Representam, no entanto, uma existência no convívio mais íntimo possível com os silvícolas: morando na sua maloca, assistindo as suas festas, ouvindo-os nos longos cavaqueios entre si, e com êles entretendo-se em amigável conversa, participando de suas alegrias e de suas tristezas, observando-os nos seus trabalhos, admirando as suas habilidades, aproveitando-se dos seus serviços, curando-os nas suas doenças, sondando o seu espírito, ilustrando a sua inteligência em longos anos de educação, iluminando sua alma com as verdades religiosas, vendo a trechos abrir-se inesperadamente aquelas mentes em clarões que revelam, através de uma ingenuidade encantadora, um mundo interno jamais sonhado. Compreende-se um ambiente vivendo nelas e a ambiência pode explicar-nos uma mentalidade.

Nem pareça exagêro falar numa existência de convívio íntimo com os indígenas. Pois aqui não se registram apenas as nossas

---

(1) "Zwei Jahre bei den Indianer nordwest-Brasiliens" — Stuttgart, 1921. Data de Stuttgart, 1922, o seu trabalho "Festschrift Eduard Seler", contendo a classificação e localização das várias tribos que visitou ou das quais obteve informações.

(2) Na bôca do rio Curicuriari, o remador de Koch, o Tukano João, dá-lhe uma lição do "ininteligível Tukuno": — "Gibt mir Unterricht in Tucano seiner fürchterlichen Stammessprach, voll nasaler, gutturaler und ganz UNDEUTLICHER laute" (Z. I. 137).

(3) Além de encontrarmos já numerosos índios com os quais nos pudemos entender perfeitamente em nossa língua pátria, porque haviam aprendido o português nas escolas das Missões.

observações pessoais. Procuramos conhecer e ouvir a todos os Missionários Salesianos que trabalham nos Rios Negro, Uaupés, Tiquié, Papuri e Içana e Caburi; bem como aos Missionários de Montfort que atenderam os indígenas da região fronteiriça da Colômbia, visto que algumas das tribos em estudo, têm membros residentes na zona que hoje faz parte do território colombiano. E tivemos, por mercê de Deus, o feliz ensejo de conversar com Missionários que desde 1916 estavam vivendo com os filhos das selvas e para êles.

É, portanto, êste trabalho, num sentido rigoroso, uma contribuição dos Missionários Salesianos aos Estudos Etnográricos que, se interessam de um modo geral aos estudiosos de todo o mundo, à nós, Brasileiros, nos falam outrossim, de interêsses políticos e patrióticos.

Estas páginas são um documentário de como decorre a vida dos silvicolas do Uaupés ou Caiari neste meado do séc. XX. Em fôrça de uma mentalidade indobràvelmente tradicionalista, que caracteriza êsses grupos humanos, podemos pensar sejam também, nas linhas gerais, uma descrição de como vivem há séculos, ou talvez mesmo de como vivem essas tribos desde que se aclimataram no habitat atual. Escassos dados dos primeiros exploradores e informação dos indígenas ancião autorizam essa opinião.

Gozando nós, embora, de condições privilegiadas, que não tiveram, ou sequer poderão ter, outros etnólogos, o fundo esquivo da psique indígena tira-nos a ilusão de lhe ter desvendado a alma. Estamos mesmo convencidos que desconhecemos ainda costumes e práticas interessantes sob o ponto de vista etnológico e de muitos outros nos escapam o verdadeiro sentido. A fantasia primitiva, tanto mais desperta quanto livre do freio da razão e o contrôle inibitório da experiência positiva, naquele ambiente misterioso e sugestivo da selva milenar, terá arquitetado um mundo lendário e com belezas fascinantes para as suas almas, como se foram as riquezas estonteantes de castelos encantados, porém defesos para nós, e dos quais só podemos contemplar ao de fora denegridos muralhões, nos fragmentos quase inexpressivos das suas lendas.

Êstes apontamentos são apenas uma picada na brenha. Virão outros estudiosos refazer o caminho; retificarão desvios, ligarão com viadutos pontos anteriormente sem conexão, solidificarão com a firmeza de suas observações aquelas passagens que ora apresentam a ameaça dos atoleiros, e resultará, por fim, a avenida ampla e reta, arejada e segura, arborizada e bela da verdade por onde transitarão multidões no futuro.

Aspiram, porém, a muito mais. Desejam ser um brado de gratidão e de patriotismo. Gratidão para com aquêles abnegados Mis-

4: Silva SQ19 Tucano

*sionários (e todos êles, sem distinção de nacionalidade ou de institutos, desde Anchieta até o mais modesto Irmão Leigo ou Freira, os quais impulsionados pelo mais puro amor de Deus, renunciam ao carinho da família, ao confôrto da civilização, e muita vez também ao encanto das suas pátrias terrenas, fazendo sua a vida do índio, a fim de fazê-lo filho do Brasil e de Nosso Senhor Jesus Cristo, só esperando a recompensa de Deus, porém recebendo, não raras vêzes, como antecipação, a ingratidão dos silvícolas e a calúnia de malévolos ou de irresponsáveis.*

*É um brado de um incontido patriotismo, chamando a atenção do Brasil, — Govêrno, facultosos, homens de estudos, — para aquelas raças que se abrigam sob a copa majestosa da selva amazonense. Urge despertar o interêsse de todos os Brasileiros a fim de que se estabeleça uma porfia de auxílios que facilitem uma rápida integração daqueles muitos milhares de patrícios na civilização brasileira e cristã. É, pois, não só obra humanitária e religiosa, preocupar-se da incorporação dos indígenas à civilização brasileira, senão também do mais lídimo patriotismo. Por isso urge se intensifique o apoio do Govêrno aos que consagraram sua vida e suas energias ao bem do silvícola do Uaupés.*

Pe. ALCIONILIO BRÜZZI ALVES DA SILVA, S. D. B.

## Capítulo I

## O HABITAT

A área, cujos elementos etnográficos se recolhem nestes apontamentos, é a bacia do *Rio Uapés* ou *Caiari* (1), como era conhecido até há poucos anos, afluente que desemboca no Rio Negro cêrca de 50 quilômetros acima da cidade de S. Gabriel-da-Cachoeira, hoje denominada *Uaupés*.

Resulta o Uaupés, conforme o Dr. Hamilton Rice, da união dos rios *Unilla*, que é o mais importante, e *Itilla*, ambos com suas nascentes nos planos que lindam os contrafortes dos Andes Colombianos. Após um percurso de cerca de 330 Km em território da Colômbia, o Uaupés avança em direção *SE* e *S*, como demarcador de

---

(1) *Caiari* ou, antes, *Ucaiari* seria o nome primitivo, conforme o Padre José Monteiro de Noronha, o qual no n.º 184 do seu "Roteiro de Viagem" (vd. abaixo, II, 2), diz: — "O verdadeiro nome do Rio Uaupé he Ucayari, que no idioma dos índios Manaos e Barez significa — Rio de água branca: porém, como o gentio que povoa o principal tronco do Ucayari he de nação Uaupé, lhe atribuirão os mais índios o mesmo nome que os Brancos verterão em Goaupé".

Releve-se que, embora as suas águas não sejam tão escuras quanto as do Rio Negro, o Uaupés pertence ao número dos rios de "águas pretas".

"Tôdas estas tribos, informa Wallace ("Travels of the Amazon and Rio Negro" — London, 1849, pág. 335) apresentam algumas peculiaridades nos seus idiomas e costumes, porém, tôdas elas vêm sob o nome geral de Uaupés e distinguem-se, como um todo, dos habitantes dos outros rios. Daqui o ser chamado o rio Rio dos Uaupés (the River of the Uaupés), se bem que pròpriamente o seu nome é Ucaiari e assim é êle denominado pelos índios".

Lemos recentemente (maio de 1956) em Luiz da Câmara Cascudo ("Em memória de Stradelli", Livr. Clássica-Manaus, 1936, pág. 7), que Stradelli cita um poderoso Tuxáua *Buapé*, da tribo Taryana, (cujo nono-neto, Maximiliano José Roberto, acompanhou Stradelli em suas viagens), o qual teria vivido pelo fim do século 16, e emprestado o nome ao rio (cfr. abaixo Nota 5, II Cap.).

Esta crença é hoje perfilhada também no Rio Negro. Não sabemos, porém, se ela se funda na opinião de Stradelli, ou lhe tenha dado origem. No fim do século 19, com Stradelli, o nome *Uaupés* se nos apresenta qual corrupção do vocábulo primitivo *Buapé*. Pelos meados do século 18, ao invés, *Uaupé* seria a forma primitiva donde, por corrupção, se originou o têrmo *Goaupé* e nenhuma menção se faz do Tuxáua por nome *Buapé*, cuja memória, se existiu, deveria, então, ser mais viva. Com quem estaria a razão?

[p. 9]

4: Silva SQ19 Tucano

fronteiras entre o Brasil e a Colômbia, até *Iauareté-cachoeira* (2), onde se dá, pela margem direita, a afluência do *rio Papuri*. Tomando a seguir a direção *Leste*, corre inteiramente dentro do Brasil até desaguar no Rio Negro, depois de ter recebido, ainda pela direita, o *rio Tiquié*, pouco abaixo do povoado *Taracuá-ponta*. Em território brasileiro avança 520 Km (possuindo, pois, um percurso total de 850 Km) e apresenta uma largura máxima de 3 Km e mínima de 200 metros aproximadamente.

---

De qual língua seria o nome *Uaupés*? e que significa? Não o sabem responder os indígenas atuais, nem os de há meio século. Com efeito, Koch Grünberg (Zwei Iahre, 131) diz apenas que o nome é *depreciativo*; isto, porém, porque sob o nome de Uaupés se entendem tribos rudes, silvestres (*Wildstaemme*) e desprezadas, como a *Tukano* e a *Kubewãna*, que lutaram contra os Arwake mais adiantados.

No vocabulário Nheengatú-Português de Stradelli encontramos o verbete: "*Iasaná*" — Casta das Rallidas. Nome que no baixo Amazonas e no Grão-Pará dão à *Parra Iaçaná*, que no Solimões chamam *Piasóca* — e no Rio Negro, *Uaupé* e *Uapé*.

Por sua vez o rio emprestou o nome a uma planta característica das pedras das suas cachoeiras. Com efeito, chama-se *uaupé* ou *uaupé-da-cachoeira* (e também *carurú-das-pedras* e *murera-das-cachoeiras*), uma planta aquática que nasce nas pedras das cachoeiras dêsse rio e da qual se serviam outrora os indígenas para a extração do sal (cf. N. 51, VI). (Cfr. Gastão Cruls, *Hiléia Amazônica* — C. E. N., 1944 — pág. 35).

O nome *Ucaiari* (como de ordinário os terminados em *ri* ou *li*) é de origem Arwake. Na língua dos Arara-tapuya e dos Kadáu-puritãna, o rio Uaupés se chama *Ukayali*; na dos Huhúdeni, se diz *Ukávari* (tôdas três são do grupo Arwake). Poderia, talvez, derivar de *U(ni)*, água rio, e *Kawale* (em Kadaú-puritãna) ou *Kawáeri* (em Hihúdeni), vento. No entanto, nenhum dos velhos das várias tribos Arwake dos rios Içana e Aiarí, que pudemos consultar, souberam indicar o significado do têrmo *Cuiari* ou *Ucaiari*. Como também não o souberam os das outras tribos que habitam o *Uaupés*. Todos êstes designam o Uaupés por "*Dya Poxsá*", rio dos *Makú* (?). Essa designação poderia induzir a pensar que so Makú (*Puxsá*) por primeiros habitaram as suas margens, e depois, sob pressão dos invasores *Arwake* e *Tukano*, se internaram nas matas adjacentes, desde os arredores de S. Gabriel até as cachoeiras de Jandú e Carurú (no rio Uaupés). Verdade é que, conforme o espírito da língua, Rio dos Makú dever-se-ia traduzir por "*Poxsá Dyá*" e não "*Dyá Poxsá*".

(2) Na Amazônia denominam-se *cachoeiras* os lugares em que o curso de água apresenta algum declive com rebojos, corredeiras e verdadeiras cachoeiras ou quedas de água; estas aliás, bem raras. Como se trata de denominações indígenas, vêm os nomes numa construção semelhante ao genitivo ou possessivo saxônico, que é muito do espírito da língua *Tukano*, e, em geral, das línguas indígenas da região. Por isso se diz: *Iauareté-cachoeira*, *Parí-cachoeira*, *Taracuá-ponta*, etc., em vêz de: *cachoeira de Iauareté* ou *de Parí*, *ponta de taracuá*, etc., conforme a índole da língua portuguêsa.

4: Silva SQ19 Tucano

Resulta o *Papuri* (ou *Capuri*, como também se dizia outrora) da união de dois afluentes em território colombiano, pouco acima de «Melo Franco», o *Aua* e o *Paca*. Porém, a quase totalidade do seu percurso, de cêrca de 280 Km, delimita a fronteira entre o Brasil e a Colômbia. Os indígenas denominam-no «*Oxkó ñyisé dyá*», isto é, rio de água preta; efetivamente suas águas são mais escuras que as do Uaupés. Lança-se no Uaupés em *Iaureté-cachoeira*, com a largura de 250 metros. Embora apresente uma declividade média de 0,32 m. por quilômetro, possui um subsolo de granito, com inúmeros afloramentos e cachoeiras (3), que tornam perigosa a navegação. Ou, antes, só é viável por pequenas canoas e *montarias* (4), as quais, algumas vêzes, avançam pelas corredeiras empurradas a braço ou puxadas por espias, ou mesmo são transportadas através das pedras ou matas marginais pelos «*varadoiros*» (5).

O *Tiquié* é o outro afluente, e mais importante que o *Papuri*. Resulta de dois *igarapés*, ou ribeirões: o *Uaracú-pirera* (significa em Nheengatú «pelo de aracú), que toma o nome de *Tiquié*, nome de origem e significação desconhecidas (como, outrossim, *Caiari*, e *Papuri*), depois que recebe o *Macucú*. Os de língua Tukano denominam o Tiquié «*Kösá*», cujo significado, porém, ignoram. Extremamente sinuoso, mede cêrca de 450 Km de percurso, quase todo em território brasileiro. Terá seu meio quilômetro de largura na foz, porém vai estreitando-se sensivelmente para uma centenas de metros em grande parte do percuso. Em *Tucano-cachoeira* sua largura é cêrca de 50 metros, e assim se mantém até *Parí-cachoeira* (até onde chegam as lanchas de pequeno calado), e estreitando-se ainda mais, apresenta até a fronteira uma largura média de 15 a 20 metros.

Corre quase paralelo ao Papuri, seu aspeto, no entanto, é muito diverso. O leito arenoso e profundo permite-lhe curso remansoso, parecendo por isso mais escuras as águas do que o são na realidade (6), sombreadas, ademais, pela densa mata marginante. Tem

---

(3) A Comissão Brasileira de Fronteiras, sob a direção do Marechal Boanerges Lopes de Souza, que fêz o levantamento dêste rio, assinalou 39 cachoeiras. Possui ainda alguns ilhotes e ilhas, e por isso, sua largura chega a atingir seus 500 metros.

(4) "*Montarias* são as canoas que foram ampliadas por uma ou mais tábuas longitudinais, adaptadas às suas bordas.

(5) "*Varadoiros*" são as passagens abertas na mata; ou ao longo dos rios, nos trechos não navegáveis; ou como atalhos entre dois pontos, para evitar as longas voltas dos rios.

(6) O seu maior afluente, o rio Castanho, de côr leitosa, clareia sensivelmente as águas do Tiquié.

4: Silva SQ19 Tucano

poucas cachoeiras, entre elas a denominada «*Carurú*», acima de Pari-cachoeira, por certo uma das mais belas cataratas do Estado do Amazonas.

Tanto o Uaupés, como os seus dois afluentes, recebem a contribuição de inúmeros, porém pequenos, cursos dágua que, na terminologia regional se dizem *igarapés*.

A bacia que estudamos compreende as terras banhadas pelos rios *Uaupés* e os seus dois afluentes, o *Papuri* e o *Tiquié*. Está, pois, situada na zona equatorial (7). Entretanto a temperatura *mínima diária* oscila entre 19° e 22° e a máxima 24° e 32°, raro até os 36°, graças às frequentes precipitações. Apresenta terras não sujeitas a inundações, ou «*terra-firme*», conforme a nomenclatura regional, e grandes extensões banhadas, ao menos durante alguns meses do ano. A vegetação é, por isso, a mata alta e densa do «*tipo hidro-higro-megatérmico*», semelhante à do Rio Negro. Merecem um destaque as palmeiras. São de muitas variedades, por vêzes acompanhando os cursos de água, e outras, dispersas pela mataria, e das quais se servem os silvícolas para vário emprego.

Notamos, entre as palmeiras de «*terra-firme*», o *tucum* (*astrocarium vulgare*, Mart. ou *astr. tucumóides*), a *bacaba* (*oenocárpus bacaba*, Mart.), o *açaí* (*eutérpe oleracea*, Mart.) o *inajá* (*Maximiliána régia*, Mart.), a *pupunha* (*Guilerma speciosa*), a *paxiúba* (*iriartea exorrhiza* ou *settigera*, Mart.). Entre as dos banhados, o *javari* (*astrocárium javari*), o *miriti* ou *buriti* (*mauritia vinifera* e *m. flexuosa*), o *caraná* (*mauritia caraná*), o *jará* (*leopoldinia maior*), a *piaçaba* (*leopoldina piassába*, Wal.), o *tucumã* (*astrocarium tucuman*, Mart.). A palmeira trepadeira, a *jacitára* ou *Kamiwarri*, do gênero *Desmoncus*, é de grande emprêgo na cestaria indígena.

Em geral existe apenas uma pequena camada superficial humosa, donde surge a imponente selva milenar, e a seguir os estratos arenosos ou argilosos. Uma primeira consequência de tão pequena base humosa é o possuirem as árvores raízes muito superficiais, e por isso os temporais freqüentemente as derrubam, causando verdadeiras clareiras nas matas. Uma segunda consequência é que a terra se torna improdutiva após três ou quatro anos da primitiva agricultura indígena.

---

(7) Nas 486 voltas ou sinuosidades que apresenta o Tiquié, no percurso da foz até Pari-cachoeira, corta 18 vêzes a linha equatorial.

4: Silva SQ19 Tucano

Povoam rios e igarapés numerosas espécies de peixes, que constituem um alimento principal do indígena.

A fauna amazônica não é rica de variedades, e menos o é quantitativamente. Além, dos felinos perigosos, a *onça* (*felix onça*) e o *gato maracajá* (*felix pardalis* e *felix mucura*, Neuw.), poucos são os animais que o indígena pode, de ordinário, encontrar e que lhe oferece carne para alimento: o *veado* (*gen. cervus*), a *paca* (*coelógenys paca*), a *cotia* (*dasyprocta aguti*, Lin.), *queixada* e *caetitu* (*dicótyles labiátus*, *tayassú albirostris* e *tayassú tayassú*, Lin.), a *anta* (*tapirus americánus*, Briss.), a *capivara* (*hidrochoerus capybára*, Erxl.) e *macacos* de diversas espécies.

A mesma pobreza pela quantidade, porém maior riqueza pela variedade e plumagem apresentam os pássaros. Entre os apreciados como alimentos pelos servicolas, lembramos os *tucanos* (*ramphastus*), *jacamim* (*psophídeos*), *mutum*, (*crax nigra*, *alector*, etc.), *jacú* (*penélopes*), diversos *pombos* (*columba*). Procuradas pela sua plumagem são as *garças* (*heródias egretta*) e outras variedades de *ardeidae*), *tucanos*, e a variedade portentosa de *araras* e outros *psittacídeos*.

Mais variada e rica é a contribuição entomológica, servindo também algumas variedades de insectos de alimento aos habitantes da região.

Neste *habitat* em que a área para cultivo se adquire abatendo dificilmente a mata secular, e que só é aproveitável regularmente durante três ou quatro anos, não se pode, evidentemente, fazer senão um pequeno plantio. Lembrêmo-nos que primitivamente o homem uapesino dispunha apenas do machado de pedra, e que, no Uaupés, não são nem freqüentes, nem extensos os *verões*, isto é, os períodos de estiagem que permitem «a queima da roça».

A agricultura, por um lado, como também a pesca e caça não permitem grandes ajuntamentos humanos. Vamos, por conseqüência, encontrar a população sempre dispersa em pequenos grupos localizados à margem dos rios e ribeirões (igarapés), os quais além de subministrar, com os peixes, um alimento predileto, lhes servem de meio de comunicação.

Mínimas sendo as exigências dos indígenas, reduzem-se a três as condições que determinam o seu habitat: 1.º *água*, para beber, banhar-se e dar-lhes o peixe; 2.º a *floresta* que lhes proporciona a fruta e a lenha para o fogo; 3.º *terra* suficientemente fértil para o cultivo da mandioca, seu principal alimento vegetal. Nem sempre; antes, muito raramente, no estado atual, se pode, a critério indígena,

4: Silva SQ19 Tucano

conciliar a primeira condição com a terceira. Por essa razão ordinàriamente plantam a roça «*wezsé*» alguns quilômetros da sua casa. Compensando o incômodo da distância, apresenta-se à inteligência do silvícola a vantagem da segurança da sua propriedade, que assim mais facilmente escapa à vista e à cobiça. A conseqüência natural é que a densidade da população, em cada grupo, é independente da fecundidade das terras adjacentes.

## Capítulo II

# AS TRIBOS DO UAUPÉS NO PERIODO HISTÓRICO

## 1 — DADOS DA HISTÓRIA DOS RIOS NEGRO E UAUPÉS

O importante problema da origem dos silvícolas do Brasil, como da América, espera ainda sua solução. Visto que a ciência antropo-etnológica não os reconhece como autóctones, donde vieram? De uma só ou de várias origens. Em qual época? Por qual via? Com quais meios? Em uma ou em várias migrações sucessivas. Debaixo de qual direção? Como se espalharam?

Não visa o presente trabalho responder a essas ou outras questões conexas. Convém, no entanto, uma rápida visão dêsse grupo cultural do Uaupés dentro do período histórico para êle, isto é, desde a descoberta do Brasil.

A viagem de descoberta do «Rio das Amazonas», como de então ficou conhecido, foi executada por Francisco Orellana, em 1541, servindo de cronista o frade da Ordem de S. Domingos, Gaspar de Carvajal. Da sua relação, pelo que respeita o Rio Negro, só se depara que no sábado, véspera da festa da SS. Trindade, 3 de junho de 1542, «Vimos uma bóca de outro grande rio, à mão esquerda, que entrava no que navegávamos e de água negra como tinta e por isso lhe pusemos o nome de Rio Negro» («Descobrimentos do rio das Amazonas», 50).

Na breve «Relação do descobrimento do Rio Amazonas, hoje S. Francisco de Quito», do Padre Alonso de Rojas, se lê apenas, no § 6: — «Da banda do norte está um rio grandíssimo com légua e meia de bóca e as águas tão negras que se distinguem das outras, efeito que deu nome ao rio chamando-o *«Negro»*.

«O piloto-mór, de quem depois falaremos, tendo navegado dois ou três dias por êste rio Negro, disse que, segundo as notícias que pôde obter de alguns índios, nasce êste rio em umas serras vizinhas do Novo Reino de Granada e que em sua origem se divide em dois braços; um dêles, com o nome de Rio Negro deságua depois de longo curso no das Amazonas; o outro vem desaguar no mar do Norte, à vista da ilha Trindade, e pensam que êste rio seja o famoso Orinoco» («Descobrimentos», 95).

[p. 15]

[facing p. 16]

Area indígena do Uaupés e Brasil-Colombia

Silva SQ19 Tucano

O Padre Cristobal de Acuña, que acompanhou a Pedro de Teixeira no seu retôrno de Quito a Belém, traz no seu «Novo descobrimento do grande Rio das Amazonas» mais abundantes informes sobre o Rio Negro ou *Caripuacuru* como o chamavam «os naturais que o habitam», ou *Uruna* «que quer dizer água negra», pelos Tupinambas», em sua língua «*Canicuaris, Aguapras, Yacuncarais, Cahuapatis, Manacarus, Yanmas, Guanamas, Carapanaris, Guaranacuapas, Acerabaris, Carupatabas* e *Guaranaquazama*, são as nações que residem nas águas do Rio Negro» («Descobrimentos», 251).

Depois das viagens de Pedro de Teixeira começam as batidas na captura do índio. Denominavam-se «tropas de resgate» estas bandeiras escravizantes. Das primeiras foi a chefiada por Pedro da Costa Favela, de ominosa memória (1).

O Jesuita Padre Manuel Pires (conforme o Padre Serafim Leite, na sua História da Companhia de Jesus no Brasil) quatro vêzes entrou o Rio Negro, acompanhando «tropas de resgate». São, no entanto, rápidas penetrações sem escopo de colonização.

Em 1668 retorna Pedro da Costa Favella, acompanhado do Mercedário Frei Teodósio da Veiga, e no lugar denominado *Arumã* funda um povoado de índios *Tarumã*, o qual ao depois se transfere para a foz do rio Jaú, com índios «*Manao, Aruaqui* e *Tacú*», sob a denominação de Santo Elias do Jaú, e hoje se diz *Airão*.

Em 1669 Francisco da Mota Falcão lança os alicerces de uma fortaleza duas léguas acima da foz do rio Negro, onde se formara dos poucos o «*Lugar da Barra* ou o «*Povoado de S. José da Barra*», hoje a moderna e pitoresca cidade de Manaus.

Por carta régia de 1694 aos Religiosos Carmelitas e confiada a catequese do Rio Negro. Por obra dêstes surgem oito aldeamentos: S. Elias do Jaú, S. Alberto de Aracary, S. Angelo do Cumará, N. Senhora da Conceição de Maruiá, S. Rita de Cassia de Itarendaua, N. Senhora do Monte do Carmo de Cabuquena, N. Senhora do Rosario de Bararoá (ao depois denominada Thomar) e N. Senhora do Monte do Carmo do rio Dari, e mais tarde as missões do Uaupés, em S. Joaquim da Foz e S. Jerônimo da Cachoeira ou Ipanoré.

É que o govêrno da metrópole, entrado em mêdo das incursões holandesas e espanholas, e com o desejo das «drogas», se propusera a fundação sistemática de povoados ao longo de todo o rio Negro.

---

(1) "A história da província abunda em fatos da mais dura crueldade. No rio Urubú, para citar um, em 1665, uma expedição comandada por Pedro da Costa Favella aniquila completamente uma tribo, matando 700 pessoas, aprisionando 400 e incendiando 300 aldeias" Baena — Compêndio das eras da Província do Pará, 1838 — ap. José Veríssimo, o.c. 304).

Batidas, oficiais ou não, em procura das «drogas» (os produtos naturais) e das «peças» (os índios para os serviços públicos ou mesmo como escravos) se foram sucedendo. Em breve o Rio Negro e seus principais afluentes ficaram bastante conhecidos pelos portugueses, até suas ligações com o Orinoco pelo Cassiquiare e com as Guianas pelo rio Branco.

Por carta régia de 3 de março de 1755 é criada a «*Capitania de S. José do Rio Negro*». Precisamente nesse ano, por decisão do Marquês de Pombal, pelo alvará de 7 de junho, os Missionários Religiosos eram excluídos da direção temporal dos povoados indígenas (direção que passava aos juízes e vereadores), e submetidos no espiritual aos Bispos (não mais aos seus Superiores Religiosos). Em abril desse ano é escolhido o Padre Joseph Monteiro de Noronha como Vigário Geral da Capitania, sob a jurisdição eclesiástica do Bispo do Pará, que nessa época é D. Frei Miguel de Bulhões, da ordem de S. Bento.

Aos 16 de julho de 1757, é nomeado o 1º Governador Joaquim de Melo Povoas, e, em 1759, são elevadas a *Vila* ou *Lugares* várias aldeias, a de Maruia em Vila de Barcelos, como Capital; Itarendaua em *Vila de Moura*; Bararoa em *Vila de Thomar*; Jaú em *Lugar de Ayrão*; Cumaru em *Lugar de Poiares*; Aracari em *Lugar de Carvoeiro*.

As preocupações territoriais da metrópole ditaram ordens para o guarnecimento do alto Rio Negro contra as tendências expansionistas espanholas. Para isso foi destacado em 1761 o capitão José da Silva Delgado que fundou as localidades de S. Pedro de Simape, S. José dos Marabitanas, N. Senhora da Guia, S. Barbara, S. João Batista do Mabe, S. Isabel, Senhor da Pedra, N. Senhora de Nazaré de Curiana, S. Gabriel da Cachoeira, S. Sebastião e S. Antonio do Castanheiro Velho. Este é abandonado mais tarde pela impossibilidade da agricultura sempre danificada pela formiga saúva, e a população transfere-se para cima da foz do Abunã, fundando-se o povoado de S. Antonio do Castanheiro Novo. Como primeiro vigário de S. Gabriel foi nomeado o franciscano Frei José de S. Úrsula.

Em 1772 fundou-se o povoado de N. Senhora de Loreto de Maçaraby, e em 1781 o de N. Senhora das Caldas na margem do rio Cauabori.

Por ordem do General João Pereira Caldas, encarregado de Portugal para a demarcação dos limites (com D. Francisco de Requena, representando os interêsses da Espanha), o coronel Manoel da Gama Lobo D'Almada, em 1784 sobe o Rio Negro, funda a povoação de S. Marcelino na foz do Xié, e entra as águas do Uaupés.

No entanto, reduzidos os Missionários de poderes e número, a não idoneidade dos «Diretores dos Índios», foi prejudicando a sua

cristianização e estabilização em povoados. Os «Diários» de Sampaio e Ferreira documentam-no e contra isto protestam (2).

Não obstante a falta de Missionários o processo de cristianização-se vai realizando, embora mais lentamente, pois índios do Uaupés desciam até S. Gabriel ou arredores, quando sabiam da presença ali de algum sacerdote.

Proclamada a Independência do Brasil, em 1822, à província de S. José do Rio Negro não se concedeu, como às outras, plena autonomia e como «Comarca do Alto Amazonas» passou até 1850 a integrar a Província do Pará.

Com os trabalhos apostólicos do Carmelita Frei José dos Santos Inocentes, no alto Rio Negro e afluentes, por mais de vinte anos a contar de 1832, a evangelização dos indígenas cobrou novo alento.

Criada 5 de setembro de 1850 a Província do Amazonas, o seu primeiro Governador, João Batista de Figueiredo Tenreiro Aranha, no mesmo ano de sua posse, 1852, nomeia o Capuchinho Frei Gregório José Maria de Bene, «Vigário encomendado das freguezias e povoações do alto Rio Negro e Missionário dos rios Uaupés e Içana», visto que Frei José dos Santos Inocentes fôra obrigado, por doença, a descer a Manaus. A atividade de Frei Gregório é grande, e, em pouco mais de dois anos, conseguiu pôr-se em relação com 25 tribos (que figuram na sua lista), procurando aldeiá-las, restabele-

(2) Alexandre H. Ferreira na Participação segunda, em data de 30 de janeiro de 1788 afirma: — "Disse o que sempre disse, que os índios depois de livres [illegible] nesta parte de pior condição, que a que tinham na sua escravos. O senhor na vida do escravo zelava o seu dinheiro; o Director na vida do índio não zela interesse algum". E observa que os índios morriam de muito trabalho e pouco alimento. "Só lhes dão beijú, farinha e carne" (c. c. 87).

As pág. 43 fala dos maus tratos que os Diretores infligem aos índios, enquanto se enriquecem e tornam-se tantos fidalguetes: — "De umas para outras mãos absolutas e tão absôlutas que, nas vilas e lugares, ou antes, ducados, marquezados e condados livres dos Diretores os índios sofrem mudos a fiel coluna de seu sofrimento".

A pág. 70 refere do coronel Teodósio Constantino Chermont ao convidar os índios Macuxis para se aldearem em Tabocas, rio Apapóris, ter quem de seu principal Mamanaca que êles o fariam. "Com tanto pedir que se lhes havia de mandar vigario para os baptizar e doutrinar, como elles muito desejavam, e não poucas vezes o tinham pedido de balde" mas por, nenhum modo o Director, porque da conduta de tais elles com os índios nas nossas povoações estavam bem informados, tratando somente de as destruirem e não de as edificarem".

O Presidente da Província Conselheiro Herculano Ferreira Pena, na "Falla dirigida à Assembléa Legislativa Provincial do Amazonas", em 1º de setembro de 1852, depois de reconhecer que tinham falhado os nobres planos de catequese e educação dos índios afirma: — "Por uma

4: S.1.3 SQ19 Tucano

cendo muitos povoados, e trazendo delas muitos individuos ao christianismo. Citam-se as seguintes povoações para as quaes em 1854 pede mudança de nome a saber: no *Uaupés*: Querari, Macaquinha, Micura-rapecuma (aldeia do S. Coração de Jesus), Carurú-cachoeira (aldeia de S. Fidelis martir), Mutum (aldeia de S. Cruz), Aracapuri (aldeia de S. João-Batista), Jutica, Pacú-cachoeira (aldeia de S. Sebastião), aldeia do Cubeó (aldeia de N. Senhora das Dores), Umiri, Iauaretê (aldeia de S. Ana), Jabuti-rapecuma (aldeia de S. Paulo Apostolo), Juquira (aldeia de S. Domingos), Nania-rapecuma (aldeia de S. Antonio de Lisboa), S. Jerônimo (aldeia da Conceição de N. Senhora), S. Joaquim, Trovão, Pituna-rapecuma, Inuitera, Cunuri, Coró-Coró, Iura-rapecuma (aldeia de S. Francisco das Chagas), Taracuá (S. Francisco das Chagas), Ambaiua, Iviterarapecuma. No *Tiquie*: Tucano (ou S. Isabel), Uira-poço (ou Nazaré), Maracaja (ou S. José), Turi-igarapé (ou S. Pedro). No *Papuri*: S. Luzia dos Tucanos, S. Gregorio Magno dos Pira-tapuya. (Archivo do Amazonas, Anno I, vol. I, n. 2, p. 34 e Anno II, vol. II, n. 5 p. 7).

Com alternados periodos de assistência prosseguiram os Capuchos attendendo aos incolas do alto Rio Negro e Uaupés até 1888, quando se retiraram e extinguiu-se a Missão. Desde essa época civilizados e indigenas do Rio Negro tiveram visitas periódicas de

---

tudo tão simples e geralmente conhecida, isto é, por faltarem-lhe fieis executores desde que desappareceram os antigos Missionários que punham posto a essa empreza, digna certamente dos Vieira, dos Nobregas e dos Anchieta.

Exterminando os Jesuitas não previu o governo portuguez que assim decretava também a destruição dos indios, que por espaço de dois séculos tinham vivido felizes e contentes sob a paternal tutela daquelles Religiosos, entendeu pelo contrario o celebre Ministro del Rei D. José que essa tutela poderia ser vantajosamente substituida pelo mando dos Directores então creados, mas o novo systema não teve desgraçadamente outros efeitos, senão a decadencia das aldeias já formadas, e a impossibilidade de fundar outras que as imitassem como se observa no Brasil inteiro.

O que os fatos attestam é que se algum bom resultado se conseguiu foi devido ao zelo e à caridade dos Missionarios.

Entregar, portanto, a direcção das aldeias a religiosos que sejam capazes de fazer completa abnegação dos bens e gozos mundanos, que tenham a paciencia necessaria para relevar aos indigenas os erros e faltas provenientes da incontestavel inferioridade da sua inteligencia; que lhes inspirem o amor do trabalho; que os instruam nas máximas da religião catholica e da doutrina christã; que em summa os eduquem até o ponto de acharem-se habilitados para cumprir os deveres e gozar das vantagens da sociedade civil; é a meu ver o unico systema que poderemos seguir com toda probabilidade de feliz successo". ("Relatorios da Presidencia da Provincia do Amazonas", vol. I, p. 218-9).

4: Silva SQ19 Tucano

eclesiasticos, raros dos quais passaram além de S. Gabriel, e alguns nem ali chegaram.

Em 1914 a Missão do Rio Negro e Uaupés foi confiada pela Santa Sé à Congregação Salesiana de S. João Bosco e inicia-se nova e mais promissora fase para aquelas tribos. Quatorze delas localizadas ao longo dos rio Uaupés, Tiquie e Papuri são assistidas material, sanitaria e espiritualmente. Os indios são atraidos para as margens desses rios e aldeados em pequenos povoados.

Para mais perfeita assimilação civilizadora, conforme os principios cristãos, além dos hospitais, maternidades, ambulatórios e igrejas, estão funcionando (1958) 13 colégios (6 masculinos e 7 femininos) que no regime de internato, educam e instruem na lingua patria, ciencias e artes cêrca de mil e quinhentas crianças de ambos os sexos. O confronto entre a vida dos ex-alunos da Missão nos seus povoados e a dos que vivem nas malocas aonde não atingiu a ação do Missionário, é a melhor prova do alcance civilizador das Missões Salesianas.

## 2 OS PRIMEIROS RELATÓRIOS

No século 18 aparecem três Relatorios com indicação de tribos do Rio Negro e Uaupés:

1.º «Roteiro da viagem da cidade do Pará até as últimas colonias dos dominios portuguezes em os Rios Amazonas e Negro. Ilustrado com algumas noticias que podem interessar a curiosidade dos navegantes e dar mais claro conhecimento das duas capitanias do Pará e de S. José do Rio Negro», do Vigário Geral Dr. José Monteiro de Noronha (Collecção de noticias para a História e Geographia das nações ultramarinas que vivem nos Dominios Portuguezes ou lhe são visinhas: publicada pela Academia Real das Sciencias — Tomo VI. Lisboa 1856).

2.º «Diário da viagem que em visita e correição das povoações da Capitania de S. José do Rio Negro fez o Ouvidor e Intendente Geral da mesma Francisco Xavier Ribeiro da Sampaio, no anno 1774 e 1775» (Lisboa — na tipographia da Academia, 1825 — Com licença de S. Magestade»).

3.º «Diário da Viagem Philosophica pela Capitania de S. José do Rio Negro com a informação do Estado, presente pelo Dr. Alexandre Rodrigues Ferreira, naturalista empregado na expedição philosophica do Estado», em 1775-6 (Revista do Inst. Hist. e Geogr. Brasileiro t. 48, Rio de Janeiro 1885 pag. 147 ss.)

4. Silva SQ19 Tucano

O ouvidor Sampaio, como os Ouvidores precedentes, chegou apenas até a povoação de Thomar; traz, todavia, dados sobre o Rio Negro e Uaupés por informações havidas especialmente do autor do «Roteiro» a quem cita.

Alexandre R. Ferreira sobe todo o Rio Negro e penetra no Uaupés até Ipanoré. Assim, além das notícias hauridas do «Diario» do Ouvidor Sampaio, pôde acrescentar as que obteve pessoalmente. Poucas, seja dito a bem da verdade, pelo que interessa a etnografia.

Data de 1789 a «Descripção Chorographica do Estado do Gram-Para que, por ordem alphabetica, descreveu João Vasco Manuel de Braum, Governador da Praça de Macapá no anno de 1789». Mas, além de apenas repetir os dados do Pe. Noronha, e até na mesma ordem, do Rio Uaupés só aparece a «povoação de S. Joaquim do Cbane» com 200 pessoas das nações *Uaupés* e *Cocuana*» (Rev. do Inst. Hist. e Geog. Brasileiro, vol. 36, 1873, pag. 289).

Alguns informes mais interessantes, embora já conhecidos, trazem as «Noticias Geographicas» do Cônego Fernandes de Souza. Datam do sec. 19 porem já em 1793 era êle Vigário em São Gabriel (Cfr. Rev. do Inst. Hist. e Geog. Brasileiro vol. 10, Rio de Janeiro, 1876).

Desde o meado do século passado temos notícias mais abundantes que visam em especial o Uaupés, a partir da obra «*Travels of the Amazon and Rio Negro by Alfred Russel Wallace*» sob o ponto de vista etnográfico; e, para a *localização das tribos*, os Relatórios do Capuchinho Frei Gregorio de Bene, nomeado Missionario do Rio Uaupés de 1852 a 1854.

## 3. INFORMES ETNOGRAFICOS DO SÉCULO 18

Nas três fontes do sec. 18 conhecidas, e por nós citadas, pouquissimos informes etnográficos encontramos sôbre as tribos da bacia do Uaupés, que estudamos. Sem grande incômodo, pois, podem ser transcritos e o fazemos para maior comodidade dos leitores dêstes estudos.

a. No «*Roteiro*» lemos: — n. 184. «O verdadeiro nome do rio Uaupé he Ucayari que no idioma dos Indios Manáos e Barez significa — Rio de agua branca: porem como o gentio que povoa o principal tronco do Ucayari he de nação Uaupé lhe atribuiram os mais Indios o mesmo nome, que os Brancos verterão em Goaupé (é o mesmo que Condamine chama *Yaquiri* (no Mapa) e *Quiquiari* (no Diario)».

185. «Cinco dias de viagem pela margem austral desemboca o Tiquié. «Em distancia de mais tres dias de viagem tem uma grande catadupa chamada de *Ipanoré*. Mais tres dias a foz do rio Capuri na margem austral. No Rio Tiquié se acharam em o ano de 1719 pétras que depois de examinadas e fundidas, mostraram ser de prata. Por este rio e pelo Capuri se pode ir ao Apuapari (Apapóris) «que desagua na margem septentrional do Japurá, como fica dito: passando-se das fontes daquele para o Rio *Yeyá* ou *Uaya* que desagua no braço oriental do Apuapari».

186. «No rio Ucayari e nos que lhe são collaterais habitão Indios das nações Uaupe, Cocuana, Quererurí, Uanana, Cubeuana, Burenaji, Mamanga, Panenuá e outros. O gentio da nação Uaupé tem hum pequeno furo entre a cartilagem e extremidade inferior das orelhas; e outro no beiço inferior entre a barba e a extremidade superior do mesmo beiço. Sôbre o beiço traz uma pedra branca sólida, bem levigada, de figura cylindrica e de uma polegada de diametro, prega ao pescoço com cordão e fio introduzido por um pequeno furo que lhe faz artificialmente pelo meio de uma extremidade a outra: os principaes as trazem de meio palmo de comprido: os nobres pouco menos, e os plebeus muito mais curtas».

187. «Alguns Indios da nação Tariarana habitantes do Rio Capuri forão vistos em outro tempo com folhetas de ouro nas orelhas, as quais compravão a troco de pennas a Indios de outras nações que se ignoravão. Agora se sabe que os Indios da nação Panenuá, que habita na parte superior do Ucayari usa das mesmas folhetas e que delles passavão aos Tarianos. Subsiste porem a duvida donde vem os ditos fragmentos de ouro» (3).

189. O Issana he habitado de Indios das nações Baniva, Tumayari, Tuniari, Deçana, Puetana, Uerequena e outros. Os da nação Uerequena chamada comumente, por corrupção do vocabulo Ari-

---

(3) Manoel da Gama Lobo D'Almada que, por ordem de João Pereira Caldas Governador do Rio Negro, explorou as passagens do Uaupés para o Japurá, em sua relação de 13 de setembro de 1785 assim manifesta a sua opinião ao mesmo Governador (Arthur Cesar Ferreira Reis — Lobo D'Almada, p. 32): "No que pertence as Folhetas de ouro das quais se diz que usavão para pendentes de orelhas certos Indios do Rio Uaupés, he cousa esta de que não pude descobrir nem menor notícia por mais que o indaguei das muitas e diferentes Naçoens com que fallei habitantes do mesmo Rio. Bem pode ser que aquelas pertendidas Folhetas de Ouro não fossem mais do que huma illuzão quimerica originada de se verem nas orelhas das ditas Indios as Azas de certo Besouros grandes cor de cobre, cujas Azas depois de secas parecem huma especie metallica pela sua consistencia e luzimento.

4: Selva SQ19 Tucano

quena, tem por distintivo hum furo mui largo entre a cartilagem e a extremidade inferior das orelhas em que mettem molhos de palha. Entre eles acham-se muitos que antecedentemente á comunicação e conhecimento de Brancos, tinham nomes Hebraicos, huns puros e outros com pouca corrupção, como: Joab, Jacob, Yacobi, Thome, Thomequi, Davidu, Ivanan e Marianan».

b. Xavier Sampaio, no seu «Diario» escreve: — n.º 380. «Mais adiante faz barra o famoso Ucayari por outro nome Uaupés, derivado da nação assim chamada que principalmente o povoa. Desagua com duas bocas e uma ilha triangular de 20 leguas de circuito e inumeraveis cachopos e cachoeiras perigosissimas por causa de medonhos vortices que formam... Pelo sul o Tiquié e Capuri, que são os principais. Pelo norte corre ele hum canal de comunicação com o rio Guabiari que desce das vizinhanças de Santa Fé de Bogotá. Os Indios Daçanas, Tarianas e Uaupés, que comunicarão com os indios do mesmo Guabiari se tem visto com pendentes de orelhas de ouro finissimo, que se conjectura ser extraido das minas de nova Granada».

381. «He o Uaupés habitado de muitas nações das quais as principais são Cocuana, Macu, Macucoena, Uanana, Tariana, Deçaca (sic), Urinana, Timanarã, Boanari, Mamengá, Panenuá; porem a mais celebre he a Uaupés por causa da diferença que entre si admitem de varios graus de nobreza, a que serve de distintivo, como de uma ordem militar, huma pedra branca muito liza, de figura cylindrica e furada para lhe passarem um cordão com que a trazem ao pescoço. As dos principais chegam a ter meio palmo de comprido. São menores as dos nobres e muito menores as dos plebeus. Trazem os Uaupés as orelhas e beiços furados».

c. Numerosas e interessantes informações encontramos no sec. 19, especialmente nas obras de Wallace e de Koch Grunberg. A medida que se nos apresentar a oportunidade de citálos-emos, como confirmação do que se encontra no presente, ou para verificar uma modificação de costumes indigenas, ou, enfim, para retificar observações daqueles autores que nos parecem inexatas.

---

Emfim eu tenho para mim que esta Noticia das tais Folhetas de Ouro do Rio Uaupés, he tão Fabuloza, como o he certamente a que se afirma na Sinopse do Padre Jozé Monteiro, de se terem tirado ou trazido do Rio Tiquié no anno de 1749, Certas Pedras, que fundidas mostrarão ser de prata, quando bem se deixa crer que elas não seriam outra couza mais do que aquelas Pedras Metalicas chamadas Pirites, de que eu remeti a V. Excia algumas apanhadas no Apaporis, e que tambem se achão pelo Rio Tiquié, as quais parecerão prata a maior parte das pessoas da minha cometiva, que já como tal as pretendião carregar".

## 5 DIFICULDADES DE IDENTIFICAÇÃO

Grandes dificuldades apresenta a decifração da nomenclatura das tribos indígenas, mesmo limitando-nos aos grupos humanos do Uaupés e afluentes.

Tal dificuldade tem várias causas:

1.ª — Cumpre, primeiramente, indicar não apenas a possibilidade, mas a realidade de erros tipográficos. Por exemplo, a importante tribo *Tariana*, do ramo *Arawake*, que se localiza em vários povoados do médio Uaupés brasileiro, desde *Arari-pira* até *Periquito*, no «Roteiro» do Padre Noronha é denominada *Tartarana*; nos «Diários» do ouvidor Sampaio e de Rodrigues Ferreira, respectivamente, *Tariana* e *Carvana*; e nos mapas apostólicos de Frei Gregório, *Itariana* e *Itatiana*.

2.ª — As fontes antigas, de que nos podemos socorrer, trazem notícias de segunda ou mais remota mão, de cuja exatidão ficamos, às vezes, perplexos, os que sabemos quão árduo seja obter amplos esclarecimentos da parte dos indígenas. E muitos dos informantes, para aqueles primeiros exploradores, seriam necessariamente índios.

3.ª — A dificuldade supra, compreende-se, será ainda acrescida pela má pronúncia dos indígenas; ou, quiçá por divergências fonéticas ou mesmo por deficiência de som nas suas línguas. A tribo, dita no próprio idioma *Hanêrã*, e que habita as cabeceiras do Tiquié, é denominada *Panerôã* pelos Tukanos, e *Panênôã* pelos Tuyuka. Esta divergência torna-se muito compreensível se revelarmos que sua língua é da família do Tukano, porém as palavras que em Tukano começaram pelo fonema *p*, em Hanêrã iniciam pela aspirada sonora *h*. Por exemplo, *pai* se diz em Tukano *paxkó*, e em *Hanêrã*, *hakó*; *mãe*, em Tukano *paxkó* e em Hanêrã, *hakó*.

4.ª — A expressão «*região do Uaupés*» ainda hoje é vaga, e muito mais o era no passado, abrangendo também as bacias do *Içana* e do *Apapóris-Japurá*. Por essa razão os primeiros catálogos (do sec. 18) situam no *Uaupés* tribos que na realidade vivem naqueles outros rios.

5.ª — Quase nunca terão podido os informantes saber como alguma tribo se denominava a si mesma. Não raro uma mesma tribo é diversamente denominada pelas outras. Indagando de indivíduos da tribo *Tariana* (entre os quais dois bem idosos: Paulino e Casimiro, de Iauaretê) como se chamavam a si mesmos, responderam: — *Talyaseri* (alguém pronunciou *Talyaseri*). — Que significa a palavra *Tariana*? — Não sabemos, responderam êles. — Quem lhes deu o

4: Silva SQ19 Tucano

nome de *Taryana?* Responderam: — os brancos» (4). Nas matas banhadas pelo *Komé-ya* (em Tukano) ou *Komé-nyaka* (na língua da região) afluente do rio *Pirá-paraná*, há várias malocas de uma tribo que, no próprio idioma se diz *«Ide-masã»* — isto é, água-tapúya ou gente-água. Como frequentemente empregam a exclamação *sáo* (equivale à afirmativa *sim*), as tribos vizinhas alcunharam-nos «os que dizem «sáo». E assim os Tukanos denominaram-nos *«Aõ-ulrã»*, os Tuyuka *«Ao-nãnã»*. Os Colombianos, naturalmente por informação de alguma outra tribo, designam êsses mesmos *«Ide-masã»* pelo nome *«Makuna»*, termo registrado também por Koch Grünberg, cujo significado, porém, é desconhecido aos atuais *«Ide-masã»*.

6.ª — Como de ordinário as tribos se denominam pelo nome de algum animal ou planta, é certo igualmente que, às vêzes, seu nome é traduzido não só para a língua portuguesa ou para a *língua geral* (5), como também para o idioma de outras tribos. A guisa de exemplos: há no baixo Tiquié uma pequena tribo que se denomina em português *Miriti-tapúya*. Êsse nome é tão só a tradução do nome indígena *Neõrõã* que indica a palmeira *mirití* ou *buriti* (*mauritia flexuosa*). Outra tribo a si mesma se chama *«Mõxtã»*, que é o nome de um mosquito (dos gêneros *stegomya, culex*, etc) que picam durante a noite. Em língua portuguesa é conhecida por *Carapanã*, que é termo regional da Amazônia para indicar tais mosquitos. As várias línguas procuram imitar o som *«Mõxtã»* ou traduzir o nome do inseto, donde os nomes: *Mõxtéã*, em Tukano; *Muxtã*, em Pirá-tapúya; *Moxtea*, em Tuyuka; *Moneã*, em Desana; em Kubéwa, *Morõ-Wa*, em Taryana *Aini-nonc*; em Maku, *Kyira*. A tribo conhecida por *Desana*, no próprio idioma se denomina *Wind*; os Tukano dizem-na *Wnã*; os Pira-tapúya, *Knã*; os Wanãna, *Knã*; os Kumãdene, *Desã*; os Maku, *Mãã-de*. Uma pequena tribo, em caminho de extinção, e até já perdeu o próprio idioma, falando exclusivamente o dos Tu-

---

(4) Strudel, no seu "Vocabulario Portuguez-Nheengatú e Nheengatú-Portuguez" ensina que ena é um sufixo Nheengatú que indica abundância [illegible] seu emprêgo em nomes de tribos: Taryana, Wanana, Desana, Kubéwana, Barasana, etc. O termo Taryana, portanto, resulta de Tary-ena ou Talya, com a transformação do l por r pelo fenômeno de rotacismo e o sufixo ana. Ouve-se também Talyãna.

(5) Denomina-se "Língua geral" ou "Nheengatú" (a língua boa, bela) o Tupi da Amazônia, língua sonora e rica de termos e expressões, falada ainda hoje por brancos e caboclos do Rio Negro e entendida por muitos índios do rio Içana. O Tupi, como se falava de S. Vicente (S. Paulo) até o Maranhão, com suas variações dialetais, denominou-se "Abanheenga" (a língua da gente, a língua do índio).

kano, é conhecida por *Arapasu*, têrmo da língua geral que indica o pequeno pica-pau. Outras tribos traduzem êsse nome para a própria língua, e assim os Tukano chamam tal tribo *Kõrèá*; os Desana, *Kõrõ-tea*; os Taryana, *Ku-hõne*; os Makú, *Hom'de*.

7.ª — Pensamos, ainda, que, em alguns casos, a dificuldade aumenta por vir apresentada como tribo alguma subdivisão de tribo. Por exemplo: conhece-se no rio Içana uma tribo pelo nome vulgar de *Cutia* ou *Cutia-tapuya* (do grupo *Arawáke*), e na língua local se diz *Ancadzuruna*. No rio Uaupés, precisamente em Taracuápunta, vivem hoje, ainda, algumas famílias da tribo *Pira-tapúyá*, pertencentes à subtribo *Bisá-põné*, como se diz em seu próprio idioma, e que, traduzindo para o português, significa: «*filhos da cutia*». Acima de Jandia, no rio Papuri, há outrossim, uma subdivisão da tribo Tukano denominada «*Boxsó-põrá*», filhos da cutiáia (cutia pequena).

8.ª — Complicando ainda mais o problema, vêm os «descimentos», como se denominavam as migrações voluntárias dos índios abrigando-se sob a proteção do branco, para escapar às perseguições de outras tribos. Dessas migrações resulta, em dada época, o deslocamento de uma tribo para longe do seu *habitat* anterior. Assim na primeira metade do século passado, índios de várias tribos desceram do Alto Rio Negro e Içana, e vieram estabelecer-se no Baixo Uaupés, como se pode ver nos mapas de Frei Gregorio de Bene (vd. abaixo, pag. 25). Ou talvez aprofundaram-se na selva, sem que dêles se saiba mais notícia alguma. Koch Grunberg informa-nos de vários grupos *Kaica-yari* que das cabeceiras do Içana e Querari, passaram, através das cabeceiras do Uaupés, para o Apapóris. Podem outrossim, dar-se migrações de uma mesma tribo para diversos lugares, e ser designada em uma localidade preferivelmente de um modo, e em outra, de outro.

9.ª — É certo ainda que, por não se distinguirem bem as tribos, sob um mesmo nome podem vir incluídas várias tribos. Engano fácil, particularmente quando são de idênticos costumes, de línguas parecidas e, quem sabe, usando o mesmo idioma. É precisamente o que ocorre no Uaupés. De ordinário os primeiros Relatórios usam a expressão «Nações Uaupés», abrangendo tôdas as tribos que habitam aquele rio e afluentes.

Indicadas estas dificuldades, procuraremos, confrontando as fontes, identificar as tribos atuais com as antigas, e assim indagar do seu *habitat* há dois séculos, e dos movimentos migratórios que talvez se tenham dado nesse período.

## 6 AS TRIBOS DO UAUPÉS E SUA LOCALIZAÇÃO

### a Listas do século 18.

1ª — Padre Noronha no seu «Roteiro» de 1759, cita nove tribos das quais uma no rio Capuri ou Papuri, a *Tariarana* (Taryana) e oito no rio Uaupés.

2ª — Sampaio, 1775, elenca doze tribos no Uaupés e seus tributários.

3ª — Ferreira, 1785, enumera vinte e uma tribos, sendo uma no rio Papuri, a *Caruana* (Taryana) e vinte no Uaupés.

*Observações* — 1ª Nenhuma dessas listas é completa, declaram os próprios autores. Uma servirá, pois, para completar a outra, se apresentar nomes que as outras silenciam.

2ª O não figurar em lista posterior uma tribo da anterior, poderia indicar extinção ou migração de tribo. Quer parecer-nos mais provável um esquecimento do relator; ou o seu silêncio significara que não teve informações sôbre a tribo silenciada.

3ª Estas listas compreendem, outrossim, tribos que residem fora do território brasileiro, ao menos conforme as demarcações atuais das fronteiras (6).

Dispostas em quadro temos

| | Pe. Noronha, 1759 | Sampaio, 1775 | Ferreira, 1785 |
|---|---|---|---|
| 1 | | | Aguara |
| 2 | | | Arapaxi |
| 3 | | | Arara |
| 4 | | | Baniba |
| 5 | Burutari | Beatari | Burutari |
| 6 | | | Cequeho |

(6) Conforme os marcos delimitadores da fronteira, o rio *Querari* desagua no Uaupés em território colombiano. Asseguram-nos, porém, habitantes da região que em Jurupari-cachoeira (trecho colombiano do Uaupés), pode-se ver na vasante uma pedra com o nome *Brasil* insculpido. Os Relatorios de Jesuino Cordeiro, Tenente da 6ª Companhia do Corpo Policial, e que foi "Diretor dos Indios" nos rios Uaupés e Içana, no-lo mostram aldeando índios em postos que hoje pertencem a Colombia, como a Cachoeira-do-Mutum (hoje Mitu, capital do Território Nacional Colombiano do Waupes), e muito mais acima, no *Lago-do-Espelho* ou Uaruai-lago, etc.

(7) Eis a íntegra da "Carta Patente" "Manoel Joaquim do Paço, Cavalleiro da Ordem de Christo Sargento Mor addido ao Estado-Maior do Exercito do Brasil e Governador da Capitania do Rio Negro por Sua Magestade Fidelissima &. Faço saber aos que esta minha Carta-Patente virem, que depois me requerido o Indio Abalizado Raymundo José da Nação Uaupes, situado no Lugar *S. Jeronimo*, no Rio Negro, tendo para isso mostrado Documentos authenticos ser agil e sufficiente, e attendendo eu ao justo o seu Requerimento. He, por bem prover o referido Indio Abalizado Raymundo José da Nação Uaupes como por esta fosse nomeado Carro de Principal dos Indios da Nação Uaupes com o qual gosara de todas as honras, liberdades, izempsoens e franquezas que em Cazos do mesmo Cargo lhe tocarem.

Pelo que mando a todos os Officiais seus subalternos e mais Indios a elle subordinados o reconheção por Principal e como tal o honrem, estimem e lhe obedecerão, e guardem suas ordem como devem e são obrigados.

E por firmeza de tudo lhe mandei passar a presente por mim assignada e sellada com o Sinete das Armas Reais, que cumprirá inteiramente como nesta se contem e se declara. Registrando-se aonde tocar. Dada neste quartel do Governo do Rio Negro aos dezesseis dias do mez de Novembro do Anno do Nascimento de Nosso Senhor Jesus Christo de mil oito centos e vinte. E eu Claudio José Carmo, Sargento Miliciano, que Sirvo de Secretário do Governo a Subscrevi. L.S.)

d. Silva SQ19 Tucano

particular? Sim. De fato, com data de 18 de novembro de 1820 existe uma «Carta-Patente» do Governador da Capitania, Manoel Joaquim do Paço, dando provisão ao índio Abalizado Raymundo José no cargo de «Principal» dos Indios da Nação Uaupés» da localidade de S. Jerônimo (8). Trata-se evidentemente, de uma tribo em particular. Isto resulta: 1.º da redação singular: «Nação» Uaupés; 2.º não se pode pensar em um chefe geral para uma confederação de tribos, fato que não se deu nessa época; 3.º os Tuxauas ou «Principais», não são sequer chefes de tôda uma tribo, porém de pequenos grupos da sua tribo. A nomeação indica que será «Principal» dos Indios Uaupés do lugar de S. Jerônimo.

Hoje não se aplica essa denominação *Uaupé* a nenhuma das tribos do rio homônimo. 8.º Qual seria a tribo conhecida até meado do século passado por *Uaupés*? Aos 27 de março de 1818, o Brigadeiro João Henrique de Matos, Diretor Geral dos Indios, expedia título de nomeação como Tuxaua de S. Joaquim no índio João de Matos, da «Nação Tucano» filho do finado Tuxaua Abalizado Raymundo José (Cfr. Archivos do Amazonas, vol.º I, n.º 2, pág. 30, de 23 de outubro de 1906). Ora, é sabido que os filhos pertencem à tribo do pai, donde se infere facilmente que também era «Tucano» o seu pai, dito da «Nação Uaupés» na Carta-Patente de 1820.

«Nação Uaupés» das listas antigas designa, pois, a tribo *Tukano* mais numerosa e importante do Rio Uaupés, e da qual de modo particular se falará no presente estudo.

Encontramos pela primeira vez o nome *Tucano* e ultima vez a denominação *Uaupé*, em «Noticias Geographicas da Capitania do Rio Negro, no grande Rio Amazonas», do Cônego André Fernandes de Souza, Vigário Geral da Capitania e que aí exerceu seu ministério por 37 anos, sendo já em 1793 Vigário de S. Gabriel (hoje cidade de Uaupés). (Rev. do Inst. e Geog. Bras. t. 10 p. 465 — R. Janeiro, 1870).

---

Manoel Joaquim do Paço. Carta Patente porque VSa. há por bem prover ao Indio Abalizado Raymundo José no Cargo de Principal dos Indios da Nação Uaupés no Lugar de S. Jeronimo.

Para VSa. ver. Nº 510 a fl. 118 v.

Pagou de sello desta 1.600 reis. Barra 18 de Novembro de 1820.

Carvalho Costa
1820

(8) Pelo fim do sec. 16 conforme pensa Stradelli (crf. Nota 1, I) viveu um grande Tuxaua *Tarpana*, por nome Buopé, que fixou sua tribo no rio Uaupés. Com felizes façanhas guerreiras, enfrentou as outras tribos, especialmente os Wanana e tornou-se célebre. Suposta a existência do Tuxaua Buopé, pode-se admitir que tenha podido ligar seu nome ao rio e a própria tribo, que é a *Tarpana*. Dificil, porém, de explicar-se

G. Silva SQ19 Tucano

2) *BURENARI* ou *BOANARI*. O autor de «Pelo Rio Mar» (9) identifica *Burenari* com *Boanara* e *Boyana*, e acrescenta: «homens-cobra, índios de origem caraíba que moram no rio Uaupés». No trecho brasileiro do Uaupés e também no trecho colombiano que visitamos ou do qual podemos obter informações, não existe tribo alguma sob o nome de *Burenari*, *Boanari*, *Boanara* ou *Boyana*. A etimologia insinua realmente, a derivação do nome Nheengatú *boa*, boa, cobra. Nos «Relatórios» (vd. Catálogos do séc. 19, pág. 34) figura igualmente a tribo *Boanari* no rio Uaupés. Entretanto na lista de Frei Gregório de Ilene, Missionário no Uaupés naqueles mesmos anos, não aparece tal tribo. Os «Relatórios» podem ter sido organizados sôbre informações de várias origens, como os «Diários» antigos e o próprio «Roteiro». As relações de Frei Gregório, que viveu mais de dois anos entre os indígenas do Uaupés, trazem as credenciais de valia (vd. abáixo II, 6, b). Cita Frei Gregório em *Arauapiari* (alto Uaupés) a tribo *Giboia*. Por esta localização poderia tratar-se de algum grupo vindo do Aiari ou Içana. Os «Relatórios» não mencionam nenhuma tribo *Giboia*. Encontramos, no entanto, uma tribo *Giboia* no rio Içana. Se a tribo *Burenari* é a mesma *Giboia*, concluimos que é a que se diz no próprio idioma *Dzuréuê* pertencente ao grupo de tribos Arawáke, como se vê pelo vocabulário que recolhemos e gravamos (cfr. o trabalho do Autor «*Discoteca Etno-linguístico-musical*»).

Artur Ramos, entretanto, ensina que os *Boanari* são do grupo «*Caraíba* «quase extinctos, que habitam o Uatamá, afluente do Amazonas, e hoje vivem no rio Uaupés» (Introdução à Antropologia Brasileira, I, pág. 198). Talvez essa informação deve ser retificada, ao menos quanto ao *habitat*, ou quiçá mesmo totalmente, conforme o que acabamos de expor.

---

é como *Uaupé* passasse a ser a denominação específica da tribo *Tukano*, rival da tribo *Taryana* à qual pertencia Buopé.

A não ser que seja mera coincidência, o mesmo nome para o Tuxáua Taryana e para o rio. Ou quiçá êste já era denominado *Uaupés* muito antes das proezas bélicas do chefe Taryana *Buopé*, e a aproximação dos nomes se deva à confusão ou deturpação. O rio, sim, é que emprestou o nome às nações marginantes e, em particular, a uma tribo mais numerosa e dominante, a dos *Dazscá* ou *Tukano*. Convém recordar que só nestes últimos anos é que se vai generalizando o nome Uaupés para o rio. Até coisa de 20 anos o rio era popularmente conhecido por *Caiari*.

(9) "Pelo Rio Mar" denomina-se um esplêndido Relatório organizado em 1933 pelo Prelado Salesiano do Rio Negro, Dom Pedro Massa, Bispo Titular de Hebrão, contendo um esboço histórico geográfico e etnográfico da Prelazia e as atividades dos Missionários Salesianos e fartamente documentado com fotografias e estatísticas da assistência escolar, sanitária e religiosa prestada aos selvícolas.

4: Silva SQ19 Tucano

3) *CUBEUANA*. — É a grande tribo conhecida também pelo nome de *Kubeu* ou *Kubeua*, com muitos representantes ainda hoje no alto Uaupés e seu afluente o Querari (vd. IV, 2p).

4) *CUEUANA*. A tribo *Cueuana* figura na «lista das Nações indígenas» dos «Relatórios da Presidencia da Provincia do Amazonas» (Vol. I, pag. 259 ss.) correspondente aos anos de 1852-7. Entretanto nas relações de Frei Gregório não aparece tal tribo. «*Cocuana*» é que figura na lista de Frei Gregorio. Curt Nimuendajú identificou-a também com *Cocuana*, e informa que em 1927 havia remanescentes da tribo «Cocuana ou Cueuana» em três sitios da foz do Uaupés, tendo já perdido o proprio idioma e só falando a *lingua geral* (oã Nheengatú). Já em 1759, conforme noticia o Padre Noronha, os Cocuana residiam na foz do Uaupés em S. Joaquim do Coané. E na relação de 28 de julho de 1853, do Diretor dos Indios, Jesuino Correiro, aí figuram 108 indios da nação «*Chuéuana*» como erradamente grafa.

Pensamos que o nome da localidade *Coané* (S. Joaquim do Coané) deriva precisamente da tribo que aí residia na época do descobrimento. *Coané* seria apenas diferente pronuncia do nome *Cocuané*, como temos ouvido pronunciar, ou *Cueuana*.

5) *MAMANGA*. Na relação de Frei Gregório não aparece esta tribo, embora seja mencionada no I vol. dos Relatórios da Presidência da Provincia do Amazonas, como existente no rio Tiquié. Sob o nome de *Mamangá* não ouvimos falar de nenhuma tribo dos rios Uaupés, Papuri e Tiquié. Aceitando, embora, como exata a informação dessas fontes do sec. 18 pode muito bem ser que se trate de grupo que posteriormente tenha emigrado ou mesmo esteja extinto.

No entanto, não somos proclives a aceitar as hipóteses de extinção ou migração; julgamos mais plausivel que se trate apenas de uma divisão de alguma tribo uaupesina. *Mamengaba*, *mamangá* ou *mangaiga* é o nome das abelhas do gênero *Bombas*. Koch Grünberg assinala (Z.I. 283) na foz do Dyl-igarapé, afluente do Uaupés, uma horda Kubewãna com o nome de *Utí-uaiwa* ou «Indios-Vespas». É possivel que se trate dos *Utsi-ãwekõ*, a 10.ª subdivisão dos Kubewãna, conforme a elencação de Josefa (Cfr. IV; 2p).

Conhecemos tambem uma subdivisão Tukano denominada *Yaí-uxtyá* (Cfr. IV — 2ª) que é o nome de uma vespa grande, e residindo precisamente no Tiquié nos povoados de Caruru e S. Tomé (10).

---

(10) Quica, *Uti-uaiwa* seja simples alteração mórfica de *Yaí-uxtyá*, pela inversão dos termos (Uxtyá-yai), com perda da aspiração daria *Uti-yai* donde ao depois *Uti-uaiwa* ou *Uti-waiwa* na representação da Fonética Internacional.

[facing p. 33]

Maloca em constr
tribo Kulewand

em Ambatina rio Qu
ri afl. do Uaupes

Maloca em constr
tribo Iawarete-t
rio Siari afl. do I

Convem aqui recordar que no Rio Aiari (afluente do Içana) sobrevivem ainda atualmente dois pequenos grupos da tribo Arwake denominada *Kawa-tapuya* (11) ou *Aintdákenai*, no idioma natal. *Caua* é um término da Lingua Geral que significa *vespa*. *Curt Nimuendajú* identificou os *Kawa-tapuya* com os *maulyene* e di-los a mais numerosa tribo do rio Aiari. É possivel que se trate de um engano de Curt (Cfr. nosso trabalho «*Idiomas Indígenas da Amazônia*»).

6) *PANENÔÁ*. — Figura esta tribo nas listas do Padre Noronha, de Sampaio e de Ferreira. Seria ela a tribo que negociava com os Taryana aquelas folhetas de ouro que êstes usavam como adôrno, conforme narram os primeiros exploradores. Nas Relações de Frei Gregório não aparece essa tribo, embora a encontremos na lista dos Relatórios.

Há uma tribo denominada pelos Tukano *Panênôá* ou *Panêrôá*, e que se diz no idioma natal *Hâuera* (Cfr. IV — 2. g), da familia de linguas Tukano, como se pode verificar pelo vocabulário que obtivemos. (Cfr. «Discoteca Etno-linguistico-musical»). Seu *habitat* são as cabeceiras do Tiquié, ou, com mais exatidão, as vizinhanças do igarapé Comé-ia.

Koch Gruberg, entre os Tuyuka do alto Tiquié, obteve noticias dos *Buchpu-machsa*, os *Palanoa*, os *Erúlia*, os *Pamõ-machsa* e outras tribos que moravam no Pirá-paraná, rio dito pelos Tukano Uaiya, e mais para as cabeceiras residiam os *Yahuana* inimigos dos Buchpu-machsa (Z.I. 198). *Palanoá* seria apenas uma grafia diversa, explicavel pelo rotacismo de tantos indios especialmente no Papuri e Uaupés por influências Taryana.

7) *QUERERURI* ou *QUERERUI*. — Do costume de se designarem os rios pelas tribos que o habitam e vice-versa, podemos pensar que se trate de alguma tribo do rio Querari, afluente do Uaupés. Vivem, presentemente, no Querari grupos *Kubowana* e provavelmente dêsse grupo será a tal Quererurí. Ou, à semelhança dos Tukano

---

(11) Um indio *Kawa-tapuya*, por nome Miguel Joaquim, da localidade de S. Joaquim, rio Aiari, apresentou-se como "*Cacau-tapuya*". Pensamos se trate de um mero equivoco. São estas as poucas palavras da lingua primitiva *Kawa-tapuya* que nos soube dizer uma velha índia (pois atualmente todos falam o Siwsi):

Cuia, *tiya* ou *tiia*
bálaio, *apa*
anzol, *épiwi*
cachorro, onça, *dzáwi*
panela, *darapi*
cabeça, *xnúida*
êle tem, *hi-katsa*

que foram designados por *Uaupés*, não seria um grupo *Kuberiodna* conhecidos por *Quererurí*, porque dominavam o rio *Querari?*

Não logramos obter notícia alguma sobre a existencia de tribo denominada *Quererurí* ou *Quererui* na bacia do Uaupés.

8) *TARIANA*. — O Padre Noronha menciona como tribo do Papuri. «Alguns índios da nação *Tariarana* (sic) habitantes do rio Capuri foram vistos em outro tempo com folhetas de ouro nas orelhas («Roteiro», n.º 187). Sampaio recensela entre as tribos do Uaupés (incluindo os dois afluentes principais) a *Tariana*, Alexandre Ferreira grafa *Cariana* apelando para o «Roteiro» do Padre Noronha: «os índios *Cariana* do Papuri foram outrora vistos com folhas de ouro nas orelhas compradas por penas aos de outra nação os *Pananuá*» («Diário», Participação).

*Tariana* é a tribo Arwake que presentemente ocupa várias localidades do Uaupés e Papuri, e que no próprio idioma se diz *Talydseri* (em Tukano *Pdana*) (cfr. IV — 2, y).

9) *UANÁNA*. — Em «Pelo Rio Mar» encontramo-la identificada com *Uaiana* ou *Yuriti-tapuya*, etc. *Wanana* é uma tribo com várias malocas e povoados nos Uaupés, acima de Japu-ponta, a qual se denomina a si mesmo *Kotirja* e na lingua Tukano são denominados *Ozkó-ti-khãrã*, e em Pirá-tapuya, *Ozkó-tiria*. *Uaiana*, ao invés é o nome que os Tukano dão à tribo conhecida também por Juriti-tapuya. Atualmente, ao que nos consta, vivem apenas no território colombiano na area banhada pelo rio Paca e outros pequenos afluentes (Acuaricuara, etc. cfr. IV — 2, u). Tanto o idioma dos *Wanana* como o dos *Waiana*, ou Juriti é da família linguística Tukano, como se pode ver pelos respectivos vocabularios (Vd. «*Discoteca Etno-Linguístico-Musical*» do Autor).

b — *De Ribeiro Sampaio.*

Do confronto com a precedente, na lista de tribos de Sampaio, faltam: *Cubeuana e Quererui*
a mais: *Dessana* (ou Deçaca), *Macú*, *Mucucoena*, *Timanará*, *Urinaná*.

1) *DESSANA*. — É elencada nas relações de Frei Gregório e nos «Relatórios». Vários grupos desta tribo subsistem ainda no Uaupés, Tiquié e Papuri, como adiante se verá (IV — 2, w).

2) *MACÚ*. — Figura nas várias listas posteriores. Sob esta denominação vêm indicados diversos grupos humanos, como mais adiante se verá (IV-1, a (4) e IV-2).

3) *MACUCOENA* — Atualmente ao longo dos rios Uaupés, Papuri ou Tiquié e seus afluentes não existe tribo alguma sob o nome

de *Macucoeira*. «Pelo Rio Mar» informa-nos: «derivado do pássaro macu, encontrados no rio Uaupés». Embora figure na lista dos «Relatórios», não a encontramos na relação de Frei Gregório e somos proclives a pensar seja apenas outro nome sob o qual era conhecida alguma das tribos do Uaupés, quiçá mesmo a *Macú* ou *Makuná* (vd. adiante (IV-2, h). A não ser que se trate de um simples erro de imprensa ou de pronúncia.

4) *TIMANARÁ*. — Encontramos em «Pelo Rio Mar»: *Timanará, Timanará*, citados no rio Uaupés» — Aparece igualmente nos «Relatórios»; não, nos mapas de Frei Gregório, e, atualmente, na área do Uaupés não se conhece nenhuma tribo com êsse nome.

5) *URINANÁ*. — Lemos em «Pelo Rio Mar»: Urunaná, urinaná — índios escuro. No rio Uaupés. Consta esta tribo nos Relatórios; não, porém, nas relações de Frei Gregório. Talvez se trate da tribo *Urina*? Conforme Koch Grünberg pertence ela ao grupo Arwake do rio Marati a este do Caciquiare, próxima dos índios *Yabarana* (Koch G. — *Festschrift Eduard Seler* — Stuttgart, 1922, pag. 205 — 6). Chestmir, na sua classificação das línguas, indica como desaparecido o idioma *Wirina*, que êle filia à família de línguas Arwake (cfr. o trabalho do Autor «*Idiomas Indígenas da Amazônia*»).

c) — *De Alexandre Rodrigues Ferreira*

Na lista de Ferreira notamos:

falta: *Cucuana*.

a mais: *Aguará, Arará, Banibá, Cecueno, Golaná, Cudujari, Cucuaca, Macu, Macuno, Pacueno, Pumeuicá*.

1) *AGUARÁ*. — Não figura nas diferentes listas, a não ser que a identifiquemos com a tribo *Agaram* (ou ante *Agarani*) que nos «Relatórios» se indica existir no Rio Branco. «Pelo Rio Mar» informa-nos apenas: «assinalados no Rio Uaupés», e insinua sua identificação com outra tribo também desconhecida, *Agauíra*: «uma tribo mencionada no Rio Negro, talvez os mesmos Aguará».

Poder-se-ia talvez identificar *Aguará* com *Guará*? *Guará*, como ensina Stradelli, é o nome Nheengatu da *ibis rubra*, a qual, ao nascer, é branca, e só no segundo ano se torna vermelha. Esta semelhança de *guará* ainda nova com a *garça*, a cuja família — dos *ardeídae* —também pertence, de sorte que os dicionários tupi traduzem *guará* por *garça* não justificaria quiçá dar aos *índios guará* ou *aguará* o nome de *índios garça*? As lendas Tukano aludem aos índios *yché* ou garça. No século passado Wallace (cfr. II-6, b) cita no rio Papuri índios *garça* ou *uacará* (Cfr. abaixo o que se disse sobre os *Coró-Coró*).

2) *ARAPIXI*. — Também não se lê nas diversas listas que possuimos. Nem existe atualmente nenhuma tribo com êste nome na bacia do Uaupés. «Pelo Rio Mar» apresenta a seguinte insinuação: «Arapixi — citados no rio Uaupés, talvez os mesmos Arapaços» (cfr. IV-2).

3) *ARARA*. — Nos «Relatórios» consta uma tribo *Arará*, a qual, porém, vem localizada no Rio Madeira. Entre os Arwake do Içana existe uma tribo denominada *Arara-Tapuya* que, em lingua Siwsi, se diz *Adarú-dákenci*. (Cfr. infra o que diz sobre os Baniva).

4) *BANIBÁ*. — *Baniva* (*Baniua*, *Banibá*, *Vaniva*, *Maniva*) figurara nas várias listas posteriores.

Mais do que uma tribo, é um conjunto de tribos *Arwake*. Embora se encontrem membros dessas tribos dispersos em uma ou outra localidade do Uaupes, seu *habitat* é o rio Içana. Curt Nimuendajú no seu estudo «Idiomas indígenas del Brasil» apresenta a seguinte divisão:

*Baniwas ocidentais*:

*Karutana* (Baniwa do Içana, em Santa Ana) compreendendo 4 classes: *Mapátse-dákenci* ou Yurupari tapuya, *Wádzoli-dákenci* ou Urubu-tapuya, *Dzawi-minanci* ou Yauaretê-tapuya e *Adarú-minanci* ou Arara-tapuya.

*Kadauparitana* (com duas formas: Baniwa de Tunui e do Mariuá)

*Morinene* ou *Sukurúlu-tapuya* (Baniwa de Seringa-Rupitá)

*Walipari-dákenci* ou Siwsi-tapuya (ou Estrela-tapuya) Baniwa de Caruru-poço, rio Alari)

*Hohódene* (Baniwa do Yandú-cachoeira, rio Içana)

*Máuleni* (12) ou Kawa-tapuya (Baniwa do Uirá-uaçú, rio Alarí)

*Payuliene* ou Paku-tapuya (Baniwa do Acutí-igarapé, rio Içana)

*Adyaneme*, Adyana ou Tatú-tapuya (Baniwa de Santa Rosa, rio Guainia)

---

(12) Um dos famosos informantes Siwsi deu-nos *Máuri-weni* como tradução na sua lingua, de Kawa-tapuya. E' possivel que se tenha enganado. Entre as poucas palavras do idioma natal de que ainda se recordavam os Kawa-tapuyas da localidade de S. Joaquim, perto de Uapuim-cachoeira, rio Alari, é o nome da própria tribo, *Aini*, nome pelo qual é também indicado pelas outras Linguas irmãs. Cfr. nosso trabalho "Idiomas Indígenas da Amazônia")

4; Silva SQ19 Tucano

*Kumuda-mindnci* ou Ipeka-tapuya (Baniwa de S. Pedro, rio Içana)
*Kapité-mindnci* ou Coati-tapuya (Baniwa de Camuti-poço, rio Içana)

*Baniwas orientais* em Moyo, no rio Orinoco.

5) *CECUENÓ*. — Omitem-na as várias listas, e nenhumas informações logramos alcançar, dos indígenas do Uaupés e Içana ou nos livros, sôbre os *Cecueno*.

6) *CUDUIARI*. — «*Pelo Rio Mar*» informa-nos apenas: tribo mencionada no Rio Negro e Uaupés, no fim do sec. 18». Talvez a esteja identificando com os *Carajari*, que os documentos do sec. 18 atestam localizada em Moura, no baixo Rio Negro? (Cfr. II-6).

Koch-Grunberg (Zwei Jahre, 392) traz notícias de índios *Kuiapari*, que do rio Içana passaram ao Uaupés, Pirá-paraná, Apaporis e outros rios onde ainda hoje se encontram. Trazem, diz, largo batoque nas orelhas, de sorte que os lóbulos destas chegam aos ombros. Seriam, porém, do grupo *Arwake*, e seu idioma muito semelhante aos de outras tribos *Arwake* do Içana. Entretanto Curt N. que estudou os Arwake do Içana, nada informa dos Kuduyari, nem dos *Kauapari*; como também a nós nada souberam informar dessas tribos os indígenas que pudemos consultar nos rios Içana e Aiari.

Dos *Kaua-pari* das cabeceiras do rio Cananari e Tiquié, informou-nos um negociante Colombiano, Napoleão Estrada, que os visitou, são da família de línguas Tukano. É provável, então, que os *Kaua-pari* ou *Kaurpa* das matas do Cananari sejam uma tribo do grupo Tukano, ou talvez sejam os *Kaua-pari* que os Bara apresentam como subdivisão de sua tribo (cfr. IV-2, b).

Opinamos que os *Cuduiari* citados por Ferreira são os *Kubéiedna* do rio Cuduiari, pois não consta, no período histórico, ao menos de dois séculos para cá, deslocamento de índios, ditos *Cuduiari*, para outros rios.

7) *CUENACÁ*. — Não a vemos figurar em nenhuma das outras listas supra-citadas, a não ser que se identifique com a tribo *Queuanaca* que os «*Relatorios*», porém, situam no rio Japurá (cfr. II-6, b).

Não se trata, propriamente, de uma tribo, mas sim de uma subdivisão, *Kuéliaka*, da tribo Taryana (cfr. abaixo, IV, 2, y), com representantes residindo atualmente em Iauareté e Ira-uaçú-ponta. Coincide, pois, com a localização que os mapas desenhados por Manoel da Gama Lobo D'Almada, (Governador da Capitania de S. José do Rio Negro, de 9 de fevereiro de 1787 até a data do seu falecimento, 27 de outubro de 1796, e que de 1784 até 1787 explorara a região do Rio Negro e Rio Branco por ordem da Coroa Portuguesa) sinalam para os índios *Queuenacans*.

8) *GOIANÁ*. — Em «*Pelo Rio Mar*» vêmo-la indentificada com *Cocuana*, *Cabcuana*, *Cubco*, etc. Não aparece na lista dos «Relatórios», nem da de Frei Gregorio. Provavelmente será a que Wallace grafa *Quciuná* e situa em S. Joaquim do Coané, na foz do Uaupés e portanto se identifica com os *Cocuana* e que temos também ouvido denominar-se *Coianá* (cfr. acima).

9) *MUEINÓ*. — Silenciam-na as várias listas. «*Pelo Rio Mar*» traz apenas: «Mueino, citado no rio Uaupés». Num mapa do Território Colombiano do Uaupés, preparado com muito cuidado e pormenores pelos Missionarios da Congregação de Montfort, e que pudemos consultar em Mitú (Capital do Território) citam-se uns índios «*Mocinòn*», porém localizados nas cabeceiras do *Caqueta*, rio que, unindo-se ao *Apapóris*, dá origem ao *Japurá*.

Os «*Relatórios*», seguindo os documentos do sec. 18, enumeram os *Mendo* e os diz localizados no povoado de *S. Marcelino*, na foz do Rio Xié. Os mapas elaborados por Lobo D'Almada situam índios *Mocinans* sôbre o rio Uaupés, nas imediações da cachoeira de Ipanoré. Ora, nessa área do Uaupés residem presentemente vários grupos *Tariána* ou *Ariaúke*. É provável, por essa localização, que se trate realmente de índios *Mendo*, emigrados do rio Xié (ou de alguma subdivisão Tãryana).

10) — *PAICUENO*, *PUMENICÁ*. — Omitidas nas várias listas. Em «*Pelo Rio Mar*» encontra-se apenas, da primeira: «indicados no Uaupés», e da segunda: «indicados no Rio Negro». Nenhumas outras referências nos foi possível encontrar.

11) — *UACARÍ*. — Não figura nas outras listas que conhecemos. Em «*Pelo Rio Mar*» lê-se: «Uacará, Uacaraú, Uacarauá. Mencionados no Rio Negro e no Juruá». *Uacarí* ou *acarí*, é palavra tomada da Língua Geral, e indica o macaco de rabo curto *cacajao*, família dos *cebídeos* (gênero *cacajao*, *os brachyurus rubicundus* ou *macaco inglês*, o qual, no idioma Tukano se denomina *Wax-ti-suru*). É também a designação de vários peixes *locarídas* (em Tukano *Wa'ri*). No Uaupés brasileiro, no Papuri e no Tiquié, não só não existe tribo alguma sob a denominação de *Acarí*, como também não souberam dar informações de tal tribo os indígenas dêsses rios e do Para-paraná que pudemos interrogar. Não seriam, talvez, os *Uacarí* apenas uma subdivisão de alguma tribo? Conhecemos várias subtribos designadas sob o nome de algum macaco; por exemplo, na tribo Tukano os *Waúro*, na Yebá-masã os *Emõã* e os *Sêi*; entre os Kubewãna os *Tóreakó*. Pela localização no Uaupés poder-se-ia

4: Silva SQ19 Tucano

pensar numa subdivisão Tukano ou Kubewãna. Parece, porém, que não se poderia identificar os *Uacari*, nem com os os *Waú* (Uáia-pisá, sagui,), nem com os *Tóreakõ* (macaco barrigudo).

### b. Listas do século 19.

1.º — Alfred Russell Wallace, ao findar o seu livro de viagens apresenta uma lista de tribos, acrescentando algumas vêzes o significado do nome em português, e a localização da tribo. Releve-se, porém, que Wallace só esteve no Rio Negro e no Uaupés até Micura acima de Uaracapuri. Portanto as localizações das tribos em outros rios, êle, as obteve por informações, e suas notícias já não possuem tôdas o mesmo valor.

2.º — Preciosas pela localização, e bem minuciosas são as relações ou mapas de Frei Gregório de Bene.

3.º — Possuimos a lista oficial, apresentada pelo Presidente Conselheiro Herculano Ferreira Pena, em primeiro de outubro de 1853 na «Falla dirigida à Assembléia Legislativa Provincial» do Amazonas» (pag. 259 ss. do vol. I dos «Relatorios da Presidencia da Provincia do Amazonas»). Esta lista, embora oficial, tem apenas o valor de uma compilação: não traz observações novas, é, tão só, uma transcrição do «Dicionario Topographico, Historico e Descriptivo da Comarca do Alto Amazonas» de Lourenço da Silva Araujo e Amazonas (1852), porem completada com os dados fornecidos por Frei Gregório. No Rio Uaupés são elencadas 26 tribos e no Papuri apenas os *Mamangá* (Cfr. acima o que dissemos sôbre os Mamangá, II — 6, a). Na «Falla dirigida à Assembléia Legislativa Provincial do Amazonas», o Presidente Angelo Thomaz do Amaral, em primeiro de outubro de 1857 apresenta um quadro dos indígenas no qual aparecem quatro tribos que não figuram na lista do Presidente Pena, a saber: *Cariarana, Peixe, Caenatari* e *Beijú*, sendo as duas primeiras apenas grafias diversas de Tariana e Pirá-tapuya, e as duas últimas figuram no catálogo de Frei Gregório. Por essa razão não transcrevemos o elenco do Pres. Amaral.

a — *De Wallace.*

No Rio Uaupés: 1. *Quciná* (= Coeuana ou Cocuana) em S. Joaquim; 2. *Tariana*, em S. Joaquim; 3. *Ananá* (Abacaxi), abaixo de Iauareté; 4. Cubeo, perto de Carurú-cachoeira; 5. *Piratuirú* (bôcas de peixe); 6. *Puçá* (rede); 7. *Carapanã* (mosquitos, em Jurupari-cachoeira; 8. *Tapira* (anta); 9. *Uaracú* (um peixe), acima de Juquiraparaná; 10. *Cóidia;* 11. *Tocandira* (umas formigas);

12. *Jacamin* (pássaro cavadeira); 13. *Miriti* (*Mauritia*, uma palmeira) no Bacate-paraná; 14. *Omaúas* (Hianacoto).

No Rio Tiquié: 15. *Macuna*; 16. *Taiassú* (porco do mato). 17. *Tijuco* (barro).

No Japú-paraná: 18. *Arapasso*.

No Rio Apapóris (13): 19. *Tucano*; 20. *Uacará* (garça), 21. *Pirá* (peixe). 22. *Deçana*.

No Rio Queriri (Cuiari ou Iquiari) (14): 23. *Ipeca* (pato); 24. *Gi* (machado); 25. *Caua* (vespa).

No Rio Cudulari: 26. *Coró-coró* (colheireiro-ibis verde); 27. Bauuna; 28. *Tatú*. No Canici-paraná (15): 29. *Tanimbuca* (cinzas). Em Juquira-paraná: 30. *Macuras* (gambá).

6 — *Dos Relatorios*.

Rio Uaupés (pag. 250 ss.): *Boanari, Carapanã, Cocuana, Cubeo, Deçana, Itariana, Juruá, Jurupari, Macú, Macucocna, Mamengá, Panenoa, Picassu-taputa, Pirá-taputa, Tapiira, Tariana, Timanara, Tocandira, Tucano, Uananá, Uaupés, Urinaná*. Pag. 616: *Catariana, Peixe, Cuinatari, Beijú*.

Rio Tiquié: *Mamengá*.

c — *Lista de Frei Gregorio*

Datados de 1853 (Archivo do Amazonas, de 23 de Outubro de 1906, vol. I, n.º 2, pag. 32-39) os Mapas do labor apostólico de Frei Gregório de Bene entre os índios do Uaupés e Içana, trazem a descriminação das localidades, nome, idade e tribo dos individuos. Resumindo os dados temos, no rio Uaupés, as nações:

---

(13) Deve ser um engano de Wallace, não se trata do *Apapóris* (afluente do Japurá) e sim do rio *Papuri* (afluente do Uaupés) onde realmente têm seus principais nucleos as tribos *Tukano, Pirá-taptipa* e *Desána*.

(14) Bento Aranha (no "*Archivo do Amazonas*", Anno II, n.º 5 pag. 2) em resposta a uma carta de Koch Grunberg, registra *Iquiari*, como outro nome do rio Içana: "da mesma maneira por que chamam *Iquiari* ao rio Içana ou Issana".

Presentemente o rio Içana não é conhecido sob nenhuma outra denominação. Tambem não se conhece na região nenhum rio sob o nome de *Iquiari*. Sob o de *Quiari*, sim, existe um afluente da margem esquerda do Aiari, o qual, por sua vez é afluente da margem direita do Içana. Igualmente sob a denominação de *Queriri* não há nenhum rio na região. Talvez a grafia fôsse *Querari*, que é afluente da margem esquerda do Uaupés, na fronteira colombiana. *Cadulari* é um dos afluentes do *Querari*, e *Cuiari* um dos afluentes da esquerda do Içana (cfr. acima II-3 Informes etnograficos sôbre Yaquiri e Quiquiari).

(15) Não nos foi possivel obter informação sôbre a existência do *Canici-Parana*. Trata-se, provavelmente, de um êrro de imprensa.

*Mutum-cachoeira*: Cubeo, Tocandira, Tapiira, Picassú, Bauna, Macu

*Mucura-rapecuma*: Itariana, Cubeo, Beijú

*Aracapuri*: Ananá, Deçana, Cubeo, Giboia

*Pacú-cachoeira*: Onça, Quaty, Tapiira, Caimatari

*Cururu-cachoeira*: Itariana, Ananá, Piratapuia, Cubeo, Baniua, Deçana

*Jabuti-cachoeira*: Cutia

*Jaburete-cachoeira*: Itariana, Tucano, Piratapuia, Baniua

*Juquira*: Juruá, Tucano, Piratapuia, Deçana, Itariana

*S. Jeronimo*: Itariana, Tucano, Piratapuia, Deçana, Arapaço, Anana, Cubeo

*Natia-rapecuma*: Tucano, Deçano, Arapaço, Macú, Itariano, Carapanã, Iravassu

*S. Joaquim*: Caimatari, Macú, Piratapuia, Cubeo, Tucano, Irauassu, Baniua, Itatiana, Arapaço, Jurupari, Carapanã, Tabanna, Itariana, Deçana, Macú, Cocuane.

Dispostas em quadro temos:

*Tribos do Uaupes no seculo 19*

| | *Wallace*, 1848 | *Frei Gregório*, 1852-3 | *Relatórios*, 1853-7 |

Para um mais fácil cotejo, dispômo-las em quadro, juntamente com as três listas do século anterior:

a. *A lista de Wallace.*

É bem singular. Concorda com as listas do século precedente apenas em três nomes: *Tariana, Anana* (Wanana) e *Cubeo.*

Da grande lista de Frei Gregório difere: *Caua, Cóidia, Coró-coró, Gi, Ipeca, Jacamí, Macuná, Micura, Miriti, Omáua, Piraiurú, Puçá, Queianá, Taiaçú, Tanimbuca, Tatú, Tijucó* e *Uaracú.*

(1) — *CAUA.* — (cfr. Mamangá, II 6, a 5).

(2) — *CÓIDIA.* — Com tôda a probabilidade trata-se da tribo *Coidia* ou *Wanana* (IV — 2, k).

(3) — *CORÓ-CORÓ.* — É o nome de uma ave aquática *(Ibis melanocephala)* que se inclui no grupo das garças (*ardeidae*). «Pelo Rio Mar» acrescenta: «Indios Ibis verde. Nos rios Cuerari e Codolari afluentes do Uapés». Ensina Koch G. (*Festschrift Eduard Seler*, 205-6) que são os *Korod* do grupo Kubewana, vivem no Cudulari, mas desceram do alto Querari.

Pela coincidência da localização opinamos que os *Coró-coró* citados por Wallace sejam uma subdivisão da tribo Kubewana que se denomina *Kortóa* (vd. abaixo IV — 2, p) precisamente o nome da ave *Coró-coró*.

Convém recordar que o *Coró-coró* é uma ave aquática do grupo das *ardeidae* como a garça, donde talvez o chamar a tribo Coró-coró de «índios garças». É verdade que Wallace localiza os *Coró-coró* no rio Cudulari, e os *Garça* no Papuri. Cumpre, porém, relevar que são localizações vagas as que obteve Wallace, e que das cabeceiras do rio Paca, um dos formadores do Papuri, é relativamente facil a passagem para o Uaupés e o Cudulari (cfr. o que se disse acima sôbre os *Aguará*, II — 6, a - c, 1).

(4) — *GI* — É palavra da lingua geral e significa *machado*. Encontramos em «Pelo Rio Mar»: «Gi-tapuias, índios Machado. No rio Querari, afluente do rio Uaupés». Discorda, portanto, da localização de Wallace, que os situa no rio Cuiari, afluente do Içana. A não ser que se trate de uma confusão pois Wallace registra, além do *Cuiari*, a grafia *Queiri*, para o mesmo rio. Deve, pois, tratar-se de uma tribo *Arawake*, como tôdas as dêsses rios.

Hamilton Rice, no seu mapa, localiza os *Gi-tapuia* no igarapé do Cigarro (abaixo Uaupés). No entanto, não foi confirmada a existência aí dessa tribo por nenhum indígena dessas proximidades por nós consultados.

Um pajé do ribeirão Japú (Japú igarapé, rio Uaupés), por nome Henrique à nossa questão se conhecia a tribo *Gi-tapuya* (1955) respondeu-nos que são os «*Pirá-tapuya* da cauda» (isto é, última subdivisão dos Pirá-tapuya), ditos em Tukano *Komé-pá-pôrá*, residentes outrora acima do ribeirão Japú e que hoje moram em S. Francisco (rio Uaupés). Esta localização coincide com a que se pode ver no mapa desenhado por Hamilton Rice (Cfr. Mapas do Rio Uaupés N. A. 19 e Rio Putamayo S. A. 19 — Provisional Edition Published under the Patronage of Hamilton Rice — Geographical Society of New York).

(5) — *IPECA* — São os *Kumãdene*, dos quais um grupo reside hoje em Urubucuara, como mais adiante veremos (Cfr. IV — 2, x).

(6) — *JACAMIM* — Silenciado nas demais listas. Lemos em «Pelo Rio Mar»: «*Jacami-tapuia*, índios trombeteiros. Indicados no rio Uaupés. Talvez os mesmos *Buchpu-machsa*».

Dos indígenas de Pari-cachoeira Koch Grünberg obteve informações sôbre os *Buchpu-machsa* (que quer dizer «Gente da sarabatana», porque especialistas no fabrico dessa arma) ou *Buhãgana*,

como êles mesmos se denominam, habitantes do Dyi-Igarapé, afluente do Pirá-paraná, o qual por sua vez desagua no Japurá. Soube que moravam em barracas redondas, perfuravam os lóbulos das orelhas e traziam avental de casca, ao redor das coxas, e jamais haviam visto civilizado algum. Sua língua, da qual Koch pôde mais tarde recolher um vocabulário de 60 palavras, é quase idêntica à do *Omöd* e ambas, em algumas palavras, se afastam do Tukano (Z. I. 180). Fabricavam sarabatanas grandes (3,5 metros) e pesadas, por isso as usavam apoiadas (Z. I. 207). Releve-se, porém, que os *Buhágana* dos quais nos informa Koch, não se localizam no Uaupés. Por isso pensamos que não se podem identificar com os *Jacamim*. Um confronto dos vocabulários que recolhemos dos *Ide* e dos *Emöd* e o dos *Buhágana* de Koch, ressalta logo a semelhança dêste idioma com os dois primeiros. Em agôsto de 1956 um tuxáua dos *Ide-masã* ou *Makúna*, informou-nos que os *Buhágana* residiam antes nas matas do rio Taraira (afl. do Japurá), porém já se haviam extinguido em conseqüência das vinganças dentro da tribo e das lutas com outras tribos.

Não é improvável que os *Jacamim*, localizados por Wallace no Uaupés, sejam apenas uma subdivisão de tribo, quiçá os *Taitö-parmêra*, isto é, «Netos do Jacamim» (*Cfr.* abaixo as subdivisões dos *Koretcabôa*, IV — 2, p).

(7) — *MACUNA* — Não aparece, igualmente, nas outras listas. *Pelo Rio Mar*, traz pequena relação: «Macú de côr negra» e termina dizendo «são mencionados entre os afluentes do Rio Negro, no Araçanatuba, Apapóris e Jupurá». Ao invés, conforme Koch G., pertencem ao grupo Tukano, e têm seu *habitat* atual às margens do Apapóris, abaixo do Pirá-paraná, em duas malocas. São tipos de boa configuração, prossegue Koch, e falam língua bem próxima dos *Buhágana* (*Zwei Jahre*, 370; e *Festschrift Eduard Seler*, 205-6).

Podemos precisar que *Makúna* é denominação que lhes dão os Colombianos. No próprio idioma êles se dizem *Idemasã* (gente-água) e estivemos entre um grupo dêles que reside no Komé-ya (Vd. abaixo *Ide-masã*, IV — 2, h).

Koch não traz no seu *Zwei Jahre* o Vocabulário dos *Makúna*, porém, sim, o dos *Kueretu*. Ora, o Vocabulário que recolhemos dos *Ide-masã* afasta-se bem do que Koch obteve dos *Kueretu*, apesar de ser êste grupo indicado como subdivisão dos *Ide-masã*.

(8) — *MACURA* — *Macura* ou *Micura* é palavra da Língua Geral que significa *gambá*. De acôrdo com as informações obtidas dos índios Karapanã e Tatú, das cabeceiras do Aua e do Tim-igarapé, uma tribo por nome *Oá-masã* (gente gambá) reside entre os ri-

4: Silva SQ19 Tucano

beirões *Jare* e o *Tuim* (afluentes do Uaupés), e pertence à família de língua Tukano. Alguns indivíduos *Od-mahã*, como se dizem no próprio idioma, anteriormente à nossa passagem, residiram entre os Tukano de S. Miguel e Melo Franco (rio Papuri).

Encontramos mulheres *Od-mahã* casadas com Tuyuka, nas cabeceiras do Tiquié, o vocabulário que pudemos recolher e cuja pronúncia também gravamos autoriza incluir os indígenas *Micura* ou *Gamba* na família de línguas Tukano. (*Cfr.* IV — 2, n).

Obtivemos da tribo dos *Tatú* (*cfr.* IV 2, o), entre as divisões da sua nação, *Od-masã*. Embora bem próximos, pela língua, dos Tatú, parece-nos que não se podem identificar com os *Od-mahã* a divisão homônima da tribo Tatú.

(9) — *MIRITI* — Em três localidades do baixo Tiquié residem presentemente alguns grupos da tribo *Miriti-tapúya*, da qual falaremos adiante (IV — 2, m). Pela localização que Wallace dá aos *Miriti*, isto é, em *Bacate-paraná*, rio Uaupés, opinamos que se trata, não de uma tribo, e sim de uma subdivisão dos Kubéwãna, a qual no idioma pátrio se diz *Nedboko* (*cfr.* IV — 2, p).

(10) — *Omãnaua* — Também não figuram nas outras listas. Na família linguística Tukano, Chestmir, seguindo Koch Grunberg, inclui os *Omoã*, localizando-os nas cabeceiras do rio Tiquié. Estes são os *Emõã-masã* (*Cfr.* abaixo, IV — 2, f, e o nosso trabalho «*Idiomas Indígenas da Amazônia*») e que se não podem identificar com os *Omãna*.

Ensina também Koch que não se devem confundir os atuais *Omãua* com os antigos *Omãgua*, muito mais adiantados do que aquêles, e que se puseram logo em relações com os primeiros exploradores espanhóis (*Cfr.* Padre Cristobal de Acuña, «Novo Descobrimento do Grande Rio das Amazonas» — Coleção Brasiliana, v. 203, ed. 104, pág. 226-8).

Da relação de Jesuíno Cordeiro, datada de 1853, vemos que êle conseguiu aldear os *Omãua* junto do Lago-do-espelho ou *Uauruá-lago* (alto Uaupés). Os *Omãua* são puros *Karibe*, como Koch verificou por umas palavras obtidas de José, o tuxáua *Bahuna* da maloca Subiroaka (Z. I. 219); são aparentados aos das Guianas, com muitas subtribos e suas diferenças dialetais, por ex.: os *Ipurukoto*, *Pianakoto*, *Parikoto*, *Purigoto*, *Arimagoto*, *Kumanagoto*, etc. Os *Omãua* ou *Umãua* se denominavam a si mesmos *Hyanakoto*, isto é, Gente-abutre, Urubú-tapuya. A desinência *koto* ou *goto* é karibe e significa gente, povo, índio. Ao conjunto *Hyanakoto* os Wanana chamam *Mazsa-tirtod*, os Taryana, *Ehetod* e os Kubewãna, *Afwõkãwõ*.

4. Silva SQ19 Tucano

No princípio dêste século viviam, os *Hyanakoto* em 8 malocas nos rios Maciya e Cuniari ou rio dos Enganos, afluente da esquerda do Caquetá-Japurá, informa Koch. A sua língua seria muito afim a dos *Tsaha-tsahá* ou índios-Mergulhão, os quais possuiam 3 malocas nas savanas dos rios Cuniari e Mesai, e a dos *Tsahá-tsahá*, por sua vez, se afasta do idioma dito *Carijona* por Crévaux, do alto rio Japurá. *Karihona*, ou melhor *Karihona* significa *homem, gente*. Não é propriamente nome de tribo e, sim, uma expressão geral usada pelos Colombianos para designar um conjunto de tribos *Karibe* da região compreendida entre o alto Uaupés e o alto Japurá.

(11) — *PIRAIURÚ* — Não se encontra esta tribo citada em outras listas. «Pelo Rio Mar» traz: «Pirayauara-tapuya, Piraiurú, índios de bôca de peixe No rio Uaupés». Não foi possível obter outras informações entre as tribos da região. Convém observar que piraiurú significa, em Nheengatú, bôca de peixe, e *pirayauára* quer dizer peixe-cachorro e é o nome que se dá comumente ao lendário boto vermelho.

(12) — *Puçá* — Não a vemos também figurar em outras listas. Koch Grünberg encontrou duas pequenas casas de *Uasóna* ou *Puçá-tapuya* (por êrro de imprensa grafado *Pisd-tapuya*, Fischnetz-Indianer) no igarapé Manaphalla, afluente da direita do Uaupés (Z. I 284) (16). São de corpo elegante, refere Koch, rosto alongado, parecido aos Tuyuka e Yuriti, e todos com dermatose. A língua também é próxima da Yuriti. Seu centro principal, porém, são as cabeceiras do Papuri.

Em quatro excursões pelo rio Papuri até os seus formadores, os rios Paca e Aua, e navegando êste até as cabeceiras, não obtivémos notícias de tribo alguma conhecida por *Wásóna* ou *Puçá-tapuya*. Os Kubewâna indicam, sim, uma subdivisão da sua tribo por *Puçá* (*Cfr.* abaixo IV — 2, p) e residente no igarapé Pacú (acima de Mitu, Uaupés), portanto não muito distante dos *Wásóna* visitados por Koch, cujo idioma, no entanto, se afasta bastante do dos Kubewâna.

Um índio Tuyuka, por nome Lino, das cabeceiras do Tiquié, porém com prolongada permanência no alto Uaupés, informou-nos ter conhecido por lá índios denominados «*Kwásóna*», de idioma próximo ao dos Bará. É possível que sejam êstes os índios *Puçá* visitados por Koch e citados por Wallace.

---

(16) Zwei kleinere Hauser sind hier (im Quellgebiet des Caiari-Uaupés) von Udsona (Fischnetz Indianern — Puçá-Indios) bewohnt, deren Hauptsitz wiederum am oberen Papury ist.

4: Silva SQ19 Tucano

(13) — *QUEIANÁ*. — Wallace situa-a em S. Joaquim do Coanó. *Queianá* ou *Coianá* (donde o nome Coanó) é a tribo que outros denominam *Cocuana* (*Cfr.* acima II — 6 a).

(14) — *TAIAÇÚ*. — Omitida, igualmente, em outras listas. Koch localiza nas margens do rio Oocá, uns índios do grupo Tukano (*Beiopa* como diz Koch) ditos *Yupuá* ou *Taiasú-tapuya*, de língua próxima à dos *Desâna*, e dos quais recolheu seu pequeno vocabulário. Taiaçú é o nome do porco-do-mato. Os *Desâna* indicam uma subdivisão da sua tribo que se diz, no próprio idioma, *Yezsé-pôná*, «os filhos do taiaçú», e coincidindo precisamente com a localização indicada por Wallace isto é, pelas cabeceiras do Rio Castanho, afluente do Tiquié.

(15) — *TANIMBUCA*. — Na Língua Geral quer dizer *cinza*. São os *Opaina*, conforme Koch Grünberg, da família linguística Tukano, subdivisão da tribo *Yahuna*, a qual se compõe de muitas *hordas*, entre as quais os *Opaina* e os *Dutuana*, vivendo em oito malocas no rio Apaporis, a dois dias de viagem acima da foz do Pirá-paraná. Informa Koch que os *Opaina* são chamados *Hwaina* pelos Tuyuka (Z. I. 379) ou *Hoá-ñiará*, como temos ouvido pronunciar também.

(16) — *TAPIRA*. — *Tapira*, ou *Hôma-dákenaí*, como se diz na língua dos Ira-tapuya é uma tribo Arwáke dispersa em várias localidades do rio Içana, conforme a localização fornecida por Frei Gregório.

(17) — *TATÚ*. — Os índios *Tatú-tapuya* que Wallace cita no rio Cuduiari, devem ser os *Adyá-mene* do grupo Arwáke, da qual nos fala Curt Nimuendajú, ou os *Adza-nene* cujo vocabulário recolhemos e gravamos (*Cfr.* nossos trabalhos «*Discoteca Etnolinguístico-musical*» e «*Idiomas Indígenas da Amazônia*»). Relève-se, contudo, que Curt encontrou grupos dêles em S. Rosa, no rio Guainia; e Frei Gregório, nos seus mapas registra presença de índios *Tatupiá* em vários lugares do rio Içana, onde efetivamente vivem ainda hoje os *Adzanénei*.

Com êstes não se confundem os índios *Tatú* ou *Páboamahã*, como êles se dizem (ou *Pamúá-mazsá*, gente-tatú, como os chamam os Tukano), os quais pertencem ao grupo de línguas Tukano, como se pode ver pelo vocabulário por nós recolhido (*Cfr.* os dois trabalhos citados supra «*Discoteca* e *Idiomas*»). Seu núcleo principal situa-se entre o Jaré e o Cananari (afluentes do Pirá-paraná). São de estatura mediana, feições mais delicadas, tez e olhos mais claros que nos Tukano (*Cfr.* abaixo, IV — 2, o).

(18) — *TIJUCÓ*. — É a tribo *Tuyuka* das cabeceiras do Tiquie (Cfr. abaixo IV — 2, d).

(19) — *UACARÁ*. — Wallace cita ainda no Papuri, além dos Tukano, Pirá-tapuya e Desana, que efetivamente aí se encontram, a tribo *Uacará* ou *índios garças*. Presentemente nem no Papuri, nem nos seus afluentes, nem na mata circundante, de uma e outra margem, existe tribo alguma sob a denominação de *Uacará*. No tronco fluvial conhecido por Papuri, atualmente só há indígenas das tribos *Tukano*, *Desána* e *Pira-tapuya*. No interno da mata na margem direita, há um grupo *Karapanã*, localizado nas cabeceiras do ribeirão Umari, e alguns grupos de *Makú*, em ambas margens. Dos formadores do Papuri, no rio Paca e seus afluentes há ainda indígenas *Tukano*, *Desána*, *Juriti* e *Suryána*. Às margens do outro formador, o Aua, localizam-se grupos *Tukano* e *Karapanã*.

As outras listas não citam índios *Uacará* ou *garça*. No entanto obtivémos uma lenda que fala de «*índios garça*» (no idioma Tukano, *Yehea*), das cabeceiras do Papuri, ou quiçá mais distante ainda, do Pira-parana (formador do Apapóris). Num dos mapas desenhados por Lobo D'Almada aparece o nome de *Uacarás*, localizados entre as cabeceiras do Tiquie e o rio Pirá-parana.

Seriam os *Uacará* uma tribo hoje extinta? Ou quiça não se trate de uma tribo, e sim, de alguma subdivisão de tribo designada sob o nome de alguma ave aquática, da família das *ardeidae*, como o é a garça, e por isso traduzido pelo termo geral *garça*? No Papuri, coincidindo aproximadamente com a localização dos tais *índios garça* de Wallace, há um subgrupo dos *Suryána*, o qual no idioma nativo se diz «*eõna*», nome de uma ave aquática (cfr. IV — 2, r e II — 6 a, *aguará*). Entre os *Bará* (cfr. IV — 2, b) há uma subdivisão *Waya-pona*, nome também de uma ave aquática, situada, porém, nas cabeceiras do Tiquie; em coincidência, portanto com a localização registrada por Lobo D'Almada para os índios *Uacarás*.

(20) — *UARACÚ*. — Nos «Relatórios» são mencionados os *Uaraicu*, dizem-se porém, localizados nos rios Jutaó e Javari. Na área do Uaupés, presentemente, não se conhece nenhuma tribo sob o nome de *Uaracú*.

*Uaracú* é o nome de um peixe, que em Tukano se diz *Boté*. Talvez, quando se fala de Uaracú, se trate de uma subdivisão de outra tribo. Por exemplo, há uma subdivisão dos *Karapanã*, «*Botéamasá*», no rio Cananari. Traz também o nome do peixe *uaracú* a principal divisão da tribo *Desána*, que se denomina no próprio idioma *Boré-ka pama*»; porém sua residência não coincide com a dada por Wallace, pois se localizam no Papuri e não no Uaupés. Com mais

probabilidade, pela localização, seriam os «*Botéa wahyara*», subdivisão dos *Yuriti*, que vivem entre as cabeceiras do rio Paca e o Uaupés. Êstes, conforme nos asseguraram indígenas do rio Paca, já estão extintos hoje em dia.

b) *Lista Oficial.*

Quanto à lista oficial dos «Relatórios», já assinalamos suas omissões de algumas tribos que figuram nas listas anteriores. No restante coincide ela perfeitamente com as de Frei Gregório, da qual se serve. Faltam-lhe, no entanto, as tribos *Iraussú* e *Cocuana*, e tem a mais: *Coeuana* (que, como vimos são os mesmos *Cocuana*, *Goiana* ou *Coane*) e *Queuanacá*.

*Queuanacan* e como lemos no mapa traçado por Lobo D'Almada, que os localiza no Uaupés, não muito acima da foz do Papuri. Provàvelmente é a tribo Cuenacá, que figura na lista de Rodrigues Ferreira. Ou melhor, é a subdivisão «*Kuénaka*» da tribo *Taryana* (cfr. acima II — 6, a, e abaixo — IV, 2, y).

Observamos apenas que, para a tribo Pirá-tapuya, a expressão *Peixe* é uma tradução para o português do nome da Língua Geral.

c) *Lista de Frei Gregório.*

Notamos, além dos nomes que as precedentes trouxeram, os seguintes: *Anana* (Wanana), *Arapaço*, *Baúna*, *Beijú*, *Cainatari*, *Cocuana*, *Cufia*, *Giboia*, *Iraussú*, *Itatiana*, *Juruá*, *Jurupari*, *Onça*, *Picassú*, *Pirá-tapuia*, *Quati*, *Tabatana*, *Tocandira*.

(1) *ANANA* — É grafia diversa do nome *Wanana* (vd. IV — 2, k) ou *Wananá*. É comum a simplificação da pronuncia dos nomes da Língua Geral que iniciam por *ua* em *a* (cfr. *uacará* e *acará*, *uaracú* e *aracú*, etc.).

Os mapas desenhados pelo explorador (e ao depois Governador) Lobo d'Almada grafam também *Ananás* e os localizam no Uaupés, precisamente onde se acham os *Wanana*.

(2) *ARAPAÇO* — Encontra-se ainda ao longo do Uaupés, de S. José até Paraná-Jucá, e dela se falará depois (IV — 2, j).

(3) *BAÚNA* — Conforme o autor de «Pelo Rio Mar» trata-se de uma tribo espalhada desde o Rio Branco e afluentes, ao Negro, Içana, Uaupés, Japurá, Juruá, etc. e que é conhecida sob muitas denominações, sendo as principais: *Baiana*, *Povoana*, *Pazíana*, *Pautzana*, *Pualava*. Ora a tribo *Pautzana* pertence ao grupo Arwake do Rio Branco (cfr. Arthur Ramos — 172).

4. Silva SQ19 Tucano

Os Kumãdene de Umbucuara (rio Uaupés), no próprio idioma denominam os Baniva, *Bayanã-sema*. Talvez os *Bayana* dos quais fala «Pelo Rio Mar» sejam os mesmos *Baniva* ou *Arwake* que, efetivamente, povoam o Içana e afluentes.

Frei Gregório, ao invés, localiza os *Baúna* na Cachoeira do Mutum (hoje Mitu, Colombia). Por essa localização, parece-nos mais provável a identificação com o grupo Kubewana (família linguística Tukano), cuja língua citou Curt Nimuendajú e tem por nome *Bahuna* ou *Bahukiwa*, como os chamam os Kubewana. Koch Grunberg informa também que os *Bahuna* residem na parte central do rio Cudulari, afluente do Uaupés (17).

As informantes da tribo *Kubewana*, Heloisa e Josefa (cfr. IV — 2, p) ambas casadas com Wanana e residentes em Carurú-cachoeira (rio Uaupés, 1955), indicaram, como 5.ª divisão da sua tribo, os «*Bahukako*». Em abril de 1957, duas outras mulheres *Kubewana* ou *Korõterabõa* (cfr. IV — 2, p), Nazaria e Byatrina casadas com yawareté-tapuya, e residentes em Arapaço-poço, localidade do rio Içana próxima da foz do rio Aiari, deram-nos também como 5.ª divisão da sua tribo os *Bahukõwa*.

Koch Grunberg que os visitou (Z. I. 278) confirma que os *Bahuna* são ditos *Bahokõoa* pelos Kubewãna e residem na parte central do rio Cudulari.

(4) *BEIJÚ* — Silenciada nas outras tribos. «Pelo Rio Mar» diz apenas que foi missionada por Frei Gregório em 1852-3. O relatório de Jesuíno Cordeiro traz o número de 187 pessoas da tribo *Beiju* que em 1853 viviam no povoado de Cubio-paraná.

Um velho septuagenário Wanana, de Tipiaca (em 1954), por nome José, informou-nos que existe em Cubio-igarape uma tribo *Beiju*, a qual só fala o Kubewãna e se denomina a si própria *Baxtod*.

Outros informantes do alto Uaupés asseguram que, sob o nome de *Beiju*, só é conhecida uma subdivisão dos *Kubewãna* (portanto da família de línguas Tukano) e que no próprio idioma se chama «*Atucko*».

(5) *CAINATARI* — Conforme o autor de «Pelo Rio Mar» são os *Acanjatara-tapuia* que se encontram no rio Castanho, afluente do Tiquié.

---

(17) Os Kubewãna informaram a Koch que tanto os *Bahuna*, como seus vizinhos os *Mapalõwa* (conglomerados ambos sob a denominação de *Bahokõa*) são *Boloa* (Makú) e que antes falavam língua "muito feia". No princípio dêste século consideravam-se como legítimos *Kubewãna* cujo idioma era o que exclusivamente falavam (Zwei Iahre, 278).

4: Silva SQ19 Tucano

A relação de Jesuíno Cordeiro, de 1853, localiza 168 indivíduos da nação *Cainatari* em Pacú-cachoeira, aí recentemente aldeados. Por essa localização (região dos Wanana) poderia tratar-se de uma subdivisão Wanana, a qual, no próprio idioma, se diz «*Witõ monõ*», que quer dizer *acangatara branca*.

6) *COCUANE*. — Conforme Curt Nimuendajú (em carta datada de Belem a 1.º-set. 1945 ao Pe. Antônio Giacone) é a tribo conhecida também por *Cocuana* e da qual em 1927 havia ainda representantes em Jandiá e outros dois sítios da foz do Uaupés. Haviam, porém, perdido o próprio idioma e só falavam a Língua Geral (vd. acima II — 6, a). Foram os índios que mais facilmente se adaptaram à civilização, e dos quais descendem muitos caboclos do Rio Negro.

Em agosto de 1957, conforme Atayde Inácio Cardoso, do SPI (Serviço de Proteção ao Índio), havia ainda sobreviventes dos *Cocuana* ou *Coiand* na povoação de S. Joaquim na foz do Uaupés. João, o pajé Tukano de Umari (rio Uaupés, pouco acima de Iauretécachoeira, narrando as lendas das origens, diz que dentro da Cobra-grande vieram subindo os homens, e que «os *Kuewãna* que em Tukano se dizem *Pettãna*, ficaram na bôca do Uaupés. Mas um dos *Kuewãna* subiu até Taracuá-ponta e até aí ficou o limite de suas terras».

7) *CUTIA*. — Conhece-se no Içana uma tribo sob o nome de *Cutia-tapuya*, do ramo Arwake, cujo nome, em língua Baniva seria *Auddzurudi*.

8) *GIBOIA*. — Como na metade do século último muitos indígenas passaram do Içana para o alto e baixo Uaupés, somos proclives a pensar que os aldeados por Frei Gregório em Aracapuri, são indivíduos da tribo *Jiboya-tapuya* ou *Dzurênê* do Içana, dos quais recolhemos um vocabulário (Cfr. «Discoteca Etno-linguístico-musical» do Autor e Boanari (II — 6, a).

9) *IRAUSSÚ* ou *IRAVASSÚ* — Koch Grünberg informa-nos (Z. I. 288) que na Língua Geral eram denominados *Uirãuaçú* os *Hyanakoto*, isto é um grupo de tribos *Karibe* compreendendo também os *Ondua* (Cfr. acima êste nome) dos rios Macáya e Cuniari. Os Hyanakoto se achavam, portanto, localizados pela longitude do lago Uauruá. Ora, os *Irausú* ou *Iravassú* citados por Frei Gergório residem no baixo Uaupés em Naná-rapecuma e S. Joaquim da foz.

4: Silva SQ19 Tucano

Seriam, então indivíduos descidos do alto Uaupés. A não ser que se trate de uma grafia incorreta e que fôssem membros da tribo Arwake do Içana ditos *Ira-tapuya* ou *Mápanai* no idioma natal.

10) *ITATIANA*. — Não se encontra êsse nome para tribos do Uaupés. A não ser que se trate, como é provável, de um erro de imprensa, e se deva ler *Itariana*, que é como Frei Gregório chama regularmente os *Taryana*.

11) *JURUÁ*. — Não é propriamente uma tribo, senão um ramo da tribo *Tukano* que reside ainda hoje nas vizinhanças de Juquira (rio Uaupés, cfr. IV — 2, a).

12) *JURUPARÍ*. — Serão os *Jurupari-tapuya* do rio Içana, do grupo *Karutana*, da família linguística *Arwake*, denominada no próprio idioma «*Mapítse-dakene*» e do qual recolhemos um vocabulário (cfr. nossos trabalhos «Discoteca Etno-linguístico musical» e «Idioma Indígenas da Amazônia»).

13) *ONÇA*. — Supomos, pela localização indicada por Frei Gregório, sejam como os precedentes, provenientes do Içana, onde existe a tribo *Yawareté-tapuya* ou no próprio idioma e em Siwsi *Dauki-minanei*. O termo *Onça* seria a tradução de *Iawareté* da língua geral. São de língua Arwake, como resulta do Vocabulário que recolhemos (cfr. «Discoteca Etno-linguístico-musical» do Autor), e do grupo *Karutana*, conforme a classificação de Curt Nimuendajú.

O velho Wañana, José de Tipiaca, informou-nos da existência de uma tribo Onça ou *Yai-marsá* (como se exprimiu em Tukano) residente nas cabeceiras do Cudulari, acrescentando que êles falam o *Kudewâna*.

Outro velho, um Tukano octogenário de Pari-cachoeira, por nome Gabriel Costa, afirmou também a existência de uma tribo canibal, que os Tukano denominam *Yai-marsá* (gente onça) ou *Yai-peri marsá* (gente dente-de-onça) e reside nas cabeceiras do Tiquie.

14) *PICASSÚ*. — É palavra Nheengatú que quer dizer *pomba*. Frei Gregorio cita a tribo *Picassú* em Mitú, no Uaupés. Pensamos seja a tribo dita também *Yuriti* localizada precisamente em vários igarapés, entre os rios Paca e Uaupés, nas proximidades de Mitú.

15) *PIRA-TAPUIA*. — É a grande tribo que hoje se encontra em muitos lugares do Uaupes e Papuri, e da qual damos informações mais amplas neste trabalho (Vd. abaixo IV — 2, v).

4: Silva SQ19 Tucano

16) *QUATI*. — São os Coati-tapuya que passaram do Içana, em cujas cabeceiras ainda hoje residem. Pertencem à família linguística *Arwake*, e o nome da tribo no próprio idioma é «*Kapité-minanei*».

17) *TABAIANA*. — Silenciada, outrossim, nas várias listas. É possível, no entanto, que se trate também de um êrro de grafia, e a tribo em questão seja a *Yabaana* (como grafa Arthur Ramos, 170), ou *Yabarana* (de Koch G.-*Festschrift Eduard Seler*, 205), do grupo Arwake quase extinta e que Chestmir localiza no rio Maruiá. De fato, no mapa de Frei Gregório (1 de abril de 1853) consta aí apenas o nome de uma mulher *Yabarana*, residente em S. Joaquim na foz do Uaupés. Consta-nos que presentemente (agosto de 1957) só há um superstite da tribo *Yabahana*, por nome Aniceto, residente na localidade dita S. Paulo, próxima de Tapurucuara (antiga S. Isabel), no Rio Negro.

Koch (Zwei Iahre, 379) informa haver visto indivíduos de corpo elegante, representantes da tribo *Yabahana* que vivem entre os Maauna do Pirá-paraná, e cuja língua (do grupo Tukano) falavam.

Pensa, no entanto, Koch Grunberg que êsses *Yabahana* do Pirá-paraná nada tenham que ver com a tribo Arwake *Yabaana* do alto Rio Negro.

18) *TOCANDIRA* — Presentemente não se conhece nenhuma tribo sob o nome de *Tocandira* em Mitú e em todo o Uaupés para baixo da cachoeira de Jurupari.

José o velho Wanana de Tipiaca, afirmou a existência de uma tribo *Tocandira* nos igarapés Cubio e Miriti (afluentes do Uaupés) e que atualmente só falam o Kubewana.

Poderia também tratar-se da subdivisão Kubewana que no próprio idioma se diz *Pyardkó* (que quer dizer Tocandira), ou ainda seria algum dos grupos Kubewana, conhecido por Tocandira por residirem no igarapé homônimo.

# TRIBOS DA BACIA DO UAUPÉS

*T* = família Tukano, *A* = família Arwake; *K* = família Karaíba;
*gr.* = grupo; *s* = subdivisão

## Capítulo III

## MALOCAS (Baxsasé-wi'seri) E POVOADOS (Maxka)

O Uaupés lança suas águas no Rio Negro por duas bôcas, separadas pela «*Ilha das Flores*» (antiga *Ilha do Umiri*, wextinâxkârô) e ilhotes, pontuadas, ademais, de inúmeras pedras e rochedos: a bôca do sul com três barras formadas pelos arrecifes e a «*Cachoeira do Tamanduá*», sendo mais difícil a sua entrada; a do norte, também com muitos rochedos e a «*Cachoeira do Carapanã*».

Quem o sobe, vai encontrando, a pequenos intervalos, barracas ou agrupamentos de barracas, duas ou três aqui, oito ou dez mais além, e até dezoito ou vinte. São os «*Povoados*» (*maxkâ*), como os denominam os da região. Terão o nome de um Santo, por Patrono, ou de algum acidente geográfico, um nome indígena ou outro qualquer escolhido, parece, ao acaso, como em geral acontece à toponímia nacional. Os nomes são, de ordinário, da língua *Nheengatú* ou *Língua geral*, e corresponde-lhe outro em *Tukanô*, quase sempre como mera tradução. É difícil dizer se o nome original seja o *Tukano*, e o da *língua geral*, pelo qual é conhecido, seja apenas tradução, ou vice-versa.

Até 1924, da *Cachoeira de Ipanoré* para cima só existiam *malocas* (1), informa o Pe. João Marchesi, o veterano Missionário Salesiano do Uaupés. Data dêsse ano a substituição das malocas pelas casas familiares, e o aparecimento dos pequenos *povoados*, por influência das Missões Salesianas. Presentemente (1958) só existem malocas, ou no interno das matas, ou, nas margens do Rio Uaupés acima de Iutica, e do Tiquié acima de Carurú-Cachoeira.

A tradição indígena conserva o nome e a localização de malocas e ajuntamentos humanos hoje desaparecidos. Como documentário trazemos as listas abaixo. De alguns lugares, neste meado do sec. 20 existe apenas uma *capoeira* a sinalar o posto onde a mão humana abateu a mataria virgem e construiu uma maloca.

---

(1) *Maloca* se diz a grande habitação coletiva (cfr. VI, 1).

[p. 58]

I. *Malocas e Povoados do rio Uaupés* (dyá Poxsá, rio dos Makú?)

| NOME | EM TUKANO | TRADUÇÃO | TRIBOS |
|---|---|---|---|
| S. Joaquim | ? | | Koená ou Kukwana |

| Pirá-murim | sé'á-ya | Ribeirão da Piabinha | Pirá-tapuya |

(2) *Ponta*, na toponímia, indica sempre o acidente geográfico.

(3) Os indígenas forneceram-nos os dois nomes supra. *Coró-coró* é o nome de aves ribeirinhas de várias espécies: *Ibis melanocephala*, *Geronticus infuscata*.

(4) Aí houve, outrora, uma Missão dos Frades Capuchinhos, sob o patrocínio de S. Pedro, informa Koch Grünberg (*Zwei Jahre*, pág. 231). Buxpú-seró é abreviatura de buxpú-kaxsero, pedaço de sarabatana. O nome alude às lendas da sarabatana e de Tupana-ruca.

(5) Sem moradores, isto é, não existe mais o antigo povoado.

[p. 59]

(16) *Buxsika* é palavra, parece, da língua Desana.

(17) De acôrdo com a tradição indígena, existiria um canal subterrâneo que de Piracuara ligaria o rio Papurí ao Tiquié, pouco acima de Parí-cachoeira.

(18) *Sexkã* é o nome de uma madeira venenosa que deu o nome ao ribeirão.

4 — Observações — 1ª Como acabamos de ver, encontram-se pequenos grupos de uma nação próximos ou mesmo no meio de outras nações. A sociabilidade natural, ou a imposição das circunstâncias relaciona entre si êstes grupos humanos. Várias são as consequências dessas relações.

A primeira, o generalizar-se de uma língua, a da nação tukano, como idioma comum a várias tribos, de modo que, no baixo Uaupés até Iauaretê, quase tôdas as pessoas adultas (19) falarão, além da língua de sua tribo (20) também a da tribo tukano.

Depois, uma fusão dos costumes, com alteração ou até eliminação dos costumes ancestrais e adoção (não raro também com modificações) dos costumes de outros grupos. É a aculturação que há alguns séculos, ou quiça dezenas de séculos se vem processando na área do Uaupés. Nota-se, por isso, uma semelhança e quase identidade de «modus vivendi» nesses ajuntamentos humanos. Explicando e complicando êsse caldeamento étnico, vem o fato de que todas essas tribos admitem, como regra inviolável, da organização da família, o matrimônio exogâmico, pelo qual o indivíduo deve buscar, como esposa, uma mulher de outra tribo.

Quais são as práticas originárias de um grupo? Estarão em sua pureza primitiva ou sofreram o influxo de outros grupos? Quais foram os importados e de qual tribo? Houve, acaso, adaptação nessa

(19) Esta observação data de 1947, logo após nossa primeira excursão pelo Uaupés. Verificamos, então, ao penetrar a área habitada pelos Wanana, que raríssimos indivíduos desta tribo, conseguiam entender uma que outra frase usual Tukano. Em 1957, já se encontraram em todos os povoados de Caruru para baixo, dentre os antigos alunos da Missão de Iauaretê, ou dentre os adultos que aí estiveram empregados durante algum tempo, certo número de pessoas que não só entendiam bem o idioma Tukano, senão também o usavam nas conversas entre si. Relevamos em nossos trabalhos sôbre a língua Tukano, a complacência dos jovens, que passaram pelos colégios da Missão, de falar entre si o idioma Tukano. Pareceu-nos descobrir, nessa complacência, apenas uma ponta de soberba, como se fôra uma superioridade sôbre os próprios pais e outras pessoas idosas, e não por lhes proporcionar um meio de conversa entre companheiros, isento do contrôle dos "velhos".

(20) Relevo-se que não se deu a formação de uma língua, com elementos disparatados das outras, como tem acontecido em condições análogas, por ex. o Sabir (miscelânea do italiano, francês, espanhol, grego e árabe) que se ouve nos portos do Mediterrâneo.

É natural que venha a sofrer, em sua pureza, tanto a língua da própria tribo, como a da Tukano. A língua Tariana está em via de desaparecer. Em Urubucuara apenas dois velhos Ipeca-tapuya sabiam, em 1954 algumas palavras do próprio idioma Kumidene, que recolhemos e gravamos, a saber, o tuxaua septuagenário Mandú, e o quase nonagenário komu, Martinho, que veio a falecer em março de 1956.

importação? São os primeiros e graves problemas com que defronta o etnólogo, que se proponha especificar as várias camadas de cada ciclo cultural.

2.ª O problema da origem dos grupos humanos que povoam o Novo Mundo, já o dissemos, está ainda envolto em densas trevas (21). É certo, porém, que a partir do sec. 18, sempre mais frequentes e duradouras vão sendo as relações dos colonizadores com êsses indígenas. Dessas relações, provaveis umas, provadas outras, vão resultando as modificações dos nativos e adotação mais ou menos alterada, dos usos dos civilizados. É o outro aspeto do fenômeno de aculturação, e bem marcado, que se pode verificar no Uaupés na metade desta centúria.

3.ª Embora biológica e culturalmente tendam a um nivelamento, consideram-se socialmente desiguais. O grupo de tribos *Tukano* é o mais nobre. Os *Makú* são considerados e denominados escravos (em tukano poxsá, termo que, conforme A. Giacone, significa o que trabalha de graça), e êles próprios tais se julgam, servindo sem remuneração às tribos dos grupos *Tukano* e *Taryana*. Dentro do mesmo grupo de tribos, como nas *subdivisões* (cfr. VIII-3, c) de cada tribo, também se escalonam conforme certa nobreza, que é reconhecida sem discussão alguma. A Pré-história dessas tribos viria trazer luz a esta curiosa praxe.

4.ª Emerge ainda uma questão palpitante entre tôdas: esta população indígena caminhará talvez para o desaparecimento? Ou, quem sabe, se mantém numericamente idêntica; ou quiçá mesmo, tende a aumentar? Faltam-nos dados estatísticos para confronto. Podemos, contudo, afirmar:

a) Não consta aumento de um grupo por junção com outra tribo. Nem é possível, se atentarmos à mentalidade exageradamente racista dos grupos humanos do Uaupés. (22)

---

(21) Um resumo do que se pensa razoàvelmente em nossos dias, pode-se encontrar na obra de Paul Rivet: "*Les origines de l'Homme Américain*". Montreal, 1943.

(22) Parece, sim, que houve alguns casos de uma assimilação cultural mais perfeita, com perda até do próprio idioma, por exemplo o que afirma Koch Grünberg dos *Kaua-tapuia*. Mas embora os Etnólogos queiram conglobar grupos diferentes como *Sibes* de uma mesma tribo, socialmente êles são considerados pelos índios como tribos distintas. Aliás no Uaupés não existem *Tribos* no sentido rigoroso do termo, como relevamos adiante (VIII-3, b), porém nações diversas fragmentadas em mais ou menos numerosos agrupamentos. Recorde-se o que dissemos (IV-2,a) a propósito dos *Thumé* que, embora havidos por *Tukano*, apresentam peculiares traços somáticos que os diferenciam dos demais Tukanos.

Nem consideramos, porque raros atualmente, os casos de matrimonios ou «menage» de indias com civilizados (de resto todos fugidos), porque o filho não é, nem se considera mais indígena (23).

b) Fato indiscutivel é a fecundidade da mulher india. Das indagações feitas, constou-nos apenas um fato de um individuo repudiar sua mulher por infecunda, a juizo, evidentemente, do marido. Apesar do comodismo ou conveniências da mulher india que não quer ter muitos filhos (e temos várias vêzes ouvido dos seus lábios esta declaração: «é feio ter muitos filhos»), e das práticas que empregam para espaçar cada parto de 2, 3 e até 4 ou mais anos, surpreende-nos agradàvelmente, em cada povoado, a presença de numerosas crianças. Encontramos, em nossas investigações, um indio valido de seus 45 anos mais ou menos, que tinha 11 filhos (24). De uma nossa lista de individuos de várias tribos, na ordem casual em que foram feitas as medidas antropometricas, 20 casados dentre homens e mulheres, de seus 35 anos aproximados para mais, apresentam um total de 101 filhos. Portanto verifica-se uma média de 5 filhos por casal. Note-se que nessa mesma lista figuram apenas 13 filhos mortos, sem discriminação de idade. Se pensamos que todos os adultos se casam (ordinariamente depois dos 20 anos) (25), e que mais ou menos correspondem em número os dois sexos, dever-se-ia concluir pelo aumento da população (26).

c) Pode suceder que se encontre um local parcial ou mesmo totalmente desabitado, e que anos antes fôra florescente. Êste fato de per si não autoriza concluir que se trate de uma diminuição

---

(23) Relevamos (n. 105, VII 5.c), que quando nasce algum filho de uma relação esporadica de um civilizado com uma india, a qual naturalmente cabe criar a criança, esta se considera da tribo da mãe, se é solteira, ou da tribo do marido (como se fôra filho dêste), se se trata de mulher casada. Conhecemos em Iauareté (1950) dois irmãos, alunos da Missão, havidos como Taryana, embora filhos de pais diversos, dois aventureiros colombianos.

(24) Trata-se do indio Agostinho Barbosa, da tribo *Taryana*, em Iauareté. É verdade que em dezembro de 1948, de seus 11 filhos 4 eram já falecidos.

(25) Só nos consta o caso de um homem que não achava mulher; note-se, porém, que se tratava de um viúvo.

(26) Com prazer encontramos algumas destas opiniões firmadas pelo Vigário de S. Gabriel, o Cônego André Fernandes de Souza, desde fins do séc. 18. Ao n° 266 das suas "*Noticias Geographicas*" releva: "O que com efeito é digno de nota não haver entre os gentios centrais a enfermidade a que chamam humores gallicos, segundo se tem averiguado nos rios Uaupé, Japurá, Juruá, Jutahi e outros, e por isso talvez haja entre elles summa propagação como mostra a experiência diaria, em qualquer descimento se vê o duplo e triplo de crianças dum e outro sexo".

de população. Pode ter havido migração para outro local como consequência de alguma epidemia ou briga havida no povoado primitivo. Verdade é que tem aparecido surtos epidêmicos de gripes (catarro, chôa, diz o índio), sarampo (27) ou malária (uhiáke) que diminuíram a população de um ou outro grupo. A assistência médica que as Missões Salesianas lhes proporcionam, vem evitando tais surtos ou reduzindo-lhes o perigo.

Infelizmente, porem, é ainda muito alto o índice de mortalidade infantil. Anteriormente ao estabelecimento dos hospitais e ambulatórios das Missões Salesianas, dos 2 aos 10 anos de idade, morriam, por falta de higiene, cerca de 50% das crianças.

Mais alarmante ainda é o perigo da turbereulose. Enviado pelo governo colombiano, o tisiologista Dr. Alvaro Arguello Pinzon, visitou em agosto de 1955 as populações do Uaupes e Papuri. Logo após a visita deste último rio aos povoados da margem colombiana, como da brasileira, afirmou-nos em Iauarete que 75% da população indígena já se achava contagiada pelo bacilo de Koch. A afirmação é dolorosamente verossímil. Não só os indígenas desconhecem as mais simples normas de higiene, convenientes ao caso (convivem no mesmo ambiente impregnado do anidrido carbônico do fogo sempre aceso, deitam-se na mesma rede, introduzem as mãos sujas na comida comum, bebem da mesma cuia, consomem os restos da comida do tuberculótico, sorvem as bebidas mascadas quiça por algum contagiado, etc.), mas também a sua *mentalidade* exclui o emprego dos cuidados impostos pela doença. Com efeito, não crêem em doenças, julgam-se imortais. As doenças são maleficios causados por algum inimigo e que só o pajé com suas práticas mágicas e rapé de-enfumar (práticas que na realidade muitas vezes contribuem apenas para o agravar-se do mal). Por isso não se sujeitam a um tratamento longo nos hospitais da Missão onde, de ordinário, só se recolhem por vontade sua e consentimento dos parentes, depois de tentados inutilmente os tratamentos de vários pajés, já nos derradeiros dias de vida. Nestes últimos anos considerável proporção de óbitos, maxime de adultos, têm tido como *causa mortis* a tuberculose laríngea e pulmonar.

Raros são os indígenas que superam os 70 anos; aos 50 anos o índio é já velho (28), e morrem de ordinário antes dos 60 anos.

---

(27) Em agosto e setembro de 1956 um surto sucessivo de coqueluche, sarampo e malária dizimou aproximadamente duas centenas de indígenas nos rios Uaupes, Papuri e Tiquié.

(28) O aspecto faz com que se empregue comumente a palavra *velho* para determinar melhor o indivíduo. Assim se ouve com frequência: "o velho Feupe de tal lugar", "o velho Cândido", etc.

[p. 69]

## Capítulo IV

# DISTINÇÃO E CLASSIFICAÇÃO

### 1 - *DISTINÇÃO*

Abrangem estes estudos, repetimos, as tribos do Brasil e da Colômbia que povoam a *bacia do Uaupés*. Sob tal denominação entendemos o *Rio Uaupés*, desde que penetra no Brasil, logo após o afluxo do rio *Querari*, até sua foz no *Rio Negro*, com seus dois tributários, o *Papuri* e o *Tiquié* e numerosos afluentes pequenos. Nossas pesquisas de campo abrangem não só tôdos os agrupamentos humanos localizados à margem dos três rios supra, como também muitos outros grupos das cabeceiras daqueles rios e no interior da mata. Por isso parece-nos poder considerar de modo geral a área ampla da *bacia do Uaupés*. Tanto mais que alguns dos grupos que se acham mais internados nos *igarapés*, pertencem às tribos ribeirinhas, ou, ao menos, estão de longa data em relação com elas, e desta sorte tem havido assimilação cultural.

Entre as nossas *fichas antropométricas* figuram representantes de quatorze tribos, a saber: 1. *Arapasso*, 2. *Bará*, 3. *Desana*, 4. *Karapanã*, 5. *Kubéwa*, 6. *Pira-tapuya*, 7. *Suryana*, 8. *Tukano*, 9. *Tapuia*, 10. *Yuriti*, 11. *Wanana*, 12. *Kamidene*, (ou *Ipéka-tapuya*, gente pato-dagua), 13. *Taryána*, 14. *Makú*.

Tivemos ainda o ensejo de relações com as tribos: 1. *Bairemasã*, 2. *Edúrya*, 3. *Emôa-masã* (guariba-tapuya), 4. *Hanêrã* (patênôã), 5. *Ide-masã* (gente-água, ou *Aonirã*), 6. *Oá-mahã* (mikura-tapuya), 7. *Puboa-masã* (tatú-tapúya), 8. *Roéra-masã* (tarayra-tapuya), 9. *Yebá-masã*, 10. *Miriti-tapúya*, 11. *Ihuána*, 12. *Tsêna*, tôdas do grupo Tukano, e com uma dúzia de tribos do grupo *Arawáke*, dos rios Içana e Aiari.

Não incluimos no presente estudo as tribos do Içana. São fáceis as relações e frequente o comercio, hoje em dia, entre estas tribos e as que habitam o alto Uaupés. Encontram-se, não raro, indivíduos daquele rio estabelecidos na bacia do Uaupés. Grupos inteiros

tem abandonado o Içana e afluentes, havidos por «famintos», isto é, com escassez de peixe, atraídos também, muitas vêzes, pelo conforto maior que as Missões católicas vão proporcionando aos habitantes dos rios Uaupés e Negro.

Fato impressionante em tão notável caldeamento fisiológico e cultural, é que todos os indígenas, mesmo as crianças, sabem altivamente distinguir e precisar o grupo a que pertencem. Qual seria a base dessa distinção? Vigorando a lei que os filhos pertencem à nação do próprio pai, é fácil ao indivíduo indicar qual seja a própria tribo. Quais seriam, porém, os fundamentos desta distinção de tribo? O primeiro fundamento, em se tratando de *nacionalidade*, será evidentemente de ordem bio-etnológica.

a. *Distinção pelo elemento somático.*

Vimos, como foi dito, entre tôdas essas tribos (exceto os *Makú*) a lei da exogamia. Os *Taryana* de *Iauareté*, por exemplo, obtêm, como esposas, as mulheres da tribo *Tukano* residentes no povoado vizinho, dito *Umari* ambos povoados sôbre o Rio Uaupés. Vice-versa, os *Tukano* de Umari tomam como esposas as *Taryana* de Iauretê. Conforme os conhecimentos atuais sôbre a hereditariedade, os *genídios* (1) paternos se fundem e equilibram. Pode-se, pois esperar que o aspecto físico dos *Taryana* (de mãe Tukano) não apresentará traços físicos indiscutìvelmente caraterizadores, que os distingam dos *Tukano* (de mãe *Taryana*). Êste cruzamento obrigatório, e que data de muitas gerações, explica-nos a semelhança de traços fisionômicos, que não, encontramos, entre indivíduos de tribos diferentes (2).

No entanto, documentando origem étnica diversa, com uma resistência surpreendente aos fatôres biológicos niveladores, notam-

---

(1) A ciência nova, a *Genética*, verificou e admite uma concepção granular da hereditariedade. A célula germinativa do homem, no seu núcleo contém 24 pares de pontos *cromáticos*, são os *cromossomos*, cada qual constando de partes menores dêles *gen* ou *genídio* (do radical grego *gen*, que indica *gerar*).

(2) Um caso típico entre os inúmeros, observamos em agôsto de 1956, numa excursão ao ribeirão *Umari*, afluente do Tiquié (próximo de Pari-cachoeira). Encontramos em *Piracema*, povoado da tribo *Desana* no Umari, um menino com os traços fisionômicos extraordinàriamente semelhantes ao de um rapaz *Desana* que nos servia de remador, e justamente dêsse povoado. Verificamos, porém, que o menino era da tribo *Tukano*, do povoado denominado Floresta, à margem esquerda do Tiquié. Na realidade, o menino e o rapaz são entre si *bazukêra* (= primos indicados para casamento preferencial). Efetivamente o menino filho de pai Tukano, tinha por mãe uma *Desana* do povoado de Piracema, e tia do rapaz nosso remador.

SQ19 Tucano

se tipos somaticamente bem diferenciados (3). Parece-nos mesmo que se podem distinguir no Uaupés 5 ou 6 tipos somáticos ou normotipos, com seus traços peculiares. Tentaremos esboçar os traços de alguns desses *tipos somáticos*, aos quais, em falta de outro critério, e por ser mais simples, denominamos pela tribo onde encontramos o maior número de indivíduos com tais lineamentos.

1) *Tipo Tukano.*

Tez: bronzea. As crianças são mais avermelhadas, puxando ao cobre. Após exercício físico (corrida, trabalho) tornam-se notàvelmente acobreados.

Em todos os casos de recém-nascidos, que nos foi dado observar encontramos a característica *mancha mongólica*, arroxeada, oval, medindo aproximadamente um centímetro de diâmetro ou pouco mais, e sempre na região glútea. Informaram-nos os Tukano Antonio Barreto, Dorotéia Brito, e outros, que essa mancha se denomina *Wâr-ti-ôtá*, e é absolutamente geral. Embora desapareça, ordinàriamente, após dois ou três meses, pode, no entanto durar um ano ou mais. A denominação *Wâ-ti-ôtá, fezes de Wâr-ti*, resulta, conforme a lenda, do fato de o primeiro recém-nascido ter sido deposto em local onde havia fezes de *Wâr-ti* (cfr. VII-4, d (5) que o sujaram.

Rosto arredondado, por vêzes alargando-se para as bochechas, como *tipo gastronômico*, ou mesmo afilando em duplo triângulo, para a testa. Esta é fugida e, na totalidade dos casos, em forma de trapézio, com base menor para cima, e frequentemente abaulada lateralmente para as fontes. O zigoma é bem saliente.

Sobrancelhas pouco espessas, pequenas, retas, ou leve e elegantemente arqueadas, separadas por espaço glabro de uns 3 cm (a base do nariz). Cílios curtos e pouco espessos. Olhos pequenos, mongoloides, de pálpebras oblíquas. Íris preta ou bem escura e conjuntiva esbranquiçada, ou, com certa freqüência, amarelada.

Nariz curto, baixo, ordinàriamente côncavo, formando um arco regular. Base larga (entre as sobrancelhas); algumas vêzes se estreita, rebaixa e afina no *násion*, semelhante a um pequeno triângulo, para logo alargar-se até a ponta que é, de ordinário, muito

(3) Temos encontrado dentro da mesma tribo, porém pertencentes a subtribos diferentes, tipos somáticos bem distintos. Por exemplo os Tukano de Iuquira (subdivisão *Ihumuã*) apresentam notável diferença de outras subdivisões Tukano: são mais claros, de testa mais alta e reta, feição mais delicada. Igualmente os *Pirá-tapuya* do povoado S. Paulo, no rio Papuri, os *Desana* de Piracema no Umarí apresentam traços fisionômicos característicos que os distinguem de outros grupos da mesma tribo.

SQ19 Tucano

cicatriz. Narículas grandes, redondas, muito visíveis, porque freqüentemente a ponta é arrebitada. Na quase totalidade dos casos termina em proeminência arredondada.

Orelhas em geral longas, piriformes, acabanadas e de lóbulos presos quase sempre. Na totalidade dos casos que pudemos verificar (mais de duas centenas de indivíduos de ambos sexos e das várias tribos cujas medidas antropométricas executamos) pudemos observar (na parte dorsal do pavilhão auricular tem ambos pavilhões ou num só, e geralmente na parte inferior) uma cicatriz de feitio e dimensão varia. Em muitos casos pareciam marcas de dentadas, com o sinal de 2 ou 3 dentes. Tôdas as pessoas não sabiam ou recusavam dar a explicação dessa cicatriz, respondendo, como o fazem de freqüente: «não sei», ou «é assim mesmo», ou ainda «é de nascença». Uma jovem afirmou que foi seu tio quem executou, e nada mais quis dizer. Um rapaz informou que o fora por sua mãe, quando ainda pequeno, com a finalidade de poder mais tarde prender penas nas danças. Explicação que evidentemente não satisfazia, porque ele não tinha os lóbulos furados. Dorotéia Brito, bem mais tarde informou que se chama tal cicatriz *Wãx-ti-ba'bekaro* (orifício de *Wãx-ti*), porém nada disse da origem, afirmando que era de nascença. Pareceu-nos poder afirmar, como de fato o fizemos: 1º que é artificial, pela aparência; 2º feito antes do rito da puberdade, pois os encontramos em crianças pré-púberes; 3º o nome de *Wãx-ti-ba'bekaro* é indício que a julgam de valor mágico ou transcendente. Talvez mesmo um rito de valor simbólico, como a circuncisão dos judeus. Estas conclusões provisórias tiveram sua ratificação em setembro de 1950, quando o Tukano Antônio Barreto, que apresentava essas cicatrizes em ambas as orelhas, não só confirmou o termo *Wãx-ti-ba'bekaro*, como acrescentou que é feito pelo pai, pela mãe, ou qualquer outra pessoa, depois que a criança recebeu o nome (cfr. Rito da imposição do nome, VIII-1, b (4), isto é, de 3 aos 5 anos). Afirmou, porém, que desconhecia seu significado.

Bôca larga, lábios grossos, prognatismo freqüente, embora leve, dentadura feia, com dentes amarelos, muitas cáries e falhas. Dos indivíduos acima dos 20 anos, poucos possuem todos os dentes. Não raro caninos e incisivos deslocados ou acavalando-se.

Queixo arredondado, pequeno, às vêzes quase imperceptível, e freqüentemente terminando em pequena e elegante ponta.

Nem bigode, nem barba. (4) Poucos indivíduos do sexo masculino apresentam alguns fios esparsos de bigode ou barba, e

(4) Entre as tribos *Ihuãna*, *Rucra*, *Ide-masã*, os *Arucke* do Icana e as tribos do Caburi encontram-se, com muita freqüência, homens com discreto bigode e até com pequena barba no queixo.

SQ19 Tucano

procuram eliminá-los por depilação (*poá-ri kuré*) com os dedos, processo igual para arrancar os pelos dos braços, pernas e outras partes do corpo a si próprio ou a outrem (5). Temos visto, para as axilas, servirem-se do seguinte processo depilatório: uma bola de breu ou da resina dita *si-pe*, que se comprime e volteia nas axilas, aderindo e arrancando os pelos. O apresentar-se glabro, é uma verdadeira de elegância, conforme seus gostos estéticos.

Cabelo negro, ou, mais comumente, castanho escuro, quase preto, bem liso, grosso e abundante, muitas vêzes, porém, quebradiço (6) só. (6). Os que passaram pelo colégio trazem-no de tamanho regular, penteado e partido do lado esquerdo; os mais, tem-nos cortados com tesoura com pequena franja na testa, atrás das orelhas e na nuca. Há um século deixavam-no crescer em longas tranças (7) que podiam atingir até a coxa. As mulheres, ao invés, aparavam-no um pouco, talvez para não embaraçar no serviço. Hoje as mulheres têm-no um pouco baixo dos ombros, mais ou menos preso por alguma fita ou grampo. Vêem-se algumas crianças com o cabelo bem rapado, porém crescendo de largura, como se fôsse uma juba de leão (8). Em alguns poucos casos, cabelos rareando por queda, não, porem, calva completa. Encanecimento raro e tardio, graças ao emprego de algumas loções tintóriais. Nenhum caso de albinismo ou eritrismo, nos 8 ou 10 mil índios que temos visitado.

Pouco piloso o restante do corpo, pêlo fino e castanho, mais ou menos da côr da pele, e por isso desta pouco se distingue.

É de estatura baixa e pescoço curto. Ridicularizam os brancos de pescoço um tanto longo. O tronco bem feito, ligeiramente maior

---

(5) Wallace informa ainda: "Os homens têm muito pouca barba, e mesmo esta pouca êles arrancam, puxando os fios. Homens e mulheres, todos arrancam as sobrancelhas (o que hoje não se verifica, ao que parece, ou será mais raro) e pelos dos sovacos e das partes genitais" (Op. cit. 617).

(6) Entre os *Maku*: *Idé-masã*, *Rocrá-masã*, *Yeba-masã*, *Hanêrã*, *Edurya*, *Bareadal*, são freqüentes os tipos quimétricos. Pudemos ver e fotografar algumas mulheres que apresentavam cabelos pretos, finos e *cacheados*.

(7) A. Wallace Russell, em 1850 escrevia: "Os homens não cortam cabelo, deixam-no pender na frente em longa trança, prendendo-a em roda com cordas ou deixando-a cair no meio do dorso, muitas vêzes até as coxas. A cabeleira das mulheres cai-lhes solta sôbre as espáduas e é cortada com um moderado comprimento" (Viagens pelo Amazonas e Rio Negro, 616).

(8) Cabelo cortado assim: "à juba de leão", embora com faixa mais larga, de uns 5 ou 6 cm, temos visto, outrossim, em crianças cabocias do Rio Negro. Talvez os indígenas tenham imitado êsses exemplos.

que os membros inferiores nos do sexo masculino, e com diferença ainda mais sensível nos do sexo feminino, sem que por isso cheguem a ser deselegantes. Troncudos, com ampla caixa toráxica e com quadris bem mais finos que os ombros. Nos homens, depois dos 40 anos, ventre muitas vêzes grande e caído, o que dá ao tronco um aspecto roliço. O desenvolvimento desproporcional do estômago, como resultado do excesso de alimentanão preponderante de farinha de mandioca, já se nota em tôdas as crianças desde os 3 ou 4 anos de idade.

A mulher moça é de corpo sempre cheio, o que é tido como traço de elegância; chega, às vêzes, a apresentar um aspeto roliço. De ordinário as mulheres têm o busto elegantemente inclinado para trás, talvez pelo modo de carregar os pesos, em grandes cestôs ao longo das costas, porém presos à testa por embira. Quiçá esta é ainda a causa de um desenvolvimento exagerado do *externum*.

Os indivíduos do sexo feminino têm a região glútea bem desenvolvida, embora não exageradamente, qualidade aliás apreciada também como fator da elegância feminina. São, por isso, objeto de zombaria, como *desnalgadas*, *duxkú*, as de corpo mais esguio. Parece porém, que não há processo artificial para o desenvolvimento dessa região e que o próprio modo de andar, com o tronco bem inclinado para trás o abdômen avançando, e o peito e cabeça bem erguidos, ou mesmo inclinados para trás, é que realça as proporções glúteas.

Braços e pernas bem torneados. (9) Aquêles notavelmente desenvolvidos pelo exercício do remo, o que lhes dá uma envergadura de braços sempre maior que a altura, até de 10 ou mesmo 15 centímetros.

Peito musculoso nos homens. Seios semi-esféricos e volumosos nas donzelas, constituindo também elemento de elegância para as jovens. Caídos como ubre de cabra, nas mulheres depois de certa idade. Isto pelo fato de estarem sempre pendentes e oscilantes quando trabalham (10).

(9) O tipo Tucano se apresenta bastante bem. De estatura regular, côr brônzea-clara, cabeça e olhos redondos (?), cabelos geralmente pretos e curtos, tem um conjunto de tão belas proporções que, em perfeita imobilidade, dir-se-ia uma artística estátua de bronze" Mons. Lourenço Giordano (Boletim Salesiano, fevereiro de 1918, pág. 31).

(10) Os seios finos e longos são, outrossim, objeto de zombaria. Alcunham tais mulheres de "mãe do Curupira, *Boraró-parkó*". Temos visto mulheres de seios tão longos que, passando debaixo do braço são sugados pelas crianças postadas atrás, nas costas.

Mãos pequenas, dedos regulares. Pés, ao contrário, grandes, larga a ponta dos pés, como em leque, pela maneira de andar. Dedos de base fina e cabeça achatada, com grande espaço entre êles, especialmente entre o polegar e o imediato; fato que lhes permite notável prensibilidade (segurar e levantar objetos com os pés, ou mesmo dirigir o volante de uma lancha e remar).

Não praticam deformação alguma do corpo (11), a não ser a perfuração dos lóbulos das orelhas, donde pendem os brincos nas danças. Fora dêsse tempo, a fim de conservar aberto o orifício, introduzem pequeno palito de nervura de palmas. Dentre os homens da nova geração, nos povoados assistidos pelas Missões Salesianas, muitos não perfuram mais os lóbulos.

Não são, por certo, tipos de beleza, e alguns, com a velhice e as rugas, tornam-se francamente feios. Nos 8 ou 10 milhares de indivíduos que vimos, porém, nenhum deforme (12). Encontram-se mesmo, entre os mais jovens, tipos simpáticos, e, em velhos, os traços de uma serena gravidade. É verdade que os aleijados e monstruosos são eliminados ao nascer (casos êstes um tanto raros, pelo que nos consta) (13).

Temos assim esboçado um tipo mongolóide, braquicéfalo, lissótrico, platirrínico, levemente prognata, morfològicamente misto, pícnico-atlético, bem próximo da normalidade.

---

(11) No entanto o Ouvidor Francisco Xavier R. de Sampaio, no seu "Diário" do ano 1774-5, nota ao nº 318, do rio Anauene, afluente do Rio Negro: "É este rio habitado da nação Arunaqui, muito guerreira e antropófaga, mas sem deformidade alguma artificial das que costumam praticar as nações do Amazonas". E dos Uaupés (nº 381) diz que traziam furadas as orelhas e o lábio inferior. Confirmam-no, no fim do séc. 18, o Cônego André Fernandes de Souza "Noticias Geographicas da Capitania do Rio Negro no grande Rio Amazonas, nº 208) e 50 anos mais tarde Wallace (Viagens pelo Amazonas e Rio Negro), pag. 245 e 634) acrescentando que os Kubeo alargam mais, de sorte que poderia passar pelo orifício da orelha uma rolha de garrafa. Talvez êsse costume já se vá perdendo. Não encontramos sequer um indivíduo com tão grande orifício nas orelhas e pudemos observar algumas centenas de Kubéwãna no alto Uaupés e no Querari. O maior orifício que pudemos observar mediria um cm. de diâmetro e o vimos num homem da tribo *Roéra-masã* residente no Iaraparé Come-ia, afluente do rio Pirá-paraná.

(12) Koch Grunberg (*Zwei Jahre*, 179) encontrou em Parí-cachoeira um anão, de seus 15 ou 18 anos, e medindo 107 cms. de altura, brincando com as crianças. Seus pais, já mortos (1903) eram de estatura normal.

(13) Conhecemos vários casos de aleijões. Por falta de estatística não pudemos dizer qual percentagem representam na escassa população dêsses rios. Parece-nos, porem, que todos são conseqüências de quedas, em pequenos, ou de paralisia infantil.

São algo frequentes os casos de retardamento evolutivo na primeira infância, e até de verdadeiro *raquitismo*, acompanhados por vezes de *debilidade mental* (14).

Completando êsse perfil, convém notar que são de movimentos lentos, de andar às vêzes grave. Caminham com passo curto (15), como pequenos saltos; muitos arrastam ligeiramente e afastam lateralmente a ponta dos pés, e o calcanhar mal toca o solo.

De pé permanecem pouco tempo, quase sempre apoiando-se mais num dos pés (o esquerdo), e apenas na ponta do outro. A mulher resiste menos de pé que o homem. A posição mais frequente e duradoura, quando parados, é de cócoras; é a posição normal para comer, mesmo quando poderiam fazê-lo sentado. Quando se assentam preferem assentos baixos ou o chão; e, então, nunca cruzam as pernas.

Notemos agora alguns traços que variam neste perfil que tratamos.

2) *Tipo Pirá-tapuya*.

Tez mais clara que no Tukano, e rosto ligeira ou pronunciadamente alongado. Zigoma menos saliente. Cabelos lissótricos, castanhos mais claros.

Olhos pardos; às vêzes bastante claros, máxime nas crianças. Nariz alto, porém um tanto chato na ponta, e grande. Bôca regular, dentadura mais bem feita, queixo pequeno, arredondado em curvatura natural do rosto; lábios grossos. Os traços fisionômicos, no entanto, menos simpáticos que nos Tukano.

Tipo mais alto que o Tukano, e também de corpo menos cheio.

3) *Tipo Taryana*.

Mais claro de côr que o Tukano, possui, outrossim, rosto mais alongado, porém malar bem saliente.

---

(14) Lamentamos também aqui a falta de dados estatísticos que nos representem a porcentagem dos casos patológicos. Encontramos, em Puricachoeira em 1957, duas crianças do sexo feminino, com raquitismo e debilidade mental, recolhidas no hospital. Uma, da tribo *Desana* de 8 anos, e outra *Tukano* de 14 anos. Ambas, por fraqueza dos órgãos, só puderam caminhar depois dos 5 anos de idade, após longo tratamento. Entre os casos de pronunciado *hebetismo*, ocorrem-nos dois adultos do sexo masculino, um da tribo *Hahudêne* em Uapuim-cachoeira (rio Alari), e outro *Taryana* de Iauaretê, conhecido por Marcelino "Contente", porque ri por qualquer motivo.

(15) Na evolução militar das crianças, num dos colégios das Missões Salesianas, pudemos verificar a tendência a acelerar a marcha.

A. Silva SQ19 Tucano

O nariz é alto, reto, com ponta, no entanto, muito larga e enormes narinas. Testa quadrada, menos abaulada lateralmente, mais reta e larga que nos Tukano. Bôca larga, queixo bem grande e por vêzes bem afilado.

Corpo menos cheio e estatura mediana como o Tukano.

4) *Tipo Maku.*

Tez mais clara, de um pálido terroso. São tipos quase sempre quimotricos, de cabelos pretos, abundantes e algumas vêzes, finos.

Testa pequena, fugidia, zigoma menos notado. Nariz alto e fino. Olhos mais abertos, quase caucasianos. Há tipos de feição mais delicada e simpática que os das outras tribos, embora se encontrem grupos de aspeto que retraça maior degradação.

Corpo mais delgado e baixo. Assemelha-se mais aos brancos que os das outras nações.

5) *Observação geral.*

Os *Desana* são menores, mais claros que os Tukano, e de traços mais delicados, e, por isso, em geral mais simpáticos. E dentre essas várias tribos, os *Yuriti*, *Suryana* e *Ide-masã* são mais claros (16). Os *Ide-masã*, *Bará* e *Kubéuana* apresentam os tipos mais belos.

b) *Pelos elementos culturais* (trabalho e indústria).

Os *Tukano* são os fabricantes dos *banquinhos*, que ornam com suas pinturas características. E muitas vêzes, em seus objetos, aparecem, como elemento decorativo, as linhas do banco, por exemplo a curvatura na *cigarreira* e no *cabo do remo*.

Os *Desana* são especialistas na fabricação de *balaios* e *esteiras*; também com ornamentação colorida, de motivos originais.

Os *Tupuka* foram os primeiros fabricantes de canoas, vendendo-as depois aos de outras tribos que hoje começam a imitá-los, sem, porem, os superar.

Os *Maku* são fabricantes exclusivos, na região, dos belos balaios de cipó, tipo «atura», do *curare* (veneno para as flechas), e da arma original que é a *sarabatana*, produtos que depois entregam aos de outras tribos, quando lhes servem como escravos.

Os *Banua* ou *Arudke* do Içana fabricam, com exclusividade, o *ralo*, e são, outrossim, êximios canoeiros.

---

(16) Os cabelos também, em relação com o pigmento, vão se fazendo menos escuros. Num adolescente *Suryãna* de Acuaricuara eram tão ruivos quanto a barba de um dos Missionários holandeses que os evangelizava.

Enquanto o *cacuri*, como processo de pesca, é geral a tôdas as tribos, os *Pira-tapuya* têm *cestos característicos* para a pesca, e peneiras com seus desenhos.

Quanto aos enfeites de danças, originariamente só o grupo Tukano empregava a *acangatara* e a pedra ornamental do pescoço (VII-3, d). O *pay-pó* (pé da onça, VII-3, c (3) e o escudo de cipó (VI-2, e), que usam nas festas, no momento de beberem o *kazpi* (VI-4, 1 (4) provêm dos *Desâna* (cfr. Koch G., *Zwei Jahre*, 218).

Por outra parte, entre as tribos do Uaupés as *máscaras* são fabricadas e usadas pelos *Kubéua* e *Wanana*, e, mais tardiamente, também pelos *Taryana*. Encontramos, outrossim, *máscaras* entre os *Ide-masã* do ribeirão *Comé-ia* (afluente da margem esquerda do rio Pirá-paraná).

## 2 CLASSIFICAÇÃO

Está ainda aberto à discussão o tentame de classificação das tribos do Brasil, em geral, como as do Amazonas ou do Rio Negro, em particular.

Uma *classificação*, digamos, *culturológica* das tribos uaupesinas é, hoje, impossível. As relações entre as várias tribos, datando já de séculos, operou uma interculturação mais ou menos perfeita entre elas. Podemos, pois, afirmar que as nações do Uaupés constituem, presentemente, um único *grupo cultural*, de cujos elementos culturais dificilmente se pode, na época atual, retraçar a origem. São poucas e insignificantes as particularidades de cada tribo, como acabamos de ver, e não autorizam, por si sós, uma classificação.

Uma *classificação* fundamentalmente *antropológica*, seja *sorológica*, seja *somática*, é igualmente impossível. O exame sanguíneo, realizado há poucos anos pelo Prof. Emilio Blocca, da Universidade de Roma, em 237 indivíduos das tribos *Tukano*, *Taryana* e *Maku*, acusou pertencenrem todos ao tipo *O*, e ser constante a relação entre os *genídios m* e *n*. O regime de absoluta exogamia de tribo que se pratica há séculos entre êles, induz necessàriamente uma assimilação *bio-antropológica*.

Quer-nos parecer que, atualmente, mais fácil e persuasiva seria ainda a *classificação glotológica*, embora nesse *melting-pot* plurissecular alguns idiomas ficaram profundamente alterados e alguns grupos humanos já adotaram o idioma de outros somaticamente bem diferenciados. Esperamos aqui a palavra dos especialistas (17).

---

(17) Com colaboração do "Centro de Pesquisas da Prelazia do Rio Negro" para a classificação dos idiomas amerindios, temos recolhido o Vocabulário "teste" de 200 palavras (e de muitos gravada também a pronúncia) sugerido pelo Prof. Morris Swadesh, de Denver (Estados Uni-

Na clássica divisão das tribos do Brasil pelos quatro grupos *Tupi-guarani, Gê, Arawáke* e *Karaíba*, a área dêstes dois últimos grupos abrange a bacia do Rio Negro. No grupo *Karaíba*, porém, entram apenas os *Arekuna* e *Makiritare* (ou *Deukuana*, de Curt Nimuendaju), com representantes no rio Içána, não na bacia uaupesina, embora Chestmir tenha encontrado vestígios *Karaíba*, (como assinalamos na obra «*Idiomas Indígenas da Amazônia*») em muitos idiomas.

As outras nações foram, a princípio, incluídas tôdas entre os *Arawáke*. Na pena dos primeiros exploradores aparece frequente a denominação «*Arodquis*» abrangendo distintas tribos do Rio Negro.

Daniel G. Brinton, 1892, distinguiu nas tribos que ocupam a região entre o Solimões e as Guianas, a família linguística *Betóya*, a qual compreendia também a Tukano. Posteriormente Paul Rivet mostra que a *Betoya* deve ser incluída entre as *Chibcha*, e propõe para o grupo uaupesino a denominação de *Família Tukano*.

Entre as tribos da região em estudo, sinalamos a presença de pequenos grupos humanos *silvícolas* por excelência, isto é, caçadores, mais ou menos nômades são os *Maku*. Ao passo que as outras tribos são *fluminícolas*, isto é, estabilizadas à margem dos importantes cursos de água e dados à pesca e à agricultura. Embora alguns grupos *Maku* hajam assimilado muitos dos costumes das outras tribos, não os incluímos nestes estudos. Já relevamos (I, Nota 1) que, provàvelmente, os *Maku* são os mais antigos habitantes da região.

Classificam-se, pois, as tribos que estudamos, em duas grandes famílias Linguísticas:

1.ª *Família Tukano*, abrangendo as tribos: 1. *Daxseá* ou Tukano; 2. *Baré* ou Barasana; 3. *Ba:re-masá* ou Temyú-tapuya (gente-comida); 4. *Doxká-foará* ou Tuyuka (gente-argila); 5. *Edúrya* ou Erúlya; 6. *Emõã-masã* ou Wariwa-tapuya (gente-guariba); 7. *Hanêra* ou Panênoã; 8. *Ide-masã*, Aõ-nira, Makuná ou Yi-tapuya

---

dos). São as seguintes as Tribos cujo Vocabulário possuímos e que figuram em nosso trabalho "*Idiomas Indígenas da Amazônia*":

1.ª Da *Família linguística Tukano*: 1. Baré (ou Barasana); 2. Desana (Winá); 3. Edúrya (Erúlya); 4. Ihwana (Yona); 5. Karapanã-tapuya (Moxtã); 6. Kubewana (Pamiwa); 7. Mikura-tapuya (Oá-mahã, gente-gambá); 8. Panenoã (Hanêra); 9. Pirá-tapuya (Waikhana, gente-peixe); 10. Suryana (Surirá); 11. Tarairá-tapuya (Roéra-masã, gente-comida); 12. Tatu-tapuya (Páboa-maxsã, gente tatu); 13. Temyú-tapuya (Ba:re-masã, gente-comida); 14. Tsêna; 15. Tukano (Daxseá); 16. Tuyuka-tapuya (Doxká-foará, gente-argila); 17. Yebá-masã; 18. Yi-tapuya (Ide-masã, gente água); 19. Yuriti-tapuya (Wahyára, Uhaflana, gente-pomba); 20. Wanana (Kórtirya); 21. Wariwa-tapuya (Emõã-masã, gente-guariba); 22. Koréterabôa (Buya-tapuya, gente-cobra).

(gente-água); 9. *Ihicana* ou Yona; 10. *Konea* ou Arapásu (gente-pica-pau); 11. *Kotirya* ou Wanana; 12. *Mõrtá* ou Karapanã-tapuya (gente-perniongo); 13. *Neenõã* ou Miriti-tapuya (gente-buriti); 14. *Oa-mahã* ou Mikura-tapuya (gente gamba); 15. *Pamiica* ou Kubewana; 16. *Puboa-maxsã* ou Tatu-tapuya (gente-tatu); 17. *Ricra-masã* ou Taraira-tapuya (gente traira); 18. *Surirá* ou Suryana; 19. *Tsena*; 20. *Yebá-masã*; 21. *Wahyara*, Waiana ou Yuriti-tapuya (gente-pomba); 22. *Wai-khãna* ou Pirá-tapuya (gente-peixe); 23. *Wina* ou Desana.

2ª *Família Arawake* compreendendo as tribos: 1. *Kumãdene* ou Ipeka-tapuya (gente pato-dagua); 2. *Talyaseri* ou Taryana. Falamos só destas duas, porque as outras tribos desta numerosa família não habitam a bacia do Uaupés, e, sim, a dos rios Içana, Xie e Negro.

A Família Tukano, constando de grupos humanos localizados nos planos colombianos da floresta Amazônica, penetrou no Brasil pela mesopotâmia Uaupés-Japurá, provàvelmente antes do período dos Descobrimentos (18). Quase simultâneamente a Família Arwake saiu da mesopotâmia Orinoco-Negro, chegando até o Japurá, como o prova, conforme Koch Grunberg, os nomes dos rios em *ri*, terminação tipicamente *arwake*. Ao sobrevirem os Tukano, que se postam como uma cunha no Uaupés, os *Arwake* ficaram divididos ao Norte e ao Sul deles. A última migração, é opinião de Koch, foi a dos *Karaiba*, vindos da parte oriental, com relação aos grupos anteriores, isto é, do alto Guaviare.

---

2ª — Da *Família linguística Arwake*: 1. Inábu-tapuya (gente-inambú, Hohódene); 2. Ipeka-tapuya (gente pato-dagua, Kumãdene); 3. Maracaya-tapuya (gente-maracajá, Werekena); 4. Pisuna-tapuya (gente-preta, Kadaupuri-tana); 5. Siua-tapuya (gente-estrêla, Wariperi-dekeme); 6. Sukuruyu-Tapuya (gente-sucuri, Mauri-weni); 7. Taryana (Talyaseri); 8. Tatu-tapuya (gente-tatu, Adza-nêêni); 9. Yawareté-tapuya (gente-onça, Dzawi-minãney); 10. Yurunari-tapuya (gente-demonio, Mipatse-dikeney); 11. Yiboya-tapuya (gente-gibóia, Dzuré-mêne).

3ª — Da *Família linguística Maku*: 1. Maku da Serra dos Porcos (nas proximidades do Iuareté, Rio Uaupés). 2. Maku do Japú-igarapé (afluente da direita do médio Uaupés). 3. Maku do Ira-igarapé (afluente da direita do baixo Tiquié). 4. Maku do rio Taraira (afluente do Apaporis).

(18) Um velho Tukano de Iuquira, por nome Justino, do grupo *Ihumeá* ou *Jumá*, informava ao Pe. Antonio Giacone que o seu grupo tomou o nome do rio Juruá, onde residiam. Daí passaram, aos poucos, ao Japurá, Apaporis, e alcançaram o alto Uaupés. Desceram pelo Uaupés até a foz do Papuri, para, em seguida remontá-lo até Turi-igarapé, donde os Maku os guiaram até o Japú-igarapé em cuja foz se fixaram, depois que daí saíram os Arajáku. Tal informação, por alguém que nunca vira um mapa da região, apresenta fortes indícios de veracidade.

G. Silva SQ19 Tucano

A título de comprovação da filiação dêsses idiomas, recolhemos um *Vocabulario* paralelo das palavras mais usuais, nas diversas línguas indígenas (cfr. nossos trabalhos «*Idiomas Indígenas da Amazônia*» e «*Discoteca Etno-linguístico-musical*».

4) *DAXSEA OU TUKANO*

1) *Gente-Nome-Língua* — No idioma natal, dizem-se *Darseá* (sing. Masc. *darsegá*; Fem. *darsegó*), nome do pássaro que em português chamamos *tucano*. No período histórico já se encontram sob o nome de *Uaupés* (cfr. II — 6, a (1)), na bacia dêste rio, de sorte que sob a denominação de «*Nações Uaupés*» são conhecidas e compreendidas as várias tribos dessa região. Talvez a ampliação do nome se deva, não ao fato de se terem impostos os costumes *Tukano*, sendo eliminados os das outras nações, senão ao maior número e dispersão de grupos desta tribo, bem como a generalização do seu idioma. Ainda hoje muitas pessoas adultas (e últimamente, pelo convívio nos internatos das Missões, também crianças) das várias tribos dos rios Uaupés, Tiquié e Papuri entendem e falam a *língua Tukano*, e talvez tenham esquecido o próprio idioma nativo.

Conforme Lucas, um velho Tukano de S. Luzia, no Papuri (em relação ao Pe. Antônio Giacone, em julho de 1947), os *Tukano* desceram do *noroeste* (discordando portanto do velho Justino de Iuquira, conforme se viu em *Nota* anterior) para a bacia do Uaupés, já encontrando ali pequenos grupos de *Makú* que, ou foram escravizados, ou se internaram na selva. Aos *Makú* denominam *Porsá*, isto é, quem serve gratuitamente. «São para o serviço na paz e soldados na guerra», assim dêles se exprimem os velhos (19). As tribos que chegaram depois denominavam os Tukano *Yepá-marsá*, isto é, «gente da terra». Impressionados depois pelo fato de se alimentarem com frequencia e muito, compararam-nos aos *tucanos*.

Será, provàvelmente, uma explicação posterior achada pela fantasia indígena. Note-se, porém, que os dessa tribo a si mesmos sempre se chamaram *Darseá*, e nunca *Yepá-marsá*. Conforme o velho Tukano de Pari-cachoeira, Gabriel Costa, *Yepá-marsá* é alcunha dos *Bará*, embora não saiba o que significa aquela denominação. Na realidade *Yeba-marsá* (em Tukano, *Yepá-marsá*) é o nome de uma tribo do grupo Tukano, como adiante veremos (IV — 2, t).

---

(19) Não é verossímil que os Tukanos tivessem como aliados os *Makú*, ou dêles se fiassem, se atentarmos que êles se mostram tímidos e se submetem também às outras tribos. Nem as lendas que recolhemos falam de prestimos dos Makú aos Tukanos em guerra.

4 Silva SQ19 Tucano

A designação de «*Tukano*» obedece evidentemente à estrutura da mentalidade do primitivo, de se denominar por um animal ou planta. Não queremos, por ora, entrar na questão do *Totemismo*, que esperamos tratar mais amplamente em outro estudo. É-nos lícito, agora, apenas inferir para êles um *habitat* onde viva o pássaro *Tucano* (*ramphastus*), como na planície amazônica da Colômbia.

2) *Habitat e habitantes* — Encontram-se grupos mais ou menos numerosos de Tukano desde *Yu-Rapecuma* (quase na foz do Uaupés) até *Umari* (médio Uaupés), no Tiquié da foz até *Cururu-cachoeira*, e no *Papuri* de *Serrinha* para as cabeceiras. Pequenos grupos se estabeleceram também no Rio Negro entre S. Gabriel e Santa Isabel. Os quadros precedentes (II — 6, a, b) mostram os principais lugares onde hoje os encontramos. A principal via de penetração no Brasil, parece-nos, foi o rio Papuri, donde passaram ao Uaupés e Tiquié (20). As subdivisões mais nobres estabelececeram-se de *Piracuara* para cima (rio Papuri), havendo um grupo dos Waú-ro baixado até Ananaz (Uaupés).

Pelos mapas de Frei Gregório, em 1853 os Tukano no rio Uaupés residiam em: Pacú-cachoeira, Iuquira-Rapecuma, S. Joaquim, Nanã-Rapecuma, S. Jerônimo de Ipanoré e Iauaretê-cachoeira. Os primeiros «Relatórios» do século 18 (cfr. «Roteiro» do Pe. Noronha, n.º 174; «Diário» de Sampaio, n.º 366) já noticiam a presença de *Tukanos Uaupés* em *S. Isabel*, hoje Tapurucuá, no médio Rio Negro. De fato, ainda se encontra um grupo Tukano por aquelas imediações.

Conforme Koch G. (*Festschrift Eduard Seler*, 206) os *Tukano* atingiriam a 1.500 almas. Devem, porém, ser bem mais numerosos. As estatísticas de «Pelo Rio Mar» acusam, só em território brasileiro, 1622 indivíduos; e são igualmente numerosos os do território colombiano. É possível que ultrapassem os dois milhares.

Esboçamos o aspecto físico dos *Tukano* (IV — 1, a (1)). As qualidades físicas e de espírito em nada revelam superioridade sôbre as demais tribos. Ao invés, algumas destas apresentam traços mais delicados e muita mesmo melhor configuração e proporção anatômica. Entretanto, o *Tukano*, como já o fizemos notar, se considera

(20) O velho tuxáua, José, de Pari-cachoeira, cousa de trinta anos mostrava ao Pe. João Marches uma capoeira no Tiquié, informando que fôra ali a primeira maloca dos seus antepassados, quando vieram do Pakuri. A denominação indígena da localidade de S. Luzia do Tiquié, buórá-bahá, nado dos velhos (cfr. Nota 9, III), é uma confirmação da tradição Tukano sôbre a sua proveniência e migração.

G. Silva SQ19 Tucano

superior às outras tribos e essa primazia lhe é pacificamente reconhecida. Explicam os Missionários essa superioridade pelo fato de as outras tribos aceitarem a sua língua, como idioma oficial, ou, ao menos, geral, nesses rios. Legicamente a generalização do idioma dever-se-ia explicar pela superioridade da tribo. Releve-se ainda esta incoerência: conforme a tradição *Tukano*, teriam êles sido vencidos pelos «Filhos do sangue do Trovão», os *Taryana*, os quais, por fim, acabaram aceitando a língua Tukano.

Somos propensos a pensar que, independentemente de episódios guerreiros, ou elementos culturais, tenha várias causas essa superioridade dos *Tukano*: 1.º o ser a tribo mais numerosa; pelos dados de velha estatística podemos pensar que se avizinham dos dois milhares. Assim sendo, é duas ou mais vêzes superior em população a qualquer outra tribo; 2.º é provável também que tenham ocupado alguns dos seus centros atuais (donde expulsaram os Makú), antes que outras tribos chegassem a essa área, e, conforme a mentalidade indígena, é grande o valor da prioridade de tempo; 3.º situaram-se mais ou menos regularmente escalonados ao longo dêsses três rios, e pela união entre si (que todos se dizem e consideram irmãos) deveriam constituir uma fôrça temível pelas outras tribos que são menores e têm seus núcleos situados mais distantes um do outro; 4.º o número e a disposição ao longo dos rios, teria aos poucos generalizado a sua língua entre os indivíduos das outras tribos, que viajavam por motivo de comércio com os *Tukano* ou com outras tribos (21). Parece-nos confirmar esta hipótese o fato de já não conhecerem (22) o idioma Tukano, aquêles grupos indígenas do médio Uaupés especialmente acima de Carurú-cachoeira) cujo comércio se faz regularmente entre si ou com as tribos do Alari. Ao passo que a língua Taryana se vai perdendo, porque estão rodeados pelos *Tukano*.

Vigora interdição matrimonial dos *Tukano* com os *Wanâna* e os *Bará*.

---

(21) A convivência, como alunos ou empregados, e ao depois os frequentes encontros entre as várias tribos, nos Centros Missionários têm contribuído poderosamente para que o idioma Tukano se propague, sempre mais rápidamente. Pode-se prever, nesse passo, que se tornará a língua geral do Uaupés, como o Nheengatú o é do Rio Negro.

(22) Escrevíamos isto em 1947. Dez anos mais tarde, 1956, já encontramos muitos Wanâna da geração môça, que passaram pelos internatos das Missões, não apenas entendendo o Tukano, mas até preferindo-o à linguagem materna quando se entretêm com os seus colegas.

3) *Divisões* (23) — Embora todos os de uma tribo se considerem *irmãos*, tôdas as tribos da bacia do Uaupés (24) apresentam algumas *subdivisões* atuais, e citam nomes de outras que existiram outrora. Essas subdivisões correspondem a uma antiga aristocracia, como adiante se verá (VIII — 3, d), e no presente estudo denominamo-las *Gens* porque, parece-nos, correspondem a *Gens* da sociedade Romana. Festo traz a seguinte definição de Cincio (op. 94) *Gentilis dicitur et ex eodem genere ortus et is qui simili nomine appellatur*».

---

(23) Em 1947 havíamos obtido um elenco de 28 subdivisões. E, em 1953-4 procuramos confirmação com o velho *Komã*, Gabriel Costa (seus 80 anos), de Taracachoeira. Confirmou-nos êle a ordem de procedência que aqui expomos (iniciando pela *Mami* (irmão mais velho) *Wañ-ro-pôra*, e prosseguindo com o termo *Ayãmã* (irmão mais moço) *Oã kaapéa pôra*, etc. Informou-nos ainda que "as primeiras 14 subdivisões são as principais", "as 14 seguintes são inferiores". E acrescentou mais 4 subdivisões como "outras ainda mais baixas". Das que obtivéramos precedentemente êle não mencionou, por exemplo, mas não negou a existência os *U'kleçãra* e *Vidari*. No entanto, da sua existência tivemos confirmação da parte de indivíduos pertencentes a essas subdivisões, respectivamente em S. Miguel e Mello Franco (antigas localidades brasileiras do rio *Papuri*).

A Tukano Doroteia Brito, de Ananaz (Uaupés) informou-nos da existência de outra subdivisão dita *Yauã-nã pôra*, em Tatu-punha, pouco acima de Ananaz. Outra observação: conforme Gabriel Costa, o principal tronco Tukano seria o dos *Wañ-ro pôra*. De acôrdo com esta informação está a lenda e numerosos informantes. Entretanto Doroteia Brito, que pertence ao grupo dos *Wañ-ro*, assegurou-nos que êles não são os "Tukano da cabeça" (conforme o modo geral de se exprimirem nesse sentido) e sim os *Oã*. E não só êstes, senão também, sucessivamente os *Mami*, os *Tourã*, e os *Burôra*. Ao todos "*Mami*" (isto é "irmãos maiores") dos *Wañ-ro pôra*. Parece-nos, entretanto, que aqui há um equívoco dessa nossa ótima e servical colaboradora.

Acrescentou a mesma informante que os últimos ramos Tukano, os "Tukano dos pés", são os *Komã-rã*, *Ba*, *Boxsã kasperi*, *Turo* e *Dyi-pê*. Disse-nos que os *Ihurã*, *O'mã-peri* e *Arpã-kerya* "antigamente não eram Tukano" (e, portanto, podiam casar com os Tukano), e êstes por compensação os chamavão irmãos".

Koch Grunberg (Z I 201) nomeia os *Urica-tapuya* ou Gente-flecha (*Pfeilgift-Indianer*) como uma horda *Tukano*, localizada no Uaupés entre os cachoeiras de Micura e Uaruri. É verdade que o conceito de *Horda*, dos Etnólogos, é vago e tanto pode corresponder a grupos que os índios consideram tribo diversa, como a grupos havidos como subdivisões de sua tribo. Nenhum dos numerosos Tukano com que conversamos jamais falou em tribo ou divisão de sua tribo por nome *Gente-flecha* ou *Urica-Tapuya* (em Nheengatu) que seria, em Tukano *Anã-pã niarsã* ou *Anã-rã-ie niarsã*. Concluindo, ao invés, aproximadamente com a localização indicada por Koch, está residindo o subgrupo Tukano dito *Arpã-kerya* ou "pata-de-Caranguejo".

(24) Fizemos numerosas e inúteis tentativas (abril e maio de 1957), a fim de descobrir se as tribos *Arawáke* do Içana e Aiari possuiam subdivi-

G. Silva SQ19 Tucano

Entre os *Tukanos* obtivemos as seguintes:

1.º — *Wau-ro pôra* (25) (isto é, os «filhos do *Wau*», um macaco preto de cara branca, dito, em Nheengatú, *udya-pisa*), em Piracuara (rio Papuri) e Ananaz (baixo Uaupés).

2.º — *Oa kazpéa pôrá* (ôlho de gambá), em Piracuara (Papuri)

3.º — *Opé pôra* (gaguice?), em Pato (Papuri)

4.º — *Irápé pôra* (uma formiguinha preta), em Anananaz (Uaupés)

5.º — *Pamõ pôrá* (tatú), em Nazaré ou Uira-poço (rio Tiquié)

6.º — *Menú pôra* (o banhante? ou Nêêrú, nêênú, miritizinho) em Acuaricuara (rio Paca)

7.º — *Toarõ pôra* (um sapo), em Acuaricuara (Paca)

8.º — *Mimi pôra* (beija-flor), em Meio Franco (Papuri), Taracuá (Uaupés)

9.º — *Bôrôra pôrá* (Caídos), em S. Miguel (Papuri)

10.º — *Sararó pôrá* (um gafanhoto grande), em Acuaricuara (Paca)

11.º — *Ba'ti torõ pôra* (chupador de japurá), em Pari-cachoeira, Tucano e Bela Vista (Tiquié)

12.º — *Neêru* (*nêênú*) *pôra* (um miritizinho), em Irati (Tiquié)

13.º — *Dpi-pe pôrá* (buraco de argila), em Uira-poço, S. José (Tiquié)

14.º — *Dáka pôrá* (abandonado?), em Uaracapá

---

sões e quais os nomes destas. O resultado foi sempre negativo, isto é, não consta a existência de subtribos. Releve-se, porém, que o grupo *Kumãdêne* residente em Urubucuara (rio Uaupés) forneceu-nos os nomes de subdivisões da sua tribe, ao passo que os *Kumãdêne* do Alari não souberam indicar-nos essas subdivisões. Tê-las-iam esquecido?

(25) *Pôra* (*bu pôra*, como se pronuncia nos rios Uaupés e Papuri) quer dizer gerados, filhos, e só se usa no plural. Para simplificar, nas listas que seguirão, omitiremos, na tradução, a palavra *filhos*.

Os índios mais adiantados (que falam o português e estudaram alguns anos nos colegios das Missões Salesianas), quando interrogados sôbre estas divisões, espontâneamente acrescentam, à guisa de explicação, "são apelidos (que os outros lhes impuseram". Isto, sem dúvida alguma, é verossímil, pois gostam de pôr apelidos. Mas por outra parte não está em desacôrdo com o "*barséke wamé*", *nome soprado*" (Cfr. VIII 1 b, (4). Conforme as lendas, desde o início tiveram os primeiros chefes as alcunhas que passaram para todo o grupo; por exemplo, um dos "cabeça" foi apelidado "mimi", *beija-flor*, os seus descendentes são conhecidos hoje por "Filhos do *beija-flor*, *Mimi-pôrá*".

A Tukano Patrícia Vasconcelos, da subdivisão Komã-ro-pôrá, do povoado de S. Luzia, no Rio Papuri, contou-nos, em uma de suas interessantes informações: "Os Wau-ro-pôrá são os Tukano da cabeça. Wau é o seu *barséke wamé* (nome soprado). Antigamente êle se es-

15.º — *Yai-ro põrã* (um inambúzinho), em Beijú-cachoeira (Papuri)

16.º — *Yõrã põrã* (amargosos), na bôca do Tiquié

17.º — *Birpiõe põrã* (tumor) ou *Birpỹã põrã* (azulão, pássaro), em Bela Vista (Tiquié)

18.º — *Sakuro põrã* (saracura), em Montfort (Papuri)

19.º — *Sa: põrã* (cesto de palma), em Nazaré (Papuri)

20.º — *O'mêperi-Ro põrã* (orelhudo), em Uira-poço (Tiquié); Tapurucuara (Uaupés); Yua-pixuna (Papuri) (26)

21.º — *Bubera põrã* (fígado de cutia), em Cabari (Tiquié)

22.º — *Bozsó kurpo-ri põrã* (olhos de preá), em Taracuá acima de Jandiá (Papuri)

23.º — *Tiro põrã* (um sapo pequeno venenoso), em S. José, Tucano e Estrêito (Tiquié)

24.º — *Khoã-pã põrã* (var. de miriti pequeno), em Matapi, Urubúlago (Tiquié)

25.º — *Bã: põrã* (amarrado de fôlhas para moquear), em Turígarapé (Tiquié)

26.º — *Kuinã-rõ põrã* (verão), em S. Luzia (Papuri)

27.º — *Ihuriã põrã* (magricela?), em Juquira (Uaupés) (27)

28.º — *Bayã põrã* (mestre de danças), em Serrinha (Papuri)

29.º — *Bã'ã põrã* (tucunaré, peixe), em Bela Vista (Tiquié)

30.º — *Arpã-kerya põrã* (pernas de caranguejo), em Umari e Mirapirera (Uaupés)

31.º — *Warpékãra borõrã põrã* (cacaos caídos), em Melo Franco (Papuri)

32.º — *U'khuãra põrã* (esp. de macaco pequeno) ou *Ku'kwãra põra* (tartamudos), em Melo Franco (Papuri)

---

conduz na planta denominada *Wau-mutõ*, a fim de ver as môças tomando banho. O macaco *Wau* (em Nheengatú *wãya-pisá*) gosta muito dos frutos daquela árvore. As môças, quando se estão banhando ouvem barulho na árvore, olham imediatamente para lá, e avistam o homem escondido entre os ramos. Exclamaram tôdas: *wau nibã! é o wãya pisá!*

(26) O Tukano Henrique, pajé de Japú-igarapé, informou-nos que no igarapé do Tamanduá, *Burko-yé*, vivia outrora um grupo Tukano *o'mêperi põrã* hoje extinto.

(27) Koch Grünberg registra as grafias *Yohoroa* e *Kurawa*. Informa que possuíam cinco malocas nos arredores de Iuquira, e eram mais de 100 pessoas (*Zwei Jahre*, 157 e 238).

G. S. Iva SQ19 Tucano

33 º — *Yai-uxtyá pôrá* (var. de vespa grande), em Cururú e S. Tomé (Tiquié)

34 º — *Viduri pôra* (sardinha), em S. Miguel (Papuri)

35 º — *Buxpõ pôra* (aranha), em Coró-coró (Tiquié)

36 º — *Yami-nó pôrá* (formiga da noite?), em Tatá-punha (Uaupés).

b) *BARA OU BASANA*

1) *Gente-Nome-Lingua* — É o nome pelo qual, sem modificação alguma, nas várias linguas, é conhecida esta tribo; nome, também, de um arbusto perfumoso, com cujos ramos as diversas tribos costumam cingir-se quando dançam.

Sua lingua é da familia *Tukano*, como se pode ver pelo *Vocabulario da Amazônia*». (*Cfr.* os livros do autor: «*Discoteca Etno-linguistico-musical*» e «*Idiomas Indigenas*».

Ouvimos alguns Tukano dizer que os *Bará* são seus *Paxkõ-Ro* (avós), porém não nos souberam dizer a razão dêste apelativo, nem encontramos alusão alguma em suas lendas. O certo é que é interditado o matrimônio entre estas duas tribos.

O Pe. Humberto Limpens (28), da Congregação de Montfort, informou-nos que ouviu de alguns velhos *Bará*, que a si mesmos se diziam *Manao*. Não conseguimos porém, confirmação disso. Atualmente ainda nada se sabe de suas relações com a antiga tribo *Manao*, que dominou grande parte do Rio Negro, e é classificada no grupo *Arawáke*. Que um pequeno grupo de *Manao* tenha sido dominado ou absorvido pelos *Tukano*, cujo idioma assimilaram?

Nas vizinhanças da cachoeira de Iauareté há um local denominado *Manao*. Êste nome, para a tribo *Bará*, teria provindo do seu antigo domicilio nessa localidade; ou vice-versa (29)? Pouco sabemos dos antigos *Manao*. Consta que eram de traços fisionômicos mais regulares e simpáticos. Os *Bará* atuais são menos corpulentos que os Tukano, e fisionômicamente também mais simpáticos,

---

(28) Foi um dos grandes e beneméritos Missionários Monfortianos das tribos na região Colombiana do Uaupés. Ficou conhecido pelo nome de "*Pe. Clemente*" que fôra o seu antecessor na Missão.

(29) Ouvimos relatar que, quando a Comissão Militar Demarcadora da Fronteira (em 1932) se achava em Iauareté, apresentou-se um grupo de indígenas pedindo passagem para a capital do Estado, Manaus. A Comissão, porém, não lhes concedeu isto, e, após alguns dias de permanência nas vizinhanças de Iauareté, regressaram aos seus povoados. E que, por tal episódio, o local onde se aboarracaram os indígenas, ficou conhecido por *Manao*. No entanto, asseverou-nos o Pe. Limpens, que essa localidade sempre se chamou *Manao*. E, note-se, que o Pe. Limpens já residia na região desde 1916.

mais claros, com malar pouco saliente e traços mongolicos menos carregados (30).

2) *Habitat e habitantes* — É uma tribo pequena, de talvez duas ou três centenas de membros, vivendo ainda no regime de malocas nas cabeceiras do rio Tiquié e seus afluentes, os Igarapés Inambu, Abio, Aracu-pirera e outros.

Observa Koch Grunberg (*Zwei Jahre*, 211) que, pela lingua e modo de vida, os *Bará* se avizinham mais às tribos do Japurá, porem com relações mais intimas com as do Pira-parana.

3) *Divisões* — Informante uma jovem de seus 20 anos (1954), conhecida por *Pasika* (Francisca), da subdivisão *Waya-pôna*. Quiça no presente elenco apareça, como subdivisões, tribos mais proximas com as quais vigore interdição matrimonial. Observe-se, com efeito: 1º — Nas matas do Cananari (afluente do Pirá-parana, como nas dêste último, habita uma tribo conhecida por *Kapyari*, cuja lingua é do grupo Tukano; 2º — *Pamô-pôna* seria talvez a tribo *Tatu* (vd. IV — 2, b)? *Seu habitat* é vizinho do dos *Bará*; 3º — *Dozka poerá*, *poará* ou *foará* é o nome dos *Tuyuka* (cfr. IV — 2, d), e êstes residem proximo dos *Bará*, nas cabeceiras do Tiquié. Não conseguimos apurar se as três últimas divisões são de fato *Tuyuka*, considerados mais aparentados com os *Bará*; ou se trata apenas de *apelidos* de alguns grupos *Bará*.

1º — *Kanayarô* (?), no rio Tiquié (Colômbia)

2º — *Pamô pôna* (tatu), no Igarapé Inambú

3º — *Waya pôna* (uma ave aquática), no Tiquié

4º — *Ozkô kapéa pôna* (filho dágua), no Tiquié

5º — *Da-ryá* (uma fruta) no Komé-ya

6º — *Minô dozka poará* (uma fruta?), no Tiquié

7º — *Paya dozká poará* (?), no Tiquié

8º — *Dahya dozká poará* (camarão), no Rio Castanho (afl. do Tiquié)

---

(30) Em parte concorda com a informação de Koch Grunberg que nos descreve: "de corpo esbelto, proporcional, menor que o Tuyuka, semblante mais fino, olhos negros, testa menos fugidia, nariz alto e, levemente convexo, bôca grande lábios grossos". Pelo dizer dos índios, Koch teria sido o primeiro branco visto por êles, e que subira as cabeceiras do Tiquié.

c) *BA RE-MASÁ OU TeMYO-TAPUYA*

1) *Gente-Nome-Língua* — Pertence igualmente à família de línguas Tukano o idioma dos *Bá re-masá* ou «*gente-comida*». Como se pode verificar pelo Vocabulário que recolhemos (cfr. «Idiomas Indígenas da Amazônia»), está bem próxima da língua dos *Roéra*. Encontramos um representante da Tribo *Bá re-masá* vivendo entre os Ide-mará do Come--ia (maloca *Bóhó-rya-hidó*, foz do ribeirão da Granha). Era (em agôsto de 1956) um tipo de seus 38 a 40 anos, de estatura baixa, gordo, tez de um bronzeo-claro, nariz pequeno e alto na ponta, rosto arredondado, zigoma não muito saliente e cabelos pretos quase quimótricos. Tinha as orelhas perfuradas, atravessadas por um batoque de 1 cm. de diâmetro aproximadadamente; o maior orifício nos lóbulos das orelhas que temos encontrado entre as várias tribos do Uaupés.

Vigora também, na tribo, a lei da exogamia, e consta haver matrimonios com os Hanêra, Bará e Ide-masá.

2) *Habitat e habitantes* — A tribo dos *Bá re-masá* está muito reduzida de membros. Sabemos da existência de uma maloca no ribeirão *Unîú-ia* (ribeirão do japú), afluente da margem esquerda do ribeirão Timí-ia (ribeirão da lontra), o qual por sua vez confluí na margem esquerda do Pirá-parana, pouco acima da foz do Comé-ia.

3) *Divisões* — O informante acima, denominado *Titoyá* (conhecido ainda sob o nome de Domingos) indicou-nos como sendo divisões da sua tribo: 1.º — *Ide-masá*, 2.º — *Ogóro-sóroa*. É provável que a primeira subdivisão, Ide-masá, seja a tribo principal do Come-ia (cfr. IV — 2, h) tida como aparentada aos *Bá re-masá*, e não uma simples divisão destes. Os *Ogóro-sóroa* são os *Hógolo-tsóloa* ou *Tsóroa* citados por Koch-Grünberg (Z. I. 370) no Yauaca-Igarape, de idioma quase idêntico ao Edúrya.

d) *DOXKÁ POARÁ OU TUYUKA*

1) *Gente-Nome-Língua* — Na língua Tukano dizem-se *Dyi-khúra* (*Dyi-khâua*), e no próprio idioma *Dozká poára* ou ainda *Dozka fhuará* ou *foará*; ou, contratamente, *Dozká-rá*. (Sing. Masc. *Dozká-poaro*; Fem. *dozká-poaro*). Tuyuka é palavra Nheengatú que quer dizer barro, lama; e, com mais propriedade, o barro ou argila que serve para o fabrico das panelas. Os Tukano explicam

que o nome se deve ao fato de morarem na terra onde há a argila da panela. É fácil admitir-se que, no princípio, só aí descobriram essa argila, a qual mais tarde foi encontrada em muitas outras jazidas no Uaupés e outros rios. Por êsse fato mesmo, não teriam sido os *Tuyuka* os primeiros oleiros? A cerâmica hoje é usual e perfeita nas várias tribos. Os *Tuyuka* conservam, presentemente, a fama de especializados canoeiros.

Sua língua é da *família Tukano*, (cfr. nossos trabalhos «Discoteca Etno-linguístico musical» e «Idiomas Indígenas da Amazônia») com vestígios *Karaíba*, ensina Chestmir. Os idiomas dos *Tuyuka* e dos *Bará* são os mais próximos da língua Tukano, afirma Koch G. Distingue êstes dois tipos somáticos Tuyuka: o *fino* e o *grosso* ou corpulento (*Zwei Jahre*, 202).

Não se casam com os *Desana*.

2) *Habitat e habitantes* — Oscilam por meio milhar de membros (378 no Brasil, em «*Pelo Rio Mar*», sabemos que são mais numerosos em território colombiano), e seu *habitat* atual são as cabeceiras do Tiquié. Frei Gregório com auxílio do Diretor dos Índios Jesuíno Cordeiro, conseguiu fundar a aldeia de S. Pedro do Tiquié, com índios Tuyuka, onde ainda se acham, porém vivendo em maloca (em 1947).

Conforme uma tradição Tukano, recolhida pelo Pe. Antônio Giacone, os *Tuyuka* baixaram da cachoeira *Uaí-numbí* (cabeceiras do Macú-paraná); porém sob pressão dos Tukano foram obrigados a subir as cabeceiras do Papuri, donde passaram às do Tiquié e aí se radicaram.

3) *Divisões* — Informante Henrique Resende, de seus 35 anos (1953), da subdivisão *Dõrpãri*, tuxaua da maloca do *Yaí-sa igarapé* (Tiquié)

1.º — *Dyáta põna* (um peixinho), no Igarapé Inambú

2.º — *Dyatáñó-nõ* (suspenso?), no Igarapé Inambú

3.º — *Dyáta yuzkúro* (cabeça cumprida), nas cabeceiras do Tiquié

4.º — *Iñó-rõ* (?), em S. Pedro (Tiquié)

5.º — *Iñó-rõ oakõ* (estaca), no Igarapé preto (Tiquié)

6.º — *Poõ-ni mani* (calvo), no Igarapé Mari-iá (Tiquié)

7.º — *Dõrpãri* (galhos), no Igarapé *Kurtíro pezíd* (Tiquié)

8.º — *Yurkûro* (bossa ocipital), na foz do Açaí-igarapé (Tiquié)

9.º — *Wesé dorká poará* — (Tuyuka da roça), acima do Caruru (Tiquié)

10.º — *Poá pirá* (?) no alto Cabari (Tiquié). São os pária

11.º — *Azkó karpéa — pôna* (olho dagua), em S. Pedro (Tiquié)

12.º — *Ebera-pôna* (pato dagua), na foz do Igarapé Boá-ia

A jovem Amélia Resende, de 18 anos (1955) aproximadamente, acrescentou:

13.º — *Myõ dyi-Khâra* (doxká-poará), em Cabari e S. Pedro (Tiquié)

14.º — *Arã pôná* (filho da serra?), no Igarapé do breu (dêste grupo é informante).

e) *EDÛRYA OU ERÛLYA*

1) *Gente-Nome-Língua* — Esta tribo denomina-se, no próprio idioma, *Edûrya*, ao passo que os Tuyuka dizem-nos *Erûlya*. Filiam-se ainda, pela língua, ao grupo Tukano (cfr. Vocabulário em «*Idiomas Indígenas da Amazônia*»).

São de estatura média, pouco mais alto que os Tukano. Tez cobre claro, cabelos pretos, quimótricos, grossos, testa larga, quadrada, olhos pretos, queixo fino, nariz alto às vêzes ligeiramente aquilino, rosto ovóide e lábios delicados.

Estão vinculados por laços matrimoniais com os *Bará* e *Tuyuka*.

2) *Habitat e habitantes.* — Seu *hábitat* são vários e pequenos afluentes do Pirá-paraná, em território totalmente colombiano. Não foi possível saber o número de habitantes da tribo; parece, porém, que é ainda menor que a tribo Hanêra.

c) *Divisões.* — São as seguintes, indicadas por um jovem de seus 20 anos (em março de 1954) por nome *Tunú*, em *Mosã-bhod* (maloca do urucum, cabeceiras do Tiquié):

1. *Kaupayána* (mestre de dança?), no igarapé Axtáue-ya (31)
2. *Ehéburu* (uma palha), no igarapé Axtáue-ya
3. *Gâbûrkôrô* (*Komû*, «soprador», VII - 2, e (3), no igarapé Scmé-ria
4. *Izkó-masã* (uma cobra), no igarapé Ioxkó-rya
5. *Wezidyoa* (?), no igarapé Ioxkó-rya

f) *EMÔÃ-MASÃ OU GUARIBA-TAPUYA*

1) *Gente-Nome-Língua.* — *Emõã* é, no idioma natal, o nome do macaco guariba. Sua língua pertence também à família Tukano

(31) Talvez se identificaria com a tribo *Kavirya* das matas do Cananarí?

(cfr. Vocabulário em «Idiomas Indígenas da Amazônia»). Encontrei-se Ide-masã da maloca *Buhó-rya-hidó*, do Comé-ia. Era um tipo de estatura mediana, corpo fino, feições delicadas, zigoma pouco saliente, rosto alongado, nariz alto, fino, tez mais clara que a do Tukano, cabelo preto, fino, algo ondulado.

Observa-se a exogamia de tribo. Sabemos de matrimônios com Ide-Masã, Hanêra e Bará.

2) *Habitat e habitantes*. Habitam nas matas entre as cabeceiras do Tiquié e rio Pirá-paraná. São poucos, hoje em dia, conforme a informante, a qual nos soube citar apenas 3 subdivisões. Note-se que, de acordo com a informante os *Yebá* e *Roéra* fazem parte da sua tribo. Concorda com uma informação obtida três anos antes de um *Yéba* o qual entre as divisões de sua tribo citava os *Emõa* e os *Roéra* (cfr. IV-2, t). Se os *Yéba* se devem incluir entre os *Emõá*, serão êstes, no conjunto várias centenas de indivíduos, pois os *Yéba* vivem em várias malocas na região compreendida entre o Comé-ia e o Piraparana.

Koch Grunberg (Z. I. 401) fala dos tão temidos *Guariua* ou *Guariba-Tapuya* localizados abaixo dos Juri e Passé, isto é na bacia do rio Japurá. Os *Emõá* não se podem identifirar rom êsses *Guariua-Tapuya*, porém, sim com os *Omoá* dos mananciais do Tiquié.

3) *Divisões*. Informante a índia *Mistrã*, de seus 50 anos (1957), conhecida também por Joaquina, esposa do tuxáua Ide-masã do Comé-ia:

1 *Satrõa-masã* (gente dagua? gente tagarela?)

2 *Yebá-masã*

3 *Roeá-masã* (gente taraira)

(1) *Gente-Nome-Língua* — *Emõá* é, no idioma natal, o nome do macaco *guariba*. Sua língua pertence também à família Tukano (cfr.

6) *HANERA OU PANENOÁ*.

1) *Gente-Nome-Língua*. — Tipo mais alto e franzino que o Tukano. Tez mais vermelha, rosto longo, queixo fino, nariz alto, testa larga.

O seu idioma, que se deve filiar à família linguística Tukano (cfr. Vocabulário, em «Idiomas Indígenas da Amazônia») apresenta êste particular: aparece uma aspirada inicial (*h*, como representamos neste trabalho) em palavras nas quais o Tukano pronuncia um *p*, por exemplo: pai, *hakó* (Tukano *paz-kó*), mãe, *hakó* (Tukano, *paz-kó*), etc. Esta caraterística do seu idioma explica-nos a correspondência do seu nome na própria língua, *Hanêra* e na Tukano, *Panenõá*, ou Parêrcá.

Sabemos que estão ligados por matrimônio com os *Bará* e *Tuyuka*.

2) *Habitat e habitantes*. Temos visto apenas alguns indivíduos de passagem pela maloca denominada *Mosá-bhoá* (monte do urucú), dos Mara, no igarapé Uaracú-pirêra, e na sua maloca próxima da foz do Timi-ya. Não souberam informar-nos sôbre o número aproximado dos indivíduos da sua tribo. Parece que não ultrapassam os 4 centos. Atualmente residem só em território colombiano, em vários igarapés da margem esquerda do Pirá-paraná.

Os informantes do sec. 18 atestam que dos *Panenôá* é que os *Taryana* recebiam por troca, seus enfeites de ouro e prata (cfr. II - 3) e *momôrõ Khuiri* (VII - 3, d).

3) *Divisões*. — A índia Duhigó, de seus 50 anos deu, em março de 1954 as seguintes divisões da sua tribo:

1. *Daseká̃na* (?), no igarapé Umû-ya (cabeceiras do Komé-ya)
2. *Doc* (Taraira), no igarapé Amori-ya
3. *Dyasiama* ou *Ryasuma* (?), no igarapé Amori-ya
4. *Fêniona* (?), no rio Pirá-paraná
5. *Koniya* (?), no Soari-ma-pitó (foz do igarapé vermelho)
6. *Wimona* (?), no igarapé Umû-ya
7. *Nikumepana* (?), no igarapé Umû-ya
8. *Sené* (?), nas cabeceiras do Komé-ya.

h) *IDE-MASÁ, AÕ-NIRA OU MAKUNA*.

1) *Gente-Nome-Língua*. — Assim se denominam no próprio idioma, o qual pertence ainda à família linguística Tukano, como se pode verificar pelo Vocabulário (Cfr. «Discoteca Etno-linguístico-musical» e «Idiomas Indígenas da Amazônia») e significa «*gente agua*». É costume de tôdas as tribos da região Uapesina, a cada frase que ouvem emitirem: um som exprimindo que se está acompanhando e entendendo a conversa, ou, ainda, que se está de acôrdo com quem fala. Êste som, para as tribos do Uaupés, Papuri e Tiquié, é ãã ou ũũ (cfr. *Gramática da língua Dazseyé*, do autor). Os *Ide-masá*, porem, repetem a cada momento «*aõ*». Por êste costume os indígenas do Tiquié denominam-nos «*Aõ-nira*» ou «*Aõ-nina*», isto é, «os que dizem *aõ*». Esta a explicação que nos forneceu o tuxáua *Ide-masá* da primeira maloca do Komé-ya. No próprio idioma tal alcunha se traduziria: «eu sou dos Aõ-nira, *yoõ aõ-ligõ* (masc.) *aõ-ligo* (fem.), *aõ-lira* (plural)). Êsse mesmo tuxáua informou que os Colombianos os denominam *Makúna*. Não sabem, porém, o signi-

ficado, nem a origem da palavra Makuna que vem registrada por Koch Grünberg.

São os *Ide-masã*, em geral, menos corpulentos que os Tukano. Porém de tez mais clara, um tanto pálida, rosto alongado, nariz alto, levemente aquilino, zigoma não saliente, olhos amendoados quase sempre castanho claros. Os cabelos são, em geral, escuros ou mesmo pretos, finos não lissotricos, ao invés muitas vezes até ondeados.

Vigora entre êles a exogamia de tribo. E conhecemos que estão ligados por matrimônio com os Tuyuka, Bará, Emõa, Yebá, Bá:re, Roéra. Não só as mulheres mas também os homens trazem as orelhas furadas com um pequeno batoque de 2 a 3 mm. de diâmetro que mantem aberto o orifício.

Uma particularidade dessa tribo são as danças de máscaras. Tivemos a oportunidade de ver as máscaras representando *Warti* e o *macaco*. A de Waxti era uma verdadeira máscara branca de casca, como um rosto arredondado, com larga fenda figurando a bôca, um nariz comprido e pontudo, e aos lados da base do nariz duas fendas um tanto obliquas à guisa de olhos. A que representava o macaco era um simples camisolão de tururi com uma parte afilada, como capuz, recobrindo a cabeça. Neste capuz há dois orifícios correspondentes aos olhos e duas pontas para o alto figurando orelhas.

2) *Habitat e habitantes*. Acham-se espalhados por área muito ampla: todo o ribeirão Comé-ia (ribeirão do ferro ou do machado, no idioma Ide, *Komeryaka*, afluente da margem esquerda do Piráparaná), o Miriti-paraná, Apapóris e o Kamori (o qual, conforme indicações do mesmo tuxáua, deve ser um afluente do rio Solimões). Parece que são bem numerosos, isto é, são várias centenas. Parece confirmar esta informação, o número de divisões que apresenta a tribo.

c) *Divisões*. — Fornecidas pelo índio *Hinõ* (i. e. cobra), também conhecido por Fernando), de seus 50 anos (em agosto de 1956), tuxáua da maloca *Buhõ-rya-hido* (foz do igarapé da aranha), na margem esquerda do Komé-ya, cerca de 10 horas de canoa desde a foz.

1. «Aõ, no Komé-ya (a esta divisão pertence o informante)
2. Ide-*hi-nõnya* (?), no Apapóris
3. *Lyaró hi-nõnya letwana* (?), no Apapóris
4. *Yukũra* (?), no Miriti-paraná

5 *Kuêra* (?), no Miriti-paraná

6 *Witata* (?), no Miriti-paraná

7. *Adókya* (?), no Kamori

6 *Witata* (?), no Miriti-paraná

*Observação*. 1.º Koch Grünberg registra como subdivisão dos *Yahuna* (*Z.I.* 362) os *Dahwana*. Não conseguimos apurar se êsses dois grupos citados por Koch se devam identificar com *Yukúra* e *Lehwana* da tribo *Ide-masã*. 2.º Releve-se que no Miriti-paraná, afluente do Japurá, existe uma tribo Arwake, por nome *Yukúna*, da qual Koch (*Z.I.* 286) recolheu seu Vocabulário de 60 palavras. 3.º Koch obteve também informação (*Z.I.* 394) que no rio Caritáya, afluente da direita do Miriti-paraná viviam ainda os *Kueretú* e dêles conseguiu também seu vocabulário. Verificamos, porém, que o idioma Kueretu se afasta notavelmente do dos Ide-masã. 4.º Os *Witata*, que figuram como uma subdivisão dos Ide, não se confundem com os *Uitóto* que habitam a região entre o Caquetá e o Putumayo. Koch, que conseguiu recolher dêles um vocabulário, opina que devem ser considerados um grupo à parte (antes conglobados com os *Karibe*). *Witóto* quer dizer inimigo, nome que lhes deram os *Omáwa* e, depois, os civilizados. Compreendem os *Witóto* um numeroso conjunto de hordas com suas diferenças dialetais.

1) *IHWANA OU YONA*

1) *Gente-Nome-Língua*. — Não conseguimos saber ao certo o significado do nome *Ihwana* ou *Yona*, seria quiça o nome de um peixe. A língua é da família Tukano, como se depreende do Vocabulário que recolhemos na maloca Wextá, no Pirá-paraná, próxima da foz do Komé-ya.

Os indivíduos da maloca eram mais franzinos e de feições mais delicadas que os Tukano. Todos os homens tinham furados os lóbulos das orelhas, mantidos abertos por um chumaço de plumas de pássaros. Apertando os braços, pouco abaixo dos ombros, um cordão, e pinturas vermelhas pelo rosto, indícios talvez de alguma festa pouco tempo antes. Cabelos escuros, quimótricos, com leve ondulação, e olhos mais claros que os dos Tukano.

2º) *Hábitat e habitantes*. — Residem em malocas ao longo do Pirá-paraná e seus pequenos afluentes próximos e para baixo da cachoeira do Beijú, onde se pode ver na vazante um belo desenho que lembra o dragão chinês. Por deficiência de intérprete não conseguimos apurar o número de componentes da tribo, nem as

suas subdivisões. Das informações obtidas pensamos se possa concluir que são ainda varias centenas.

1) *KÓ'NEA OU ARAPASU*

1) *Gente-Nome-Lingua* — A si mesmos se denominam *Kó'nea* (em Tukano *Kõ-rea*), o nome de uma variedade de pica-pau, dito, em Nheengatú, *arapasu*.

Conforme reminiscências de antiga tradição, foi uma tribo muito numerosa e valente. Quando indivíduos de outras tribos passavam pelo rio Uaupés, na zona dominada pelos *Arapásu*, êstes os cercavam, tiravam-lhe todos os produtos e depois lhes afundavam as canoas, deixando-os, porém, fugir. As vítimas vingavam-se soprando [illegible] e, lançando maleficio; cfr. VII - 2, e (1) sôbre os *Arapasu*, que, aos poucos, se foram extinguindo.

Perderam também o proprio idioma, falando todos, hoje, a língua Tukano.

Koch O. inclui os *Arapásu* como divisão Tukano. Parece-nos inexato, pois até é permitido o matrimônio entre membros dessas duas tribos. Fisicamente os *Arapasu* distinguem-se bem dos Tukano, pois são mais claros, altos e franzinos: Nariz alto, às vêzes um tanto aquilino, zigoma menos saliente e rosto alongado.

Consideram-se, ao invés, *irmãos* dos Pira-tapúya, por isso vigora intercâmbio matrimonial entre *Arapásu* e *Pira-tapúya*, e também com os *Dara*, *Desana*, *Miritti* e *Kumddenc*.

O seu idioma, sim, parece filiar-se à família de línguas Tukano (32).

2) *Habitat e habitantes.* — Em «*Pelo Rio Mar*» lemos que seu centro é a região compreendida entre o Uaupés e o Japurá, donde passaram para o Uaupés e foram aldeados por Frei Gregório em S. Jeronimo, Nanã-Roperuma e S. Joaquim.

---

(32) Sua filiação à Família de línguas Tukano, pode-se verificar apenas pelo pequeno número de palavras que nos souberam dizer alguns indígenas *Arapasu*:

| | | |
|---|---|---|
| tapioca, *kaveiari* | pai, *mai* | tio paterno, *moamõ* |
| abóbora, *musóua* | mãe, *Yõ* ou *thyõ* | tia paterna, *moamã* |
| peito, *kuiria* | filho, *maakã* | tio materno, *kabo* |
| gente, *nuriã* | filha, *maakõ* | tia materna, *kabõ*, **kabú** |
| cutia, *pako* | irmão menor, *peñã* | primo materna, *kabõ maakã* |
| [illegible] | irmã menor, *peñõ* | primo materno, *kabõ maakõ* |
| fogo, *pe'kûme* | | sobrinho, *peñanã* |
| | | sobrinha, *peñanõ* |

Vai soprar o fogo, *pe'kûme apusumaré*

O Pe. João Marchesi, ao chegar em 1925 entre êles, soube, dos velhos *Arapasu*, eram êles senhores do Uaupés desde S. José até a foz. Por serem mais sociáveis e simpáticos que os outros indígenas, muitas mulheres tornaram-se esposas dos civilizados e muitos homens da tribo foram levados para os trabalhos. Muitos, outrossim, se fixaram no baixo Rio Negro, e outros pereceram. Do cruzamento com *Arapasu* procedem numerosos caboclos daquela região. A tribo ficou assim muito reduzida. Havia um grande grupo em Pinú-pinú (Uaupés), que emigrou para o baixo Rio Negro. Ao regressar encontrou aí estabelecidos os Taryana que não quiseram ceder o lugar, sabendo que êles eram muitos e os *Arapasu* menos numerosos.

Pouco mais de uma centena vive hoje na margem direita do Uaupés, entre S. José e Paraná-juca.

3) *Subdivisões* (33)

1) — *Arpá sorpé pôna* (filhos da ponta do caranguejo), em Caranguejo (Uaupés)

2) — *Winé ñõa pôna* (filhos da ponta do vento), em S. José (Uaupés)

3) — *Kundeko ñõa pôna* (filhos da ponta do louro), em Louro (Uaupés)

4) — *Dyá pursu pohoro pôna* (filhos do estreito do Uaupés), em Paraná-juca (Uaupés)

*k) KOTIRYA OU WANANA*

1) *Gente-Nome-Lingua* — Wanâna é palavra Nheengatú e indica uma ave aquática *chendlopez jubátus*, conhecida comumente por marreco. A si mesmos os *Wanâna* se denominam *Kotirya*, *Kotidya* ou *Kotirica* (Sing. Masc. *Kotirica-kiro*; Fem. *Kotirica-koro*). São chamados pelos Tukano *Ozkó-ti-khâra*, que quer dizer «gente que tem remédio» ou «gente paje», de *oz-kó*, remédio. Se bem que a expressão Tukano autorize semelhante tradução, mais conforme as lendas das origens seria a interpretação *ozkó*, água (e não *oz-kó*), isto é, «gente que está na água ou saiu da água». Os Tuyuka denominam os *Wanana* simplesmente «gente do rio Uaupés, *Dyá-*

---

(33) Esta divisão foi-nos obtida pelo Pe. Antônio Giacone, SBD. Relevé-se que não se assemelha aos nomes das divisões das outras tribos. Talvez porque já não os saibam mais. Assim o declararam todos os *Arapasu* que pudemos consultar. E um dêles veio perguntar-nos se sabíamos como se chamavam as antigas divisões da sua tribo. Os nomes supra são apenas indicações dos lugares onde residem presentemente. E' possível que cada povoado atual represente uma das antigas divisões.

*Pozsu-markd*». Desta sorte não se percebe relação alguma entre os nomes nas línguas Nheengatú e Tukano. (34) Já relevamos que o Relatório de Frei Gregório em vez de *Wanãna* traz *Anana*.

São de estatura mais elevada que os Tukano, e sua língua é da família Tukano, embora mais vizinha do idioma Pirá-tapuya, como podemos ver no vocabulário.

Vigora interdição matrimonial com os Pirá-tapuya.

2) *Habitat e habitantes.* — «Pelo Rio Mar» informa que foram aldeados em Thomar no sec. 18 pelos Carmelitas. Foram-no, como resulta do «Diario» de Sampaio, os *Uapuna*. Parece-nos, entretanto, que esta seja uma tribo Arwake do rio Japurá, e não os *Wanãna*, que são da família linguística Tukano. Pensamos também, por esta mesma razão, não se podem identificar com a tribo *Ana*, descida do Orenoco, conforme os exploradores do sec. 18.

Seu *habitat* atual é o médio Uaupés, desde Japú-ponta até a foz do Querari perfazendo uns 600 indivíduos, conforme Koch Grunberg (*Z. I.* 271). Na estatística de «Pelo Rio Mar» encontramos o número 367 para os atendidos pelas Missões Salesianas. Informaram-nos que é bem maior o número dos que vivem em território colombiano.

3) *Divisões* — Informante Maximiano Sá, de seus 25 anos (1953) e um grupo de homens, em Cagurú-cachoeira.

1. *Khenê* (pato dagua) no igarapé Paca (afluente do Uaupés)
2. *Biali* (variedade de pato), em Matapi (rio Uaupés)
3. *Wai kapea ñãrori* (35) *pondyro* (ñãrori de ôlho de peixe), em Macucú, (rio Uaupés)
4. *Uryd ñãrori* (um vermie), em Iutica (rio Uaupés)
5. *Dyãni pondyro* (pato branco), em Carurú-cachoeira (rio Uaupés; os informantes eram dêste grupo)
6. *Batiri-kd pond* (japurá, uma fruta), em Arara (rio Uaupés)
7. *Stupo pond* (panela, talha), em Jacaré (rio Uaupés)
8. *Dozkana pond* (mão de pilão), no igarapé Paca
9. *Wiroyro* (o passaro trovão), no igarapé timbó (rio Uaupés)

---

(34) Lemos em "Indios do Brasil" do Major Lima Figueiredo — Brasiliana, n.º 163 — S. Paulo, 1939, pag. 146): "a palavra Wanana, em idioma arusack, significa ladrão".

(35) O Joven Ernesto Domingues, em vez de *Ñãrori*, pronunciou *ÿãhori* e informou que significa o lodo de beira-rio.

10 *Bukupro* (uma árvore), em Tiplaca (rio Uaupés)

11 *Nadi yarpárya* (caroço de miriti), em Tucano-cachoeira (Uaupés)

12 *Yopayriro* (milho), ramo extinto

13 *Nadi ryákiro* (miriti), em Jacaré (Uaupés)

14 *Nuti dirsoryákiro* (pintado de cinza nas pernas, nas danças), em Uaracapuri (Uaupés).

O informante Ernesto Domingues, de uns 22 anos (em 1955), em Jacaré (Uaupés) forneceu 12 subdivisões, 9 das quais coincidem com as obtidas em Carurú. As outras três são:

16 *Witó monó* (acangatara branca), em Uaracapuri (Uaupés)

16 *Witó monó* (acangatara branca), em Uaracapuri (Aaupés)

17 *Yahori ponó* (lodo da beira do rio), em Taiassú (Uaupés)

Outro informante, Gabriel Paiva, de seus 18 anos acrescentou ainda:

18 *Wanirtiro* (acará), em Matapi (Uaupés)

19 *Yarpima* (batata), em Jutica (Uaupés).

1) *MÕXTA OU KARAPANA*

1) *Gente-Nome-Língua.* Pertencem à família Tukano, quanto ao idioma, no qual se dizem *Mõxtã*, e na língua Tukano, *Mõxtõa*, termo correspondente a *Karapanã* da língua geral, isto é, o nome de um mosquito que pica à noite (gêneros *stegoniya*, *culex* e outros).

Mais franzinos que os Tukano, são também de traços menos mongoloides, claros de epiderme e de olhos e de rosto oval.

2) *Hábitat e habitantes.* — Seu *hábitat* atual é a região colombiana entre o Uaupés e as cabeceiras do Papuri ou melhor do seu formador o Aua, e o Tiquigarapé. Frei Gregório de Bene aldeou alguns grupos *Karapanã* em *Nanã-Rapecúma* e *S. Joaquim*, no baixo Uaupés; e em *S. Luzia*, no Papuri.

Jesuíno Cordeiro, em ofício datado de 1 de julho de 1853, informa ao Presidente da Província, de um ataque dos *Karapanã* ao povoado de S. Cruz dos Kubéwana, junto à cachoeira do Mutum (hoje *Mitú*, capital do Território Nacional del Waupés, Colômbia). Perseguidos pela Polícia colombiana, em 1928, um grupo dêles se estabeleceu em território Brasileiro, nas cabeceiras do Umari-igarapé (afluente do Tiquié). Êsses episódios confirmam sua fama de belicosidade e violências.

3) *Divisões* — Informante Antônio Gentil, de 40 anos (1953) de Uniari igarapé em Paricachoeira.

1.º — *Dúrya mãtará* (um peixe), no Ekê-ya (igarapé do nariz?). São os *Mamí*

2.º — *Poztá-hará* (espinho), no igarapé Po-yá

3.º — *Mãmya pakãna* (abelhas), no Ekê-ya

4.º — *Mãmya* (abelha), no igarapé Po-yá

O informante Vicente, Karapanã (de seus 30 anos) das cabeceiras do Aua, hoje estabelecido em Uaracapá (rio Papuri) deu novos nomes e modificou a ordem, além de pequena diferença de pronúncia.

1.º — *Mumyá* (abelha), no igarapé Po-yá

2.º — *Dorya pakãna* (?) do Pirá-paraná, hoje em Pô-yá

3.º — *Dorya mãtará* (um peixe) no Ekô-ya

4.º — *Poa-ya môztè* (35 *a*), já extintos.

5.º — *Poztá yara* (espinho), no igarapé Po-yá

6.º — *Mãmyá pakãna* (abelhas), no Ekô-ya

7.º — *Kenenô* (jatai), no rio Pirá-paraná

8.º — *Botea matsa* (aracú), no rio Cananari

9.º — *Datô-hyá* (?), no rio Uaupés (disse o informante: «hoje são Kubewãna», isto é assimilarão por êstes) (35 *b*)

10.º — *Pizkô-sè* (gavião tesoura), no rio Cananari

Um jovem Karapanã, de seus 23 anos, Luiz, da maloca de *Hôboômakarya* (cabeceiras do Tiquié), informou que atualmente (1955) só existiam os 7 grupos seguintes e na ordem decrescente de importância:

1.º — *Mãmyá* (abelhas). São «os da cabeça», i. e., principais

2.º — *Dúrya* (cutia) (dêste grupo o informante)

3.º — *Dúrya mõtára*

4.º — *Môztè pakãna*

5.º — *Mõtára*

---

(35a) *Poá-yá-môztè*, propriamente significa "Karapanã do igarapé Poá".
(35b) Seria quiçá a subdivisão Kubéwãna denominada *Tatiwa* (javari) ?

4: Silva SQ19 Tucano

6.º — *Poxtã yara*

7.º — *Poxtã yara mõtara*

Não sabemos se se equivocou dizendo em 4.º lugar *Mõxtê pakãna*, em vez de *Mũmya Pakãna*.

m) *NEENOA OU MIRITI-TAPUYA*

1) *Gente-Nome-Lingua* — *Neenoa* é no idioma natal o nome da tribo conhecida por *Miriti-tapuya* (nome derivado de uma palmeira, a *Mauritia flexuosa*) ou *Myariti-tapuya* (36), isto é gente-buriti. São pequenos como os Tukano, porém mais claros, franzinos e de fisionomia mais delicada.

Vigora interdição matrimonial com os *Taryana*, *Arapasu*, *Kamãdene*, *Pirã-tapuya*, *Tuyuka* e *Desana*.

Falam todos, presentemente, a língua Tukano, e os próprios anciãos não se recordam senão de uma meia dúzia de palavras. Afirmam, porem, que a língua era muito semelhante à dos Arapasu, e as poucas palavras que obtivemos justificam a filiação à família de línguas Tukano (37).

2) *Habitat e habitantes* — Os únicos sobreexistentes da tribo no Brasil, uma centena de pessoas, vivem no baixo Tiquié, em Urubu-lago e Iraiti. Informaram-nos que, por motivo de dissenções, um grupo, talvez pelo fim do século passado, fugiu para o rio Japurá (territorio colombiano), e que êsses, provàvelmente, ainda conhecerão a língua materna primitiva.

3) *Divisões* — Fornecidas por Luciano, do grupo *Umũhori*, de seus 50 anos, e Maria Cabral, do grupo *Umiã-põ*, de seus 22 anos, ambos de Iraiti.

1 *Itsé-pi pond* (?), em Iraiti e Urubu-lago (rio Tiquié)

---

(36) Artur Ramos (o. c. I, 172), põe como outra denominação dos Miriti, *Matati-tapuya*. Seria um êrro de imprensa por *Matapi-tapuya* (*matapi*, cercado de peixe, VI-5, a (2)? Nesta hipótese parece-nos uma identificação inexata. Conforme Koch G. *Matapi-tapuya* é uma subtribo dos Yukuna existentes em Uacaiacá, afluente da margem esquerda do Miriti-paraná (*Festschrift*, 205 e Z. *I*, 394 e 398).

(37) pai, kõ-ká — avô, kõ-Ro — tio paterno, *mõãma*
mãe, *yõ* — filha, *maxkõga* — tia paterna, *mõãmo*
filho, *maxkõya* — sabão (?), *sã* — fogo, *maryã tukáro*

2) *Pena baya pona* (mestre de dança do caxiri), em Urubulago (vindos do Japurá)

3) *Maha baya pona* (mestre de dança com pena de arara), em Iraiti

4) *Umuhori pona* (?), no ribeirão Umú-ya, afluente do Uaupés

5) *Su-pou* (?), extinta

6) *Umu-pu* (?), em Iraiti e rio Japurá

7) *A-u* (?), extinta

8) *Hoñi-di* (?), em Iraiti.

B) *OÁ-MAHÃ OU MIKURA-TAPUYA*

1) *Gente-Língua-Nome* — Seu idioma é da família linguística Tukano, conforme se verifica pelo Vocabulário que obtivemos de uma índia por nome Kaxpé de seus 45 ou 50 anos, natural do ribeirão Inambú, afluente do Papuri e casada com um Tuyuka do Tapuio, onde reside na última maloca do território brasileiro, próxima à fronteira colombiana. O nome Nheengatú *Mikura-tapuya*, ou *Macucambira*, é a tradução do nome *Oá-mahã*, no idioma natal.

São os *Oá-mahã* de tez mais clara e mais franzinos que os Tukano. Cabelos castanhos escuros ou pretos, finos às vezes ondeados. Rosto mais alongado que nos Tukano, traços também mais delicados e olhos claros.

Observam outrossim, a exogamia de tribo, e sabemos de matrimônios com os Tuyuka, Bará e Tukano.

2) *Habitat e habitantes* — Parece que, atualmente, habitam todos no território colombiano entre as cabeceiras dos rios Tiquié e Papuri.

Os *Pamõã-maxsã* (Tatú-tapuya) citam como divisão da própria tribo os *Oá-mahã*. Não sabemos se se trata da presente tribo, como parece mais provável pela localização, ou realmente se dá uma simples [illegible] com êste nome de *Oá* (genital).

3) *Dialeto* — Não se soube indicar a informante.

C) *PABOA-MAXSA OU TATU-TAPUYA*

1) *Gente-Nome-Língua* — No próprio idioma, que pertence à família de línguas Tukano (cfr. «Discoteca Etno-linguístico-musical»), dizem-se *Paboa-maxsã*, correspondente à denominação Tukano *Pamõã-maxsã* ou *gente Tatú*.

Tez mais clara que os Tukano, e também mais altos e franzinos. Cabelos castanhos escuros, rosto ovóide, olhos claros, lábios finos, nariz alto.

Sabemos de ligações matrimoniais com os Bará e os Karapanã.

2) *Habitat e habitantes* — Atualmente residem na região compreendida entre as cabeceiras do Aua (um dos formadores do Papuri) e o rio Pirá-paraná. Vai por uns vinte anos houve encontros e mortandades recíprocas entre os Tatú-tapuyas e seringueiros colombianos, e recordam-se até episódios de antropofagia, que se explicam, parece, por particular ódio e represálias.

Deve, pelas informações que obtivémos, oscilar pelos 300 o número de habitantes desta tribo.

3) *Divisões* — Fornecidas pela índia Kamóõ, de seus 45 anos (1954), das cabeceiras do rio Aua:

1 *Tsuñinó* (?), no rio Pirá-paraná

2 *Pirõ* (cobra), no Pirá-paraná

3 *Peturi sauinõ* (?), Pirá-paraná

4 *Oa-mazsã* (gente gamba), no rio Pirá-paraná (38)

p) *PAMIWA OU KUBEWANA* — Opina Koch Grünberg (*Z. I.* 277) que o nome *Kobewa* seja apenas uma alcunha dada pelos seus antigos inimigos, os Arwake, pelo uso freqüente da palavra *kõbauõ*, nada, não. No idioma Tukano são denominados *Potori-khãra* que significa «gente ou habitantes das cabeceiras dos rios» (*Cfr.* o seu nome em diferentes línguas indígenas; *Cfr.* IV — 3). Êles, porém, a si mesmos se denominam *Pamiwa* (sing. M. *pamiko*, F. *pamiko*). Curt Nimuendaju e Koch registram *Hehõnawa* como nome da tribo. Os *Hehõnawa* constituem apenas um grupo principal dos Kubewana, que Koch encontrou na maloca de Namakoliba (*Z. I.* 278) (*).

1) *Gente-Nome-Língua* — Sua língua é da família Tukano, como se pode verificar pelo Vocabulário que transcrevemos e gravamos («Discotêca Etno-linguístico-musical» e «Idiomas Indígenas da Amazônia»). Chestmir afirma que apresenta atualmente vestígios *Karaíba*.

---

(38) Seria a mesma tribo *Oá-nichã* ou *Mikura-tapuya*?

(*) Informa Koch que nos mananciais do Querari há um pequeno grupo Kubewana denominado *Abarõhahãngua*, isto é, Kubewana-Jurupari, nome que os Wanana traduzem *Warrikurtipinos*; e os de Uaracapuri (Uaupés) são *Olobahahanaua*, ditos *Dudãitos* pelos Wanana.

Antropologicamente distinguem-se notavelmente dos Tukano. São mais altos, menos corpulentos e, sobretudo, de fisionomia menos acentuadamente mongólica que êstes.

2) *Habitat e habitantes* — Acham-se domiciliados no alto Uaupés, na fronteira do Brasil e da Colômbia, e nos rios Querari, Cuduiari e cabeceiras do Içana. Os primeiros exploradores já os encontraram nesse *habitat*. Há um século Jesuíno Cordeiro aldeiou algumas centenas dêles em *Mitú* e no *laço do espelho*.

Compreende um milhar de almas, de acôrdo com os cálculos de Koch Grunberg, o qual informa que os *Kubéuana* dominaram dos grupos *Arudke* do Querari e lhe impuseram sua língua e costumes: os *Hohodua* e os *Kaiña* (30). Dêstes últimos porém, muitos emigraram para o rio Içana, e em contato com os grupos *Arudke* de ali, retomaram seu caráter *Arudke* (*Zuei Iahre*, 72).

3) *Divisões* — Obtivemos 4 listas das subdivisões da tribo *Kubéuana*.

1ª — A primeira compreende 9 (nove) nomes, e foi-nos fornecida em novembro de 1953 pela *Kubéuana* Heloísa, de seus 45 anos, casada e residente em Cururu-cachoeira (rio Uaupés). O Wanana Maximiano de Sá, desse mesmo povoado, que nos servia de intérprete deu-nos o significado de cada nome, conforme segue:

1º — *Orobako* (pacova sororoca), em Pindaíba-igarapé (perto de Mitú, rio Uaupés)

2º — *Aurako* (beiju), nas cabeceiras do Cuduiari (afluente do Querari)

3º — *Wararíko* (var. de pimenta), em Tatú-cachoeira (rio Uaupés)

4º — *Hehenakó* (azedo), no rio Cuduiari

5º — *Bahikeko* (aparecido), no rio Cuduiari

6º — *Neaboko* (muriti), no rio Cuduiari

7º — *Barcuko* (manivana), em Pindaíba-igarapé

8º — *Hurako* (?), na lagoa dágua fria (cabeceiras do Cuduiari)

9º — *Pyarako* (tocandira), acima de Mitú (rio Uaupés).

---

(30) Há ainda duas ou três famílias superstites dos *Kawa* (cfr. II-6, a (5). Quanto aos *Hohodua*, de que fala Koch G. quiçá seriam os *Hehénakó* ou *Hehenaué* considerados hoje subdivisão dos *Kubéuana*, como se pode ver nos quadros aqui transcritos.

2º — Mais tarde, em abril de 1955, outra Kubewana, Josefa, também de seus 45 anos, esposa do tuxaua de Cururú-cachoeira, o Kaxuna Mandu, revia a lista fornecida por Heloisa, confirmou-a e acrescentou outras nove subdivisões. Negou, no entanto, a existência da 4ª div. no supra *Hurako*, e localizou os *Pyardkò* ou *Myardkò* no igarapé Macaquinha. E quanto ao significado dos nomes no-lo ofereceu em Wanana (ou tukano) o seu esposo, como poremos na mesma ordem na qual foram citadas as subdivisões:

10º — *Ufat-aiteko* (moã-parya), no rio Cuduiari

11º — *Bnorbokò* (tone-neãkiro), no rio Cuduiari

12º — *Koroko* (coro-coro mira, i. e. vermelho), no rio Cuduiari

13º — *Pedikaako* (sovaka, ralo), no rio Cuduiari

14º — *Bpeko* (o passaro-parirou), no rio Cuduiari

15º — *Kowiterabocko* (a planta bosaritena), no rio Içana (deste grupo e Josefa)

16º — *Dyurobokò* (pino maxxã pona), no rio Içana

17º — *Forcoko* (guariba), no rio Içana

18º — *Dyokarbekò* (sem folha), no rio Içana

3º — Um grupo de *Wanana* de Tipiaca (médio Uaupés colombiano), auxiliando-se reciprocamente, citaram-nos em maio de 1954, 16 subdivisões da tribo *Kubewana* que damos a seguir. Pela tradução que nos fizeram, parece-nos que se possam identificar as subdivisões nº 1, 2, 3, 4, 5, 7, 8, 11, 13, 15 respectivamente com os números 1, 18, 14, 16, 5, 13, 12, 10, 15 e 3 das listas fornecidas por Heloisa e Josefa. A diferença resultaria ùnicamente do fato que a lista de Tipiaca se acha em língua *Wanana*, ao passo que Heloisa e Josefa deram os nomes no seu idioma que é o *Kubewana*.

1º (1) — *Hoporya* (sororoca), no Abio-igarapé

2º (18) — *Phuri marina* (sem folha), no rio Querari

3º (14) — *Yatsroa* (um corante), no Rio Uaupés, acima da foz do Abio-igarapé

4º (16) — *Mokkã piro põnã* (lugar da cobra), cabeceiras do Querari

5º (5) — *Pirta* (tocandira), acima de Mitú-cachoeira (Uaupés)

6º — *Surpuara* (borbulhas de água), nas cabeceiras do Cuduiari

7.º (13) — *Sorkõa* (ralo), no rio Cuduiari

8.º (12) — *Kortoa* (coró-coró vermelho), na bôca do Cuduiari

9.º — *Desoporca* (barbado), abaixo de Mitú (rio Uaupés)

10.º — *Yurya* (alejado), no Karapanã-igarapé

11.º (10) — *Mod-parya* (sal), no Miriti-igarapé (acima de Mitú, Uaupés)

12.º — *Bote dyerya* (ovos de aracú), nas cabeceiras do Cuduiari

13.º (15) — *Wamãtarua* (uma erva), nas cabeceiras do Querari

14.º (7) — *Yebakuroa* (mandiavara), no rio Querari

15.º (3) — *Byêdero* (var. de pimenta), em S. Cruz e Tatú-cachoeira (Uaupés)

16.º — *Wai uchêko* (puçá), em Pacú-igarapé (acima de Mitú, Uaupés)

4.º — Em abril de 1957 encontramos em Arapaçu-poço, localidade sôbre o rio Içana, próximo da foz do Afari, duas mulheres provindas do Querari. Nazária de seus 40 anos e Byatrina de uns 25 a 28 anos, casadas com homens Arwáke da tribo *Yauarcté-tapúya*. Apresentaram-se como sendo da tribo *Koréteraboa*, nome que nos traduziram como *Buya-tapuya* (gente-cobra). Note-se que na 2.ª data supra, Josefa deu como uma subdivisão dos *Kubéwana* os *Koréteraboa*, nome que indica a planta *bosaritena*. Recolhendo o Vocabulário-teste destas mulheres *Koréteraboa*, verificamos que era quase idêntico ao fornecido por Heloísa em 1955. Byatrina indicou as seguintes divisões, servindo-nos de intérprete o índio Ernesto, da tribo Jurupari-tapuya, de S. Ana (rio Içana):

1.º — *Hehêwana* (velho), em Tui (rio Cuduiari)

2.º — *Pa[illegible]* (gato), em Itapinima (rio Cuduiari)

3.º — *Byêdero* (pimenta), em *Pirá-mirim* (rio Querari)

4.º — *Myarúka* (branco), em Sôi-ma (rio Uaupés)

5.º — *Bahuhona* (aparecido), em Uaracú-cachoeira (rio Cuduiari)

6.º — *Wararima* (?), em Macucú (rio Uaupés)

7.º — *Koroa* (coró-coró), em Itapinima (rio Cuduiari)

8.º — *Pyardika* (locandira), em Pirá-mirim (rio Cuduiari)

9.º — *Horóbora paramêra* (argila), em Cupim-igarapé (rio Papuri)

10.º — *Tidua* (um peixe), em Ti-igarapé (rio Uaupés)

11.º — *Akeromona* (formiga de fogo), no rio Pirá-paraná

12.º — *Tapio paramêra* (pavãozinho ou feiticeiro), no rio Uaupés

13.º — *Korébana* (esperado), Iviari-igarapé (afluente do Queari)

14.º — *Kopayona* (cupim branco), no Miriti-paraná (rio Uaupés)

15.º — *Burédua* (uma formiga de cabeça grande), no Miriti-paraná (rio Uaupés)

16.º — *Orubana* (deserto, clareira?), em Jacamim-cachoeira (rio Uaupés)

17.º — *Yamitidona* (fuligem), em Uaracapuri (rio Uaupés)

18.º — *Wirona* (um grilo), em Tipiaka-cachoeira (rio Uaupés)

19.º — *Tatina* (javari), em Paca-igarapé (rio Uaupés)

20.º — *Módkoraua* (olho), em Iutica, (rio Uaupés)

21.º — *Betona* (côco de tucum), em Açaí (rio Uaupés)

22.º — *Bpukona* (estrela), no rio Içana

23.º — *Yarui paramêra* (filhos do veado), em Surubi-igarapé (rio Içana)

24.º — *Mãpia paramêra* (daguiru preto), Cumari-igarapé (rio Içana)

*Observações.* — Confrontando as varias listas verificamos:

1.º — As localizações não coincidem. Esta dificuldade, porém, talvez se explique porque se trata de indicações vagas (rio ou igarapé tal, cabeceiras do rio tal, etc.), ou porque um mesmo grupo pode estar espalhado por varias localidades.

2.º — Os nomes igualmente não coincidem perfeitamente. Também poder-se-ia explicar esta dificuldade admitindo-se que nenhuma lista esta completa, donde o fato de uma omitir nomes que figuram em outras.

3.º — Estranha-nos sobremaneira a última lista: a) é mais numerosa. Talvez além de *subdivisões* propriamente ditas, compreenda também tribos proximas consideradas irmãs e, por isso, com interdição matrimonial entre elas.

b) Não é grande a coincidência com as listas anteriores (apenas em meia duzia de nomes). Tendo presente que a desinência *ko* é indicadora do masculino singular e *ka*, a desinência do plural, descobrimos um maior numero de coincidências. Por exemplo:

A 5ª subdivisão desta lista, *Bahukoica* com *Bahukekó* citada por Heloisa;

A 6ª divisão, *Warárica*, com a 3ª de Heloisa, *Wararikó* (pimenta);

A 9ª, *Horobora*, *argila*, com a 8ª *Hurukó* (?);

A 16ª, *Órobaica*, com a 1ª, *Órobakó* (sororoca).

c) *RODRA-MASÁ OU TARAYRA-TAPUYA*

1) *Gente-Nome-Língua* — *Rodra-masá*, como dizem no próprio idioma, corresponde ao Tukano *Doca-masá* ou *Taraira-tapuya* da Nhengatú; pois *rod* (em Tukano *doc*) é o nome do peixe taraira (*Erithrynus Taraira*, Lin.).

Seu idioma pertence ainda ao grupo linguístico Tukano, como se vê no Vocabulário (Cfr. «Idiomas Indígenas da Amazônia»), que nos forneceu, em agôsto de 1956, um jovem por nome Yami, conhecido ainda sob a denominação de Pedro, de seus 22 anos, e residente na maloca Idemúra no Komé-ya. São êles em geral de estatura mediana, cheio de corpo, rosto arredondado, tez bronzeo-clara, olhos claros, pouquíssimo a nul, fios de pêlo, nariz alto e um tanto aquilino, e cabelo castanho. Todos, homens e mulheres, trazem as orelhas furadas e atravessadas por um pequêno batoque de seus 2mm de diâmetro.

Vigora também entre os *Rodra*, a exogamia de tribo, e sabemos de matrimônios com os *Ide-masá*.

2) *Habitat e habitantes* — Possuem uma maloca próxima da foz do ribeirão Go-ya, afluente da direita do Komé-ya. Parece que são pouco numerosos, salvo se os considerarmos em conjunto com os *Ehuéa* e *Yebá* que nos foram indicados como uma mesma tribo (cfr. IV — 2, 1). Note-se que não é raro que os de uma tribo sejam apresentados como irmãos ou parentes dos de outra tribo com intercâmbio matrimonial, embora se distingam não só pela língua, como se sói dizer, mas também etnologicamente. É o caso, por exemplo, dos Tukano e Bará.

3) *Divisões* — O informante supra indicou-nos apenas os *Yebá-Yeiuna*. Várias tribos, como os *Hunêra*, *Yebá*, *Emód* indicaram como subdivisão sua os *Rodra* ou *Taraira*. Trata-se realmente de

subdivisões dessas tribos, ou constituem os *Roera* uma tribo a se? Se é pequena a diferença dialetal, como nos revelam os Vocabulários comparados, é maior a somática, apesar do regime de matrimônio que liga essas tribos. Se temos em mente que entre tôdas essas tribos vigora o *matrimônio exogâmico* como lei rigorosa (cfr. 1, a, 1) a não interdição matrimonial poderia servir de critério para distinção de tribos, embora a interdição nem sempre valha como um critério classificativo.

7) *SURIRA OU SURYANA*

1) *Gentílico-Nome-Língua* — Êles se denominam a si mesmos *Surira*, de significado desconhecido, e são chamados *Suryana* pelos de outras tribos. Provavelmente é a mesma tribo chamada *Cirango* por Curt Nimuendaju.

Sua língua é do grupo Tukano, como se vê no Vocabulário que coligimos e gravamos (Cfr. «Discoteca Etno-linguístico-musical» e «Idiomas Indígenas da Amazônia»). Possivelmente a que vem em 36º lugar na classificação linguística de Chestmir (fr. «Idiomas Indígenas da Amazônia») e a situa erròneamente no rio Caiari.

São de tez mais clara que os Tukano, rosto miúdo, traços menos proeminentes e também mais baixos e menos corpulentos que aquêles. Moralmente mais decaídos, são tidos pelos Tukano como inferiores, e como tais se julgam a si mesmos. São, na realidade, mais lentos em assimilar a civilização, mais preguiçosos, menos susceptíveis ao estímulo (40).

Em Acuariquara encontramos *Suryana* casado com *Tukano* e com *Desana*. Não vigora pois, interdição matrimonial entre estas tribos. A exogamia é obrigatória também entre os *Suryana*.

2) *Habitat e habitantes*. Encontramos alguns grupos nas cabeceiras do Papuri e no rio Paca (Acuariquara e arredores). Não se confundem com os *Suryana*, de origem *Arawake*, localizados no Demeni, e que Curt Nimuendaju identificou com os *Dahuna*.

Pelas informações obtidas em Acuariquara, a tribo *Suryana* está muito reduzida de membros. Serão uns 200 indivíduos: 120 em S. Geraldo (rio Paca), 60 em Vinha-igarapé, 30 em Ulva-igarapé e 20 em Tapira-cachoeira (rio Paca).

---

(40) Confirma a impressão que estão mais decaídos o aspecto de suas casas em Acuariquara. É verdade que em novembro de 1953 duas famílias Suryana estavam construindo as duas melhores casas do povoado missionário. Da decadência moral, o fato de um pai vivendo maritalmente com sua filha. Cumpre relevar que os Tukano não aceitavam *Suryana* como aprendiz de trabalho; no entanto, na escola da Missão, os dois jovens mais inteligentes eram Suryana.

3) *Divisões.* — Informante Manoel Rodriguez de Acuaricuara

1 *Tu-boa* (?), em S. Geraldo

2 *Bebe-bariséra* (Suryana tapurú), em Vinha-igarapé

3 *Wira* (*flecha*), em Ulva-igarapé (rio Paca, acima do Tapira-cachoeira)

4 *Wya-foa* (uma formiga), em Ulva-igarapé

5 *Eond* (jaburu), em Tapira-cachoeira

6 *Bayaro surya mamasurá* (Suryana cantador), nas cabeceiras do Vinha-igarapé

7 *Bara-ka* (?), nas cabeceiras do rio Paca.

8) *TSÊNA.*

1) *Gente-Nome-Língua.* — Pertencem os *Tsêna* à família de línguas Tukano, como se deduz do vocabulário «*test*» (*Cfr. Discoteca Etno-linguístico-musical*). Não nos foi possível obter dados para um cálculo aproximativo dos Tsêna. Como as tribos vizinhas que residem entre o Tiquié e Pira-paraná, os *Tsêna* são de tez mais clara que os Tukano e traços menos mongolóides. Apresentam, outrossim, cabelos quimétricos, castanhos escuros.

2) *Habitat e habitantes.* — Localizam-se presentemente em malocas no médio *Pira-paraná* e em alguns seus pequenos afluentes como o *Tuni-ya* (igarapé da lontra), *Ahã-ya* (igarapé do inambú), *Iaxpi-ya* (igarapé da batata) e *Utu-ya* (igarapé da campina).

3) *Divisões.* — O índio Tsêna Marco, de seus 25 anos (1958), que nos forneceu e gravou o vocabulário, indicou as seguintes divisões da sua tribo em ordem decrescente de importância:

1 *Odni-sêna* (mucura ou gambá), em Tsêna-pwea (cachoeira do Pira-paraná)

2 *Tsêna-pó* (?), no ribeirão Tuni-ya

3 *Pinã-sêna* (cobra), no ribeirão Ahã-ya

4 *Kãmya* (?), no ribeirão Iaxpi-ya

5 *Wapa-sêna* (um peixe), em Tsêna-pwea. A êste grupo pertence o informante

6 *Pamõ* (tatú), em Utú-ya (Pirá-paraná).

1 *YEBÁ-MASÁ*

1) *Gente-Nome-Língua* — Yebá-masá é sua denominação na língua materna, embora não saibam o significado dêste termo (41). Seu idioma se classifica na família Tukano, como se evidencia pelo vocabulário (Cfr. «*Discoteca Etno-linguístico-musical*» e «*Idiomas Indígenas da Amazônia*»). São, em oposição aos Tukano, tipos franzinos, de estatura média como êles ou mais baixos ainda. Rosto pequeno, afilando para o queixo. Fisionomia pouco ou nada monótona. Cabelo mais grosso, preto ou escuro, não lissótrico, como acontece geralmente aos indígenas do Brasil. Às vêzes até apresentam leves ondulações. Olhos escuros, nariz baixo na raiz, como os Tukano, porém ponta mais alta e fina. Os homens têm ordinariamente as orelhas furadas.

Com insignificante agricultura de mandioca, são especialmente caçadores e vivem de frutas silvestres. Por isso é grande entre êles o consumo do *ipadú* (cfr. VI - 4, 1 (3). Usam todos a rede de 30 fios. São freqüentes as suas festas.

2) *Habitat e habitantes* — Um grupo de *Yebá-masá* vive nas cabeceiras do Igarapé Iaissa (igarapé da casa da onça), ainda em território brasileiro, porém a totalidade está em território colombiano, no interno da mata banhada pelo Komé-ya. Provavelmente não superam duas ou três centenas de membros.

3) *Divisões* — As cinco primeiras divisões nos foram fornecidas pelo índio desta tribo por nome Joaquim, de seus 25 anos (em 1954), e as duas últimas pelo índio João, 40 anos, da tribo Tuyuka, da maloca do Iaissa. Nas seguintes divisões figuram os *Roéra* e *Fmôa*. Não conseguimos apurar se são as tribos homônimas, como é mais provável, consideradas como mais aparentadas. O seu hábitat coincide com os destas tribos, como se pode ver nos respectivos lugares.

1 *Doé* ou *Roé* (taraira), no Komé-ya

2 *Wihuri* ou *Wipuri* (?), no Komé-ya

---

(41) Lucas o Velho Tukano de S. Luzia, como já foi dito (IV-2), a) explicava ao Padre Antonio Giacone que *Yepá-masá* (como dizem em Tukano), quer dizer *gente-da-terra*; e que os indígenas chegados posteriormente ao Papuri assim denominavam os Tukano. Note-se que *Yepá*, conforme as lendas, é o filho de *Burpó* (o Trovão), e os índios, com algumas noções religiosas, dizem que é Deus Filho. Koch G. (Z. I., 216) encontrou no Tiquié uma índia por nome Inácia, da tribo *Yepáhã*, de belos traços fisionômicos. Seria outra grafia de *Yepá*?

3 *Ajoka* (?), no Komé-ya

4 *Hotu* (?), no Komé-ya

5 *Kutto* (?), no Komé-ya

6 *Enõa-masá* (gente macaco guariba), no Komé-ya

7 *Sé-masá* (gente macaco barrigudo) (42) no Komé-ya

*u) WAHYARA OU YURITI-TAPUYA*

1) *Gente-Nome-Lingua* — Os indios conhecidos por *Yuriti-tapuya* se dizem no proprio idioma *Wahyára* ou *Uhayana* e pertencem a familia linguistica Tukano, cuja lingua, no entanto, apresenta vestigios *Karaiba*, assim afirma Chestmir (cfr. Vocabulário na «Discoteca etno-linguistico-musical»). *Juriti é a tradução do nome da pomba-wahyara*. São de rosto mais longo e tez mais clara que os Tukano, como tambem são mais altos e esbeltos que êstes.

2) *Habitat e habitantes* — Chestmir informa de sua existência no rio Camari. Pelo que nos consta, e na região colombiana entre o Uaupes e o Papuri que vivem alguns grupos dos Juriti, bem como em Acuariquara (rio Paca) e seus arredores. Parece-nos que são mais numerosos que os Suryana.

Em «Pelo Rio Mar» se diz que foram aldeadas em 1852 por Frei Gregorio no rio Uaupes em Aracapuri, Cururú-cachoeira, S. Jerônimo e S. Joaquim, e um século antes pelos Carmelitas em Thomar. E que são muito proximamente aparentados aos Huhúteni e são denominados *Hahkuhuru* pelos Siwsi. Pensamos que haja aqui um certo engano. Os *Huhúteni* são do grupo *Arawake*, e os *Juriti*, dos quais falamos, são, pela lingua, do grupo *Tukano*. É verdade que os traços fisionomicos dos Juriti são menos mongolóides e mais delicados que os dos Tucano.

3) *Druisões* — Informante Emilia Cordeiro, de seus 40 anos em Acuariquara em novembro de 1953.

1 *Derpoa Waxiti panamêna* (cabeça de Waxti), nas cabeceiras do Paca

2 *Tapára Wahpara* (andorinha), na bôca do Turi-igarapé, em Neniya

3 *Dyata pond* (pato dagua), nas cabeceiras do Cussá

4 *Botea Wahpára* (aracú), nas cabeceiras do rio Paca (hoje extintos)

---

42) *Sé* é o macaco dos gêneros *Lagothrix* e afins, que se diz também *aimoré*, por isso os indigenas deste grupo algumas vêzes são ditos *Aymoré-tapuya*.

5 *Wakebu ponã* (inga), em Tuim-igarapé (afluente do Uaupés)

6 *Ydsed Wahydra* (juriti mico), no igarapé Komé-ya (afluente do Paca) (43)

7 *Usénina* (cucura), no igarapé Komé-ya

8 *Dyipo putada* (pata pé), no igarapé Komé-ya

9 *Wakó basoka* (seringa), nas cabeceiras do Paca

10 *Dyato panamena* (lua pixuna), no rio Paca (acima de Tapira-cachoeira)

11 *Ahuã betori panamena* (minhoca), nas cabeceiras do Paca.

v) *WAY-KHANA OU PIRA-TAPUYA*

1) *Gente-Nome-Língua* — Pirá-tapuya é o têrmo da língua geral correspondente a *Way-khana* do idioma materno, ou «gente-peixe» (Sing. Masc. *Wai-khõ*, *Fem.* *Wai-khõ*). O seu nome explica-se pela lenda das origens. Seus particulares traços fisionômicos foram descritos (IV - 1, a (3)). Sua língua é do grupo Tukano, como se pode ver pelo Vocabulário (Cfr. «Discoteca Etno-linguístico-musical»), e muito próxima da dos *Wanana*.

Já observamos que vigora interdição matrimonial entre os *Pirá-tapuya* e os Arapasu, Wanana e Juriti.

2) *Habitat e habitantes* — Nas listas do século 18 não figuram. É interessante relevar que os *Pira-tapuya* são indicados nos mapas de Frei Gregório em Caruru-cachoeira, Iauareté, Juquira, S. Joaquim, isto é, em povoados de outras tribos e não onde os encontramos e sinalamos (III). O seu núcleo principal é o Papuri, donde passaram depois ao Uaupés. É provável que tenham chegado ao Brasil antes dos Tukano.

Oscilam por uns seis centos (588 na estatística de «Pelo Rio Mar»), assim distribuídos: no Uaupés, em Jacaré-ponta e arredores de Ananás, de Taracuá, em Urubucuara, Mariuá, Buzina, em Uaracú-ponta que é o seu maior centro atualmente e nos arredores de Umari. No Papuri, em S. Gabriel, S. Paulo. São, outrossim, numerosos em território colombiano fronteiriço.

---

(43) Komé-ya é o nome da língua Tukano correspondente a Gi-parana do Ñeengatu, isto é "Ribeirão de ferro ou do machado". Não se confunda com Komé-ya, afluente do rio Pira-parana que banha as matas habitadas pelos Ide-masã, Roera, Yebá e outras tribos.

3) *Divisões* — Indicadas por um grupo de Pirá-tapuyas de Teresita (rio Papuri):

1. *Wehéra* ou *Vetára poné* (polvilho), em Teresita, Ucapinima, Japim, Japu (rio Papuri) e Uaracú (rio Uaupés)
2. *Sukiya poné* (vermelhos), em Macú-paraná e África (Papuri)
3. *Sasiro poné* (sasiro, um gafanhoto grande) em Uaracú (Uaupés)
4. *Kenè poné* (uma barata), no rio Paca
5. *Pàtá poné* (um sapo que incha), em Japim (Papuri)
6. *Busúna poné* (palmeira), em Igarapés do rio Japurá
7. *Buzpo pone* (trovão), em S. Tomé (Bela Vista) no baixo Uaupés
8. *Durkodo poné* (desnalgado), em Bela Vista
9. *Nuna-emèperea poné* (orelha de veado), em Ituim-ponta (Papuri)
10. *Napa pone* (um sapo), em Arari-pirá (Uaupés)
11. *Kome-pa poné* (pedra do machado), em S. Francisco (Uaupés) (44)
12. *Nohu-peoroa* (queimada), em Bacaba (Uaupés) e Japim (Papuri)
13. *Peoroa* (vazante), em Teresita (Papuri)
14. *Numakuli poné* (veado pintado), em Macú-igarapé
15. *Yupè pone* (uma rã), em Cangatara (Uaupés)
16. *Kehólya* (sonhador?), em Ponta-fria (Uaupés)
17. *Bud pone* (cotia), em S. Paulo, S. Gabriel, Tucunaré (Papuri), Taracuá, Bela Vista, Açaí-paraná (Uaupés)
18. *Pardoro poné* (um cipó de flor perfumada) nos ribeirões Macú e Ituim.
19. *Nizti-pá poné* (cinza), em Teresita (Papuri) (45)

---

(44) Conforme o Tukano Henrique, pajé do Japú-igarapé (rio Uaupés), os *Kome-pá*, ditos também *Gi-Tapuya*, são os "Pirá-tapuya dos pés" ou "da cauda" (assim se exprimiu) e moravam antigamente acima do Japú-Igarapé, conforme se pode ver desenhado no mapa de Hamilton Rice (cfr. II-6, b).

(45) "Porque traziam o fogo nas danças", assim nos explicaram a razão do nome. Deve ser costume antigo, que hoje não mais vigora. Releve-se que em Teresita no-lo apresentaram como os Párias dos *Pirá-tapuya*; ao passo que no Tiquié qualificaram de escravo aos *Bud poné*, *Pardoro* e *Orkonya*.

20 *Orkdirpa pone* (espuma da água onde apareceram os Pirá-tapuya), em Caruru-cachoeira (Uaupés) (46)

21 *Dyaxtú panamina* (netos de Dyaxtú, i. e. do que bebe caxiri puro), em S. Tomé (Tiquie), Bela Vista (Uaupés) (47)

w) *WINA OU DESANA*

1) *Gente-Nome-Língua.* — No próprio idioma se dizem *Wina*; nome, parece, de um peixe. Conforme o Padre João Marchesi significa *tentania, trovão, gente do trovão*. Pelos Taryana são chamados *Detsana* ou *Papurinara*. O sufixo *uara* é do Nheengatú e exprime origem, o nome pareceria, então, indicar que penetraram no Brasil pelo Papuri. É certo que quando os Tukano chegaram ao Tiquie, os *Desana* já se achavam aí e nos principais afluentes. Inversamente dos Tukano, depois é que passaram ao Papuri, quiça ainda antes da chegada dos Tukano ao Brasil.

Na língua Tukano dizem-se *Wenã* ou *Wirã*; receberam, outrossim, as alcunhas de «*mahi-pũ pôra*», *filhos do sol*, e «*ô mã-kori marãpa*», *gente do dia*. Tais alcunhas podem derivar de alguma lenda que desconhecemos. Ou quiçá, da localização relativa dessas duas tribos, estando os *Desana* na região oriental, com relação aos Tukano?

O vocabulário que conseguimos (Cfr. «Discoteca Etno-linguístico-musical») revela tão grande afastamento do idioma Tukano, quanto antropologicamente se distinguem desta tribo. Baixos como êles, porém mais franzinos e mais claros, e de rosto afilado. Chestmir afirma que seu idioma apresenta intrusão Karaiba.

São especialistas no fabrico de peneiras e no preparo do tucum. Os *Tukano* afirmam haver aprendido com os *Desana* a fazer a «rede de trinta fios» (VI - 2, c. 2).

É-lhes interdito o matrimônio com os *Taryana* e *Arapasu* (48).

---

(46) Seriam os *Wanana* considerados como irmãos dos *Pirá-tapuya*, donde a interdição matrimonial que vigora entre estas tribos?

(47) Informaram-nos um indivíduo dêste grupo que êle se identifica com o 7.º grupo acima *Búzapa pone*.

(48) Lemos em Koch Grunberg que se casam com os *Makús*. Não o pudemos verificar. Talvez só tratasse de um caso particular referido a Koch. Nem nos parece aceitável, pelas centenas de indivíduos que observamos, a opinião de Koch que diferem das outras tribos pelos seguintes traços somáticos: "corpo não tão bem proporcional, cabeça alta, cabelo crespo, rosto oval, zigoma saliente, nariz grosseiro, olhos algo oblíquo".

2) *Habitat e habitantes* — São muitas centenas (601 no censo de «Pelo Rio Mar»). Hoje os encontramos numerosos no Papuri e afluentes, porém especialmente no Tiquié e seus tributários — o Castanho, Umari, Ira e Turi-igarapé. Alguns grupos desceram, já em princípio do século passado, para a foz do Uaupés e o Rio Negro. Estes últimos, como temos em Giacone «pelo contato com os Caboclos e brancos, são os mais adiantados; além do próprio dialeto e do Tukano, falam o Nheengatu e muitos, o português. Todos os anos alguns dêles sobem o Tiquié e o Papuri, em visita aos seus irmãos, levando-lhes mercadorias ganhas com os brancos e recebendo em troca farinha de mandioca, peneiras, aturás ou cestos, novêlos de tucum e canoas» («Os Tucanos», 7).

3) *Divisões* — Informantes: Amélia Veiga (30 anos, em 1956) da subdivisão *Yugo-pôna* e Ana Cabral (22 anos, *Depôtino*) ambas de Floresta (Rio Tiquié); Justina Pires (de Embaúba, rio Uaupés) e Judite Monteiro (de Matapi, Tiquié):

1.º — *Bore-ka-pôna anikma* (aracú) (49), no rio Papuri — são os «Mami».

2.º — *Baggéri pôna* (velho), em Tucunaré (Papuri)

3.º — *Sungéri pôna* (uma fruta amarga), no Macú-igarapé (Papuri)

4.º — *Pogéri pôna* (uma fruta semelhante ao abio), no rio Uaupés

5.º — *Depôtino pôna* (uma formiga), em Ira-igarapé (Tiquié)

6.º — *Yugo pôna* (solução), em Trovão (Uaupés) e Floresta (Tiquié)

7.º — *Sipeanuá anikma* (um pássaro), em Umari-igarapé (Tiquié)

8.º — *Anuéri pôna* ou *Aguniguéri pôna* (pé de inambú), no rio Papuri

9.º — *Yerse pôna* (porco do mato), no rio Castanho (afl. do Tiquié)

10.º — *Tôa piana* (lua pixuna, fruta), em Iraiti (Tiquié)

11.º — *Warsupo pôna* (cunuri), em Turi-igarapé (Papuri)

12.º — *Yú pôna* (um inseto?), em Floresta (Tiquié)

13.º — *Yeborúma anikma* (osso?), em S. João (Tiquié)

14.º — *Simpó peru pôna* (caxiri de uacu), em Teresita (Papuri) e Itapinimã (Uaupés)

---

(49) *Bore-ka-pôna* quer dizer «filho do aracú». "*Anikma*" é um demonstrativo que emprego com frequência e significa *estes, êles*. Transcrevê-mo-lo para tirar fiel à indicação e pronúncia dos nossos informantes.

15.º — *Yuxpe pafinã* (?) ou *yai buxtinã* (onça branca), em S. Antônio (Tiquie)

16.º — *Bupuka pôna* (sumauma), no rio Papuri

17.º — *Teaburu pôna* (uma fruta), em Floresta (Tiquie)

18.º — *Mahuñana pôna* (uma lagarta comestível), no rio Papuri

19.º — *Monca pôna* (carapanã), em Umari-igarapé (50)

20.º — *Minuma pôna* (andorinha), nas cabeceiras do Papuri

21.º — *Marpinya pôna* (açaí), em Turi-igarapé e Montfort (Papuri)

22.º — *Way-poberi pôna* (canal de peixe) (51), em Piracuára e Montfort (Papuri)

23.º — *Kuperi pôna* (?), em Tucunaré (Papuri); só uma mulher sobrevive, mãe de Sabino Paiva de Iuquira, Uaupés)

24.º — *Poctêna* ou *Po'partêna* (uma planta), em Po-yá igarapé

25.º — *Oiwa anãma* (morcego), no rio Papuri; são os pária.

*Obs.* — O Desana José Prado, de uns 30 anos (1958) confirmou as subdivisões supra, com as seguintes modificações: 1.º não conhece a 11.ª subdivisão *Warsupo pôna*; 2.º corrigiu os nomes da 8.ª, 15.ª e desmembrou a 24.ª, respectivamente *aganigáni pôna*, *yai buxtinã* e *Poparteêna*, porque plantou o igarapé» (assim explicou); 3.º — As três primeiras são as mais nobres, disse, e os *oiwa* são os pária.

x) *KUMADENE OU IPEKA-TAPUYA*

1) *Gente-Nome-Língua* — *Ipeka* é têrmo nheengatu que significa pato-dagua. No próprio idioma êles se denominam *Kumãdene*, e na língua Tukano, *Dya-kaxta-porã* (filhos do pato-dagua). Os Taryána dizem-nos *Kumãda Yaperikuli*, patos de Yaperikuli.

Há no Uaupés um pequeno grupo desta tribo de Linhagem *Arukáe* e cujo idioma se filia ao grupo *Baniva*, como se pode ver pelo Vocabulário que recolhemos (Cfr. «Discoteca Etno-Linguístico-musical»)

Consideram-se irmãos dos Taryána, e, por isso, é proibido o matrimônio entre estas tribos. Na lista das subdivisões dos *Taryana*,

(50) Seria talvez a tribo Karapanã que considerem mais intimamente ligada aos Desana? Efetivamente existe um grupo Karapanã nas cabeceiras do ribeirão Uamari ou Umari-igarapé.

(51) Afirmam os indígenas que há um canal subterrâneo entre o Papuri e o Tiquie, por onde, reza sua lenda, passaram os primeiros peixes para o Tiquie.

figuram os *Kumãdã Yaperikuli*. Porém as diferenças somáticas e culturais demonstram-na uma tribo distinta dos Taryana. São menos corpulentos, de compleição mais delicada, mais claros e de cabelos menos abundantes do que estes.

Os do Uaupés já perderam o idioma pátrio falando todos exclusivamente o Tuxáua. Em 1954 encontramos em Urubuara apenas dois velhos que sabiam ainda algumas palavras da língua natal, que pudemos transcrever e gravar: o sexagenário tuxáua Mandú Henriques, e o quase nonagenário *Komã* (xamã) Martinho, falecido em março de 1956. Os do Cuiari, afluente do Içana conservam ainda seu próprio idioma.

2) *Habitat e habitantes.* — Esta tribo participou das primeiras migrações que se localizaram no Cuiari e Içana; tendo, como centro neste último, a localidade de S. Pedro. A escassez do Içana em peixe em relação à população, especialmente em alguns anos, levou, em meado do século passado, alguns grupos a emigrarem para o Uaupés. Em maior número passaram pelas matas do Aiari, e outro, pelo baixo Içana. Entre estes últimos o grupo *Ipeka* que hoje se encontra em Urubucuara e arredores, e nenhuma relação mantém com os Ipeka do Içana. Parece que, presentemente, a tribo inteira não ultrapasse três ou quatro centenas de almas.

3) *Divisões.* — Informante Mandú Henriques, do grupo *Kumãdã-pã*, tuxáua de Urubucara. Releve-se que os vários *Kumãdãne* do rio Cuiari, que pudemos consultar, embora falem o idioma nátal, não souberam indicar as divisões da tribo.

1º — *Kumãdã-da* (?), em Pinú-pinú, já extintos.

2º — *Kumãdã-pã* (?), em Urubucuara

3º — *Kupãi Mãnesi* (gancho?) Cabeceiras do Yaviari

4º — *Hupeka* (?), em Bacaba-cachoeira (Uaupés)

5º — *Wumerida* (?), em Bacaba-cachoeira

6º — *Mãnãipa* (?), em Periquito-cachoeira (Uaupés)

7º — *Wiri-Kurupa* (uirapipi, passaro), em Periquito (Uaupés)

8º — *Kumãdã-di* (fileira), no rio Aiari

2) *TALYSERI OU TARYANA.*

1) *Gente-Nome-Língua.* São os principais representantes, no rio Uaupés, do grupo étnico e linguístico *Arawáke*. Denominam-se, na língua Tuxáua: *Pãdna* (nome de uma planta?), e no próprio

idioma *Talpáseri* ou *Talpéseri* e em vários idiomas Arwáke do Issana *Tariana* ou *Tariri*. De *Talpáseri*, opinamos nós, deriva a palavra *Taryana*, pelo rotacismo (troca do *r* pelo *l*, fenômeno comum entre essas tribos) e o sufixo *ana*, da língua geral, que exprime abundância ou coletividade.

Tentamos dar um esbôço do aspeto somático (cfr. IV - 1, a (2). Caracterizam-se melhor pela língua, que é do ramo *Arwáke*; portanto bem diversa da Tukano pela pronúncia, radicação e flexão. (Cfr. «Discoteca Etno-linguístico-musical» e «Idiomas Indígenas da Amazônia»). Parece-nos, no entanto, que, quanto à estrutura ou arcabouço lógico da língua (derivação de palavras, ordem da frase, sintaxe, etc.), o *Taryana*, como também os *idiomas Arwáke* e o próprio *Nheengatú*, sejam semelhantes ao da Família de línguas *Tukano*. Envolvidos geograficamente, como se acham por êstes, e pelas relações comerciais e matrimoniais, nota-se que a sua língua tende a desaparecer, sendo substituída pelo Tukano. Atualmente apenas uma centena e meia de adultos entende e fala o idioma *Taryana*. Os moços só conhecem o *Tukano*, que é, muitas vêzes a língua da própria mãe, e muitos o Português aprendido nas Missões Salesianas.

De acôrdo com as lendas teriam saído da terra por buracos que se vêem nas pedras da Cachoeira de *Uapuim* (no rio Alari). Ao emergirem, ainda cobertos de sangue, fez-se ouvir forte trovão, e por isso são ditos «Filhos do sangue do trovão» (em Tukano: *Bürpó di pöra*, ou *Di-rsa*, (gente do sangue).

Por ocasião da chegada ao Uaupés deu-se uma cisão em dois grupos, que ainda hoje se mantêm antagônicos. Um se localizou na cachoeira de *Ipanoré*, e o outro na de *Iauaretê*; e entre ambos se radicaram um grupo *Tukano* em Iuquira, um *Pará-tapúya* em Aracú-ponta e um *Arapaso* em S. José.

A sua ascendência *Arwáke* faz-nos pensar numa descida provável pelo Rio Orinoco-Negro, localizando-se alguns grupos (*Ipeka*, *Baniva*, etc.) pelo vale do Içana e Xié, e outro (*Baré e Taryána*) desceram mais. Os *Baré* chegaram até a foz do Rio Negro, e os *Taryána* até a do Uaupés, cuja corrente depois subiram. Essas migrações devem ter-se processado há vários séculos. Com efeito, na época dos descobrimentos, já se acham os Arwáke nos rios que ocupam atualmente. Mais ainda, os primeiros exploradores, que atingiram o rio Orinoco, encontram entre as tribos locais a crença que os habitantes do Rio Negro eram gigantes (Cfr. Sampaio, «Diario» de 1774-5, pag. 302). Podemos, pois, inferir um intervalo de séculos para o surgir e generalizar-se de lendas dêsse jaez.

2) *Habitat e habitantes* — As estatísticas das Missões dos Frades Capuchinhos de 1880 a 1888 indicam 11 aldeias habitadas pelos Taryána com um total de 2.272 almas, cujos centros principais eram: Iauareté, S. Joaquim, Nanã-Rapecúma, S. Jerônimo, Micura-Rapecúma, Caruru-cachoeira. Podemos afirmar que dêsses centros indicados presentemente só há *Taryána* em Iauareté, S. Jerônimo de Ipanoré, e Micura-Rapecúma. Os últimos dados que possuímos acusam apenas 717 em *Ipanoré, Pinú-pinú, Cigarro Buzina* e de *Iauareté* para cima até *Periquito*, tôdas localidades sôbre o rio Uaupes, e em Aracapá, Japurá e arredores sôbre o rio Papuri, e no rio Javiari. É possível que no cômputo dos Capuchinhos estivessem incluídos outros grupos *Arúake* mais vizinhos pela língua e costumes, residentes na bacia do Içana.

3) *Divisões* — Em outubro de 1953, um grupo de *Taryana* de Iauareté, entre os quais dois velhos de mais de 60 anos, verificaram a lista que daremos em seguida e obtida em viagens precedentes. Quanto à ordem e significado dos nomes havia indecisão entre os informantes, devido, talvez, à decadência do grupo que, além de sua redução de membros, está perdendo o próprio idioma.

1.º — *Pakurána* (nascido das nuvens), no povoado *Manao* (Iauareté). São os mais importantes.

2.º — *Nérikua Kuenaka* (cara de veado), em Japurá (rio Papuri) (52).

3.º — *Siuiru Ihuriu* (?), em Japurá

4.º — *Kuisi-ada* (cauda de mutum), em Iauareté (Uaupés)

5.º — *Kui-ôafe* (?), em Iauareté

6.º — *Kuenaka* (?), em Iauareté e Ipanoré (quase extinto) (Uaupés)

7.º — *Kui Kuparo* (macaco almoré), em Ipanoré

8.º — *Sami-da* (?), em Arach-ponta, (Uaupés)

9.º — *Maku-pa* (urutaui, bacurau), em Micura (Uaupés)

10.º — *Kumãde Yaperikuli* (Pato de Yaperikuli), em Pinú-pinú (Uaupés) (São propriamente os Kumãdéne, também do grupo Arúake).

---

52) Dêsse grupo, hoje quase extinto, o velho Paulino que nos forneceu estas subdivisões.

11° — *Mukurupa-po* (?), em Uafacapá (rio Papuri)

12° — *Hiparikú susari* (*riku* é um pica-pau pequeno), em Iauareté (Missão)

13° — *Sereuni* (um periquito de cauda longa), em Bacaba (Uaupés)

14° — *Kapuroa* (? sonhadores), Iauareté (povoado Dom Bosco)

15° — *Wáparo póna* (um peixe), em Pinú-pinú (Uaupés) (53).

Em maio de 1956, o paje *Taryána* do Ira-igarapé, por nome Henrique, homem de seus 50 anos, contou-nos a lenda das origens dos grupos *Arukáe*, na cachoeira de Uapuim, e deu-nos a relação dos chefes *Taryána* na ordem de saída da panela da cachoeira, e que corresponde igualmente à importância do grupo que dêle se originou. Note-se que se diferencia da precedente, não só quanto ao número das subdivisões e sua *precedência*, como também quanto aos nomes e seu *significado*. Só há acôrdo com a precedente em meia dúzia de nomes. Revelou-se, no entanto, melhor conhecedor das lendas antigas, e por isso mais crédito merece sua palavra, aliás muito respeitada não só pelos simples homens, como também por outros pajés da tribo Taryána.

Começando pelos mais importantes, assim ficam seriadas em ordem decrescente as subdivisões:

*1° grupo dos mais nobres*

1° — *Kuwéna* (?), os cabeça, já se extinguiram ?

2° — *Inipumakeni* ou *Ena-pamákere* (gente do sangue, isto é, nascidos do trovão) dêste grupo Agostinho do povoado Manao (Iauareté)

3° — *Pokurána* (i e irmão mais velho) *Kasúfari*, já extintos; outrora no povoado Manao

4° — *Pokurána tuseri* (?), também extintos, em Iauareté

5° — *Pokurána puriti* (folha), dêste grupo Filipe de Iauareté

(53) Êste nome está em língua Tukano. Uma jovem de 17 anos, Antonia Corrêa, se apresentou em 1954 como sendo *Wáparo póná*, não sabendo dizer o significado de *Wáparo*. Conforme outros é um peixe semelhante ao aracu, porém mais arredondado.

6.º — *Pokurãna Kuenaka* (cunuri), dêste grupo é Joaquim de Iauareté

7.º — *Pokurãna Nerikoa* (testa de veado), extintos, em Iauareté

8.º — *Dapu-kari* (lagarto dagua), Paulino de Iravassú-ponta

9.º — *Kuenaka Pitasifsaiei* (perna de cutia), Iravassú-ponta

10.º — *Kuenaka Siuiru* (pomba), Mandú Moleque de Iauareté

11.º — *Pokurãna Kuisnada* (cauda de mutum), Mandú de Turí-ponta (Uaupés)

12.º — *Pokurãna Wadakõnini* (galho de iúa-pixuna), Benedicto de Tana (ultimamente moravam em Taiaçú)

2.º *Grupo mais abaixo* (i. e. inferior)

13.º — *Kuenaka Kuewãthe*, Nicolau de Iauareté

14.º — *Kuenaka Manuere* (Manuel) *Kuewãthe*, Callisto de Iauareté

15.º — *Kuenaka Manuere Kuewãthe*, Leopoldino de Iauareté (54)

16.º — *Kuenaka Dukurani* (puraquê), os Taryana de Ipanoré

17.º — *Pupuna Sahãni* (cabeça de cutia), os Taryana de Aracu-ponta

18.º — *Sahãni Maru-apanapéri* (sobrinho do Bayá), Feliciano de Mandú

19.º — *Sahãni Karinéseri Buasé-bó* (55), no Ira-igarapé (deste grupo o informante

20.º — *Sahãni Karinéseri — Yauritpápu* (arco de flecha), em Japurá (Papuri)

21.º — *Wuaka* (?), hoje em Ipanoré, outrora na cachoeira do Acari

22.º — *Hunaka* (?), hoje em Cigarro, outrora na cachoeira do Acari

3.º Grupo — *Surára* (os soldados, para os trabalhos inferiores) (56)

23.º — *Kumida Arréda* (pato branco), Agostinho da ilha do bezouro (abaixo de Iauareté)

---

(54) Leopoldino foi um tuxaua muito temido de Iauareté, por volta de 1920

(55) Parece ser da língua Tukano o nome *Buasé-bó*; conforme uma lenda foi o personagem que lhes deu a mandioca

(56) Surára é o têrmo, parece, do Nheengatú, corrupção do português soldado e que as diferentes línguas adotaram

4: Silva SQ19 Tucano

24.º — *Kumãda Kadéita* (pato branco), Martinho de Urubucuara

25.º — *Kumãda Kadéita*, no rio Javiari

4.º *Grupo*

26.º — *Yauria-pe nipe* (gente do Javiari), Paulino de Uaracapá (Pupuri) (57)

27.º — *Yauria-pe nipe* (gente do Javiari), Bibiano de Uaracapá

28.º — *Adari*, (pavãozinho ou feiticeiro, ave), Marcelino de Iauareté

29.º — *Yaryanipe* (tartaruga-bayá), em Iauareté (servem a Nicolau)

5.º *Grupo — dos Kayaroa* (em Tukano Way-penésiriri)

30.º — *Yaryanipe* (jubo de ritmo), os Taryãna de Miriti (Uaupés)

31.º — *Kayaroa*, extintos desde o início (i. e. morreu sem deixar filhos)

32.º — *Hayka Sãni* (coração de pau), João Barrigudo de Iauareté

33.º — *Hipara* (a curvatura do sapo), Eduardo de Iauareté

34.º — *Tepina Masyedana*, são os escravos, em Iauareté (sobrevivem só algumas mulheres)

6.º *Grupo — dos sobrinhos* (?)

35.º — *Pai Penesiri* (=Wai penésiriri?), Antonico de Iauareté

36.º — *Pai Penesiri*, Eduardo de Iauareté (pai de Ricardo)

37.º — *Pai Penesiri*, os Taryana do povoado de Buzina (Uaupés)

7.º *Grupo — dos escravos, «Taryana da cauda»*

38.º — *Mamyari-keni* (neto de Wãx-ti ou Jurupari), Bibiano de Periquito

39.º — *Mamyari-keni*, em Bacaba-cachoeira (Uaupés)

40.º — *Mamyari-keni*, em Juquira-ponta (acima de Iauareté.

---

(57) Yauria-pe nipe, com tôda probabilidade é do idioma Tukano, e com melhor pronúncia se escreve Yauria-po nipo, i. e. os que estavam no rio Javari.

Cap. V

## OBSERVAÇÕES SÔBRE A PSICOLOGIA DO INDIO (1)

Se tôda alma humana é indevassável, a do índio constitui um mistério. Não são raras as surpresas que têm os que com êles conviveram dezenas de anos e pensavam conhecer a fundo os indivíduos.

Ser humano que é, o indígena apresenta, naturalmente, qualidades boas e más, como qualquer outro homem, tomando algumas delas uma côr ou relêvo que o ambiente de privação e isolamento facilita, e que por essa razão, ressaltam mais aos olhos do civilizado que os visita. Notaremos a seguir algumas bastante gerais e que, por isso, parecem caracterizar a mentalidade e educação indígenas, admitindo-que possa haver alguma exceção, bastante rara de resto.

1) *Morosidade intelectual e física*

Por uma parte a vida material a que estão obrigados, e por outra, a sujeição quase asfixiante às leis da tribo, que não admitem

---

(1) Êste capítulo da Psicologia indígena surgiu como os demais, de observações pessoais, em diferentes lugares, e em diversas circunstâncias, sem ter de inquérito apresentado aos Missionários Salesianos e de Montfort e a outros civilizados conhecedores destas tribos. No primeiro esbôço dêste trabalho, organizado em 1948, já estava elaborado um capítulo sôbre os traços psicológicos mais característicos das tribos uaupesinas. A oportunidade de viagens sucessivas e de mais demorada permanência no Uaupés sugeriram, como era natural, correções, retoques e acréscimos ao trabalho. No presente capítulo, porém, é que mais frequentes foram os retoques e as correções, e quiçá onde será mais marcada a diferença entre o esbôço primitivo e a redação atual dêstes estudos. O mais longo e constante contacto com o indígena obrigou-nos a modificar nossa opinião em um ou outro ponto. Alguns que conheçam as tribos que aqui estudamos apenas por informações ou por uma rápida visita, parecerão quiçá carregados os traços que aqui esboçamos. Estamos, porém, convictos que, não só são bem objetivos, como dar-nos-ão razão os que tiverem a oportunidade de verificar in loco estas nossas observações. Podemos assegurar que antes de passá-las para estas páginas, nossas observações foram lidas a pessoas muito criteriosas e que há dezenas de anos convivem familiarmente com êstes indígenas e tôdas estas pessoas nos asseguraram que eram exatas as nossas observações, e correspondiam também a quanto viam nos índios das diversas tribos desta região.

discussão, não deixam campo para a especulação ou, digamos, para o exercício da inteligência teórica. Prova-o a dificuldade de aprender uma verdade religiosa, e a da criança de escola para resolver o mais simples problema de aritmética. Para a totalidade das crianças escolares, os 5 ou 6 anos de estudos, no regime de internato, não bastam para que consigam aprender as 4 operações. O índio, como fisicamente é lento de movimentos (2), também é tardo, para dar-nos a mais óbvia resposta. Moroso para entender uma ordem que lhe damos, encontra dificuldade em acompanhar o nosso raciocínio, quando com êle conversamos. De ordinário é preciso repetir-lhe os ensinos muitas vêzes. Talvez por isso é que, nas conversas entre si, há tantas repetições.

De quanta paciência e tempo se não necessita para obter do indígena um vocabulário, por mais simples que seja, por exemplo, meia dúzia de palavras correspondentes às partes do corpo (cabeça, mão, braço, perna, pé), ou os nomes que dão às várias tribos. E isto até quando nos servimos de uma língua que êles conhecem (por exemplo, o Português, o Nheêngatú ou o Tukano). A dificuldade cresce sobremaneira quando se quer o têrmo correspondente de algum objeto que não temos no momento, ou a noção vai ficando mais abstrata. A modo de exemplo e confirmação, se lhe pedirmos as palavras de sua língua correspondentes a *cadáver*, *comprido* (espaço), *longo* (tempo), *último* (numa enumeração) (3). Pròpriamente não há no idioma Tukano, têrmo equivalente à palavra úl-

---

(2) Tivemos estudado não o aspecto bio-fisiológico, esta lentidão pudesse ser [illegible] corrigida por farto alimentar adequado. Alguma correção, mais de natureza psicológica, vão, por certo, recebendo durante os anos que passam na Missão, máxime os alunos nos internatos.

(3) A guisa de confirmação bastam êstes dois episódios. Já possuíamos os nomes das subdivisões da tribo Taryana, obtidos diretamente por nós em excursão precedente, e pelo sr. Pe. Antônio Giacone. Desejando uma verificação, reunimos em conferência seis indivíduos dessa tribo, dos quais 5 entendiam suficientemente o português, e o mais velho, um pouco menos. Foram necessárias duas horas para obter o nome das 18 subdivisões que figuram neste trabalho (IV, 2, *y*), e o local onde [illegible] em outra ocasião, averiguar a procedência exata [illegible] (2) o taquinho quebrado, e "[illegible]" que se deixa no caminho como malefício para alguém. Indagamos numa roda de 6 ou 8 rapazes que falavam o português. Êles trocavam idéia entre si rapidamente, em língua Tukano, ora falava um, ora outro, ora falavam mais simultâneamente e depois ficavam todos calados. Insistimos ora com êste, ora com aquêle, que parecia estar compreendendo nosso desejo. Só depois que abrimos os originais datilografados do presente trabalho, e o mais desembaraçado dêles leu o trecho a que me referia, acrescentou: "é assim mesmo". Para resolver esta simples questão passaram-se 40 minutos!

SQ19 Tucano

tinos, dirão mais concretamente: o da *ponta*, o da *extremidade* (yaxpa-ti-kãgõ, masc., yaxpa-ti-kãgõ, fem., yaxpa-ti-kãra, pl., yaxpa-ti-kãsõ, neutro).

Por esta razão não se deve contentar, por quanto possível, de saber de um só indivíduo, ou numa só ocasião, a tradução de uma palavra. Muitas vezes ouvir-se-á a palavra pronunciada diferentemente. Tratar-se-á de pronúncia defeituosa do indivíduo? de qual delas? de todas? ou a divergência é devida a pronúncias regionais? e então qual delas será a melhor? ou, enfim, trata-se de têrmos correspondentes a uma mesma palavra portuguêsa? qual dêles seria o melhor? seriam perfeitos sinônimos? Acenamos a estas dificuldades para que se compreenda o esfôrço de quem se põe a estudar, diretamente com o índio, a língua dêle. É dez vêzes mais difícil do que estudar um idioma estrangeiro com auxílio de mestres, gramáticas e vocabulários.

O índio é homem da realidade, daí a sua dificuldade para as generalizações e abstrações. Em vez de dizer simples e abstratamente *cabeça*, preferirá dizer «*minha cabeça, tua cabeça*», etc. Não diz *trabalhar*, comer (a língua Tukano não possui sequer o modo infinitivo), dirá: *eu trabalho, tu comes*», etc.

Quanto à memória, tem-na um pouco mais desperta, para os assuntos que lhe interessam. Donde se segue menor dificuldade para aprender algumas palavras ou frases da língua portuguêsa, ou para leitura (4), e para reter os nomes de lugares, de pessoas, ou relembrar os acontecimentos. Com mais dificuldade decorará a tabuada ou as orações. E sente-se satisfeito também, quando o civilizado lhe recorda algum episódio em que o índio tomou parte. Mova-o, depois, o desejo de tornar-se «branco», isto é, de civilizar-se. Por isso adaptam-se ao grande sacrifício de internar-se num colégio e assistir às aulas, bem como sujeitar-se à disciplina escolar.

2) *Inteligência prática*

Quanto à inteligência prática, tem-na mais desenvolvida. Prova-o a solução prática dos problemas que lhe apresenta a vida, e com os recursos que a Natureza lhe pôs à mão. Os civilizados naquelas regiões, quando não dispõem de outros recursos, acabam, em algumas coisas, imitando o índio, ou encarregando-o da execução do que precisa. Basta acenar, por exemplo, à segura e ampla casa

(4) Trouxe, em 1946, para o Museu Salesiano do Índio de S. Paulo, as provas escritas das crianças de Pari-cachoeira, após tão só 8 meses de escola, constando de pequeno ditado executado com boa caligrafia e poucos erros.

ou maloca que constrói, à estável e rápida canoa que faz, e aos numerosos objetos que fabrica (vasos, ralo, cestos).

Merecem admiração a habilidade e perfeição com que abre as palmas para a cobertura da maloca, com o auxílio do remo, ou como executa os seus trançados, o modo de amarrar e transportar um feixe de palmas. É mesmo notável a sua habilidade para essas necessidades práticas da vida. E mais admirável se torna, se pensarmos que a aprendizagem é rápida, sem verdadeiras escolas, e acha-se logo habilitado, por exemplo, para os variados e belos trabalhos de redes e cestos. Com relativa rapidez aprende também os ofícios dos civilizados, como o de pedreiro, ferreiro, carpinteiro, alfaiate nos Colégios Salesianos, embora, quiçá por fôrça do ambiente, das circunstâncias e de sua inconstância, muitas vêzes não alcancem a perfeição no seu ofício. Alguns continuam como oficiais dêsses ofícios nos estabelecimentos missionários. Outros, tornando dos colégios para as suas casas têm a oportunidade de servir-se do que aprenderam, manejando, por exemplo, o serrote, o martelo e até o formão. São êles ainda os maquinistas das lanchas que sobem seus imensos rios, como são capazes de se desincumbirem de trabalhos mais delicados, quais as observações e manejo dos aparelhos meteorológicos (5). São os insubstituíveis «práticos» da navegação daqueles perigosos rios, porque possuem notável memória topográfica das pedras escondidas e bancos de areia, aliada a uma impressionante calma nos perigos que apresentam os temporais e as cachoeiras.

Quiçá nos impressione de primeira luz o pequeno alcance da inteligência do índio, mesmo no campo prático e nas cousas mais evidentes e simples. Verificaremos, por exemplo, os erros que cometem na navegação, o não saber prever e, ao depois, evitar ou sanar um inconveniente. Talvez, por figurar casos concretos, para tirar a água de um bote, não removerão uma tábua que dificulta a operação; se uma árvore ribeirinha obstacula a navegação, cortam-na tão mal que a passagem fica ainda mais difícil, etc. Essa impressão de obtusidade intelectual, no entanto, ficará atenuada se atentarmos que executa o trabalho com despreocupação e desinterêsse.

(5) A. Wallace já observava um século atrás (quiçá com algum exagêro para ressaltar a idéia) que, enquanto um camponês europeu levaria 6 meses a aprender o manêjo de um sextante, um dos nossos índios aprende-o em minutos. Semelhante observação fêz também Koch Grunberg (Zwei Jahre).

SQ19. Tucano

3. *Fantasia ou imaginação*

Uma faculdade grandemente desenvolvida no indígena é a imaginação. Compreende-se facilmente que assim o seja, faltando-lhe o controle de uma inteligência mais desenvolvida e educada, tendo, pelo contrário, o espírito informado por lendas e crenças pueris, incoerentes e mesmo absurdas, e vivendo num ambiente de solidão majestosa e quase esmagadora. Muitas das suas conversas, nas longas horas ociosas do dia e soturnas da noite, versam sôbre lendas, aparições e maleficios. Por isso tem sempre a imaginação inflamada. Só assim se explica como possam ver em algumas pedras estranhas semelhanças com plantas, instrumentos, etc., semelhanças que, mesmo preavisados, não logramos perceber. Basta citar uma rocha da cachoeira de Uaracapá, quase na foz do rio Papuri, apresentada como «uma bananeira» e na qual vemos apenas um desses rochedos comuns que emergem dágua.

As suas conversas desconexas, as suas narrações incompletas, denunciam alguém que supre com a própria fantasia e deixa campo à fantasia dos ouvintes. Algumas vêzes desejamos uma informação rápida e prática (por exemplo, sôbre um caminho, uma cachoeira, uma distância), pedimos a um indígena intérprete que a pergunte a outro. Conversarão 10 ou 15 minutos entre si e, ao cabo dêsse tempo, o nosso intérprete dirá que não sabe, que não entendeu ao seu irmão de tribo. Compreendemos, então, que de narrações imperfeitas, nas quais gestos e rumores enfáticos da bôca suprem palavras e idéias, surgirão mal-entendidos, alteração do pensamento do narrador, variação nas notícias e nos contos.

Quando conseguimos que algum indígena nos fale espontâneamente, com intimidade, verificamos que aquêle homem que nos parece bem equilibrado, de pouca impressionabilidade, aquêle ex-aluno ou ex-aluna dos colégios missionários, com aparência de um quase civilizado, não só tem a cabeça onerada de tantas lendas exóticas e crenças estranhas, porém até vê e ouve com impressionante frequência aparições, vozes, palavras, ditos misteriosos. Surpreendemo-nos às vêzes ouvir dos lábios de moços e môças com muitos anos de convívio com a civilização, quiçá mesmo de vida em cidades, como Manaus, as mais estranhas narrações de visões que tiveram, em pleno dia, na sua barraca, ou na roça, em caminho, na viagem; vozes, ditos que ouviram, fatos inverossímeis, fabulosos ou lendários, que asseveram haver presenciado, citando-nos lugar, tempo, nomes de pessoas (por exemplo, que viram Wáx'ti, Boraró, etc.; pessoas que se transformaram ou se transformam periòdicamente em ani-

mal, anta, piraboto, que passam dias, semanas e até meses no fundo dágua, etc. (6).

Por um lado a reserva do indígena ante o civilizado, porque sabe que êste não o compreende, nem crerá em tais narrações, e quiçá mesmo o repreendera ou ridicularizará; e por outra parte, o desejo de parecer civilizado, fá-lo-á silenciar tudo isto ao «branco», que passa entre êles, de sorte que não advirta êste traço da psicologia do índio.

Talvez não seja exagerado apresentar como *traço geral* da psicologia indígena, esta "superexcitabilidade da fantasia. Quiçá se deve qualifica-la mesmo de *desatirada*, e afirmá-la com desvio da normalidade, se fazemos um confronto com a do civilizado.

Somos levados a crer que a imaginação do homem destas selvas, ao ouvir a narração de alguma de suas lendas, a vá reconstruindo e revivendo, a vá enriquecendo de cenas e pormenores, na proporção da incoerência e omissões do narrador. Mais ainda, temos a convicção que, em alguns casos, uma imagem ou cena (desejada ou odiada), que passou pela imaginação do índio, acaba por se transformar para êle numa realidade; o *imaginado* se lhe converte em *real*, em *fenômeno*. Assim nos explicamos, por exemplo, como surgem (com tal frequência que já nem se leva em conta) notícias e informações sem fundamento algum, e que os próprios acontecimentos vem desmentir (7), e no entanto são cridas sempre que surgem.

---

(6) Temos sido consultados por moços e môças, que passaram pelos colégios da Missão, e nos perguntavam, com tôda a convicção: — "Como é possível a gente virar boto?" "virar anta"? Patrícia Vasconcelos, por exemplo, em outubro de 1955 contou-nos o seguinte, como um fato de que ela tem absoluta certeza. N. N. da tribo Taryana, do povoado de Arapiuna (Maués) é antiga aluna da Missão de Iauareté, casou-se com um moço Tukano, que já tem trabalhado várias vêes em Taracuá e outros centros Missionários. Outro rapaz queria tê-la como espôsa, e, por vingança, indo certa vez em passeio pelo mato com o marido dela (isto lá por 1952) deu-lhe, a pegar uma folha de pirá-yaudara-pûri (planta do boto, explicou-nos Patrícia). Certo dia "o marido ficou diferente", "ficou como boto" (isto é resfolegando como faz o boto na superfície dágua), e por fim mergulhou no Rio Negro, lá em Tapurucuara (antiga S. Isabel). Ficou um dia inteiro dentro dágua. Os botos o empurraram para a terra e êle "virou gente" outra vez. Várias vêzes êle tem virado boto. A própria espôsa do infeliz rapaz é que lhe contou êstes episódios e chora muito por esta desgraça.

(7) Vários alguns exemplos dessa exagerada impressionabilidade ou excitabilidade do índio, e de como chegam a convencer-se da realidade de uma mera imaginação. Nem isto causa estranheza aos estudiosos de psicologia e fenômenos parapsíquicos.

Periódicamente viajam as lanchas da Missão que fazem o abastecimento dos diversos centros. É certo que seu rumor pode ser percebido a grande distância, com o favor do silêncio da solidão e da direção do

SQ19 Tucano

4) *Espírito de imitação*

O seu espírito inventivo parece de todo atrofiado, em benefício do espírito de imitação, grandemente desenvolvido. O índio não inventa, faz como aprendeu, sem aperfeiçoar. Como também não é capaz de copiar de um original, sem auxílio de alguém que lho ensine. Costumam, presentemente, adquirir chapéus de palha fabricados em Santarém (Est. do Pará). A um índio, hábil fabricante de peneiras, tipitis e outros trançados, interpelamos no ato da compra de um dêsses chapéus: — «Vocês não têm palha na mata? — Temos-sim. — E então, em vez de comprar, por que não faz o seu chapéu? — Ninguém ensinou para nós», foi a resposta.

O alto conceito que tem do «branco» (é assim que denominam o civilizado, seja qual fôr a côr do seu pigmento), leva o homem da selva a imita-lo em tudo. E fa-lo com animador resultado; por exemplo, na construção da casa com janela e pórtico, e até no talhe de uma veste feminina. Donde o abandonar fácil e espontâneamente certas práticas de sua cultura e seus objetos (rêdes, panelas, fogão, etc.), pelos da nossa civilização, embora continuem aferrados às suas crenças e costumes.

---

vento. Não só lhe ouvem o rumor quando não há lancha alguma em marcha, como asseveram que já está em determinada localidade, ou, até que foi deixada lá enquanto pernoitava, por algum indígena que veio navegando durante a noite. Um dêsses casos verificamos em junho de 1956. Vindo de Iauaretê, ao chegarmos em Urubucuara os índios da localidade informaram-nos que a lancha já se achava havia dois dias, em Taracuá, onde ali a vira um índio (do povoado Cigarro) que viera do Taracuá em a noite precedente. Na realidade em Taracuá não havia lancha alguma, a primeira, vinda de S. Gabriel, apareceu três dias depois de nossa chegada a Taracuá.

Cfr. também a informação de Koch Grunberg sôbre o rumor do Jurupari em Ipanoré (VII 4. e (2 a).

Achavamo-nos em Pari-cachoeira (rio Tiquié) em agôsto de 1956. O estado sanitário local era bom, porém os marinheiros da lancha alarmaram a população com a notícia de casos de coqueluche e sarampo em Taracuá (distante cerca de 300 Km.). Surgiu, então, a notícia, sem fundamento algum, que o Diretor de um terceiro centro missionário, Iauaretê, escrevera ao de Pari que reenviasse as crianças internas para as suas casas. Ora, aquêle missionário a quem se atribuiu a recepção e a leitura da carta imaginária (na ausência do Diretor de Pari) de nada sabia. Por sua vez as meninas internas da Missão (pouco mais de uma centena) conversando com uma das suas Irmãs Professôras, informaram-lhe: "Logo que chegar de viagem o Diretor da Missão, os alunos e alunas serão enviados para seus povoados". — "Como vocês souberam disto?" indaga a Irmã. — Respondem-lhe prontamente as meninas: — "Foi a sra. Irmã Diretora que avisou". Ora a sra. Irmã Diretora do Colegio Feminino não só não falara a ninguém sôbre êste assunto, porém nem sequer pensara nisso.

4 Silva SQ19 Tucano

5) *Espirito de observação e critica*

O indio é um observador de espirito logico e perspicaz. Deduz suas conclusões, tira as consequências do que viu e ouviu, e logo as manifesta aos seus irmãos de tribo. São inúmeras as provas que tem o civilizado de estar sendo observado com muita atenção e julgado com rigor, mesmo quando o silvicola parece indiferente e nem olha. Não raro são espirituosos e até mordazes as observações que faz.

Gostam muito de pôr apelidos ridiculos. Para isto basta uma semelhança ou um episódio. E não só o fazem aos proprios companheiros, porem a todos, sem que lhe mereça consideração a idade e o merito das pessoas. É também um desafôgo contra os civilizados que, podem estar certos, na primeira apresentação ja receberam um apelido, o qual será propagado com incrivel velocidade (8).

6) *Curiosidade*

Dotado de grande curiosidade, de qualquer civilizado que se apresenta quer saber quem é, como se chama, donde vem, para onde se destina, que vem fazer, qual sua nacionalidade; e mil outras perguntas fazem aos seus irmãos de tribo, que acompanham o visitante desconhecido. Um indio é capaz de fazer longa e incômoda viagem para contar aos de outro povoado um episódio que se deu, a visita de um novo missionario, etc. (9).

Se se abre uma mala, um livro, um caderno, o ôlho do indio não se desprega dêsses objetos. E muitas vêzes quer ter um conhecimento mais pratico e completo, aproximando-se dêle, tocando e

---

(8) Contaram-nos alguns dêsses apelidos: a um chamavam sôdgó, vermelhão, por causa da sua côr; a outro, subi cremo, porque tinha os cabelos encaracolados; a um terceiro, uxpikã-ro, dentuça; a um quarto, o mêpéro-ro, orelhudo; a um quinto, wau, o macaro; ãdta-pica; a um sexto uxsã-bocano, fêzes de jacaré (por ser alto e magro), etc. Koch Grünberg (Zwei Jahre, pag. 206) conta que a êle apelidaram Wüxti (vel. Villa 4 d. 51), por causa da barba (?), e ao seu companheiro Schmidt bómyõ-xaxé, mulher-macáco.

(9) Em julho de 1956, o Exmo. snr. Bispo Coadjutor da Prelazia do Rio Negro, Dom José Domitrovitsch, resolveu fazer uma surpresa aos missionários de Pari-cachoeira (rio Tiquié), e com um pequeno bote acionado por motor de popa foi, vencendo os 300 Km que separam Pari de Taracuá. Pernoita no povoado de S. João, distante uns 30 Km da Missão. Um indio, no coração da noite, põe-se de viagem na sua canoa, e às 6 da manhã informa os Missionários da visita do snr. Bispo que é festivamente recebido na Missão duas horas mais tarde. Humoristicamente se diz que nessas latitudes não há ainda telegrafo sem fio, está porem bem desenvolvido o sistema de comunicação Rádio-cipó.

A. Silva SQ19 Tucano

observando-o em todos os seus aspetos. E não raro submetendo a observação de todos os sentidos: pega, cheira, morde. O civilizado percebe que está sendo furtivamente tocado nas vestes, ou até na mão, pelas crianças e mesmo pelas mulheres. Não pudemos verificar se neste gesto entraria também algum conceito mágico.

Quando ouve falar português, se o não entende, gosta de repetir os sons que ouviu, pronunciando-os várias vêzes, como para gravar na memória.

7) *Desconfiança*

Inversamente, não gosta de ser observado. Se percebe que o é, retira-se. Responde lacônicamente ao civilizado, afastando-se logo, para evitar nova pergunta, ou deixará sem resposta. Passa horas inteiras de viagem em silêncio numa canoa, quando viaja sòzinho com algum civilizado, ou mesmo com outros da tribo, porém em presença do «branco». É a desconfiança (10) sempre observada e re-

(10) Fomos felizes conseguindo que indígenas de ambos sexos, das diversas tribos, e em localidades diferentes, se abrissem confidencialmente, e nos revelassem muitas cousas mais íntimas e secretas. Além dos freqüentes presentes (embora pequenos (muitas vêzes apenas alguns bombons e cigarros, cousas muito apetecidas por todos)), e da paciência e afabilidade do trato, valeu-nos o mostrar que já conhecíamos algumas das cousas mais secretas, especialmente se pertinente ao assunto da nossa pergunta. Talvez a validade de mostrar que sabia mais e melhor do que os informantes anteriores, abria a bôca dos índios. Muitíssimas vêzes devia instar que dissessem francamente, sem acanhamento, que não só não perderiam nossa estima, mas que até o civilizado gosta mais nas pessoas francas. Podiam falar pois não revelaríamos a ninguém o seu nome.

Dentre as confidências que assim obtivemos (e temos em nossos apontamentos anotado a pessoa, local e data), confirmando sua prevenção contra todos os civilizados, seja embora o mais abnegado Missionário, lembramos aqui as quatro seguintes: 1° — não gostam do civilizado. 2° — crêem-se mais espertos, que o civilizado; julgam-nos precisamente tolos. 3° — gostam de ver irritado o civilizado, mesmo fingindo não entender o que êle deseja. 4° — é cousa boa prejudicar o civilizado.

Seria fácil compilar numerosos episódios que confirmam essas declarações. Mas estas confidências, colhidas dos lábios mesmos dos indígenas, dispensam mais palavras e são mais precisas que quaisquer episódios. A idéia de acrescentar esta Nota ao capítulo de Psicologia do Índio, surgiu-nos a 27 de agôsto de 1957, em Carará-poco no baixo Icana ao ouvir que, pela segunda vez uma jovem mulher siusi-tapuya (com três filhos, abandonada já por dois homens, com os quais viveu, caridosamente acolhida e beneficiada de tantos modos pela Missão Salesiana) falava às outras mulheres: "os Missionários são ladrões como todos os brancos".

velada p[illegible]uantos trataram com os índios, quiçá, em parte, por terem ouvido falar dos enganos causados pelos civilizados (11).

Em parte também porque sente-se inferior ao branco. Uma análise mais acurada revela nele um complexo de inferioridade ante o civilizado. Só após um longo tempo de convivência, maxime quando se fala sua língua, é que de vez em quando se expande. Sinal de alguma confiança e amizade é, então, o aproximar-se do branco e falar-lhe apoiando a mão sobre o ombro. A mulher, como o homem, vem cumprimentar o visitante, dando-lhe, conforme o uso atual, a mão, porém retira-se logo. Como sinais de alegria pela vinda desejada de um civilizado, as mulheres — acompanhando com uma entonação mais longa e elevada de algumas sílabas das palavras de saudação, roçam ambas as mãos do ombro até abaixo do peito dos visitantes, enquanto lhe estão falando.

Por um misto de desconfiança e timidez, conversam entre si em voz baixa diante do branco, de modo que êste não ouça a conversa, se acaso sabe a língua indígena. Talvez por esta mesma razão, dificilmente se presta para ensinar a própria língua (12).

---

(11) Muitos viajantes atestaram que à aproximação dos brancos, os índios escondiam seus filhos e mulheres para o mato. Alexandre R. Ferreira, no seu "Diário da Viagem filosófica" pág. 98, informa: "Por outra parte não trataram muito de se fazerem amáveis aos olhos dos índios os primeiros que os descobriram, cuja dura e durará no gentio a memória do tratamento". De fato, davam sua palavra, recebiam a hospitalidade, depois emboscavam os índios para os levarem cativos. "De tal modo ficaram em todos a aversão e horror aos brancos, que só a sua manifesta ou embuçada ação matou. Quando descem é porque sob o dilema, ou morrerem às mãos dos índios seus inimigos, ou descerem a servir aos brancos". O Estabelecimento Missionário Salesiano, Pe. João Marchese, confirmou, lembrando que, cousa de 20 anos atrás, no tempo da barbárie, avistavam alguma embarcação dos brancos fugiam todos. Devido, então, o Missionário pôs-se de pé na proa para ser visto de longe pelos indígenas e assim encontrá-los na malloca.

Conta Koch Grunberg (Zwei Jahre, 203) que à sua chegada na malloca dos Bará no Marabitanapé três moças se puseram em segurança. Fatos semelhantes temos verificado em várias circunstâncias, especialmente entre os Karapanã das cabeceiras do rio Aiuá.

(12) Como é que pronuncia tal palavra? perguntamos ao índio. Êle, porém, indagando — É assim? arriscamos nós. — É assim mesmo, dirá êle prontamente. — Ou é deste outro modo? — É assim mesmo, repetirá êle. Em outros casos responde — não sei, sou Taryana, pergunte a Tukano. O Tukano também se eximirá: não sei. Mas você é Tukano. — Porém os do lugar pronunciam melhor do que eu.

É, de regra, fechado; não gosta de manifestar suas doenças, bem como suas lendas e costumes. Neste ponto os homens são ainda mais reservados que as mulheres, das quais com menos dificuldade se pode obter informações com promessa de presentes.

8) *Volubilidade e inconstância*

Se excetuarmos as prescrições das leis da tribo, às quais se acha perfeito, perfeita e passivamente conformado, no mais o índio goza de grande autonomia. Desde criança, especialmente os do sexo masculino, pode seguir seu alvedrio. Não há, pois, esperar no indígena grande tenacidade de vontade. Não se pode contar com êle para um trabalho sempre idêntico, por exemplo, fazer diariamente observações meteorológicas ou a ligação de um gerador elétrico. São de grande volubilidade, tanto os homens, como as mulheres. Não se conformam com fazer indefinidamente o mesmo trabalho, seja embora o que mais lhes agrade o que êles mesmos escolheram. Não se pode, pois, com rigor falar de profissão de carpinteiro, alfaiate, serrador, etc., em se referindo a algum índio. Êle terá algum conhecimento ou prática de tal ofício. Porém, quando sob o estímulo de interêsse de adquirir algum objeto se dispuser a trabalhar, não só lhe é indiferente sentar-se a uma máquina de costura, servir como marinheiro ou remador, ou fazer outro serviço qualquer, porém, êle próprio pedirá para largar um trabalho e passar a outro muito diverso.

9) *Indolência*

Aos visitantes habituados ao ritmo intenso e constante de atividade e trabalho das novas grandes cidades, causará espécie encontrar os indígenas, durante o dia, deitados nas suas rêdes a dormir ou entretidos horas a fio em amena conversa. A repetição dêsses encontros lhes radicará na mente a convicção tradicional da indolência dos índios. Talvez seja mais exato afirmar que o índio não é nem o herói da fadiga, nem o protótipo da indolência, embora por temperamento seja lento nos movimentos, como o é de espírito.

A natureza que o envolve e o seu modo de vida estabeleceu-lhe um ritmo de trabalho. Exercita todos aquêles trabalhos que lhe impõem os costumes: constrói sua casa, derruba a mata para a roça, prepara suas rêdes de pesca, escava sua canoa, ocupa-se na pesca e caça, fabrica seus utensílios. Se não o encontramos todos os dias ocupado da manhã à noite, como os civilizados, é que não

sente necessidade. Não tem ambições, contenta-se de pouco, e trabalha quanto é necessário para viver. É certo também que o fundo de prevenção que sente contra o civilizado não é um estímulo para que o índio se esforce quando trabalha para o «branco». Menos empenho ainda mostrará do que nos próprios serviços. Produzirá, no entanto, um trabalho razoável sob duas condições: um respeito timoroso do branco e uma fiscalização constante.

Do confronto dos índios entre si, não se pode taxar alguém de miserável. É o mais harmonioso equilíbrio econômico que se concebe, embora o seja de nível muito baixo. São raríssimos os casos, que se conhecem, de tipos singularmente indolentes, *tesé-buhugo*, e parasitas, e que os próprios contribuíes vituperam.

A mulher essa sim, vê-se mais ocupada, absorvida como está na faina da casa (como adiante se verá, VIII — 1, a (9)), ocupando-se com os filhos pequenos, cultivando sua roça e preparando a comida ou fabricando alguns artefatos.

As crianças coloriais mostram algum gôsto e habilidade pelos trabalhos manuais: a menina prefere os trabalhos do campo, e aprecia também os bordados e costura.

Como trabalhador é dotado também de seus predicados. A habilidade, a que já acenamos e acenaremos (Vd. Cap. V), a perfeição e relativa rapidez no gênero de trabalhos que executa tradicionalmente são as melhores provas.

A necessidade de viver obriga-o, por seu lado, a afrontar também grandes dificuldades, a fim de vencer a natureza. Basta conceber os sacrifícios que impõe uma *derrubada* para a roça, com os meios de que dispunha outrora. A sua resistência, por exemplo, para remar, é digna de apreço. Para outros trabalhos, como o agrícola, ou cavar a terra, é fraco. Embora o ritmo de trabalho não seja intenso, antes seja sempre com a calma que lhe é característica, e tenha alimentação melhor do que na sua casa, depois de duas semanas o índio começa a esmorecer, e não raro a emagrecer; e após dois ou três meses deve ser dispensado para férias e descanso (13).

---

(13) Além do perigo da malária no baixo Rio Negro, êste enfraquecimento do índio, especialmente quando faltam os seus alimentos habituais, conhecemos processos (que alguns já exploraram), e outros, desconhecedores das circunstâncias, preconizam) de aproveitar o braço indígena na extração da piaçava, castanha ou borracha. Pensamos que tais trabalhos podem, ou antes, devem ser executados só pelos caboclos que já possuem resistência física e disposição psíquica diversa da dos indígenas.

4 Silva SQ19 Tucano

10) *Paciência*

É um homem de extremada paciência. Como seria útil se essa sua qualidade pudesse ser canalizada em tantos setores da nossa civilização! Documentam-no aquêles trabalhos que exigem não apenas horas, mas por vêzes dias, meses ou anos de trabalho e atenção, como o preparo do tucum e de uma rêde, o fabrico da canoa com o machado de pedra e o fogo, ou perfurar regularmente uma sarabatana ou uma pedra de quartzo amorfo (vd. VII — 3, a (2)) com o auxílio de uma vara e areia finíssima. Suporta sem uma palavra de queixa, dentro de uma canoa, uma chuva por horas a fio, ou um sol requeimando todo um dia.

Nunca o vimos altercar (senão quando já embriagado), ou mostrar-se impaciente e protestar contra outro índio, embora sobejassem as ocasiões para isto. Por exemplo queixar-se do companheiro, porque com sua indolência o obriga a trabalhar mais. Se vai-arcado sob um grande pêso, e outro índio está obstruindo a passagem: não grita para que se retire; porém, pacientemente, contornará fazendo caminho mais longo.

11) *Timidez*

Ante o civilizado, cuja superioridade reconhece e sente, mostra sempre docilidade. Nunca uma revolta aberta; embora não raro deixe de fazer o que lhe mandou. São raros os episódios de uma tomadia para uma represália (14). Note-se que, se o civilizado pede por favor, respondera talvez um «não quero». Porém, se ordena de maneira categórica, o índio obedece e até com alegria. É que as ordens positivas estão mais de acôrdo com seu espírito.

Diante do civilizado o índio é sempre tímido, especialmente se aquêle levanta a voz. Ante os trabalhos perigosos, como abater madeira na mata, transpor cachoeiras, mostra-se ousadamente valente. Fica impávido diante das tempestades. Sua fleugma diante de certos perigos, por exemplo, o de um naufrágio, causará inveja a qualquer inglês. Em outros serviços, ao contrário, revela-se grandemente medroso. Tem mêdo não só das onças, que já têm feito muitas vítimas entre êles, mas até de ser ferido, quando devem tra-

(14) Recordam-se alguns poucos episódios, mas todos êles se deram quando o civilizado violou algum costume da tribo, ou praticou verdadeiras injustiças ou crueldade.

tar de bois ou porcos. O estampido de uma bomba ou um tiro assusta-os. A notícia da aproximação de índios ferozes foge logo (15). Sobretudo grande é o medo que tem dos envenenamentos ou maleficios (dokase) e dos espíritos (udirtyd). Com receio dêstes, por motivo algum penetrara à noite na mata.

12) *Desmazelo*

Talvez a relativa facilidade com que alcançam ou fabricam o de que precisam, torna-os descuidados das cousas e aparelhos, especialmente dos civilizados, deixando-os estragar-se ou perder, sem atender ao seu valor ou necessidade. Muitas vêzes o viajante deve chamar a atenção do índio para que lhe não perca, quebre ou inutilize um aparelho. Há, porém, uma cousa pela qual zelam carinhosamente: são os enfeites das danças, guardados em um estôjo *ad hoc*, em lugar seguro. Como consideram a roupa e outros adereços, um enfeite de ordinário conservam-nos bem. E só se nota algum desleixo naqueles que fàcilmente podem ganhar outras roupas dos civilizados.

13) *Interêsse e gandaia*

Uns tantos defeitos seus chamam a atenção do civilizado. É extraordinariamente interesseiro (16). Nada faz para o branco sem

---

15) Os índios da região do Caburi, aos quais se atribuem episódios de truci[illegible] [illegible] quando há grande clareira ao [illegible] dêste, se perceberam que há muitos homens dentro. Entre os Pira-tapuia do Teresita (Colômbia, rio Papuri) conserva-se a tradição de dois índios Bexaguri (Bonival) da Venezuela que invadiram até o Papuri e, na escuridão da noite, mataram a muitos pelas mãos. De vez em quando correm notícias alarmantes, de novas invasões e os Pira-tapuia fugem das suas povoações. Vão para 12 ou 15 anos, no período de Ottaiano (missão colombiana do rio Papuri) surgiram rumores dos índios que se divertem marandúga na língua xeral (Cfr. Supra). Dizem, porém, certo dia, repentinamente, os índios abandonaram por três meses as suas casas e se empenharam em preparar trincheiras e [illegible] para fazer [illegible] marandúga. O Missionário Pe. Afonso Kuhn chegou a prometer presentes para quem lhe trouxesse vivo um dêsses Bexaguri. Alguns chegam a afirmar que já os viram, alguém diz ter ele matou vários deles, porém não pôde ter nenhum cadáver porque os companheiros levaram os seus mortos.

16) Até no serviço de Deus querem saber se êle lhes dará presentes, dará bananas, fitas e vestidos. Perguntou certa vez uma menina à Diretora se no céu lhe daria. Tomada de surpresa a Diretora disse que não. A criança acrescentou prontamente: "então não quero ir para lá".

4. Silva SQ19 Tucano

paga, e de ordinário a quer antecipada. Verdade é que, de regra, não nega suas dívidas ao civilizado; muitas vêzes, porém, afirma mais trabalho seu e diminuição das dívidas, apesar de constar o contrário nos assentamentos feitos com exatidão e consciência. Vai, com freqüência, deixando passar o tempo, e às vêzes muda-se ou morre, e fica por isso mesmo. Os pais, irmãos, filhos ou outros parentes de alguém falecido, suponhamos, no hospital da missão, apresentar-se-ão logo como legítimos herdeiros da espingarda, rêde, mala ou outros objetos do defunto. Ninguém, no entanto, se responsabiliza pelas dívidas do falecido.

Para tê-los a seu serviço, na época da seringa ou da castanha, os civilizados devem antecipar-lhe a paga. Acontece, não raro, que na época do trabalho (*fábrico*, diz-se no Amazonas) o índio se esconde, ou foge, depois de trabalhar algum tempo.

Não faz presentes ao civilizado, embora dêle os tenha recebido e muitos. Vende-lhos (17). Se neste percebe interêsse por algum objeto indígena, pretende grande pagamento (18). Quando oferece alguma coisa (beiju, frutas, peixe moqueado), faz logo pedido de objeto de maior valor.

Mostram-se gananciosos negociando com outros índios, e até com os da própria tribo. Não é raro que um indivíduo, com seu trabalho ou produtos, adquira abundantemente sal ou fumo, no centro Missionário, e vá depois vendê-lo aos seus contribules com grande usura. Temo-los visto adquirir panelas, espelhos, etc., na Missão, e com êsses pequenos objetos ir negociar com os das malocas mais afastadas, recebendo em troca ralos e canoas (19). Periòdicamente um pe-

---

(17) Contam-se episódios até cômicos. O pai com a família veio visitar o filho que era aluno da Missão de Taracuá e trouxe consigo peixe moqueado e beiju. E de cócoras a um canto, comeram, como num piquenique de família. Antes de retirar-se, porém, veio cobrar do Missionário o preço do peixe e do beiju.

Quando na nossa primeira excursão ao Içana, em 1953, em companhia do Pe. José Schneider levava êste consigo, entre os ajudantes, um luxuda da tribo Mupatsé-dakenei (Yurupari-tapuia). Como os outros, recebia êle, além de alimentação e donativos, uma diária de serviço. Ao chegarmos à Tunui, mostra êle um pequeno bulaio e beiju dizendo que era um presente que os Baniva de aí lhe faziam, mas pede ao Pe. sal, fumo e querosene "para dar em agradecimento".

(18) Por exemplo os Kubewana chegaram a pedir-nos uma espingarda por uma zarabatana ou uma simples acangatara.

pequeno bote da Missão de Tauaretê subia em 1953 até S. Miguel e Melo Franco (rio Papuri) comprando farinha para os seus colégios. Os Tucano desta última localidade se prontificaram a guardar por alguns dias os parceiros de farinha dos seus «irmãos» que moravam algumas horas de distância, no rio Aua, até que o bote da Missão [illegible] a recolhê-los. Por êste pequeno favor, porém, exigiam, de seus «irmãos» Tucano do Aua, 30% da farinha, a saber: de 4 paneiros [illegible], dois forma entregues à Missão e os outros dois ficaram de pagamento ao «armazém de guarda».

É porém, hospitaleiro. Quando chega à maloca algum irmão de tribo, ou mesmo um índio de outra tribo, apresenta-lhe logo beiju e quinhapira e, se tiver, também manicuera, bacaba ou outra bebida. O branco, pode igualmente servir-se de tudo com liberdade.

14) Inveja

A inveja é um dos vícios que desfiguram seu caráter, nem se dão o trabalho de disfarçá-lo. Quem, pelas suas qualidades, começa a [illegible] será objeto de inveja dos demais, e deixa-se logo tomar de receio de algum malefício dos outros. Tendo um homem Tukano, com seu trabalho na Missão de Pari-Cachoeira, adquirido [illegible] começou a fazer uma barraca com mais capricho e [illegible]. Os outros amedrontaram logo de envenená-lo, e êle se viu [illegible] a abandonar tudo e fugir. O mesmo verme de inveja é [illegible] na criança. As que aprendem mais fàcilmente o Português [illegible] pelos pontos são elogiadas, inexplicàvelmente [illegible] e [illegible]. Foi por medo da inveja das outras. Nas premia-

---

(48) Em [illegible] Alari, em maio de 1957, um dos nossos remadores [illegible] por nome Ernesto do povoado de S. Ana (baixo Içana) [illegible] na Missão de Assunção uma espingarda no valor de 1.200 cruzeiros. Levou-a consigo a fim de trocá-la por uma máquina de costura, [illegible] nova, de um Ilhéu-Ne do Riacrão Waraná (afluente [illegible] Alari) e [illegible] assim se realizou o negócio apesar da máquina valer [illegible] mil cruzeiros.

(49) As próprias [illegible] entre pais e filhos estão contaminadas ou são [illegible]. Os pais vêm periodicamente visitar os filhos [illegible] da Missão e muitas vezes trazem-lhes beiju, peixe [illegible] frutas. O aluno os vê de longe e encaminha-se logo para [illegible] e com êles se entretém, sempre porém de uma maneira fria, sem [illegible], quase fazendo o chão com o dedo do pé. Outra vez vêm os pais sem trazer coisa alguma. O missionário avisa ao menino: — "vai [illegible] seu pai, está aí". "Já sei", responde indiferente. — "Então vai conversar com êle". — "Não dá nada", responde, e não se abala para ver o próprio pai, embora haja meses que não o vê.

SQ19 Tucano

jogos escolares não se pode determinar êste é o primeiro prêmio e é para Fulano, ou premiar só alguns. É mister dar prêmios a todos contentando-se de ir chamando antes os de maior merito e deixa-los escolher. A uma das môças que trabalhavam na Missão a Diretora doou um par de sapatos. Usou-o uma vez apenas. — «Por que não usa mais os sapatos?» — «As outras xingam para mim», foi a resposta.

15) Furto

Sofrendo tão fortemente a picada da inveja, não é de admirar-se que apresente outro ponto fraco: a tendência para o furto. Recalque talvez contra o «branco», a quem julga sempre superior e rico, facilmente se apodera (mesmo fora dos casos patológicos de cleptomania (20)) de alguma cousa dêle, especialmente do que lhe pode ser util para a vida, ou se não o pode fazer, estraga alguma cousa para causar-lhe prejuizo.

É talvez haja ainda outro estimulo para o furto: o julgar-se mais esperto e astucioso que o branco, devendo êste, a fim de evitar atrito com os indios, fechar um olho, como se não houvesse percebido a astucia do indigena. É um circulo vicioso inevitavel naqueles lugares e circunstâncias. O viajante finge que não vê, e essa atitude radica ainda mais no indio a convicção de que é mais ladino do que o civilizado, e sente-se mais estimulado a ludibriar a êste. O civilizado deve, por isso, vigiar sempre atentamente pela propria bagagem, que não raras vêzes será mesmo arrombada (21).

Subtraem objetos aos seus próprios companheiros. Serão furtos mais raros, porque a vida mais ou menos em comum refreia ou elimina os impulsos a determinados furtos. São frequentes os assaltos à roça ou ao cacuri dos outros. Mostram vergonham quando surpreendidos. Se o não fôr, nega o furto. Ou diante da evidência diz: «levei, não furtei». Enquanto o prejudicado diz: — «êle roubou-me». Nota-se uma pendência preponderante, quase escravizante, a roubar comestiveis. Nos furtos revelá, de ordinário, surpreenden-

(20) Em alguns casos, pela precocidade do ladrão, a frequência e as circunstâncias do furto é licito pensar que se trate de cleptomania.

(21) É tão grande a tendência para o furto, a habilidade com que o executam, jamais seguido de arrependimento, que nos assaltou a duvida, se acaso não o julgariam licito e bom, ao menos furtar dos brancos. Indagamos a dois indigenas que nos mereciam mais confiança, e ambos afirmaram que julgam cousa má furtar a quem quer que seja. No entanto, outro dos nossos melhores auxiliares declarou-nos que furtar dos seus irmãos é cousa má, porém roubar dos civilizados é cousa boa!

4-Silva SQ19 Tucano

te esperteza. Especialmente nos furtos a outros índios abstêm-se de subtrair o que fàcilmente se identifica. Tomará sempre as precauções oportunas, no ato do furto, como ao depois, a fim de ocultar o corpo de delito, por exemplo, as meninas furtam agulhas e escondem-nas na camada dura da sola dos pés.

Insurgem-se quando obrigados a restituir; sobretudo se o deve fazer ao civilizado. Fá-lo mais fàcilmente ao tuxaua que o manda restituir, olhando quer manter-se amigo do branco. Diversamente, máxime se gosta do ladrão, dirá altivamente: — «não há ladrão na maloca» (22).

16) *Mentira — Falta de palavra — Simulação*

O amor à veracidade que tem sido relevado entre alguns primitivos, não é o forte dêsses nossos índios. Responde muitas vêzes falsamente: «não sei», «não vi», às informações que se lhes pede. Vice-versa dão informações do que eles não sabem. E os outros índios presentes não corrigem as informações inexatas. Por exemplo, não gostam de vender seus enfeites de danças, e afirmam regularmente que não os têm. Se se indaga se há algum doente no povoado, responde invariàvelmente que não, embora na realidade haja. Nem se pode pensar, nestes e noutros casos, que houve restrição mental. Haveria, no caso dos doentes, alguma razão de natureza mágica? Não logramos sabê-lo, apesar de muitas indagações em diversas circunstâncias e lugares. Passam para uma segunda e terceira mão a cousa roubada, a fim de ocultá-la. Jamais denunciam os outros, a não ser para se defenderem. Não raras vêzes os apanhamos em contradição (23). Se lha fazemos ressaltar, calam-se. O silêncio é uma defesa e arma de que se servem com freqüência contra o civilizado e suas argumentações. São «mentirosos natos» foi a expressão que usaram duas pessoas que há vários

(22) Se se exceituam êsses raríssimos casos de devolução, pode-se afirmar que, de regra, não devolvem a cousa roubada, nem dão a conveniente satisfação. Do ponto de vista moral parece lícito concluir que não tem a disposição de restituir nem de abster-se dos furtos.

(23) Em abril de 1954 uma jovem do Pari-cachoeira nos havia descrito o ritual de iniciação puberdária com toda a clareza e indicação de pormenores. Em junho dêsse mesmo ano, falando casualmente sôbre o assunto, começou ela a negar que houvesse *Komũ* (cfr. VIII-1, b (7) ou "sonrador" no seu povoado e ter ela passado pela iniciação. — Está esquecida que você já narrou tudo? Não tenha acanhamento... lhe dissemos nós. Então sorriu, confirmou e completou a descrição feita em abril.

4. Silva SQ 19. Tucano

mos convivem com êsses indígenas. Sustenta não raro sua mentira até diante das provas mais evidentes.

Nem, tão pouco, se pode ter absoluta confiança em sua palavra de promessa, encontrar com o índio para uma data combinada, para a execução de um trabalho, de uma viagem, etc. Deixará de comparecer em tal dia ou lugar em que é esperado, ou de fazer o trabalho encomendado. Mais tarde, quiçá, se apresentará sem, no entanto, tratar do assunto ou pedir desculpa. Se, acaso, somos os primeiros a falar e queixamo-nos (o que nem sempre é político), apresentará uma razão qualquer, verdadeira ou falsa. Não lhe passa sequer pela cabeça ponderar se há motivos fortes para cumprir a palavra dada ao branco. Absolutamente não sacrificará nenhum interêsse seu para satisfazer um compromisso assumido.

São dotados de grande capacidade de simulação (24), é a afirmação unânime de todos os que com êles conviveram algum tempo. De maneira perfeita fingirão enfermidade ou indigência, fingirão desconhecer uma ordem ou uma proibição, um esquecimento ou uma inadvertência. Planejando uma ação que julgam má (por exemplo, três ou quatro índios organizando um assalto para fins de furto, ou em fila indiana para espreitar o branco por uma fresta, etc.) não deixam transparecer ansiedade. Mesmo quando surpreendidos, não se desconcertam; separam-se com simplicidade, como se nada houvera acontecido. Quase sempre virá uma gargalhada a rematar o tentativo fracassado.

Mais ainda, são capazes de aparentar emoções que não sentem. Exemplo típico é o *chôro-fúnebre* (com lágrimas, gritos, exclamações) executado com comovedora perfeição, retornando logo em seguida à mesma conversa alegre de minutos antes, entremeada de descompostas gargalhadas, enquanto outros, por seu turno, recitam

(24) A mesma habilidade de simulação apresentam os indígenas *Arapaço* do Içana. Entre os episódios comprobatórios recordamos o seguinte. Eram os inícios do internato feminino dirigido pelas Irmãs Filhas de Maria Auxiliadora ou Irmãs Salesianas (1957). Várias meninas, apesar da largueza da disciplina e da tolerância das Reverendas Irmãs, fugiam. Duas alunas, aproveitando o momento oportuno, escapam e, com uma canoa, alcançam a margem oposta onde, numa pequena barraca, se achava a sua mãe. Esta atravessa imediatamente o rio e vem ao colégio ver as filhas. Não sendo, naturalmente, encontradas, a mãe se mostra muito desolada, põe-se a chorar com sinais de grande aflição, causando séria preocupação às Educadoras. No entanto fôra a própria mãe quem escondera as filhas no mato, como se depois se veio a saber, por testemunhas do fato.

à sua parte, entregando-se ao pranto, para voltar minutos depois à alegria habitual. Talvez pudessem ser aproveitados como atores teatrais.

17) *Vida sentimental: amor, amizade, gratidão*

A sua vida sentimental não parece muito intensa. Nunca se notam expansões muito vivas de sentimentos (25). Embora ria com facilidade, recebe sempre com certa indiferença as grandes alegrias ou desgraças. Não conhecem como expansão do afeto, entre pais e filhos, ou outros parentes, o beijo (26) ou o abraço.

Faltam ao índio alguns sentimentos mais delicados, como o da compaixão. Não só maltratará a um animal, rindo-se das suas contorsões de dor, como até verá com indiferença sofrendo a outro homem, seja embora seu irmão, pai ou mãe (cfr. VII - 4, g (1)

Não padece dúvida a existência nos pais, particularmente na mãe, do amor para com a sua prole, máxime quando ainda na primeira infância. Mesmo então é um amor mais *efetivo* que *afetivo*, a saber industrioso pela saúde dos filhos, aos quais procura remédios nas doenças e alimento. Quando se trata de filhos já crescidos, a estima se contamina de interêsse pelos serviços que dos filhos recebem. E o pesar que exprimem, quando os filhos se ausentam ou morrem, é porque não têm mais quem lhes traga o peixe ou cultive a roça.

Atenuando essa presunção em favor do amor materno, está a vigerigia do infanticídio, e muitas vêzes é a propria mãe que o quer

(25) O encontro entre pais e filhos ou entre esposos, após meses ou quiçá anos de separação, reveste-se sempre de frieza de um encontro qualquer sem se abraçarem, com aquelas expressões convencionais que indicamos adiante formalismo). O Missionário Pe. Antônio Glacone pôde observar este episódio muito curioso: o marido se ausentara quase dois anos para trabalhar com os brancos do baixo Rio Negro, sem enviar nos [illegible] Ao regressar, o encontro com a mulher se deu com a indiferença de costume, na beira do rio ao desembarcar da canoa. Porém, dentro da barraca, depois de lhe ter apresentado a quinhapira e o beijú, [illegible] de cócoras-se lido do marido, desabafa-se com estas queixas: — ô pai dos meus filhos (yo-pôra-kô), tu chegaste finalmente. Fôste com o branco muito longe, muito longe, e a mãe dos teus filhos ficou [illegible] sozinha, sem ter peixe para os filhos, sem poder fazer roça nova, abandonada, sem roupa. Oh! como é triste viver assim! como é triste [illegible] (Os Tucanos, pag. 72-3).

(26) Parece também que não existem as palavras beijo e abraço, na língua tucano. O termo mimi, que o Pe. Antônio Glacone registra em seu vocabulário como correspondente a beijo, propriamente quer dizer chupar. Efetivamente, nos primeiros tempos, quando se lhes ensinava a [illegible] algum objeto, chupavam-no, mesmo quando se tratava da mão de um sacerdote numa função litúrgica.

4-Silva SQ19 Tucano

e executa. São, outrossim, conhecidos casos em que a mãe abandona os filhos, embora recem-nascidos.

Nos filhos, o sentimento correlativo é contrabalançado, ou talvez superado pelo egoismo. Quando os pais envelhecem, facilmente os abandonam, sem lhes providenciar mais roupas, ou sequer lhes dar remédio, comida ou água (27). Citam-se casos em que enterraram vivos os pais velhos (28).

Ao menos enquanto estão vivendo no próprio ambiente, ligam-se mais entre si, mesmo entre indivíduos de tribo diversa, do que

---

(27) Depõe o Pe. João Marchesi, com a autoridade de conhecedor da totalidade dos indígenas entre os quais vive vai para 35 anos, e que pela sua heroica caridade, capa de todos os sacrifícios, mereceu que o Gal. Alexandrino Ferreira da Cunha o chamasse "o Anchieta do Amazonas". — "Entre os elementos da mesma tribo, que se consideram irmãos, há certa cordialidade externa e consideração pelo sofrimento alheio, mas não generosidade, nem oferecimento espontâneo de auxílio e meios, é um egoismo frio e estéril". "Os velhos pais ficam abandonados, quando não passam da casa de um filho para a do outro, a fim de não representarem um pêso". "Nem o amor natural dos genitores se pode dizer que tenha base segura, pelo cinismo com que enterram vivos os recem-nascidos, sufocando-os como se fôra com qualquer animalzinho" (No livro "Os Tucanos", do Pe. Antônio Giacone, pag. 13).

A propósito do matrimônio, escreve o Pe. Antônio Giacone: — "O índio não tendo amor e carinho para com a mulher, ficará satisfeito com a que lhe derem, não se importando que seja bonita ou feia; basta que seja trabalhadora e lhe dê muitos filhos; se fôr estéril, repudiá-la-á, como coisa inutil, pois todo índio se casa fazendo questão de ter muitos filhos" ("Os Tucanos, pag. 22). Acima o tratamento dos velhos pais, por parte dos filhos, de *indiferente e desumano*". (Ibidem pág. 26).

Em novembro de 1953, por ocasião da nossa permanência em Iauaretê, deu-se o seguinte episódio. Um jovem de Uaracú-ponta (rio Uaupés), casado poucos meses antes, gravemente enfermo de tuberculose, pede ao Diretor que o venha buscar para o hospital da Missão. Aí recebe a visita de sua esposa que fica dias em sua companhia. Numa segunda visita ela se expande em pranto tão clamoroso que o Diretor manda avisá-la que se modere ou se retire mais longe, a fim de não aumentar os sofrimentos do esposo doente. No entanto, dois dias antes da morte do esposo, ela quer retirar-se para seu povoado, levando consigo a rede do marido. E o fez, apesar dos pedidos insistentes dêste, que ficasse ainda e deixasse a sua rede.

(28) Foi-nos mostrado em Uaracapã (rio Papuri), ao sair do povoado, o local onde haviam amarrado, entre dois galhos, a rede de um velho doente. E não só o expulsaram assim de casa, senão também aí o deixaram ao relento, sem assistência nem recursos. Apenas falecido, cavaram, de baixo da rede, uma cova, cortaram as cordas da velha rede que se precipitou, com o cadaver, dentro do buraco, e cobriram-

com um civilizado. Não, há, porém, indício de particular amizade entre êles: notam-se os mesmos tratos para com todos. É ainda o espírito de grupo que atrofia os impulsos individuais. A inveja recíproca e o medo de envenenamento, que os atormentam, não permitem florescer entre êles os sentimentos da amizade. Estão sempre com receio um do outro. Com o civilizado, alguém dêles quereria abrir-se mais, e em alguns casos fá-lo-á, quando estão a sós. Fecham-se, porém, logo que aparece outro índio. Tem-se a impressão de que tenham medo de parecer amigo do branco.

Nem é evidente a existência da gratidão em seu ânimo, máxime para com o civilizado. Embora se mostre amigo, falando com êles com expansão e intimidade, jamais agradece os favores recebidos; nem sequer mostra reconhecê-los, mesmo em casos de extraordinários benefícios e até de verdadeiro e heróico devotamento do Missionário ou da Irmã Enfermeira. Não se lhe aproxima para oferecer-lhe algum presente como sinal de gratidão, ou sequer dizer uma palavra carinhosa de agradecimento. Nem consta que entre seus contribuíles faça questão de mostrar gratidão pelos benefícios recebidos do branco. Pode-se afirmar que a cordialidade que mostram com os civilizados é sempre inspirada pelo interêsse, e basta a suposição de uma desatenção da parte do branco, para que desapareçam as manifestações daquela cordialidade.

13) *Vingança-vindicta*

Forte, ao invés, é seu instinto de vingança. Com um perfeito domínio de si, sem que o menor sinal externo ou expressão do rosto revele seu desgosto, o índio recebe as maiores contrariedades. Porém não esquece as afrontas e injustiças, reais ou supostas, nem as perdoa (26). Pensa na vingança, e são numerosos os episódios

---

[illegible] irregularmente com terra, como o pudemos ver em novembro de 1953. Em junho de 1954 foi encontrado no pôrto de Iauareté um velho Taryana, de seus 70 ou 80 anos, a tiritar de frio. Não sabemos como chegou até ali. Recolhido ao hospital, em grave estado, é deitado em uma rede, medicado e aplicam-lhe bolsa de água quente (para substituir o fogo que usam sempre debaixo da rede). Dias depois, sentindo-se bem, foi interrogado de onde viera. Êle atalha logo dizendo que não queria voltar para sua casa, pois lá era maltratado pelos filhos.

Fomos informados de um Taryana de Pinú-pinú (rio Uaupés) que maltratava e até várias vêzes espancou o próprio pai, que era de Iauaretê.

(26) Parece que não existe, na língua Tukano, o verbo perdoar. Por necessidade da catequese, às vezes o Missionário emprega o verbo orkóbono, esquecer. Os indígenas, ao invés, empregam o verbo português com a desinência tukano: *perdodpe* (perdoe você), *Perdodpõ* (eu perdoe).

4 Silva SQ19 Tucano

demonstrando que êle aguarda pacientemente a oportunidade durante anos, e fazem longas viagens, afim de executar uma vingança.

É uma obrigação imprescritível a da *vingicta*, *a'mê-uché*, oficial do grupo, por um membro seu morto ou ferido por algum civilizado ou índio de outra tribo. A vingança será feita também, dentro da tribo, contra indígena de outra subdivisão e até contra seu próprio irmão de sangue. Se, em algum caso, não executa a vingança, é porque tem medo da contravingança (maleficio).

Na aparência o índio é muito pacífico. Não se ouvem os indígenas altercando entre si em voz alta, mesmo quando nos parece que há motivos para isto. Parecem até de grande delicadeza entre si. Quando num grupo de indígenas alguem dentre êles deu, suponhamos, uma informação inexata (note-se que não gostam de declarar: não sei, não estou certo disto) os outros não corrigem no momento a inexatidão ou erro. Talvez algum dos presentes, quando estiver sozinho com o civilizado, retificará, a pedido, a informação errônea.

Não há recordação, se excetuarmos as lendas, de guerra entre as várias tribos (30). São frequentes, no entanto, as brigas por motivos econômicos (assalto à roça, ao cacuri, etc.). Não raro há rixas por intrigas, e destas cabe às mulheres a maior porcentagem.

Para as vinganças entre si a oportunidade é a embriaguez (31), e convidam prèviamente para as festas aquêles dos quais desejam tirar desforra. Após está, mesmo quando a consequência é a morte da vítima, nada no índio revela arrependimento ou remorso (32). As lendas referem semelhantes episódios, e talvez procurem imitar os seus heróis lendários.

---

(30) Em outubro de 1947, poucos dias antes de nossa visita à maloca dos Mukú cerca de seis Km de Iauaretê, deu-se, entre êles, por ocasião de um caxiri (festa com bebedeira), uma briga com facão, na qual um índio veio a fulecer e vários ficaram feridos gravemente. Em janeiro de 1946, nessa mesma maloca, dissenção de maior vulto e verdadeira luta com bastão, facão e flechadas se deu entre os Mukú e os Tarpena, ainda por ocasião do caxiri.

(31) Para ter maior valor "tal que enborrachar-se", diz um da Colômbia. Por isso é que nunca há duelos entre êles. Nem consta que façam, por exercícios, lutas corporais. Nas brigas servem-se de qualquer objeto que tenham à mão, facão, massa, arco, etc. ou mesmo espingarda.

(32) Há anos, em 1933, deu-se um episódio de vingança com particulares circunstâncias de crueldade. Em Ananaz, no baixo Uaupés, os Tukano mataram dois homens Desana, cortaram um menino pelo meio, do ombro às pernas. Os indigitados foram levados a S. Gabriel (hoje ci-

[Facing p. 160]

1. Preparando [illegible] grandes [illegible]

2. Dando [illegible] grandes [illegible] [illegible] [illegible]

ai o meio mais comum de vingança, entretanto, são os envenenamentos. Quando nos falam com intimidade e franqueza, os indígenas afirmam e documentam numerosíssimos casos de envenenamentos por vingança. Donde se compreende o medo geral que a todos domina, uma quase obsessão de ser envenenado. Alguns nos revelaram terem sido vítimas, eles próprios, de envenenamentos que lhes causaram «doenças» graves e demoradas. Conhecemos também casos em circunstâncias tais que, pelo relato das Rvdas. Irmãs Enfermeiras, admitem a suspeição de envenenamento. Entre êstes lembramos aqui dois casos ocorridos durante nossas viagens. E tratar-se-ia de uma forma mais odiosa de vingança, a saber, causar mal aos filhos menores para desforrar-se de injurias causadas pelos seus pais. Duas crianças de seus 10 anos aproximadamente, alunos da Missão Salesiana: uma menina de Iauaretê, em abril de 1955, e um menino de Pari-cachoeira em outubro de 1956. Ambos faleceram ao cabo de poucas horas, após a ingestão de bebidas indígenas.

Não praticam, porem, a antropofagia, e nada revela que tenha havido esse costume no grupo de tribos Tukano (cfr. adiante o que se diz sôbre o *Canibalismo*, VII - 6, h).

19) *Vaidade*

A vaidade é um traço bem pronunciado da psique indígena. As crianças de braço as mães atam ligas, abaixo do joelho e acima do tornozelo, «para engrossar-lhes as pernas». Efetivamente, são na totalidade anatomicamente bem conformados e elegantes, com as pernas bem torneadas. Querem ter-as pernas grossas. É um dos pontos, sobretudo entre as meninas, xingarem-se de perna fina (33). Todos de corpo cheio até cerca dos 30 anos. Depois dessa idade, em alguns homens se exagera a corpulência, e a totalidade das mulheres emagrece, envelhecendo precocemente. Não provocam nenhuma deformação para efeito estético ou guerreiro (34). As donzelas ostentam seios redondos, bem desenvolvidos. Identificam a beleza com a corpulência. Quando alguém muda de clima para

---

cade de Ubupes) e interrogados pelo Inspetor do S.P.I. (Serviço de Proteção ao Índio). Sem dificuldade confessaram o crime. — Mas por que vocês os mataram? — "E' isso mesmo", foi a única resposta.

(33) Xingamento em tukano: perna fina, *ñorkã-dyi-Mariçó*; cabelo crespo, *pouri-sukiñ*; olho grande, *kurpeni-bukupó*.

(34) É característica dos caraíbas a deformação do crâneo, aplicando à cabeça das crianças talas apertadas. Entre as tribos do Amazônas, os primeiros exploradores encontraram êste costume entre os Cambeba ("Roteiro" do Pe. Noronha, 145). Em algumas tribos, por exemplo, os Pinão da Colômbia, isto se fazia para tomar aspecto feroz.

[Facing] p. 161

SQ19 Tucano

Pl. XXIII

SQ19 Tucano

justificar-se, dizem «que foi buscar carne». Nenhuma preocupação com a cintura, nem usam cinta.

Sobretudo o cabelo é objeto de vaidade. Ajustam-no, penteiam-no amiúde, as mulheres e a nova geração dos homens. Os rapazes, durante as viagens, colhem flores da margem do rio e enfiam-nas no cabelo, por cima da orelha. Aplicam-lhe loções, que preparam com jenipapo e outras plantas, para conservá-los pretos. Eis o segredo por que lhes não embranquecem. Amam as missangas, sabonetes, perfumes. Uma donzela vendeu-se por meio vidro de brilhantina.

Gostam muito de espelho e miram-se com frequência; antigamente davam um remo em troca de um pequeno espelho.

As moças sentem pesar de serem escuras, e para clarear a pele esfregam-na fortemente com sabão e até com areia, remirando-se a cada momento, afim de verificarem se estão ficando mais claras.

20) Soberba.

Equivalente à vaidade é a soberba. Jamais reconhecem o próprio erro. A mínima palavra que lhes soa como repreensão, fecham-se no mutismo, e a criança agira mal por acinte. Citam-se casos por quais a uma simples repreensão do civilizado, retiraram-se e passaram anos sem reaparecer.

Comprazem-se sobremaneira com os elogios; é o meio de que se servem os educadores, afim de estimulá-los ao estudo e ao trabalho. Se acaso a criança é corrigida na escola, porque errou na leitura, abaixa o livro e não lê mais. Nunca faz pergunta na aula, mesmo quando não entendeu e é convidado a pedir explicação. Por outro lado ri-se gostosamente quando outros, especialmente o branco, erra (tropeça, cai, não sabe amarrar uma rede, etc.)

São altivos das próprias qualidades, e comprazem-se em que mas louvem. Embora com suas crenças bem radicadas, assimilam bem a nossa civilização nos seus elementos materiais, e até, quando voltam à sua maloca, imitam o que viu os civilizados fazer. No íntimo atribuem a superioridade dêstes aos recursos de que o indígena não dispõe, e «porque aprenderam de outrem». São estas as duas razões, (assim julgam êles) por que não podem realizar tudo o que os civilizados fazem, seja mesmo um gerador elétrico, um motor de lancha, ou um avião.

No seu íntimo parece radicada a convicção que o civilizado é que precisa dêles, pois vêlo até suas terras; e êles não precisam dos

civilizados (35). E semelhante conceito é difícil de corrigir-se, porque não aceitam se nem acompanham os raciocínios do civilizado. Em realidade o branco que viaja por estas regiões não pode dispensar o trabalho do índio (para guiá-lo, remar, transportar carga, etc.). E não é o período dos descobrimentos, e de modo especial nos últimos anos, sobem negociantes a buscar índios para os trabalhos nos seringais e piaçabais do baixo Rio Negro ou seringais do Colombia. Diante da natureza majestosa e selvagem destas regiões, é natural que o civilizado sinta e manifeste um sentimento de timidez e inadaptação, o que confirmará o índio na convicção da própria superioridade.

Quando transportado a uma das nossas cidades, bem longe dos seus irmãos de tribo e do seu rio natal, êsse mesmo sentimento de inadaptação e timidez fará, com mais facilidade, que o índio se una com fidelidade e quiçá verdadeira afeição ao civilizado com quem vive e para o qual trabalha.

O indígena que se instrui nas escolas da Missão, considera-se «branco», e procura imitar o civilizado. Não gostam que os chamemos «índios» (36); deve-se dizer: «vossa tribo», «vossa nação». Há em todos êles um ponto que de modo particular não se deve ferir, a saber, o orgulho da própria tribo.

21) *Gula*

São também excessivamente gulosos. Estão sempre dispostos a comer. Comem de tudo o que come o branco e que se lhes dá, e quase sempre tudo o que t[illegible] ...o momento (37). São frequentes os distúrbios intestinais. Comerão até se sentirem mal, e sobrevir indigestão e cólicas. Comem sem medida quando têm, e passarão depois o dia todo só com chibé (água com farinha de mandioca

---

(35) Durante a última guerra cresceram as dificuldades de abastecimento dos centros missionários. Um dos Superiores da Missão julgou prudente avisar aos indígenas que não era má vontade dos Missionários, porém as dificuldades da época (falta de recursos, de transporte, etc.) impunham a privação de algumas coisas que êles vinham recebendo, por exemplo, do sal. E outro, de um tuxaua êste aparte: — "vocês os brancos é que vão sofrer com isto; a nós não nos faz falta".

(36) Os mais civilizados dentre êles dizem às vêzes: — "eu não sou do Caupéri, como equivalendo a "eu não sou índio". Reservam comumente o nome de índio para os da tribo Makú.

(37) Assistem curiosamente os brancos que comem e depois devoram tudo o que sobra; sempre, porém, repartindo-o entre si. Alguns de Iauaretê não gostaram de chocolate, e cuspiram-no fora.

d Silva SQ19 Tucano

mudança (38). As crianças no colégio vão imprimindo as comidas que lhes apetecem até ficarem doentes. Nos caxiris não comem, de acôrdo com os costumes, e assim podem servir maior quantidade de bebida. E tão vomitando por um lado, à maneira dos antigos romanos, e por outro enchendo nova cuia. Verdade é que o caxiri é nutriente, sendo na realidade uma papa bem diluida. Como, às vezes, é servida ainda em fermentação, continua essa no estômago, donde muitos casos de hérnias estomacais, por excesso de bebida. São avidíssimos de aguardente, e uma paga pela qual farão qualquer sacrifício. Sentem-lhe o cheiro de longe. Para evitar repreensões, escondem as garrafas no fundo do rio, donde as retiram quando querem beber-lhes o conteúdo alcoólico.

Gulosíssimos particularmente de doce (39), apreciam também muito o sal, e até o próprio sal amargo (sulfato de sódio) subministrado como remédio. O sal é um artigo que sempre procuram.

(32) *Ingenuidade é alegria.*

Possui, outrossim, um conjunto de virtudes naturais e invejáveis qualidades. Já indicamos algumas, acenemos ainda a outras. Entre as belas qualidades do indígena nota-se a sua encantadora ingenuidade. Simples, inocuo, até quando conta os episódios mais escabrosos, e o faz sempre com os têrmos do mais cru realismo... Ingenuidade estranhamente natural, nas conversas, e especialmente na compostura, mesmo quando, a julgar pelos fatos anteriores, se tem certeza que ela encobre maltem.

É um indivíduo alegre. Ri com a máxima facilidade, e por qualquer motivo explode em grandes, prolongadas e típicas gargalhadas. O riso não é só uma resposta ao ridículo ou ao humorístico, mas a tôda surpresa agradável (40). Muito antes de clarear o dia, desde as 3 ou 4 horas da madrugada, ouvem-se gargalhadas na maloca, e até as 10 ou 11 da noite. É uma raça alegre: na sua

---

(38) De resto estão habituados ao jejum. Além dos jejuns forçados (porque não têm o que comer, ou nas viagens), observam numerosos jejuns rituais: na iniciação puberdária, no chôco (couvade), menstruação, etc.

(39) Com um bombom os próprios tuxauas, chefes de povoado, mostram-se satisfeitos, e não raro uma bala é ainda partida, ou passa por mais de uma bôca. Com alguns caramelos e cigarros, davam-se por bem pagos pelo trabalho de se deixarem medir.

(40) Uma índia interrogada porque tantas e tão prolongadas gargalhadas, esclareceu que é porque lhe soltavam a fumaça do cigarro sôbre as diversas partes do corpo. Parece costume comum quando a mulher se acha deitada sôbre a rede para descansar, durante o dia.

4: S Iva SQ19 Tucano

maloca ouvem-se muitas risadas e quase nenhum chôro. As próprias crianças choram menos que os seus irmãozinhos da civilização (41): chôro que dura poucos momentos.

23) *Estoicismo.*

O índio é o mais perfeito tipo do estoico, e supera de muito os antigos filósofos gregos. Homem do presente, o futuro não o preocupa. Não faz depósitos para amanhã; confia que amanhã a natureza lhe seja tão favorável ou mais que hoje, e êle trabalhará também amanhã. Na privação, saberá sofrer, com serena tranquilidade, a fome. Nem sequer pensa na dor futura. Nesta disposição de ânimo se assenta o segrêdo da sua tranqüilidade e bom humor constante. De resto, suporta fàcilmente o sofrimento; não gemerá por intensas que sejam as suas dores (42). Na enfermidade deitar-se-á sôbre a rede e espera que a natureza reaja sob a sugestão dos ritos do pajé. Se êste diz que o doente vai morrer, aguardará êle tranqüilo a morte, sem choros nem gritos. Os parentes não lhe darão remédio, e muitas vêzes nem mesmo alimento ou bebida (44). O

(41) Nas crianças recolhidas nos internatos da Missão, e nas próprias crianças filhas de ex-alunos e criadas à sombra das Missões, observa-se com mais freqüência e prolongadamente choros e gritos de manha.

(42) Nas freqüentes visitas às malocas e aos povoados indígenas, muitas vêzes com admiração nos temos encontrado indivíduos, não só adultos, mas também crianças, suportando grandes dores sem uma lagrima ou um gemido. Ao invés, quando aos cuidados dos civilizados, por exemplo, quando hospitalizados, facilmente se desabafam em gritos e gemidos que parecem até exagerados. Abstemo-nos de apresentar uma explicação para semelhantes fatos, embora a tenhamos inutilmente pedido, em várias ocasiões, aos próprios indígenas.

(43) E vocês têm dado-mingau ao doente? Indagava o Missionário aos de uma maloca, onde encontrara um velho muito mal, deitado na rede. — "Para que" objetaram-lhe os índios, êle vai morrer mesmo". Em Pari-Cachoeira encontrava-se, em maio de 1954, uma jovem esposa gràvemente doente e desenganada pelo pajé, por nome Adelia Abreu, da tribo Tukano. Não aceitava os remédios ou punha-os fora, fingindo tomá-los. Recusava geralmente os alimentos. Se acaso mostrasse alguma disposição a aceitá-los, sua mãe murmurava que não os tomasse, porque o pajé dissera que iria morrer. Com certa dificuldade transportaram-na ao hospital. A Irmã Enfermeira conseguiu vencer a resistência da môça, e esta dispõe-se a tomar os remédios e a alimentação, e notou-se logo esperançosa melhora. A mãe da doente, ao saber disso, correu ao hospital, a fim de impedir êste fato. A quem lhe argüia porque agia assim, respondeu a mãe: — "O pajé disse que ela deve morrer, se ela sarar no hospital, o pajé vai ficar com raiva de mim". É verdade que apenas a môça se sentiu melhor, fugiu do

A. S. Silva SQ19 Tucano

paciente não o pedirá, ou até recusará tomar se alguem lhos apresentar. A sua vida foi tôda de lutas e privações suportadas com a mais inalteravel calma, jamais foi vencido pelo desespêro; mostra-se sempre forte até diante da iminência de morte (cfr. VII - 2, e (1).

24) *Formalismo*

O indígena uaupesino é um tipo singularmente formalista. Precisamente êste formalismo rigoroso, atingindo quase cada atividade do individuo, é que esmaga o individual, o pessoal no índio. Dêles, como dos mongóis, os que com êles não têm um contacto muito prolongado e imediato dizem que todos se parecem, porque é difícil distingui-los pelos traços fisionômicos. Na realidade, mais do que no rosto assemelham-se no seu comportamento. Os índios parecem-nos feitos *em série*, se os consideramos na sua maneira de agir. A educação, que lhes subministra a congênita tendência de imitar, e a sujeição aos costumes e tradições é de tal modo absorvente que quase lhes faz desaparecer os traços individualizantes. E esta uniformidade é ainda mais impressionante porque *nivelou* culturalmente *nações distintas* e bem diversas pelos traços somáticos, pela origem bio-étnica e pela fala, e parece haver conseguido moldar todos os componentes das tribos conforme um modêlo único. Por essa razão afirmamos que, até na maneira de rir e gesticular, as diferentes tribos do Uaupés se assemelham, e por isso mesmo a vasta região uaupesina deve-se considerar como uma única área cultural.

Vão aqui alguns acenos ao formalismo indígena do Uaupés.

Nos encontros de parentes não há expansões de júbilo, já o relevamos, embora depois de longa separação, mesmo o encontro de esposos ou entre pais e filhos.

São frequentes entre êles as viagens de visitas: necessidade psicológica por que vivem em pequenos grupos? ou reminiscência de nomadismo ancestral?

As recepções oficiais das grandes festas, ou eventuais de alguma visita, revestem-se sempre de um estranho e indispensável formalismo.

Quando nas suas assíduas viagens de passeio, resolve parar em alguma maloca ou povoado, encosta sua canoa no pôrto e sobe. Se

---

hospital. Do parto, que logo se seguiu, teve criança muito fraca que veio a falecer quase imediatamente. Porém a jovem mãe ficou forte e está ainda em gôzo de saúde (em setembro de 1966).

forem vários, fa-lo-ão em *fila indiana*, isto é, um atrás do outro, observando uma ordem em que precede o mais digno. Não entrará absolutamente, sem dizer à porta: «*nê! marsá nii?* olá, há gente aí». Isto dirá mesmo quando viu que havia gente. Virá, então, receber-o o chefe da casa, ou o mais importante que aí estiver, e trocam-se de leve as mãos direitas. Ficando de pé, um em frente do outro, sem se olharem, olhando para o chão ou para um canto, o da casa perguntará: — «você chegou? *ertuti mÃÃ?*» — «Cheguei, *ertupi*». Ou: — «a sua canoa chegou»? O outro responderá: — «chegou». Passarão alguns segundos em silêncio, depois continua: — «Ah! você chegou? — Sim, cheguei». Após pequena pausa insistirá talvez: «Ah! bem! você chegou? — «Sim, cheguei». — «Donde vem você»? (pergunta muitas vezes inutil, pois sabe muito bem a procedência do visitante). — «De X» (e diz o nome da localidade). — Ah! você vem de X? — «Sim, venho de X». Estas e semelhantes expressões são intercaladas de silêncio e de «*dã*», que cada qual vai alternando, como sinal que compreendeu a frase do outro.

O mesmo fará e dirá cada um dos homens da maloca ao hospede, ou aos hospedes, se forem vários. Passarão, outrossim, as mulheres, uma por uma, diante de cada visitante, e tocando-lhe a mão direita farão as mesmas perguntas: — «chegaste? — Cheguei», etc., sem olhar porem para os hospedes, com os olhos baixos. Retiram-se as mulheres e uma delas vai buscar uma pequena esteira, colocando-a diante das visitas, e sôbre a esteira põe uma panela com *tucupi* e uma peneira com beijú, de que se servem sem acabamento os visitantes.

Mais tarde, sentados nos Banquinhos, ou cada qual na sua rede, entabolam longas conversas até horas tardas da noite, com certa rapidez, entremeadas pelos monotissimos «*dã*» e com incontáveis e sonoras gargalhadas. Se pensarmos que a lingua tukano é tão concisa, diz tanta cousa com poucas palavras, teremos uma idéia da loquacidade dos indigenas entre si. A criança contará tudo o que lhe passou nos meses em que estêve no colégio. O adulto relatará as viagens, os episódios da caça ou da pesca, os feitos, as pessoas que encontrou, as conversas que teve, os episódios proprios e alheios, enfim terá um sem-número de noticias a comunicar que nos parecem sem interêsse, porem, para sua mentalidade infantil são muito importantes. A curiosidade de saber, corresponde, da outra parte, grande vontade de contar.

Note-se que o marido nunca conversa com a mulher à noite, só de dia, e mantem longa prosa, quando descansam, após o trabalho. A noite só é permitida a cavaqueira entre pessoas do mesmo

sexo (assim nos informou a velha Taryana Teodora de Guarete, e nos-o confirmou Dorotéia Brito, Tukano) (44).

Singular encontro de pajés proporcionou-nos uma excursão ao médio Uaupés em maio de 1956. Viajávamos em companhia de dois pajés Tukano, Marcelino e Henrique, respectivamente pajé de Juquira e do Japu-garape. Uma avaria do motor de popa obrigou-nos a uma parada mais longa no povoado de *Periquito*, da tribo *Taryana*. Os dois pajés em trânsito cumprimentaram de uma maneira comum o colega Taryana da localidade. Logo em seguida, porém, os três pajés se postaram à margem do rio, à distância de 50 ou 60 em um do outro, cada qual fumando seu cigarro (que um dos visitantes dera aos outros dois). E sem se olharem, voltados para o rio, puseram-se a declamar, em voz bastante alta e característica tonada, que se podia distinguir a uns 20 metros de distância. Mais de meia hora durou aquele diálogo, no qual se alternavam com a palavra ora um ora o outro dos três, sempre com a intervenção dos outros dois que repetiam as últimas palavras da frase do locutor, ou outras palavras à guisa de estribilho. Era uma recordação dos episódios que, de acordo com a lenda das origens, ter-se-iam realizado naquelas paragens, à história das suas ilhas, canais, cachoeiras e pedras, recordação com valor de um exorcismo e augúrio de uma próspera navegação. Se houve também invocação das «mães das cousas», como Stradelli afirma haver assistido por ocasião da imposição do nome, não nos foi possível averiguar (45).

---

(44) Entre os Ilé-maxsã, do ribeirão Komé-ya, temos observado, durante a noite, conversa entre marido e mulher. Quiçá não sejam proibidas as frases impostas pela necessidade, e interditas sejam apenas as conversas por entretenimento.

(45) Fato semelhante deu-se em agosto de 1956 no Ribeirão Timi-ya (afluente da esquerda do rio Pirá-paraná). À hora do almôço paramos numa roça que se elevava à mão esquerda de quem desce o ribeirão. Um dos nossos remadores, da tribo Bará, aí encontrou um seu "irmão" de tribo. Suspendeu, então, a refeição o nosso remador, e os dois Bará, de pé sôbre um grande tronco abatido, voltados para o poente (provavelmente para não ter o sol a castigar-lhes o rôsto) lentamente sem se olharem puseram-se a dialogar entre si, em voz muito alta. Era ainda o augúrio de feliz viagem pelas recordações das lendas das origens, como nos foi informado. Terá durado um quarto de hora êsse diálogo, depois os dois sentaram-se sôbre o tronco e continuaram numa conversa alegre, em tom mais baixo e amistoso, enquanto comiam, pois o nosso remador pôs à disposição do seu "irmão" a nossa comida, e ambos dela se serviram desembaraçadamente.

Êsse mesmo remador Bará, propiciou-nos em a noite seguinte espetáculo semelhante, embora em circunstâncias mais desagradáveis. Um temporal e as trevas da noite surpreenderam-nos navegando o Pirá-paraná, e precisamente nas proximidades da perigosa "cachoeira

25. *Habilidade e gosto artístico*

Acenamos a habilidade do índio na execução dos seus trabalhos tradicionais. Mais ainda, possui gôsto artístico, como veremos adiante (VII - 3). A sua malôca é um belo trabalho de engenharia e arte. Harmoniosa e imponente nas suas proporções, e com um perfeito travamento das vigas, está solidamente plantada em terra, a desafiar as tempestades, com estacas de madeira de lei, tôdas bem regulares e admiràvelmente alinhadas.

São trabalhos perfeitos os *yurta-seri*, ou ligas tecidas de tucum (gr. *inheengatu*, *tapacurá*) que as mulheres usam abaixo do joelho para engrossar-lhes as pernas ou como adornos nas danças.

As pinturas nos banquinhos e os desenhos com palhas de diversas côres, nos cestos e peneiras, são perfeitas e agradáveis.

O *yurkê-warsoro* (ou cobre-sexo, (pequeno avental de missangas enfiadas em fios de tucum), que as mulheres usam na frente, quando dançam, demonstra paciência, habilidade e bom gôsto.

A geração nova tanto do sexo feminino, como do masculino, que passou pelos colégios das Missões, aprende a fazer suas roupas, e

---

[illegible] A margem esquerda foi improvisada uma tenda com duas [illegible] que abrigavam a bagagem e algumas redes. Pela meia [illegible] o rumor de remos, uma canoa abordou a margem e [illegible] os seus tripulantes, entre os quais um velho da tribo *Ihuêna*. [illegible] ou seria o primeiro encontro, não pudemos [illegible] pela [illegible] de [illegible]. Somos proclives a pensar que [illegible] antes, porque o remador Bará afirmara não co[illegible] a rezar, e os *Ihuêna* moram nessa zona do Pirá-paraná, e [illegible] somente para ajudar-nos a passar a cachoeira, conforme pedimos que fizessemos na malôca visitada horas antes. O remador Bará levantou-se para ver os que havam chegado. Imediatamente teve início, no silêncio da noite, um diálogo em voz alta, como se fôsse uma [illegible] entre o Bará e o velho Ihuêna. Eram os esconjuros tradicionais, com a recordação dos episódios lendários, com o fim de obter a [illegible] da viagem. Assim nos revelou um índio Tukano que [illegible] companhia. Aquelas gritos no coração da noite todos acordaram. Após [illegible] minutos, com o desejo de conciliar o sono tão [illegible] para quem se entrega a tão penosas viagens, procuramos [illegible] para que cessasse aquêle distúrbio. Foi tentativa baldada. Os dois [illegible] ou porque não entendessem nosso desejo, ou, como é mais provável, porque não lhes interessava saber se estavam incomodando [illegible] o que é também um traço marcante e geral da psicologia dos índios do Uaupés, e pela importância que dão às suas praxes, continuaram imperturbados ante nossos apartes e protestos. Depois de quase uma hora dialogando em voz forte e na típica toada dos esconjuros, passaram a falar em voz baixa e discreta, pediram alguma coisa para comer e por fim, deitando-se sôbre a areia, dormiram até o amanhecer.

executam com bastante gôsto e procurando seguir a moda que [illegible] entre os civilizados do Rio Negro. Até os meninos gostam de [illegible]urar e bordar (5).

Revelam pendor pelo desenho, e não só desenham pelo chão, como nos cadernos representam o que viram: animal, objetos, edifícios escolares, etc. A bem da verdade se deve relevar que, por causa de sua inconstancia, nenhum deles até agora prosseguiu a aperfeiçoar-se no desenho.

Dentre as côres preferem o vermelho e o azul, combinando esta última côr com o branco. E amam as côres bem vivas. Note-se que na língua tukano (40) há um só termo, *pôase*, para indicar o *amarelo*, o *vermelho* e o *amarelo*, e outro *pâsase*, para o *verde* e *azul*, embora distingam não só as sete côres simples, como as intermediárias.

Quanto à música, embora não favorecido pela voz, pois tem-na geralmente estridula, nota-se o gôsto e relativa facilidade para aprender os cantos a uma como a mais vozes. Os seus cantos das danças, se bem que monotonos e tristonhos, são muito harmoniosos, e são bem variados e agradáveis os motivos que executam nas suas flautas. Dotada, por assim dizer, do instinto musical, a criança com a maior facilidade aprenderá o ritmo e os passos das danças tradicionais, sem escola, vendo e dançando. Até as crianças são capazes de preparar suas flautas, mesmo aquelas ditas *de Pá* ou *cano*, como pequenos orgãos de 6 a 10 tubos, correspondentes às notas musicais e harmonizando-se perfeitamente entre si os seus varios instrumentos musicais.

---

(40) E não só o Tukano, mas também os demais idiomas do Uaúpés (família linguística Tukano) e do Caburi empregam o mesmo têrmo para as côres vermelho e amarelo, e outro para o *verde* e *azul*.

## Cap. VI

## CULTURA MATERIAL

### HABITAÇÃO

Sob o nome de *cultura material* (*Sachkultur* dos autores alemães) entendemos o conjunto de objetos que o silvícola produz para as necessidades da vida. São, pròpriamente, os *objetos materiais* enquanto manifestam o seu nível cultural.

As tribos que estudamos não são nômades. Na fase atual em que as encontramos, acham-se estabilizadas há várias gerações ou séculos (...quanto avança a memória completada por algumas informações dos primeiros viajantes), no mesmo local, donde só se mudam por motivo de epidemias ou de brigas. O grupo dissidente vai, então, construir nova casa ou iniciar outro povoado, ordinàriamente não muito distante do primeiro, talvez afastado poucos quilômetros apenas. Admiram-se ainda hoje malocas bem antigas; de meio século, quiçá. Circunstâncias particulares (incêndio, tempestade, etc.) podem igualmente forçar a construção de nova maloca. O índio prefere sempre fabricar nova casa, a reparar a antiga, se grandemente avariada. Embora, para a nova construção, muitas vezes aproveite as traves e, mais comumente, as palhas de cobertura, especialmente se estão ainda boas e teria que ir muito longe buscar palhas novas. Em se tratando assim de tribos fixas, é natural que encontremos boas habitações. Como é zona de freqüentes e torrenciais chuvas, não é conveniente a simples construção de barro.

O sistema de cobertura, *peokaro*, é sempre o de duas águas e com grande inclinação, de sorte que o beiral do telhado ficará acima do solo apenas um metro ou pouco mais. A palma de cobertura varia conforme os recursos da região; geralmente empregam o *carandá* (*Maurítia flexuosa*, Wall.) pelo só porque além de abrigar bem das chuvas, dura muitos anos. Regularmente compõem a cobertura começando pelo beiral.

Do carandá empregam as palmas sem mais trabalho, superpondo-as de maneira que uma recubra parte da outra. De outras palmas

4: Silva SQ19 Tucano

como o buçú *muhi* devem antes tecer os folíolos (é o que se diz *muhi-pama* buçú-trançado), e em diversas camadas, afim de que vedem perfeitamente das chuvas, (é o sistema *muhi-peõkaro*)

Outras vezes preparam o buçú entre talas, no chão; é o *muhi-deroke* (buçú costurado). *Cosem* um amarrado de fôlhas, isto é, prendem algumas palmas entre duas talas de sorte que constituam um pano *retângular* de dois por três metros, mais ou menos; é o que se denomina *muhi-sud-ka-pama* (pano de buçú cosido).

Das paredes, *tpakaro*, as laterais (*so'mûta-tpakaro*) são preferivelmente de palma trançada. Encontram-se com mais freqüência paredes de *pehe*, palma que atinge dois a três metros de comprimento e 30 a 40 cm de largura, ou ainda de *moa*, cujas palmas são mais largas alcançando os folíolos uns 60 cm.

As paredes principais (frente e fundo), no estilo clássico das malocas (assim nos informou Júlio, tuxaua de Pari-cachoeira, rio Tiquié) são, ao invés, de casca de árvore (*puxko-karseri tpakaro*) até certa altura (1), e completada até o telhado por palma de *ocaí*, *mizpi pokaro*.

Preparam a casca de sorte que se assemelham a largas tábuas. Cortam um cipó, como medida do comprimento que devem ter as cascas, ordinariamente de 5 a 6 metros. Vão à mata, escolhem a árvore e com um objeto cortante (antigamente o simples machado de pedra ou mesmo uma ponta aguçada qualquer) dão um talho ao redor, na parte superior e outro na inferior do tronco, conforme o tamanho desejado. Executam, ao depois, pequenos talhos no cortex, batem-no muito bem, com um pau, ao longo da casca a fim de que esta se despregue. Em seguida dão-lhe um talho longitudinal, e com uma pequena espátula vão separando do tronco a casca que pode ter um metro ou mais de largura. Transportam as cascas para casa e, a fim de que não se enrolem, empilham-nas umas sôbre as outras, bem esticadas, com um pêso por cima.

Para fazer as paredes, põe-se uma travessa (*tr*) horizontal a um palmo do solo, e outra mais acima, paralelamente, com intervalo de um metro ou mais, prêsas com cipó a estacas (*e*) bem firmes. A essas travessas ou réguas aplicam-se verticalmente as tábuas de casca já bem sêcas, e sôbre elas põem-se novas réguas, paralelas às primeiras, a fim de reter a casca. Depois um índio pelo lado de fora, e outro pelo de dentro furam quatro orifícios e, com cipó cosem

(1) Em um ou outro lugar vimos barracas que, em vez de casca, tinham as paredes feitas de tronco de paxiúba, aberto e batido, de sorte a apresentar o aspecto de tábuas rústicas ou costaneiras.

4: Silva SQ19 Tucano

as cascas às réguas, resultando algumas vêzes, dessa costura, um X com bastante regularidade e simetria ao redor das travessas.

Sôbre estas cascas frequentemente se encontram pinturas, servindo de tinta o latex da sorveira, com argila de diversas côres.

Atualmente tôdas as malocas que ainda se encontram pela região do Uaupés e afluentes são retangulares. Até 40 anos atrás viam-se algumas com a parte posterior de forma arredondada, como abside, dita do *ukaro-tiri-ley'i* (maloca-com-cozinha) (2). Esta

(2) Era assim absidal a maloca dos Tuyuka, em *Pinó-koa-liró*, no alto Tiquié e que Kôch Grünberg afirma media 27x17,80x7,80 metros (*Zwei Jahre*, 204).

abside achava-se separada, na parte interna da maloca, por uma divisão de esteira que se dizia *i'misa-ta'tyá* (apartamento de esteira). Nesse compartimento absidal residia a família do tuxaua e se guardavam os enfeites, instrumentos musicais e utensílios de uso comum, que constituíam propriedade coletiva do grupo.

Com o aumento de conforto dos índios e do instinto de propriedade (e até certo ponto e imitação ou mesmo sugestão dos civilizados) aparecem casas pequenas, *wi'i*, familiares, de palha ou casca ou mesmo de pau-a-pique (3), em vez das antigas e grandes malocas, *baxsa-wi* ou *baxsari-wi* (casa de dança) (4) para todo um grupo local.

Nota-se, nos povoados atuais, que as casas têm todas o mesmo estilo retangular. São, em ponto pequeno, uma maloca. Não são, porém, iguais, nem obedecem algum alinhamento, salvo os casos de intervenção dos missionários. Por imitação dos prédios das Missões vêem-se hoje algumas casas com pequeno pórtico ou alpendre.

Quanto à localização, é sempre à margem de um rio ou ribeirão (5). E afim de evitar as enchentes anuais, situam-se em pontos mais elevados ou «*terra-firme*», e nunca se vêem em palafitas (6).

Nos povoados de duas ou mais casas, ou atrás da maloca única, haverá sempre uma área batida que a separa, de uns 50 ou 100 metros, da mata e preserva da incursão dos animais ferozes.

Regularmente plantão nas vizinhanças a *pimenteira* (diversas variedades de *capsicum*), pupunheira, açaizeiro, urucum, e, com menor frequência, a cucura, limoeiro (hoje também a laranjeira), mamoeiro (*papaya carica*), abio (*lucuma caimita*, Roem. e Schulth.),

---

(3) Por *pau-a-pique* ou *taipa* (em tukano *di'tá pukaro*) entende-se, em todo o Brasil, a casa cujas paredes constam de um engradado de estacas e ripas o qual depois é enchido e rebocado com barro ou argamassa.

(4) A de Pari-cachoeira, no rio Tiquié, desaparecida vai para 20 anos, media 60 por 30 metros aproximadamente, atesta o snr. Pe. João Marques.

(5) Paulo Rivet qualifica a civilização dessas tribos de "civilização da mandioca". Talvez com mais exatidão se devia dizer "civilização da mandioca e da pesca". Temos encontrado, especialmente na região habitada pelos *Karapanã* e *Tatu*, malocas no interno da mata, distantes 500 ou 600 metros dos ribeirões. Esse afastamento é uma injunção das circunstâncias, a fim de se garantirem contra ataques e violências.

(6) Em alguns postos da fronteira Colombiana, ditos "Comissaria", existe, para os funcionários aduaneiros e da guarda, uma residência construída em ponto elevado, sôbre estacas a dois metros do solo, aproximadamente. Em 1952 um índio da margem brasileira do Papuri imitou êste estilo na construção da sua barraca. Por zombaria os outros a denominaram "comissaria".

cana (*saccharum officinale*, Lin.), fumo (*nicotiana tabacum*) e coca (*erythroxilon coca*).

Amiúde se vê uma pequena moenda, *d'rã arõãrõ* (Uaupés *d'nã arõãrõ*), para cana (7). São geralmente quatro estacas verticais, bem plantadas em terra, suportando dois cilindros de madeira munidos de sulcos longitudinais, e que rodam em sentido contrario, comprimindo entre êles a cana. Embora esta não seja planta nativa do Brasil (8), pensa Nordenskiold que a moenda seja invenção indígena, de acôrdo com a sua matéria e recursos. Não nos parece aceitável a opinião de Nordenskiold, para as moendas e as tribos do Uaupés. Serão imitação das moendas que desde o sec. 18 os civilizados empregavam no baixo Rio Negro.

Uma praça, *merkú-pa*, ou área retangular, limpa de qualquer vegetação, e de ordinário proporcional à população, situa-se adiante da maloca. Denomina-se também *bursari-u'tú*, «páteo de dança»; efetivamente aí se desenvolvem alguns números das danças cerimoniais.

Há sempre uma estrada de alguns metros de largura, e limpa, que leva ao pôrto, ou aos portos, onde amarram as canoas e tomam o seu banho. Estrada que serve, outrossim, para a procissão de *d'ir-ti*, na sua festa (cfr. VII - 4, e (2).

Quando a barranca do rio é muito alta, constroem uma escada com degraus de terra ou de paus. Sendo degraus de terra, êstes são imobilizados com paus roliços de uns dois metros, presos a pequenas estacas, fincadas no chão, ou amarradas transversalmente, por meio de cipós, a duas longas traves paralelas laterais.

A maloca Tuyuka do lugar S. Pedro (alto Tiquié), nas proximidades da fronteira colombiana, era (em 1947) das mais antigas. Semelhante a ela temos visto em outras tribos (Tukano, Kubéwãna, Wanãna, Bãra, Karapanã, Ide-masã, Hanêrã, Ihwãna, Roéra, e Baniva). Verificamos em nossa visita de 1954 que já havia sido abandonada.

---

(7) Em uma maloca dos Tuyuka, nas cabeceiras do Tiquié, a moenda se achava dentro da maloca, nas proximidades da porta principal.

(8) Assim se pensa comumente. A cana tem uma origem asiática da China donde passou ao Mediterrâneo, e da Espanha para o Novo Mundo. Marca-se o ano de 1627 como sendo o de sua introdução no Pará. É certo que na época dos descobrimentos os índios já plantavam cana. Alonso de Rojas, na relação da viagem de Pedro de Teixeira, em 1637, no-lo informa (Descobrimento do Rio das Amazonas", pag. 114).

Rio

Verdugo, os tecidos [illegible]
tales em desenho regular

[Facing p. 176]

Vista do Campes no período da vazante e uma canôa cheia de cestos para o comercio com outros tribos

Malóca Tuyuká (S. Pedro, rio Tiquié)

Era construída conforme os antigos costumes. Descrevê-la-emos, pois, como modêlo dêsse tipo de construção. Era retangular, medindo 27,60 metros de comprimento por 16 de largura. A cobertura (2) de duas águas, com declive bem pronunciado, para o rápido escoamento. Media internamente 7,30 metros de altura até a cumeeira, terminando a 90 cm do chão, de sorte que as paredes laterais mediam apenas 1,52 metro de altura. O telhado de carana prolongava-se um pouco mais, na parte correspondente às portas, a fim de defendê-las das chuvas.

As paredes principais obedeciam ao estilo clássico, i. e. eram de casca de árvore até 2,5 metros de altura, e depois, de trançado de ucari. As paredes laterais eram de *pehé*.

Estava construída solidamente sôbre 5 pares de esteios, *boxtá-ri* (9) que delimitam a nave central (vd. a nomenclatura dos colunas - VII - 4, e (2)). Eram paus roliços, retilíneos, rústicos (sem descascar), porém bastante regulares e proporcionais, como o eram também as vigas, *nêxtó-ri* (Uaupés *nêxtó-ni*), e calibros *wa' só-ri* (Uaupés *wa' só-ni*).

Todo o madeirame era solidamente travado com cipó (10). Internamente os esteios, todos êles bem alinhados, dividiam o espaço em 5 naves. As três centrais para uso comum: passagem, reuniões, danças, visitas e trabalho. Aí ficavam, mais para o fundo, os uten-

(9) Muito preferido para esteios é o "pau-vermelho" (mira-piranga) das Cesalpineas.

(10) Em algumas das casas modernas já aparecem pregos em vigas, ripas, etc.

4 Silva SQ19 Tucano

silos de uso comum, como sejam os grandes vasos de barro cozido e os cochos de madeira para a fermentação dos caxiris, e o forno para o fabrico da farinha. É aqui que se desenvolvem as danças por ocasião das festas (11).

As duas naves mais externas, que correspondem à parte baixa do telhado, ao longo do beiral, eram destinadas à residência das famílias: cada nave tinha 4 divisões, ao todo, pois, oito compartimentos que se dizem *wri-khãra tuxku-ri* (Uaupés *wri-khãna tuxku-ri*).

Na do tuxaua, casualmente, a separação era um pouco melhor, não bastando porem, para tolher a visão do interno. Em algumas malocas nenhuma separação existe absolutamente. Pode-se, pois, dizer que são *divisões imaginárias*, correspondentes às traves e esteios da maloca.

As estacas que suportam o telhado servem para aí se atarem as redes e permitem que, nas duas naves habitadas, se arme um jirau, *kamã-tó*, aproximadamente a 2.00 m do solo, servindo de prateleira onde cada família guarda parte da sua alfaia, e também beijú, farinha, moqueado, ficando por terra os objetos mais pesados.

Cada apartamento tem seu pequeno fogão ou trempe, o qual, em todas as casas indígenas, consta de três vasos, *nitari-a* (vd. VI - 2 a 12) de barro cozido, entre os quais se põem as acendalhas.

Duas são as portas, *sorpé*: uma principal de ingresso, voltada para o rio dita *mirpi-yokaro-sorpé*, e outra no fundo da maloca, para uso dos seus moradores exclusivamente, *doakaro-ká-sorpé*; medindo aquela 2,5 por 1,5 m de largura, com uma trave de 20 cm de altura por soleira.

Servindo de tapume para as duas portas, existe uma esteira, *sorpé-pema* (em Nhengatú *japó*), de fasquias bem forte, com armação de paus roliços. Em algumas malocas a porta assemelha-se a um duplo engradado forte e cerrado, em cujo entremeio são estendidas folhas de palmeiras, afim de vedar melhor da chuva e do vento. As esteiras são suspensas à guisa de persianas, da parte superior do porta. Mantém-se abertas durante o dia, levantando a parte inferior por meio de um cipó, *mi-yori-da*, que pende do teto, ou por meio de uma vara apoiada ao chão, *sorpé-fú-kó* ou *sorpé-fuñé-ká*. As vêzes reforçam a porta, à noite, com uma tranca, *tárto-pi*.

(11) Algumas malocas tem apenas 3 naves, sendo mais larga a central. Vimos também de 4 naves. Nas de 5, as três naves intermediárias servem sempre para os trabalhos (preparo da farinha, do caxiri, etc.) e para as reuniões.

Havendo, pois, apenas duas aberturas, o interior é sempre um tanto escuro, sendo, em parte, iluminado pelos fogões (12).

Nas modernas barracas familiares costuma existir uma separação interna, geralmente feita de cascas. Talvez essa divisão, que se vai adotando, tenha sido sugerida pela conveniência, quando devem abrigar algum hóspede, especialmente o civilizado. O índio é, de ordinário, muito hospitaleiro; não só recebe os convidados para os grandes caxiris, como acolhe qualquer índio ou branco que se encontre em viagem. O primeiro apartamento perto da porta é reservado, com exclusividade, para os hóspedes (vd. VII — 4, e 2 a).

Em alguns povoados, por solicitação do Missionário, constroem uma barraca ampla que serve de pernoite do Padre e de capela, quando não há outro local destinado ao culto.

Algumas malocas (e também barracas de Makú), em que o telhado termina muito vizinho do solo, carecem total ou parcialmente das paredes laterais. Tais paredes são regularmente dispensadas nos *ocoro-aro* (Nheengatú *tapiri* ou *papiri*), ou choças de emergência, que fazem nas roças distantes ou nas margens dos rios onde costumam pernoitar em ocasião de viagens e pescarias.

Ordinàriamente a maloca ou casa é única, e contém tôdas as alfaias da família. Começa, no entanto, a aparecer casas auxiliares. Possui uma dessas a maloca dos Tuyuca acima descrita. Um dos índios, conhecendo um pouco de português, explicou que era a "sucursal" da maloca. Muito menor e parcialmente apenas defendida por paredes laterais, feitas de palha e casca. Havia ali umas 14 redes destinadas aos Makú de serviço, o forno de farinha, peneiras, balaios, tipitis suspensos, vasos de barro cozido e uma vasilha cilíndrica muito bem feita, de casca, semelhante às barricas retas em que guardamos castanhas o bacalhau.

Presentemente (e desde a época dos descobrimentos, como atestam os primeiros exploradores), encontra-se como animal doméstico, nas várias malocas e casas, e em tôdas as tribos, o cão que, além da guarda serve também para a caça. De ordinário pequenos, famintos, excessivamente magros; alguns nem suportam o pêso do corpo. Muitos dêsses animais, pelas picadas da formiga de fogo ou fari, sofreram degenerescência da córnea e por isso têm os olhos brancos.

---

(12) Às vezes sôbre ou uma ou mais estacas, parece que plantadas só para essa finalidade, acendem à noite um pedaço de resina dita *cicantá*, que arde com luz bastante intensa e duradoura, e deixa como resíduo um breu que serve também para a calafetagem das canoas.

Aqui e acolá, pelas malocas e povoados, vêem-se também araras, papagaios, mutuns, jacamins ou jacus domesticados. As Missões vem estimulando a criação de porcos e galinhas. As galinhas remontam aos primeiros colonizadores do Rio Negro, e para sua defesa, à guisa de galinheiro onde se abriguem à noite, fazem pequenos cercados cônicos, com o vértice para cima, ou empregam alguma canoa velha emborcada, com uma abertura que fecham à noite, a fim de que não entrem a micura (gambá) ou outro animal perseguidor de galinhas.

Nas línguas *arawáke* a galinha denomina-se *karáku*, provàvelmente uma onomatopéia da voz da galinha. São, de resto, muito comuns entre as tribos do Uaupés os onomatopaicos para designar os pássaros. Quiçá de *karáka* derive a palavra da língua tukano que significa galinha i. e. *kárêkê* ou *kaiêkô* (Uaupés *kaiêkô, kaiêkô*). Nesta hipótese dos *Arawáke* é que os *Tukano* (e, em geral as tribos do Uaupés) teriam recebido os primeiros galináceos ou ao menos o conhecimento dêstes. Torna verossímil tal hipótese não só o maior desenvolvimento cultural dos *Arawáke*, como, outrossim, a sua anterior relação com os civilizados do Rio Negro.

Parece que não há regra alguma quanto à orientação da maloca, nem quanto à distância do rio ou da mata.

2) *ALFAIAS DA CASA E OBJETOS DE USO*

A casa do silvícola, que estêve a serviço do «branco» ou em comércio com êles, apresenta agora muitos objetos obtidos dos civilizados, como caldeirões, canecas, facão, machado, garrafas, anzóis, tesouras, redes e até baús ou malas para guardar suas roupas. Exceto a rede de algodão que, entre as tribos do Uaupés, Tiquié e Papuri, hoje é quase tão comum ou mais que a indígena do tucum, os outros objetos são raridades, no conjunto dos utensílios de fabricação indígena.

Lembraremos agora êstes, e, mais adiante, descreveremos os enfeites e instrumentos musicais.

a) *Cerâmica*

Cabe à mulher todos os trabalhos de cerâmica, e ao homem procurar a argila.

1) *Potes e panelas.* *Camotim* ou *camocim* é um têrmo regional do Amazonas e genérico, da Língua Geral ou Nheengatú, equivale a *pote*, e usa-se para designar diferentes vasos de forma e dimensões muito diversas, conforme o emprêgo. Entre os produtos da cerâmica indígena, alguns se assemelham a uma panela comum das

nossos, dizem-se *ki-pa-to* (Nheengatú, *yapepú*) e se empregam para preparar o mingau e a quinhapira. Existem ainda:

*kini-dod-to*, para cozinhar o peixe;

*ini-baari-pa*, na qual se serve o peixe aos comensais;

*pêru-to*, é uma espécie de talha para guardar o caxiri. Distinguem-se:

*pêru-ahua apari-pa*, grande panela preta em qúe se fermenta o caxiri de beijú;

*pêru-poari-pa*, no qual se guarda o caxiri já preparado;

*saxto-to* é o cântaro de carregar água;

*kaxpi-to* o em que se distribui o kaxpi (VI — 4, 1 (4).

Chamam *baxpa* aos vasos de forma mais achatada, como tigelas ou pratos de diversos tamanhos, alguns bem pequenos, *baxpâryakâ*, usados à guisa de colheres, que não conhecem.

Todos esses vasos são fabricados com a argila dita *dyi* (Nh. *ipiché*), que se encontra em estratos compactos, de côr azul ou verde escura, em certos lugares, especialmente nas margens ou no leito dos cursos de água. Extraem a argila com o auxílio de lascas de madeira, em camadas finas, e conservam-na em lugares úmidos e bem cobertos de fôlhas.

Para o fabrico dos vasos a mulher amassa a argila muito bem, adicionando de cinza (*ocrá*), e para cada 3 partes de barro, uma de cinza da casca do *caripé* (13), reduzida a pó e peneirada. Deixa-se a massa durante alguns dias em repouso.

Não há fôrma alguma para facilitar o fabrico; não obstante isto, os vasos são bem bastante regulares e proporcionais. Preparado o barro em feitio de corda, *torôri-da* (Uaupés *tonôri-da* e *tonini-da*), de um meio metro, começa pelo fundo, depois com estas cordas de argila a mulher vai levantando os bordos, comprimindo uma corda sôbre a outra e alisando bem. Em seguida, com um pedaço de cuia, *tocha-pétto* (Nh. *peruta*) vai desbastando e alisando melhor, por dentro e por fora. Feito o vaso, deixa-se secar à sombra, e, quando adquirida certa consistência, alisa-se bem, até tornar-se lustroso, servindo-se de um seixo rolado que denominam *wa'té-khá*.

A última operação consiste na queima. Ao redor dos vasos acendem-se algumas achas de lenha; aos poucos acrescentam-se outras achas, de sorte que os vasos serão envolvidos pelas chamas até ficarem bem queimados, isto é, a ponto de tinirem. Com meia hora

---

13 Árvores de várias espécies da família das rosáceas, (*Licania utilis* e *licania mysticédes*, Benthe., *licania sagba*, Hook). Sua cinza dará forma porosidade ao vaso e não deixa fender-se a argila.

4: Silva SQ19 Tucano

no fogo intenso estão prontos: alguns apresentam côr esbranquiçada, outros, avermelhada. Êstes são os mais bem cozidos.

Para tornar os vasos escuros, lustrosos e impermeáveis começam por esfregá-los bem, por dentro e por fora, com fôlhas de cubio, *kafoi pûri*, ou de ubio, *kdré pûri*. Acendem, depois, um pequeno fogo com fôlhas úmidas, de modo que haja muita fumaça, a qual é recebida antes na parte interna da panela ou pote emborcado, e depois também na parte externa. O vaso, por fim, será lavado e apresentará, então, a côr escura, quase negra, firme, e está, outrossim, impermeabilizado.

Os vasos são relativamente leves, com a resistência conveniente para seu emprêgo. Podem ser submetidos ao fogo mais intenso, sem que se fendam, nem deixam vasar a água ou o líquido que neles se guarda. Vêem-se algumas talhas com quase um metro de diâmetro e mais de meio metro de altura, portanto com capacidade para várias centenas de litros.

O vaso para o caapi, *karpi-to*, difere dos demais não só pela forma, pois se assemelha a uma ânfora de bôca estreita e munido de duas pequenas asas laterais, como também por ser decorado de desenhos.

O *karpi-to*, depois do uso nas festas, conserva-se regularmente na maloca, suspenso a uma das estacas angulares. Não conseguimos saber o motivo dêste costume.

2) *Fogão ou trempe*. O fogão consta sempre de três vasos de barro cozido, ditos *ntari-a* (em Nheengatú, *itacurúa*), entre os quais se põem os tições. São de forma cilíndrica, porém com as bases um tanto alargadas, quase como se fôssem dois cones truncados superpostos, e isto lhes dá maior estabilidade. Medem, aproximadamente, 25 cm de altura e 10 de diâmetro. São bastante leves e com a vantagem de só se aquecer a face voltada para o fogo, e por isso pode-se tomar com a mão pela outra face, quando se quer mudar de lugar. Dispõem-se com o afastamento conveniente às dimensões das panelas. Sôbre êstes vasos põem-se as panelas para preparar o mingau ou a quinhapira.

3) *Forno*. O forno, *arta-ro* (Nh. *papúna*) consiste num vaso de barro cozido, plano como uma bandeja, de dois a quatro cm de espessura. Mede de 80 a 120 cm (14) de diâmetro, com rebordos

(14) Koch Grunberg (*Zwei Jahre*, 335) diz que encontrou forno de até 2 metros de diâmetro e com desenhos de meandro no suporte.

4: Silva SQ19 Tucano

de 10 a 15 cm. É preto, da mesma composição dos *camotins*. Pela sua dimensão e pêso não se costuma remover da sua posição, que é sôbre um fogão ou fornalha de barro, de forma circular, com abertura lateral por onde se introduz a lenha. O diâmetro do

trempe (vitari-a) e suporte de panela (sá'ri-ro)

fogão, de 50 a 100 cm, varia de acôrdo com as dimensões do forno, e êste, com a quantidade da farinha a preparar. As vêzes o forno assenta-se simplesmente sôbre 3 ou 4 pedras encravadas no chão.

forno (aka-ro) e grande vaso para as bebidas (pêru-tu)

Os fornos de grande dimensão são fabricados no local em que serão usados. A saber, sôbre a fornalha, preparada precedentemente, a mulher dispõe uma grade de varas bem cerradas, estende por cima uma camada fina de terra, com o fim de nivelar melhor, e com as cordas de barro inicia o fabrico do forno, pelo centro da parte plana, até alcançar as dimensões que deseja. Depois de sêco, aí mesmo é queimado, como se faz com os camotins.

Entre os *Suryana* vimos preparar um grande forno sôbre uma escavação feita no chão da casa, servindo de molde. Aí mesmo foi deixado a secar e, ao depois, foi queimado o forno.

Distingue-se um forno de bordos um pouco mais alto, para o preparo da farinha, e diz-se *pokâ-axtêri axtâ-ro*, e um de bordas mais baixas para o do beiju, é o *ahû-ga peóri-axtâ-ro*.

b) *Utensilios de madeira*

Os instrumentos para seus trabalhos na madeira eram, primitivamente, o machado de pedra *ôxtâ-komé*, a enxó, *syó-a*, também de pedra, e o fogo, *perkâ-mê*.

Com um pedaço de diabase escura (15), polido de encontro às pedras, fabricavam seu machado primitivo. Para isto bastava enfiar a diabase em uma fenda na extremidade de um pau reto, na posição mesma em que encabamos os nossos machados de ferro. Com auxilio de fio de tucum e do breu, se assegurava a estabilidade necessaria. A enxó resultava de uma diabase menor, prêsa à extremidade de um pau recurvado como gancho, *yarpú*. Hoje a *syó-a* é apenas um instrumento usado como adôrno nas danças, enganchado no ombro esquerdo.

1) Canoa. A canoa, *yurkô-só*, é um utensilio de primeira necessidade, pois essas tribos vivem em região onde os cursos de água constituem o único meio de comunicação (16), e o peixe é um alimento principalissimo. Hoje varias tribos sabem construir suas canoas; porém canoeiros especializados são os *Tuyuka*, *Bará*, *Mikura* e *Baniua*.

Sendo os rios da região de grande caudal ou com muitas cachoeiras e pedras, não podem usar canoas de casca, como outras tribos (17), senão de madeira muito resistente e de um só tronco. Algumas de 3 metros de comprimento e seus 40 cm de largura; outras, grandes lenhos de 8 a 10 metros de comprimento e 100 a 120 cm de largura. Tôdas, porém, com *popa* e *proa* altas e afilando. Correntosos como são os rios (18), não permitem embarcações maiores. Canoa pequena determinará, por seu lado, seja pequena a comunidade, por isso vigora a comunidade familiar. Porém mui-

(15) Encontram-se em algumas cachoeiras, por exemplo no Pirá-paraná, e já semitrabalhadas pelas águas.

(16) Os "varadouros" através da mata são poucos e de secundária importância.

(17) O explorador Lobo D'Almada fala também de canoas, com *pachiubas estribadas*" (?). Eram, porém, perigosas e serviam para 2 ou 3 homens descerem o Tiquié no trecho sem cachoeiras. (Cfr. "Lobo D'Almada", de Arthur Cesar Ferreira Reis, — Manaos, 1940, pag. 73).

(18) Entendemos falar especialmente do Uaupés e do Papuri, onde estão os mais numerosos núcleos indígenas.

tas vêzes não bastara para o transporte de tôda a família e alfaia. Por outra parte, para a sua construção dois homens são suficientes: pai e filho.

Canoa (Juxkuaá)

Com pancada de machado sôbre a casca da árvore escolhida (19), esta vem a secar. Uma fogueira em redor terminava por abater seu tronco que, com o fogo lento (20) se vai escavando. A enxó servia para raspar o carvão, deixando mais lisa e regular a parte interna. Coloca-se, ao depois, a canoa escavada como se quis, sôbre umas travessas, e um fogo por baixo, de sorte que se aqueça o lenho e não se queime. Sob a ação do calor as fibras tornam-se mais flexíveis e o canoeiro vai, aos poucos, por meio de pequenas hastes à guisa de cunha, forçando de modo que se vai ampliando o vão da canoa, começando pelo centro, depois para a popa e a proa. A fim de que não se contraia ao resfriar-se, põem-se estacas transversalmente, nos lugares onde mais tarde ficarão tábuas para

(19) Empregam, para isto, de preferência o kumã-ko (Nheengatú mirá-tauá, pau amarelo, *Euxylophora paraénsis*, Hub. das rutáceas), muito resistente e leve, de modo que as canoas nunca vão ao fundo. E também o sari-ko (louro preto, *Nectándra mollis*, Nees. das laurácens), o sã-rã (itauba preta e amarela silvia *itauba*, Pax.) e outra laurácea denominada pi'ã-gã.

(20) Para tal efeito acendem a casa do cupim, buxtuá-gã que serve maravilhosamente, porque fornece um fogo lento e duradouro e facilmente o indígena vai controlando, a fim de não desbastar mais do que convém. É o processo de que regularmente se servem quando querem escavar a madeira para o fabrico do cocho, pilão, trocano, canoa etc.

os assentos. Conforme seu comprimento, terão 3, 5 ou mais assentos. Embutam-na com tal maestria que, posta nágua, a embarcação se equilibra perfeitamente, com a popa e proa bem levantadas. Os orifícios ou fendas são obturados com breu, *gxpé*.

Sob influência dos civilizados, aumentam a altura dessas canoas, com tábuas fixadas com pregos às bordas. Tais canoas dizem-se, em têrmo regional, *montarias*.

2) *Remo*. O remo, *wahd-phi* (Uaupés *uhd-phi*) muitas vêzes é feito de *sabi-ko*, como a canoa. O cabo, *wahd-phi dõxpo-d*, é sempre uma pequena saliência cilíndrica transversalmente, de leve curvatura, como pau de muleta. Entre os Tukano está perfeitamente de acôrdo com o estilo do seu banco e da sua cigarreira. As dimensões dependem, evidentemente, da vontade do dono e da finalidade: há remos pequenos para as crianças, médios para as mulheres, e grandes para os homens.

Remo Tukano
(note-se a cabeça em pau-de-muleta e a ponta em breu)

Por influência dos modelos dos remos civilizados que navegam êstes rios, vê-se hoje em dia muita variedade de feitios na pá dos

4: Silva SQ19 Tucano

remos: arredondada, lanceolada, etc. Não raro trazem, na pá, desenhos coloridos (círculos, etc., evidentemente imitação dos civilizados). Originàriamente, parece, que usavam o remo de pá arredondada, porém com uma ponta quase imperceptível; assim, geralmente, nas malocas mais afastadas.

3) *Ralo*. Em tukano se diz *sorkõ-rõ* (Uaupés *sorkõ-nõ*) e em Nheengatú *ietesé*. É uma especialidade dos índios *Baniva* do rio Içana (vd. IV — 1, b) onde num igarapé próximo da cachoeira de Tunuí existe o quartzito empregado no ralo.

Temos visto no Içana que o preparo da tábua cabe ao homem, sendo a incrustação das pedrinhas executada ordinàriamente pelas mulheres.

Como objeto que é de primeira necessidade, encontra-se em tôdas as malocas e barracas, mesmo em regiões muitíssimo afastadas do Içana, adquiridos dos Baniva por troca.

Fabrica-se geralmente de *marupá* (*simaruba amara*, Aubl.), madeira branca e leve, cujas fibras tendem a voltar à posição primitiva quando desviadas. Em tukano denomina-se precisamente *sorkõ-nõ*, isto é, madeira de ralo. Consiste numa tábua de 60 a 100 e 120 cm de comprimento, e 40 a 50 de largura por 2 a 4 de espessura, e um tanto recurvada. Começam por executar na face côncava o desenho que desejam, ou, antes, tradicional e que facilita a operação de ralar (29), como um pequeno sulco. Depois com uma ponta (hoje servem-se de um prego), e seguindo as linhas do desenho, abrem um pequeno orifício. Antes que as fibras da madeira voltem à posição natural, incrustam pequenas pedras de silex, da forma de um dente, de sorte que emerge apenas uma aresta de meio centímetro. Estabilizam-se melhor as pedrinhas com o latex da seiva, espalhado com um pincel de fibras de bananeira, cujo tanino dá mais consistência ao latex. As pedras são encravadas à distância de um centímetro uma da outra, e ocupam a parte central da tábua, deixando pequenas margens laterais, uma margem inferior de 15 ou 20 cm e outra superior, ou cabeça do ralo, *sorkõ-rõ dõrpod*, de uns 30 cm, tendo esta última uma saliência, a modo de cabo. Êsse cabo, no entanto, serve apenas para suspender o ralo.

A mulher, ao ralar, fá-lo com as duas mãos alternadamente, e não em ritmo uniforme, porém com arrancos que provocam movimento dos próprios seios. Estará assentada ao chão, tendo entre

(21) Há um modêlo de desenho denominado precisamente *sorkõ-rõ ôori*, flôres do ralo.

as pernas o ralo, cuja cabeça apoiam ao ventre. É um trabalho exclusivamente feminino.

É o ralo um objeto tão útil que, no baixo Rio Negro, os civilizados o adotam, bem como ao tipiti (VI — 2, d (1)).

4) *Banco.* O banco, em tukano *kû-mû-rõ* (Uaupés *kûmû-no*) é de uso geral, embora seus produtores especializados sejam os *Tukano*. São fabricados, geralmente, de *sorva* ou *arara-seringa* (*Couma guianensis*, Muell.), madeira não muito pesada e que dificilmente se fende. Preparavam-no antigamente com o auxílio da sua enxó primitiva. Hoje, em vez da *syó-a*, usam um ferro de cova ou mesmo uma enxó obtida dos civilizados.

Banquinho monóxilo (ku-mû-rõ)

As dimensões são as mais variadas, alguns de 30 a 40 cm apenas, e outros de 120 a 150 cm. Constante, porém, é o estilo, a saber, o lugar do assento é côncavo, com dupla curvatura nos sentidos longitudinal e transversal. É sempre baixo, de 10 a 15 cm tão só de altura, com quatro pernas ligadas por duas travessas longitudinais. E o banco, com os suportes é *monóxilo*, isto é, de um só pedaço de lenho.

Costumam adornar o banco com os desenhos tradicionais, e por cima, um como verniz, obtido do sumo da casca de um ingazeiro silvestre, *mê'nê* (Uaupés *mê'nõ*).

Com dois dias de trabalho um homem prepara o seu banco.

Pelo instinto de imitação, e também por ser mais simples, muitos índios vão alterando o tipo primitivo do banco, usando pregos para fixar os suportes, e êstes em número de quatro, como os pés dos nossos mochos.

Em algumas casas indígenas vimos quatro pequenas estacas encravadas no chão, e sôbre elas uma tábua fixada às escatas por pregos, ou com quatros orifícios por onde se encaixam as estacas.

5) *Cigarreira*. Em tukano denomina-se *ufikaro yazpa* ou também, *ufikaro sere*, ou ainda *mõrõ dõxkõ* (?) (em Nheengatú, *emapu*). Nos dabacuris é ritual o uso do fumo sob forma de um grande cigarro, *ufikaro*, de seus 20 cm de comprimento. No entanto, hoje é raro encontrar-se a cigarreira primitiva. É grande, medindo 50 ou 60 cm, constando de uma *forquilha*, no estilo do banco, a qual prende o cigarro, e um *cabo* em ponta, por onde se segura o *ufikaro* enquanto se fuma e que se encrava no chão quando não se usa mais.

6) *Cocho de caxiri*. Em tukano *pèru yuxkõ-sõ* pròpriamente quer dizer *canoa de caxiri* (em Nheengatú *tiea*, donde o término *uba* que significa *canoa*). São troncos de madeira de até 50 cm de diâmetro, por uns dois metros de comprimento, cujo interior é também escavado com auxílio do fogo, e com uma fenda longitudinal quase da extensão do tronco. Tem capacidade de várias centenas de litros, e aí os indígenas deixam o líquido, coberto com fôlhas de bananeira, a fermentar à sombra, para as festas.

cocho de caxiri (pèru yuxkõ-sõ)

7) *Pilão*. O pilão, *pa-mõ-a* é um dos utensílios indispensáveis e consiste num tronco de madeira escavado. O feitio e dimensões, porém, variarão, conforme a finalidade. Ou terá a forma comum, como se usa entre nós, e é sempre de pequeno tamanho; êste serve, por exemplo, para pilar as fôlhas do *ipadú*.

Ou se assemelhará a um cocho de caxiri, medindo o tronco um metro ou mais de comprimento, porém de pequeno diâmetro (seus 20 cm). Neste segundo pilão é que pisam o *caapi* (e por isso se diz *kazpi pa-mõ-a*) e o cará cozido e mascado para a preparação do caxiri de cará.

A mão-de-pilão, *dõxkõ-kõ*, parece-se com a que se usa entre os civilizados. Consiste em um pau roliço, cuja extremidade inferior se alarga em forma cilíndrica de raio maior.

Pilão (pa-mã-a)

c) *Fiação e tecidos*

1) *Preparo do fio*

As tribos do Uaupés desconhecem o algodão (22) e preparam seus fios com fibras de palmas, especialmente de *ncé* (miriti ou buriti, *Mauritia flexuosa* e *vinifera*) e de *yõzkd* pûri (tucum, *astrocaryum tucumoides*), sendo as fibras dêste mais resistentes e duradouras.

Colhem-se as fôlhas ainda novas do tucum, ou melhor, o grelo de côr amarelo esverdeado, antes de abrir-se. Separam-se de cada folíolo dois feixes de fibras, de seus 30 a 40 cm de comprimento. Depois de lavadas em água natural, expõem-se ao sol para secar e alvejar.

---

(22) Parece que as tribos antigas das margens do Amazonas cultivavam o algodão. De fato, o Pe. Alonso de Rojas (Viagem de 1637-*Cfr.* "Descobrimentos do Rio das Amazonas", pág. 116) informa: "a construção de naus é muito facilitada nestas montanhas (?), tanto pela grande abundância de madeiras e de breu, como pelo muito algodão que se colhe, haver grande abundância de pencas de que se faz a pita (?), e palmeiras com que se podem fazer enxárcias tão fortes como as de canhamo". A não ser que por algodão êle entenda a paina.

O processo de cardação se faz com auxílio do «ouriço» do piquiá (*caryocar villosum*, Aubl.), *ipu-pu*, para «pentear», *wohõa-po*, as fibras, tornando os fios bem finos. Tem-se assim o tucum em rama, *pôrka pari pôrã* (Uaupés, *pôrka pûri pôna*).

A mulher (23) prepara o seu fio esfregando um feixe de fibras contra a coxa. É natural que assim resulte encardido o fio. Para tirá-lo, lavam-no bem, servindo-se também das fôlhas do mamoeiro ou do suco do limão; recursos êstes, evidentemente, mais recentes.

Primeiramente toma ela dois feixes de fibras desigualmente, isto é, a ponta de um avança mais de um lado, e a do outro, para a extremidade oposta. Com a mão direita enrola *para a esquerda*, a saber, contra a coxa do joelho para cima. A fim de emendar novas fibras, abre a extremidade do fio assim enrolado, e aí insere mais dois feixes de fibras, combinados também desigualmente, e enrola *para a direita*, isto é, esfregando em sentido oposto, da parte superior da coxa para o joelho. Feita a emenda, enrola os dois feixes de fibras emendadas *para a esquerda*, como o fizera aos dois primeiros feixes, e assim por diante, atritando as fibras com a mão direita sôbre a coxa direita. Para enrolar, atrita-as coxa acima; para emendar, coxa abaixo. Dois feixes de fibras dão o fio mais fino, e torcendo juntos dois ou mais fios obtém-se a espessura que se deseja para o trabalho em vista. Quanto mais fino o fio, mais delicado ficará o tecido.

Quanto está sob forma de *meada*, é que se aproveita para a lavagem e clareamento do fio, e também para tingi-lo. Servem-se, ordinàriamente, de corantes vegetais. As côres preferidas são: a *avermelhada*, obtida de *onôrã pûri* (carajurú, vd. VII — 3, e), a *amarela*, por meio de uma pequena batata semelhante ao gengibre, e que se diz em Nheengatú *makaratafa*, e a *escura*, que se obtém do cozimento do arbusto *dyawé* (jenipapo). Da *meada* se enrola, ao depois, o fio em grandes *novelos*, que se guardam dentro de uma peneira, a fim de se não sujar.

2) *Redes de dormir*

O índio nunca dorme sôbre o chão, sempre em redes (24), *pûghõ*, e transportam-na consigo em suas viagens. A rede corres-

(23) Entre os Tuyuka, Baré, e em geral as tribos das cabeceiras do Tiquié, Papuri, Komé-ya, é o homem quem prepara o fio de miriti e a rede de "trinta fios".

(24) Pelo contacto com os civilizados têm aprendido a dormir sôbre o assoalho ou tolda das lanchas, e depois também sôbre bancos e caixões.

4: Silva SQ19 Tucano

pende perfeitamente às exigências do clima da região, quente e úmido, pois é fresca, ventilada, leve, de pequeno volume, e tecida como costuma ser, de tucum (25) apresenta suficiente resistência e durabilidade. Fazem-na de diversos tamanhos, para crianças, como para adultos. Existem três tipos de redes de dormir:

a) *Rede de trinta fios.* É a denominação comum em Português; em Nheengatú se diz *kisaiú*, e em Tukano, *ne-é pú-ghõ*, isto é, rede de miriti. É feita sem uso de tear. Dão trinta ou mais voltas ao redor de duas estacas, tão separadas quanto o comprimento que desejam; sempre, porém, maior do que o corpo de quem deve usá-la. Esses fios são unidos em dois *punhos*, como anel, *pú-ya-po*, por onde ficará suspensa a rede. Transversalmente, em ângulo reto, passam os fios que determinam a largura da rede, presos aos horizontais por nós, de sorte que resultam pequenos retângulos de um palmo mais ou menos.

Pela sua simplicidade é conhecida e produzida por tôdas as tribos, embora denominada «*rede de Makú*». Por causa dessa denominação depreciativa, e principalmente pela facilidade atual de adquirir dos civilizados redes de algodão mais duráveis e econômicas, vai perdendo sua aceitação entre os índios das outras tribos, e hoje quase se encontra só entre os Makú e as tribos sem contacto com os civilizados. Os Tukano informam haver aprendido dos *Desána* o processo dêsse tipo de rede. Não souberam esclarecer se antes usavam a *rede-puça*, ou se desconheciam a rede e dormiam sôbre estrados.

b) *Rede batida.* Em Tukano denomina-se *pá-tuke*, e em Nheengatú *makira*. É fabricada com um tear (26) muito simples,

---

(25) A "rede de trinta fios" dos Makú costuma ser de fios grossos de miriti.

(26) Koch Grunberg (*Zwei Jahre*, 340) opina que o tear seja de origem européia. Parece-nos aceitável essa opinião, e julgamos poder avançar que também o feitio da "*rede batida*" não é de origem indígena, senão aprendido dos civilizados. Confirmam esta conclusão: 1.º o fato de não serem muitas as índias que sabem fazer a "*rede batida*"; 2.º as que presentemente o sabem (como resulta de nossas indagações) o aprenderam nos colégios da Missão ou com as ex-alunas da Missão; 3.º sabemos que o Governador da Capitania de S. José do Rio Negro, Lobo D'Almada, no seu plano econômico de incentivar a indústria, favoreceu a tecelagem, chegando-se "a confecção de pannos necessários ao fardamento da guarnição, aos colonos e aos índios descidos, empregando dezoito teares e dez rodas de fiar, com vinte e quatro fusos cada uma. Só em 1798 trabalhavam como fiadeiras cento e cincoenta e sete índias" (A. Cesar Ferreira Reis — *Lobo D'Almada* — Manaos 1940, pag. 35); 4.º Nos povoados mais em contacto com a civilização, como nas malocas mais afastadas, nunca se encontra a "*rede-batida*";

*pũ-pá -tuse nerió-ri*, constando de quatro paus roliços ligados em retângulo. Cada uma das suas hastes verticais (urdideiras) possui dois orifícios por onde passam as horizontais. Os orifícios são propositalmente muito grandes, de sorte que com calço conveniente, pode-se variar a distância entre as hastes horizontais e assim obter redes de diversos comprimentos.

A urdidura se faz no sentido vertical (ao redor das travessas horizontais, cuja separação marca o comprimento da rede), passando umas voltas com fio bem extenso. As travessas verticais do tear determinam a largura da rede.

Por entre os fios verticais vai a mulher desenvolvendo a trama, servindo de lançadeira, *wa'mẽ-kõ dõxkã*, pequena vara com o fio enrolado, e batendo com uma régua, *pá -turi-phi*, a fim de unir bem as malhas. Resulta um verdadeiro tecido de malhas bem cerradas, e redes tanto mais elegantes e cômodas, quanto mais fino o fio.

Completam-lhe a elegância com uma «varanda», *pũ-ghõ so'mũ-tõri* ou *pá -tuke-udri*, ou franja marginal de feitio variado, como se faz *macramé*.

Prepara-se a varanda esticando-se um fio do tamanho correspondente ao da rede. Ao longo dêsse fio prendem-se com nós as fibras de tucum dobradas ao meio. Com essas fibras variamente coloridas, tece a mulher sem auxílio de *birros*, mas apenas com os dedos um *ponto* de renda um pouco largo, até obter uma barra

---

porém os indígenas ou usam só a rede "de trinta fios", ou as compradas dos civilizados. 5.º Parece-nos descobrir ainda um argumento, a saber: fora do Colégio Feminino das Missões Salesianas, em numerosas excursões por rios e igarapés, apenas em dois povoados tivemos a oportunidade de ver o *tear* e o trabalho da "*rede-batida*", e tratava-se nos dois casos de moças que haviam aprendido na Missão e o executavam por encomenda de civilizados. Mais, os termos da língua Tucano que apresentamos a propósito da "*rede-batida*", resultam de inúmeros inquéritos, em diversas épocas e lugares, com os ex-alunos da Missão nunca desenvolvidos. Não se trata de uma *nomenclatura* amplamente conhecida e empregada por todos, como se poderia esperar se a "rede-batida" fôsse uma indústria primitiva. Muitos desconheciam os termos; outros apresentavam termos formados na ocasião e improvisados. Como termos genéricos e de ocasião, eram, às vezes sim e às vezes não, compreendidos e aceitos por outros indígenas.

Antes que entrasse o comércio das atuais redes de algodão (ditas na região, "redes-de-Cena", as civilizadas do Rio Negro e algumas índias do Içana continuaram a "bater" as suas redes nos teares primitivos, como haviam aprendido no baixo Rio Negro. As Missões Salesianas procuram, por sua parte, que não se perca esta habilidade, e ensinam às índias de mais capacidade e jeito, não só a fazer a "rede-batida", como pelo mesmo processo, a preparar tapetes, toalhas de mesa, guardanapos, bolsas e outros artefatos ao gôsto moderno.

de seus 10 ou 15 cm. e esgarça depois as pontas com o ouriço de piaçava. Não só empregam fibras de diversas côres, como até prendem-lhes hoje em dia, belas e coloridas plumas de passaros, conforme o gôsto dos caboclos do Rio Negro.

c) *Rede-puçá*. Em Tukano se diz *pú piõke*, denominamo-la rede-puçá porque se assemelha, pela laçada, as redes de pesca chamadas puçá em Lingua Geral (27). Para o fabrico dêsse tipo de rede usa-se um tear algo diferente do que se viu precedentemente. Consta de dois pares de hastes verticais, com a pequena separação de um palmo mais ou menos. Um espaço maior variável medeia entre um par e outro, e marca o comprimento da rede que se deseja.

Horizontalmente esticam-se dois fios, com a distância entre si de 3 a 4 cm. Entre êles a mulher vai dando *laçadas* ou *pontos* como os de tarrafa. Esticam mais dois fios horizontalmente, e novos pontos se entrelaçam aos primeiros, e assim sucessivamente.

Este tipo de rede é, quiçá, mais trabalhoso que a «batida». Os Tukano a denominam *pú pyõke* porque a linha se enfia, *piõ*; e se dá a laçada com a mão.

3) *Redes de pescar* (puçá)

Os Tukano as denominam *wehé-ko* (28) pela sua finalidade que é *matar* os peixes (*wehé*, quer dizer *matar*), e em Lingua Geral, puçá. É uma malha de *nós* feita de fibras de *caroatá* (*Bromelia pinguin* Lin.), *caroá* (*Neoglaziovia variegata* Ar. Com.) ou mesmo de *tucum*. As malhas são mais estreitas ou mais largas, conforme sua finalidade.

São fabricadas pelo homem. A mulher gravida não pode tocá-la, porque seria infrutuosa a pesca. Quando preparam o seu puçá os homens ficarão em silêncio, para terem sorte na pescaria.

Executam o trabalho de duas maneiras: ou com laçadas sucessivas, como entre os civilizados se preparam as tarrafas de pesca; ou servindo-se de fasquias de arumã, prendendo-as de distância em distância com laçadas de caroatá, como quem estivesse preparando

---

(27) Informa o Pe. Ezequiel Lopes que, por volta de 1931, dentre os indiozinhos Pirá-tapuyo do rio Papuri, que vinham internar-se como alunos no colégio de Iauareté (rio Uaupés), alguns apresentavam-se munidos de rede de dormir tipo puçá.

(28) O Missionário Salesiano, Pe. Eduardo Lagório, faz a seguinte observação: "Interessante o verbo *matar*, *wehé*; usa-se quase exclusivamente para indicar a morte de peixes e animais. Para os homens, não havendo quase assassinatos violentos, usam-se as expressões relativas aos vários modos de envenenar".

um cesto. Pronto êste, retiram-se as fasquias e as laçadas de caroatá apresentam a rede desejada.

Fabricam-nas de duas dimensões: uma maior, (*jererê*, em Nheengatú), com a forma de um funil bem largo; mede 1,5 m ou mais de comprimento e mantém-se aberta, no ato da pesca por meio de duas varas amarradas nas extremidades, de sorte que forma com o auxílio de uma terceira vara em cunha, quase uma circunferência.

Fazem também redes menores e afuniladas, tipo ganapão, adaptadas a um aro munido de um cabo, como as que se usam para caçar borboletas. Com estas é que apanham os peixes entontecidos pelo timbó.

Parece que todos os homens sabem tecer suas redes de pesca, com exclusão dos rapazes da última geração.

4) *Outros tecidos*

Com os fios de tucum ou de miriti executam aquelas elegantes ligas, *yurta-seri*, que aplicam às pernas (conf. VII — 3,d (1)).

Com êsses mesmos fios ou com embira retorcida preparam alguns dos enfeites de danças que devem sustentar a bela plumagem.

Servem-se do pêlo do macaco para preparar tranças que usam como adornos de danças.

Em tecidos, como em trançados, combinam elementos de várias côres, resultando desenhos muito regulares e agradáveis. Pela regularidade e acabamento, alguns dos seus trabalhos atingem quase a perfeição.

d) *Cestaria e trançados*

Para a sua cestaria, — e todos êstes trabalhos são executados pelos homens, — a matéria-prima é mais variada. Usam a *embira* ou liber de algumas árvores, especialmente da que denominam *pii-karó-pó*. Empregam *palmas*, com um trançado simples dos folíolos, nas paredes das habitações e, mais raramente, também nos telhos. Servem-se de fasquias de paxiúba, (*waxtá*), patauá, (*yumú*), e jacitára (*wai-tu*, uma palmeira de caule sarmentoso e aéreo) para esteiras (*i'mi-sa*) e cercados de peixe (*sûxteri-ka*). E com o cipó uambé (*mi'si*), que se fabricam os cestos ditos *aturás*, e as nassas de pesca. Mas é especialmente do arumã (*wohó*), reduzido a fasquias (*woho-phi*), que mais se servem, pois com elas preparam cestos, peneiras e o tipiti.

O arumã (*Schinosiphon ovatus*, Kokes, da família das marantáceas) é uma planta de «terra-firme», porém úmida, de fôlhas

largas, cujo colmo pode superar os dois metros. Dêle separam-se fasquias, as quais, depois de sêcas, adquirem a côr amarelada da nossa palhinha de cadeira. Quando desejam executar seus desenhos, os indígenas tingem as palhinhas com seus corantes vegetais. As vezes são coloridas de um só lado, por exemplo para os desenhos do lado interno das peneiras.

Conforme o destino, varia a largura das malhas e o feitio.

Para o trançamento igualam bem as palhas, põem-nas bem ordenadas pelo chão (ou sôbre uma esteira), e de cócoras, firmando-as com os pés, começam a trançar com talas tranversais incolores ou coloridas de acôrdo com os desenhos que entendem executar.

Se se trata de uma peneira ou cesto, arrematam com três ou quatro voltas de cipó, à guisa de aro (*be'tó*), no qual prendem as extremidades do trançado e aparam depois as pontas das palhas ou das fasquias.

A cestaria dessas tribos é das mais ricas que se conhecem. Empregando material mais flexível ou menos, combinam o *trançado* e o torcido em vários processos técnicos, de espaços largos ou cerrados, e de tramas e urdiduras em várias direções, de sorte que resulta uma variedade surpreendente de debuxos. Como demonstração ainda de sua habilidade, entremeiam fasquias coloridas, donde aparecem as gregas caprichosas que caracterizam seus desenhos. E, com tal riqueza de fantasia e técnica, executam objetos de variada dimensão e feitio, consoante suas finalidades.

Cestos e peneiras são fabricados por tôdas as tribos, contudo especialistas são os *Desana*.

1) *Tipiti*. O tipiti, em tukano *wãx-ti-kê-ã*, é a prensa do índio. Consiste num cilindro ou tubo que os homens tecem, mais comumente com palhinha de arumã, de malha bem estreita. Mede 1,50 e até 2 metros de comprimento, e apenas 10 cm de diâmetro. A extremidade superior, *wãx-ti-kê-ã dõrpo-ã* (cabeça do tipiti), é aberta e termina em alça, por onde se suspende o tipiti a um dos esteios da habitação. A outra extremidade é fechada, termina também em alça, *wãx-ti-kê-ã be'tó* (anel do tipiti). Com adequado movimento das mãos reduz-se o tipiti a menor comprimento, o que tem por efeito aumentar-lhe o diâmetro, e pela bôca assim alargada se introduz a massa da mandioca ralada (cfr. VI - 4, a).

2) *Peneiras*. Usam-nas para *coar* a massa da mandioca, *tamisar* a farinha, etc. e são tecidas de palhinha de arumã.

A largura das malhas, dimensões e feitio variarão conforme o uso a que se destina a peneira. Encontram-se algumas rasas, como as nossas peneiras comuns, e outras mais fundas.

Pode-se distinguir três tipos de peneiras: 1.º *tõ-pa* (em Nheengatú, *cumuta*) é grande, de malhas bem estreitas, serve para coar a manicuera e extrair o amido; 2.º *suó*, ou melhor *sóó-a* (Nh. *urupema*), de malha mais aberta, e, algumas vêzes de feitio quadrado, dentro de uma moldura de quatro paus roliços; destina-se a tamisar a massa da farinha dagua; 3.º *Baxti* mais funda, como pequenos cestos para guardar o beiju, e outros alimentos e objetos. Êstes é que costumam trazer os belos desenhos tradicionais.

3) *Cestos*

a) *Pi'i* são cestos grandes, que no Amazonas costumam denominar *aturás*. Usam-no para transportar mandioca, frutos, terra, lenha, bagagem; são tecidos exclusivamente pelos *Makú*, que trabalham tambem para as outras tribos.

A forma tradicional e a cilindrica, com a base um pouco mais larga que a bôca. A matéria é o cipó uambé, *misi-da*, bem forte, escolhido sem nós, e que se põe ao fogo a fim de soltar fàcilmente a casca. Lasca-se o cipo em duas ou três partes, e começa-se o trançado pelo fundo. A bôca é de aneis de cipó, como aro, e se amarra ao cesto com fios tecidos de caroata.

A mulher, a quem compete carregar o *pi'i* (o homem deve andar sempre desembaraçado, a fim de poder defender a si e a familia) carrega-o da seguinte maneira: vai o *aturá* às costas, porém suspenso da fronte por meio de uma embira larga, *pi'i-karõ-pá* (29), cujas extremidades passando pela bôca do cesto, correm-lhe ao longo e se entrelaçam no fundo dêste. Transportam assim carga de 30 a 50 Kg a quilometros de distância.

b) Denomina-se *pi'i-kamõ* um pequeno cesto, do feitio e matéria do *pi'i*, e no qual as mulheres guardam seus adereços e pó de pintura.

c) De cipó costuma ser também um pequeno balaio, dito *wamõ azka-ro*, onde o pajé guarda os seus objetos de tratamento dos doentes (cfr. VIII - 2, e).

d) Para guardar ou transportar a farinha que vendem, fazem-se os *paneiros*, *ferõ-pi* (Uaupés *ténõ-pi*), da fasquias de arumã ou de taquara, e de malhas bem largas (dois a três cm) e assim o fabrico é mais rápido. Forram-nos com muita habilidade, com folhas de *mpó-pó pùri*, ou mesmo de arumã ou outras plantas, de tal mo-

(29) Ou *pi'i-kãrõ-kaxsori*. Parece que a árvore derivou seu nome do *pi'i*, porque sua embira é muito empregada para transportar o *pi'i*. Contudo usam-se também outras embiras, como *só'ú-kaxsero*, *deóti-kõ*.

que não deixam passar a farinha, embora com o pouco cuidado que costuma haver nos embarques, desembarques e transportes.

4) *Abanador*. Com a palma do miriti, do tucum, ou palhinhas de arumã, trançam um objeto semelhante a um abanador, e que pode perfeitamente substituí-lo, diz-se *uê'ri-rõ* (Uaupés *uê'ni-nõ*). Fabricam-no de diversos tamanhos e servem-se dêle para atiçar o fogo bem como de pá para virar o beijú no forno. Tem forma de cunhão, e as próprias palhas enfeixadas constituem o pé ou suporte, por onde se segura o abanador.

Veem-se alguns muito grandes, do tamanho natural das maiores palmas de miriti, de que são feitos, e usam-nos como esteiras para as divisões dos compartimentos das malocas, ou mesmo para servir de parede.

5) *Aljava*. Ainda com fasquias de arumã preparam uma aljava *ba'sa-sa*, de forma cilíndrica, e seus 40 cm de altura, com um diâmetro de 8 ou 10 cm, alargando-se para a bôca. Serve para guardar as pequenas flechas envenenadas da sarabatana, ou *curabis*. A fim de que a água não dissolva o veneno, costumam impermeabilizar essa aljava com breu.

6) *Suporte de panela*. Com talas de paxíúba de 40 ou 50 cm de comprimento, preparam um suporte para as panelas, denominado *sá'ri-rõ* (Uaupés, *sá'ni-nõ*).

É essencialmente um feixe de talas, amarradas com cipó ou embira na parte central, e cujas extremidades se alargam como a formar uma espiral, de sorte que o *sá'rirõ* se assemelha a um duplo cone espiralado, com ligação pelo vértice. As extremidades são firmadas por meio de cipó ou embira a uns dois ou três cm. uma da outra.

7) *Caixa de enfeites*. É uma caixa retangular, geralmente de talo de miriti reduzido a lâminas, e que serve para guardar as plumas e outros enfeites de dança. Como uma caixa é menor que a outra, introduz-se aquela dentro desta, como se fôra sua tampa, de modo a ficar bem fechada e do feitio de um baú. Diz-se em tukano *ñahã-podri-karo*, e em Nheengatú, *pacará*.

8) *Outros trançados*.

a) De várias palmeiras tecem, outrossim, as palmas para servirem de cobertura, *peokaro*; e, mais frequentemente ainda, de paredes, *ryakaro*.

b) Executam esteiras, para fins variados, ditas *imi-sa* (Nh. *tapé*), com folhas de diversas palmeiras ou com cipós mais finos.

c) Com rápido trançado dos folíolos de alguma palma improvisam cestos, *ba*, para transportar frutos da mata.

d) Da pacova sororoca e outras folhas ajeitam pequenos amarrados, ditos *sí* ou *sa* da forma de uma espiga de milho, que enchem de pira-mirins para assá-los.

e) *Pelo contacto com os civilizados êsses trançados vão tendo novas aplicações. Lembramos aqui as que no Amazonas se dizem *panacarica* (em tukano *yuxkó-o-mõarõ*) e *decorrera* (*moãri karsero* ou simplesmente *moãrõ*, Uaupés *riodnõ*). Aquela é uma coberta reta para as canoas e pequenas lanchas, e se prendem a suportes fixos. Esta, ao invés, de forma recurvada, é uma cobertura móvel e por isso pequena e leve, e apoia-se diretamente às bordas das canoas. Ordinariamente a *decorrera* costuma ser de palma com malha bem cerrada; ao passo que a *panacarica* consta de duas esteiras superpostas, trançadas de cipó e malha larga, e entre elas uma camada de palma ou folhas de arumã.

f) Costumam também trançar de cipó um chapeu de abas largas, até de um metro de diâmetro, e, como na panacarica, combinam dois chapeus e entre êles à guisa de entretela, uma camada de folhas de arumã. Tais chapeus servem especialmente para defender do sol na roça e nas viagens de canoa, e também da chuva, embora se tornem incômodos pelo pêso da água.

Outros trançados que convém recordar são os que se empregam na pesca, como *nassas*, *cacuris*, etc. que adiante se citam (cfr. VI - 5, a 12).

c) *Armas*

1) *Armas usadas como adornos de festas*

a) *Tangapema*. A maça do sacrifício ou *tanga-pema* (em Nheengatú, *cuidarú* ou também *acanga-pema*, isto é, achata-cabeça), em tukano *uxpi-o-phi*, foi outrora arma de guerra dos chefes. Depois, como já observava Gonçalves Dias («Relatórios da Presidência da Província do Amazonas», vol. II pág. 671) tornou-se apenas símbolo de autoridade nas festas, e quase de todo desaparecida. Os indígenas da geração atual só lhe conhecem o nome, *uxpi-o-phi*. Um dêles lembrava-se de tê-la visto com especiais pinturas, «a fim de incutir valor e trazer sorte ao guerreiro». Outros completavam a informação que ouviram dos velhos, a saber, que, antes de partirem

para as excursões belicosas com suas tangapemas, e a fim de se tornarem invisíveis aos inimigos e invulneráveis aos seus golpes, pintavam-se com o sumo da batata *uxpi*. Fumavam, outrossim, de um grande cigarro dito *uxpi-mõrõ*, adornado de pinturas simbólicas, a fim de se tornarem mais corajosos.

Koch Grünberg encontrou ainda algumas maças ou tangapemas na maloca Namakõliba, alto Uaupés (*Zwei Jahre*, 301). Eram de madeira vermelho-escura, medindo 112 cm de comprimento, com o punho pontudo e a outra extremidade mais larga. Usavam-nas, então, os *Kubêwana* e tribos afins, para as danças e, ocasionalmente, até como banco de canoa. Conclui que a maça de guerra dos *Omawa* é uma prova da origem oriental dessa tribo *Karaiba*, pois é semelhante à das tribos das Guianas. Com efeito, nestas tribos a extremidade superior da maça termina em ponta aguda, a fim de atravessar o inimigo abatido, com um golpe de graça, na fonte ou no ouvido.

b) Antigamente usavam, outrossim, nas lutas um escudo, dito em tukano *bazti-pa'karo*; era tecido de cipó, levíssimo, porém eficiente contra as flechas. Hoje raramente se vê, e foi, até o princípio deste século (informação do Pe. João Marchesi) usado como enxoval de dança, que traziam ao braço esquerdo quando iam beber sua cuia de *uxpi* (cfr. VII — 4, e (2).

c) Igualmente hoje é apenas um instrumento de dança (como o veremos ver), a lança, *pôrsêri-phi*, a qual, essencialmente, é tão só um pau roliço, pesado, de seus dois metros de comprimento, e terminando em ponta aguçada. Usam-na nas danças do dabacuri, e com ela se realiza o «*golpe-ao-branco*» (cfr. VII — 4, e (2 a 3).

2 — *Arco*. As únicas armas indígenas de uso atual, e assim mesmo de uso muito reduzido no Uaupés, são o *arco* e a *sarabatana*. As tribos do mais interno das matas, com poucas ou nenhumas relações com os civilizados, empregam-nas mais. Em troca, o contacto com a civilização, supriu os indígenas de espingarda, facões e machados, das quais, infelizmente, se servem nas brigas e vinganças recíprocas.

O arco, *boe-ku-fê* ou *boe-kha-thê*, é feito geralmente de pau-de-arco, em tukano, *turto-po* (bignoniácea de flor roxa, espécie de *tecoma*), madeira pesada, resistente, e flexível. As dimensões normais são de 1,5 a 2 metros de comprimento e um diâmetro de uns 3 cm na parte central, afilando-se para as extremidades, com pequena incisão ou talhe para amarrar a corda. A parte externa é arredondada ou convexa, e a parte interna, levemente escavada ou côncava.

Por corda usam um fio de tucum, e o arco conserva-se habitualmente reto, isto é, desarmado, com a corda prêsa só a uma extremi-

dade. Recurva-se sòmente quando vai ser usado. É uma arma de precisão na mão do índio, podendo projetar as flechas a 50 ou 60 metros de distância.

3) *Sarabatana*. É uma arma de origem e fabrico exclusivo dos *Maku*, e que êstes preparam para os índios de outras tribos do Uaupés, aos quais servem. Prepara-se com uma variedade de palmeira nodosa, a *paxiubinha*, dita em tukano *buxpu*, donde, para a sarabatana, o nome de *buxpu-uo*. Mede uns 4 cm de diâmetro e até 3 ou 4 metros de comprimento. Extraem-lhe a medula fàcilmente com uma vareta bem regular, resultando um orifício bem calibrado, como a alma dos fuzis, porem liso. Externamente, mais ou menos pela metade do tubo, encravam-lhe um dente recurvado de cotia ou outro animal, para servir de «massa de mira».

Sarabatana (buxpú-uo)

Na parte que se adapta à bóca, alarga-se uma pequena cavidade como bocal para facilitar a adaptação aos lábios. Por êste bocal introduz-se uma pequena seta, *bu'sá-khá*, com um tampão de paixa de sumauma (*Eriodendron Sumauma*, ou *Ceiba pentandra*, Gartn.), com o duplo papel de obturar o orifício e assim opor resistência ao sôpro, e também dar pêso à extremidade da seta e não permitir que se desvie no ar. Com um sôpro forte e curto conseguem propulsar a seta a 20 ou mais metros de distância, com grande precisão, sobretudo no sentido vertical. É uma arma muito útil, pois é de manejo fácil e rápido, e ademais, a seta não faz barulho algum, e assim conseguem matar um pássaro no alto das árvores, sem que voem os que lhe estão próximos.

É arma para a caça pequena de aves, macacos, etc.

4) *Flechas*. Costumam ser de paxiúba (*Eriartea settigera*, Mart.), e com auxílio de um cordel e do breu adapta-se-lhe fortemente a *ponta*. Conforme a finalidade, variará a forma e a substância desta. Há pontas de paxiuba, de bambú, de dente de onça ou

[illegible] peixe e de espinho de pataua (30). Dos civilizados alcançam [illegible] ou pedaços de ferro donde agora as pontas metalicas.

Algumas flechas são ornadas de plumas de tucano e arara. Encontra-se a emplumação de cavalete e espiral.

Quando se destinam a caça ou à pesca, são muitas vêzes envenenadas com o curare (31). Põem o veneno alguns milimetros abaixo da ponta, para que um arranhão casual não intoxique alguma pessoa.

Distinguem-se três tipos de flechas: para *caçar*, para *pescar* e as *curibis* ou setas pequenas para a sarabatana.

(a) *Para a caça*. As flechas destinadas a caça grande, são pesadas, de pau brasil ou pau-de-arco, com ponta de madeira, ou mais comumente de osso de animal ou de ferro (32). As *pontas* (de pau, osso ou ferro) estão encravadas em um pedaço de madeira, dita *ponteira*, que se prende fortemente ao corpo da flecha com fios e breu.

Quando as flechas se destinam a aves e pequenas caças, são de madeira mais leve e trazem, na extremidade oposta à ponta, três penas da asa de arara dispostas em espiral. Dêste modo a seta descreve sua trajetoria fazendo simultâneamente um movimento de rotação que lhe conserva melhor a direção.

(b) *Para a pesca*. Para os pequenos peixes empregam-se setas comuns e totalmente de paxiuba. Para os grandes peixes (piraiba, pirarara, jacares e tartarugas), a ponta é de ferro (ou de osso) e [illegible] lateralmente de sorte que, uma vez enterrada na carne, não pode sair sem dilacerar o tecido.

O conjunto sarapeca (termo Nheengatú que significa: cousa que [illegible]) é de duas flechas que constam de duas partes, *hastil* e *ponteira*. Ponteira ou *sumba* é de madeira forte (33), com um arpão [illegible] e prende-se ao hastil ou corpo da seta, por um longo fio (34). Quando atingido, o peixe ou a tartaruga foge com a pon-

---

(30) As de paxiuba, usadas pelos indios do rio Caburi, são munidas de três ou quatro nós artificiais, a fim de que se quebre e fique enterrada no corpo. Acrescentam, ordinariamente, emplumação bela e colorida.

(31) O veneno fica neutralizado pelo fogo, quando se prepara o alimento ou [illegible] de cozinha, que convem seja subministrado a quem for envenenado pelo "curare".

(32) Antes das relações com os civilizados, usavam igualmente pontas de pedra, conforme a relação de Alexandre Ferreira "Diario" parte 6ª).

(33) Muitas vezes servem-se da *paracôuba*, uma leguminosa, endurecendo ainda a sumba ao fogo.

(34) Os pescadores de tartaruga chamam *virote* ou *espoleta* à ponta de ferro das flechas (cfr. José Veríssimo: "As populações indigenas do Amazonas". Rev. do Instituto Historico e Geographico do Rio de Janeiro: 50, 1887, pag. 377).

teira fisgada ao corpo; porém o hastil de *canarana* (gramínea dos generos *paspalum* e *panicum*), que lhe está prêso por longo fio continua a boiar, e assim denuncia o local em que se escondeu o animal fisgado. O pescador apanha o hastil e vai recolhendo lentamente o fio, e com relativa facilidade recolhe também a tartaruga à canoa (35).

c) Curabi: Curabi é têrmo da Lingua Geral, em Tukano denomina-se *bu'sa-khu*. São as setas para a sarabatana. De ordinário são de paxiubá, e medem uns 30 ou 40 cm de comprimento e 1 ou 2 mm de diâmetro, e afila-se na extremidade. Guardam-se e transportam-se numa aljava de arumã, *bu'sa-sá*, como acima dissemos.

5) O curare. Curare deriva da palavra da Lingua Geral *uirari*, e indica o veneno preparado por várias tribos selvagens com diversas plantas, especialmente variedades de *strychnos*. No Uaupés só os *Maku* (36) sabem prepará-lo e o executam também para as tribos as quais servem. Os Maku de Iauareté (37) fazem-no da seguinte

---

(35) Para atingir as tartarugas, os pescadores arremessa[illegible] flecha para o alto, de sorte que caia perpendicularmente e com [illegible] pêso e o impulso da queda penetre o casco do quelônio. Ordinariamente as tartarugas se conservam vivas para a venda e o consumo. Quanto aos peixes de maior tamanho, ao se avizinharem, matam-no com uma remada na cabeça, e dêste modo podem recolhê-lo à canoa sem perigo algum.

(36) Reduze Koch Grunberg (*Zwei Jahre*, pág. 208) que os *Buhágana* (dito também *burpemirsá*, ponte da sarabatana) preparam o *curare* tão forte que o empregam até na caça de animais grandes, como a anta.

(37) O Prof. Ettore Biocca, em 1944, assistiu também à preparação do curare pelos índios Maku do Tiquie, e levou para as observações do Laboratório Paulista de Biologia de S. Paulo, amostras das várias plantas empregadas, e do curare. Mesmo em algumas plantas que os indígenas consideram menos importantes, a análise do Laboratório encontrou alcalóides. Foram identificadas quatro variedades de *strychnos* (*[illegible]*, etc.), duas de *Menispermáceas* (*abuta triana* de Planchon, e *Anomospermum*), e sem alcalóides uma *Malpighacea* e uma Rubiácea (*[illegible]* ou *Psychotria*). Conforme suas conclusões, a preparação do curare pelos indígenas não é "uma simples extração de alcalóides, mas uma complexa operação química, com transformação das propriedades físico-químicas e biológicas dos mesmos alcalóides" ("Atti della Accademia Nazionale dei Lincei — vol. II, 1.º sem. 1947). E que as plantas desprovidas de alcalóide (como as Rubiáceas) pode-se supor: "tenham provàvelmente a função de permitir ou de facilitar a preparação indígena de derivados dos próprios alcalóides,

maneira. Raspam caule e raizes de várias espécies de arbustos e põem os fragmentos em um funil feito de fôlhas de arumã. Derramam por cima água, a qual dissolve os alcaloides tóxicos e, gotejando lentamente, é recolhida, como um líquido avermelhado, em uma panela de barro cozido. Em seguida o líquido é submetido a fogo lento durante um ou dois dias, eliminando-se com uma espátula de madeira a espuma, até que adquira consistência xaroposa e côr escura.

Todo o tempo que dura esta operação, o índio não pode deitar-se na rede; porem deve manter-se de cócoras, ao lado do fogo, e nem pode comer beiju, quinhapira, fruta ou qualquer outro alimento animal. Poderá, apenas, servir-se moderadamente do chibé. Se faltar alguma dessas regras, crê êle que o curare não terá sua virtude tóxica.

Conserva-se o curare em pequenos potes de cerâmica. Com o tempo torna-se duro e devem, para usá-lo, destemperá-lo em água morna; ou, se está muito duro, «*acordá-lo*», isto é, acrescentam-lhe água com pimenta malagueta.

f) *Outros objetos de uso doméstico*

1) *Tripé e moquém*. Um utensílio muito simples e muito útil é o que em Tukano se denomina *ñamá*, veado. É, pròpriamente, um tripé, constando de tres varas de seus dois metros ou mais de comprimento e cuja grossura varia conforme o tamanho e o uso, geralmente de poucos centímetros de diâmetro. Acham-se unidas na extremidade superior por meio de um cipó ou embira, e mantidas separadas, na parte inferior, com auxílio de duas varetas distantes do solo de uns 80 ou 100 cm. Sendo apenas duas essas varetas, a base do aparelho pode ser alongada ou apertada, conforme se quer, ou mesmo fecha-se o tripé e encosta-se à parede, para economizar espaço.

Sobrepõe-se a essas varetas a peneira em que se comprime com as mãos a massa da mandioca enquanto um pote recolhe o líquido ou manicuera. Pode-se também sobrepor a essas varetas uma espécie de grelha ou *moquém*, em tukano *waí kazsá*, feito de paus ro-

---

com ação altamente curarizante" ("Atti, vol. II — 2.º sem. 1947, pág. 165).

Quanto à atividade tóxica curarizante, uma grama deu até dez mil doses mínimas mortíferas para camondongo, quando aplicadas por via muscular ("Atti, vol. II — 1.º sem. 1947, pág. 695). Ao passo que por via oral ocorriam doses 80 a 90 vêzes maiores ("Atti", vol. V — 2.º sem., 1946, pág. 99).

ço. Sôbre o moquém coloca-se o peixe ou a carne que se deseja «moquear», consoante a expressão amazonense, e o fogo debaixo.

Trípe (fôrma)

Encontra-se também o moquém fixo a quatro estacas plantadas solidamente, a um canto da maloca.

2) *Aparelhagem para o ipadú e o caapi*

a) Para o preparo do *ipadú* (cfr. VI — 4, i (3)), o índio além de uma *panela* de bôca larga, *patu artêri-to*, e de um pequeno *pilão*, *pa-mó-a*, do feitio usual, precisa de *sacolas* e de um longo *tubo*, *patu pa po*. As sacolas obtêm-se do tururi (cfr. VI — 3).

b) Para o *karpi* torna-se necessário um *cocho* de madeira, *karpi pa-mó-a*, (vd. VI — 2, b (7)) em que se pisa o cipó, e um *paso*, *karpi-to* (vd. 2, a (1)), onde se recolhe o sumo e se destempera em água.

3) *Macurú*. Quando a criança começa a firmar-se nas pernas, usam um processo muito prático para entretê-la e ao mesmo tempo ensinar-lhe os primeiros passos. Consiste num aro que se obtém com um cipó grosso enrolado em várias voltas e prêso a uma trave. A criança ficaria de pé dentro do aro que lhe chega à altura do peito. Uma embira muito flexível e macia, prêsa ao aro, passa por entre as pernas da criança, a qual fica assim como a cavalo e pode assentar-se sôbre a embira, quando se sentir cansada. Hoje em dia é muito comum encontrar um pedaço de fazenda em vez da embira primitiva. Êste aparelho que em Língua Geral se diz *macurú*, e em Tukano *bahari be'to*, está seguro a uma das traves do teto por um cipó, e chega à tal distância do solo que permita à criança tocá-lo com os pés e tentar os primeiros passos.

Macuru (baharí-be'te)

Fora dêsse aparelho não conhecem outro para as crianças que, ou ficam abandonadas pelo chão, ou estarão acavaladas às cadeiras da própria mãe ou irmã mais velha (38), quando não estão nos braços ou na rede.

4) *Cuias e cabaças.* Empregam-se, outrossim, cuias (*wahá-ro*) e cabaças (*ÿarsá*), ou *ÿa'sá*, *ña'sá*), de diversos tamanhos e formas,

(38) São sempre as mulheres que carregam as crianças. Por influência dos civilizados, pode-se ver hoje um pai trazendo ao braço o próprio filho, mas por breve tempo, quando a mãe está carregando outra criança qualquer. Em casa nunca se vê um índio carregar e menos ainda acalentar um filho.

como vasos para os mais vários usos: tomar água, preparar o chibé, distribuir o caapi, guardar seus pós coloridos, fabricar o maracá (vd. VII — 3, c (3), etc.

a) *As cabaças* obtidas do cabaceiro reptante (*Cucúrbita lagenária*, Lin., das cucurbitáceas, (*yazsá-ya*), são empregadas, quando sêcas, sem mais trabalho. O mais importante emprêgo das cabaças é a fabricação dos maracás e como continente dos pós corantes.

b) *As cuías*, da planta dita cuieira ou culetezeira (*Crescentia cujete*, Lin., das bignoniáceas) são usadas para tomar água, chibé, mingau, etc. e apresentam a superfície interna de côr preta lustrosa. A mulher alcança isto, com auxílio do *wahá-ko* (quer dizer água de cuia; de *wahá*, cuia, e *ozkó*, água, líquido, sumo).

cuia (waha-ro)

Da planta denominada *wahá-ko-gó* (39), *cumati* (*myrcia atramentifera*, B. Red.) golpeiam a casca que goteja um líquido vermelho escuro, ou dela separam raspas que, deixadas algum tempo em infusão n'água, produzem um líquido grosso escuro, o *wahá-kó*. Na parte interna da cuia espalha-se com um pincel o *wahá-kó*, deixando-o depois secar. Repete-se a operação uma segunda e mais vêzes, até alcançar a espessura de um milímetro aproximadamente. Espalha-se, em seguida, urina pelo chão e nessa área emborcam, sôbre pequenos pedaços de pau, as cuías que desejam pintar. O amoníaco que se desprende da urina transforma a camada de *wahá-kó* do interior da cuia em verniz preto, luzidio e bem aderente.

Obtém-se o mesmo resultado aplicando, sôbre a camada de *waha-kó*, fôlhas de mandioca embebida em urina.

5) *Outros objetos de utilidade*

O índio soube tirar da natureza que o contorna tantos outros objetos e recursos para a sua vida. Lembraremos alguns:

---

(39) O Pe. João Marchesi chamou-nos a atenção para o costume dos indígenas de denominarem um vegetal pelo emprêgo que dêle fazem.

a) *Papoque*. O papóque, em Tukano *pápua-khá-sõti*, é a embira de uma árvore que produz espuma, e com ela lavam a cabeça, em falta de sabão.

b) *Tauari*. *Taugari*, como também se diz em Tukano (*couratari tauari*, da família das lecitidáceas) é também uma embira que se desdobra em lâminas muito delgadas e flexíveis, que servem para mortalha de cigarro. Obtém-se da casca, batendo-a com um macete até separar-se tôda a parte lenhosa.

c) *Sacolas, cucio e máscaras*. O tururi, em Tukano *waxsó-gõ*, é uma árvore de várias espécies de *Manicariao*, de cujo líber ou entrecasca preparam as sacolas para o ipadú, as máscaras (vd. VII — 3, d (2)) e os *waxsó-ro* (em Nheengatú *cucio*) de danças (cfr. encaitio, VII — 3, d (2)). Escolhido o galho ou tronco que lhes convém, cortam-no, e com um macete de madeira vão batendo a casca até que assim se obtém, de um tronco grosso emprega-se para o preso fosse uma manga de camisa ou uma capa. Com um objeto cortante (outrora uma taquara) separam a parte que desejam. O líber que assim se obtém, de um tronco grosso emprega-se para o preparo das máscaras, de um ramo pequeno, amarrado numa das extremidades apresenta a forma de uma sacola para os seus vários usos.

Observamos outro processo entre os *Karapanã* das cabeceiras do Papuri. Com o auxílio de uma espátula iam despregando a casca, como quem enrola a manga de um paletó para fora, até alcançar o comprimento que se deseja.

6) *Brinquedos e jogos*

Não encontramos objetos lúdicos característicos das meninas, como as bonecas das civilizadas. De resto, desde tenras, as crianças do sexo feminino são aplicadas ao trabalho e não lhes sobra muito tempo para os brinquedos.

Os meninos, ao invés, constroem seus pequenos arcos e flechas, com que se divertem aprendendo a atirar ou mesmo a matar aves e peixes.

De uma madeira leve e macia, *poo-gõ*, molongó (é a *ambelânia grandiflora*, Hub., da família das apocináceas), constroem minúsculas canoas que soltam à água, prêsas a um cordel, acompanhando-as da margem enquanto deslizam.

Possuem ainda outros brinquedos e divertimentos que se vão sucedendo durante o ano. Entre êstes o que se conhece no sul do Brasil por «cama de gato». Isto é, com um cordel, com as duas extremi-

dades ligadas, executam figuras com os dedos de ambas mãos, passando ao vizinho que, com diversa posição dos dedos, fá-lo tomar outra figura. Temos visto formar com o cordel 8 ou 10 figuras diversas, algumas bem interessantes e parecidas com o objeto ou animal cujo nome levam. Denomina-se êste brinquedo *mi-pesé* (i. e. brinquedo de tomar).

Uma palavra aqui sôbre alguns divertimentos das crianças. As crianças, respeitando sempre a separação dos sexos, reunem-se em bandos e se entretêm em folguedos nos quais figuram as abelhas zumbindo em procura das flôres; é o jôgo das abelhas, *mumi-pesé* (40).

Outro brinquedo coletivo é o «esconde-esconde», e denomina-se em Tukano *wãx-ti mãã-re baagõsamim* (Wãx-ti vai comer-te), porque o sinal de esconder é dado por uma das crianças gritando: «*Wãx-ti vai comer-te*».

Um dos divertimentos mais comuns, e que aparece até nos *Dâbucuris* (vd VII — 4, e (2) é o que se diz brinquedo «*do sapo*», *táro-kõ-pesé*. Algumas crianças põem-se de cocoras e avançando aos saltos vão cantarolando: *táro-kõakã* *táro-kõakã* (sapinho! sapinho!). Outras crianças de pé impedem o salto dos sapinhos, e entre elas trava-se o seguinte diálogo: — «Aonde vão vocês? (*no'õ-pó waati mãrsã?*) — Vamos ver se na roça há algum abacaxi maduro (*õxsã wersepo pãra wa:, sè'rã to'ó-pó buxtise-pa yãra wã:*) — Lá a vossa avó foi comer abacaxi, caiu e machucou-se (*toó-pó mãxsã ñèxkõ sè'rã baãgo myõ-dorkè-pyõ-waapõ*). Então os sapinhos exclamam: — Coitada da nossa avó! (*adé:! õxsã ñèxkõ!*) e fingem desmaiar, caindo por terra.

Com o folíolo de palma enrolado em espiral improvisam uma flauta capaz de emitir sons diversos, conforme o diâmetro da espira.

Fabricam pequenas flautas, *puxtisé*, de taquara ou paxiúba; o pião, *bexiaga*, servindo-se do coco de tucumã e outros. Mais recentemente, de posse de canivete e prego, preparam também seus piões de madeira à imitação do dos civilizados.

3) *Vestes e calçados*

a) *Vestes*

Sob o influxo dos civilizados (o exemplo do branco, a quem o índio gosta de imitar, a instrução dos Missionários e as vestes que

(40) Uma indiazinha falava também do "jôgo do limão", porém não no-lo descreveu, nem tivemos o ensejo de assisti-lo.

estes lhe dão), os indígenas se vão habituando ao uso das vestes. De regra os que passaram alguns anos nos colégios, retornando às suas aldeias, não dispensam mais as vestes. Ao menos uma calça ou calção (os homens) e uma saia (as mulheres); deixando o busto descoberto.

Um particular interessante é que, geralmente, as mulheres só executam, consertam e lavam suas vestes femininas. Os homens recebem roupas feitas, dadas ou compradas, e devem pensar em lavá-las e repará-las. Alguns homens têm sido vistos lavando as vestes de suas esposas.

Primitivamente, isto é, antes de qualquer influência dos civilizados, datando desde os descobrimentos do novo mundo, teriam algum traje? como seria êste?

Por um lado o clima quente não impõe o uso de vestes. Por outro, as chuvas e excursões freqüentes pela mata, que oferece ao indivíduo um abrigo, e lhe gastaria ràpidamente as vestes, desaconselham o emprêgo de roupas. Isto o que podémos a *priori* deduzir do seu *habitat*.

O primeiro Vigário Geral da Capitania de S. José do Rio Negro Padre José Monteiro de Noronha, em 1759, diz muito originalmente: — «Não tendo comumente os Indios destes sertões mais vestido do que aquêles que trajavão nossos primeiros pais no campo Damasceno» (o. c. 145). Releva, como exceção, que os Cambeba usavam vestes compridas de algodão, e sem mangas, abertas lateralmente.

Um século depois, em 1846, o costume é ainda o mesmo, conforme Wallace. — «Êstes indios libertam-se dos estorvos de vestuário, tanto quanto é possível conceber-se. Os homens usam sòmente uma pequena peça de tururi, que lhes passa entre as pernas e prende-se a uma corda que lhes cinge a cintura. Mesmo êsse costume as mulheres o dispensam totalmente, não se cobrindo com qualquer cousa que exista. Vivem em nudez completa, e isso é generalíssimo. Entre os indios do Uaupés não se abandonam tais costumes» (O. c. 629).

Setenta anos mais tarde (Boletim Salesiano, fev. 1918 pág 30) depõe o primeiro Superior Salesiano dessas Missões, Mons. Lourenço Giordano. — «Os homens não trazem veste e as mulheres, ordinàriamente, não têm melhor que êles» «O Tucano pode dizer com mais verdade que o filósofo: *omnia mea mecum porto*. Como vestido leva ... a *poira* (?), isto é, um cordel ao pescoço, com sementes de diversas côres ou um pedaço de mármore branco, e, ordinàriamente, nada mais».

Ainda hoje se encontram muitos homens só com o encacho ou *warsó-ro*, como se diz em Tukano (*cuéio*, em Nheengatú), (41), que se assemelha à primeira vista a uma funda herniária. Consiste numa tira de fazenda de seus 6 ou 8 cm de largura, cobrindo as partes pudendas, passando por entre as pernas e prêsa pelas extremidades a um cordel como cinta, na altura das ilhargas. Naturalmente deve ser incômodo êsse cordel, e, provàvelmente, para se irem habituando, os meninos antes de usarem o *warsó-ro*, começam por trazer apenas o cordel de cinta. Parece também que não há idade prescrita para o uso do *warsó-ro*. Certamente acima dos seis ou oito anos, todos os meninos o trazem.

Quanto às pessoas do sexo feminino dos povoados ao longo dos rios Uaupés, Tiquié e Papuri, desde bem tenras, seguramente desde os 3 ou 4 anos, hoje em dia, se apresentam diante do civilizado com o corpo todo coberto, ou, ao menos com uma saia da cintura até abaixo do joelho. São raríssimos os casos de um simples saiote-acima do joelho, ou um pano envolvente à guisa de tanga.

Evidentemente essas coberturas são subministradas pelos civilizados, propriamente pelas Missões Católicas. Teriam algo de original, como e de qual matéria?

Não há dúvida que o *warsó-ro* masculino, pelo feitio e o uso, nem é imitação do Civilizado, nem conselho dêste ao índio, embora se faça com fazenda importada, e não com o tecido fabricado pelos índios com embira de tururi. O *warsó-ro* é de uso muito antigo e geral nas tribos americanas Karaíba. Wallace um século atrás no-lo descreve entre os índios do Uaupés, como sendo um pedaço de líber ou entrecasca de tururi (42). Os primeiros viajantes do Solimões acenam a índios «de cauda». Wallace tem por certo que o atribuir cauda aos

(41) Pensamos que cuéio seja apenas uma corrupção da palavra portuguêsa cueiro, o encacho que se usa com os recém-nascidos. *Warsó-ro* deriva provàvelmente, conforme o gênio da língua Tukano, de *warsó su'ti-ro*. *Warsó* quer dizer semen; *su'ti-ro*, vestido. Alguns Missionários que falam o Tukano, pensam que *warsó-ro* venha de *warsó-o*, o nome Tukano da planta *tururi* (da família das esterculiáceas), de cuja entrecasca se tira um tecido aproveitado para a bolsa de guardar o ipadú, para o fabrico das vestes ou máscaras de danças. Note-se, todavia, que tais máscaras se dizem *ya'ko-kó su'ti-ro*, veste das lágrimas, porque só se usam tais máscaras nas danças fúnebres. Não seria, pelo contrário, o nome da planta, *warsó-gò*, derivado de *warsó-ro*, pela serventia do seu líber como cueio? Releve-se que êste é precisamente o costume dêsses índios, denominar as plantas pelo uso a que a destinam.

(42) No meado do séc. 18 (1759) o Padre José M. de Noronha o refere dos Tecuna (o. c. n.º 139).

4: Silva SQ19 Tucano

índios dessas regiões se deva a uma observação imperfeita dos *warsó-ro* sujos e retorcidos.

Não parece, porém, uma «veste de decência», porque demasiado apertado e estreito, e por vêzes só cobrindo parcialmente. Poderia ser «veste de atração». Julgamo-lo antes uma «veste de proteção» (43), em se tratando de parte mais sensível que o restante da epiderme do índio, endurecida pelas intempéries.

Quanto à tanga (44) das mulheres, dita em Nheengatú *muruari*, assemelha-se a um pequeno avental de seus 20 cm de comprimento por 10 cm de largura. Hodiernamente é apenas um ornamento das danças, que as mulheres apresentam juntamente com a pintura; ou estão mesmo sem êle e apenas pintadas. Com as missangas que obtêm dos civilizados, preparam belíssimos *yazkè warsó-ro*. Mesmo os originais, tecidos de tucum, eram notáveis trabalhos de tecedura. Um e outro, porém, parecem antes «veste de atração», do que «veste de decência», pois ficam pendendo à cintura, e pela posição e dimensões (a maior dimensão fica horizontalmente) não recobre suficientemente (cfr. VII — 5, b).

b) *Calçados*

Não fabricam, nem usam calçado de espécie alguma, como o costumam os índios das savanas. São desnecessários para as suas grandes viagens que se fazem por canoa, e incômodos para as excursões na mata, se não forem de matéria resistente como o couro e bem adaptados. Ademais, o clima quente e as chuvas contínuas tornariam seu uso prejudicial à saúde.

4) *Alimentação*

a) *Mandioca*

O índio tira da mandioca (*Manihot utilissima*) seu principal alimento, preparando-o de diversas maneiras, e dela se serve todos os

---

(43) Em maio de 1954, expondo a um índio Karapanã, residente desde vários anos em Uaracapá (rio Papuri), por nome Vicente, nosso desejo de visitar a região dos Karapanã, nas cabeceiras do rio Aua, espontâneamente como a prevenir-nos o espírito êle nos informa que por lá ainda não usavam roupa alguma. Depois dessa viagem, conversando com uma senhora Tukano, já cristã e que desde 1926 vive com as Irmãs Missionárias, à questão por que os homens usavam o *warsó-ro* e as mulheres, nada ouvimo-la responder que as mulheres não precisavam de uma proteção física como os homens.

(44) Gaspar de Carvajal, na relação da viagem de Francisco de Orellana, em 1540 (o. c.) informa-nos do uso do *warsó-ro* pelas mulheres. Wallace (o. c. 352), em 1849, informa que no Uaupés as mulheres antes nuas, "à entrada dos brancos cobrem-se com uma tanga". O mesmo ainda acontece um século depois.

dias do ano. Há reminiscências de um período muito longínquo (séculos ou milênios ante do período histórico, que é o séc. XVI) em que não conheciam a mandioca, e comiam a castanha dita *borpé* (informação de Dorotéia Brito).

1) *A Farinha*. A farinha, *po'ká*, é alimento indispensável não apenas para os indígenas de tôdas as tribos do Uaupés, como também para os caboclos do Rio Negro. Sem a farinha não só lhes parece deficiente a mais variada e nutriente refeição, como não suportariam seguidamente nenhum regime alimentar sem a farinha.

Para o fabrico da «farinha dágua», assim denominada, servem-se da «mandioca puba», *ki-bo*. Isto é, são raízes imersas em água (às vezes dentro da canoa, ou em algum paneiro submerso, ou mesmo camotim) por uns seis dias até que apresentam um início de fermentação ou putrefação, com cheiro desagradável. Por simples compressão entre os dedos, solta-se a massa, ficando a casca quase inteira.

A massa, *ki-o'ta*, depois de espremida à mão em uma peneira de malhas finas, *tó-pa*, posta sôbre um camotim que recolhe o líquido, *yórka*, é introduzida no *tipiti*. Depois de cheio, suspende-se êste pela alça superior a um esteio. Na alça inferior a mulher introduz um pau roliço de uns dois metros, servindo de alavanca, ficando esta imobilizada por uma de suas extremidades contra o esteio, e sôbre a outra fará pressão a mulher com os braços ou mesmo sentando-se em cima. Com o pêso do próprio corpo e com movimento conveniente faz alongar-se o tipiti, o qual assim comprime a massa e obriga a escorrer o líquido, que é cuidadosamente recolhido em uma vasilha.

Há três modos de imobilizar a extremidade da alavanca: 1.º) por meio de um anel de cipó, *o'tá buhuri-bo'tó*, que circunda o esteio, ou 2.º) o esteio é munido de orifícios, *ó'tá buhuri-pé*, e a ponta da alavanca se fixa sucessivamente nos vários orifícios, à medida que se alonga o tipiti; ou 3.º) o esteio é cortado como dentes de serra, *ó'tá buhu-pehéró*, nos quais se apoia a extremidade mais curta da alavanca. Entre os Arwake dos rios Içana e Alari, observamos a preferência por êste último processo, e de modo muito prático. A saber, haviam plantado sòlidamente no chão uma estaca roliça, de um metro ou pouco mais de altura e seus 10 cm de diâmetro, munida de dentes como uma serra, contra os quais se imobilizava a alavanca do tipiti.

Por efeito da compressão a massa sai bastante sêca e dura. Passa-se ainda por uma peneira de malhas mais largas, *sóó-a* (Nh. *urupema*), a fim de eliminar os flapos.

Espremendo a massa de mandioca no tipiti

Estando já bem quente o forno, a mulher vai sôbre êle esfarinhando a massa com a mão, espalhando-a bem, em pequenas quantidades, e ao mesmo tempo mexendo-a com uma pá de madeira, porá aitâri-phi (Nh. *farubá*), a fim de ficar bem torrada. Conforme a qualidade da mandioca, a farinha adquirirá côr esbranquiçada (contém sempre *tapioca*, isto é *amido*), ou de um belo amarelo-canário. Do forno passam a farinha para peneiras fundas, *barti*, a fim de esfriar-se, e mais tarde guardam-na em paneiros para o consumo ou para vender aos civilizados.

2) *Tapioca*. A mandioca fresca descasca-se com os dentes, ou com um terçado (facão) se o possuem, e rala-se servindo-se das duas mãos, num movimento alternado e rápido.

A massa apenas ralada adiciona-se água, a fim de separar o *polvilho* ou *amido*, e deixa-se em repouso em vasos ditos *birperi-pá*. O polvilho depois de algumas horas deposita-se no fundo. Eliminado o excêsso de água, cobre-se às vêzes o vaso com um trapo e uma camada de cinza, a fim de clarear melhor o polvilho. Mais tarde leva-se ao forno, e tem-se a *tapioca*, *werfá*, de forma granulada, mui-

to apreciada também pelos civilizados, especialmente para tomar com leite ou café. Os silvícolas costumam guardar a tapioca e dela se servem diàriamente para preparar seu mingau ou beijú.

3) *Maniquera — Tucupim*

a) *Maniquera*. O líquido que escorreu da massa da mandioca espremida, embora venenoso pelo ácido cianídrico que contém, deixado algum tempo fermentando ao sol ou submetido ao fogo perde sua toxicidade, torna-se agradável sendo muito apreciado no caxiri e fora dele. É o que se diz *maniquera* ou *manipuera* (em Tukano *pokka*). Costumam ajuntar-lhe cará, batata doce ou frutas, como uma sopa rala.

b) *Tucupim*. Também o líquido extraído da mandioca puba, evapora-se pela ebulição até tornar-se uma substância escura, de consistência xaroposa, um tanto acidula, porém, grata ao paladar, que se usa como tempêro, e se diz *tucupim* (em Tukano *ki-bo-kó*). Do tucupim afirma Stradelli: «Para meu gôsto, é o rei dos molhos, tanto para as caças, como para o peixe, devendo-se acrescentar que é aconselhado para a cura do bériberi, na dose de um cálice depois de cada refeição, e que se lhe atribuem curas extraordinárias» (Vocabulario Nheengatu-português, verbete «*tucupim*»).

4) *Beijú e alimentos semelhantes*

a) O beijú dito também *meiú* ou *caçábe* (em Tukano *ahũ-ga* ou *ahũ-a*), é um bolo feito de massa da mandioca fresca; depois da compressão no tipiti. Vai a mulher espalhando a massa aos poucos sôbre o forno bem quente, comprimindo com as mãos e alisando com uma pequena espátula, até tomar a espessura de uns 3 cm. Quando já está bem cozida a parte de baixo, vira-o para cima, servindo-se de um abano (*ucéri-rõ*).

b) Prepara-se também, embora seja menos apreciado, o beijú de mandioca puba, e denomina-se em Tukano *karibé-hũa*.

c) Semelhante ao beijú é o *curadá* (em Tukano *sirúkaro* ou *sidakaro*), porém mais espêsso e mais rico de polvilho. É o alimento obrigatório no rito da iniciação das donzelas.

d) *Ó'ta-pekaro* denomina-se o beijú fresco quebradiço, que se obtém da mandioca cozida, ralada e trabalhada no mesmo dia, no intervalo de poucas horas.

e) *Sukaro* é o nome de uma variedade de beijú de mandioca com tapioca.

5) *Mingau*. Obtém-se, geralmente, da tapioca, cozendo-a em água até tomar uma consistência gomosa, como grude mole. Quando podem acrescentam-lhe açúcar ou sal, ou caldo de frutas. É o alimento que, por via de regra, costumam tomar cada manhã, antes de partir para o trabalho. Em Tukano se denomina *yumû-ku*. Note-se que no Tiquié se chama *yumû-ko* a bebida preparada com bacaba; no Uaupés se pronuncia *ñámá-ko* o nome desta bebida, e *yumû-ku*, o mingau).

6) *Arumbé*. Pode-se preparar a massa da mandioca com pimenta. Denomina-se em Língua Geral, *arumbé* ou *arubé*. Parece-nos que tal alimento, do qual raramente se fala, não seja primitivo, porém herdado, como o foi também o nome, das tribos de língua Nheengatú, ou talvez mesmo do caboclo ribeirinho.

7) *Chibé*. Com a farinha d'agua rica de tapioca prepara-se o chibé em tukano *pokâ pooko*). Basta tomar certa quantidade de farinha numa cuia e adicionar-lhe água. Tomam, por exemplo, a água diretamente do rio, enquanto navegam, com um movimento rápido da mão, sem que se entorne a farinha. Esperam alguns segundos, para que subam os fios da mandioca, que existem na farinha (às vêzes facilitam-no, movimentando a massa com os dedos), e escoam fora a água de cima, com êsses fiapos. Após alguns instantes a farinha «cresce», por impregnar-se de água. Está preparado o chibé. Essa água amidosa, de sabor acidulo, é naturalmente refrescante. O chibé serve de merenda para o índio. Com uma cuia de chibé, rema horas a fio. É o alimento regular, ou mesmo único nas viagens, e também sua sobremesa após as refeições.

b) *Milho*

O milho *ohó-ka* (não sabemos se o índio descobre especial relação entre o pé de milho, *ohó-ka*, e a bananeira, *ohó*; ou se se trata de mera casualidade a semelhança dos têrmos), não só é de introdução tardia, como, outrossim, de uso muito restrito. Não há pròpriamente roça de milho, entre as tribos do Uaupés, senão apenas algumas plantas isoladas, quando as há. Um grupo da tribo *Karapanã*, residente entre os rios Papuri e Tiquié, nas cabeceiras do ribeirão do Umari, cultiva em maior abundância o milho, o qual, no entanto, é quase totalmente vendido à Missão Salesiana. Trata-se de uma variedade de grão mole e branco.

Em pequena quantidade, o milho mascado serve, em alguns casos, para facilitar a fermentação das bebidas.

Entra também na preparação de bolos, pelo seguinte processo: depois de pilado o milho, passa-se a farinha pela peneira, e umedece-se com água morna. Com esta massa preparam-se bolos que se

4: Silva SQ19 Tucano

põem a assar sôbre as brasas, envolvidas em fôlha de bananeira. Se a mulher «tem boa mão», dizem, sai um bolo adocicado e agradável. É, porém, alimento de pequeno consumo e recebido dos civilizados, como dêstes receberam o uso do milho cozido e assado, aliás muito limitadamente.

c) *Peixes e iguarias de peixes*:

1) *Peixe*. Os peixes, em Tukano *wai*, constituem também uma alimentação habitual para os indígenas que habitam as margens do Uaupés e principais afluentes, suficientemente piscosos para os pequenos grupos de população atuais. Comem o peixe quase sempre *moqueado*, *wai sûóko* (Uaupés *wai sòrsókõ*), isto é, assado e enfumaçado a fogo lento, tendo-lhe tirado apenas as vísceras, ou mesmo com elas, se os peixes são pequenos. O fogo é pôsto a 80 ou 100 em baixo de uma grelha de madeira, o *moquém* (cfr. VI, 2, f (1).

O peixe *moqueado* conserva-se muito tempo, pois realiza-se uma desidratação bastante perfeita. E assim, durante semanas, quando a pesca foi abundante, guardam-no em casa ou consomem nas viagens.

2) *Farinha de peixe*. Ao peixe moqueado e ressequido tiram a espinha, pisam-no ao pilão, levam-no ao fôrno, esfarinhando-o com a mão até ficar completamente enxuto, e está preparada a *farinha de peixe*, *wai pókã* (de *wai* peixe, e *po'kã*, farinha; em Nheengatú, *pirá-cui* de *pirá*, peixe, e *cui*, farinha) de que se servem quando não há peixe fresco (45).

3) *Quinhapira e maniçoba*. Preparam, outrossim, o peixe fresco cozendo-o em água com muita pimenta, e também com sal, se o têm.

Mais raramente o cozinham com folhas tenras de mandioca; tal iguaria denomina-se *maniçoba* (do Nheengatú *manib*, mandioca, e *çob*, folha), e em Tukano *dõrko pũ* (Uaupés, *dõrkõ pũnĩ*; de *dõrkõ*, maniva, e *pũnĩ*, fôlhas).

A água apimentada (com ou sem sal) em que se ferveu o peixe ou o *pirácui* é que se chama *bya-tõ* (literalmente, panela de pimenta) e, em Língua Geral, *quinhapira* (de *quinha*, pimenta, e *pirá*,

(45) A propósito desta farinha de peixe, informa-nos o Gen. Couto de Magalhães: "remetida para uma das exposições de Londres, mereceu as honras de ser classificada como a mais perfeita das conservas de peixe". ("Ensaio de Anthropologia — Região e Raça Selvagens, pág. 398; Rev. do Inst. Hist. e Geogr. Brasileiro, vol. 36 — Rio de Janeiro, 1873).

peixe), e na qual se umedecem os pedaços de beijú antes de serem levados à bôca.

4) *Os peixes*. São muitas as espécies de peixe (46) existentes nos rios dessa zona noroeste do Amazonas, e de quase tôdas se servem os indígenas (47).

Citamos algumas das principais e mais comuns espécies:

ã-mã, jandiá ou bagre (*Rhamdia* de várias espécies)
ã-ñã, arraia (peixe plagiostomo)
bizpari ou *tom-dõzpari*, arari
bolêa, aracú (*Leporinus mülleri*, Gunther).
bolo, piranha (várias espécies de serrasalmos)
bulu, tucunaré (*Cichla ocellaris*, Schneider)
bukoã-siro, ituim (*Sternópygus cordpus*, e várias espécies de gimnotideos).
buzpó, acará (Geophagus brasiliensis e várias outras espécies de ciclideos)
buzpo-toai, peixe aranha (peixe traquinideo)
dõe, traira (*Erythrinus taraira*, Lin.)
ikayã, mandi (várias espécies de silúridas)
i-kõã, jacunda (*Crenicichla seratilis*, Lin.)
iuzipi-pürí-ui, piraíra
mõã, piraíba (*Blanchyplatystoma filamentosum*)
ñrã-bui, uatucupá
ñã-ã, puraquê (*Gimnotus eléctricus*, Lin.)
pêã, pirá-mirim (*Brycon striatus*)
uhã, pacú (*Dóras dorsalis*, Cuv., e várias espécies de prochilodus)
pakã, acari, gascudo (peixe loricarida dos alagadiços)
pozsã-ui, pirá-pucú (*Xiphostoma Cuvieri*, Spix.)

---

(46) Calculam-se em cerca de 3.700 as espécies de peixes brasileiros, sendo aproximadamente 1.700 dessas espécies peixes de água doce. (J. H. Leoni. — Peixes Brasileiros. — Edit. Anchieta, 1940).

(47) Um índio Tukano, por nome João, velho pescador de S. Francisco (Rio Tiquié) afirmou-nos em 1935: "comemos de todos os peixes, exceto o pirá-boto". Boto ou pirá-boto, dito também *pirá-yauára* (i. é, peixe cachorro, e em Tukano: *orko puritiéro*, soprador de água?), é um mamífero cetáceo do qual citam quatro espécies na região amazônica: o branco, conhecido por uiara (*Inia Geoffroyensis*, Blaw.); o preto ou pumuã (*Inia Amazônica*); o vermelho ou *pirança* (*Delphinus fluviatilis*, Gervais) e o cinzento ou *tucuxi*, (*Steno tucuxi*). O Boto é, outrossim, um peixe que figura nas lendas, bem como a *pirarara* (em Tukano *mahã-ui*, que quer dizer precisamente *peixe arara*, pelas suas belas côres). Nota-se alguma prevenção contra "os peixes de pele", como sendo causadores de dermatoses.

*wai-wexkó*, peixe boi (*Manatus americánus*, mamífero do baixo Rio Negro)

*wapé*, aracapuri (peixe do gên. *erythrinus*)

d) *Carnes e animais comestíveis*. A caçada para o índio, qual o encontramos na fase atual, é apenas um esporte. Se excetuarmos os «porcos do mato» (dos gêneros *dicótiles e tayassu*), que às vêzes aparecem em varas, em determinados lugares (48), quando o rio vasa e o javarizeiro amadurece seu coco, as caças são raras. Servem, portanto, apenas para variar de vez em quando o «menu». Tanto mais que o índio repartirá sempre o fruto da sua caçada com os que moram na mesma maloca, e comumente o fará para os que residem nas casas vizinhas à sua (se o não vende ao civilizado).

Preparam a caça «moqueando-a», como ao peixe. E parece que jamais comem carne crua; dizem mesmo que quem come carne crua é só o Wix-ti. Como também comem carne de cobra. Os principais animais que lhes servem de alimento são (49):

macacos de várias espécies (*axké, emõã*, guariba, *séi*, almoré, *waú*, *uaiá-piçá*

*porsó* cutiyala, preá (*cavia aperea, leupyga, fulgida*, etc.)

*bu*, cutia (*dasyprocta aguti*)

*bi porsó*, um rato de pelo comprido

*kapo*, lontra (*lutra brasiliensis, paraensis*)

*kia wexkó*, capivara (*hydrochoérus capibara*)

*waipi*, coati (duas de *násua*, mamífero procionídeo)

*ñamã*, veado (*cervus campestris*)

*pamõ*, tatu (*xenartros dasipódidas*; de várias espécies: *pamõ soá, pamõ uho*, etc.

*Seme*, paca (*coelógenis paca*)

*u*, tartaruga (várias espécies de quelônios)

*ahuri*, jabuti (*testudo tabulata*)

(48) Como a piracema se manifesta, de regra, nos mesmos lugares, assim também os porcos do mato têm seu carreiro habitual e costumam atravessar os rios em determinados pontos, onde os surpreende o caçador.

(49) Os cachorros são geralmente magros e muitas vêzes, também, doentes; por isso e pelos serviços que lhes prestam não os comem. Há indícios que, em Parí-cachoeira (rio Tiquié), os indígenas comeram um cachorro gordo morto a tiro. O caboclo do Rio Negro é incapaz de matar um cachorro, embora doente. Receia que êsse "pecado" (assim pensam e dizem) lhes atrairia o castigo de S. Lázaro, que reúm como protetor dos cachorros, e que os puniria, provàvelmente, com a lepra.

[illegible] anta (*tapirus americanus*, Briss.) (50)
[illegible] lagartos (diversas espécies de lacertílios)
[illegible] porco do mato (caitetú, *dicótylis torquatus*, e queixada, *dicótylis labiatus*)

Dentre as aves mais frequentemente se alimentam de:
[illegible] inambú (generos *crypturéllus* e *tinamus*, de várias espécies: *dyuyró*, *puxiua*, etc.)
[illegible] tucano (várias especies de *ramphástus*)
[illegible] *kurtu*, pato-dagua (varias espécies)
[illegible] *kasóró*, jacú (cracídeo penelope)
[illegible] como-coró (*phimósus infuscátus*, dos ibidídeos)
[illegible] jacamim (*psophia crépitans*, Lin.)
[illegible] mutum (varios galináceos do gen. *crax*)
[illegible] cujubim (*pipile cujubi*)

Não se alimentam de *galinha*, nem de *ovos*, nem de *porco*, embora os criem e vendam aos civilizados (e comem algum pedaço que êstes lhes derem). É notavel a habilidade do indio em criar algumas aves como jacú, jacamim, mutum, papagaio, araras e outras que se tornam incrivelmente mansos. Fazem-no, porém, por simples divertimento, sem lhes aproveitar a carne (51). A mulher indígena masca o alimento para os filhotes dessas aves, que algumas vêzes se vêem tirando o alimento dos labios mesmos da mulher.

c) *Tubérculos e verduras.*

Comem cozidos ou assados os tubérculos da batata, *yazpi* (*hipomaea batatas*, Lam.), do cará, *ñómó* (*dioscórea alata*, Lin.) que foram introduzidos no sec. passado, e vários tubérculos da região,

(50) Quando matam alguma anta, cortam-lhe imediatamente a lingua, para que não o conte às outras.

(51) Informa Wallace ("Viagens ao Amazonas e Rio Negro", ed. 1939, pág. 202) que alguns indios criavam araras pela sua plumagem. No local da pena extraida injetavam a secreção leitosa do sapo, e a nova pena nascia de côr amarela ou alaranjada. Outros criavam gaviões reais, *uira-tauá* (*Thrasaetus harpya* Lin.), alimentando-os com duas galinhas por dia, para aproveitar-lhes as penas e por essa razão lhes ficavam caros os seus adornos. Não nos consta que ainda hoje submetam à arara a êsse tratamento. Aliás as araras domesticadas quase que se encontram só nas malocas mais afastadas. Quanto ao *gavião real* e ao *galo da serra* (*rupicola elegans*) hoje em dia só os apanham quando há esperança de vendê-los aos civilizados. Koch Grünberg (*Zum Jahre*, 50) informa também que os Káwa-tapúya obtinham a côr alaranjada das penas injetando gordura de pirara ou a secreção de um sapo.

como *durtú*, *karpo* e outros. Não conhecem a batata inglesa (*solanum tuberosum*, Lin).

Quanto às verduras, recusam-nas, quando se lhes oferecem, dizendo que não são vacas (propriamente, anta, *wezkó*).

Nos molhos de peixe, além da pimenta, às vêzes põem fôlhas tenras de mandioca (vd. acima, *maniçóba*). Algumas vêzes, também, deixam envelhecer as fôlhas da mandioca três ou quatro dias, até adquirir a côr escura; machucam-nas, então, fervem-nas e bebem o caldo. É o que se denomina *ki-pù*.

Serviam-se outrora das cinzas do carurú-da-pedra (*mourera fluviatilis*) que nasce espontamente nas pedras de algumas cachoeiras, em substituição do sal, para salgar-lhes a comida (52). Conforme a descrição do Cônego André Fernandes de Souza (fim do séc. 18) o processo se assemelhava ao do preparo da lixívia para o fabrico do «sabão de cinza». A saber: a planta era reduzida a cinzas que se deixavam em infusão em água, a fim de que se dissolvesse o sal, e êste, ao depois, pela evaporação se depositava sob forma de cristal esbranquiçado» (pag. 467 das «Noticias Geographicas» ap. Rev. do Inst. Hist. e Geogr. Brasileiro, Vol. 10 — Rio de Janeiro, 1870).

f) *Insetos*

1) *Termitas e formigas*

a) *Mexkó* (em Nheengatú *manituara*, *manivara*) é a rainha de uma espécie de cupim amarelo, que sai em abundância dos buracos da terra logo após a chuva. Comem-nas vivas ou assadas. É o alimento obrigatório dos moços e môças no rito pubertário.

b) Nos tempos de escassez, as mulheres sondam o terreno, com varas, nos lugares onde sabem provavelmente existirá um tipo de manivara sem asas, dito *ezkó*. Elas saem numerosíssimas e são comidas vivas, ou depois de assadas em pequenos amarrados de folhas de sororoca.

---

(52) Esta planta fornece excelente salada, já salgada por sua natureza. Porém o índio "não é vaca" para comer verdura. Wallace informa (Travels, 340) que dos frutos das palmeiras *inajá* e *jará* (*Geopoldinia maior* e *pulchra*, Mart.) preparavam uma farinha de sabor salino. Não nos consta, porém, que atualmente o façam, em razão da facilidade de obter o sal. Os índios que trabalham nas Missões compram sacas inteiras de sal e, ao depois, o vendem, até com exagerada usura, aos das malocas mais afastadas, mesmo em território colombiano.

Comem igualmente a tanajura, *dpárá* (Uaupés *dpárá*) e [illegible] espécies de formigas *yami-ka* (formiga-da-noite, porque [illegible] ou de madrugada), *dérpérpura* (*durabá*), *duhusá* (que [illegible] tarde), etc., no emigrarem dos formigueiros. Quando [illegible] grande movimento de formigas, pre[illegible] a altura de meio metro acima do formigueiro. Po[illegible] uma família inteira pousada sôbre êste jirau, e as tana[illegible] à medida que emergem da terra, são comidas cruas, muitas [illegible] também com acompanhamento de beiju ou farinha. Quando e[illegible] abundante a saída, as tanajuras são recolhidas em cestos [illegible] nos quais são, em seguida, torradas.

Igualmente comem, vivas ou assadas, as *saúvas*, *byá-pórá* [illegible] quer dizer filhos ou crias, *pórá*, da pimenta, *byá*, pelo seu [illegible] picante), e ao cupim, *burtied*.

Larvas

[illegible] certas épocas do ano aparecem numerosíssimas larvas [illegible] uns 3 ou 4 cm de comprimento, sôbre as plantas do ju[illegible] (*[illegible] ierásma japurá*, Spr.) e do cunuri, *[illegible]* (*cunúria spru[illegible]* Baill.), devorando-lhes totalmente as folhas. Apenas o per[illegible] abatem as plantas em redor, para que a larva não [illegible] para outras árvores, e ficam assim obrigadas a descer pelo [illegible] em procura de alimento. Na parte inferior do tronco fazem [illegible] com a folha da poeira sororoca (*oho pôri*), *que é muito* [illegible]. As largartas ao chegarem aí, escorregam e caem no chão, sendo [illegible] com pau ou flos em peneiras e depois torradas lenta[illegible] sôbre uma esteira à certa distância do fogo. É tão grande [illegible] que podem encher cestos, que são conservados no [illegible] para ir consumindo aos poucos.

Mesmo quando o descobrem só na fase de crisálida, cortam os [illegible] carregadas de casulos, como uma grande espiga de milho, [illegible] cortam, sendo assim mais fácil de abrir os casulos, como se [illegible] uma casca de amendoim torrado. A crisálida constitui uma [illegible] muito apreciada e serve, outrossim, como isca para o anzol. [illegible] larvas denominam-se em tukano *bá-ti-ya* (piolho? do japurá) e [illegible] (piolho do cunuri).

[illegible] *Mo'ré-pámo* é o nome Tukano de uma larva amarelo-esver[illegible], semelhante ao bicho-da-seda, e que se nutre das folhas do [illegible] (*inga édulis* mimosácea), e que muito apreciam, viva ou torrada.

c) Além das indicadas, há várias outras larvas procuradas como alimento, como as denominadas *mè'rè-ka-pexíorõd*, igualmente do ingazeiro; *uixtyá*, também do cunuri; *nexíod*, que vive na árvore homônima; *suxpi-só*, que se nutre das folhas da acuaricuara (de sementes vermelhas miúdas); *pixkõrõd*, da pupunheira; *sitá*, da árvore dita *uxpisikuri*.

3) *Caba (vespas)*. A palavra Tukáno *uxtyá*, como também a de origem Nheengatu *caba*, indica várias espécies de vespas ou marimbondos (*parachartécus apiculis* e outros da família dos vespídeos e pompilídeos). Comem-lhe as larvas com farinha (53).

4) *Coleópteros e outros alimentos animais*

a) Alimentam-se ainda de certas espécies de gafanhotos e de besouros, vivos ou torrados. Anos há em que uns besouros ditos *uxasya* (Nheengatú *morima*) aparecem em tal abundância que conseguem encher muitos cestos e até mesmo grandes canoas.

b) Atravessando a mata, muitas vêzes se encontram áreas como se fôssem revolvidas por suínos. É que por ali passaram os Makú com um pedaço de pau, ou com a mão, à procura de vermes para comerem.

c) Apreciam sobremaneira certas espécies de pequenas rãs arborícolas, denominadas *omã*. Sem limpá-las sequer, moqueam-nas ou cozinham-nas com pimenta. Igualmente saboreiam muito uma rã grande terrestre, chamada *tõhõd*.

d) Agrada-lhes grandemente um caranguejo, *sã'ã*, dos igapós ou alagados. O Missionário sr. Manoel Valério observou um particular interessante dêsse caranguejo, a saber: êle faz seu ninho à margem dos igapós, porém a tal altura que os paixes não venham comer os seus ovos. E assim, pela altura dos ninhos poder-se-ia prever, ano por ano, a alta das águas na enchente.

Quiçá a riqueza de *Vitaminas A*, hauridas da ingestão de tão variados insetos e larvas, o índio é devedor da admirável visibilidade noturna de que desfruta.

---

(53) Curioso o processo que empregam. Quando descobrem uma caixa de caba, esfregam a mão na axila e aproximam-na da caixa. Ao cheiro os marimbondos fogem, apoderam-se, então, da caixa com as larvas, e o próprio vespeiro lhes serve de prato, onde põem farinha que comem com as larvas. (Informação do Missionário agrônomo Teotônio Ferreira).

8) *Frutas*

Se a alimentação indígena carece de verduras e legumes, são muitas as frutas que consomem.

1) Dentre as fruteiras cultivadas, em primeiro lugar vem cinco ou seis variedades de banana, *oho*, e comem-nas cruas, assadas ou cozidas e reduzidas a mingau. Até mesmo ainda verdes, comem-nas cozidas na cinza.

Apreciam ainda o abacaxi, *sõ'nã* (Uaupés *sõ'nã*), biribá, *pizkã*, [illegible] *sõ'nã*), e, mais recentemente, a laranja, *darãñõ*, abacate *ñõmã* abio, *kã'rẽ*.

2) As frutas silvestres que conhecem e comem são numerosíssimas. Lembraremos algumas: *o'sé*, cucura ou mapati (*pourõuma cecropiaefolia*, Mart.), umã moráceа muito parecida com a embaúba, produzindo grandes cachos de frutos do tamanho de uma jabuticaba, os quais, quando maduros, são escuros, doces e mucilaginosos e fermentados dão uma bebida vinhosa; *mõ'rẽ* (U. *mõ'nẽ*), *kim-mõ'rẽ*, várias espécies de ingá (*ingá cinamómea*, *marginata*, *edulis*, etc., mimosáceas); *burukũña*, maracuja; *ãxtã-ñimi*, cumã (fruto da sorveira); *pãgã*, outra espécie de cucura; *kenõ*, jatobá; *tohõ*, [illegible] *tehõ* e *ehpã-pu*, variedades de pequiá; *thoã*, yúa-pi-[illegible], *ñumã*, umari; *uihi*, parica; *extoã*, cubio; *wexti*, umiri; *[illegible]*, pequena fruta branca; *tohoã-karperi*, *omã-karperi* e *ñerõ*, semelhantes ao cumã.

3) E muitas espécies de cocos, mais ou menos oleosos: *ixki*, *[illegible]*, *pupunã*, *ucuqui*, *mirípi*, açaí, *ã'rã*, pupunha de que são guiados, *bexti*, tucumã, que muito apreciam, *ñãmã* (U. *ñumũ*), bacaba e patauá, etc.

Açaí, patauá e bacaba são cocos pequenos, em cachos. Postos em água quente, desprende-se a polpa que o envolve. Esta, depois de amassada e peneirada, espalha-se no chibé ou no mingau, tornando-o mais nutriente e saboroso.

4) Deixam também em água o umari (*paroquéiba paraénsis*, Ducke), depois de lhe chupar a casca amarela adocicada, a fim de que o caroço perca o suco amargo que possui. Costumam misturar ainda sua massa amarela ao mingau.

5) A pupunheira é uma palmeira ornamental, erecta, de belas palmas que plantam em todos os seus povoados. Duas vêzes por ano produz cachos de pequenos cocos vermelhos ou alaranjados, com uma polpa farinhosa e enxuta. Comem-nos cozidos em água.

Apreciam-no tanto que, nessa época, chegam a abster-se de outros alimentos. Sua polpa diluída em água e deixada a fermentar em cametins durante 24 horas, transforma-se numa bebida muito saborosa, o caxiri de pupunha, *â'rê-kó*.

Quando há muita fartura dêsse côco, preparam grande quantidade de massa, e para conservá-la durante o ano sem se estragar, cavam um buraco nas proximidades da casa, forram-no bem com fôlhas de bananeira, e aí introduzem a massa, premendo-a bem, a fim de expulsar todo o ar, depois recobrem com fôlhas de bananeira e uma camada de terra de um palmo ou mais de espessura. Essa massa servirá para ir preparando o caxiri durante meses.

6) Dentre os mais procurados frutos da mata figura o *japurá*, uma dicotiledônea, como amêndoa, dentro de um invólucro mole. Submetem-no à fervura, a fim de eliminar-lhe a pele fina e amarga que a envolve, e depois esmagam-no, resultando uma massa escura, de um picante que lembra o queijo gorgonzola (54). Comem-na com beijú ou como tempêro do peixe. Quando o fabricam em grande quantidade, conservam-no em buracos na terra, como a massa da pupunha.

Note-se que a mulher não deve ir à sentina, nem mesmo beber água, enquanto prepara o japurá. Diversamente a massa ficaria tôda estragada, dizem.

g) O *caxiri*, *warpo*, também é consumido assado ou cozido. Porém depois de cozido deve ser deixado imerso em água corrente a fim de perder o sabor amargo.

h) *Bebidas*

Com um término tomado da Língua Geral denomina-se *caxiri*, em Tukano *pérã*, as várias bebidas que o índio fabrica. O término *caxiri* ou *pérã bazsase*, designa também as suas festas, que se fazem sempre com bebedeiras. Nem sem estas se concebem aquelas.

O *caxiri* assemelha-se a uma cerveja ou vinho de fruta, pelo paladar (55) tão grosso porém, que mais parece um mingau ou

---

(54) Disse, já informava o Pe. José Monteiro de Noronha em 1759, no seu "Roteiro do Viagem", pág. 114: "O nome de Japurá lhe imposerão os Indios (o um rio) por ser mui dual entre o gentio dele huma masa tirando negra e de ingratissimo cheiro feita de certas frutas chamadas Yapurá (assim pronunciado entre os indios o nome do rio) depois de corruptas, a qual come com o seu pão ou beijú, e com tudo o que lhes parece".

(55) "Das palmeiras fazem os indios vinho regalado", traz o Pe. Alonso de Rojas, na sua relação da viagem de 1637 (em "Descobrimentos do Rio das Amazonas, pág. 118).

uma rala, alongada. São bebidas fermentadas, e em muitos casos [illegible] outrossim, fermentação alcoólica. O paladar é agradável, especialmente quando se lhes acrescenta caldo de cana. Torna-se, [illegible] mais doce, porém com maior teor de álcool e mais embriante.

Preparam-nas de mandioca, *pôrhã*, de beijú, *ahû-ga*, de cará, [illegible] e de várias espécies de frutas. O beijú para o caxiri deve ser bem torrado, diz-se precisamente *pêru-ahûd*; sendo depois esfarelado e misturado à água que se deixa fermentar durante dois dias.

Os principais tipos de bebidas são:

1º — *Yaïrakê*. Espera-se que o beijú fique meio mofado, adiciona-se depois a mandioca ralada sem descascar, e abundante caldo de cana quente. Para ativar a fermentação o grande vaso, dito [illegible], que contém essa mistura, ficará sôbre a cinza quente. Ao cabo de uma semana, mais ou ménos, acha-se pronto para o consumo.

2º — *Tu-sa'bekê*. É preparado também com beijú desmanchado na mandioca, e depois adiciona-se caldo de cana. A fermentação é mais rápida, em lugar fresco, recobrindo-se com fôlha de bananeira o coxo que a contém. Ao cabo de três dias pode ser bebido. Quando resulta mais forte e estonteante, crêem que isto se dá porque Wãx-tí tomou banho dentro do coxo de bebida, quando ainda recoberto de fôlhas de bananeira (56).

3º — *Dorkê dorpoasé*. Mais apreciado, e dando oportunidades para as suas maiores festas e danças, é o «caxiri de pupunha», *dorkê dorpoasé*, para o qual todos trabalham. Cabe ao homem a colheita das frutas na mata. As mulheres cozinham-no em grandes panelas, adicionando-se à água fôlhas de pupunheira, para facilitar o cozimento, assim no-lo explicaram. As môças solteiras é que ralam a fruta cozida, ou socam-na, quando apenas amassada. Um [illegible] cômodo, embora de pouca duração, é o que se diz *wartá-nõ-sa*, isto é, uma raiz adventícia e aérea, munida de pequenas, porém, numerosas e resistentes saliências, que emite a palmeira paxíuba. As indias mais idosas trazem o milho, mastigam-no e acrescentam-

(56) Patrícia Vasconcelos narrou-nos que, certa ocasião em S. Luzia (rio Puduri) achava-se um velho muito fraco deitado na sua rede próxima ao fogo de tu sabekê. Pôde, da sua rede, ouvir o barulho de Wãx-tí que rasgava a fôlha de bananeira e banhava-se no líquido, e dêle bebia. Chamou, então, seu neto e disse-lhe: — "meu neto, joga essa bebida fora, eu ouvi Wãx-tí tomar banho dentro dela".

no à massa, que se dilui em água e deixa-se a fermentar durante três dias com caldo de cana.

Êsses três tipos de bebidas são os mais fortes que, originàriamente, sabiam preparar. Afirmam que, se os fabricantes têm «mão boa», ficam muito fortes os caxiris. Julgam, outrossim, que os «sopros» dos *Komũ* (VII — 2, e (3) emprestarão ainda maior fôrça incoriante à bebida.

4.º — *Pêru kaxiisé*. É o caxiri habitual, porque se prepara de um dia para o outro, apenas com a manicuera fresca, sem cana. Consome-se num espaço de 24 horas, de meio-dia a meio-dia. Se êste caxiri foi feito em pequena quantidade (informou um indígena Taryana; e o pudemos verificar também entre os Bará do Tiquié), de sorte que até a meia-noite já está tudo terminado, então, talvez fiquem sentados, conversando e soando as flautas-de-pã, porém não dançam. Note-se que fora das danças executam suas músicas sentados, e declararam que o fazem sempre assim, sem contudo indicar a razão dêsse costume.

5.º — *Duxtú-kó*. É o caxiri que se prepara com a batata *duxtú* (semelhante à batata japonesa). Soca-se a batata já cozida e mistura-se com a mandioca e deixa-se fermentar com suficiente quantidade de água.

6.º — *Nomõ-kó*. Prepara-se fazendo-se cozinhar o cará, *nõmõ*, o qual depois é insalivado e esmagado ao pilão. Mistura-se, por fim, ao beiju ou à manicuera e deixa-se fermentar.

7.º — *Sibeóké*. É verdadeira aguardente. Obtém-se destilando ao fogo o caldo de cana (*d'rã-kó* Uapés *d'nã-kó*). O seu uso é mais raro, sendo geralmente reduzido o plantio da cana, *d'rã*. Parece que às vêzes destilam também os caxiris.

alambique (sibeóri-pã)

Sabemos que, embora mais reduzidamente, também no Uaupés se prepara *sibeóké*. Em Ambaíba (rio Içana) vimos um dêsses

alambiques *sibeóri-pá* (Nheengatú *mutiquerepáua*). Constava de um grande *camotim*, com capacidade de uma centena de litros, terminando em bôca mais-estreita, que se fechava por um tampão de madeira ao qual estava adaptada uma *taquara* que conduzia a aguardente para outro *camotim* menor. Os orifícios eram obturados com *ubá*. Não consta ter havido alambiques nem destilação de cachaça nessa região noroeste do Amazonas, e atentando que os indígenas não se preocupam com o problema do resfriamento da destilação, alguns são levados a supor que se trata de uma invenção indígena. Pode, no entanto, ser uma imitação imperfeita dos alambiques que já no séc. 18 havia no baixo Rio Negro.

1) *Excitantes e entorpecentes*

1) *Tabaco*. É pequeno e raro, atualmente, o plantio do tabaco *mõ'nõ* (Uaupes *mõ'nõ*) (*nicotiana tabácum*), e quase que só se vê nos povoados e malocas de pouca ou nenhuma relação com os civilizados. Preparam-nô do modo seguinte: os homens colhem as folhas com o talo, reduzem tudo a pedacinhos e põem-nos ao fogo dentro de uma panela bem quente, movendo o conteúdo até tornar-se uma massa escura. Comprime-se depois a massa em pequenas fôrmas arredondadas. Sob a ação do sol e da fumaça endurecem êsses pães de tabaco *mõ'nõ bé'to* (Nh. *mboti*). Quando querem preparar o cigarro tradicional das festas, esmigalham o tabaco e o enrolam em lâminas finas de tauari (vd. VI — 2, f (5) ou de bananeira, resultando o grande cigarro, *ufikaro*, de 15 a 20 cm de comprimento.

O índio gosta muito de fumar. O fumo, porém, que hoje em dia consome (nos três rios cuja área estudamos), é todo obtido dos civilizados. Costuma êste obsequiar os adultos, homens e mulheres, com alguns cigarros, ou pedaço de fumo em rôlo ou em vara, a título de amizade. O fumo em rôlo é um produto que sempre tem procura da parte dos indígenas, como pagamento pelos seus trabalhos.

Mais rara é a aspiração do tabaco em pó, pelas narinas. Servem-se, então, de dois pequenos tubos de taquara ou osso, ligados entre si em ângulo de 45° por fio e breu. Introduzindo o pó num dos tubos, o índio aplica a extremidade a uma das narinas e a outra extremidade na bôca, e com um sôpro obriga o pó a subir pela narícula.

2) *Pimenta*. O indígena consome a pimenta, *byd*, em grandes dóses, quase sempre como tempéro da quinhapira.

Ordinàriamente já tem preparado o seu tempéro, dito *byd-uhd-Rosé* (isto é, pimenta em infusão em água), para aplicar ao peixe.

É frequente hoje que o índio, em viagens ou mesmo em casa, tenha uma garrafa com pimentas inteiras ou pulverizadas.

Em alguns casos trituram e mastigam a pimenta pura (a malagueta (*capsicum fructéscens*, Willd, das solanáceas), e muitas outras, como as denominadas *koro-byá*, *awí-byá*, *orkó-byá*, etc.

É admirável como até crianças, de dois anos ou talvez menos idade, tomam o beiju molhado na quinhapira sem mostrar sentir o ardor da pimenta, que é excessivo para o nosso paladar.

Serve-lhe a pimenta de estimulante do apetite, em falta de sal ou outros temperos.

3) *Kaxpi* (Nheengatu: *Caápi*) (57)

A origem e uso do *Kaxpi* perde-se na lenda (cfr. «Lendas do Uaupés» do Autor). Em uma festa que se realizou entre os Wanãna de Cururú-cachoeira (rio Uaupés), com a participação dos Kubéwãna e Hohudõne (de Uaupuim-cachoeira, rio Atari, afl. do Içana) e de elementos de várias outras tribos, nos dias 24 e 25 de abril de 1955, um pajé Tukano, por nome Henrique, do Japú-igarapé (afl. do Uaupés), levou, com muito cuidado, um par de instrumentos denominados *chcõnõ* (isto é, catarro, gripe), muito antigos e religiosamente conservados por êle como feliz herdeiro de seus antepassados. Assemelhavam-se a uma pequena corneta de madeira, reforçada com fio de tucum enrolado, e medindo seus 25 cm. Fazia-se soar soprando com fôrça pelo orifício superior, e simultâneamente abrindo lentamente o orifício inferior, um pouco mais largo que o superior, e que a palma da mão estava obturando. O som imitava um vagido de criança. Explica o detentor dos instrumentos que o *chcõnõ* é a «*mãe do kaxpi*». A desenfreada fantasia indígena, excitada pelas bebidas, máxime pelo Kaxpi, ao ouvir êsse som, revive a lenda e quiçá mesmo reproduza a cena lendária dos primeiros componentes do grupo, que assaltaram o recém-nascido e devoraram-lhe os ossos «*que eram Kaxpi*».

*Kaxpi* é uma bebida de sabor amargo, que se obtém de algumas trepadeiras especialmente do gênero *banistéria*. Não saberia se é mais exato chamá-lo excitante ou entorpecente, violento e quase

(57) Como observamos abaixo, a propósito do *Ipadú* a palavra *Kaxpi* pode ter derivado do Nheengatu *Caápi*, ou vice-versa. É certo, por um lado, que o uso do *kaxpi* é muito antigo e perde-se nas lendas, e, por outro, que é generalizado entre tôdas as tribos da região.

4: Silva SQ19 Tucano

instantâneo para os índios (58), à conta do alcalóide *banisterina*, porém, de efeito passageiro. Os pajés Henrique do Japú-igarapé e Marcelino de Juquira (rio Uaupés), ambos da tribo Tukano, informaram que êstes preparam o *kaxpi* com a casca dos seguintes cipós: 1.º) *mêrê-oê-kaxpi-dá* (cipó ingá), 2.º) *boxká-dá*" (cipó encontrado, do qual há duas variedades), 3.º) *kúri-kaxpi-dá*, (um cipó nodoso, que dá kaxpi dos mais fortes), 4.º) *sêi-pixkôrô-dá* (cipó rabo de guariba), 5.º) *yehe-nôxká-dá* (cipó perna de garça). Extraídas as cascas dos cipós, pilam-nas bem em um cocho de madeira e diluem em água. Maceram, outrossim, as fôlhas de *kaxpi-pûri* e de *kúnu-pûri*, reduzindo-as a uma massa como fumo, que se diz precisamente *kaxpi-môhô* (fumo de kaxpi), e que se mistura ao líquido precedente. Misturam-se ainda as fôlhas de *doxké-morôri-dá* e *duxtú-sarêhô-dá*.

Um seringueiro de Urânia (no Uaupés colombiano), de mãe Tukano e criado e vivendo entre os indígenas da região, soube dos Taryana que, além dos cipós precedentes, empregam também o de-

(58) Assim descreve A. R. Wallace ("Viagens pelo Amazonas e Rio Negro", 281) o efeito do kaxpi: "Um índio velho avançou para o meio da roda com um grande (?) pote de barro, que parecia pintado de pouco, e o pôs no chão. Então, agachando-se, o velho permaneceu de cócoras em frente do pote, e começou a remexer o conteúdo. Em seguida, cheios de líquido duas pequenas cuias, e, erguendo-se estendeu os braços, sustendo, porém, em cada mão, uma cuia. Depois de pequena pausa, dois índios avançaram em direção dêle, trazendo os arcos e flechas e as suas lanças. Cada um pegando a oferecida cuia, bebeu o que ela continha. Por ser excessivamente amarga a bebida, cada um fez uma cara muito feia. Durante meio minuto, talvez, fizeram imóveis. Repentinamente, ambos deram forte gritaria nas cordas de seus arcos, fazendo-as vibrar; sacudiram as suas lanças, bateram com os pés no solo, e, em seguida, foram procurar os seus assentos. As pequenas cuias de novo se encheram e pela mesma forma foram apresentadas a dois outros índios, que se aproximaram e procederam de maneira idêntica. E assim, dois de cada vez, êles se foram sucedendo, uns aos outros. Alguns, entretanto, ficaram como que mais exaltados. Empunhando as lanças, correram em seguida pela casa furiosamente, como se quisessem matar um inimigo, bateram com os pés no chão, soltaram gritos e pularam selvagemente, numa atitude guerreira e ao mesmo tempo terrível. E, como os outros também o fizeram, voltaram depois, tranqüilamente a ocupar os seus lugares. A maior parte recebe ruidosos e frenéticos aplausos por parte dos assistentes, o que também é feito por vêzes durante as danças". Esta estranha cena final denomina-se "golpeiao-branco" *pexká-sápuxé*, e têmo-la também presenciado (cfr. VII, 4, e (2-8); porém sem relação com a absorpção do *kaxpi*. Pensamos que se trata de um engano de Wallace, supondo-a mero efeito do *kaxpi*, quando, na realidade, é um rito regular dos Dabacuris, e que se pode realizar mesmo antes de beber o *kaxpi*.

nominado *ma-karpi-dá*, do qual há 3 variedades, que produzem bebida muito forte, donde a fama de ser mais violento o *karpi* dos Taryana.

Poucas horas de infusão em água, dentro de uma ânfora de 8 ou 10 litros de capacidade, com os desenhos costumeiros, dita *karpiro*, basta para estar em condições de ser consumido. Seu uso é reservado exclusivamente às pessoas do sexo masculino e de idade madura. Crêem que o «sôpro ritual» do pajé ou de algum *Komú*, aumenta-lhe a virtude excitadora da fantasia. É servido em pequenas cuias, seguido imediatamente de libações de caxiri.

Sob a ação do *karpi* o índio diz ter visões agradáveis. «Vê sinais luminosos», foi a expressão do nosso prestimoso auxiliar Tukano, Antônio Barreto. E foi também o que viu Koch Grünberg (*Zwei Jahre*, 201), ao qual parecia ver maravilhosas lentejoulas claras quando volvia os olhos para o escuro, ou chamas vermelhas, quando os deslizava sôbre o papel.

Um funcionário da alfândega Colombiana de Iauareté (rio Uáupés) tomou-o e viu imagens de objetos com muita nitidez, e com tôda a clareza percebeu figuras geométricas, e até teoremas de trigonometria lhe vieram à imaginação. Um negociante do rio Querari revelou-nos que o kaxpi lhe provocara, em certa ocasião, uma bela e agradável deformação das sensações. Assim as mulheres lhe pareciam cobras coleando com lindíssimos enfeites; as flautas-de-pã davam-lhe a impressão de uma grande orquestra.

Seu efeito é, pois, também uma superexcitação da fantasia. No entanto algumas vêzes tomba por terra sem sentidos. «Na quarta cuia, diz o velho índio Antônio a Koch G. (*Zwei Jahre*, 201), a gente cai violentamente, e tem, então, as mais belas visões» (59).

---

(59) De nossa experiência pessoal podemos informar que temos bebido *karpi* preparado por indígenas Makú, Wanána e Taryana. Na grande festa dos Wanána de Caruru-cachoeira (Uáupés), da qual se falou supra, foi servido karpi das tribos Makú, Wanána e Taryána. O da tribo Makú foi preparado por um dos Makú que serviam como escravo aos Wanána da localidade. O dos Taryana o foi pelo velho Taryana Calisto de Iauareté que, desde esta localidade, levara consigo, por esta circunstância, um feixe de cipó grosso (1 polegada de diâmetro e 1,5 m de comprimento aproximadamente). O *karpi* foi distribuído pessoalmente pelo tuxaua local, de nome Mandú, que levava simultâneamente duas pequenas cuias, uma para cada pessoa. O Komú que "soprara" a bebida, antes que fôssem enchidas as cuias remexia o líquido, servindo-se de um pedaço de cipó grosso, com 4 entumescências, e que é um dos ingredientes da bebida. Toma-se sem dificuldade, pois é de um gosto amargo suportável. No entanto, vários índios fizeram caretas e alguns cuspiram o resto fora. Em seguida três homens, cada

4) *Pátu* (Nheengatú: *Ipadú*) (60)

É o produto da *coca*, arbusto da família das eritroxilâceas (*erythróxylon coca*, Lin.) que pega fàcilmente de galho. Bem que as mulheres adultas possam também tomar o *ipadú*, cabe aos homens o seu plantio e o fazem na roça, e por vêzes até perto da maloca, à guisa de sebe. Diàriamente os homens vão colhendo as fôlhas tenras, deixam-nas secar e depois as torram em panela especial, denominada *pátu-axtéri-to*. Como tempêro do ipadú, *pátu-mõd* queimam fôlhas de *embauba* (cecrópias) ou de *cucura*, no interior (61) da maloca, porém junto da porta. Misturando as cinzas com as fôlhas torradas do ipadú, passam longamente por um pilão de forma usual, o *pátu-ahú-gõ* ou *pátu-dorké-khá*, até ficar tudo bem moído. Depositam depois o pó em uma sacola de tururí, a qual denominam *pátu-pa:ri-sutiro*. Atravessa esta sacola uma vara,

---

qual com duas grandes cuias de caxirí, vinham em fila, ziguezagueando e fazendo com a boca um rumor como um zumbido de inseto, e distribuíam o caxirí aos que haviam bebido kaxpí, a fim de tirar o gôsto desagradável. Alguns indígenas declararam-nos que haviam visto globos ou chamas luminosas. Nada percebemos nós; experimentamos, então, apenas leve excitação nos músculos das pernas, e, à noite, forte dor occipital de cabeça. Cremos, porém, que tais sensações nenhuma relação tinham com a bebida, e eram apenas efeitos do cansaço, do sol e calor do dia. Observamos depois aos índios Taryana, que nos acompanharam à festa, que o Kaxpí estava fraco e nada sentíramos. Explicaram-nos que faltava um dos ingredientes, um cipó que era plantado por um velho já falecido e não haviam encontrado tal cipó ao empreenderem a viagem. Prometeram-nos preparar mais tarde um Kaxpí bem forte e com tôda a técnica. Efetivamente o fizeram dias mais tarde e no-lo ofereceram. Com receio de uma ação violenta provocada pela bebida não a quisemos tomar publicamente, porém em particular e não apenas uma pequena cuia, porém sorvemos uma boa cuia em três etapas. Embora como Koch G. tivéssemos ante os olhos papel branco, em que anotávamos nossos apontamentos, nenhuma sensação luminosa logramos perceber, ou de outro sentido externo. Apenas o sabor desagradável provocou-nos um mal-estar, embora sem vômito, obrigando-nos a uma dieta naquele dia e ao uso, mais tarde, de gotas amargas e outras poções estomacais. Opinamos, por isso, que os efeitos sinalados nos indígenas devem ser explicados pela fácil excitabilidade da sua fantasia.

(60) O nome Tukano pátu parece derivar do Nheengatú ipadú, fazendo-nos supor que as tribos do Uaupés tenham recebido das tribos do Rio Negro, de língua Nheengatú, o uso do ipadú. É verdade que, hoje em dia, os caboclos do Rio Negro e os índios do Içana não empregam o ipadú.

(61) Não sabemos se a queima à porta da maloca seja uma prescrição de caráter mágico, ou apenas por razão de comodidade. Esta segunda hipótese é mais verossímil; efetivamente, sem dificuldade alguma executam as várias operações do preparo do ipadú também fora da maloca a fim de serem filmadas.

dita *pátu-pá-kó*. Introduzindo-a num tubo de forma de pilão alongado (de 1,80 m. e uns 15 cm de diâmetro, e que se diz *pátu-pá-pó*) vão batendo com as duas mãos a sacola contra as paredes do tubo, até que o pó fique tão finamente pulverizado, que passa através da sacola e se deposita no tubo. A fim de facilitar o trabalho, costumam amarrar êsse tubo a uma das colunas da maloca, de sorte que a abertura fique a um metro de altura do solo, posição cômoda para quem deve «bater» o ipadú, e a extremidade fechada apoia-se no solo.

Retira-se, por fim, o pó e guarda-se em sacolas apropriadas, tambem de tururi, ditas *pátu-ahuró* ou *pátu-warsóro*, cuja bôca é

sacola-de-ipadú (pátu-ahuró)

atravessada por um fino tubo, *pátu-baari-oá*, de taquara ou de osso de garça (*yehé-oá*), pelo qual se aspira o pó, como nos bares se chupa um refresco. Assim nas viagens, pois em casa o *ipadú* é conservado mais comumente dentro de uma cuia e dêle se servem tirando um punhado com uma espátula de madeira ou mesmo uma fôlha. Fazem-no com atenção para evitar que o pó finíssimo caia no solo.

Os Makú preparam-no em bolas. O índio serve-se do *ipadú* especialmente quando vai à caça ou à pesca, porque, entorpecente como é, não lhe deixa sentir fome nem sêde, e dêste modo dispensa-o de levar alimentos. Fazem dêle uma bola que conservam num canto da bôca, e vai chupando aos poucos. As mulheres, salvo raríssimas exceções, não comem o ipadú; apenas os homens adultos.

Seu consumo, hoje, é quase desconhecido no baixo Uaupés, é bem geral, no entanto, entre as tribos do Papuri e Tiquié, mesmo quando têm sua alimentação regular. Talvez o abuso do ipadú seja responsável pelo depauperamento orgânico nos velhos e muitas úlceras estomacais. Vicia, ademais, o indivíduo, e seus filhos nascem fracos, apatetados, tarados (62). A geração môça, que passou pelos colégios da Missão, quase não consome mais o ipadú.

---

(62) O Missionário Salesiano, Padre João Marchesi, certa ocasião mostrou a um tuxáua como o filho de um comedor de *ipadú* era tardo de inteligência, não aprendia a ler nem a escrever, não tinha habilidade nos trabalhos manuais, ao passo que as outras crianças o faziam rapidamente.

*Conclusão*

Os indígenas do Uaupés tomam crus apenas os frutos e alguns insetos. Nunca um pedaço de carne ou peixe (63); êstes alimentos são, ordinàriamente, *moqueados*. E o peixe é frequentemente cozido e reduzido a môlho com pimenta, para acompanhar a ingestão de beiju.

O fogo obtém-se hoje pelo fósforo, «*pallito*», como o denominam, e procuram não deixa-lo apagar-se. Dia e noite acha-se aceso o fogo dentro da maloca, e levam, outrossim, panelas com brasas para viagem e nas viagens.

Outrora obtinha-se o fogo girando ràpidamente, entre as palmas da mão, um graveto cuja extremidade munida de uma mecha de palma, se vai esfregando no pequeno orifício de outro graveto bem sêco. É o aparelho denominado, em Tukano, *pexkâ-mê*, «fogo».

A alimentação dêstes indígenas, embora de primeira vista não pareça, é bastante variada, rica em vitaminas de origem vegetal e animal. Quanto aos sais necessários ao organismo, tem-no das frutas e frutas, com efeito, são de forte arcabouço ósseo, e no entanto algumas denunciam deficiência de sais calcáreos. Quanto ao açúcar, não o dão as frutas e da fermentação das suas bebidas. O açúcar da cana de açúcar é insignificante e destinado pràticamente ao preparo dos caxiri, embora uma vez ou outra se veja também algum índio chupando-a.

É grande a quantidade de alimentos que o índio ingere diàriamente, quando tem fartura; embora outros dias, pela falta de alimentos, se veja obrigado a um jejum bem rigoroso. Talvez o próprio caxiri, que bebe em grandes doses, por ocasião das festas, exerça o papel de uma lavagem periódica do estômago, intestinos e rins. E por o que, raramente, se encontram entre êles pessoas magras, se se excetuam as mulheres idosas, que geralmente o são, e os doentes. São, ao contrário, cheios de corpo ou mesmo gordos, sem obesidade ou adiposidades deformantes, fortes e sadios.

Nota-se que o índio exala um cheiro característico que faz pensar seja devido à alimentação preponderante de peixe e pimenta.

(63) Não nos foi possível apurar se é questão ùnicamente de gôsto e costume, ou entrem também motivos supersticiosos. Não nos parece que os haja, embora em uma de suas lendas se diz que Wãã-ti é que come carne crua.

5) *Caça e pesca*

a) *Pesca*

O peixe é um elemento importante na alimentação dos índios, já o vimos. No regime de casa familiar cada chefe de família providencia o peixe, é sua ocupação habitual, embora não exclusiva. No régime de habitação coletiva de várias famílias, a maloca, cabe ainda aos homens a pequena pescaria e saem em grupos de dois ou três, ou mesmo sozinhos, ou acompanhado de algum filho, quiça muito pequeno, que reme e governe a canoa. Tôda a preocupação do índio é fazer do filho um ótimo pescador, um *marupiara*. «Mũ'sigõ» é o têrmo Tukano para indicar o indivíduo feliz na pesca e caça.

Chega, porém, a piracema, época em que os peixes se reunem em cardumes, *uci tũriró*, especialmente nas cachoeiras, tentando vencê-las a fim de ganhar as cabeceiras. É a oportunidade para que o índio prepare suas reservas de peixe para os dias infrutuosos. É o período das grandes pescarias. Ou ainda, sobrevém a vazante, e os peixes que subiram os igarapés e igapós (64) procurarão ganhar o rio, é o momento também das pescarias em comum. Constituem estas um ato social que estreita os habitantes da maloca ou povoado. Mais ainda, é um divertimento ou esporte coletivo, uma época de festa. Se a distância até o local da pescaria fôr grande, como muitas vêzes o é, por lá deverão pernoitar vários dias, e, neste caso, deverão levar suas redes. Não raro improvisam *tapiris* ou barracas nas proximidades, com a conveniente antecedência. As mulheres prepararão o beiju e a farinha. Os homens atenderão às redes e verão se as canoas estão em boas condições. O preparativo completo compreende além dos instrumentos da pesca, os paneiros para guardar o peixe, o fogo, etc.

Os principais processos de pesca são:

1) *Com veneno* (65)

---

(64) *Igarapés* são os pequenos afluentes dos rios; *igapós* são os braços d'água ou lagos que se formam nas enchentes.

(65) Discute-se sobre a nocividade do processo, e alguns condenam-no como destruidor dos peixes, dos quais muitos não são aproveitados. O fato é que desde muitas gerações percam nos mesmos lugares, e sempre acham peixe. Se não são atualmente tão grandes e tão abundantes, talvez se deva atribuir não ao processo, mas à freqüência da pescaria. Parece, também, que muitos peixes ficam apenas entontecidos e conseguem escapar. A circunstância de fato inconveniente é que por vêzes os igarapés estão muito vazios e foi muito grande a dose do timbó, e tanto o peixe como a própria água que bebem, provoca desarranjos intestinais aos índios.

a) *Ehú* (timbó). A grande pescaria (*Wai pu'asé*), é a que se realiza com o *tihbó* (66).

Previamente foi escolhido um local adaptado, por exemplo um remanso do rio como pequena baía, ou a foz de um igarapé ou igapó e cevou-se, *burtú-kûse*, isto é, com frequência aí se lançava alimento para os peixes (cupim, *burtwá*, donde o têrmo *burtú-kûse*, a ainda pupunha, farinha, frutas, massa de beijú, etc.). Depois, durante a noite, cercou-se o sítio com o *pari*, em Tukano *suterika*, ou seja com uma cêrca bem cerrada de estacas finas de paxiuba, deixando apenas uma abertura por onde entram os peixes. Para facilitar êste trabalho já fabricam o *pari* com uma esteira, não trançada, mas com talas verticais bem unidas, e que adaptam no local escolhido, com fortes estacas. Na noite precedente à pescaria fecha-se a abertura, de sorte que os peixes que entraram para comer não podem voltar para o rio. É o cêrco do peixe ou *wai-ôô*. Soca-se bem o timbó, batendo-o contra as pedras, ou esmagando-o com um bastão. O sumo, que é de cheiro ativo, se espalhará pela água, matando os peixes pequenos e entontecendo os grandes, os quais logo virão à tona. A fim de que o veneno atinja as camadas inferiores da água, lançam também barro com o sumo da planta. Partem então, as canoas muito de madrugada (ou já se deslocaram com uma antecedência, se o lugar é muito distante), com tôda a família, homens, mulheres carregando os filhos, as crianças, os apetrechos (67). Nesse dia ninguém comerá mingau, nem algo doce (68); devem ir em jejum, porque senão a pesca será infrutuosa. Procurarão todos entrar simultâneamente na água, avançando de cima da correnteza para baixo, gritando em uníssono (e será repreendido quem o fizer atrasado): pud-pud-pud, a fim de amedrontar os peixes. Essa ação se denomina *wai nârá*; é o enxotamento dos peixes, a fim de que penetrem na água envenenada.

Os peixes pequenos sobem à tona mortos e são recolhidos com o puçá, ou com uma peneira, ou mesmo com a mão; é o *wai wa'sá*. Os grandes, apenas entontecidos, são presos com flecha ou azagaia. Alguns peixes conseguem saltar o *pari* de barragem, caso êste tenha

---

(66) Timbó é o nome de várias leguminosas dos gêneros *Tephrósia Lonchocarpus* (*densiflorus, rufescens*, etc.).

(67) Não, porem, as mulheres grávidas, porque nesse caso a pescaria não teria bom resultado. Se o cachorro entrar na água, crêem que o timbó perderá sua atividade.

(68) "Eu comi doce e fui feliz na pesca", objetou o Padre Afonso, Missionário Montfortiano de Teresita. — "Mas o senhor não é dos nossos", respondeu-lhe o índio convicto.

fechado muito imerso, mas caem em redes horizontais suspensas ao longo da barragem: é o uaí bu'pá-pcaró.

A pescaria se faz com gritos, risadas, tombos, grande alegria enfim. E todos participam, crianças, mulheres, homens. Nas imediações do local da pescaria preparam o peixe para comerem e moqueiam-no também para conservá-lo.

b) *Wai nimá* (cunambi). *Wai nimá*, quer dizer *veneno-de-peixe*. É (dito em Nheengatu *Cunambi*), *Phyllanthus* cunami, arbusto de fôlhas grandes, da família das euforbiaceas, que costumam ter plantado nas vizinhanças de sua habitação ou na roça. Pisam-lhe as fôlhas e sementes, adicionando farinha, cinza de cana brava, pimenta e japura, obtém uma massa consistente da qual fazem pequenas bolas que são atiradas à água. Antes, porém, de lançar uma dessas bolas, têm-na entre o indicador e o polegar, descrevem com a mão ao redor da cabeça dois circulos para a direita e um para a esquerda. Se se omitir um dêsses gestos, dizem, nada se pegará. Explicam que a cinza sendo de cana que flutua, também o peixe flutuará (69). O peixe engolindo alguma dessas bolinhas virá depois de alguns instantes à flor dagua, atordoado, e os índios, a nado ou em canoas, o-recolhem em cestos. É, porém, passageiro o efeito. A mulher enquanto prepara o japura para semelhante pesca nada deve comer, nem pode ir à sentina, para que o veneno mantenha tôda sua eficiência. Empregam também o veneno-de-peixe como o timbó, misturando seu sumo com o barro.

Do mesmo modo que o *veneno-de-peixe*, podem-se empregar umas fôlhas miúdas conhecidas por *doé nimá*, veneno-de-taraíras.

c) *Shú-pu*. Piquiá (*caryocar villósum*, Aubl.) é o nome de uma castanha comestível, cuja polpa, no entanto, é venenosa. Por isso, depois de machucada resulta uma massa que, lançada à água tem ação mais forte ainda que a do timbó, isto é, entontece os peixes, os quais logo sobem à tona, sendo, então, presos à mão ou flechados.

Êstes dois últimos processos empregam-se nas pequenas pescarias.

2) *Com armadilhas*

São várias as espécies de armadilhas de que se servem para a pesca, as principais são:

---

(69) A explicação talvez seja esta, a potassa da cinza atua sôbre a bexiga do peixe, fazendo-a dilatar-se, e o peixe vem à tona.

a) *Buxkod-ico* (em Nheengatú, *matapi*). É uma nassa ou gaiola como a dos pescadores do sul do Brasil. Consiste numa gaiola de varetas de pataúá, de paxiúba, ou mesmo de cipó, em forma de cone ou cilindro alongado. A parte fina é amarrada por cipó, e se abre no momento de, por aí, extrair os peixes presos. Na parte larga (base do cone) há uma abertura de forma afunilada denominada em Tukano *yeé-ñé-pa*, com varetas flexíveis que se alargam a fim de dar passagem ao peixe. Imerge-se o matapi nos pequenos canais, encravando-o entre as pedras da cachoeira, com a boca para o lado de baixo, e a ponta fechada para o lado da correnteza. O peixe, que tem a tendência de subir a correnteza, entra pela bôca, porém encontra o fundo fechado. As vêzes recolhem diariamente dêste modo numerosos e grandes peixes.

Cacuri (Wai-ro)

b) *Wai-ro* (em Nheengatú *cacuri*). Consiste num cercado de varetas de paxiúba ou pataúá, prêso a estacas bem altas e reforçadas, para que a correnteza do rio não o derrube, localizado próximo da beira do rio, ou de ilhas, por onde sabem que os peixes costumam passar na enchente. O cercado, quase sempre de forma triangular, é continuado lateralmente por dois panos ou barragens de pari, que se juntam em ângulo obtuso, encaminhando para o cercado os peixes, os quais, conforme seu instinto, avançam sempre contra a correnteza. Ao chegar ao ângulo da barragem, esta cede passagem, porque aí está solta, porém volta logo a fechar-se pela ação da correnteza. Os peixes avançam, mas encontram o fundo fechado e, não achando o caminho por onde entraram, ficam presos, não raro, em grande quantidade. Êste sistema é muito prático, equivale a um viveiro no qual os peixes são conservados vivos e o

pescador mergulha e vai apanhando com o puçá, *waí wehé-kõ*, os peixes que deseja. As mulheres quando grávidas, não podem comer peixe do cacuri. Pensam que o espírito da criança nascitura vai à noite chorar perto da armadilha e espanta os peixes. Atribuem os insucessos a tal causa, e remedeiam envolvendo a estacada com um cipó venenoso. O espírito da criança, ao percebê-lo fugirá, e os peixes tornarão a entrar na armadilha.

c) *Ivui-nõ*. Assemelha-se ao cacuri; e, porém, de pequenas dimensões, geralmente um metro de comprimento e outro tanto de largura. Costuma ser de varetas e encaixa-se, como a massa, por entre as pedras da correnteza.

Jirau de pesca (ewá)

d) *Ewá* (em Nheengatú *caja* ou *jirau*). O índio sabe que o peixe, em certa época, tenta vencer de salto as pequenas quedas de água. Conhecedor desses lugares, aí arma, durante a vazante, um jirau firmado sôbre grandes paus, de sorte, porém, que ficará como um plano inclinado, com o lado mais baixo correspondendo ao ponto em que os peixes tentam a passagem. Algumas vêzes vêem-se troncos enormes e bem travados que resistem à fôrça da correnteza, representando talvez o trabalho de muitos dias de todos os homens da maloca ou povoado. Os peixes saltam, tentando alcançar a parte de cima da cachoeira, e caem sôbre o jirau, donde, várias vêzes por dia, os recolhem os pescadores. Ou ainda, tal grade é disposta de sorte que receba a água da correnteza e retém os peixes por ela arrastados. São os *sõ'd* (em Nheengatú *pirá-mirim*) os peixes que logram assim apanhar, enchendo por vêzes muitos paneiros.

3) *Com flecha e rede*

a) *Com flecha* — A margem dos rios existem muitas vêzes árvores cujos frutos ou sementes são procurados pelos peixes, como o japurá o é pelo aracu. O índio põe-se, então, à sombra dessas árvores, dentro da sua canoa, e espera que o peixe suba para apanhar esses frutos que sobrenadam; atinge-os nesse momento com flechada certeira, e os recolhe na canoa. É um exercício que muito diverte e se diz *wai bôé*. Em falta de frutos quebram os ninhos de rupim, cheios de larvas, de que os peixes muito gostam, e lançam-nos à água. Quando os peixes saltam para abocanhar essas larvas, são alvejados pelas flechas.

b) *Com rede*. Vimos o emprêgo da rede afunilada puçá, *wehèko*, e com a bôca sempre aberta, para recolher os peixes mortos ou entontecidos pelos venenos. Servem-se também, para o mesmo fim, de suas peneiras ou *barti*, é o processo que se diz *wai wa'sé*.

Note-se que enquanto o homem prepara o seu puçá, fá-lo escondido, sem fumar nem comer, apenas com ipadú na bôca, e abstém-se de falar ou de ir à sentina, a fim de que o puçá seja eficiente.

Empregam-no também para a pesca direta; é o *wai ñûû*. Parado na bôca do igarapé espera que o peixe assustado pelos que fazem barulho de montante, procure o rio, e com um movimento rápido levantam o puçá trazendo quase sempre algum peixe.

Também na escuridão da noite, especialmente nas praias, surpreendem os peixes e os apanham com seus puçás; é o que se denomina *wai ôô*.

Ou ainda, com aquele tipo maior de puçá (VI — 2, e (3), dito em Língua Geral *jereré*, que se abre só no momento do uso, mergulham-no e quando o peixe está dentro fecham a rede, tirando-lhe a cunha. São processos simples, porém, rendosos, especialmente na vazante ou nas piracemas.

Usam ainda o seguinte processo: cercam com paú a bôca de um igarapé deixando uma pequena passagem para os peixes que sobem para dormir. A certa hora da noite um homem se põe com o seu puçá junto dessa abertura, enquanto outros, na parte superior do ribeirão, batem com paus nágua. Os peixes assustados, que procuram voltar ao rio, caem no puçá.

Piracema, *wai furirô*, é a reunião dos cardumes de peixes em certos lugares no tempo da desova, em que, por isso mesmo, são menos arisco. A *piririca*, isto é, o encrespar das águas, e um ruído característico, *wai bôzôrô*, denunciam êsses lugares. Metem-se, então, de canoa entre os cardumes, e com o puçá ou com a flecha os índios apanham grandes quantidades de peixes.

4) *Pesca com anzol, acangaia e arpão*

a) Hábeis pescadores como são, os índios servem-se ainda de outros processos e instrumentos de pesca, e também dos meios introduzidos pelos civilizados, dando-lhes, no entanto, aplicações características.

Às vezes com um facho aceso, entontece o peixe que está dormindo, é o que se diz *encandear* ou *fachear* o peixe, e fisga-o com seu arpão, *yôxé-kô*. Este processo denomina-se *wat wá*, (*tatattica* ou *mafurisana* em Nheengatú). Note-se que a própria mata lhe fornece êste facho com a árvore dita *mârpâri* (turi), do gênero Licânia) cuja madeira se separa em fasquias (70) finas, e uma vez acesa, mantém seu facho até consumir-se tôda a fasquia.

Na época da piracema saem à noite, duas ou mais canoas com certa velocidade e com fachos de turi. Os peixes, mesmo os grandes, acordados com o rumor e tontos pela luz, saltam e muitos caem dentro das canoas. É o que se diz em Nheengátú *pirdquira*, e em Tukano, *wat nâ-â*, isto é, enxotamento dos peixes.

b) *Iscas*. São várias as iscas, *ahûñesé*, que empregam, conforme a qualidade de peixe que desejam e cujo hábitat procuram e conhecem. Por vezes empregam a minhoca, *ahicá*, ou larvas de insetos, gafanhotos, etc.

Muitas dessas minhocas vivem dentro de bromélias (ditas por isso, pelos de língua Nheengatú, mãe da minhoca, *ãmuoi mãía*). O pescador já leva consigo algumas dessas bromélias, verdadeiros depósitos de minhocas vivas (71), denominadas *darakubi* em língua sorá.

Outras vêzes, como isca, empregam pedaços de peixe ou ainda bagas, frutos ou massa de fruto preparada como pequenas bolas. O tambaqui, por exemplo, gosta muito do fruto da jacitara dos igapós, conhecido por *wat-tú-da* (em Nheengatú, *Kamú-kamú*). O pescador, até sem anzol amarra o fruto na ponta da linha, bate com êle n'água, como se o fruto estivesse caindo diretamente da árvore.

---

(70) Essas fasquias empregam-se também como ripas, pois a resina torna-a inatacável pelos cupins.

(71) Esse tipo de minhoca darakubi encontra-se nas bromélias dos igapós. o darakubi quer emigrar, corta um pedaço de si, os anéis finais do corpo, e deixa-os cair. Se há peixe pelas proximidades, dará logo um salto para apanhar a isca, e a minhoca pelo ruído tem ciência do perigo e fica quieta. Quando não ouve mais rumor, quer dizer que os peixes já emigraram para o rio, e ela pode sair sem perigo.

4: Silva SQ19 Tucano

O peixe avança sôfrego e engole o fruto. Então, com rápido movimento o pescador o traz fora d'água. Até com simples bola de pau, *dozké-nõ-wehéká* (Nheengatú *pa-pôga*) conseguem apanhar o tambaqui, agindo como precedentemente.

c) *Anzóis*. Outrora fabricavam o seu anzol com dois espinhos resistentes de tucum, *berta*, unidos em ângulo bem aberto, por um fio com breu, no qual se esmaga *karpó*, uma raiz semelhante à batata japonesa. Explicam que o peixe sentirá o cheiro da raiz e virá morder o anzol.

Este, como o anzol metálico comum, prêso a um cordel e revestido de isca, prende-se nas brânquias do peixe que o engoliu.

Muitas vezes o anzol é deixado prêso a uma vara, *wcheri wá'só*, fincada à margem do rio. É o processo dito *wai wehé-kù*.

Ou o índio o traz à mão, fixo à extremidade de uma vara; diz-se *wai wehô*. *Way-mpó-he* é quando se dispensa a vara, e o anzol; pois o mandi costuma engolir o fio mesmo sem isca alguma.

Por vêzes o caniço do anzol está engenhosamente, com a ponta arqueada e constituindo uma armadilha, *wai pâro*. Quando o peixe morde a isca, o caniço levanta-se e o peixe fica suspenso no ar. Assim costumam apanhar a taraira que vive na beira dos lagos grejos.

É muito curiosa a maneira de apanhar o *buú* (tucunaré), peixe de escama, muito saboroso, e que durante o dia nada na superfície d'água à caça de outros peixes. O aparelho se diz *buú wcheri wásó* (Nheengatú *pindá siririka*). Consta de uma vara tendo na extremidade um cordel com um floco de penas bem vermelhas do pescoço do tucano, entre as quais se escondeu um anzol. Nos lugares em que há o tucunaré, descrevem com a ponta da vara movimentos rápidos semicirculares na água. O peixe segue o movimento da vara a fim de alcançar as penas coloridas e, quando o consegue, dá um salto para abocanhá-las. Nesse momento o índio, com rápida puxão da vara, fisga o peixe que pode pesar até três ou quatro quilogramas.

Às vêzes conseguem apanhá-los com o cordel amarrado à popa da canoa, durante as viagens, de sorte que as penas vão roçando a flor d'água; é o meio dito *buú wahari-da°* (Nheengatú *pindá wa-kéká*).

d) *Espinhel*. Atualmente adquirem os anzóis metálicos dos civilizados e empregam-nos ainda com processos muito rendosos e cômodos. Um dêsses, por exemplo, é o espinhel: processo dito *mó-wehérikaró*.

O *espinhel* consta de um cordel bem forte, de 50 a 100 metros de comprimento, atado por uma extremidade à margem do rio, e pela outra, a uma pedra que se lança no fundo do rio. Um pedaço de molongo, como flutuador, *poopo dorka* ou *pa'sa-ka* (em Nheengatu, *mafufi*), prêso ao centro do cordel, conserva-o em profundidade conveniente e serve para a localização do espinhel. Neste cordel longo, a intervalo de 3 ou 5 metros, estão ligados pequenos cordéis, cada qual com o seu anzol munido de isca. Armam o espinhel à tardinha e pela madrugada com a sua canoa o retiram, começando a puxar pela parte da pedra, no meio do rio. À medida que o peixe preso se avizinha da canoa, matam-no com uma bordoada na cabeça, pois não raro se encontram grandes surubis e piraíbas de 30 kg e até mais. Frequentemente encontram os peixes já cansados pelos esforços feitos para libertar-se, ou até mordidos e semi-comidos pelas piranhas.

O primeiro peixe do espinhel será dado a algum cachorro ou soltam-no à água, ou enterram; o essencial é que não seja comido por pessoa alguma.

A mulher grávida (VII - 4, f (2 d) não pode comer do peixe preso ao espinhel, pois, diversamente, nenhum peixe mais ficará preso.

Na época da enchente quando os rios desbordam, invadindo as matas (são os *igapós*), muitos peixes emigram dos rios, para comer frutas da mata. Aproveita-se, então, o indígena dêsse fato para amarrar aos arbustos ou aos galhos das árvores, cordéis com anzóis, de sorte que êstes fiquem mais ou menos um palmo debaixo d'água. Ao passar revista, de madrugada, encontra quase todos os anzóis com o seu peixe. É a pesca denominada *wai porta-poó*. Nos primeiros dias de enchente podem fazer essa operação duas ou três vêzes por noite, com resultado positivo, a fim de que o jacaré não coma os peixes.

b) *Caçada*

1) *Caçada de perseguição (amá siró-tú pexkayesé)*

A fauna do noroeste amazônico é pobre, qualitativa e quantitativamente, de animais para alimentação. Mas a caça, além de proporcionar o alimento, é um esporte agradável ao índio. Escassa como é, a caçada na densa floresta virgem só pode ser praticada por grupos de dois ou três índios. Raramente sairá sozinho, a não ser muito recentemente, quando obtem dos civilizados uma espingarda. Com a espingarda ou com o arco os índios são apreciáveis

4. Silva SQ19 Tucano

caçadores. Também raramente irá em grandes grupos; isto só quando localizam em alguma zona uma vara de porcos do mato. Então procuram cercá-los, e com paus terçados e flechas matam grande número (72).

Auxiliar precioso do homem nas caçadas são os cachorros, pequenos, magros e muitas vêzes quase cegos, pelas picadas das formigas *tari*, mas talvez por isso mesmo com o faro mais aguçado.

Os Maku são caçadores especializados. Quando saem ao encalço do animal acuado pelos cachorros, fazem grande algazarra, com gritos característicos, e nada, nem os cipós, espinhos e outros obstáculos, é capaz de deté-los.

2) *Caçada de tocaia* (*pexkaye du'tigõ* ou *pexkaye pe'sá-kõ*)

Os animais têm seus bebedouros (73) onde vão tomar água nos dias quentes, como têm, outrossim, lugares mais ou menos habituais da floresta nonde vão conjer frutas. As pegadas sinalam êsses sítios, e a êles costumam ir em horas mais ou menos constantes. Sabedor dêsse costume, o índio constrói *kaasá-ua* (Nheengatú *mutás*) (74) ou jirau entre os galhos das árvores; é a *pexkaye pe'sá-kõ*) nas proximidades dêsses lugares e aí ficam pacientemente de tocaia sem fazer ruído, ou imitando os pios das aves que desejam matar. Ou mesmo ficará no chão escondido atrás de alguma árvore; é a *pexkaye du'tyase*. Ao aproximar-se o animal dispara uma flecha certeira que atingirá mortalmente o animal, ou, ao menos, o ferirá e, neste caso, perseguem-no até matá-lo.

Se o animal se entoca, acendem pequeno fogo, quase sempre com a casca de algum cupim, à boca da cova, e o calor e a fumaça obrigam-no a sair, sendo então, prêsa dos caçadores.

3) *Caçada de mundéu* (*pexkaye-sã-kõ*)

Os animais, especialmente quando têm sua toca, costumam bater os mesmos caminhos ou *carreiros*, à procura do seu alimento ou de água. Descobrindo um desses carreiros, o índio faz uma cova

---

(72) Não raro acontece que a vara de porcos, esfaimada ou atacada, agride os homens que se salvam trepando ágilmente às árvores.

(73) No alto Tiquié, perto da Cachoeira Grande, vê-se uma pedra que as antas vem lamber. Denomina-se "chupador de anta" o terreno ou pedra, com sais naturais, e, por essa razão, procurado pelas antas, veados e outros animais.

(74) Uma pequena queimada, próxima do mutá, atrai algum veado com desejo de lamber as cinzas.

estreita e profunda, tendo o cuidado de transportar para mais distante a terra cavada. Depois recobre bem a cavidade com varas, folhas e detritos, de sorte a não diferenciar do restante trilho, e está feito o *mundéu*, *korpe*. Nas primeiras noites o animal não passa por ali; mais tarde, porém, vem a cair e o índio o mata. Sucede algumas vêzes que se esquece de ir rever o mundéu, e encontrara o animal já morto de fome.

4) *Caçada de armadilha (perkaye-ko yuro)*

É simples o processo que usam para os pequenos animais como a cutia. Uma haste forte, porém flexível, é plantada no chão. Servem-se às vêzes de arbustos já existentes no local escolhido. Vergam a extremidade livre à qual adaptam um laço, prendendo-a a varas, no local em que prevêem passe o animal, e está pronta a armadilha, *yuró* (Nheengatú *ikká*). Quando o animal tenta comer a isca ali deixada, ou mesmo simplesmente ao passar pelo laço, a haste solta-se violentamente e o animal fica suspenso pela perna. E assim ficara até morrer ou será morto à pauladas.

Modernamente em vez do laço está, muitas vêzes, uma espingarda armada que dispara e mata o animal; é a armadilha que se diz *perkaye-ko*.

armadilha para aves e pequenos animais

5) *Caçada de canoa*

Muito frequentemente o veado, a anta, lançam-se ao rio, porque perseguidos pelos cães ou para procurar seu alimento na outra margem. Perseguem-nos então, os caçadores com suas velozes canoas e com o remo, um pau, ou facão os matam. Em algumas ocasiões alcançam assim grandes varas de *queixadas*, e matam-nos em grande número.

Na vazante saem também à caça durante a noite, vogando lentamente e sem fazer rumor, enquanto um dos índios traz um facho de tari. Surpreendem assim as *pacas*, que ficam facheadas pela luz e o índio as flecha. Modernamente utilizam para a caçada noturna um farolete de pilhas.

6) *Agricultura*

A mandioca é que subministra o principal alimento aos índios da bacia do Uaupés. Tôdas essas tribos se acham assim na fase da lavoura, que se pratica, porém, de uma maneira muito primitiva: é a *fase do «catouco»* ou da *«coivara»*.

Escolhem com liberdade a terra que mais lhes agrada, pela proximidade da sua residência, e pela garantia contra o furto (75), e um pouco arenosa, como o são, em geral, as «terras-firmes» de tôda a região, e convém à mandioca. O ato da *derrubada*, *wexsé sa kurú*, é que lhe dá a propriedade do terreno enquanto o cultivar.

A derrubada se faz nos períodos de menos chuva, a saber: de junho a agosto, e de dezembro a fevereiro. É trabalho exclusivo dos homens. Começam pela escolha de uma área conveniente pela distância e não sujeita a inundações, de terra amarelada, semi-arenosa, *di'tá sûrú*, ou preta e algo humosa *nârkâ di'tá ñyirô*.

«Cercam» a roça (*pú-pe*: é o têrmo tukano que usam) isto é, delimitam do restante da mata a área que desejam, com uma pequena picada, cortando as plantas pequenas e quebrando galhos. Antigamente executavam-no só com o machado de pedra, *ôrtá komé*; hoje se faz a derrubada com o auxílio do facão *di-phi*, e, às vêzes, também com o machado de ferro, *komé*. Consiste o trabalho essencialmente em quebrar os arbustos e contornar os troncos grandes com pancadas de modo a fazer saltar a casca. Com isso a árvore vinha a secar e assim podia ser queimada. Sêco todo o arvoredo, de uma área mais ou menos quadrada de seus 50 ou 100 metros de lado (conforme o número de pessoas da família), põe-se fogo em diversos pontos e assim as árvores gigantescas ou se incineram ou ficam reduzidas a um tronco enegrecido, que muitas vêzes tomba por terra. Os bulcões de fumo que se erguem, aqui e ali, da verde

(75) Por isso não se fará à beira do rio, a não ser que seja ao lado da sua habitação. Se é na proximidade do rio, deixará sempre uma nesga de mato entre a roça e o rio, para ocultá-la à vista dos que navegam. E, o pôrto onde desembarca e amarra a canoa será a certa distância da roça, a fim de não denunciar o local da mesma.

mataria, denunciam os lugares em que se está realizando uma boa queimada, *ôhôa-dpakâ-siri*.

Se a queima não foi bem sucedida, porque não estavam secos os paus, ou por falta de vento, refaz-se o trabalho, abatendo galhos ajuntando-os ao redor das árvores; — a isto se chama *coivara*, em Tukano *dozté-pcosé*, e faz-se nova queimada.

Embora a roça seja propriedade individual, ou melhor, familiar, o interessado pedirá, para o trabalho da derrubada e da queima, a colaboração dos seus companheiros da malôca ou do povoado; ou, se ele mora isolado, a dos habitantes mais próximos. E não só da própria tribo, senão até de outra nação. Êsse trabalho coletivo (cfr. IX — 2) diz-se *ncôsé* (em nheengatú *ayuri*). A paga imediata, isto é, no dia ou nos dias do trabalho é um caxiri abundante para todos os trabalhadores, e, mais remotamente, o próprio auxílio, quando solicitado para idêntico trabalho em benefício de outros. O *ayuri* se pratica sempre que se faz mister a participação de muitos para um mesmo trabalho, por exemplo, cortar e trazer madeira da mata, assentar o travamento de uma cobertura de casa, etc. O *ayuri* é uma prática que vigora ainda entre os próprios caboclos do Rio Negro.

Após a operação da *queima* ou da *coivara*, procede-se à *limpa* propriamente dita, *ôasé*, removendo para os lados um ou outro tronco e galho que estejam por terra.

Começa agora o plantio que é reservado às mulheres, isto é, a esposa auxiliada por suas filhas ou mulherês que vivem com ela. Como êsse trabalho pode durar longo tempo, se a roça está muito distante da casa, o homem constrói lá uma pequena barraca ou *pupiri* em Tukano *wi'ykâ-pama*. São quatro estacas suportando uma cobertura de palha. Aí ficará a sua família durante a *limpa* e o plantio. Realiza-se êste, ainda hoje, da maneira mais simples; dita *idzsé bu'bé*, com auxílio do *digging-stick*; a saber, depois de uma chuva, quando a terra está ainda mole, faz-se um buraco em terra com um pau de ponta (mais raramente, hoje em dia, com um ferro de cova), *séri-phi*, e introduz-se obliquamente uma maniva (ramo de mandioca) e ao redor se reune um monticulo de terra.

Atualmente, além da mandioca, plantam nas suas roças, nós de cana (*saccharum officinale*), mudas de bananeira (*musas*), de carás, de batata doce (*hypomoea batata*), de abacaxi (*ananas sativa*), sementes de mamão (*papaya cárica*). Ordinàriamente não plantam de uma só vez tôda a área roçada, mas em duas etapas ou duas roças por ano, nas duas épocas propícias, é o que chamam *dezké bu'besé*, meio plantio. A plantação é feita em desordem, as

mudas muito proximas e sem passagem. Por essa razão, e também pela pobreza do terreno, o rendimento é sempre escasso. De ordinario não arrancam mandioca para farinha senão depois de um ano. As ervas que crescem são extirpadas à mão, *ioa kuresé*, pelas mulheres. Na roça passará a mulher varias horas do dia com seus filhos e ao voltar trará às costas um aturá de mandioca, um feixe de lenha para o fogo e uma criança ou duas enganchadas à cintura.

A colheita, *da'd*, se faz puxando e arrancando com as mãos a planta pela haste. Começam a colheita pela periferia da roça «para enganar a cutia». Dizem que esta, encontrando o terreno revolvido marginalmente, abandona a roça que julga tôda colhida. O indio não é previdente, nem pensa em acumular alimentos. Não tem por isso deposito ou armazém. A circunstância do clima o favorece e o induz a isso. De resto, a mandioca, algumas horas depois de arrancada, pelo clima quente e úmido, começa a deteriorar-se; e a farinha e o beijú frescos são mais saborosos.

O homem só periodicamente irá ver a roça, especialmente quando se torna necessaria a sua participação para o combate à formiga ou aos animais que assaltam à plantação. Extirpam as formigas, quando em quantidade que causa apreensão, fazendo fogo no olho do formigueiro com caixa de cupim, ou para lá encaminhando as águas das frequentes chuvas.

Conforme a fertilidade do terreno, aí se plantará durante três ou quatro anos. No segundo e terceiro plantio, quando as raizes e troncos vão apodrecendo, a limpa, *O'd*, é mais perfeita e se faz arrastando a terra solta com um pedaço de pau. Todo êste processo de queimadas e limpas vai empobrecendo a roça, aí nunca mais se formará mata. Um claro ou uma charneca ficará perpetuando o fogo. No maximo surgirá ali uma raquitica capoeira.

Com frequência perto da casa existe uma pequena roça, quando a outra é muito distante, para os dias de chuva ou doença.

A contingência de derrubar nova roça a curtos espaços; a imprevidência indigena, que é um carateristico racial; a inconstância dos elementos climatéricos, que o é da região (76), acarretam periodos de escassez. Pode-se fixar também em cada três ou quatro anos

(76) A inconstância dos fatôres climatéricos, que caracteriza tôda a bacia do Rio Negro, por um lado, e pelo outro a pobreza quase geral do solo e as pragas (insetos) de tôda espécie, incapacitam a região para uma produção agricola suficiente e econômica. O problema da *fome* chegando para fora os habitantes do Uaupés, ainda não se pôs (e tardará ainda, como notamos alhures), porque se trata de pequenos ajuntamentos humanos com um minimum de exigências e já parcialmente

o *periodismo da fome*, para estas populações. *O conformismo indígena*, filho da indolência, da ignorância, da falta de ambições; o *hábito dos jejuns*, forçados pela carência de alimentos ou impostos pelas tradições; as *reservas de frutas* que a mata proporciona, e, por vêzes justamente na quadra da carestia de farinha, ajudam o índio a superar esta dificuldade que, pela sua frequência, já o não impressiona. Modernamente encontra êle nas Missões Salesianas um alívio para estas crises periódicas. Durante as épocas em que as suas roças não lhes fornecem a mandioca para a farinha e o beiju, corre a família inteira, marido, mulher e filhos, aos centros missionários. Os pais serão ocupados em um serviço qualquer, e, além da diária que vencem, para aquisição de roupas e utensílios, está assegurada a alimentação para si e os filhos todos.

7) *Indústria e comércio*

Já o temos notado, nestas tribos que moram tão vizinhas, em ambiente mais ou menos com idênticos recursos naturais e ligadas entre si pelo matrimônio, e por vêzes morando no mesmo povoado, há um intercâmbio cultural, de sorte que uma tribo vai aprendendo a fabricar objetos que outrora constituíam exclusividade da outra, e ainda hoje é especialidade sua, pois os faz com mais perfeição. Desta exclusividade na produção de certos objetos, que correspondem às primeiras necessidades para a vida, seguia-se, naturalmente, um comércio entre as várias tribos. Parece que dentro da tribo ou maloca não há comércio, porque todos sabem fazer as mesmas coisas. Além disso o espírito comunitário não favorece o comércio pròpriamente dito.

---

socorridos pelos gêneros alimentícios que as Missões Salesianas mensalmente carreiam de Manáus e de outros pontos do país.

Vem aqui a propósito uma conversa que tivemos na manhã do dia 8 de março de 1956, com o Missionário Salesiano Pe. João Marchesi, que desde 1922 moureja heroicamente na Prelazia do Rio Negro, e que se acha resumida em 6 pontos, em nosso "Diário", dos quais os cinco últimos se prendem ao assunto em foco. A saber: "1.º — Êste ano morreu um número maior de índios Brasileiros que trabalhavam na Colômbia, entre os quais três de Pari-cachoeira (rio Tiquié); 2.º — O Cairi (Uaupés) hoje tem menos gente do que antes, e vai diminuir ainda mais. 3.º — Os índios tendem a descer, e um bom grupo dêles já se estabeleceu em Tapuruguá (antiga S. Isabel, no baixo Rio Negro); 4.º — Dos Pirá-tapúya de Arucu-ponta (Uaupés) muitos já baixaram para o Rio Negro, e outros querem descer para lá (e efetivamente em nossa companhia, e na mesma lancha, aos 14 de novembro de 1956 baixaram para Tapuruguá umas duas dezenas de Pirá-tapúya; 5.º — Também de S. Luzia (rio Papuri) estão descendo; alguns já se esta-

Nunca houve uma moeda (77) para a realização do seu comércio. Efetuava-se, outrora como hoje, o comércio «em espécie», a saber, a permuta de um objeto por outro. Vai-se acentuando modernamente entre os índios, pelas relações com os civilizados, o conceito de um *valor intrínseco* dos objetos, pela raridade não só, como também pelo trabalhoso do seu fabrico e dificuldade de obter a matéria-prima. Ainda hoje, no entanto, e muito mais intensamente outrora, consideravam apenas o *valor apreciativo*, isto é, o valor dependia do desejo ou da necessidade de um objeto. Compreende-se facilmente que sendo uma tribo produtora exclusiva de uns objetos e outra, de outros, não era difícil chegar a um acôrdo.

Não se tem informação alguma sôbre a existência de mercados intra ou extra-tribais, isto é, lugares para a exposição dos produtos destinados ao comércio. O índio outrora, como ainda hoje o faz, sob a necessidade de um objeto, empreendia uma viagem (e foram sempre muito andejos, parecendo mesmo reminiscência de um nomadismo ancestral) aos povoados de outra tribo, levando algo para a troca (78). Este comércio era mais freqüente com as tribos com as quais havia relações matrimoniais.

Se bem que se mantenha ainda hoje o comércio entre as tribos, pela permuta dos produtos de sua especialidade ou exclusividade, tornou-se êle muito mais intenso pelas relações com os civilizados, que desde o século 18 navegam, com maior ou menor freqüência, aquêles rios.

Em primeiro lugar o civilizado precisa do serviço do indígena. Foram sempre êles os remadores para os primeiros viajantes dos

---

[illegible] permaneceram perto de Bela-Vista e Taua (baixo Uaupés), onde há boas terras e vão se dedicar a tirar borracha que venderão ao José Maria (Prefeito de Uaupés). E repetiu-nos, nesta altura, a queixa que ouvira dos índios: "A terra está pobre, não dá. Onde vamos buscar sal e roupinhas para nossas mulheres??

(77) Muitas vêzes vistas as crianças brincando com favas chatas e arredondadas, como as fichas ou moedas, e essas crianças dizem que são a sua moeda. Um grande número delas, hoje em dia, sabem o que é uma moeda. Talvez o denominar moedas a tais favas, derive da forma que apresentam. É possível, no entanto, que os antigos se servissem dessas favas como unidades para facilitar-lhes os cálculos (vd. contagem pelos dedos, VII-2 p).

(78) Temos visto alguns índios levando nas viagens mercadorias recebidas dos civilizados (sal, facão, espelho, etc), com intenção de trazer em troca algum objeto indígena (canoa, ralo, puçá, etc). Em alguns casos sucederá que não encontram para permuta o objeto que desejam, ou não interessa nos dos vários povoados os objetos oferecidos, e o seu dono retorna da viagem com a mercadoria que levara. Podemos pensar que o mesmo se daria outrora, talvez mais raramente do que hoje.

rios (79), e hoje são os «marinheiros», isto é, práticos, maquinistas, remadôres, carregadores das lanchas. É não raro são contratados como guias e interpretes. Todos êstes serviços são pagos com mercadorias. Desde o tempo da Capitania de S. José do Rio Negro e da do Amazonas (80), e em menor escala ainda hoje, com irregularidade descem ao baixo Rio Negro levas mais ou menos numerosas de índios de diversas tribos para os mais variados trabalhos, particularmente a extração de vários produtos (borracha, piaçaba, castanha, madeiras, etc.).

Da indústria indígena objetos de compra não são apenas os seus artefatos para coleções de museus ou adornos de casas particulares. Os que vivem ou viajam por suas regiões obtêm dos índios parte da sua alimentação (81), em frutas (especialmente bananas, mamões, abacaxis), farinha, beiju, peixe, caça. São ainda os silvícolas que fornecem aos civilizados daquelas paragens canoas, material para construção das residências (madeira, cipo, palmas para a cobertura), bancos, cerâmicas, esteiras, cestos, peneiras, etc. Os índios do alto Rio Negro e do Rio Xie dedicam-se atualmente ao fabrico de cordas de piaçaba que são vendidas não só para espias das lanchas daqueles rios, senão também regularmente para os navios do rio Amazonas e até para os Estados.

Dos civilizados os índios quase todos procuram hoje anzóis, fósforos, fazendas (e os acessórios para a roupa), sal, fumo, sabão. Tem menor procura pólvora, chumbo, espoletas, machados, facões, espingardas. A prática mercantil já fixou mais ou menos os preços dos diversos artigos. Não obstante, os índios, sob o estímulo do interêsse e de certos preconceitos contra os brancos, querem sempre vender caro e comprar barato ou obter de graça.

---

(79) Sabemos, por exemplo, que na esquadra de Pedro de Teixeira, em 1637, havia 1 200 índios para o labor do remo e outros serviços.

(80) Vide "Relatórios" desses Províncias. Infelizmente em vez de contratos de trabalho, houve negociatas entre os latifundiários ou negociantes do Rio Negro e os tuxauas ou os que, em caráter particular ou oficial, se achavam em relação com os índios ou moravam entre êles, para explorar os silvícolas. Desciam êstes iludidos com promessas que não correspondiam à realidade e eram vítimas de impaludismo ou outras doenças. Não se lhes facilitavam os meios para voltarem aos seus povoados. Explorava-se seu fraco pelo álcool e com algumas garrafas de aguardente pagavam-se-lhe meses de serviço. A exposição documentada dessas "descidas" dos índios constituem capítulos bem negros da futura História dos índios do Brasil.

(81) As Missões Salesianas têm trazido grande estímulo aos índios para a produção dos meios de subsistência, pois mantendo mais de milhar de crianças indígenas no regime de internato, devem comprar ao índio

4: Silva SQ19 Tucano

Os índios que estão em contacto com os civilizados adquirem [illegible] roupas e muitos objetos para depois revendê-los a outros [illegible]genas. Tem-se verificado que nesse comércio revelam tino econômico e sabem auferir grandes lucros não só com os índios de [illegible] diversa, senão também dos seus próprios «irmãos» de tribo (82).

3) *Vias de comunicação*

Para seu comércio e relações sociais as vias de comunicação são os rios e igarapés, a canoa é, pois, o primeiro meio de transporte (83). Como de ordinário êsses rios são bastante largos e sujeitos a grande [illegible]vel e impetuosidade das águas nas enchentes, não é possível a construção de pontes. Quanto à passagem nos pequenos riachos, [illegible] o fazem a vau, ou derrubam árvores sem nenhum cuidado senão [illegible] alguém nas duas margens. Êste trabalho é, aliás, raríssimo, porque a cada passo se encontram árvores, abatidas pelas tempestades, que servem de ponte.

A floresta amazonense entrançada como é de lianas (um pouco menos, é verdade, do que aparece a quem só a vê pela margem dos rios) atravessa-se com certa dificuldade, e talvez por isso não é retalhada de passagens. É conhecido o costume dos índios de caminhar sempre um atrás do outro, jamais ao lado. É o que se diz «fila indiana», isto é, por um de fundo. O indígena não penetra muito na mata, tem mêdo de Wãx-ti (VII — 4, d (5)). Quanto à sua roça, é até desejável que não haja caminho revelador do sítio. Assim estará mais a coberto dos furtos. Por essas razões não abrem estradas senão a que leva da maloca ou povoado ao porto, de ordinário poucas dezenas, ou no máximo, uma ou duas centenas de metros de extensão.

---

farinha, beiju, peixe, frutas, caça, etc. para os seus alunos. Durante a [illegible] conflagração mundial passavam regularmente negociantes comprando grande quantidade de farinha para os que trabalhavam nos seringais da Venezuela e Colômbia. Hidroaviões americanos vinham periodicamente até o Papuri recolher e transportar centenas de paneiros de farinha.

(82) Sabemos, por exemplo, que os índios Tukano residentes em Meio Franco recebiam farinha de outros Tukano da foz do Aua para vendê-la à Missão Salesiana, e só por essa transação exigiam dos seus "irmãos" 50% do preço da farinha.

(83) Jamais constroem jangadas. Os *Makú*, porque só vivem no interior das matas, não sabem fazer canoas, nem as possuem. Dizem que algumas vêzes improvisaram jangadas para atravessar os rios ou paranás. São episódios, porém, raríssimos.

Descobrem, no entanto, passagens mais curtas que as intermínas voltas pelos rios ou igarapés, de uma maloca a outra. Tais passagens, quanto mais frequentadas para as trocas de mulheres, as festas ou comércio, tornam-se melhores e constituem o que se denomina *varadouro* (em Tukano *ma'd*) (84). Todo o transporte de carga por terra se faz por meio dos aturás ou *pi'i*, que a mulher carrega às costas.

Na enchente dos rios formam-se entre a mataria canais navegáveis por canoas, pois a selva converte-se num mar, e o indígena disso se aproveita para encurtar as viagens; a sua canoa atalha pela mata a dentro, em vez de seguir tôda a sinuosidade do rio. A sua memória topográfica dos rios nos quais vivem subindo e descendo, não os deixa extraviar-se.

(84) Parece que originàriamente o têrmo Tukano *ma'd* significava só o trajeto que devia seguir a canoa nas passagens perigosas das cachoeiras. Hoje o têrmo *ma'd* se usa como equivalente às palavras portuguêsas: varadouro, caminho, estrada, etc.

[p. 253]

## Cap. VII

# CULTURA ESPIRITUAL

O homem é sempre o animal racional, e são inúmeras e vêm a cada momento, as provas da sua natureza racional. Mas também é sempre verdade o *primum vivere, deinde philosophari*, a saber, só se pode dar às especulações, depois de satisfeitas as necessidades primeiras da matéria. A inteligência necessita de um ambiente favorável para desenvolver-se; porém, mesmo no ambiente mais adverso, dá-nos sempre manifestações de sua presença. E são muitas essas manifestações que nos autorizam a dizer, de uma maneira geral, que o índio é inteligente. A facilidade relativa com que se adapta à nossa civilização, com que aprende e fala várias línguas indígenas e algumas noções do português que lhe são ministradas nas escolas, a perspicácia com que observa o branco, ouve-o e lhe fala, são provas do nosso asserto sôbre a sua inteligência. Até o presente porém, nenhum indígena do Uaupés adquiriu uma instrução secundária ou superior, nem mostrou interêsse de adquiri-la, apesar dos estímulos oferecidos pelas Missões Salesianas (1). Não é para estranhar-se o insucesso das primeiras tentativas, porque a instrução supõe uma civilização, isto é, hábitos de vida, de estudos, que só uma segunda ou terceira geração indígena, criada no regime civilizado, poderá apresentar.

Indicaremos aqui as manifestações primitivas da sua cultura (*Geistlichkeitkultur*), entendendo por esta expressão o que êsses silvícolas apresentam de cultura própria e não recebida do branco, e que facilmente se descobre da convivência com êles.

---

(1) Os Salesianos contam entre os seus membros, na qualidade de Irmão Coadjutor, um Indio *Tariana*, com uma instrução maior que a primária, e que é um bom mestre alfaiate, com curso de especialização em Recife. As Madres Mensfortianas recrutaram para o seu Instituto dois índios, um *Desana* e um *Tariana*. Moças de diversas tribos se encontram presentemente (1958) em Manaus fazendo o curso de enfermagem, por conta das Missões Salesianas.

1) *Escritura*

Uma questão que logo surge é se essas tribos conhecem a escritura. Pode-se responder que atualmente não sabem nem usam escritura alguma (2).

É uma questão aberta à discussão se aqueles sinais que se encontram em muitas pedras do Rio Negro e afluentes, isto é, os petroglifos ou itacoatiaras (*ôrtá ohoritiri-pa*, em Tukano), sejam uma escritura de língua falada, ou ao menos *linguagem cifrada* (de qual idioma? de qual tribo? em qual época?), ou sejam apenas *desenhos* quiçá *estilizados* (sinais lúdicos) (3).

Não teriam, porém, uma linguagem por sinais ou sinais correspondentes a algumas ideias? Muitos viajantes que subiram o Rio Negro mostraram-se surpresos de verificar que já era conhecida previamente sua vinda, de quantos se compunha a comitiva, a finalidade desta, etc. (4).

Consta-nos que muitas vêzes tais informações foram fornecidas de viva voz por índios que subiam mais velozmente, por igarapés e atalhos, e uma maloca se encarregava de enviar a notícia à maloca seguinte (Cfr. V Nota 8, sôbre a curiosidade dos indígenas).

---

(2) Com exceção naturalmente dos que passaram pelos colégios da Missão. Alguns em particular com alguma facilidade aprendem a escrever a língua tukana, porém com dificuldade escrevem o Tukano. Realmente as letras do alfabeto latino, que usamos e como pronunciamos em português, não reproduzem todos os sons da língua Tukano.

(3) Sôbre os petroglifos, sua antiguidade e sua interpretação, cfr. o notável trabalho de Bernardo da Silva Ramos, *Inscrições e tradições da América pré-colombiana*. Koch Grünberg subindo o rio Curicuriari (afluente da margem direita do Rio Negro), aos 14 de fev. de 1904, encontra numa pedra gravuras com figuras de homem, de macaco e ornamentais, ainda frescas, talvez executadas semanas ou dias antes. Emite, então, a opinião que um índio dá o primeiro risco com alguma pedra. Outro, ao passar, afunda mais o traço, e assim sucessivamente, até resultar um sulco indelevel (Z. I 144). O mesmo Koch indaga de um índio que lhe servia de guia no rio Cuduiari quem teria feito os *petroglifos* que se viam. E o índio lhe responde prontamente: — "Foram os antigos com uma pedra" (Z. I 304).

(4) Lemos, por exemplo, na "Participação Quinta" (da "Viagem Philosophica de Alexandre Rodrigues Ferreira, datada de Barcelos aos 30 de março de 1780, na sua chegada a Ipanuré): — "Mandei logo reconhecer as cinco malocas do gentio, situadas em cima do buteiro e segunda vez me confirmei que elle já tinha sido avisado da minha subida, achando-se as casas desertas, largando por mão todo o trem de igarabas, tipitis, balaios, etc., enterrada no chão bastante tapioca, os ananasseiros das roças cortados de fresco, e os índios das canoas me informarão que haveria dois dias que elles se tinham retirado" (o. c.).

Porém um dos principais meios dessas comunicações a distância era o *Trocano*. Tido-se, hoje quase totalmente desaparecido, instrumento de sopro, sem caráter religioso e só usado para as relações [illegible] pelo tuxaua.

É um telerresonador constando de um tronco de madeira de [illegible] comprido por cinco a quatro estacas e escavado por meio de [illegible] estreita fenda longitudinal. Percutido à margem da fenda com um macete, *Tu-ú-tu pi-ko*, com saliência de borracha ou de [illegible] de anta, emite um som profundo que, na solidão daquelas [illegible] e com o favor dos ventos ouvia-se a muitos quilômetros de distância (5).

Cada tribo ou maloca possuía o seu instrumento e seus sinais [illegible]. Com êsse instrumento os tuxauas participavam a [illegible] convidavam para os caxiris. Com os trocanos davam outrossim informações sobre as comitivas que subiam os rios (6).

Alguns instrumentos musicais conseguem emitir sons que se [illegible] com palavras. Por exemplo, do instrumento denominado [illegible] (cabeça de veado, cfr. VII, 3 e 3) parece-nos ouvir [illegible] — «*Pera tradipa*» (traga caxiri) ... *péru* ... *pérá* ... *péru*» depressa, depressa, depressa).

Os rapazes dirigem convites amorosos às moças com os sons de [illegible] pífaros. Foi-nos dado no Uaupés (e por isso registramo-lo [illegible] pronúncia [illegible] o seguinte convite que exprimem no [illegible] — «*Yoo-mêna tupá*» (vá comigo), — «*Yoo-mêna vago-fá*» (tu [illegible] comigo), «*añúnõ nigosa*» (seja boa) «*añúnõ ninosa*» (vai [illegible]). Emitir tais convites com o som das flautas é que se diz em Tucano *purti-nerera* (literalmente: queixar-se tocando flauta).

Sabem, outrossim, emitir certos gritos característicos e vários, [illegible] vezes semelhantes à voz dos animais e pio das aves, e com [illegible] sinais se orientam, chamam-se, dão informações, etc. (7).

---

(5) Koch G. (Z. I 171) informa que de Cucura-igarapé (uma hora de ca[illegible] acima de S. José, rio Tiquié) os Desana se puseram em relação com os Tukano de Pari-cachoeira (cf. III, os Povoados), por meio de [illegible].

(6) Informações de Plácido Rodrigues, descendente dos Baré. Cfr. também "Notas sôbre os Trocanos" de Carlos Drumond. Boletim 58 da [illegible] de São Paulo. Koch G. (Z. I 303) informa que era muito desenvolvida entre os Witoto do Pira-paraná (Colômbia) a linguagem dos Trocanos, fabricados aos pares, isto é, homem e mulher, conforme a [illegible] expressão indígena.

(7) Numa viagem à grande maloca dos Tuyuka, no alto Tiquié, fronteira com a Colômbia, desapareceu o facão que um dos nossos companheiros de viagem havia emprestado aos índios. No momento de a canoa partir indaga-se pelo facão e ninguém sabe dar informação onde se acharia. Impaciente, queixa-se que é um roubo, e isto é feio. Depois que a

Yaburi (Waiapi) armado durante a vazante porém no caminho frequentado pelos peixes na enchente

[facing p. 256]

Barragem de um riberão para a pescaria

2) Ciências

a) *Geografia — Topografia*

Seus conhecimentos geográficos da região não são muito numerosos, são porem exatos. É difícil distinguir o que conhecem por experiência individual, por tradição da tribo, ou por influência dos civilizados aos quais consultam, porque dotados de apreciável memória, guardam as informações que recebem, como o que aprendem de visu.

De muitas cachoeiras, rios, ribeirões, ilhas, canais, pedras, montanhas, florestas, etc. admitem uma origem lendária. A guisa de exemplo, para os antigos era uma *bananeira* uma pedra lendária da cachoeira de Uaracapa (rio Papuri) embora em nada se pareça com tal planta. Numa pedra denominada precisamente *Cabeça-de-anta* (cachoeira de Tapira-Jirau, alto Uaupés) os indígenas vêem o focinho de uma anta e uma de suas lendas explica-lhe a origem. Afirmam que de Piracuara, no rio Papuri, parte um canal subterrâneo que liga esse rio ao Tiquie, um pouco acima da cachoeira de Pari. Reclam as lendas que por êste canal é que passaram os primeiros peixes daquele rio para êste. O que se observa em tal ponto do Tiquie, é uma barranca donde corre um pequeno jôrro d'águas de infiltração, como se dá também em outros lugares e rios (cfr. III, Nota 17).

Sua memória topográfica é louvável; não só identificam pelo nome os povoados e malocas que vão passando, como também os rios, igarapés, pontas, etc. Mais ainda, sabem quantas voltas e pontas do rio faziam para chegar a determinados lugar. Parece, no entanto, que êsse conceito de volta, (*mahamisé*), estirão (*ipu-ua-ponta*) é diverso do nosso, ou, quem sabe, seja um tanto subjetivo. Verificamos muitas vêzes que não correspondiam ao número que nos indicavam; êrro quiçá imputável ao seu deficiente conhecimento da matemática.

---

dando se afastar uns quatrocentos metros ouve-se um grito característico, que nos parecia mais o pio de alguma ave. Os Tukano que iam comigo com os remadores, interpretaram logo: "É o tuxaua que está chamando para entregar o filho". Efetivamente o tuxaua nos esperava com o farão que foi devolvido ao legítimo dono.

Em outras ocasiões, ao navegar nas cabeceiras dos rios ou pelos igarapés, índios que estavam no interior da mata o percebiam o rumor dos remos, trocavam pessoas com os nossos remadores, os quais depois nos davam particulares informações: quem eram, êles, se estavam caçando, colhendo frutos, procurando curaná ou cortando madeira. Note-se que muitas vêzes vinham cantando trauteando as suas canções ou assobiando por mero divertimento.

Cuia de fibras (musaceas), cipó de 4 tentáculos e pote contendo curare

[facing p.257]

Preparo do curare (Inimã) por um índio Mura

Quanto ao aguçado sentido de orientação dos indígenas na [illegible] que tem sido tão decantado, pa[illegible] ser fruto de imaginação poética, se se generaliza às tribos do Cauari. Conhecem bem os rios e matas que frequentam, não se [illegible] porém, a penetrar muito na selva. Citam-se vários [illegible] em que se perderam na floresta. E para que tal não [illegible] recorrem ao expediente de quebrar ramos, todos no mesmo [illegible] à medida que se afastam dos caminhos habituais. Os *Maku* [illegible] do interior das matas, são caçadores, e por isso se orientam melhor. Relève-se, contudo, que êles são semi-nômades e mudam-se sempre em grupos.

b) *Matemática*

Possuem os indígenas nomes diferentes para os cinco primeiros números e distinguem o *masculino*, *feminino* e *neutro* (cousa), a saber:

| número | masculino | feminino | neutro |
|---|---|---|---|
| 1 | [illegible] nikõ | nikã | nikã |
| 2 | [illegible] | [illegible] | [illegible] |
| 3 | [illegible] | [illegible] | [illegible] |
| 4 | [illegible] | [illegible] | [illegible] |
| 5 | [illegible] | [illegible] | [illegible] |
| 6 | [illegible] | [illegible] | nikã-mũkõse |

Observe-se que *Nikã-mũkõra* propriamente quer dizer *uma mão*. [illegible] preferem indicar o número de dedos (2, 3, etc.) [illegible] preferir os números. De cinco para cima todos pratica[illegible] se contentam de mostrar o número de dedos correspondente. Os mais inteligentes sabem contar até 20, servindo-se dos dedos [illegible] dos pés. Números superiores a 20 não sabem mais contar. Não possuem propriamente medidas de extensão ou comprimento. Falam em *sêrõ* (sêrõ-[illegible]), *nikã sêrõ*, o tamanho da envergadura ou dos dois braços abertos; *pauã sêrõ*, duas envergaduras de braços; *pauro*: *nikã pauro* um passo; palmo, *kamũ-ka* [illegible] *kãpu-pamã-kõero*, *nika pama*, um palmo; *pãu kamũ-ka-sêrõ*, dois palmos; *ba paridse kamũ-ka-pãose*, quatro palmos.

Como meio prático para seus cálculos, fazem até uma varinha com [illegible] de um braço ou um palmo; são, no entanto, medidas indefinidas e casuais.

A tabuada já constitui para as crianças da escola uma séria dificuldade, apesar de ser mera questão de memória. Os de melhor aproveitamento não conseguem executar as quatro operações após

três ou quatro anos de freqüência escolar. E nota-se em todos grande dificuldade para a solução do mais simples problema de matemática.

Parece que lhes é igualmente difícil a avaliação do tempo, como também da distância e da superfície: assim serão capazes de responder que o comprimento de uma sala são três quilômetros e o curso do rio, cem metros.

c) *Astronomia — Cosmografia*

1) *O mundo*

Conforme suas concepções a terra, *Di'tá*, é uma planície recoberta por uma calota esférica regular e sólida que se denomina *o'mã-te*, segundo alguns, o céu, com quatro portas correspondentes aos quatro pontos cardiais, por onde escapam as águas dos rios. Se se fechassem essas portas, as águas inundariam as terras e afogariam toda a humanidade (Cfr. a Lenda da cobra *Sõ*, p.)

Distinguem as nuvens em *ozkõ-kururi*, os nimbos, e *o'mã-kurúri*, cirros.

Aos pontos cardiais chamam «porta», *Sozpé*, e assim os designam: Este, *Sirõ-kã-sozpé* (porta de trás); Oéste, *Po'té-kã-sozpé* (porta da cabeceira, a saber, do rio); Sul, *Kũ'pé-kã-sozpé* (porta à direita de quem sobe o Uaupés); Norte, *Dyakõ-kã-sozpé* (porta da direita).

2) *Astros e estrêlas*

Não sabem explicar como são formadas as estrêlas, *Yórkõa*. Todas as denominações, porém, têm uma origem lendária. Afirmam mesmo que o sol, a lua e as estrêlas são gente, *Marsã*, consoante suas lendas. A guisa de confirmação releve-se que, enquanto todos os seres inanimados pertencem, na língua Tukano (e ao que nos parece, em tôdas as línguas indígenas da região) ao gênero neutro, tal como estrêla, trovão e o instrumento sagrado *miri* (Cfr. VII - 3, c), são do gênero masculino.

Há um só home para designar o sol e a lua, é *Muhi-pũ*. Conceptuamos, primitivamente, como um só e mesmo ente que iluminava o mundo e era sempre dia. Até que apareceu a *noite*, à maneira de poeira escura espalhada pelo espaço.

O eco, *Arkã-kõõra*, se deve a *Wãx-ti* (vd. VII - 4, d (5a) o qual, do meio da mata se diverte a remedar algum rumor. E muitos são rumores da selva (o sibilar do vento, o ciciar da brisa entre as

linhas quedas de galhos) lhes parecem arremedos das músicas e danças que Wáx-ti executa.

A revoada são as criancinhas abortadas, *Pazkó-máriri-khára* (= orfãozinhos de mãe) que choram, porque vai fazer muito calor. Essas pobres crianças andam sozinhas, porque ninguém cuida delas. (Patrício Vasconcelos).

3) *As Constelações*

Distinguem as constelações com nomes de animais ou cousas que lhes parece ver figuradas pelas estrêlas, *Yõrkód*. O conhecimento das constelações é mais generalizado entre os indígenas do que entre os civilizados. Assim perguntando a um grupo de rapazes de seus 16 a 20 anos os nomes das constelações, todos demonstraram conhecê-las, e um lembrava o nome quando o outro só esqueciu, e mostravam-nas no céu.

Distinguem as seguintes constelações cujas figuras principais damos conforme o desenho e na mesma ordem em que no-las forneceu um velho Pirá-tapuya Antônio Goes, do povoado S. Paulo, no rio Tiquié:

1. *Aõá* arraia (peixe batoide; *Aõá* é também o nome do planêta Vênus);
2. *Pamõ dõxke-ke* ou *Pamõ dõxkó* ou *Pamõ dõxkó xuxtéke* (pedaço de tatú);
3. *Kui sirti-ró* (cercado de periquito);
4. *Darigá* (camarão);
5. *Yai ou pai pudé-ro* (enchente da onça);
6. *Syó-o garpu* (cabo de enxó);
7. *Kui karia* (jirau de peixe, VI - 5, a (2c);
8. *Yehé* (garça);
9. *Dyá-po* (lontra);
10. *Bá* (o peixe piranha);
11. *Yõxkudiró* (personagem da lenda);
12. *Yõxkudiró mazkó* (filho de *Yõxkudiró*);
13. *Aõá pazkó-ró* (rabo de arraia);
14. *Nozri-pá* (escorpião);
15. *Ko dyori ma'sá* (amontoado dos seus ovos);
16. *Yai dzée-ka poari* (cabelos da barba da onça);
17. *Mahód* (o peixe jacundá);
18. *Namúxuru* (um veadinho da lenda).

[illegible] 2. [illegible] período de fatu[illegible] 3. Yai pwé-ro, enchente da [illegible] 4. [illegible] 5. [illegible] 6. Wai kasa, [illegible] 7. [illegible] periquito. 8. Yehé, garça. 9. [illegible] 10. [illegible] piranha.

4) O tempo e as estações

Possuem hoje um término para indicar o ano, *Komá* (plural *Komári*) [8] que é o espaço entre uma vazante e outro dos rios. Talvez pelas reações fisiológicas, mas especialmente pelas fases da lua, distinguem o período das luñações ou meses, e o denominam

[8] Contudo declararam alguns dos nossos informantes, o término *Komá* primitivamente indicava apenas o tempo das chuvas menos abundantes que vai de setembro a março. O período da enchente, que se estende ordinariamente de março a setembro, denomina-se *Pwé-kó*. Aquele período de 10 a 15 dias mais secos, com poucas ou nenhumas chuvas (o que é deveras raro) época propícia para as queimadas das roças, denominam *Komá-ró* (Vaupés komá-nó), verão, estio.

[illegible] termo *Muhi-pũ* (9), que se aplica tanto ao sol como à lua, como já dissemos. Esta, quando se quer distinguir do sol, se diz *Yaiá-ka muhi-pũ*, sol-da-noite. Não existe, porem, têrmo para indicar a semana (10).

Conhecem apenas duas estações, as que realmente existem, a sazon o sêrão (sêca ou vazante dos rios), *Wexfiro* ou *komã-rõ*, e o inverno (enchente) *Pue-ko*.

O ano começa, conforme antigamente computavam, no verão ou vazante do Uaupés, quando se dedicavam às derrubadas e roças.

O 1º mês correspondia à metade de agosto a meado de setembro e dizia-se *Pũri Pué-ro* (que quer dizer enchente das fôlhas).

O 2º, *Arê puxfiro* (florescimento da pupunheira), época das derrubadas e queima.

O 3º, *Ãã pue-ro* (enchente da arraia ou de Vênus, porque se nota aumento de água nos rios. É o que no Amazonas se diz «requente dos mortos»).

O 4º, *Ãã pue-ro pitiã* (termina a enchente da arraia), começa a sêca.

O 5º, *inê-rê komã* (tempo do inga).

O 6º, *Komã uãdero* (o ano vai), tempo do plantio da mandioca.

O 7º, *Arê komã* (tempo da pupunha), é a época dos grandes caxiris.

O 8º, *mãmã komã* (ano novo).

O 9º, *Wãmã petiro* (fim do tempo do umari).

O 10º, *Yai-ka pué-ro* (enchente da barba da onça).

O 11º, *Yõxkwãtero pué-ro* (enchente de Yõxkwãtero).

O 12º, *Yõxkwãtero pué-ro pitiro* (fim da enchente de Yõxkwãtero).

---

(9) Parece, também, de acôrdo com algumas informações obtidas que, mais remotamente, não distinguiam lunações ou períodos correspondentes aos meses. É certo que o termo *muhi-pũ* (plural *muhi-pũri*, no Uaupés *muhi-pũri*), como correspondente à palavra mês, não só é de emprêgo recente, como também não é muito generalizado.

(10) Usam nos rios Içana e Amari uma régua denticulada com sulcos transversais servindo como Calendário, para marcar os dias da semana e do mês. Uma laçada de tucum (a sendo deslocada dia por dia, de um denticulo para outro). Refere Koch G. (Z. F. 298) que os Juriti tinham também um pau com ranhuras para seus cálculos: numa das extremidades cheias as ranhuras marcavam os dias de viagem até o Lago-do-espelho (Uanuá-lago), na outra, os dias da volta.

Não pudemos alcançar se essas divisões dos meses correspondem [illegible] nos colégios das Irmãs Salesianas, forneceu-nos uma

Uaia Tukano por nome Doroteia Brito, com dezenas de anos de convivência nos colégios das Irmãs Salesianas, forneceu-nos, uma lista de 12 meses, com os correspondentes nomes em português. Como se verá, apenas parcialmente há correspondência de nomes, com a lista precedente que nos foi obtida pelo Padre Antonio Giacone. Doroteia explicou a origem dos nomes como sendo o das figuras que eles parecia ver nas nuvens (sic). Note-se que coincide com os nomes das constelações, precisamente como os antigos dividiam os meses pelas constelações.

São estes os nomes dos meses:

Janeiro — *Mawa bahauri mahi-pũ* (novo mês apareceu)

fevereiro — *Dorayã pizkõ-rã* (rabo de camarão)

março — *Dya-pã* (lontra)

abril — *Yai pudé-ro* (enchente da onça)

maio — *Wirã* (bicho-preguiça)

junho — *Arpã kurã* (jirau do caranguejo)

julho — *Pamã pudé-ro* (enchente do tatú)

agosto — *Wai kurã* (jirau de peixe)

setembro — *Sã-a pazpu* (cabo de enxó)

outubro — *Yuzkudiro* (estrêla dalva)

novembro — *Ana* (arraia)

dezembro — *Yai arpo* (corpo da onça)

## 7 — O dia

Sabem, com bastante aproximação, calcular a hora do dia, pela altura do sol. Não possuem, porém, cálculos de anos, meses, semanas e dias, nem sabem dizer em que data estamos.

Distinguem as seguintes horas do dia:

*Boreu-mãhodise* — (lit. antes de subir a claridade ou aurora), pelas 4 da manhã.

*Bore-kease* — aurora

*Bordko-porõdse* — maior claridade

*wuhi-pu mãhõã-tpase* — (levantar do sol) 6 da manhã

*Azi mãhõã-ti wa ró* — (começa a subir o calor) pelas 9 da manhã

*Azi mãhõã-ti duhoritero tuu'ta nõkã-nimi* — (aumenta o calor, aproxima-se a hora de voltar) pelas 10 horas

*Duhori-tero* — (tempo de voltar, a saber, da roça) pelas 11-12 horas

*mã-ka dezko* — (meio dia) pelas 12 horas

*Duhoritero mãhõã-nimi dohoagõ* — o sol subiu e caiu depois do tempo de voltar) pelas 13 horas

*Turuuro dezko* — (meio do declínio do sol) pelas 14-15 horas

*Sahãgõ wemi-mahã* — (o sol vai entrando) pelas 16 horas

*Sahã-wa pi-mahã* — (o sol entrou) pelas 18 horas

*Nai-kou wa* — (vai escurecendo) pelas 19 horas

*Nayu wa mahã* — (escureceu mais) pelas 19-20 horas

*Yami ni-mahã* — (a noite avançou) pelas 21 horas

*Yami-ka bui* — (acima da noite, noite avançada) pelas 22 horas

*Yami dezko* — (meia-noite) pelas 24 horas

d) *Ciências Naturais*

1) *Idéias sôbre a natureza*

a) Há reminiscências de uma crença antiga, pela qual julgavam que todos os animais eram «gente», *mahsã*. Alguns declararam-nos categoricamente que os animais são «gente». Confirmação, talvez, desta crença seja o fato de todos os animais, na língua Tukano, serem do gênero masculino, ao passo que todos os sêres inanimados são do gênero neutro.

Quando surpreendem um animal ou grupo de animais, por exemplo veado, anta, etc., entretidos a beber água ou a lamber uma pedra (cfr. «Apagador-de-anta» VI — 5, b (2) Nº 73), pensam que êsses animais estão tontos, porque passaram uma noitada de danças e orgias.

Explicam, igualmente, que a piracema é uma grande concentração de peixes solenizando um caxiri.

Há uma espécie de vulpídeos brancos com algumas penas pretas, aos quais denominam *bauro* (conhecido também pelo nome regional de *tesoura*) e que, em certas épocas aparecem em bando à procura de vermes. Sendo de leve peso e abundante plumagem, têm um vôo gracioso e leve. Crêem que é um grupo de espíritos ou [illegible] que dançam no ar. Dizem-nos *d'rã nõ'mpa* (môças da serra) e afirmam que não fazem ninho, pois ninguém jamais os encontrou deitado no ninho.

b) Admitem a transformação dos animais. Crêem, por exemplo, que os vermes que proliferam na bacabeira, por ocasião dos eclipses, transformam-se no peixe *burkod-wi* (ou *matapi*, dos *silúridas*), por acharem certa aparência com tais vermes. Uma confirmação dessa procedência, parece-lhes descobrir no fato de tais peixes serem encontrados ainda vivos no mato, depois de secarem na [illegible] (igapós). Dizem que, por terem sido vermes, fogem para o mato, quando se põe timbó nos ribeirões.

Sinalamos VII — 4 ; (1) que admitem a possibilidade de pessoas humanas se transformarem, temporária ou definitivamente, em animais e vice-versa.

Afirmam que os papagaios são «meninos da mata, *nãrkã wimdé*». Propriamente são filhos de *Boraró* (vd. VII — 4, d (56) ou *Curutejá*). Vivem [illegible] brincando, quando querem passear, tomam penas e voam.

Narram histórias interessantes sôbre a origem de certos animais, por exemplo, [illegible] animais, antes era uma môça muito bonita. Os papagaios teu começaram por transformação de duas irmãs, esposas de um belo rapaz Bare.

c) Revelavam [illegible] (VII — 2, e (1) sua crença na própria mortalidade. Informam que, antigamente não comiam carne de animal. A alimentação exclusivamente de vegetais, era permitido apresentar vermes e insetos. Nessa época de regime vegetariano não havia doenças, dizem. Apareceram estas depois que seus pais começaram a comer carne de peixe e de animais. Em certas doenças o paje prescrevera logo que se abstenham das carnes dos animais grandes (anta, veado, macaco, etc.).

Afirmam, outrossim, que, no princípio, os Tukano não só não morriam, porém nem sequer envelheciam. Depois de viverem muitíssimos anos, sempre fortes, findavam quando alguém lhes lançava uma maleficio, *dohase*.

*Fisiologia humana*

Sôbre a anatomia e fisiologia humanas possuem noções bastante exatas, tanto das funções externas, como algo das internas, a nomenclatura bem rica, para as diversas partes do organismo. A lista de documentação vão êstes têrmos:

[illegible] (pl. [illegible]) corpo (Plural [illegible])
[illegible] (pl. [illegible]) cabeça
[illegible] (pl. [illegible]) cabelo
[illegible] (pl. dyapo-pa), rosto, face
[illegible]-a-pero (pl. [illegible]), testa
dyapo-a-tôrô (pl. tôri), fronte
[illegible]-pero (pl. pe'tori), crâneo
[illegible] (pl. kaxpe-ri), olho
[illegible] (pl. poari), pestana
[illegible] (pl. weri), sobrancelhas
[illegible]-tero (pl. su'ti), palpebra
[illegible]-pero (pl. pori), bochecha
[illegible]-a (pl. waxsu-di-pa), zigoma
[illegible] (pl. [illegible]-pa), nariz
[illegible]-pe (pl. peri), venta, narina
[illegible] (pl. peri), orelha
[illegible] (pl. tousé-peri), orifício auricular
[illegible] (pl. wamá-tari), pescoço
[illegible] (pl. wamá-peri), garganta
[illegible] (pl. [illegible]-pa), corpo hióide (pomo de Adão)
[illegible] (pl. hêri-mi-ri), laringe
[illegible] (pl. meôse), faringe
[illegible]-da (pl. meôse-dari), faringe, esôfago
[illegible] (pl. ox'se-ri), bôca
[illegible] (pl. be'tôri), labio
[illegible] (pl. kari), queixo
[illegible]-pôa (pl. poari), barba
[illegible]-pôa (pl. poari), bigode
[illegible] (pl. inus kori), saliva
[illegible] (pl. kuxti-ri), peito
[illegible] (pl. uxpi-kari), dente
[illegible] (pl. mori), gengiva
[illegible] (pl. dûri-khâsé pikari) dente molar
[illegible] (pl. ye'mê-ri), lingua
[illegible] ou kâto-a (pl. kâto-ri), nuca

xxkõ-poro (pl. porõ), ombro
sõéma (pl. sõémãri), costas
sõéma-oõã (pl. oãri), coluna vertebral
pãti-pãma (pl. pãmãri), costela
oxpõ-ro (pl. oxpõ-ri) seio (mulher)

di-wa-se (pl. di-wa-se-dari), veia, artéria.

3) *Classificação dos animais*

Nos animais admitem a seguinte distinção:

1º — *Yaãrã* (Uaupés *ãã'ãnã*) (i. e. *maus, ferozes*) — são as feras e bichos daninhos como a onça, gamba, etc.
2º — *Yãkã-ãhãrã* (U. *ãhãnã*) (i. e. *habitadores do mato*) — são os bravios comestíveis, como a cutia, a paca, etc.
3º — *Ex-kãrã* (U. *ex'kãnã*) (i. e. *os que alimentam*) — são os domésticos, como a galinha, porco, etc.
4º — *Bãdrã* (U. *bãdnã*) (i. e. *os que comem*) — sob esta denominação vêm os peixes, lagartas, insetos, etc., que costumam comer.
5º — *Bãtrã* (U. *bwãnã*) (*bwã*, em cima) — são os voláteis.

e) *Medicina*

1) *Origem das doenças*

Seus conhecimentos neste setor ficaram prejudicados pela magia e superstição. Embora a natureza que o rodeia lhe seja prodiga, o indígena quase não usa remédios caseiros, pelo conceito que faz das doenças, sob a influência do *xamã* ou *pajé* (11).

(11) Em a narração da viagem de 1637, do Pe. Alonso de Rojas ("Descobrimentos do Rio das Amazonas", p. 110) encontramos: — "Temem

Por quanto lhes é possível, ocultam suas doenças. Não sabem, ou existem de germes patogênicos ou da ação químico-biológica do organismo e dos venenos que sôbre êle agem. Seu espírito lógico, por outra parte, exige uma explicação para os fatos, está certo que os efeitos exigem uma causa proporcional. Como existem as fôrças manifestas da natureza, admitem haver, outrossim, fôrças ocultas capazes de produzir os mais vários e estranhos fenômenos. Nem pode deixar de impressioná-los os fenômenos meteorológicos e astronômicos. O índio ademais, é uma animista convicto, como adiante veremos. Tôdas as doenças, para êle, têm uma única causa, por mais variadas que sejam as suas manifestações, a saber o *dohasi*, que poderíamos traduzir por maleficio (12). Isto é, as doenças são provocadas pelo espírito malévolo dos homens que, invejando um dos pontos fracos da psique silvícola, o seu sêmelhante, procura fazer-lhe algum mal. Para tanto podem servir os mais variados objetos tornados maléficos por magia: um emaranhado de cabelos, um pedaço de pano, pau, pedra, metal, osso, espinho, muito comumente uma ponta de cigarro (13) e até o simples pensamento. Os objetos maléficos agirão quando colocados no caminho do indivíduo, dentro da sua casa, enterrados no seu terreiro, ou lançado na sua porta ou à sua canoa.

Crêem que informação do tuxaua Júlio de Pari-cachoeira, rio Tiquié, [illegible] maléficos, nos quais denominam *Wai marsá* (gente [illegible]) chegam desenterrado germes de doenças sob as pedras dos rios [illegible] falam em *seré-pá* (pedra do purú-puru), *yohá-pá* (pedra da [illegible]). Por isso opõem-se a que se quebrem essas pedras, porque tais doenças se espalhariam e dizimariam a população. Afirmam de algumas pedras de Pari-cachoeira, que até os peixes, quando aí se encostam, morrem (14).

---

[illegible] feiticeiros aos quais consultam, e êstes ao demônio, de quem recebem [illegible] e com embustes enganam aos miseráveis índios".

(12) Como muitos dentre os civilizados crêem no quebranto, mau olhado, [illegible], macumba, candomblé. Consequência dessa opinião sôbre [illegible] nenhuma higiene e cuidados preventivos, donde o [illegible] por exemplo, da malária, da gripe, da tuberculose, etc., como certas em várias oportunidades e lugares.

(13) Tomando-se ao cavar um local, encontra uma ponta de cigarro, o [illegible] imediatamente que se trata de um maleficio.

(14) Um [illegible] Missionários deu uma explicação verossímil para o fato [illegible] existência ali de numerosas piranhas que assaltam os outros peixes.

A causa de uma dor local, inflamação ou febre, pode ser também um daqueles objetos maléficos que se introduziu no organismo. A cura, naturalmente, só se obterá com a eliminação do objeto localizado na parte doente, ou eliminação do malefício. Como atingiu o organismo misteriosamente, por um processo mágico, só outro processo mágico será capaz de provocar a cura. E entra aqui em ação o «feiticeiro» ou «xamã», dito em Tukano *Yai* (pajé) (15).

Pensam também que os civilizados, para fazer-lhes mal, lhes enviam malefício (gripe, etc.) dentro das caixas de mercadoria, as quais ao serem abertas, infeccionarão a muitas pessoas ou a todo o povoado (16).

Dessa persuasão da origem malevolente e mágica das doenças nasce a convicção de que tôda morte tem como autor uma pessoa inimiga. É portanto, violenta; o homem é, naturalmente, imortal. É esforço baldado tentar convencer a um velho decrépito, que êle vai morrer e convém se vá preparando. Tal atitude mental, já se vê, não é favorável ao suicídio, embora se possa encontrar talvez, algum velho que deseje a morte (17).

2) O *Xamã* ou *Yai*

O pajé ou *Yai* é, portanto, o médico e ao mesmo tempo *Xamã* (é um mago ou feiticeiro). Só os homens podem ser pajé.

---

(15) *Yai* também quer dizer onça. Haverá talvez alguma relação entre «feitiço» e «onça»? Não nos souberam dizer os índios. Admitem-na os filólogos.

(16) No povoado Tukano de S. Luzia (rio Papuri) morrera de coqueluche (*Ma-ig-tukano*) (1947). Com inveja dos Makú que eram bem remunerados pelos curares adquirido para ser estudado no sul do Brasil, pensou logo que as doenças foram preparadas pelos civilizados com a ajuda dos Makú e enviadas a S. Luzia com a mercadoria.

(17) «Quero morrer» dizia um dêsses velhos ao Pe. Antônio Giacone, porque os meus dentes estão cansados de mastigar!». O Pe. João Marchesi narrou-nos os particulares do único caso de suicídio de que teve notícia. Um índio Tuyuca, do povoado denominado Cigarro, rio Uaupés, fortemente embriagado pelo caxiri, derrubou por terra a própria esposa e a espezinhou até matá-la. Depois deitou-se na rede e dormiu. Enquanto dormia os parentes e outras pessoas enterraram o cadáver. O assassino ao despertar-se na manhã seguinte, chama pela mulher, a fim de que lhe preparasse o mingau. Contaram-lhe, então, como êle mesmo a havia matado em a noite precedente. O assassino, sem falar nada a pessoa alguma, toma a sua canoa e interna-se num igarapé vizinho. Alguns dias depois a canoa foi encontrada bubulando (flutuando em meio da corrente), e dentro alguns pedaços de timbó e um pouco ainda suja do suco de timbó. O pobre homem espremera e sorvera o suco venenoso daquela planta e, talvez nas convulsões da agonia, caíra dentro dágua e morrera afogado.

SQ19 Tucano

a) *Seus poderes*

Seus poderes são muitos. Em primeiro lugar, neutralizar o malefício lançado sôbre um doente, e assim cura-lo. Pode mesmo tornar os indivíduos invulneráveis as doenças.

Reversivamente, êle lançará malefício e causará enfermidade nos outros, e até a morte. Atribuem-lhe ainda poder sôbre os ventos, chuvas, tempestades, raios. É e êle também que fará as crianças crescer ou, ao contrário, as tornará raquíticas. Sabe predizer o futuro.

É capaz de descobrir os criminosos, quando se supõe a existência de um crime e ninguém foi prêso em flagrante.

Como efeito de suas cerimônias os indivíduos serão felizes na caça ou na pesca.

É ainda por ação do pajé, dizem, que o *curare* tem seu formidável poder tóxico, que as bebidas se tornam mais inebriantes ou perdem esta sua qualidade.

Donde se deduz tôda a importância social do pajé e o respeito e temor que o envolve da parte de todos os índios, não só da propria tribo, como das outras tribos também. É talvez o maior sacrifício que a catequese católica impõe aos indígenas cristãos, a renúncia a crença no poder do pajé. Em alguns casos só o consegue parcialmente.

b) *Meios de cura*

Os meios de cura de que serve o pajé correspondem, por seu lado, ao conceito mágico das doenças. Conhece e aplica as plantas medicinais, das quais faz poção, prepara pó, fumigação. Aplicam também a ablução (*Oxkó--pyó-pedsé*), borrifamento (*Oxkó-stásé-mapé*), massagens (*Pá-pudse* ou *Tu-borosé*), sucção (*Pó-ãsesé*). Mas possui além disso todo um aparelhamento de poder mágico conservado ordinariamente num pequeno cesto que se diz *Wamó arkó-ro* (18), o seu estôjo médico, onde há pequenas cabaças contendo pós, e também espinhos, pedaços de osso e de paus cilíndricos, pequenos seixos, pedras polidas de cristal para a visão e, especialmente, o maracá pintado (*Yará-gu*), considerado instrumento mágico e o cigarro (*Barséke mõrõ-rõ*, Uaupés *mõ'nõ-nõ*).

Fuma-o e espalha a fumaça sôbre o corpo ou à parte dolorida do corpo com a fôrça de espancar o *dohasé* e operar a cura. Pela fumaça ele é capaz de pressagiar a morte do doente; e a direção

(18) Para designar êsse estôjo médico do pajé temos ouvido também a expressão *Pi'i-kamó*, se é um cesto, e *Wihyó-sáku*, quando é uma bolsa de fururi.

4 Silva 5Q19 Tucano

que da tomar, ou a figura que descrever no ar indicará quem causou aquele maleficio.

Quando o pajé sopra na mão esquerda fechada, e, abrindo-a depois solta a fumaça em dado sentido, ou com gesto largo, moroso da mão direita impele a fumaça desde a axila esquerda para determinada direção, para lá enviará doenças e desgraças. O simples ato, fechando lentamente a mão esquerda, espancará as nuvens, fazendo cessar a chuva. Se, ao invés, fôr abrindo os dedos, enviará ventos, tempestades, raios. Os raios têm sempre origem de algum pajé. (Cfr. Ermano Stradelli, o c. verbete *Pajé*).

Há uma crença profundamente enraizada na força misteriosa do «Sôpro», «*Bazsesé*», do pajé, porque o sôpro provém do íntimo da pessoa, do seu *Heripôra* (10).

Não se pode, evidentemente, falar que os índios admitam uma força magnética natural no pajé. Têm-no, pois, como possuidor de uma virtude espiritual extraordinária.

c) *Algumas plantas da terapêutica xamanística*

Em um pequeno herbario, em organização no «Centro de Pesquisas» de Iauarete, havia, em 1955, as seguintes plantas da terapêutica indígena, recolhidas por alguns pajés, os quais de cada uma delas nos indicaram o nome, emprêgo, utilidade, método do preparo e posologia. Pelo costume indígena de denominar as plantas pelo seu emprêgo, plantas diversas recebem o mesmo nome, como se verificou no herbario e se indicará abaixo, e, algumas vêzes, com processo de preparo e posologia idênticos ou quase.

1. *Dapôn pariré-ko* (nas dores de cabeça). Raspa-se a casca e deixa-se algum tempo em água, da qual se toma depois uma cuia.

2. *Merê-da* (Uaupés *Meinê-da*) (colírio). Retira-se a seiva que se aplica em gotas aos olhos.

3. *Nazpéri sódsé-ko* (colírio). Deixa-se por algum tempo a raspa da raiz e da casca em água que se pinga cinco vêzes por dia no olho e ao deitar-se.

4. *Nazpéri sódsé-kó* (colírio). Da água, em que estiveram em infusão raspas da casca e da raiz, pinga-se no ôlho algumas vêzes por dia, especialmente antes de ir deitar-se.

---

(10) Admitem essa fôrça misteriosa também no sôpro dos brancos, especialmente se êle é médico (e êste julgam um pajé). Sabemos que o próprio Koch Grunberg (Z. I. 101) praticou os sopros entre os indígenas.

SQ19 Tucano

[Facing p. 272]

Cesário (octogenário xamã Tukano)

Os xamãs
(dir.) Marcelino (**Wanana** de Jacaré, rio Uaupés)
(esq.) Eduardo (**Huhudeni** de Uapuim-cachoeira, rio Siari, afl. do Içana)

xamãs Tukano:
Marcelino de Juquira (dir.)
Henrique do Japú igarapé (esq.) tocando o **chá**

5 *Pizkõ-ko* (contra dor-de-dente). Deixa-se a casca em infusão na água, a qual depois se pinga no dente dolorido e no nariz.

6 *Pã-purise-ko* (nas dores de estômago). Deixa-se a casca em infusão na água da qual se toma um meio copo. Possui também ação emética.

7 *-Papiu-ko-da* (contra a disenteria). Raspa-se a casca, ferve-se em água, filtra-se e toma-se meio copo três vêzes ao dia. O líber desta planta provoca espuma e é usado para a lavagem da cabeça.

8 *Wazkuri-ko* (nas cólicas hepáticas). Empregam-se as raspas da raiz deixadas em água, da qual se toma uma cuia.

9 *Wazkuri-ko* (nas cólicas hepáticas). Toma-se uma cuia da água na qual estêve em infusão por algum tempo a casca desta planta.

10 *Pirõ-pũri-ko* (Unupes *pirõ-pũri-ko*) (vermífugo). Deixam-se raspas da casca em água, da qual se toma uma meia cuia.

11 *Pirõ pũri-ko* (variedade usada como vermífugo). Toma-se uma cuia da água em que estêve em infusão a casca desta planta.

12 *Pirõ pũri-ko* (outra variedade de vermífugo). Raspas da raiz postas em infusão produzem um líquido avinhado do qual se toma uma cuia.

13 *Wãz-ti pouri-ko* (para tosse e afecções pulmonares). Maceram-se raspas da casca em água da qual se tomam três cuias ao dia.

14 *Wãz-ti pouri-ko* (outra variedade para a tuberculose). Deixa-se a casca em infusão, e tomam-se três cuias dessa água diàriamente, por um espaço de dez dias.

15 *Sere-ko-da* (no puru-puru (20) ou vitiligo). Raspa-se a casca que se ferve em água até lhe dar a côr vinhosa. Desta água tomam-se três colheres ao dia até desaparecerem as manchas.

16 *Dupoa-ñpisé-ko* (para as manchas pretas do rosto). Deixam-se as fôlhas em infusão na água, com a qual se banhará o rosto.

---

(20) Consiste o puru-puru numa descoloração da epiderme e mais raramente em manchas pretas causadas por um espiroqueta como a treponema pallidum. Sôbre esta doença, muito espalhada entre os Arawaks do Içana, o Centro de Pesquisas da Missão Salesiana do Rio Negro promoveu estudos do Prof. Dr. Emilio Biocca e outros.

[Facing p. 273]

[illegible] (contra a picada de cobra). Comam-se a casca e [illegible] planta e apliquem-se também no lugar da picada.

[illegible]-hêsu-trise-ko (resinador). Deixam-se as raspas da raiz [illegible] na água, que a mulher deve ir tomando até regularizar [illegible].

[illegible]-ti-ti-koko ñnî-ko (Uaupés pôrã-ti-tiôko ñnî-ko) (para [illegible]). Raspas da raiz são deixadas em infusão em água [illegible] mulher deve ir bebendo até conceber.

[illegible]-di-ta (para ter filho homem). A mulher deve ir be- [illegible] da água na que estiveram em infusão raspas da raiz desta planta.

[illegible]-ñã-ñgu-pôrãise (para ter alternadamente filhos dos [illegible]). A mulher deve beber periodicamente da água em que [illegible] em infusão raspas da raiz desta planta.

[illegible]-tpop-sêrigô-ko-sêrikoko (Uaupés pôrã-tpopo-sêrigô- [illegible] esterilizante). Toma-se a água em que se deixaram [illegible] da raiz em infusão. Seu uso muito prolongado pode trazer [illegible] a esterilidade absoluta e definitiva.

[illegible]-sêritô-ko (Uaupés pôrã-tise sêritô-ko) (esterili- [illegible]). A mulher deve beber da água em que estiveram em inace- [illegible] da raiz desta planta. É preferível misturar com a es- [illegible].

[illegible] (Uaupés pôrã-[illegible]-ko) (esterilizante). [illegible] em infusão em água que a mulher bebe para evitar [illegible].

[illegible]-ko. Raspas da raiz em infusão em água [illegible] mulher vai bebendo até alcançar o efeito.

[illegible]-ko (abortivo). Raspas da raiz em infusão na água [illegible] mulher tomará três ou quatro chás ao dia até alcançar [illegible] desejado.

*Seus processos de cura*

No processo de cura, mesmo nos casos do emprego de remédios [illegible], de plantas de reconhecida virtude terapêutica, se funda- [illegible] ou do menos, e por em auxílio. Com efeito, das [illegible] sucção da parte doente, ou de se fazer cair água dende [illegible] mostram do depois ao doente. Recorrendo à prestidigita- [illegible] que observar Kuen Grunberg, 2 / 99) o objeto [illegible].

pedra, espinho, insetos, escamas, etc.) que lhe extraiu do membro dolorido e lhe causava as pontadas, *Wazkari*.

Com auxílio de narcóticos ou de excitantes, provocará em si estados de crise ou de excitação nervosa, durante o qual vê as causas da doença, ou os causadores do maleficio. Será capaz de fazê-lo ver também ao doente. Preferirá trazer o enfermo à sua barraca, ou ir à do doente durante a noite. Exigirá a ausência de outras pessôas, e, a sós com o doente, começará suas práticas num ambiente de trevas e mistério, resmungando muito ràpidamente (21) palavras ininteligíveis, cantarolando em peculiar entoação e alternando com rudosos suspiros e gemidos. Sabem e executam uma série de canções, cada qual com sua eficiência para dado tipo de enfermidade (22), acompanhadas muitas vêzes pelo som do maracá, (*Yazsá-ga*) havido como instrumento mágico.

Maraca (yazsá-ga)

O desenvolvimento dêsse processo sugestivo é facilitado por várias causas. A primeira é a atitude mental do índio. Depois talvez o efeito natural medicinal do tratamento e coincidências que o índio tomará como [illegible]. Parece, outrossim, que em alguns casos se trate de um hipnotismo inconsciente, quiçá mesmo fôrça magnética e telepátia espontâneas. Conhecem-se fatos de singular manifestação telepática e outros, que espantam e escapam a qualquer explicação da nossa parte (23).

---

(21) Costumam nos isso, que o Missionário diga as orações mais apressadamente.

(22) Conseguimos gravar algumas dessas canções dos pajés das tribos Tukano, Wanana, Taryana e Hunhdeni que se podem ouvir na "Discoteca Etno-linguístico-musical" do Centro de Pesquisas de Iauaretê-Endereço: P. Alcionilio Bruzzi-Largo C. de Jesus, 154 — S. Paulo, Brasil.

(23) Em Iauaretê os pajés disseram que debaixo dos alicerces da igreja ficara enterrado um cigarro maléfico, o qual com suas emanações havia [illegible] os fiéis. Na realidade apareceram entre os indígenas vários casos de tuberculose, explicados, naturalmente, como efeito das emanações do cigarro. Em Teresita, outrora Missão dos Padres Monfortanos e hoje do Instituto das Missões Estrangeiras de Yarumal, no Rio Papuri (Colômbia) em menos de três anos morreram seis irmãos, homens fortes, por maleficio, se disse do Pajé Pirá-tapúya de Umuriaçuba.

Pode suceder também que o pajé nos casos graves de doenças epidemias, tempestades convide outros colegas para realizarem uma «junta médica».

Suas qualidades psíquicas

Outrora cada maloca ou povoado possuía o seu xamã e, às vezes, até mais de um. Hoje já não os há tantos. Parece um índio como os demais: terá sua família, sua casa, sua roça como os outros, só há um apartamento na maloca comum. Participa das reuniões sociais: pescaria, caxiri, dabacuris (24).

É porém um indivíduo que deve possuir singular temperamento e um estudo de qualidades especiais: inteligência mais aberta, memória tenaz para conservar os conhecimentos necessários ou úteis, conhecimentos das plantas e dos processos de cura, poder de sugestionar, capacidade de autosugestionar-se, de provocar em si emoções vivas, ou mesmo crises nervosas que causarão contorsões e até perda dos sentidos; e com estas manifestações emocionarão também o seu cliente.

Deve, outrossim, manifestar amor à solidão. Alguns preferem morar em barracas afastadas, mais no interior da mata ou nas cabeceiras dos igarapés.

São as principais qualidades que deve apresentar o pajé. Tais qualidades, conforme pensam, lhe advêm de um espírito especial que pode passar para o seu filho. Por isso êste é o indicado para suceder ao pai. Não é contudo, necessàriamente hereditária a função. Nada e um outro qualquer, com as qualidades convenientes, pode constituir-se pajé.

Além das qualidades requer-se adequada preparação que dura anos. Consiste na solidão, jejuns, em sonhos e excitações e muitas outras práticas para desenvolver, ou mesmo criar, as qualidades supranormais. Para alcançar esta finalidade o candidato por-se-á à escola de outro pajé como servente aprendiz. Não raro um pajé mais célebre atrai à sua escola mais alunos e dá-lhes uma formação coletiva (25).

---

24) Deixam por vêzes de comparecer a tais reuniões a fim de se não encontrarem com outros pajés. São oficiais do mesmo ofício...

25) Perto de Taracuá-ponta, na maloca do Suruuca, conforme atesta Mons. Lourenço Giordano, habitava por volta de 1917, um pajé famoso que tinha sempre numerosos alunos, de sorte a constituir como uma "Faculdade de Medicina indígena" no seu barracão. Soubemos também de um prestigioso pajé de Taurete, por nome João, que preparou de uma feita cinco pajés em Meio Franco (rio Papuri).

1) *Preparação do zamé* (26)

É longa a preparação de um pajé. Além das instruções teóricas que recebem, servem-se de várias substâncias e instrumentos mágicos, denominados *Wihió* (27), todos de origem lendária, alguns dos quais teriam aparecido misteriosamente, e se transmitem de pajé a pajé.

Quando um velho pajé quer preparar um filho seu para exercer a pajelança, inicia a preparação desde os primeiros meses, pondo-lhe por três meses um *Wihió* aplicado ao umbigo, *Wihyó peomi kâ mar-ró-re*. Êste *Wihió* é de forma arredondada, de uma substância endurecida, cuja origem se perde na lenda, conforme nos asseguraram. Durante êsses três meses o pajé deve também ter uma alimentação leve, de resguardo, quase exclusivamente mingau e chibé.

Mais tarde, depois de tirar o primeiro *Wihi*, adapta-lhe ao umbigo, por uns cinco meses, o *Axpá--khwi-re Wihió*, o qual consiste numa pedra pequena e arredondada de quartzo, de seus dois a três centímetros de diâmetro.

Ao depois aplicar-lhe-á o *Wihió* de coco de tucumã, bem pintado com carajuru, dito *Ovainé Wihió* (em Taryana *Enúki*).

Há um *Wihió* em forma de rapé, que o pajé e o aprendiz aspiram, e o *Kaiówa Wihió*, obtido do suco de algumas plantas (uacú [illegible]) submetido à evaporação até se reduzir a um pó finíssimo.

O mais maravilhoso é o *Wihió-phi* (em Taryana *Kerá-yúki*). É uma pequena pedra de cristal, com uma cavidade e sua tampa. Conforme a crença indígena êste aparelho remonta à origem da tribo e, misteriosamente, contém uma substância de um perfume leve e agradável. O pajé de vez em quando, nas suas preleções, destampa o *Kerá-yúki*, a fim de que exale aquêle perfume, o qual deve ajudar para esclarecer a inteligência dos seus discípulos, postados em semi-círculo diante dêle.

Dizem que em certa época do ano, lá por abril, essa substância fica seca e quase desaparece, e pelos meses de junho-agosto torna-se a cheher de per si.

---

(26) Relação do Índio Taryana Teo Iauaretê, Vicente Joaquim Rodrigues que fez o curso comparativo.

(27) *Wihió* provavelmente deriva de *Wihi*, cheirar, e designa propriamente substâncias que aspiram ou cheiram, como o paricá, quase todas de odor intenso, algumas capazes até de entontecer. Talvez, por extensão de sentido, o termo *Wihió* passou a indicar também o conjunto dessas substâncias.

Pelos 10 anos começa o curso intenso de pajelança, e dura mais ou menos uns 15 anos. O candidato só pode casar-se depois de concluído o curso.

Durante todo êsse tempo êle vive ao lado do pajé-mestre, e às suas ordens. Não tem preocupação de preparar sua roça ou participar das pescarias, porque, como o pajé, também êle será mantido pelos donativos dos doentes.

É um curso severo. Levanta-se duas horas antes de clarear o dia e prolongam-se suas atividades até alta noite. Além de ensinar ao aprendiz as lendas das origens de cada tribo e as suas tapanhuns, ensina-lhes, outrossim, o uso dos remédios e sua aplicação. É um curso prático, e o aprendiz acompanha ao pajé nos seus trabalhos junto de cada doente.

Procura o velho pajé desenvolver nos candidatos o poder de engolir. Solenemente, de pé diante dos seus discípulos (assim apunha um dêles), com gesto impressionante, faz invocação dos elementos provocadores das doenças. São especialmente três: *Ortá* (pedra), *Wazkori* (fragmentos de paxiuba) e *Uhé-phi* (cascas de árvore). Os aprendizes percebem vir do ar êsses elementos, em forma de fragmentos de pedra, paxiuba ou de casca. Os mais ágeis apanham logo, outros os deixam cair no chão.

Deve o candidato saber engolir e, ao depois, vomitar êsses fragmentos. Para vomitá-los, conscante o relato, não usam introduzir o dedo na garganta: comprime-se o estômago, inclina-se o busto para a frente e, com esfôrço do estômago, o fragmento é vomitado. Devem fazer tal exercício muitas vêzes, e assim lavam (?) o fragmento que foi vomitado para engoli-lo novamente e expelí-lo daí a pouco.

A pouca habilidade do aprendiz neste exercício, como sua inapetência de memória para guardar as lendas e ensinamentos tradicionais, acarretam sua exclusão. E assim o mestre vai reduzindo o número de aprendizes.

Muitos dos seus conhecimentos advêm ao pajé dos sonhos, que deve saber interpretar. Com o progresso do tempo, em pleno dia, pode cair em torpor, de pé, diante dos alunos, e vê, então, a distância, os doentes que virão consultá-lo e a causa das doenças.

Crê que as nuvens lhe revelam as doenças, bem como outros fatos que interessam ao grupo ou aos indivíduos. Submete os alunos a provas de capacidade. Manda-os observar as nuvens e dar a interpretação e os vai corrigindo — «Aquela forma de nuvem representa mulher e não homem, representa criança e não adulto. Não é tal parte que está doente, porém estoutra».

Já sabe que a doença é incurável, e por isso, quando chamado [illegible] dirá a seus discípulos: — «Não vamos tratar, é inútil, ele vai morrer».

Quando prevê a cura, dirige-se, então, à casa do doente e faz a diagnose, dizendo se a causa das dores é *Oxtá*, *Waxkari* ou *Uhá-phi*. A eliminação desses corpos estranhos que acarretam as dores é a primeira condição de cura. Êle o consegue com sucções profundas, repetidas três ou quatro vêzes, feitas diretamente sôbre o órgão dolorido, entremeadas também de cantos, gemidos e exorcismos.

Não deixa de dar conselho ao doente, para um pronto restabelecimento, ou para evitar a reincidência. Entre êsses conselhos, cita o informante «abster-se do abuso das relações sexuais».

O resto do tratamento fica aos cuidados dos *Kõmũ* (do qual falaremos adiante), conforme as prescrições do pajé. Realiza-se com ervas, infusões, ou esconjuros. São êstes fórmulas antigas, cuja idade ignoram presentemente, e variam conforme a causa da doença. Tendo entre as mãos a cuia de mingau que o doente vai tomar o *Kõmũ*, quando a doença é provocada por *Waxkari* localizado no crânio, pronuncia um esconjuro que começa pelas palavras — «*Yuxá-paranã-ãti*».

Minutos depois o doente começa a sentir-se melhor, e a cura se processará mais tarde.

[illegible] Sua influência

A fama de um pajé dependerá dos fatos favoráveis. Há destarte pajés superiores, ou *Fortes* e inferiores (28), conforme as curas ou

[illegible] são os pajés tidos como [illegible] nas seguintes localidades: Ultra-poço, S. João, [illegible] Ultra-Cachoeira.

[illegible] mais famosos pois, conforme a tradição [illegible] Já em 1800 queixava-se [illegible] Tarquini, a Stradelli (o.c.p. 555-verbete *Pajé*) [illegible] "E eram queixas, escreve Stradelli, de colleguismo, porque eu passei sempre por muito bom pajé graças a photographia, ao microscopio e as coleções de plantas, especie de Caillaciums, que fazia durante o tempo [illegible] dos indígenas no Rio Uaupés". O mesmo Stradelli [illegible] Vocabulário traz esta noção: — "Pajé não é qualquer, só os fortes de coração, os que sabem superar as provas de iniciação, que [illegible] para ser pajé. Com menos de cinco [illegible] não há pajé que possa afrontar impunemente as cobras venenosas, e precisa ter mais de cinco fôlegos para poder curar as doenças [illegible] imposição das mãos e, com o cuspo, as mordidelas das cobras venenosas. Os pajés que têm de sete fôlegos para cima, têm [illegible] o futuro, curam à distância, podem mudar-se à vontade no animal que lhes convém, tornar-se invisível e se transportar de um lugar para outro com o simples esforço do proprio querer".

outros fatos extraordinários que conseguir realizar. Os mais famosos atraírão clientela de grandes distâncias e mesmo de outras tribos. Até alguns civilizados, que se estabelecem por aquelas regiões, deixam-se influenciar e recorrem também aos serviços do pajé.

É tal a influência do pajé que os próprios alimentos do doente são submetidos ao seu sôpro, *Buriéke*. Até os remedios dados aos civilizados são apresentados ao pajé que sôbre eles soprará, para dar-lhes eficácia. Se o doente sarar, o mérito será naturalmente do pajé. Se não conseguir a melhora e vier a falecer, explicará que se trata de malefício de outro «pajé mais forte», ou por ter tomado remedio dos brancos, ou alimento «não soprado», ou, enfim, sobreveio o novo e improviso malefício antes que o pajé pudesse ser chamado.

E se declarar que nada mais pode fazer, o doente será abandonado como alguém fatalmente condenado à morte; e não raro lhe negarão os parentes tôda assistência, e até mesmo a alimentação. O doente muita vez, depois do tal parecer do pajé, acelerará a sua morte, recusando outros remédios do civilizado e qualquer comida ou bebida (vd. V 23 — estoicismo).

Tem acontecido que o pajé declare a maloca ou o povoado imediatamente perigoso, e então os índios não duvidarão de abandonar-lo e transferir-se para outro local, não obstante tôdas as dificuldades (29).

Tem-se visto os índios cavar um terreiro larga e profundamente, por ordens do pajé, a fim de descobrir o cigarro aí enterrado e causador das doenças, e que o pajé fará ver no momento oportuno. Em ocasião um pajé ordenou, e foi fielmente obedecido, que se substituísse o piso da maloca e fôsse substituído por outra terra, para que cessassem as doenças da maloca.

4) Sua posição.

Desfrutando o pajé do máximo ascendente, (30) pois, conforme a crença dos indígenas, depende dêle a vida ou a morte dos homens, da sua como das outras tribos, bem como as tempestades

(29) Tem sucedido inúmeras vezes que, após alguns anos voltam ao mesmo local. Em 1932 um surto de impaludismo vitimou cerca de 70 índios em Taracuá-ponta, rio Uaupés. Apesar de nenhum aluno do colégio missionário ter sido vítima, os índios abandonaram, por medo, a localidade. Em 1947 começou o reinôro.

(30) Vários índios, depois de conquistada a sua confiança, declararam-nos não querer bem, porém apenas temer e, às vêzes, odiar o pajé. Ordinariamente, porém, por receio da vingança do pajé, calam-se quando interrogados sôbre êle, sôbre seus processos de cura, etc.

e a natureza tôda, compreende-se que é privilegiada a sua posição. Embora careça de poder político, o próprio tuxaua e a população inteira respeitam-no e temem-no (31).

Para não o terem inimigo satisfazem-lhe a vontade; para terem-no amigo e alcançar seus bons serviços, dão-lhe presentes, mesmo antes de ter operado alguma cura. Como a sua fama cresce com êxitos e curas a êle atribuídos, decresce, outrossim, com os seus insucessos. Em vista de serem êles os conhecedores dos malefícios (que preparam para instrumento de vingança), aos pajés se atribuem as desgraças e as mortes misteriosas e rápidas em circunstâncias impressionantes; e contra êles também se descarregam as vinganças (32).

A sua presença nas proximidades de um povoado à noite, quando vai fazer a sua pesca, é sempre suspeita. Se após uma sua visita

---

(31) Confirmando o Padre Arcuno Giacone — "Pela autoridade que gozam entre os índios e pelo temor que todos têm dos seus sôpros mortíferos, torna-se sumamente [illegible] cheio de si mesmo chegando ali[illegible] Ugue bukue, velho Deus" (o.c. 38).

Tornou-se de nenhum de morto pois também o seu espírito é capaz de fazer mal. Em [illegible] pediram ao Missionário que não enterrasse [illegible] "porque êle assustaré nossos filhos ne[illegible] Argentina as vezes que os indígenas não querem [illegible] Um Missionário Montfortiano, o Pe Umberto Limpo[illegible] (em homenagem ao Pe Clemente, a nome do seu antecessor) viu-se [illegible] que fazer sua barraca mais longe. Em [illegible] de 1947 um menino foi mordido de cobra nas pro[illegible] Montfort, Colômbia. A morrem esquerda do Papuri. O [illegible] a Missão, porém o pajé não o permitiu, [illegible] foi o veneno. Fê-lo, porém o menino [illegible] O [illegible] insurgiu-se contra o pajé, o qual lan[illegible] sôpro mortal, e êle veio a morrer pouco depois. A popu[illegible] contra o pajé. "Deixou êste mais prudente fu[illegible] Cuiá-cuiá (afluente do Papuri) [illegible] Desana costumavam fazer suas grandes pescarias, ameaçando [illegible] sôpro sôbre todos os que lá fossem. Os Desana, naturalmente, ficaram amedrontados e deram curso ao boato que os Missionários Montfortianos estavam também com medo do sôpro do pajé.

(32) Afirmam alguns que o pajé não pode administrar veneno. "Êle vê mesmo de longe". Essa crença o vantajosa aos pajés. Parece, no entanto, que, ao menos agora, nem todos a endossem. Em outubro de 1949 morreu de pneumonia um indígena de Ipanuré. Atribuiram a morte e morte ao pajé do vizinho povoado de Cigarro. Quando tal [illegible] com alguns de [illegible] ao trabalho do transporte da [illegible] de Ipanuré, os índios desta localidade abandonaram o trabalho e escondem-se no mato e, quando o pajé vai passando pela estrada, um dos homens de Ipanuré dá-lhe uma bordoada que êle evita, desviando a cabeça e cobrindo-a com o braço que se quebra ao cotovelo e antebraço.

Numa maloca (especialmente de outra tribo) ai sobreviver alguma morte ou desgraça, o pajé será inculpado (33).

Alguns pajés se viram obrigados a abandonarem os povoados e ausentarem por muito tempo, até que se atenuasse a irritação contra êles.

1) *Seu papel social*

O pajé representa o mais elevado nível intelectual do povoado indígena não só, como também é o zelador pela observância das leis da tribo. Êle as conhece, ensina, e exige seu cumprimento, sendo capaz de punir, (34) com doenças, raios, maleficios, enfim, o desrespeito às práticas tradicionais.

Êle preside a tôda a vida social, tanto da família como o grupo. Ao nascer uma criança quem a soprará, exorcizará e pintará com carajurá, a fim de que ela cresça forte e livre de doenças, é o pajé, como, também dará os remédios à parturiente.

Em algumas tribos a imposição do nome se faz com a presença do pajé. Com seu indispensável cigarro enfumarando a criança, em um período do momento, êle dirá o nome ou sugestionará ao pai que o faça para escolher um nome indicado por uma circunstância qualquer, talvez mesmo um nome indecente.

Quando a menina atinge a puberdade, o pajé passará com ela algum tempo, dando-lhe oportunas instruções teóricas e práticas sôbre a maternidade e obrigações inerentes a esta.

Por ocasião da iniciação masculina cabe-lhe ensinar aos rapazes as lendas tradicionais, seus direitos e deveres como membros do grupo, as práticas rituais e verificar sua habilitação, por meio de interrogatórios, castigos, flagelações, jejuns, etc.

Êle é ainda o principal instrutor dos *Komú* (vd. VII - 2, e (3) de cuja capacidade emitirá parecer, e dos quais será sempre o dirigente, reunindo-os periodicamente em assembléia, e dando-lhes as indicações oportunas a cada circunstância.

2) *Conseqüências*

Uma primeira é que em muitos casos agrava-se a doença por falta de tratamento adequado; ou os próprios processos do pajé

---

(33) Numa maloca de Jandu, no igarapé Umari, afluente do Tiquié, pouco antes de nossa passagem por ali (dezembro de 1947) caira um raio. De tal desgraça foi responsabilizado o pajé que ameaçara lançar ali um raio.

(34) Êle é, pois, o maior opositor da assimilação da nossa cultura por parte dos silvícolas.

exacerbam o mal e aceleram a morte. Em vários casos de pneumonia e tuberculose laríngea e pulmonar precipitou-se o desenlace por efeito das abluções do pajé (35).

Outra consequência gravíssima dessa credulidade no poder mágico são as vinganças, em fim e numerosos crimes. Tôda doença, morte ou desgraça teve como causa algum maleficio. O pajé não só procurará neutralizar êsse maleficio, como indicará, outrossim, alguém como causador dêle, e preparará venenos (36) e contra-venenos para a desforra. Ou exortará à vingança a vítima depois da morte, e se ela morrer, os seus parentes. Donde sempre acirrado, ódio de tribo contra tribo, e dentro de uma mesma tribo, de um povoado contra outro, ou de família do mesmo povoado ou maloca. Daqui ainda maior submissão de todos ao pajé, do qual em tudo dependem, e isto é um impecilho ao desenvolvimento do espírito do índio. Por outra parte, essa mesma crença tem por fim de vingar ainda mais o indivíduo à própria família ou grupo, pois garantia que será vingado dos maleficios, e isto é já um preventivo, porque os seus inimigos, com medo da vindita, se abstêm de fazer-lhe mal.

k) *O ramá, convicto ou impostor?*

Há fatos insofismáveis em que o pajé leva, por exemplo, na boca, um pedaço de osso que dirá ter chupado do órgão dolorido, e por precaução, mostrará o côto de cigarro venenoso. Também o pôde observar Grumberg (*Z. I.* 00).

Ocupa, além disto, posição de destaque e muito vantajosa, capaz portanto de despertar inveja e cobiça. Por exemplo, um indivíduo muito feio, quase deforme, faz-se pajé, e um pai, por temor, dá-lhe uma sua filha como esposa (37).

---

35) Um Acuricuara, margem Colombiana do Papuri, um indivíduo adoecera, [illegible] pelo pajé. Era, porém, cristão, e vendo que eram [illegible] intensamente, mandou chamar o Missionário, Pe. Clemente, e [illegible] que não desejasse mais o pajé vir à sua casa. Realmente, [illegible] o teria sido possível a cura se se [illegible] dos cuidados do Missionário.

36) [illegible] exerci ou mandou dizem *Nimá toásé* (nimá: [illegible] de dar à beber).

37) É um dos exemplos que nos foi narrado pelo Padre Clemente, Montfortano de Acuricuara, rio Paca. A êsse Missionário veio ter um [illegible] que foi [illegible] o colégio de Montfort e depois [illegible] fizera pajé [illegible] que os outros tivessem medo dêle, e assim poder fazer bem o [illegible], declarou mais tarde. O pajé que o preparara deu-lhe a beber algo que entontecia e "fazia ver muitas cousas". Declarou também que aspirara demais e ficara doente, pedindo que o Padre o curasse. Nesse caso, porém, se verificou um desequilíbrio mental, quiçá agravado pelo tratamento do pajé.

Como retribuição de serviços, os pajés são sempre bem remu-
gados até o ponto de terem o que lhes é necessário para a sua
subsistência sem mais trabalho.

Será ele apenas um espertalhão a explorar a credulidade de
seus patrícios? (38)

Parece que não. Embora inteligente e talvez mesmo dotado de
certa cultura que os mais indígenas não se pode pensar que esteja
isento da crença geral nos espíritos, nas forças ocultas da na-
tureza, às quais crê ligadas a processos e cerimônias que os ante-
passados sempre empregaram. Talvez da sua grande sugestiona-
bilidade é que lhe venha o poder de transferir a outros a sua
sugestão e a cura.

Não se pode excluir, já o dissemos, certo poder magnético ou
psíquico natural. Quem sabe, em algumas circunstâncias se dão
fenômenos de telepatia, tanto mais misteriosos para os pró-
prios profanos, quanto mais ignorantes. Até mesmo as curas
feitas com ervas usadas, ou dos banhos aplicados, e as coinci-
dências totalmente fortuitas, contribuirão para radicar no ânimo do
povo uma convicção profunda sôbre a eficácia de suas cerimônias
e seu poder mágico.

São numerosos os fatos reveladores dessa convicção nos pajés.
Um deles tinha um filho internado no colégio de Taracua-ponta e,
sabendo que estava doente, veio visitá-lo e encontrou-o assistido
por missionários e em uso de remédios. Nada pôde fazer então.
Mais tarde, depois, aproveitando o momento em que todos se achavam
ausentes na igreja para uma função religiosa, sobe apressadamente
o leito de seu filho, e lá foi surpreendido junto à rede do mesmo,
ministrando-lhe seus processos de cura.

Do mesmo modo chegam a convencer-se de seu poder sôbre a
natureza e muitas vêzes ameaçam fazer descer raios. Atribuirão
os insucessos à ação perturbadora de outro pajé mais forte. Os
salesianos construíam em Itauaretê o primeiro grande pavilhão da
sede da Missão, quando, por ocasião de uma tempestade, cai um
raio sôbre a parte recém-construída, com grande susto e alarma, de
todos, sem vítimas, porém. Dias depois aparece o pajé *Taryana* da
localidade, muito penalizado, assegurando ao Superior da Missão que

(38) O Padre João Francisco Baggiaretti, médico e Missionário da Prelazia do Rio Negro, tentou várias vêzes, porém debalde, ouvir e falar a pajés sôbre doenças e curas. Chegou certa vez a convidá-los para uma reunião em Pari-cachoeira, com promessa também de presentes, porém nenhum dêles se apresentou.

não fôra ele absolutamente quem fizera cair aquêle raio. Fôra um pajé mais distante e seu inimigo que fizera aquilo, para atrair a celeridade sôbre êle que residia em Iauaretê.

Uma informação de Patrícia Vasconcelos (outubro de 1955) dá-nos a entender que, ao menos alguns pajés, têm consciência da própria responsabilidade e a noção do dever profissional. Seu tio Marco é um pajé forte do povoado de S. Luzia, margem brasileira do rio Papuri. «Sopra muito, porém não derrama água», dizia Patrícia, isto é, não usa o processo das abluções. Não saberia se é uma defesa espontânea que faz a jovem; quiça teria ouvido algum Missionário criticar êsse processo terapêutico responsável por algumas mortes de doentes pneumônicos. De uma feita disse êle a Patrícia: — Minha sobrinha, a coisa seria ser pajé. Êle deve soprar direito (isto é exercer seus ritos com exatidão). Se não soprar direito, êle será castigado. Seria o conceito de um julgamento após a morte? E repetindo o que ouvira do seu tio, a jovem acrescentou: — «Quando o doente tem dôr de cabeça, o pajé deve invocar (?) todos os espinhos que entraram na cabeça de Jesus. Tôdas as doenças foram as doenças de Jesus». De aqui se evidencia mais uma vez como até nas crenças e ritos do xamã se realiza interculturação de elementos cristãos.

b) O *Komũ* iniciado.

Compreende-se a fácil associação entre a «*fumaça*» e o «*sôpro*», dois importantes recursos mágicos no processo de cura dos pajés. Não é porém apenas o pajé que usa o cigarro pelo seu poder mágico («*sopra*»). Crêem outrossim, que a fumaça espalhada por algumas pessoas, particularmente certos velhos, tem a mesma virtude que a fumaça do pajé ou quase. O mesmo se diga das «*sopradas*». Êsse é o motivo por que em algumas circunstâncias (ritos do *komũ*, VIII - 1, b, 6, iniciação pubertária, VIII - 1 b 7) êle velhos pessoas intervêm «soprando» fumaça.

Sabemos de episódios de indivíduos que se gabavam da força do próprio «sôpro», capaz de enviar doenças e desgraças, e com isso tem dominado os outros.

Êstes «sopradores» se dizem *Komũa* (pl. *Komũ*), correspondente, pelo menos, ao conceito etnológico de «iniciado».

Temos assistido à longa preparação teórica, sob forma de preleções noturnas, que os *Komũ* mais velhos dão aos que aspiram à mesma posição. O velho *Komũ* de cócoras, ou sentado num banquinho, tendo diante de si o aprendiz, também de cócoras ou sentado, vai desenvolvendo o seu programa de instrução. Quando lhe parece

Talvez depois de uma ou duas horas de explanação, dá por encerrada sua lição, despedindo-se do seu aluno com a saudação tradicional: *Ũ, nikũ-ũnũ, ãdeas!* (lit. você vai ficando?).

Sentados à certa distância, em amena conversa entre si, estão os *Komũã*, o *ãtuxuwa*. Quando o primeiro finalizou a sua lição sôbre as histórias, lendas, crenças, tradições, costumes, origem das coisas e das doenças, etc., vira um segundo instruir o aluno que aprendera pacientemente a nova lição, e mostra o seu interêsse e aproveitamento dialogando com o mestre, conforme o costume indígena. Essas lições prolongam-se até horas velhas da noite, encerradas por uma despedida geral. Mestres e alunos, durante estas horas de preleções, servem-se abundantemente de *ipadu* (cfr. VI - 4, 1 (3).

Informou-nos um dos indígenas Taryana mais espertos, Vicente Joaquim Rodrigues, o qual fizera também o curso de pajelança, que os pajés têm reuniões periódicas, uma ou duas vêzes por mês, com os varios *Komũã*. Preavisa-os de doenças que vão aparecer, e dá-lhes as instruções sôbre o que devem fazer para esconjurar êsses e outros males.

Além destas outras reuniões mais solenes, aproximadamente semestrais, quando dá a cheirar aos *Komũã* o seu *ãthiõ* (*ãthiõ ã ã ã

[illegible] não só a noite, mas também várias horas do dia, no ambiente [illegible] da malocas (ou casas), com fogos acesos e sem escape [illegible] fumaça, seja um campo propício para as gripes e pneumo-[illegible]. No entanto, afirmando que o «catarro» vem dentro dos caixo-[illegible] de mercadoria, temo-los visto fugir do povoado de Pari-cachoeira [illegible] simples alarme de que em tal viagem da lancha as caixas tra-[illegible] catarro.

c) *Anemia — Dipetse*. Observa-se especialmente nas crianças [illegible] da terra e nas senhoras depois de certa idade, pelo [illegible] de trabalho e depauperamento orgânico com a criação dos [illegible].

d) *Bouba ou framboesia tropicalis — Maxã dihydrã*. Consiste em [illegible] dolorosas sobre todo o corpo.

e) *Reumatismo — Uhuké*. Em geral os povoados indígenas [illegible] saudáveis, pois são terras elevadas e, muito [illegible] de várzeas das cachoeiras. Têm aparecido, no entanto, [illegible] ou por causa das águas que se empoçam nas pa-[illegible] durante a vazante, ou pelos lugares inundados, [illegible] que o índio varra durante suas pescarias.

f) *Tuberculose pulmonar e laríngea — Wãz-ti poari*. Dizem-[illegible] Wãz-ti poari isto é, cabelos de Wãz-ti, que supõem pegados à [illegible] do doente. Citam-se vários casos nos rios Uaupés, Tiquié e Papuri com tendência a ampliar-se (cfr. III - 4).

g) *Mal-de-olhos — Kazuc-ri pirisé*. Em tôdas as tribos são [illegible] as chamadas de [illegible] simples irritações por friccionamento dos olhos com as mãos sujas, até os casos de conjuntivite e [illegible]. Há umas formigas amarelas, ditas taxi ou formiga-de-fogo, que vivem em alguns paus e arbustos e cuja picada é dolorida e [illegible], provocando até degenerescência da córnea. Os Makú, especialmente, são muito picados por essas formigas e ficam sofrendo da vista.

h) *Disenteria, Yohã — Diarreia, Di-pohã — Febres intestinais, Uhuké*. Disenterias, diarreias e febres intestinais são frequentes e

---

[illegible] de vermifuge. Do cadáver do filho do [illegible] saíam vermes pela bôca, pelo nariz, etc. Em Uaupés [illegible] vermes perfuraram o abdomen de um menino que [illegible] dedos.

[illegible] por comidas deterioradas, aguns corrompidas (40) ou com [illegible] de timboina (por ocasião das pescarias com timbó), [illegible] frequentes, outrossim, as disenterias por ocasião das festas indígenas, cursadas pelo excesso de bebidas.

[illegible] Doenças venereas. Ha nas lendas alusão, parece-nos, a doenças venereas. No entanto são poucos os casos verificados de [illegible] (41). Provando, porem, que não se trata de uma especial [illegible] do organismo ao treponema, bastam os poucos fatos conhecidos no Uaupés, e o contágio apresentado por alguns rapazes [illegible] chegados a Manaos em busca de trabalho. Talvez conheçam [illegible] remedios vegetais. E é provavel tambem que a imunização [illegible] cura da sifilis seja resultado de uma malario-terapia espontânea, [illegible] como é que os indigenas são muitas vezes acometidos de malaria.

[illegible] Ataques epileptiformes. Conhecemos casos de ataques epileptiformes em pessoas de ambos sexos e de varias idades. Tombam [illegible] com perda dos sentidos quase sempre espasmos e convulsões seguidos de sono e completa amnesia do ocorrido, de que foram informados pelos testemunhos (42).

---

[illegible] são constituidos em longos trechos por [illegible] que não raro se veem, em toda a superfície inundada, [illegible] elementos orgânicos em decomposição. [illegible] ao menos durante os meses [illegible] se acham em comunicação com [illegible] como facilmente verificará [illegible] um trecho de mata uaupesina. Se [illegible] de uma ahã [illegible] condenasse como insalubre tôda a frente e vasta superfície aquática da região.

[illegible] nos uma veterana Irmã enfermeira que nos seus 25 anos de [illegible] se lhe aparecera um caso de um rapaz afetado de doenças venereas e como se tratava de um rapaz já noivo, julgou de seu dever avisar a mãe, que não devia casar-se sem antes ter êle feito convenente tratamento. Não foi, porem, atendida, com as lamentáveis consequências previstas para a esposa.

[illegible] um dessos casos sabemos a origem dos ataques. Trata-se do [illegible] Henrique, Wanana de Cururu-cachoeira, rio [illegible] aluimento [illegible] seguagenario [illegible] grandes e olhos [illegible]. Ha alguns anos atras um raio atingiu em sua casa, queimando-se ardentemente e de exemplo-o privado dos sentidos por algumas horas. Desde essa epoca sofre ataques periodicos e, por isso, tem receio de entrar-se para as danças, embora delas participe como Baiá (cfr. VIII, a [illegible] que é. Tomo-lo visto, apesar dos seus anos, dançar com perfeição as danças rituais durante 12 horas seguidas.

O conceito mágico sôbre a origem das doenças não lhes permite tomar a mínima precaução. Não evitarão o contacto com a pessoa atacada por tuberculose ou gripe, ou infecção da pele, dormirão ao seu lado, deitar-se-ão na mesma rede, assentar-se-ão no mesmo banco, beberão pela mesma cuia, servir-se-ão da mesma panela em que mergulham os dedos com o beijú.

O Missionário procura persuadi-los, por exemplo, do perigo do contágio na tuberculose. Apesar disso não deixam de tomar caxiri talvez manipulado por uma pessoa tuberculosa.

Não se decidem, senão visitados e constrangidos, a tomar um remédio conforme as prescrições médicas, em tantas doses repetidas com tais intervalos (43). Ludibriando todos os cuidados, não duvidam de pôr fora o remédio que lhes desagrada; se, ao invés, fôr de paladar aceitável, toma-lo-ão todo de uma vez, ou dividi-lo-ão entre o doente e os sãos. Um vidro de xarope será, em poucos minutos, consumido com farinha.

5) *Remédios caseiros*

Em alguns casos indicam-se alguns meios de cura para certas doenças ou de prevenção contra elas, sem o recurso do pajé. É, não como um enfraquecimento de prestígio dêste, quanto, parece-nos, a razão medicinal. Ensinam, por exemplo, que o peixe *surubi* faz mal a quem está com feridas, e a fruta *cubiú*, a quem está com impaludismo. Se alguém comer do peixe *piraiba*, sofrerá da vista, etc.

Os mais conhecidos remédios caseiros são (44):

a) *Para feridas. Receita*: Ferver a casca do cipó *dyi-dá* (cipó de [illegible]) e aplicar a água na ferida. Ou ainda aplicam-se as feridas raspadas da batata cozinhada por *Kumi buxkõ-Ro-kó* (remédio [illegible] chagas).

*Antigas*: Lavam-nas muitas vêzes com a água em que se ferveu cipó de pedra dagua chamado *Mõõ bx'sé-ka-poari* (bigode de pinga).

---

(43) A criança no pajé vai sofrendo um golpe lento dos hospitais e ambulatórios do Município e as visitas do Missionário distribuindo remédios. Mas [illegible] presentemente, não só aceitam, como até pedem os remédios [illegible] especialmente quando lhes verificam uma prenha [illegible] por exemplo, os remédios antimaláricos, analgésicos, etc. [illegible] com submeter-se a um demorado tratamento que certos remédios exigem e não duvidam em fugir do hospital.

(44) Tirei-nos esta lista do Mungaro Ladislau Auer que vive há vários anos entre os índios do Uaupés.

Contra picada de cobras. 1º De jararaca: machucam-se as [illegible] e a raiz amarelada de um arbusto denominado precisamente remédio de jararaca, e por isso o cultivam nas roças. Aplicam-se as mordeduras e dão também a beber o sumo ou infusão [illegible] folhas. Uma variedade de raiz preta tem ação ainda mais [illegible]. Contra o veneno da jararaca empregam, outrossim, a in[illegible] da raiz da sororoca.

Para as picadas de cobra em geral, bebem a seiva de um cipó [illegible] *Piró-da* (cipó de cobra), de caule grosso e de seiva [illegible] e agradável, de que se servem igualmente para se desse[illegible] quando caminham pela mata.

Apesar desses seus remédios há cada ano certo número de vítimas das cobras e se esse número não é maior deve-se aos remédios e [illegible] obtidos da Missão.

*Para dor de dentes.* Empregam uma planta que arde como [illegible] *Pirkó-ko* (remédio-para-dentes). Queimam as folhas e apli[illegible] as cinzas ao dente dolorido.

*Para dor de olhos.* 1º Se se trata de crianças, raspam a [illegible] do cipó minhoca, *Ahud-da*, deixam-no em infusão no leite [illegible] ou, na falta dêste, em água, e depois pingam algumas gotas [illegible] dente, servindo de um pequeno funil de folha de arumã. [illegible] único emprêgo, e com o mesmo processo, servem-se também [illegible] uma planta parasita de longas raízes aéreas.

[illegible] o doente é uma pessoa crescida, aplicam-lhe ao olho, [illegible] infusão da raiz do cipó *Wazud-da*, depois de bem lavada [illegible]. Aplicam, ainda, aos olhos doentes sal puro, ou misturado [illegible] de galinha bem pulverizado. Provavelmente o uso do [illegible] uma indicação dos civilizados, aplicado, porém, conforme [illegible] indígena.

*Para queimadura.* Misturam o latex da planta *Yoa-motó* com [illegible] e tomam-no aquecido. Ou comem a tapioca misturada com o latex do cipó *Pirkó-se-da* (cipó do passaro tesoura).

*Para dor de estômago.* Ralam uma batata dita *Bard*, e deitam a massa em água fria, e vão tomando em pequenas doses. Anotem, porém, de remanso-as devem transvasar de uma cuia para outra, e [illegible] sempre a substância. Sem esta precaução, afirmam, o remédio mataria o doente.

Informam que da planta denominada *Tud-dorkó* (45) há [illegible] variedades, cada qual com sua virtude particular (vd. adiante

---

[illegible] experimentada, apenas provisória, cujo raiz tem cheiro ativo e a [illegible] atribuem também virtudes afrodisíacas.

VII - 4, f. 2 b) uma para mordedura de cobra; outra serve para as dores-de-barriga; uma terceira para reumatismo, uma quarta as senhoras esfregam nas pernas, nos seus incômodos.

6) *Higiene*

O ambiente em que vive o índio e suas crenças sôbre as doenças não são de molde a facilitar a higiene.

a) *Na maloca*

Sabemos que antes da influência dos civilizados, os defuntos eram enterrados na propria maloca.

A maloca, quanto mais bem feita, mais fechada é, com apenas duas portas e sem janelas, portanto com pouca ventilação e pouca luz. A fumaça dos fogos acesos dia e noite enegrece e conserva as telhas de palha do teto. Mas se êsse fogo é uma necessidade para o aquecimento, vem prejudicar os pulmões com seu gás carbônico respirado à noite e com as portas fechadas.

Pela frequência dos casos, pensamos que as gripes, *Ehô*, e [illegible] não sejam apenas efeitos de um resfriado de alguém que saiu fora da maloca à noite, com o corpo nu. Trata-se porém da verdadeira pneumonia de brônquios irritados pelo ambiente da maloca, com afolhamento e supersaturado de anidrido carbônico.

O chão não é batido, embora seja limpo periodicamente, com um [illegible] por vassoura. Fazem-no, por vêzes, quando já está [illegible] que suportar a poeira.

Não raro porém, por causa, outrossim, dos cães que aí habitam (e temos visto às vezes cães chagados e doentes), o piso é pocirento, favorecendo a proliferação dos bichos-de-pé (*culiex penetrans*) e pulgas.

Não raro as cascas de fruta são atiradas a um canto a apodrecer, provocando desagradavel cheiro. Êste é insuportavel pelos vômitos e defecações na própria maloca, durante os dabacuris. Percebe-se algumas vezes um chêiro peculiar nos povoados indígenas.

b) *Na pessoa*

É também deficiente a higiene corporal. Tomam banho tôdas as manhãs, e mais vêzes durante o dia. É porém, antes um banho para refrescar, do que para limpar. Não dispondo de sabão para eliminar a gordura do corpo e dos cabelos, vêem-se, não raro caspas de superfície sôbre algumas partes da epiderme, especialmente nas dobras da pele e nas partes cabeludas. Mesmo os que usam

sabonete, como os alunos do colégio, exalam odor desagradável e [illegible].

Embora saibam lavar a roupa, e alguns o façam bem, na maioria conservam a roupa no corpo até muito suja, ou mesmo até apodrecer. Nota-se precisamente o seguinte costume: lavar as próprias roupas com certa frequência enquanto novas. Quando as julgam velhas não as lavarão mais. Se se molham, deixam as vestes secar no corpo.

As suas primitivas redes de tucum, de regra nunca são lavadas, e dentro em pouco estão enegrecidas pelo suor, fumaça e imundície. Sobem a rede com o corpo sujo. O único cuidado será, talvez, esfregar as solas dos pés, uma contra a outra, para limpá-las da terra.

Com tôda a liberdade um índio, mesmo estranho e de passagem pela maloca (temo-lo visto até entre índios de tribos diversas), deita-se durante o dia na primeira rede que encontra livre, enquanto descança e conversa.

b) Na alimentação

Não vigora entre os indígenas a prática de preparar e tomar a alimentação com as mãos limpas. Vão cortando os pedaços de beiju com [illegible] e, alternadamente, cada pessoa o mergulha com os dedos na quinhapira. Se esta, por acaso, estiver demasiado quente [illegible] de um pau, encontrado casualmente no chão, para apanhar o fragmento do beiju que lhe escapou dos dedos na panela.

O beiju e outros alimentos não só são seguros com as mãos sujas, pois ainda depositados sôbre a rede ou outro objeto qualquer imundo.

Bebem pela mesma cuia que anda de bôca em bôca. Do mesmo modo o cigarro ou uma bala passará de uma bôca para outra.

Tem sido vistos a tirar e comer algum alimento, quiçá mesmo deteriorado, depositado na recipiente do lixo ou na lavagem dos porcos. E até mesmo, a disputar a ração com algum animal que está comendo, embora esteja ela no chão ou num cocho de porcilga.

c) Nos atos

Praticam igualmente certos atos bem repugnantes. Vai à maneira de exemplo o da mãe que, com a própria língua, limpa o nariz do filhinho, ou vai comendo os parasitas à medida que os encontra na cabeça da suas crianças. Este, aliás, é um costume geral, quando uma mulher «caça» a outra. Quiçá, à guisa de paga, quem tem o

trabalho de catar, vai comendo também os piolhos. Mais raramente dura o parasita a sua legítima proprietária (46).

Desconhecem o uso dos lenços, limpando o nariz com os dedos, os quais, só depois, são esfregados contra alguma parte do corpo.

A mãe, ou outra mulher, com as próprias mãos atende ao asseio da sua criancinha e, depois, para limpar-se, contenta-se de sacudir a mão de lado e esfregá-la por terra ou contra alguma planta.

3) *Artes*

No complexo dos trabalhos que executam os silvícolas não só revelam aptidões preciosas, rara habilidade e outras qualidades já apreciadas alhures, como também singulares prendas artísticas que estão a pedir à nossa civilização maiores oportunidades para se desenvolverem (47).

A casa que constroi, com tôda a sua alfaia, — bancos, cerâmica, tecidos, cangas, armas, utensílios de caça e pesca, cestaria, — revelam além da estabilidade e solidez para os fins a que se destina, uma harmonia no conjunto, uma proporção das partes, um acabamento das pormenores que impressionam agradavelmente. Em tudo se revela um apurado senso artístico que convém particularmente evidenciar em sua tríplice manifestação: *tecidos, desenhos, música*.

a) *Tecidos*

Dentre os trabalhos de tecedura já recordamos as redes de dormir e de pesca. Mas particularmente na *rede batida* (que parece de origem européia) e no pareocio, *Yazkô Wazsô-ro*, (vd. abaixo n. 47) a mulher indígena mostra seu gôsto e habilidade artísticos. No *Yazkô Wazsô-ro* há uma bela combinação do tecido e enfiadura, servindo-se de avelórios coloridos. Admira-se nele uma agradavel combinação de côres, proporção e regularidade no desenho e um acabamento perfeito da peça. No tecido, a malha é diagonal. Apresenta também combinação de fibras coloridas, para efeito de desenho. Na escolha das côres, como no acabamento revela-se bom

---

(46) Embora seja um costume geral, é observem sempre que uma mulher procura os parasitas na cabeça de outra pessoa, negam-se a informar se há algum sentido mágico nesta prática. Quando percebem que estão sendo observadas, ou receiam sê-lo, interrompem o ato e recusam-se a efetuá-lo.

(47) Com um canivete improvisado de um pedaço de fita metálica que conseguem de caixas de biscoitos, a criança trabalha na madeira [illegible] e [illegible] outros aviões.

[illegible] que faz dêsse tecido um belo adôrno para as mulheres nas danças. Com missangas ou com fibras coloridas, os desenhos são as provas características destas tribos.

6) *Desenhos*

a) *Desenhos murais*. Os desenhos pintados nas cascas que constituem as paredes das casas, não são reveladores de gôsto artístico [illegible]. É provável que aquilo que nos parece garatuja ou caricatura seja a estilização de representações lendárias. Aceitando, embora essa possibilidade, não se percebe a perícia dos riscos. As circunferências fazem-nas com perfeição. Quiçá seja por influência dos civilizados, servem-se para isto de um cordel, firmando-lhe uma das extremidades e amarrando na outra uma ponta de madeira que deixará a marca regular como a ponta de um compasso.

Nas pinturas murais servem-se da argila de diversas côres (principalmente branca, amarela, avermelhada, azulada), diluída no látex [illegible] (isto é a sorva, *Couma utilis*, Mell. e outras espécies), que depois de sêco adquire grande estabilidade e resistência às [illegible], nem altera as côres.

b) *Desenhos sôbre o corpo*. Executam outrossim, no corpo vários desenhos. Terão seu sentido mágico, mas revelam sem dúvida [illegible] dor artístico e, em alguns casos são feitos com capricho e [illegible] (46).

Observe-se 1º — As pinturas não trazem representações totêmicas [illegible] se trata apenas de uma estilização, cujo sentido [illegible] atuais parecem desconhecer (50).

---

[illegible] por exemplo, a representação de figuras humanas com o tronco desproporcional [illegible] informe o pescoço figurado por um traço vertical, etc.

(50) [illegible] remos que a pintura no corpo seja indício de um período de nudismo, não tendo [illegible] executar seus desenhos, faziam-nos sôbre o próprio corpo? Opinamos, antes, que tenham um caráter decorativo (são, pois, indício de pendor artístico), além de os suporem [illegible] de poderes mágicos (virtudes profilaticas, etc).

[illegible] Grünberg (Z.I. 347) encontrou entre os Arawaks do Içana, e os [illegible] Kubeiseena do alto Uaupés, numerosos desenhos antropomórficos e desenhos de plantas e animais, por vêzes mais ou menos [illegible]. E [illegible] que as mesmas figuras das paredes de [illegible] aparecem, nas telas, nos corpos dos índios [illegible] como nos [illegible] e objetos de dança. Relevo, outrossim, a estudada de "[illegible] figuras" antropomórficas e de animais não só na madeira, como também executadas em cipós de [illegible], e dependuradas através e postas da maloca por meio de um cordel.

2.º — O que se diz *Nu'ôse* ou pintura do rosto são semi-círculos com a parte côncava para cima, na testa, e retas em *V* ao lado dos olhos e na face. De ordinário para a execução dêsses desenhos servem-se do *Mami-khu*, isto é, um paozinho como se fôra um *baton*, tendo numa das pontas uma bola de cera à qual adere o pó colorido, que se retira da pequena cuia em que se conserva e se vai aplicando ao rosto.

3.º — No tronco e membro executam vários desenhos, *We'é ohasé*, todos, no entanto, constando de linhas retas. Em alguns casos, nas grandes danças do dabucuri, todo o corpo é pintado como se fôsse uma veste, com riscos longitudinais e transversais. O processo para essas pinturas é o denominado *We-ollari-tyá*, a saber, tomam um pequeno cilindro de uma madeira muito leve dita *molongó* (em Tucano *Poo-pó*, é a umbelânia grandiflora, da família das Apocináceas), com entalhes correspondentes aos traços que desejam, e enquanto a tinta está fresca fazem-no rolar de encontro à pele onde deixa os traços bem regulares. Servem-se igualmente de finas talas

Tarsia incisa em o cilindro do molongó

de arumã, não raro duas ou três amarradas à guisa de pincel, deixando um risco duplo ou triplo. Há também traços grosseiros executados com o dedo indicador molhado na tinta.

Não há, presentemente, marcas que caracterizem as tribos, como mostraram os primeiros exploradores. Observam-se os mesmos desenhos nas várias tribos.

4.º — *As pinturas são feitas com tinta:*

a) preta obtida das fôlhas de uma erva denominada *dyá-vé*, chamada por jenipapo, ou do arbusto dito *we'é*. Do decocto das fôlhas do jenipapo deixado ao sereno resulta uma loção escura que empregam para tingir os cabelos quando vão branqueando. Da casca da vagem do inga laterifólia extraem, também por maceração, uma tinta preta usada para os desenhos dos bancos.

4 S Iva SQ19 Tucano

b) Tinta vermelha do *Onôrá* ou carajurú (51), e do *Mõ'sá* ou urucú (52).

Tôdas estas tintas são bastante resistentes, pois perduram muitos dias, apesar dos seus banhos frequentes.

Muito frequentemente se encontram mulheres com o rosto mais ou menos empapado de vermelho; é a pintura denominada *Tu-dyóró*. Explicaram que é sòmente para não sentirem tanto o ardor do sol nos trabalhos da roça. Êsses pós são preparados com o urucú e carajurú.

Tatuagem verdadeira não usam e até parecem desconhecê-la os indígenas da geração atual (53).

---

(51) Carajurú, ou carajuru como grafa Gonçalves Dias-Relatório da Projecção do Amazonas, I, p. 766) conhecida também por pirdnga ou pa-[illegible] é uma trepadeira da família das Bignoniáceas, (a Bignonia chica de Humboldt ou arrabidaea chica de Verlot). Das fôlhas secas e [illegible] em maceração durante alguns dias deposita-se um pó vermelho, insolúvel na água que se guarda em cabaças e mistura-se com óleo ou resina quente quando se querem pintar. A pintura do carajurú tem evidentemente um caráter mágico. Assim figura no rito da iniciação puberdária e o Pajé pinta com êle o próprio corpo e objetos quando é chamado para atender a algum doente. Admitem que [illegible] "benzido" pelo pajé o carajurú adquire extraordinária virtude profilática, por isso servem-se dêle para pintar, com pequenas [illegible] as, o rosto das crianças recem-nascidas e, ao depois, quando [illegible] sòmente sempre que há doenças ou receios de doenças.

(52) [illegible] urucú, ou urucu, ou urucum, Hub. da família das Bixáceas, da Koch G. (Z. I. 458) com saliva, óleo ou leite de planta; [illegible] tão resistente como a tinta do carajurú e descora-se à luz.

(53) Wallace contudo informava há um século (o. c.), — "Êstes índios [illegible] fazem tatuagens, mas em pequena escala: para isso pratiam no longo dos braços uma fileira de pintas de formato circular. Os Yaruas distinguem-se das demais tribos por três linhas azuis e verticais que riscam o lábio superior em lugar dos bigodes". Pelos antigos exploradores sabemos das tatuagens de outras tribos do Amazonas, por exemplo, os Yavari, Uruná, Suarrana, Periquita, tôdas localizadas no rio Tapajós (Cfr. "Roteiro" de 1759, n. 54). Quanto às tribos do Rio Negro (sem precisar se estão incluídos os indígenas do Uaupés) escreve o Cônego André Fernandes de Souza (o. c. 455): "Furam as orelhas, beiços e narizes em que introduzem penas e [illegible] dizendo-lhes essas operações dores inestimáveis; outros desenham na pele muitos riscos pretos permanentes, usando destas deformidades [illegible] não tanto por distinção da sua tribo, como por causar um terror e impostor aos seus inimigos". Dos Desana, há 50 anos informava Koch G. (Z. I. 184) são os índios do Caiari que usam tatuagem executada com espinho de palmeira. São duas linhas paralelas azuis, do lábio inferior ao queixo.

[illegible] — [illegible] (preto); 2. Soakõ-rõ ãirí — [illegible] e branco); 3. Sõ rã — [illegible] (verde e [illegible]); 4. [illegible] — [illegible] (preto e branco); 5. Ilu [illegible] (verde); 6. Nõ ãirí — flor do miriti (vermelho [illegible]); 7. [illegible] — flor [illegible] da andorinha (verde e [illegible]); 8. [illegible] — [illegible] (preto e branco); 9. Ãirí miirí — [illegible] (branco e preto); 10. Nuxu [illegible] — perna de [illegible] (branco e preto); 11. Tuãõ sõ ãma — [illegible] de [illegible] (verde).

3) *Desenhos sôbre os objetos*

Os Banivá costumam executar desenhos nos camutins ou potes e nas outras tribos nas cuias de uso, especialmente no *maracá*. São sôbre vegetais com predomínio do branco, e os desenhos são sempre de aragas. Já mencionamos os desenhos nos banquinhos que os Tukano fabricam.

São êste os principais motivos ornamentais mais comuns que aparecem nos tecidos e trançados das redes e peneiras:

Surkérô-ôri (flôres do raio), isto é, semelhante à disposição das pedrinhas nos raios.

12

13

14

15

18

21

20

19

[illegible] — [illegible] — [illegible] — [

2 *Mijpi pôri* (fôlhas de açaí), desenhos como as fôlhas da palmeira açaí.

3 *Bya-pôra mura* (caminho da saúva).

4 *Nee dori* (flor do muriti).

5 *Yaiá seéma* (costa de calango)

6 *Pamo seéma* (costa de tatú)

7 *Dozpari-ferú seéma* (costa de lambari)

8 *Wáx-ti oxsé-pekuri* (joelhos de Wáx-ti), semelhante à cruz gamada ou suástica.

Comprazem-se os índios uaupesinos em combinar êsses motivos e obtêm numerosos desenhos. Casualmente em 24 peneiras adquiridas por mim em 1947, em diversos lugares do Uaupés, havia 23 combinações diversas.

22. Oxsé-pôrá — costa (ou sobra de duas cabeças). 23. Wáx-ti oxsé-pekuri — joelho de Wáx-ti. 24. Wáx-ti-xawá — sipó. 25. Bya-pôra — caminho de saúva (amarelo).

### 2. Música

#### 1) Senso musical

Provavelmente o mais acentuado senso artístico dessas tribos é para a música. É tão notável êste senso musical, que uma criança corta as suas taquaras com as dimensões devidas, amarra cinco ou dez e resulta um pequeno órgão, a «flauta-de-pã» ou «rio», com as notas sucedendo-se com o mesmo intervalo de frequência de vibrações que na escala musical, como se pôde verificar num harmônio. De regra fabricam-na aos pares, de modo que uma ajuda de contraponto à outra.

São, pois, dotados de bom ouvido musical, por isso com muita facilidade aprendem os mais variados dos nossos cantos, mesmo trechos clássicos, a uma e mais vozes, e comprazem-se grandemente com a música instrumental ou vocal. Apreciam, outrossim, muito a «música dos brancos», isto é, dos civilizados.

Por efeito da língua Tukano, cheia de nasais e numerosíssimas vogais guturais e aspiradas, e da influência da alimentação (pimenta), clima e gênero de vida, a voz do índio é de pequena elasticidade (54), metálica, desagradável quando fala, e mais metálica ainda o é no conjunto, quando falam ou cantam.

#### 2) Canções

O indígena gosta de cantar, embora se mostre acanhado de o fazer, fora das festas, diante do civilizado. Possui um repertório de cantos para as danças rituais (cantos religiosos) e outros para os seus divertimentos (cantos profanos). Aquelas sempre corais, sem ritmo e a uma só vêz. Êstes são cantados por um ou mais cantores simultâneamente ou alternadamente, repetindo o mesmo motivo, ou não.

##### a) Cantos religiosos

São cantados exclusivamente pelos homens. São lentos, monótonos, com muitas repetições. Quanto ao ritmo, inspiração e movi-

---

(54) É tão pequena a elasticidade da voz que talvez nenhum indígena do Uaupés seja capaz de dar uma oitava inteira. Fora das festas o dançar dos homens jamais cantam, as mulheres raramente o fazem, por exemplo, quando trabalham na roça. Relevase, porem, que as canções dos homens são cantos religiosos, ao passo que as das mulheres são composições baqueiras que executam quando distribuem a bebida. Entre os ex-alunos, e especialmente entre as ex-alunas da Missão Salesiana, há maior elasticidade e ouve-se com mais frequência cantarolar. São, porem, de ordinário os cantos religiosos ou profanos aprendidos no colégio.

[illegible] pouco classificar-se ou enquadrar-se entre as composições [illegible]. Como o canto processo de aprendizado é a oitiva e a memória, segue-se que a música se conserva mais ou menos fiel (55), [illegible] letra se foi corrompendo. Hoje em muitos dêsses cantos, [illegible] apenas sons sem significado, e os próprios silvícolas confessam não entenderem o sentido das articulações que proferem (56).

Alguns dêsses cantos inspiram-se em a natureza: canção da «cutia que come umaã», e «desfolhar-se do açaí», canção da borboleta, da abelha, etc.

Os cantos ou as danças iniciam muita vez com assobios e regularmente terminam também com um *fortissimo* de assobios e gritos.

O Pe. Antonio Giacone informa (*Os Tucanos* pág. 52) que [illegible] reservado ao tuxaua, o com a mesma melodia da dança. Enquanto o grande cigarro ritual vai passando de bôca em bôca entre os homens sentados em seus banquinhos, o tuxaua canta:

*[illegible] pazko-s'omõã bassesé duhí-wé:pãra*
*[illegible] duhi-wé:pã, mãrsé'pod pãra.*

«[illegible] nossos antepassados, sentados faziam cerimônias. Suprimo como faziam êles antigamente, fazei-o vós também [illegible] filhos, fumando sentados».

Cantos eróticos

[illegible] constituem patrimônio artístico exclusivo dos [illegible] sabem cantar, como as pessoas do sexo [illegible] dos homens. Merecem denominação [illegible] porque, de regra, as mulheres ou moças [illegible] bebida, no intervalo das danças. [illegible] cantos apresentam um sentido bem claro, são convites para beber ou pedido de bebidas, não raro referindo também episódios da vida da cantora. São recitativos, e, portanto, respeitando [illegible] excelente [illegible] seus versos, ora mais longos [illegible] vezes com mais fecundidade, outras, com menos [illegible] campo para a inspiração pessoal, embora obedecendo a um padrão tradicional e empregando frases e idéias usuais. Algumas são mais movimentadas, outras, menos, desenvolvendo um mo-

---

(55) C[illegible] se em diversas circunstâncias e lugares ou [illegible] as suas letras.

(56) Como de resto ocorre também nos cantos populares dos civilizados. Cfr. também Wilke [illegible] 2.

Silva SQ19 Tucano

[illegible] simples, de poucos compassos, porém melodioso e agradável. [illegible] melódicas e agradáveis embora também de poucos compassos são os cânones musicais que executam na «flauta-de-pã» [illegible] Impurutu.

Quanto à execução, nota-se que, às vêzes, se encontram belas [illegible]. Entre os Baniva e Kubewima observam-se também os trechos [illegible] ou mesmo pianíssimo e os fortes, cuidado que não nos foi [illegible] em outras tribos. Não há, porém, preocupação quanto à respiração, especialmente quando já temulenta, a mulher cantara [illegible] lhe sobrar fôlego, interrompendo depois de improviso o [illegible] à melodia para respirar rumorosamente.

Algumas dessas canções das danças das mulheres, como outras dos pajés, terminam com uma gargalhada ou um grito característico.

[illegible] Canto dos pajés

Há um repertório exclusivo dos pajés. Como um pajé se forma [illegible] outro, doença de tribo diversa (cfr. VII — 2 e 12 f) ex[illegible] fato de haver um mesmo canto executado por pajés de [illegible] tribos. São no entanto bem diversas as melodias dos cantos [illegible] *Tukano* do Tiquié e as dos pajés *Wanána* e *Arucáke* [illegible] gravar (cfr. «Discoteca Etno-linguístico-musical»).

[illegible] sempre os pajés cantam ao som do maracá. Seus cantos [illegible] um dos processos de cura, e por isso variará conforme a [illegible] motivo musical é um canon grego-gregoriano, melodioso. [illegible] Em alguns cantos a letra já se acha adulterada; são [illegible] sem sentido. Por vêzes há também gargalhadas [illegible]

3 — *Instrumentos musicais*

R. G. Izikowitz («*Musical and other sounds instruments of the South American Indians — A comparative ethnical study*», 1935) [illegible] quatro grupos de instrumentos musicais: 1º) *idiófonos*, [illegible] *membranofonos*, 3º) *cordofonos* e 4º) *aerófonos*. Do terceiro grupo não encontramos nenhum exemplar nas tribos Uaupés [illegible] 58). Dos outros há vários instrumentos, todos de origem evidentemente indígena.

---

[illegible] alguns anos, alguns indígenas que desceram, por motivo de [illegible] ao Rio Negro, se apaixonaram tanto da guitarra que por lá [illegible] nas festas dos caboclos, que o possuir uma delas constitui o [illegible] fruto dos seus trabalhos. E, ao regressarem aos seus povoados [illegible] horas esquecidas do dia e da noite tange, monotonamente o

a) Idiofonos

Como instrumentos de ritmo das danças possuem:

1º — *Tubo-de-ritmo*. No idioma Tukano denomina-se *ahû-uô*, plural *ahû-pakô*. É um cilindro de embauba de um metro de comprimento, e 10 cm de diâmetro, ôco, com a extremidade inferior que toca o solo, obturada, porque corresponde ao nó. A superior é aberta e termina com um prolongamento retangular, por onde se segura com a mão direita. Cada dançante leva o seu instrumento e vão todos juntos marcando o ritmo do passo com uma pancada contra o solo. Com frequência êstes instrumentos são pintados de branco, com o látex da sorva, e com desenhos de gregos de côr vermelha ou preta.

2º — *Bastão-de-ritmo*. Algumas vêzes os dançantes trazem na direita um simples bastão, de qualquer madeira, que se diz em Tukano *pazéo*, também com a finalidade de marcar o ritmo.

3º — *Maracá*. *Maracá* é o têrmo da língua Nheengatú; em Tukano se chama *pazo*, isto é, «pau-da-onça» (Gonçalves Dias denomina-o «tacapus-maracás»; cfr. «Relatório da Província do Amazonas», vol. I, pag. 76). Consiste numa haste de pau brasil (*mirapiranga*), com belas pinturas e adôrno de plumas coloridas, de uns [illegible] de comprimento e seus 3 cm de diâmetro, e a extremidade [illegible] em forma de garfo. Quase ao centro há uma intumescência com fendas e dentro algumas pedrinhas. Feitas as fendas [illegible] o lugar ao fogo, e depois de aquecido dilatam a [illegible] e introduzem as pedrinhas.

O tukano que preside às danças, empunha-o com a mão direita e bate-o contra o bíceps do mesmo braço, produzindo um rumor como de chocalho enquanto a haste inteira se põe a vibrar. Serve para marcar o início das danças.

4º — *Crotalo*. Em Tukano chama-se *kizíyo* e soa como castanholas. São pequenos cocos de tucumã, enfiados em um cordão, que se amarram ao tornozelo direito, em alguns números de danças, a fim de marcar-lhes o ritmo.

5º — *Maracá*. Em Tukano denomina-se *parsá* ou *parsá-ga*, pl. *parsá-pa*. É um chocalho preparado com uma cabaça, na qual

---

[illegible] instrumento. Talvez o encanto não lhes derive do prazer auditivo que experimentam, como de parecerem, com isto, mais adiantados e civilizados que os outros seus irmãos. Já se vê também alguma [illegible] ou sanfona ou vitrola entre os ex-alunos da Missão.

... praticou um orifício na parte inferior por onde se introduziram algumas sementes ou pedrinhas e se adaptou um cabo de uns 10 cm por onde se segura e agita. Alguns são pintados com os desenhos comuns já vistos. Em alguns números de danças os homens todos agitam o maracá.

É, além disso, um instrumento mágico, de que se servem os pajés nos seus processos de cura, e com o qual vão ritmando também suas canções terapêuticas.

Do trocano já falamos (VII — 1).

b) *Membranófonos*

Só conhecemos um, de que se servem para anunciar a hora do ... o tambor, em Tukano *tud-tó*, pl. *tudthe-paro*. É um pequeno tambor de seus 20 cm de diâmetro e 20 de altura. A parte cilíndrica é feita de casca de louro, e é fechada em ambas extremidades com pele de macaco sem o pêlo, e bem esticada. Soa-se com uma pequena baqueta de madeira, *tud-to pa-ko*.

c) *Aerófonos*

Neste grupo se inclui o maior número dos instrumentos indígenas, em seus vários tipos de flautas e apitos. Alguns dêstes instrumentos emitem diversos sons, permitindo a execução de variados e agradáveis motivos musicais. Outros, ao invés, apenas um som ... fazendo-o soar sempre ritmadamente. Observe-se que, em geral, a ... começa por pequeno exercício de afinamento dos instrumentos e encerra-se por um *fortissimo* de todo o conjunto instrumental.

1) — *Flauta-de-pã*. É o clarim dos índios, conhecido regionalmente pela denominação de *carição*, e, em Tukano, *uéó*, pl. *uéó-pari*. Consta de 6 a 10 tubos de taboca, de diversos comprimento e grossura, amarrados entre si, com os orifícios num mesmo plano, como uma gaita. Fabricam-nos sempre aos pares, para que os dois tocadores estejam afinados e, com uma terça ou quinta de diferença, ... possa executar o carição e o outro o acompanhamento ou contra-canto. Classificam-se em vários tipos, conforme o número de tubos e a tonalidade: *yendri-pa*, *uéó-pa*, *puritri-pa*, *kanjó-pa*, *ütiri-pa*.

A flauta-de-pã é, por excelência, o instrumento dos rapazes; ... a vimos tangida por homens maduros. Ao som do *carição* desenvolvem-se agradáveis números de danças (vd. VII — 6, a (4)), com variadas melodias, e com caráter recreativo nos intervalos das danças rituais. As moças também participam, como parceiras de ... tocador musical. Os musicadores vêm dançando em ala, segurando

[illegible] direita a flauta e com a esquerda o ombro do companheiro [illegible] Nessas danças postam-se de perfil, segurando pela cintura os dois homens entre os quais se acha, um em cada braço [illegible] vezes os dançadores em coluna, evoluem circularmente ou em [illegible], ora para a direita, ora para a esquerda, e então, com a mão esquerda acima do próprio ombro, seguram a mão de sua [illegible]

[illegible] — *Flauta bovina*. Em Tukano por vezes se diz *burpi-wó*, [illegible] *burpi-pãã*, que propriamente indica a *sarabatana*. Denunciando [illegible] sua origem estranha, este o nome mais comum *yaparu-* [illegible] (aparece em Língua Geral). É uma flauta de paxiuba, sem [illegible], medindo aproximadamente 150 m de comprimento, com [illegible] diâmetro de 3 a 5 cm. Sopra-se pela extremidade superior, tendo, [illegible] 12 cm, abaixo um orifício que se gradua com uma lâmina [illegible] de palheta, como se fôsse a palheta de uma requinta. [illegible] também aos pares, canto e contracanto [illegible] de vários tamanhos e cada qual com seu nome de uma ave [illegible] entre os *Wanano* e *Kubeuana*. O Tuxaua Julio, [illegible] (rio Tiquié) assegurou que êsses nomes são dados por outras tribos, não pelos Tukano.

[illegible] da flauta se executam belos e variados motivos musicais [illegible] o mais agradável dos instrumentos indígenas. Após [illegible] a fim de verificar a afinação dos instrumentos (can- [illegible] contracanto), dois ou quatro homens iniciam a dança: com [illegible] direita seguram o instrumento, enquanto a mão esquerda [illegible] ombro do companheiro ao seu lado. Deslocam-se [illegible] fim da roça, tendo o cuidado que o instrumento de [illegible] e [illegible] do outro ao mudarem de posição para a [illegible] em sentido oposto. As mulheres, que entram para a dança, [illegible] entre dois homens, segurando-os pela cintura.

[illegible] — *Flauta de osso*. Em Nheengatu é conhecida por *membi* [illegible] em Tukano por *kapi-ko o'á* ou também *purtiri o'á*. É uma flauta [illegible] 20 cm, feita de osso da tíbia de animal, com três orifícios [illegible] lateralmente, à semelhança das nossas flautas, e um supe- [illegible] extremidade por onde se sopra, sendo êste orifício em parte [illegible] com breu, para que o ar entre na intensidade e direção [illegible] Tem diferentes nomes, conforme o nome do animal [illegible] se aproveitou: *damã o'á* (osso de veado), *pai o'á* (osso [illegible] etc.

Durante as danças esta flauta estará sempre enfeitada com uma [illegible] de carapaças de diversas côres de coleópteros. Os homens [illegible] o instrumento com a mão direita, em alguns números de

[illegible] fazem-no soar com intermitência, à guisa de apito, nos intervalos dos cantos.

[illegible] — *Flauta-cutia*. Seria a tradução do nome Tukano bud[illegible] pois bud significa cutia (pequeno roedor, *dasyprocta aguti*). É um pequeno pífaro de taboca, de 20 a 30 cm, adorn[illegible] com penas coloridas.

[illegible] uma dança que se denomina bud-bursá, na qual todos os [illegible] trazem na mão direita êsse pífaro. Em dados momentos [illegible] o canto, e cada qual faz soar o próprio instrumento, como [illegible] simples apito, porém ritmadamente. A certa altura alguns atir[illegible] da mão o seu pífaro, mas retomam-no em seguida, fazendo-o [illegible] soar. A dança se encerra com um assobio mais forte [illegible] prolongado.

[illegible] — *Caramujo*. Em Tukano se chama sâ'â. É um apito que [illegible] do caramujo. Um velho indígena informou que, sob êste [illegible] nome, antigamente se designava também um pífaro de ta[illegible] ou taboca, com um orifício no centro que se aplica ao nariz [illegible] imitar o som, e com os dedos obturam-se as extremidades. É [illegible] um instrumento que muitos da geração nova desconhecem.

[illegible] — *Vareteira*. Em Tukano se diz mõxtê-poro, que significa [illegible] mosca-vareteira. É uma pequena flauta de embaúba [illegible] 30 cm, com orifício vertical, como em geral nas flautas. Tan[illegible] nos intervalos das danças. Os sons imitam articulações de [illegible], e assim os rapazes dirigem convites sexuais às moças. É [illegible] se diz purti-uersal, queixar-se tocando flauta (cfr. VII — [illegible]).

[illegible] — *Mutuxo*. Sob êste nome vêm dois tipos diversos de flau[illegible] um pífaro de embaúba, podendo atingir até um metro de [illegible] comprimento, [illegible] uma pequena flauta de 12 a 15 cm, com um ori[illegible] lateral, ao centro, também de embaúba.

[illegible] — Há vários tipos de apitos ou assobios, e que usam nas [illegible], assobiando ritmadamente nos intervalos dos cantos. Um [illegible] é de taboca, tem o feitio de um apito comum, de uns 10 cm [illegible] orifício de sôpro na extremidade superior, e usa-se na dança [illegible] denominada [illegible]-bursá (dança do capacete de arumã).

Outro, também de taboca, e do tamanho do precedente, porém com orifício no meio.

Em outras danças em vez de apito, cada homem tem um pe[illegible] de cipó, de 20 ou 30 cm de comprimento, cuja casca se des[illegible] prende muito facilmente, ficando como uma bainha. Apertando-se com a mão esquerda essa bainha, e com a direita puxando o cerne

do bico, resulta do atrito um silvo muito agudo. Êste apito denomina-se *gomi-mi*.

9 — *Jabuti*. É preparado da carapaça do jabuti, donde lhe vem o nome que em Tukano é *ukuri*, esvaziada de sorte que o casco fique oco. Depois obturam-se, em parte, os orifícios com breu. Prende-se firmemente o instrumento sob o braço esquerdo, enquanto a mão direita abre e vai atritando com força o lábio do orifício superior, emitindo, então, sem rouco, semelhante ao da cuica.

Mais que o homem, ao soar êste instrumento, ia recuando até afastar-se por brincadeira, nas mulheres que se afastavam entre gargalhadas.

10 — *Cabeça de veado*. Em Tukano denomina-se *ñama dorpo-a*. Consiste exclusivamente numa cabeça de veado, tendo obturados com breu os vários orifícios, exceto um, na parte superior, entre os chifres, por onde se sopra. Usam êste instrumento para anunciar o caxiri e precisamente sem procura imitar as palavras: *pêru ud tyo* (traga caxiri) que se repete várias vezes, e termina com a repetição: *kero, kero, kero* (depressa, depressa, depressa).

11 — *Ocarina*. Em Nheengatú *torê*, em Tukano *urpitu*, pl. *urpitu-ri*. É um instrumento de barro cozido, que lembra a ocarina, e que sopram pelo caminho quando se dirigem ao dabacuri (cfr. 10 — 4 e 12).

12 — *Jurupari*. Em Tukano se diz *miri* (Uaupés *mini*). É o instrumento misterioso. São tubos de paxiúba, envolvidos pelo liber de [illegible] grandíssima, enrolado em espiral, com duas varas que emergem como chifres, da extremidade superior, e por onde [illegible] para soprá-lo. Conforme o comprimento que varia de 80 cm a 1,50 m, e diâmetro de 6 a 10 cm, o som será como o de um trombone, ou mais grave, como o de um baixo.

miri (jurupari)

São quatro diversos, porém, como os fazem sempre aos pares, sendo o conjunto, constituem uma banda musical de 8 instrumentos que soam simultâneamente, num conjunto rouco, forte, mas bem harmonizado e que muito agrada ao índio. Na pitoresca no-

[illegible] cultura indígena, em vez de canto e contracanto os instrumen- [illegible] determinados marido e mulher. Já relevamos alhures (VII [illegible] não [illegible], e talvez derive desta [illegible] de marido e mulher.

Cada instrumento tem seu nome, conforme o tamanho; não [illegible] explicar-nos a razão dos nomes.

Começando pelos maiores, é a seguinte a ordem que nos deu o [illegible] Julio de Pari-cachoeira (rio Tiquié), [illegible] 1953:

1º — basoã (uma ave de rapina); 2º — *mahã* (arara); 3º — [illegible]; 4º — *kirípo borka* (feixe de crotalos); 5º — *arú-* [illegible] (um pequeno tucano); 6º — *mèrè-i'si* (um macaquinho, [illegible]); 7º — *doe* (tarara, peixe); 8º — *perfod* (maçarico, ave aquática caradriídea).

Em abril de 1955, dois pajés da tribo Tukano, Marcelino de [illegible] e Henrique de Japu-igarapé (Uaupés), indicaram também [illegible] dos instrumentos, porém com alteração da ordem, a sa- [illegible] registramos sua pronúncia defeituosa), começando pelo maior: [illegible] *kirípo-borka* (conjunto de chocalhos), sua mulher é *anó-* [illegible]; 2º par *ri'i-* ou *mèrè-i'si* (macaquinho branco de [illegible]), sua mulher é *puso* (assim pronunciam, em vez de [illegible] e explicaram o porquê, isto é, serve de criado, é o [illegible]); 3º par *doe* (tarara), sua mulher é *perfod* [illegible]; 4º par *deto* (esquilo), sua mulher também é *puso*.

Parece que cada tribo tem o seu modo peculiar de preparar os [illegible] de [illegible] que, sem prévio ensaio, os de uma tribo não sabem [illegible] convenientemente os instrumentos de outra tribo. Assim, ao [illegible] desfilaram os Wanana de Caruru-cachoeira (Uaupés) [illegible] haver um homem deles que sabia tocar os *mirid* emprestados [illegible] à posição pelos vizinhos Huhudéne de Uaupuim-cachoeira (rio Aiari, af. do Içana).

13º — *Ehednó*. Não é propriamente um instrumento musical, [illegible] um objeto lendário e para comemoração das lendas. Já des- [illegible] acima esta pequena cometa (Cfr. VI — 4, 1 (3).

4 — *Motivos musicais das flautas-de-pã*

O Missionário Salesiano, Pe. Eduardo Lagorio, apreciador da [illegible] indígena [illegible] fornecer as seguintes notícias sôbre as flau- [illegible] e seus motivos musicais.

---

[illegible] E que já se tem inspirado sôbre motivos musicais indígenas para a com- [illegible] de cantos religiosos e profanos.

Os três primeiros tubos (da flauta-de-pã) dão sempre um [illegible] mais das vezes maior, e de vez em quando *menor*, resultando os três primeiros tubos:

[illegible] (1) [illegible] (2) [illegible] de nove tubos; (3) [illegible] de [illegible] tubos; (4) [illegible] de sete tubos; (5) [illegible] de nove tubos.

Os outros tubos se vão sucedendo com mais variedade. Há uma flauta pequena, a que chamam *mãnyõ-pa*, com nove tubos, [illegible] são [illegible] (2 supra).

A [illegible] com que se ordem aos tubos mais grossos, ou vice-versa, toma o nome de *yõtim-pa* (yõt, respondem).

As [illegible] variarão naturalmente com a variação das medidas. Estas dependem da medida que se adotou para o tubo maior, [illegible] do seu fabricante, porque se medem pelas falanges dos [illegible]. A diferença de tamanho entre o 1º e 2º tubo corresponde [illegible] primeiras falanges do indicador; entre o 2º e 3º [illegible] e o 4º a primeira falange do indicador, entre o 4º [illegible] 5º apenas meia falange, entre os outros tubos só a ponta do [illegible].

Nota-se que a partir do 2º tubo o diâmetro vai diminuindo. Essa regra vale para o tipo pequeno *mãnyõ-pa*.

Fabricam, outrossim, uma flauta pequena de seis tubos, a qual chamam *[illegible]-pa* e toca-se sozinha, isto é, sem contracanto.

Uma delas dava as seguintes notas (3 supra):

Com [illegible] mais complicada, fabricam vários tipos de flautas, uma denominada *[illegible]-pa*, outra, *pumtiri-pa*.

A [illegible] tubos mais grossos, ou vice-versa, servem de contracanto, e o mais grosso se nomeia também *yõtiri-pa*.

Duas delas, confrontadas com o harmônio, e que serviram para a execução das melodias abaixo, davam as seguintes notas (4 e [illegible] supra):

O mesmo informante forneceu as seguintes melodias, escolhidas [illegible] as mais fáceis do repertório indígena, para adapta-las ao com-

[illegible] com wéépa (7 tubos) [illegible] variante melódica com o instrumento de 8 [illegible] melodia com pattirípa (8 tubos) 10. outra melodia com o de 8 tubos, [illegible] com a pattirípa (8 tubos) 12. melodia com wéépa (7 tubos) 13. outra melodia com wéépa.

SQ19 Tucano

*Plumagem e adornos*

Entre todos os enfeites indígenas, os mais vistosos são para os [illegible] é exclusivo para as danças (60), [illegible] entre as tribos do Uaupés.

Os antigos Muiantes falam (61) em adereços de ouro e prata. Não há tais metais nessas regiões e não sabem trabalha-los. Da mesma sorte outras tribos da Colombia (62) e Venezuela tê-los-ão

---

[illegible] conjunto de adornos (braceletes, pulseiras, colares, pentes), o cabelo longo [illegible] cuidadosamente penteado, a depilação da barba [illegible] conforme testemunho de Wallace, um [illegible] na dança quando ainda resguardava [illegible] e a parte inferior do corpo com [illegible] que o cientista inglês pensava [illegible] A opinião de Wallace é que dêsse engano [illegible] as mulheres guerreiras ("Viagens pelo [illegible]

[illegible] mesmo fora das danças temos visto os homens [illegible] pinturas no rosto, pulseira nos [illegible] de um botoque de plumas coloridas, ou

[illegible] a relação de Pedro Teixeira, em [illegible] que chegava 20 léguas abaixo da foz do [illegible] rio abaixo, chapas por nela terem encontrado e [illegible] os índios trazem pendentes [illegible] em Quito e se achou ser de 21 [illegible] nos Amazonas, trad. de C. Melo [illegible] primeiros exploradores, tais chapas [illegible] pontas e grãos de bom tamanho [illegible] serra banhada pelo rio Iquiari.

[illegible] no seu "Roteiro" informa que os [illegible] índios coloniunos *Pandnôa* (Vd. [illegible] Manoel da Gama Lobo D'Almada, que, por ordem [illegible] Rio Negro, João Pereira Caldas, explorou as pas[illegible] em sua relação de 13 de setembro [illegible] mesmo Governador (Cfr. [illegible] Lobo D'Almada, 1.ª ed. Manaos, 1940, [illegible] Folhetas de ouro das quais se diz que [illegible] certos Indios do Rio Uaupés, he [illegible] nem mendr noticia por mais [illegible] Naturais com que falei alguns [illegible] que aquelas pretendidas Folhetas [illegible] numa illusão quimerica ou Linada de se [illegible] Indias de Azas de certos Bizouros grandes [illegible] Azas [illegible] parecem numa especie meta[illegible]

[illegible] para mim que esta Noticia das tais Folhetas do [illegible] Uaupés, como o ha certamente a que [illegible] Pedro José Monteiro, de se terem tirado ou

bendo por troca. Atualmente só se encontram algumas mulheres com lâminas triangulares de prata batida, de variado tamanho, enfiadas em um cordão e se usa como colar ao redor do pescoço. São dizes pela sua aparencia, *mo'mó-rõ khiiri* i. e. fatias de borboleta.

1) *Adornos femininos*

Afora das pinturas sôbre o rosto, selos e corpo, como enfeite (e não como veste), como declaram, possuem as mulheres poucos objetos de adôrno.

a) *Colares*. São de diferentes tamanho, feitio e matéria. Reunia de várias sementes, especialmente um coco miúdo, enfiado em uma fibra de tucum, é o *parakõ-dõ*, ou também missangas, é o *pa'ri-du*, ou contas obtidas dos civilizados e combinando diversamente as diferentes formas, tamanho e côres. Usam-nas mesmo fora das danças, não são, porém, de uso geral, e no tempo de Wallace não se usavam absolutamente («Viagens pelo Amazonas e Rio Negro», pág. 630).

b) *Pulseiras*. São de contas ou sementes, como os colares, e denominam-se em Tukano, *parikõ wã-pãsé*.

c) *Ligas* (63). Em Nheengatú denominam-se *tapacura*, e em Tukano *parip-seri*. É uma faixa de delicado e curioso tecido, feita de fio de curoá, às mais das vêzes, colorido de amarelo ou vermelho. Aplica-se uma em cada perna, pouco abaixo do joelho. Em muitos casos é tecido sem emenda, e por isso, quando, pelo crescimento da pessoa, começa a apertar demasiado, cortam-na fora.

Afirmam que tem por finalidade engrossar as pernas.

d) *Brincos*. Atualmente só se vêem brincos (em Nheengatú *numbi-pura*, em Tukano, *yorsase*) obtidos dos civilizados; ou, em lugar dêles, pequenos colares de avelórios.

---

Interior do Rio Tiquié no anno de 1749. Certas Pedras, que fundidas mostravão ser de prata, quando bem se deixha crer que elas não sortiam outra cousa mais do que pequenas Pedras Metallicas chamadas Pirinces, de que vulgarmente o V. Vaxim, algumas apanhadas no Apaporis, e que tambem se achão pelo Rio Tiquié, as quais parecerão prata a maior parte das pessoas da minha comitiva, que já como tal as pretendião carregar".

(63) Entre os Ide-masã do ribeirão Komé-ya, afluente do Piré-paraná, vimos tambem rapazes usando ligas. Nas demais tribos os homens só as usam como adornos para as danças.

e) *Pucicucó*. É a tanga feminina da qual falamos antes (VI — 3, a), em Tukano *pa'kó tearsó-ro*. Atualmente só o usam nas danças e muito raramente (65).

f) *Grinalda*. Durante as danças, às vêzes as mulheres ajustam à cabeça uma grinalda de ramos daquele arbusto de odor agradável e intenso dito *baré*. É o que se chama em Tukano *baré pa'sasé*.

g) Muitas mulheres e môças usam habitualmente pentes recurvados e de côres vistosas, *ti be'tó* ou *ti-ro be'tó*, obtidos dos civilizados. Há um século atrás, conforme Wallace, não usavam pente algum.

2) *Adornos masculinos*

Para as danças, os homens pintam o rosto e o corpo, como se disse acima.

a) *Pedra do mundo*. Assim a denominamos porque atualmente é um distintivo dos tuxauas, que a trazem pendente ao pescoço nas ocasiões solenes (danças, recepção de algum civilizado, etc.). Hoje em dia é um adôrno raro, e poucos o possuem. O ouvidor Xavier Sampaio (cfr. acima II — 3), seguindo o Pe. José Noronha, fala na existência dêsse adôrno e o dá como indicador e classificador, pelo seu tamanho, da nobreza do portador. Em Tukano se denomina *bati bohá*, isto é, pedra clara. É um pedaço de quartzo amarelo, bem liso, de forma cilíndrica, e de uns 15 cm de comprimento e 2 a 3 de diâmetro.

Nas margens do Uaupés não é encontradiço o quartzo. Koch Grunberg informa que essas pedras provêm de um local no interior da mata na margem esquerda do Tiquié, próximo das cabeceiras. São atravessadas por um orifício regular de alguns milímetros de diâmetro, no sentido transversal (e em algumas pedras também no sentido longitudinal), por onde se suspende ao pescoço. Êsse orifício constitui uma das melhores documentações da paciência indígena, nos seus trabalhos, pois é executado com auxílio de areia fina e água, servindo-se de uma fina vara, que se rola entre as palmas das mãos enquanto os pés firmam a pedra ao chão.

---

(65) "Em seus festivais, quando dansam as mulheres põem, então, uma pequena tanga ouçavental, feito de contas dispostas em padrões regulares, com muito gôsto e muito capricho. Essa tanga tem cerca de 4 polegadas quadradas. Em outras ocasiões nunca é usada, tanto que acabada a festa, as mulheres logo a tiram" (Wallace — "Viagens, etc., pag. 430).

b) *Acangatara*. Em Tukano se designa por vários nomes: *mahã* [illegible]*ri-bersori-be'tó*, ou *mahã pod-ri pe'saró*, ou simplesmente *mahã* [illegible]*ri* (penas de arara). É uma grinalda larga de seus 10 ou 15 cm. [illegible] se adapta à esta, amarrando-se atrás da cabeça. É um tecido [illegible] tucum, ao qual se prendem as penas, servindo-se do leite da [illegible]iva. Costumam dispor as penas de modo que na margem infe[illegible] (a que cobre a testa) fica uma faixa de 3 a 4 cm. de delica[illegible] plumas brancas de garça, *pehé pod-ri*; depois uma faixa, mais [illegible] da metade na largura de penas vermelhas de gavião real, *a — pazkó wirtó*, e uma faixa superior, mais larga, de penas amarelas de arara *mahã pod-ri*.

Os rapazes trazem o seu *mahã pe'saró*. Consta de uma coroa [illegible] antes, de uma pala de palhinha, de 2 ou 3 cm. de largura, à qual se adapta um cordão densamente enfeitado de vistosas plumas vermelhas e amarelas, de arara. Algumas vezes em vez das penas de arara, há as vermelhas do tucano, diz-se, então, *darsé be'tó*.

c) *Tranças*. 1.º *Emõ pod borka-ri* consta de três tranças duplas de seus 40 cm. feitas de pêlo de macaco, e que se amarram à nuca, deixando pender sobre as costas. *Emõ* é o nome tukano do macaco guariba.

2.º No momento da dança ajustam às tranças precedentes, e em sentido horizontal, sôbre a nuca, outro trançado de pêlo de onça e que se denomina *pod-ri do'teri-da*, (*do'teri-da* quer dizer: fio de amarrar).

3.º Acrescentam ao precedente um pequeno osso de onça, *pa'ga dakú*, e um discozinho de casco de tatu, *pamõ pe'toro*, com uma pena no orifício central. Êste enfeite se denomina *tu-si'ti-ôoro*.

d) *Penachos*. 1.º — Sôbre essas tranças adaptam ainda vários penachos. O primeiro consta de um trançado retangular de arumã e tucum, *kka-pêma*, encimado por longas e afiladas penas da cauda de garça, *pehé si-d uhau*, e na base, plumas vermelhas de arara e penas de gavião real, (*si-d uhau*, uropígio).

Êste penacho, como o precedimente, fica verticalmente sôbre a nuca. [illegible] dêstes penachos que, em vez de tucum, entravam no tecido [illegible] coloridos, obtidos dos civilizados, é pêlo de macaco.

Os demais homens usam penacho mais simples, em que sôbre o *kka-pêma* se acham plumas de gavião-real, *a — pazkó si-d uhau*. Êste penacho, como o precedente fica verticalmente sôbre a nuca.

2.º — O segundo penacho denomina-se *a — pazkó wirtó-pó*. Consta de uma haste sôbre a qual, com sorva se fixou ao redor uma

cumada de finíssima penugem branca (*udxtõ*) de gavião real (*u — parkõ*). Ajusta-se perpendicularmente sôbre a nuca, formando ângulo reto com o primeiro.

3.º — Acrescentam ainda uma ou duas longas penas vermelhas da cauda de arara, *muhã pirkõ-rõ*, igualmente em posição perpendicular à nuca.

e) *Boné*. O boné *wa'wa*, consiste num tecido de palhinha de arumã, semelhante precisamente a um boné, e que se usa sôbre a cabeça em certa dança denominada justamente *wa'wã-ri baxsã*, dança dos bonés. A parte posterior é arredondada adaptando-se bem à cabeça, e a anterior é plana como uma pala dos nossos bonés.

f) *Pente*. Sabemos que, antigamente fabricavam um pente semelhante ao nosso pente-fino, dito *waxtã ã-ro*, porque como dentes se empregavam fragmentos de paxiúba, *waxta*. Hoje, porém, muito raramente são usados.

g) *Cangata*. É um cordel com finíssimas e variegadas plumas de tucano, e diz-se, em Tukano *daxsé si-d uhaã-dã*. Fica pendente da nuca, ao longo das costas.

h) *Colares*. 1.º — O que trazem ao pescoço é longo, e feito de sementes pretas e chatas de inajá, e diz-se *ixki-phe patã-dã*. Ou ainda de contas achatadas obtidas dos civilizados, é o *yaxkê-patã-dã*.

2.º — Abaixo da cintura, caindo sôbre as nádegas, usam, amiúde, colares de dentes de onça, *yai-piri-dã*, ou de vertebras de cobra, *pirõ-piri-dã*.

3.º — Ao tornozelo direito amarram um colar, geralmente de pequenos cocos de tucumã, *bexiã* ou de sementes; é o *kixtyõ*, ou chocalho, do qual já falamos, com a finalidade de marcar o ritmo dos passos.

i) *Encacho*. O encacho, *waxsõ-ro*, ou tanga que usam como adôrno de dança é uma lâmina de liber do tururi, de 20 a 30 cm. de largura e uns 40 cm. de comprimento, com pinturas vermelhas de argila. Usa-se pendente da cintura até a coxa. (*Cfr.* o que acima se disse sôbre as vestes, VI - 3, a).

j) *Brincos*. Os homens trazem ainda às orelhas longos brincos, possivelmente de metal dourado, *arpõã-phi* (65). Quando o não

(65) O tuxaua Maku de Iauaretê tinha por brincos um cartucho de fuzil burnido e serrado longitudinalmente em duas metades, uma em cada orelha.

[illegible] também, porém, à guisa de brinco, um molho de plumas coloridas. Observamos que a geração moça, em contacto com os civilizados, [illegible] mais os lóbos das orelhas, e por isso, não usará mais [illegible] nas danças.

g) *Braceleira.* A braceleira, barsá *kurú-pa*, é um grande anel de pelo de-macaco, do qual pendem, como flóculos, cordas do mesmo [illegible] com vistosas penas de arara. Adapta-se ao braço esquerdo, na altura do cotovelo.

h) *Ehuró.* É a enxó primitiva, syó-a *parpú*, para os trabalhos de madeira (vd. VI - 2, b) e hoje usada tão só como enfeite de dança. Consta de um galho recurvado como gancho, *parpú*, de seus 30 cm de altura, bem alisado e com plumas prêsas por meio do leite de-sorva. Numa das extremidades traz encravada uma pedra solida (hoje que é mero enfeite, também um pedaço de madeira durissima) da forma de um machado, porém mais estreita. Êsse instrumento é usado pelos individuos mais importantes (tuxaua, *komú*, [illegible]) e vai sôbre o ombro esquerdo.

i) *Enfeites das flautas.* Em certos números de danças trazem na mão direita uma flauta de osso, *mombí* (vd. acima Instrumentos Musicais), ou mesmo um pequeno osso de onça ou de outro animal, [illegible] enfeitado com um dos seguintes adornos:

1º — *Mahá-ití.* Consta de 8 ou 10 penas vermelhas da cauda da arara, presas a um cordão. Enrola-se êste cordão a uma extremidade da flauta ou ôsso, como um penacho ou leque.

2º — *Umú-ka-ití.* É um penacho de penas brancas de garça (*[illegible]*) e amarelas do japú (*umú*), usado como o precedente.

3º — *Pexká pirkóróá petori* ou, abreviadamente, *pyóróá petorí.* É um colar de carapaça furtacôr de besouros (66), que envolve a flauta de osso durante as danças.

n) *Máscaras.* No Uaupés só os *Wanána* e *Kubéwána* (67) atualmente usam as máscaras nas danças fúnebres, e por isso as denominam *pa'ko-ko su'ti-ro*, isto é, veste de lágrimas.

---

(66) O indígena forneceu-nos o esclarecimento que os pirkóróá vivem dentro da primeira bacaba. Acrescentou ainda que dotú é "pai" do besouro pirá. Trata-se provavelmente de insectos com fases diversas, como a borboleta que passa pelas fases de larva e crisálida.

(67) Koch Grunberg (Zwei Jahre, pag. 205) soube que, além dos *Buhápana*, também os *Umoa* e *Sara* usam as máscaras. Parece que até 50 anos atrás ou pouco mais, isto é pelos fins do século passado e inicios dêste o emprêgo das máscaras era bem divulgado entre as tribos do Tiquié e afluentes.

Preparam-nas com o liber do tururi, e tem a forma de um camisolão, que envolve a pessoa da cabeça aos joelhos.

O processo de preparação é como o das sacolas do ipadú. Escolhido o tronco do tururi, de grossura e comprimento desejados, vão batendo a cabeça com um macete até que a parte lenhosa seja eliminada e se desprenda o liber. Ao depois, com o fio de tucum cozem-na, dando-lhe a forma de uma camisa, fecham-lhe algum rasgão, e na altura dos ombros, adaptam-lhe as mangas também de tururi, por onde o dançante introduz os braços. Na parte inferior o tururi será cegarçado em longa fimbria que recobre as pernas.

Essas máscaras trazem pintura variada, pois conforme a simbólica indígena, cada máscara representa um animal. Por essa mesma razão cada uma delas tem seu nome, e vai também variando de uma máscara para outra o feitio da parte superior (que recobre a cabeça do dançante correspondendo à cabeça do animal simbolizado.

Estas máscaras fúnebres não constituem objetos tabuados. Temo-las encontrado conservadas dentro da habitação à vista de todos.

Até fins do século passado, informa Koch Grünberg (*Zwei Jahre*, pag. 230) os *Tariana* usavam máscaras também na festa de *Wari-ñi*. Estas, porém, não podiam, como o instrumento sagrado (cfr. acima) ser vistas pelas mulheres e crianças.

Temos, outrossim, encontrado máscaras entre os *Ide-masã* do Komé-yá (afluente do rio Pirá-paraná) as quais não são objetos tabuados, nem sequer a que se denomina *Wurti* (cfr. acima, IV - 2, h), pois estão à vista de todos e as crianças com tôda a liberdade servem-se delas para os seus brinquedos.

4. *Religião*

a) *Dificuldades*

Constitue êste assunto um dos capítulos mais difíceis da etnografia dessas tribos. Em outros pontos a influência dos civilizados é mais superficial, e logo desaparece, quando cessa o contato com os brancos e o indígena volta à vida das selvas. Ou é facilmente reconhecível pela cultura material que ficou como testemunha. Na Etnologia religiosa não só temos a influência recíproca entre as tribos, como a dos civilizados quem sabe desde a descoberta do Novo mundo (1), tôdos êles cristãos (2), com seu culto que impressio-

(1) Frei Gaspar de Carvajal, O. P., na descrição da viagem de Francisco Orellana, 1542, refere a informação de uma índia. "Prendeu-se nesta aldeia (nas proximidades da foz do Rio Negro) uma índia de muita razão. Disse que, perto daqui, no interior havia muitos cristãos entre êles duas mulheres brancas e que outros viviam com índias das quais tinham

4. Silva SQ19 Tucano

mais ao selvagem e com suas conversas ou até com sua positiva catequese, querendo trazê-lo ao Cristianismo.

Tribos do Amazonas e Rio Negro (cfr. II - I) (e as do Uaupés mantinham relações com as do Rio Negro e Içana); foram mesmo evangelizadas por Missionários em diferentes épocas. No século 17 estiveram no Rio Negro os Jesuítas e Mercedários, no 18, os Carmelitas, no 19, os Capuchinhos e Padres Seculares.

Os convertidos cristãos eram às vezes uma minoria dentro do seu, o que continuava com suas crenças e práticas. Quiçá, em alguns casos, todo um grupo, por exemplo um povoado indígena, se fez cristão, porém mais tarde perdeu o contacto com os Missionários — e vimos que foram periódicas e intermitentes a catequeses nos rios Negro e Uaupés — e retornou às suas praxes pagãs.

Não teria ficado reminiscência alguma dêsses ensinamentos aprendidos e práticas religiosas? Há indícios que sim, donde é lícito inferir o que os índios hoje praticam e nos declararam, pode não estar isento da influência dos civilizados cristãos.

Outra dificuldade não menor que a primeira é a reserva do indígena, sempre desconfiado, e muito mais se mostra nestes assuntos, sôbre os quais talvez haja até a obrigação de nada revelar aos civilizados. Verifica-se que mais facilmente fazem revelações sôbre assuntos de moralidade que, parece-nos, deveram ficar recatadas, do que sôbre assuntos religiosos (3).

---

(1) "Ao que se presume são êstes os que se perderam de Diogo Ordaz" (dos nove que fizeram parte da esquadra de Ordaz, saída de Sevilha em princípios de 1531, com destino ao rio Maranhão, sob o comando de Juan Carrejo, encalhou nesse rio com mais de 300 homens que se internaram entre os índios.

(2) Em nossas viagens sabemos de comerciantes que batizavam índios para fazê-los seus "afilhados" isto é, com obrigação de trabalhar para êles. Citemos episódios protestos dêsses batismos por vêzes de uma maloca inteira, derramando apenas água ou pondo sal na bôca, sem proferir palavra alguma. O próprio Koch Grunberg batizou algumas crianças doentes, como êle depõe no seu livro "Zwei Jahre". Ainda hoje (1957) os Missionários encontram índios esparsos por várias malocas e que afirmam haverem sido batizados "por branco", a saber por civilizados que passaram pela região comerciando.

(3) O General Couto de Magalhães, apesar de suas amistosas relações com muitos indígenas, revela essa silenciosa discrição dêles: "O índios são muito reservados e discretos em tudo quanto diz respeito a assumpto religioso. No meio da conversação mais animada, se se lhes dirige qualquer pergunta tendente a esclarecer qualquer dêsses pontos, elles tornam-se immediatamente frios, as vezes sombrios, e, ou respondem por monosyllabos, ou nada respondem" (Ensaios de Anthropologia, 455).

b) *Influências Cristãs*

Mencionamos apenas três provas da influência Cristã: 1.º a inclusão de elementos da tradição Cristã nas lendas indígenas (como se verá na obra em preparação «Lendas do Uaupés» (4); 2.º Índios com nomes bíblicos (vd. acima II - 3); e 3.º alguns episódios de fanatismo religioso que se deram no século passado nos rios Içana, Uaupés e Papuri, com tal repercussão que, apesar das distâncias,

(4) Em alguns pontos dessas lendas (como veremos em outro volume, "Lendas do Uaupés") que nos fazem admitir uma infiltração Cristã. E não nos referimos às narrações dos ex-alunos das Missões Católicas. Como tivemos mais de uma vez o ensejo de verificar, intercalam êles, na exposição das suas lendas, episódios e nomes de personagens sôbre os quais ouviram no catecismo. Uma prova disso é a Cosmogonia Tukano exposta pelo padre Marcos Sierra a Marcos Fulop (cfr. n. 65, c. VII-4, e (2c)

Marcel Homet, numa conferência realizada em Manaus em março de 1961, defendia a tese da influência da Civilização mediterrânea na bacia Amazônica, porém já, no período cristão, seja vinda diretamente do Mediterrâneo, seja passando pela África. Como um dos argumentos apontava a "tradição de expedições pré-colombianas à América. Poderia nesta tese, haver penetração Cristã nas lendas destas tribos. A propria lenda de Sumé serviria de argumento de tal infiltração.

Mais plausível, parece-nos, seria uma influência pré-cristã ou messânica. Assim como o episódio do dilúvio ocorre em tantas lendas, que os homens Americanos transplantaram do seu habitat original para as terras da América, poderiam, outrossim, trazer outros elementos como o da promessa de um Libertador. Interessante é que êste grande Libertador nasce, conforme as lendas indígenas de uma Virgem, como fôra prometido na primeira grande profecia Bíblica.

Na história da primitiva Humanidade há vários capítulos em branco, entre êles o das migrações dos Camitas, isto é dos descendentes de Cam. Teriam êles progredido muito, como sucedeu aos outros filhos de Adão? Abandonaram êles o primitivo habitat? Por onde terão ido?

É uma tese de difícil defesa que grupos de Camitas foram os primeiros a se afastarem da Mesopotâmia, onde surgiu a Humanidade. É, outrossim, não só defensível, porém muito provável a tese que o dilúvio tenha eliminado e exterminado os habitantes do Oriente próximo. Não teriam êstes grupos dêsses Camitas alcançar as regiões mais distantes do Oriente Polinesiano e Australiano, bem como as do Ocidente Americano?

Parece-nos menos aceitável a tese de Marcel Homet, entendida como uma migração do Oriente próximo para as Américas dentro do período cristão. Remontará, por certo a seis milênios ou mais a existência do homem no solo Americano.

As pesquisas pré-históricas nos sambaquis do Brasil (no do Mar-Casado, Ilha no S. Amaro, sob a direção de Paulo Duarte, nos do Paraná iniciadas por Joseph Emperaire e prosseguidas pelos professôres da Universidade de Curitiba) depararam com homens pré-históricos em camadas para as quais o Carbono 14 acusa seis e oito mil anos. Nos segundos encontros intelectuais promovidos pela Unesco, em S. Paulo em 16 de agosto de 1961, o prof. Crushent informou sobre o achado de artefatos

SQ19 Tucano

...ram a preocupar os governantes de Manaus. Ora, não é impossível que tais episódios impliquem uma mais remota influência ...

Em 1857 o Governador João Baptista de Figueiredo Tenreiro Aranha ouve falar de um grande movimento dos indígenas do rio Içana, atraídos por um pregador que se dizia o «Verdadeiro Christo». Nomeia então Missionário do Içana e Uaupés, ao Padre Romualdo Gonçalves d'Azevedo, «para baldar as prédicas do pretendido Christo, acalmar a agitação promovida e impedir a emigração dos índios para alheio território». Constara, com efeito, ao Govêrno que, o «Christo» procurava seduzir os índios a passarem ao território da Venezuela. Recelou-se até fôsse emissário político estrangeiro, quiçá mesmo da Inglaterra, França ou Estados Unidos. Tratava-se de um índio venezuelano, por nome Venâncio, que se estabelecera na povoação Cuiari, na confluência do rio homônimo com o Içana, e em presença de uma cruz ia pregando a sua falsa doutrina, e crescia seu conceito de Santo. «Prevalecia, diz o Relatório do Pe. Romualdo, do estado a que o reduziu o ataque de catalepsia, de que sofre, para fazer crer que morria, ia ao céu, falava com Deus; e que tinha o poder de perdoar os pecados» (Relatório datado de 10 de fev. de 1858 — Archivo do Amazonas de 23 de julho de 1907, vol. II, n. 5, p. 14). Prevendo os ataques, preanunciava suas relações com Deus, por cuja ordem ia exigindo paga dos índios, em troca do perdão dos pecados. A tais notícias se abalavam para vê-los os silvícolas de onde quer que se achassem. O missionário Frei Manuel de Santana Salgado, o qual, a pedido do Pe. Romualdo impedido por doença, o substituíra, ameaçando com a intervenção policial obrigou Venâncio a retirar-se para a Venezuela. Ainda durante a viagem de Frei Salgado, outro movimento religioso semelhante surge junto à Povoação da Guia, no igarapé Pira-lauara. Desta vez o protagonista era um índio brasileiro, também de nome Venâncio, «que se intitulava Padre Santo enviado do Christo», e «tivera lugar a repetição de tais atos e foi aí que se fizeram as confissões públicas, divorcios, novos casamentos, sucedendo a tudo isto divertimentos profanos de danças, comes e bebes, o que também se praticava no Cuiary em

---

em Manzanilla, Venezuela, em jazidas de até 16500 anos, pela análise do Carbono 14.

Nem repugna que para aqui tenham vindo grupos pediluvianos, quiçá dos Carmitas. Se se provasse o conceito de um dilúvio nodíco nas terras amerindias, (e não se tratasse apenas de inundações regionais), ainda assim poder-se-ia concluir que teria havido migrações de grupos pós-diluvianos, sem excluir a possibilidade de migrações pediluvianas.

[Facing p.320]

Festa da colheita do cunuri (waxpo poose)

Rito do cauim e comemorações lendárias

seguida do ensino da doutrina e dos supostos milagres do intitulado Christo».

No seu relatorio datado de Cunury (rio Uaupés, aos 12 de abril de 1880), o Pe. Romualdo informa que em Juquira-rapecuma, no Uaupés, se achavam reunidos índios de várias tribos «venerando outro Christo que alli se apresentara praticando o mesmo que se dera no Igarapé Piraiauara, no Içana, isto é, batizando, casando, etc., que esta reunião contava para mais de mil pessoas armadas de armas de fogo e curabis (flechas com as pontas envenenadas), dispostos a resistir as diligências, caso para alli fôssem, como acontecera no Içana, que alli mesmo esperariam os brancos».

Efetivamente, Frei Salgado foi recebido hostilmente e teve que retirar-se com perigo de vida, a 3 de março de 1858. «Segundo consta, prossegue o Relatório, e passa por certo o Christo he um indio natural do Uaupés, que residia no distrito de Marabitanas, bem conhecido alli de todos, chamado Alexandre. Entre o séquito do Christo conclui o Relatorio (Archivo do Amazonas, dia 23 de Out. de 1907, vol. II, n. 7, p. 85-90) existem para mais de 10 Macus presos, que delles se servem como de escravos, a ponto de vendê-los a troco de uma arma, terçados, machados e de mais que lhes há mister».

Depois de Venâncio e Alexandre, um desertor por nome Basilio Melgueiro renova os mesmos erros, informa Koch Grünberg (*Z. I.* 20).

Pelo fim de 1880 surge outro indivíduo, êste da tribo *Arapásu*, que a si mesmo denominava Vicente Cristo, e afirmava manter diálogos com os espíritos dos mortos e com o próprio Deus, de quem se proclamava representante. Apregoava-se como «Pai dos Missionários», que, a pedido seu, Deus enviou ao Catari. Fanatizou a muitos, dos quais fazia dançar ao redor de uma cruz. Tendo com seu fanatismo prejudicado a muitos seringueiros, foi, por fim, prêso em Barcelos.

Episódio semelhante sucedeu nas últimas décadas do século passado no Papuri. Um índio da tribo *Tukano* (Subdivisão dos Sukuro-pûna, vd. IV - 2. a), por nome Lino Sêwa, apareceu na localidade Buzuc-pisá (hoje Montfort). Acorreram a êle indígenas do Papuri e até do Uaupés e Tiquié. Mandava cada qual fazer uma cruz para si, ensinava cantos sacros, pregava que todos subiriam ao céu e operava muitas curas com seus remédios. Informante dêstes episódios foi uma velha índia de Pari-cachoeira, chamada Isabel, a qual completou seu relato, afirmando que (por não ter praticado a fornicação) o «Santo» Lino a tomou como auxiliar no preparo dos remédios. Entre os fatos extraordinários Isabel conta o de uma floração maravilhosa de belíssimas flôres em tôda a região compreendida

entre o Papuri e o Tiquie. Estão ainda vivos (em 1949) alguns velhos que tomaram dos remedios do «Santo». Essas romarias e curas terminaram com a morte de Lino.

*Conceito de Religião*

Religião, num sentido mais rigoroso, é o reconhecimento teórico e prático de um Ente Supremo, a quem denominamos Deus, como Soberano Senhor de todo o universo, que é uma criação sua.

Tomamo-la aqui num sentido menos rigoroso e mais amplo, como crença em seres superiores aos homens e diferentes dêles, com os quais é possível e convém estar em relação, e a crença numa vida outra extraterrena e diversa da que se leva em terra (5).

Tomada no primeiro sentido, afirma-se que os índios do Uaupés não tem religião, pois não se encontram entre êles templos onde adorem a Deus (6), nem encarregados do culto, nem sacerdotes, nem cerimônias religiosas e orações para honrar a divindade.

---

(5) M. Morris Jastrow («The study of Religion» — N. York, 1921) reduz a três os elementos constitutivos da Religião: 1º reconhecimento de uma ou várias potências que não dependem de nós; 2º sentimento de dependência do homem com relação a essa potência ou potências; 3º possibilidade de trato e comunicação com essas potências. E' inexato e incompleto êste conceito. Inexato, pois leva a confundir *Religião* com *Magia*. Se êste poder ou potência é algo impessoal, como a força cósmica, não é possível uma relação e comércio com êle, e, embora o homem o reconheça superior a si, não o venera, teme-o e procura conquistá-lo e dominá-lo com práticas particulares que se dizem *mágicas*. Temos, pois, a Magia. Se o concebe como potência pessoal, ou melhor "Ser espiritual", a qual respeita e propicia pelo culto, temos então um culto religioso e uma *Religião*. Ora, parece-nos descobrir os indícios, embora vagos, de um culto e uma Religião nas tribos do Uaupés.

(6) Tal afirmação se nota desde a época dos descobrimentos. E' verdade que frei Gaspar de Carvajal («Descobrimentos» p. 51) descrevendo a viagem de descobrimento de Francisco Orrelana, em 1540, fala-nos do culto ali, com templo e altares: "Nesse dia (segunda-feira após a Festa da SS. Trindade, 5 de junho de 1540) aportamos a uma aldeia de medíocre tamanho, onde a gente nos recebeu. Havia lá uma praça muito grande e no meio da praça um grande pranchão de dez pés em quadro, pintado e esculpido em relêvo, figurando uma cidade murada, com sua cerca e uma porta. Nessa porta havia duas altíssimas tôrres com as suas janelas, as tôrres com as portas se defrontavam, cada porta com duas colunas. Toda esta obra era sustentada sôbre dois ferocíssimos leões que olhavam para trás, como acautelados um do outro, e a sustinham nos braços e nas garras. Havia no meio desta praça um buraco por onde deitavam, como oferendas ao sol, a chicha, que é o vinho que êles bebem, sendo o sol que êles adoram, o têm como seu deus.

Era todo êsse edifício coisa digna de ser vista, admirando-se o capitão e nós todos de tão admirável coisa. Perguntou o Capitão a um índio o que era aquilo e que significava aquela praça, e o índio respondeu que

Existem, sim, nem poderia ser diversamente entre homens de tão pouca cultura, muitas superstições. Há unanimidade em afirmar que, se há um culto, é o do *Jurupari* ou demônio (7) (em Tukano *Wãr-ti*), que se festeja ou se entende aplacar com os *Dabacuris* (em Tukano *Pooro*), a fim de que não os prejudique, espírito malvado que e, quanto a Deus (em Tukano *Wa:kõ* ou *O'ã-kõ*) é um grande ausente, que não se preocupa com os homens e sem influência alguma sôbre a sua vida. Não há, portanto, necessidade de interessar-se de *Wa:kõ*, nem de pensar nele para venerá-lo.

O estudo dessas tribos convence-nos que estão numa fase de grande regressão ou involução, com traços de *totemismo*, cujo pequeno sentimento religioso e grande preponderância da magia nos ostentam.

Religião num *sentido subjetivo* é, conforme W. Schmidt *Manuale di Storia comparata delle Religioni*, pag. 2) «a idéia e sentimento da dependência de uma Potência pessoal supraterrestre, com a qual se

---

dos vêm sudítos e tributários das Amazonas, e que não as forneciam senão de penas de papagaios e guacamaios (araras) para forrarem os tetos dos seus adoratórios. Que as povoações que êles tinham eram daquela maneira, conservando-o ali como lembrança e o adoravam como símbolo de sua senhora, que é quem governa tôda a terra das ditas mulheres. Encontrou-se também nessa praça uma casa muito pequena, dentro da qual havia muitas vestimentas de plumas de diversas côres, que os índios usavam para celebrar as suas festas e bailar, quando queriam regozijar diante do já referido pranchão, e ali ofereciam seus sacrifícios com a sua danada intenção.

Saímos daqui deste aldeia, encontrando a seguir uma outra, muito grande, que tinha o mesmo pranchão e diviso".

Em outra as tribos "[illegible] fez do rio Nepo. E da região das Amazonas informaram de "Aquelaterra" e casas dedicadas ao sol, as quais são por elas chamadas curanai, e que estas casas são assoalhadas no solo e até mais altura, que os tetos são forrados de pinturas de diversas côres, que nestas casas tem elas ídolos de ouro e prata em figura de mulheres, e muitos objetos de ouro e prata para serviço do sol" (o.c. 67).

Frem Carvajal está referindo o que ouviu e sua narração está tôda impregnada de inverossímeis, fruto de credulidade e de sugestão.

O Pe. Alonso de Rojas, descrevendo a descida do ano 1637, depõe: "Não têm ritos, nem cerimônias para venerá-los (seus falsos deuses); nem templos de seus ídolos, nem sacerdotes". (Descobrimentos, 110). Precisamente como os encontramos três séculos depois.

(7) Nos seus "Diálogos das grandezas do Brazil", Teixeira Pinto, tratando dos ritos dos gentios afirma: "Não ter elle nenhum e si algum modo de adoração fazem, posto que não se lhe conheça, é ao diabo ao qual dão o nome de Jurupari" (ap. Barbosa Rodrigues, Poranduba Amazonense 94). Jurupari e Dabacuri são termos da Língua Geral ou Nheengatu que ainda se fala em todo o Rio Negro. O emprêgo dêsses têrmos pelos próprios índios do Uaupés, quando nos descrevem suas tradições, vale por uma prova da influência estranha nos seus mitos e ritos.

pretende entrar em relação»; e, *objetivamente*, é «o conjunto dos atos exteriores nos quais se exprime a religião e pelos quais se manifesta». Vamos considerá-la especialmente neste sentido.

Examinemos separadamente, para melhor apreensão dos indícios desse fraco sentimento religioso, e sua exata compreensão: 1º seus pontos doutrinais; 2º suas práticas de culto; 3º suas regras de conduta moral, religiosa e social.

d) *Pontos Doutrinais*

1) *Conceito de um Ente Supremo.*

a) A totalidade dos índios destas tribos residentes nos povoados à margem dos rios Uaupés, Tiquié e Papuri brasileiros distinguem, atualmente, como há um século atrás, no tempo de Wallace, um Deus Criador e Remunerador Supremo, perfeito e bom, e o denominam *Wá-kõ* (ou *O'ú-kõ*), e um espírito mau que lhes pode causar muitos males, e por isso o temem, é o *Wáx-ti*. Não só alguns estudiosos e viajantes, como os próprios indígenas da geração môça, identificam *Wáx-ti* com o *Jurupari* da Língua Geral ou Nheengatú e o próprio demônio (8). Diante dessas informações poder-se-ia pensar que a sua religião fôsse um *maniqueísmo*, com um duplo princípio: — o bom, que praticamente não é mister levar em conta, e o mau (9).

Não fazendo, por ora, questão de nomes, é certo que êles admitem a existência de um Ser pessoal («*marsã*, gente, como se exprimem), ser que sempre existiu, muito superior ao homem, que mora lá no alto. Êste Ser os velhos denominam *Búrpó*, o Trovão (assim por exemplo o velho Gabriel Costa, de Pari-cachoeira, rio Tiquié), e os que tem alguma noção de cristianismo esclarecem dizendo que é «*Deus Pai*» (10). Revele-se que o têrmo da Língua Geral para indicar *Deus*, é *Tupana*, simples variação, introduzida provavelmente pela catequese, do nome *Tupã*, que quer dizer *Trovão*. Não será me-

(8) Há um lugar à margem do rio Uaupés, acima de Chibarú, que se denomina *Jurupari-ponto* e os de língua Tukano chamam-no *Wáx-ti nõã*, identificando assim *Wáx-ti* e *Jurupari*.

(9) Temos, naturalmente, que excluir, quanto a êste assunto, os índios que frequentaram por vários anos os colégios das Missões Salesianas e receberam um mais profundo e firme conhecimento religioso, robustecido, ademais, por uma intensa vida prática religiosa e sacramental.

(10) A jovem Patrícia Vasconcelos, cristã e ex-aluna da Missão Salesiana, conversando com seu velho tio e pajé, Marco de S. Luzia, rio Papuri, ao falar sôbre o *Padre Eterno* (Pai de Jesus Cristo), ouviu-o interrompê-la: "ora, minha filha, êsse é *Burpó*".

na coincidência de nomes. Mas, ou ambos grupos humanos, o de Nhengatú e o do Tukano, tinham as mesmas crenças e culto; ou houve um empréstimo de crenças, ou, ao menos, de lendas.

Alguns acrescentam que desse Ser Supremo, precede o mundo e os homens, por efeito de uma simples palavra criadora. Isto, que conseguimos em conversa com os velhos de diversas tribos e em diferentes localidades, mesmo dos que não são cristãos, e não mantem contacto com os Missionários, tem probabilidade de representar a sua tradição primitiva, porque corresponde outrossim ao que narram as lendas.

b) Entre os Tukano do rio Tiquié, o Padre Eduardo Lagório, Salesiano, encontrou a crença em um *Deus* e uma *Deusa*, que existiram de per si, isto é, não criados por outro, «*kã ãaró*, por sua vontade», assim exprimem em seu idioma; e ela também «*ko ãaro*». Contra a psicologia indígena que não liga à mulher, e cujos predicados físicos não a valorizam mais, o índio que em seu pragmatismo realista, parece despreocupado das qualidades estéticas das pessoas, detem-se, ao invés, a descrever a beleza dessa deusa. Parece-nos, por esta razão, lícito procurar para tal fato, uma origem cristã, a saber o culto e homenagem à Mãe SS. de Deus (11).

Ao Deus chamam *O'ã-kõ*, e não souberam dizer o sentido dessa palavra. De acordo com o espírito da língua Tukano, poderia ser palavra composta de *o'ã*, *osso*, e a terminação de *mar-kõ*, filho. Portanto *O'ã-kõ* quer dizer «Filho do osso». Riam-se quando dávamos a tradução e apresentavam o comunissimo: «é assim mesmo», «é assim mesmo». Coerentemente (ou «por analogia») chamam a Deusa *Oã-ko* ou *O'ã-kõ*. *O'ã-kõ* quer dizer filha do osso» (de *O'ã*, osso e *mar-kõ* filhã). *O'ã-kõ*, como mais comumente se ouve, significa «mãe do osso» (derivado de *par-ko*, mãe) insinuando que seria mãe de *Oã-kõ*.

Não se trata, por outra parte, de um casal qual modêlo da família humana, como em outros povos, ou a deificação dos progenitores do grupo. *Oã-kõ* não gera filhos deuses ou homens; êle criará uns e outros.

Foi a convite de *O'ã-kõ* ou *Oã-ko*, assim informaram ao Pe. Lagório, que *O'ã-kõ* desceu à terra e aí criou montes, rios, matas, animais e por último os homens.

---

(11) O índio Sebastião Mariano da tribo Yurupari-tapuya (Arwá'te do Içana), narrando-nos em Caruru-poço (rio Içana), em agosto de 1957, a lenda do *Khoy*, que êle identificou e traduziu por *Jurupari*, di-lo filho de Yepemsuli. E à nossa pergunta como se chamava sua mãe, respondeu prontamente «Santa Maria».

c) Od-kõ, conforme lendas obtidas por nós (e que serão estudadas mais amplamente em outro trabalho), é uma personagem traída por sua esposa, *mahãui* (a pirarara); e êle, por vez, preferia a cunhada à própria mulher. É verdade, a personagem que fez sair as tribos do poço de Urubucuara, *Yepdsonye* chamam também *Yem-O'u-kõ*, e alguns dos velhos cristãos dizem-na «Filho de Deus».

Cada tribo possui suas lendas que exprimem êstes pontos doutrinais, como se verá em outro trabalho.

2) *Imortalidade da alma*

Outra verdade bem estabelecida entre as tribos do Uaupés, é a da existência e imortalidade da alma. Esta verdade, entretanto, vai contaminando-se de metempsicose e confundindo-se com a existência de espíritos desencarnados, ou que nunca foram encarnados.

Admitem no homem, além do corpo, *ãxpõ*, outro elemento invisível, que o vivifica e sobrevive após a morte do indivíduo. Os indígenas da geração moça (portanto não excluída a possibilidade de ser um têrmo aprendido na catequese), designam-no com o mesmo têrmo que indica o coração, isto é, *héri-põra* (Uaupés *héri-põna*) (12). Porém os velhos não sabem dar esclarecimento algum sôbre *héri-põra*, jamais empregam êste têrmo para designar o *elemento* incorpóreo. A êste denominam unicamente *wáz-ti* (13).

Admitem a possibilidade de a *alma* sair do *corpo* durante o sono, mas, realmente a do paje o faz muitas vêzes. Conforme atesta Koch Grünberg (*Zwei Jahre*, pag. 317), os *Kubéuna* crêem que a alma dos pajés, não apenas depois da morte vaga pela floresta como «jaguares muito ruins», porém mesmo em vida, quando já velhos, de tempos em tempos transforma-se em jaguar, vai à mata onde caça e come veados e outros animais.

Por ocasião do entêrro sepultam com o cadáver sua rede, fogo (hoje fósforos), a cuia para beber e outros objetos, para que não sofra necessidade na outra vida.

---

(12) Informa o veterano Missionário Salesiano, Pe. João Marchesi, que falando fluentemente o Tukano, que não se lembra de ter ouvido falar em outro elemento ou "sombra da pessôa", como crêem alguns primitivos. Em língua Tukano "sombra" se deveria chamar "*bahusé*", isto é, "coisa que aparece".

(13) Ctr. abaixo VII-4, § (3) o que se diz sôbre o *wáz-ti* dos defuntos. A Catequese vem empregando o termo *héri-põra* (ou *héri-põna*, como se pronuncia no Uaupés e Papuri), como correspondente a: *coração*, alma e consciência. Quando repetem os ensinos da Catequese, os indígenas, naturalmente, dão à palavra *héri-põra*, essa tríplice equivalência. Porém os velhos só a empregam no sentido material, para indicar uma parte do organismo, a saber, o conjunto dos principais órgãos internos, especialmente o coração e os pulmões.

Crêem hoje na possibilidade da alma, ao sair do corpo humano, entrar no de um animal. Mas apenas no do veado ou da anta (cfr. lendas do Uaupés) e citam exemplos da alma de determinada pessoa (24) que entrou no corpo dêsses animais. Não sabem, porém, precisar se o animal já estava vivo (assim opinam alguns), ou nasceu no momento em que a alma humana nele entrou; nem se se trata de um estado permanente ou transitório.

Conforme alguns só as almas dos maus é que passam para o corpo dos animais. A dos pajés pode entrar no da onça (15). Convem ter presente que ao pajé ou feiticeiro, chamam *yai*, têrmo que significa precisamente onça.

É crença mais geral que as almas dos pajés vão ocupar a região dos trovões, donde enviam tempestades e raios, vingando-se assim dos homens que os mataram ou lhes fizeram mal. Julgam propiciá-las enviando-lhes o fumo dos cigarros ou agitando os maracás, ritos que os pajés executavam em vida.

Tôdas as outras almas reunem-se debaixo da terra, em lugar muito profundo, escuro e frio (16), donde a necessidade do fogo. Portanto a metempsicose é caso extraordinário de punição.

Não admitem, porem, a reincarnação humana, isto é, que o espírito reapareça animando o corpo de um recém-nascido. Compreende-se perfeitamente. A reincarnação só pôde firmar-se nos

---

(14) Por exemplo, um pajé informou a Mandú, filho do tuxaua *Taryana* do Iauaretê, Nicolau, que a alma de sua mãe se encarnara numa anta, e por isso durante algum tempo se abstiveram aí de caçar antas.

(15) A onça, se não está faminta, não vem aos povoados. Quando há falta de alimento, porém, nas vizinhanças das malocas, assaltam os cachorros, e citam-se vários episódios de ter ela entrado até nas barracas. Informou-nos o Pe. João Marchesi que certa vez, no alto Papuri, uma onça matou dois índios e comeu parte dos cadáveres. Fizeram uma armadilha junto dos cadáveres e conseguiram apanhá-la. Não tiveram, porém, coragem de matá-la (provavelmente porque supunham que nela estivessem os tuix-ti das vítimas). Mas ao redor da armadilha e dos cadáveres puseram lenha e fogo até reduzir tudo a cinzas. E iam prantiando e dizendo: "tu mataste nosso irmão (o Tukano) e o nosso escravo (o Mukú), e "pensavam que na onça havia o espírito de um pajé" (assim esclareceram ao Pe. Marchesi).

(16) Um jovem Tukano do Parí-cachoeira, Casimiro Sampaio, indagado por que se punha fúmaro junto ao cadáver que se enterrava explicou que era para não sentir frio. Insistindo nós se o lugar para onde ia era frio, disse que sim. Êste conceito de inferno frio explica-se recordando a sua região quente e gostam do calor. Ao Padre Kok (conforme nos disse o confrade Pe. Afonso Kuypers) que descrevia o inferno como lugar de fogo, um índio disse: "melhor, assim lá não há necessidade de fazer fogo".

grupos humanos em que se equilibrem a mortalidade e a natalidade: entre os possos indígenas há ligeira tendência ao aumento da população, com periódicas epidemias que dizimam as malocas.

Idealmente não admitem uma futura ressurreição dos homens.

Do cadáver nenhum mêdo têm (17), nem mesmo as crianças, tanto que o enterravam na própria maloca, onde a vida continuará regularmente. Nem sequer praticam rito algum purificatório (como os juruns), quando tocam algum cadáver. Da alma, sim, mostram algum receio (18), embora declarem, quando interrogados, que elas não podem voltar, nem ser evocadas pelo pajé ou outra pessoa qualquer.

Uma mulher tukano (Dorotéia Brito) interrogada sôbre o que pensava de wdr-ti, respondeu que «é sombra da pessoa». E o Tukano Casimiro Sampaio, indagado porque alguém tinha mêdo do morto, explicou «porque vira wdr-ti» (19).

3) *Princípios morais.*

Qualificam algumas ações como «*ya'dsé*»; por exemplo, o casamento entre pessoas da mesma tribo, o ter filhos de um incesto entre pais e filhos ou entre membros da mesma tribo, o malefício (*dohasé*) e o furto.

A punição, porém, está a cargo de quem se julgar prejudicado, se o puder fazer. O pajé, pelos seus poderes extraordinários, é aproveitado como instrumento de justiça, ou antes de vingança. Não julgam, entretanto, que lhe seja lícito fazer isto. Temem-no, e quando podem, dêle também se vingam.

---

(17) É uma visão desagradável, observou um Missionário (Pe. Umberto Limpens) ao índio, como o é a todos nós, porque os faz pensar na morte.

(18) O Irmão Mateo, de Montfort, contou que navegando com uns índios chegou a um local, dito S. José (rio Papuri), onde dois dias antes fora enterrado um velho. Só o Irmão ficou nessa margem durante a noite; os indígenas foram, por mêdo, dormir na margem oposta.

(19) Tendo morrido um índio longe do cemitério, foi enterrado dentro de uma barraca; vieram depois os índios queixar-se ao Pe. Umberto Limpens que não queriam mais habitar ali, porque "o wdr-ti do homem" ficava vagando por tôda a casa. Aos 10 de janeiro de 1949, em Ki-rsérirá (igarapé das cascas de mandioca) no rio Tiquié, próximo à fronteira colombiana, morre afogado um velho conhecido por Chico, enquanto pescava. Contra o costume enterraram o cadáver onde fôra encontrado, num sítio abandonado, pouco abaixo do povoado. Informam que à noite ouvem-se gritos, e nenhum indígena ousa passar por aí. Quando lá estivemos, uns 15 dias depois do sepultamento, ainda os habitantes continuavam apavorados.

4) *Prêmio e castigo.*

Menos preciso é o conceito de um prêmio ou castigo na outra vida. Sabem, atualmente, que os bons são recompensados e os maus punidos. Talvez por influência cristã, dizem que aquêles «vão para cima», onde terão «vida boa», os maus «irão para baixo», onde «a vida é má».

O conceito de bom ou mau, porém, alarga-se até abranger todos os do povoado como bons, e os dos povoados inimigos como maus. É pois, um conceito em função do grupo, e não da vida dos indivíduos.

O fato de enterrarem o cadáver com seus instrumentos de caça (arco e flecha), talvez seja vestígio de uma crença antiga de um «paraíso da caça», como existe em tribos caçadores. Obliterou-se esta crença com a mudança do sistema de vida da caça para a pesca e a agricultura.

Vigora ainda a crença numa vida social além túmulo, semelhante à vida presente, com *pescarias e festas*, como resulta de respostas categóricas (20). Alguns pensam até que na outra vida há procriação de filhos (21).

5) *Existência dos espíritos.*

Crêem na existência de espíritos que nunca foram encarnados em corpo humano, nem o serão; podem, no entanto, tornar-se visíveis em dadas circunstâncias. Habitam tais espíritos em determinados lugares: interior das matas, cabeceiras dos igarapés, grutas, pedras, etc.

São muitos e de distintas categorias; cada categoria com sua maneira característica de se apresentar. Não é, porém, concorde a descrição como no-la trazem os índios. E alguns afirmam que os vêem ou ouvem com relativa freqüência. É fato indiscutível que, com bastante facilidade, se alarmam, quer indivíduos, como grupos inteiros (22), como se houvessem visto algo extraordinário.

---

(20) A uma Religiosa que, explicando o Catecismo, falava do céu, uma menina interrompe para perguntar se lá no céu havia peixe. Tomada de surpresa a Professora, respondeu que não. A criança acrescentou prontamente: — então não quero ir para lá.

(21) Refere um Missionário o seguinte: "uma vez um rapazito estranhou muito ao ouvir que no céu haverá plenitude de vida, sem necessidade de preparação da espécie. Perguntou quase desiludido: "então lá no céu não haverá mulheres para nós?"

(22) Nos Colégios, por exemplo, se uma criança (mais freqüentemente as meninas, note-se que são as mulheres que mais vêzes dizem te-lo visto) grita à noite no dormitório: *Wãr-ti!*, enchem-se todas de pânico, cobrem o rosto ou o viram para o outro lado. Mas também em pleno

Dêsses espíritos uns são grandemente malévolos e nocivos, e outros não. Admitem alguns que os há dos dois sexos, e se multiplicam como os homens.

*Wãz-ti* ou *Jurupari* (23). Vive no interior das matas, nos lugares mais sombrios e nas barracas abandonadas. Aparece, porém, nas malocas, sob forma de homem preto, cabeludo, feio, cheio de cinza. Uma informante tukano (Doretela Brito) dizia: quando êle se faz ver em alguma casa, é sinal de doenças. Pelo contrário. Gosta de estrangular galinhas. Quando a galinha "fala" rumor, é que *Wãz-ti* mexeu com ela. Qualquer barulho em qualquer casa ou na mata, pensam logo em *Wãz-ti*. Um animal estranho que vejam, um vulto, deve ser êle, e gritam, cheios de pavor.

Atribuem o eco, *aziu-keoõrõ*, a *Wãz-ti* que está arremedando o rumor qualquer. Parece-lhes, em muitas ocasiões, ouvir, nos rumores da mata e das cachoeiras, e no sibilar dos ventos, ecos longínquos das músicas e danças executadas por *Wãz-ti*.

Note-se que *Wãz-ti* não é um indivíduo, há os muitos; antes, uma classe inteira. Entre êles um por excelência, que seria o principal dêles. Êste, segundo na origem da nação, lhe fez muito mal: devorava as crianças, fecundava suas mulheres, e lhes fazia crianças-monstros, matava aos homens, etc. Cansados, afinal, do seu jugo. Das cinzas, mesmo, pícamo lutar, nasceram duas paxíbas, que, além de tanto, mais obrigava-os a trabalhos e provas. Mas, os homens se reuniram, apoderam-se dêle, amarram-no com cipós e o queimaram. Conforme uma lenda narrada pelo padre Vicente Rodrigues da tribo Taryana, e outros narradores,

---

(23) Afirmaram ser *Wãz-ti*. Fato semelhante passou-se em Iauaretê de uma menina atirou-se do andar superior do edifício da Missão. Um dos Missionários Salesianos de Taracuá, Valério Fernandes, se encontrava com alguns meninos na mata à procura de cucura (uma fruta). Algumas mulheres que se achavam próximas e não tinham sido vistas pelos meninos, pediram-lhe também dessa fruta. As crianças puseram-se a correr gritando "*Wãz-ti*!" e correram até saírem da mata, apesar de chamadas pelo Missionário. Os episódios dos quais pudemos ainda indagar, explicam-se todos por sugestão. Soubemos de outros casos provocados à guisa de experiência, afim de verificar a crença e a sugestionabilidade indígena. Embora depois se tente prová-lo ao índio, êle não crê, e continua a admitir que foi realmente o espírito.

(23) O jovem tukano Casimiro Sampaio, em (1919) essa informação contraditória: "os *Wãz-ti* vivem em sociedade. Fazem barulho. Não aparecem. Não fazem mal algum. Êste assunto sôbre os espíritos será mais amplamente desenvolvido no livro "Lendas do Uaupés".

*Arutáke*, foi *O'ã-kã* quem queimou *Wãr-ti*, dito também *Bisiu*. Das cinzas, nesse mesmo lugar, nasceram duas paxíubas, *warta'* (24), com a qual fazem o instrumento sagrado denominado *miri*. (Uaupés *mirí* ou *Jurupari* (25) na Língua Geral), para lembrança da grande proeza. Assim teram algumas das suas lendas, e com isso identificam *Wãr-ti* com a personagem *Jurupari* das lendas tupi.

Mesmo queimado, sobrevive ainda o seu espírito, que vaga pelas matas, tomando formas estranhas e assustadoras. A êle atribuem todas as desgraças, tanto as *materiais*, como uma tempestade, a devastação da mata (26), um animal nocivo na roça, quanto as pessoais: o defeito da gaguice, a loucura, etc. Ao louco dizem *Wãr-ti dohuãkõ*, isto é, estragado por *Wãr-ti*. A tuberculose chamam *Wãr-ti pau-ti*, cabelos de *Wãr-ti*. (27).

É tal o pavor que sentem de *Wãr-ti*, que por prêmio algum se aventuram a entrar na mata a noite, ou mesmo de dia em certos igarapés sombrios. E chegam a abandonar por anos as suas roças, porque lá ouviram rumores estranhos.

b) *Boraro* ou *Curupira* (28). Mora também no centro da mata, que é o seu reino, nas serras ou nas cabeceiras dos igarapés; nunca nos lugares abertos.

Conhecem-no como grande e disforme macaco. Emite gritos estranhos na selva, e dá grandes estalos ou pancadas nas árvores.

---

(24) Notemos que o nome da paxíuba em tukano, *warta*, lembra o de *Wãr-ti*. Do mesmo radical *wãr*, temos o termo que indica a funda hérnia-umbilical, *warsé-ro*, e *wãr-ti-kõõ*, tipiti ou a prensa com que espremem a massa de mandioca para o fabrico da farinha, objetos que, como os instrumentos sagrados, foram presente de *Wãr-ti*. Convém recordar que é também de paxíuba que preparam os *paris* e *cacuris* para a pesca, e não raro, também as paredes das malocas.

(25) Quando a etimologia do termo Jurupari Stradelli (Vocabulário Nheengatu-português, verbete Jurupari) lembrava a um índio alguem lhe haver dito Jurupari significava "o gerado da fruta". Respondeu-lhe o índio: "intimã, Jurupari deba ouheen putare o munha *iorié iurú pari* ui, nada disso, o nome de Jurupari quer dizer que fez o fecho da nossa boca" (*iurú*, boca, e *pari*, cercado para a pesca; cfr. 5, a (2b)

(26) Encontram-se com frequência grandes clareiras na mata. Trata-se de árvores altas e grossas, porém com raízes superficiais e que tombam ao ímpeto das furacões, arrastando consigo muitas outras. Êsse rumor e a derrubada atribuem a *Wãr-ti*.

(27) Causa da tuberculose, segundo, pensam, são os pêlos de mariposa na garganta. O pajé *tapra* sobre o mingau, para invocar o "*Wãr-ti* das mariposas", a fim de que não moleste o doente.

(28) Pelas relações com os vizinhos (dos quais muitos falam o Nheengatu) sabem os melhores muitos têrmos da língua geral. Como identificam *Wãr-ti* com o Jurupari, assim também muitos à pergunta: — quem é *Boraro*? Respondem prontamente: é o Curupira.

[illegible] particularmente as supupemas (raízes chatas) da sumauna. Ataca o [illegible] que se aventura na floresta, envenenando-o com sua urina [illegible] chupa-lhe os miolos. Nenhuma arma consegue matá-lo. Come [illegible] animais, e suga também o sangue dos homens. Quando lhes [illegible] chupar o sangue, faz-lo da seguinte maneira: bate primeiro no [illegible] como para anestesiá-lo; depois faz a punção; quando acaba [illegible] sopra para encher de ar o vazio deixado. Se alguém disser «foi chupado» (isto é, contar a aparição do Boraró) morrerá.

Atesta Dorotéia Brito que seu avô viu muitas vêzes a Boraró. «Ele planta roça, tem mulher e filhos. Na roça, de dia, ouvem-se palavras e Boraró que está falando, embora não se veja. Aparece como homem, de cabelos caídos sôbre os ombros, com flor vermelha na boca. Toma ainda a forma de mulher e de menino. Aos Makú [illegible] nada faz, e quer bem aos macacos. Quem o viu ficará doente». Ele chupou os miolos de sua tia, na roça, e ela lá morreu, ficando como prova um sinal na cabeça.

Depõe outra môça Tukano, *Kómã-ro pôrã*, do povoado de S. Luzia (no Papuri) que duas vêzes, quando ia procurar fruta na [illegible] pouco acima de S. Luzia ouviu Boraró fazer forte ruído, como [illegible] um tiro. Em outra ocasião, indo buscar caraná em companhia de um primo seu, viram ambos duas enormes pegadas, de [illegible] meio metro. Seu primo explicou-lhe que eram as pisadas de Boraró. *Boraró do pó-kari.*

Boraró informou a mesma depoente, «tem sempre alguns bichinhos que o acompanham e cantam perto dêle». Dizem-se êsses animais Boraró *da piolhos de Boraró*. «Quando êles ouvem cantar na [illegible] — *moláro*... (Com a *o* muito prolongado) *moláro*... (29) fogem todos, porque Boraró está muito perto.

Conforme Casimiro Sampaio — «Boraró vive no mato. Aparece como homem branco (30), grande, com a testa vermelha. Traz roupa. Faz barulho no mato. Porém não faz mal a ninguem». Em Ipanoré afirmam todos que é grandemente perigoso, e que são freqüentíssimas as suas aparições. Muitos declaram havê-lo visto ou ouvido, e em várias ocasiões.

---

(29) Observe-se que o pronúncia *moláro* denuncia a origem da informante. A língua Tukano, como se pode observar na sua melhor pronúncia no [illegible] Papuri, não possui o fonema *l*. Por influência das outras tribos, máxime a Taryana, no Uaupés e Papuri, ouve-se *l* em algumas palavras. *Moláro*, pensamos nós, de acôrdo com o espírito da língua Tukano, é uma corrupção do nome *Boraró*.

(30) Talvez êsse "branco" seja empregado no sentido usual, isto é, como equivalente de civilizado, pois completa dizendo que usa roupa.

Alguns ex-alunos da Missão Salesiana, que já assistiram funções pontificais nas quais o Bispo Celebrante usa *mitra*, disseram que Boraro aparece com mitra, e o barulho que produz é justamente com a mitra que êle abre e fecha.

Um indígena de Pari-cachoeira, José Barreto, diz que seu pai, Mandu, não batizado afirmou (1949), que são poucos os «demônios» e que isso êle aprendera do próprio avô, o qual nunca vira Missionário algum. Informou também que os seus parentes, moradores do igarapé da onça, pui-sa, conhecem o veneno com o qual podem afugentar ou matar o *Boraro*, e que por isso dêle nenhum mêdo tem.

Em outros lugares encontram-se igualmente indivíduos com tal poder e denominam-se por essa razão, *Boraró dohãrã*, isto é, os que lançam maleficio em Boraro (*dohasé*, maleficio, envenenamento). É crença de muitos que Boraro bebendo êsses venenos, morre.

Boraro é casado, completou Patricia Vasconcelos, e sua mulher tem um dos seios normal, porém o outro é exageradamente comprido. Conforme outros é a mãe de Boraró que apresenta essa anomalia, e alcunham de *Boraro pazkó* (mãe de Boraro), as mulheres de seios compridos.

c) *Bisiu ou Jurupari* (31) É, disse Casimiro Sampaio, um ser misterioso «que desce do alto». É amarelo e vem ornado de penas de arara. Ele fala, canta e dança a *miri* (32). Faz muito barulho como as pessôas. A mulheres não o podem ver».

Soubemos de vários outros informantes que *Bisiu* come as mulheres por ocasião das primeiras regras: «*amõsé badsami*», isto é, como o menstruo, assim se exprimem. Uma viúva Pira-tapuya, Maria José (em Pari-cachoeira, 1954) esclareceu que «*comer*» quer dizer que fecunda a mulher. É por isso que deve ser fechada em casa, e ela mesma invocara o serviço do pajé ou *Komũ*, para o chamado «rito da iniciação» (cfr. VIII - 1, b (7)). Êstes personagens, com seus ritos, têm o poder de afastar o perigo para a donzela.

Uma môça da tribo Tukano do Papuri informou que as mulheres Makú, que vivem quase sempre no interno das matas, muitas vêzes ficam grávidas do couto com *Bisiu*.

---

(31) Um pequeno informante de Iauaretê completou esclarecendo que *Bisiu* é o *Jurupari*. Conforme uma lenda narrada pelo pajé Vicente Rodrigues, Taryana, O-ã-ã se diz em Taryana *Yaperikuli*, e é irmão de *Bisiu*, sendo êste mau, e aquêle bem. Nas lendas *arudke Bisiu* vem denunciado com *Jurupari*.

(32) O nosso informante Casimiro Sampaio completou dizendo que é a dança do *Jurupari*. *Bisiu*, pois, confunde-se com o grande *Wãr-tĩ* das lendas.

d) *Nîrkâ Wâz-ti* (*Wâz-ti da mata*). (33) É também do mato, informou Casimiro Sampaio, — de estatura alta e feio. Traz cabelos compridos, e asas de borboleta no rosto. Não fala e não faz mal a ninguém.

Uma jovem de mãe *Wanana*, e criada entre êstes, contou a Patricia Vasconcelos que, por ocasião de uma festa de luto entre os Wanana, quando se procedia as tradicionais danças com máscaras, um homem subiu numa coluna da maloca. Com grande susto seu, viu ele, no meio dos dançantes, uma personagem estranha que apareceu: era um homem baixote, troncudo, feio, cheio de borboletas pelo corpo. Aquela mesma jovem descrevia ainda que *Yaperikuli* (personagem das lendas Arwake e pai de *Kôay* ou *Jurupari*) tem corpo muito pequeno, porém pernas tão grandes que lhe permite atingir a copa das árvores onde colhe mel e frutas.

e) *O'mõãro Wâz-ti*. *Wâz-ti do alto*, que assim significa o seu nome. Conforme Casimiro Sampaio assemelha-se a um macaco. «Vive sôbre as árvores. Não fala, porém faz rumor como o de uma pedra que cai. Êle devora homens inteiros, engole com osso e tudo. Quando quer fazê-lo, deixa-se cair das árvores e saem os demônios da sua barriga».

Uma môça Tukano de S. Luzia (rio Papuri) assevera não só ter ouvido tal rumor, porém ter visto, outrossim, a cova profunda que se formou no chão pela queda de *O'mõãro Wâz-ti*, o qual tem braços de muitos metros de comprimento.

De acôrdo com outra informante Tukano (Dorotéia Brito): «assemelha-se ao bicho-preguiça. É manso, e sua mãe o viu inúmeras vêzes. Ninguem, no entanto, conseguiu matá-lo».

A fauna amazonense possui exemplares estranhos, alguns já conhecidos dos cientistas e dos caboclos; outros talvez ainda desconhecidos (34) e só vistos dos indígenas. A mentalidade dêstes

---

(33) *Nîrkâ* significa mato, em tukano.

(34) Em 1945 na estrada de Urubucuara a Ipanuré, algumas mulheres ocupadas em transportar os volumes de carga da Missão, ouviram grande rumor de galhos que se quebravam e viram pelas costas um vulto como um grande macaco, de seus dois metros, caminhando ereto. Apavoradas, correm para junto do Salesiano, sr. Manoel Crescini, que dirigia êsse transporte. Ao chegar ao local do rumor, verificou o Missionário grandes pegadas na areia da estrada, semelhantes às de um elefante, de um animal que havia atravessado a estrada e, ao penetrar na mata foi rompendo a galharia, e assim abrindo uma passagem de um metro ou mais de largura. Rumor forte e assustador, como de algum animal quebrando galhos foi ouvido também pelo Bispo Missionário Dom José Domitrovitsch, em Barcelos. Um caçador de Barcelos (Rio Negro) narrou, apavorado, a Dom José ter ouvido urros

associara com facilidade tais animais estranhos ou deformes com o *Wãz-ti* e outros espíritos das lendas. Quiçá éstes sêres *Nhãã Wãz-ti*, *Omaãro Wãz-ti* e outros de que nos falam, como *Wãz-ti Bia*, *Tekupiá*, etc., serão apenas animais raros ou exóticos e assustadores. Sabemos, por exemplo que a umas mariposas que vivem no meio dos dos paus, denominam *Wãz-ti-turú*, isto é, *pedaço de Wãz-ti*.

e) *Práticas do culto*

1) *Culto à pedra (Itobolla)*

Não há templos, nem edifícios unicamente dedicados à divindade onde se desenvolvam as funções religiosas. Nem consta que haja culto particular ou a veneração individual da divindade, cerimônias orações, a não ser que como *culto* s entendam umas *práticas* que são perfeitamente lícitas, como a *Itobolla*.

Tratam aíndas coisas com respeito e temor; é o *tabuísmo*. Não [illegible] porém as manifestações de culto, nem individual nem social. Tais são, por exemplo, algumas cachoeiras e pedras. E delas, [illegible] contam lendas interessantes. Não permitem que se tirem [illegible] das cachoeiras [illegible], afirmando que se alguém o tentasse, [illegible] haveria de fulminá-lo. Em algumas dessas pedras é que [illegible] o fabrico de sua canoa, ou o preparo de suas redes [illegible] de pesca [illegible]

---

[illegible] a uns vinte quilômetros de Barcelos e haver [illegible] pedra medindo cousa de meio metro. O Bispo quis [illegible] e pôde ver [illegible] descomunais pegadas, semelhan- [illegible] foto mesmo Prelado viu, na mata dos arredores [illegible] um enorme macaco. Tomando por al- [illegible] no momento não quis alvejá-lo com um tiro e [illegible] fugiu.

35 [illegible] Bispo Dom José Domitrovitsch dinamitar a cachoeira de [illegible] afim de facilitar a navegação. Alvoroçou-se a popu- [illegible] e [illegible] veio aconselhar que não o fizesse, pois [illegible] fortes e doenças. O Bispo julgou de melhor alvitre não [illegible] opinião dos índios. O Irmão Mateo (da Congregação [illegible] das cachoeiras do trovão, *Burpó-pueá*, [illegible] afluente do Papuri, tirou uma lasca fina, afim [illegible] de mel. Um dos índios avisou-lhe que não de- [illegible] pois "Vai cair raio". E, com grande pasmo, a certa dis- [illegible] tomou um raio, quando nada absolutamente o indicava, foi, na [illegible] "céu sereno". Explicam o surto de malária [illegible] 1942-2 atacou a população de Taracuá-ponta, rio Uaupés, co- [illegible] consequência de se haver tirado pedra da cachoeira do beijú, *Ahã-pueá*, situada na realidade algumas centenas de quilômetros, no rio Papuri.

36 Há uma dessas pedras junto do povoado de Parí-cachoeira, rio Tiquié.

4/Silva/ SQ19 Tucano

Perto do «igarapé da lagarta» *pizkõ-rõ-ỹa*, cabeceiras do Culúcuã afluente do Papuri, há uma rocha que a mulher não deve ver; se olhar para essa pedra, jamais terá filhos. E quando passam por aquele lugar as mulheres e donzelas, volvem o rosto para outro lado. Disse e de alguns outros igarapés não se pode comer peixe, se alguém o fizer, sofrerá dor de dentes.

Em Jabuti-cachoeira, no rio Tiquié, há uma pedra dita *nõ'mpa-ga* (pedra das mulheres, ou pedra mulher?) com um sulco que aos indígenas parece uma vulva. Quando os rapazes passam aí, atiram-lhe desde a sua canoa um pedaço de beiju, um limão ou outra fruta qualquer. É o que denomina *dozke-sã-ríse*, isto é, jogam para acertar. Porque, explicam êles, se o objeto atirado permanecer no sulco, terão boas esposas. Essa pedra, para êles, é grandemente preciosa. Pensam também que, roçagando por ela a mão, depois aprenderão com facilidade qualquer ofício.

Crêem igualmente que o tomarem banho, sejam homens ou mulheres, naquela panela de *Tõpa-duri*, isto é, da cachoeira de Urucuçuara, donde saíram as tribos (cfr. «*Lendas do Uaupés*») lhes garante um próximo casamento.

Não parece, pois, que se devam considerar essas grutas, pedras, igarapés, interiores de florestas, como lugares sagrados e de culto. Ao contrário, seriam antes lugares e objetos «*tabuados*». Nem as frutas e pedras que se atiram, seriam forma de culto, a denominada *tabu*. Quer nos parecer, antes, manifestações da *magia* e do *tabu*.

Um velho Missionário declarava que alguns índios, ao passarem por grandes pedras que trazem toscas figuras (37) de animais ou de seres estranhos, com braços e pernas esqueléticos e compridos (38), barriga descomunal, cabeça enorme, olhavam com horror e diziam baixinho: *Wãr-ri!* Como se essas representações fôssem uma perpetuação, no granito, da lembrança do monstro terrível e temido. Jamais presenciamos nenhuma dessas demonstrações de mêdo. Algumas vêzes nos temos aproximado de tais *petróglifos* e chamado perto

(37) São ainda petroglíficos ou inscrições rupestres, freqüentes em rios da Amazônia, especialmente o Rio Negro e seus afluentes. Estudo amplo sôbre essas inscrições fez B. A. da Silva Ramos, sob o título "Inscrições e Tradições da América Pré-histórica". — Imprensa Oficial, Rio de Janeiro, 1930. Não encontramos representações antropomórficas esculpidas. Koch G. há 50 anos atrás viu esculturas de "ausentes figuras" antropomórficas entre os Kubewana e Wanana (cfr. Nota 40, VII-3, b (8)). Descobrimos uma única como cabeças humanas, nos suportes de um trocano. Porém não pareciam ídolos, mas apenas adornos, e eram de recente fabricação (1947).

(38) Um dêsses desenhos se vê numa pedra do Carurú-cachoeira, rio Tiquié, pouco acima de Pari-cachoeira.

Tubo-de-ritmo (ahũ-pawã)

dos índios, e estes sempre se mostraram indiferentes a tais desenhos. Muitas vêzes encontramos semelhantes figuras nas paredes de casas de barrêiras e malocas, e temos visto, outrossim, crianças desenhando com um pau por terra, e, portanto, sem visos de religiosidade.

Pode-se, pois, afirmar que não há indício de um culto individual. Deve-se falar, no entanto, num culto social, que se realiza em ocasiões e atos bem determinados. São três, principalmente, as manifestações dêste culto social: a *oferta das primícias* ou dabacuris, a *iniciação* ou *puberdade* e o *funeral*. Todas três qual comunhão espiritual, exteriorizam a solidariedade do grupo.

2) *Festas religiosas com oferta das primícias.*

Festas religiosas, opinamos nos (39), são as suas *Poosé*, que os primeiros exploradores denominaram, com um término da Língua Geral, Dabacuri. Também se dizem *Wáx-tiye baxsé*, danças de *Wáx-ti*.

*Pôosé* propriamente quer dizer *oferta*. Consistem tais festas especialmente na oferta de peixe, do beiju ou dos frutos (40), e na comunhão da bebida e perfume, acompanhadas de danças religiosas e ritos, e com o instrumento misterioso que se denomina *Mpi* e sol no princípio da festa.

Do ordinário o indígena não sabe (41) (é o que nos parece mais provável), ou não quer dizer o motivo ou o sentido da festa. Respondem-nos que fazem assim porque os antigos sempre assim fizeram. Mas um, porém, assegurou-nos que assim fazem a fim de que nunca lhes falte nem o peixe nem a fruta.

O Wanano Tomás Paiva, (42) filho e possível sucessor do tuxaua de Caruru-cachoeira, rio Uaupés, aos 20 de abril de 1955 assim se

---

(39) [illegible] que [illegible] desde 1947 e que recentemente (1954) [illegible] Koch Grünberg, o qual (Z. I, 372, e passim) [illegible] danças religiosas e danças profanas. Koch, [illegible] para Wáx-ti, e até para outras [illegible] danças profanas.

(40) A [illegible] oferta que Cuim oferecia à Divindade os frutos [illegible] e mais tarde os povos pastores, como [illegible] tambem [illegible] cerimônias religiosas com a oferta de [illegible].

(41) Tenho a impressão que os moços mais em contacto com o civilizado e que falam o português especialmente aos que estudaram nos colégios da Missão Salesiana não revelam algumas coisas, com receio que as contem aos civilizados.

(42) É um indígena inteligente, viajado e bem desembaraçado. Estudou na Missão Salesiana de Iauaretê, onde aprendeu também o ofício de carpinteiro e já tem trabalhado várias vêzes para os civilizados da Colômbia e da Venezuela.

Quando nadam, temos notado [illegible] com o rostinho [illegible] água.

4 Silva SQ19 Tucano

Atestam o caráter religioso da festa:

1º — Em primeiro lugar a denominação mesma de *Wax-tipebaxsi*, dança de Wáx-ti. A Koch G. os indígenas de Ipanuré-cachoeira contaram que em certos dias ouviam na cachoeira rumor profundo, como do grande instrumento sagrado o *Miri*. É sinal, então, que o Wax-ti da cachoeira quer que se lhe faça uma festa.

2º — As afirmações (mais claras umas, mais veladas outras) dos indígenas, embora conservem oculta muita cousa, e em geral os velhos, que mais sabem, são os mais reservados. Indagando ao velho Tukano cristão Júlio, *tuxaua-bupá* de Pari-cachoeira (isto é chefe local e mestre-danças), porque punham aqueles enfeites na cabeça, nuca, braço, etc., respondeu-nos prontamente: «Assim como o Padre põe o barrete e seus paramentos na Missa, assim nós pomos a cangatara».

Manifestando ao mesmo tuxaua o desejo de assistir a um *Poose* promovido por êle, a fim de filmá-lo, respondeu prontamente: — Tal dança não é de brincadeira. Esse mesmo tuxaua, depois de nos haver feito algumas revelações e de nos haver cantado as canções do *Poose*, manifestou a um Missionário o escrúpulo de haver com isso cometido uma falta.

3º — A seriedade com que procedem. Nada de distrações ou levandade, nada de risos ou conversas (45). Como se estivessem cumprindo uma cerimônia séria e não um divertimento. Nada viram perturbar o seu rito. Cantando palavras misteriosas (dialeto antigo? ou com mais probabilidade mera corrupção) que êles não entendem, e dançando numa cadência lenta e marcando o tempo com pancadas mais fortes do pé direito.

---

(45) Em uma delas dança, alguém, entre os assistentes civilizados, pôs-se a rir. O tuxaua enviou um dos seus homens a avisar que não devia rir, como êle também não ria nas funções dos brancos. Se continuasse a fazê-lo, êle não lhe permitiria assistir à dança. Uma confirmação disso, como de religioso, parece-nos, descobri-lo também na recusa a um pedido nosso de repetir a cerimônia da oferta do peixe (*twaí poosé*) em melhores condições, afim de que pudéssemos filmá-la. Entretanto, êsses índios repetiram-nos, para êsse mesmo fim, as simples danças.

O tukano Antônio Barreto (dezembro de 1953) afirmou-nos que não fazem *poose* diante dos brancos. No entanto, tivemos oportunidade de assistir-lo e filmá-lo. Koch Grunberg (*Zwei Jahre*, pag. 202) pôde outrossim, assistir-lo no Umari-Mirapé, porém muitos índios mostraram-se desgostosos disto, e o tuxaua José não lhe permitiu tirar fotografias.

4º — Atribuem ademais a tais festas uma enérgica ação curativa. Pode expulsar tôdas as doenças e mesmo curar grandes chagas (46).

5º — As próprias liberdades sexuais, como adiante desenvolvemos (VII - 5, c (1)) constituem também uma prova do caráter religioso das festas.

6º — O sentido que atribuem à ornamentação. Esclareceu-nos o tuxaua Mandu de Iauarete, que punha na nuca as penas de gavião, porque foi aí que Deus (19) a ferira com a sarabatana. As penas de tucano nas costas, porque Deus o ferira nas costas. Enquanto que o braçal de pelo de macaco estava junto ao cotovêlo esquerdo, sendo êste o local onde fôra atingido pela sarabatana de Deus.

7º — Argumento ainda, seria, talvez, a disposição obrigatória e constante dos dançantes dentro da maloca. O mesmo Tuxaua-baya Julio, construiu por encomenda, para o Museu Salesiano de Etnografia de Manaus, em dezembro de 1953, uma miniatura de maloca, pondo os diversos objetos (bancos, vasos e instrumentos musicais) nos respectivos lugares, conforme o esquema abaixo.

É a seguinte a nomenclatura fornecida pelo mesmo tuxaua:

a) banco dos velhos, *buzkôrá duhuri-ko-mû-rõ*

b) banquinho do baya *kõ-mû-rõ*

c) banquinho do ajudante do baya, *bayari ice-tamõgõ kõ-mû-rõ*

d) e, f, g) bancos dos habitantes da maloca, *wîi-khâra duhuri kõ-mûrõ*

d) e, f, g) bancos dos convidados *samâri mazsâ duhuri kõ-mûrõ*.

As primeiras colunas denominam-se *sahâri kâri*: *boxta-ri*, porque os hospedes (*sâhari*), quando dormem (*kâri*) na maloca, armam suas redes próximas destas primeiras colunas (*boxta-ri*). Por essa mesma razão a trave que se apóia sôbre as duas primeiras colunas, diz-se *sâhâri kâri-tõrõ* (*tórõ*, no Uaupés *tênõ*, quer dizer trave).

---

(46) É o que pôde verificar Koch Grünberg (Zwei Jahre, 202): dem Yurunari-Tanze wird eine stark Zauberwirkung zugeschrieben. Er soll alle Krankheiten vertreiben, und selbst gross Wunden heilen". Jamais pudemos assistir tais festas em ocasião de epidemias, mas nem sequer ouvimos falar que as tenham realizado.

1 — Xatari xarã boxta-ri (coluna de dormir dos hóspedes). 2c — Ilaxsa wihyarã boxta-ri (coluna da cozinha). 3c — Dokasarieka boxta-ri (coluna da cozinha). 4 — Ilaxsa kuhari kuemũ-rã (banco do anfitrião). 5 — Ilaya kuemũ-rã (banquinho do chefe) ou mesa-mobília. 6 — Ilaxari xeramãgi kuemũ-rã (banquinho do ajudante). 7, 8 e 9 — Wirakara nahise kuemũ (bancos dos habitantes da malocal). 10 — Samari massã dutuxe kuemũ (banco dos convidados). 11 — Kaxpi-to (gato do xamã). 12 — Kaxpi tsamã dutuxi kuemũ-ri (banco de quem distribui o caapi). 13 — rede da tuxaua.

As segundas colunas dizem-se *baxsa ichhyari boxtá-ri*, porque junto à segunda coluna é que o tuxáua toma a posição inicial (*ichhyari*) para as danças (*baxsa*). E a respectiva trave chama-se *baxsa ichhyari-ferô*.

As colunas do fundo são denominadas *do'dkaro-ká-boxtá-ri*, pois aí se prepara o caxiri (*do'dkaro*, lugar onde se cozinha, assim explicou Julio). E *do'karo-ká-ferô* é a trave que lhe corresponde.

*Kuxpi-to*, pote do *kuxpi*.

Banco para quem distribui o *kuxpi*, *kuxpi tóami duhiri kômú-rô*.

Rede do tuxáua; o seu compartimento se diz *syôri nigôya turkú*.

Os compartimentos dos residentes da maloca se dizem *wi'i-ukhá-ropé turkúri*.

Na hipótese de ser uma função religiosa, devemos concluir que o templo é a maloca. O seu nome, baxsari-wi, dever-se-ia traduzir «casa da dança sagrada», e não simplesmente, «casa de dança». O Sacerdote é, evidentemente, o tuxáua, e não o pajé. Enfeixa, então, o tuxáua, os poderes doméstico, político e sacerdotal, precisamente como os antigos chefes de tribo entre os Gregos e os Romanos, e em geral, os chefes das tribos primitivas.

a) *«Poosé» sem os instrumentos misteriosos.*

b) *Procissão e Banquete rituais*

O tuxáua da maloca, que resolve promover uma dessas festas, determina o dia e a *oferenda*, e disso informa ao tuxáua de outra maloca (da mesma tribo ou de tribo diversa) onde vai fazer o seu *Poosé*. Nessa iniciativa as malocas se vão revezando. Outrora realizavam-se com maior frequência, 6 ou mais vêzes por ano, como o mostramos acima, constituindo a grande preocupação dêsses índios. Vão se vão ficando mais espaçadas, como também reduzida a sua duração. Antigamente duravam até uma semana inteira; hoje já são raros os casos em que duram 3 ou 4 dias, e comumente limita-se a dois dias.

Se o denominou *uai poosé*, oferta de peixe, todos os homens hóspedes levarão peixe moqueado. Se é de pupunha, *ãrê poosé*, devem obrigatoriamente trazer esta fruta, etc. Os *poosé* mais comuns são os de peixe, de beiju (*ahû-pa poosé*), de pupunha, de ingá (*mêrê poosé*), de manivara (*mexkê poosé*).

Na maloca onde se realizará o dabacuri, mais ou menos uns três dias antes, ou mais cedo ainda (o tempo necessário para a fermentação), as mulheres se ocupam no preparo de grande quantidade de bebida: caxiri de beiju, de cará, de pupunha ou de outra fruta qual-

quer em cochos ou talhas que são cobertos com folhas de bananeira, a fim de facilitar a fermentação. A atividade é grande, há extraordinária alegria, fortes gargalhadas, uma verdadeira algazarra.

Na manhã do dia aprazado (a hora variará conforme as distâncias donde procedem), vão chegando os ofertantes, trazendo a oferenda. Chegam ao porto (ou a pequena distância da maloca, se vêem por terra) somente com alguma pintura, ou também com algumas penas nas orelhas. Dois homens vão até à maloca, a fim de dar aviso da chegada e buscar a bebida. O chefe da maloca manda a bebida ao porto. Enquanto esperam os forasteiros vão completando as pinturas.

Quando já estão prontos, o que se dá sempre pelas 9 ou 10 horas, os visitantes mandam novo aviso — «está na hora». Tomam seus instrumentos musicais (*japurutús* ou apitos) e a *oferta* e, entre gritos, [illegible] a procissão pela estrada do porto à maloca (ou pelo caminho por onde vieram).

A frente vai o tuxáua seguido por dois músicos com seus *japurutús* (cf. VII-N e (Ja) 143) e os homens que trazem a *oferta*; atrás, os demais homens. Dão uma volta no redor da maloca, depois entram e dão duas voltas dentro, gritando, os que entram e os que já estão dentro preenchendo [illegible] o que se diz out, clamar). Os homens [illegible] da maloca estão dispostos, conforme suas regras de precedência, [illegible] do lado esquerdo da porta até o fundo.

As mulheres demonstram a oferta sôbre folhas de bananeiras ou [illegible], espalhadas no centro da maloca. Talvez tenha sobrado alguma oferenda no porto, vão buscá-la e fazem sua entrega.

As mulheres e crianças, que chegaram, reunem-se ao fundo, onde já estão os da maloca.

Terminada a oferta, e cessados os gritos e músicas, os de fora, [illegible] pelo seu tuxáua saudando individualmente os da maloca,

---

[illegible] na sua Vocabulário Nheengatú-português, descrevendo estas [illegible] versão Tucano, que quando os forasteiros chegam à tardinha. [illegible] em dois posse que assistimos entre os Tucano [illegible] um de peixe e outro de cunuri. Porém, o Tukano [illegible] afirmou que no Tiquié se [illegible] pela manhã. E foi também de manhã o que assistiu em Cachoeira (rio Uaupés) nos 24 e 25 de abril de 1955. [illegible] o etnólogo Armando Sarmento observou, em [illegible] Uaupés, que os dois que abriam a [illegible] tocando, e com [illegible] Atrás, vinham os outros homens, apenas [illegible] na mão direita, ritmando os passos [illegible] Nesta ainda que no interno da maloca, por onde voltou a procissão, havia espalhados pelo chão pedaços de beijú e cascas de pupunha (o posse era de pupunha).

começando pelo primeiro da fila, que será naturalmente, o tuxáua [illegible]. São os cumprimentos comuns e formalísticos: — «Viste? — Vim! [illegible] a festa? — Vim. — Trouxeste a oferta (peixe ou o nome da [illegible]? — Trouxe». Passa a cumprimentar do mesmo modo ao [illegible] homem da fila e depois a todos os demais. Todos os visitantes, por ordem de ingresso, iniciam o primeiro. Tudo, porém, com muita [illegible]. À medida que terminarem de cumprimentar os da maloca, [illegible] formando da fila direito, defronte aos da maloca, [illegible] da fila, conforme sua importância, da porta principal para o [illegible].

Dois mais homens da maloca distribuem uma cuia de caxiri a [illegible] hóspede. Depois que todos beberam, sentam-se, e as mulheres [illegible] vem cumprimentar os homens à relativa distância e sem [illegible] as mãos. Se as mulheres são da tribo dos hóspedes, êsses [illegible] são no [illegible] da própria tribo, e não na do marido.

[illegible] dos [illegible] fala em voz alta à própria esposa (um dos inúmeros da multiarcaísmo). Elas vieram trazer a oferta (peixe, fruta), [illegible] aranaçá. Ela, com duas mulheres vai ao meio da maloca e — «Vocês trouxeram com tanto trabalho peixe (pupunha) para [illegible]. Não preparamos um pouco de caxiri, às pressas». Então responde o chefe visitante: — «Podem comer à vontade. Foi pequena [illegible] (a oferta), mas trouxemos com boa vontade».

Os cumprimentos formalísticos duram uma hora e meia. Em [illegible] começa o banquete ritual, sem mais pragmática, comendo cada [illegible] quanto lhe apetece, antes os homens, mais ou menos agrupados na primeira parte da maloca; depois as mulheres e crianças, em grupos pelo fundo da maloca.

Terminada essa refeição começa o *jejum ritual*, i. e. a abstenção de qualquer comida. Só é lícito tomar da bebida preparada para a festa. Fá-lo-á servindo-se abundantemente, até mesmo exageradamente, de bebida, que, de resto, é muito nutriente, sendo como é, na realidade, uma papa rala (40).

*3º) Preparação para as danças*

O tuxáua a certa altura fala ao chefe dos visitantes, que está findo o banquete e «pode abrir a caixa dos enfeites» (*miahã pori, axkã-ro*).

(40) Certa vez, após onze horas de penosa travessia pela mata, chegamos a uma maloca dos Bará, situada perto das cabeceiras do ribeirão dito [illegible] (afluente do Tiquié), quando aí se fazia festa. Um dos nossos companheiros de viagem, da tribo Bará, que deveria estar cansadíssimo e mal nutrido, como todos nós, pois transportava a carga mais pesada, não aceitou os alimentos que foram preparados para os da nossa comitiva. Preferiu participar da festa com seus "irmãos", e contentar-se apenas de caxiri de beiju.

As mulheres da maloca vêm ajustar à perna dos hóspedes as [illegible] (*uria-sérã*), abaixo do joelho e executar a pintura do corpo. Essa mulher que o pintou será a parceira de dança do hóspede. Cabe ao homem, referem o Pe. Humberto Limpens e o Tukano Antônio Barreto, pintar a mulher, e vice-versa (50). Não nos esclareceram, nem pudemos verificar, se devem obedecer a uma regra ou é livre a escolha da pessoa a quem devem pintar. «*Yõo ka'rénõkõ*, o pintado por mim», assim é designado o homem pela mulher que o pintou; e «*yoo ka'rékõ* a que me pintou», é a expressão com que o homem a chama.

Distribuem-se os adornos conforme a importância social dos indivíduos, alternadamente, um para um dos hóspedes, outro para um homem da maloca. Se não houver bastantes para todos, e a maloca possuir também seus adornos, empresta-os para completar. Pode dar-se que alguns devam ficar com enfeites mais simples ou quiçá nenhum, só com pinturas, por falta de adornos.

Quando todos estão prontos, (e isto se faz sempre com muita paciência) sentam-se nos banquinhos os hóspedes tocam a flauta de osso de onça (*Yai o'ã*). Alguns minutos depois o seu tuxáua (*kumú*) — «Nós vamos festejar os da maloca com nossa dança e [illegible] até enquanto durar o caxiri». Faz, então, soar o seu *kistió* (amarrado ao tornozelo, cfr. VII-3, c (3a)); é sinal que vão começar as danças (51). Os demais homens imitam-no; depois cada qual amarra o seu *kistió* ao tornozelo direito, e ajusta o próprio *warsó-ro* (Cfr. VII-3, d (3)).

Nos homens que participam das danças pode-se distinguir três grupos, [illegible] aos pares (2, 4, 6), conforme o número dos dançantes.

1º) alguns com enxoval completo, lança, e escudo e, no ombro esquerdo, o *si-a parpa* (Vd. cura, VII-3, d (2));

2º) outros com enxoval precioso, porém sem escudo, nem lança, nem o *si-a parpa*.

---

(50) [illegible] a oportunidade de observar o "pintar" as mulheres pintando os homens. Servem-se elas, para êsse trabalho, não só do próprio dedo como também de fragmentos de arumã, à guisa de pincel, por vêzes três pedaços de arumã amarrados, de sorte a resultar, de cada movimento, um traço tríplice bem regular. O próprio Koch Grünberg (*Zwei Jahre*, 217) deixou-se pintar no busto e braços por uma índia.

(51) Tomou vulto também o tuxáua, antes de distribuir aos dançantes os crótalos, agitá-los simultâneamente tendo em cada mão uma das extremidades dos crótalos. Êstes *kistió*, assim num feixe, é que se denominam *kistio bazké*, que é o nome também de um dos instrumentos sagrados (Vd. VII-3, c (3c)).

3 (V) da terceira categoria são os rapazes, com adornos mais simples.

Os que não têm lança trazem algum instrumento de ritmo, o [illegible] ou pirako, ou as flautas, vindo estas envolvidas em penas de [illegible] de [illegible] *mahã iti*, ou do japú, *umũ-ka iti*, ou com um colar de carapaças de escaravelho, *pirako pirkõrõd pe'tori* (VII 3, d (2m).

Os números de danças seguem-se, um ao outro, conforme o programa tradicional, correspondentes às várias horas do dia e da noite. Alguns são mais longos, outros mais breves. Como variáveis também são os intervalos de descanso.

Algumas dessas danças desenvolvem-se parte dentro e parte fora da maloca, por exemplo a que se denomina «*wa'ãdri bazad*», que se poderia traduzir por «dança dos bonés», pois *wã-wã* é um boné trançado com fasquias de arumã. Os dançantes vão, outrossim, ao pátio da maloca pelas 4 horas da tarde, outra vez pela meia-noite, antes da aurora e, enfim, pelas 9 horas da manhã. Conforme as lendas os antepassados das tribos dançaram naquelas horas fora da maloca. E a festa é não só uma recordação, porém quer ser também uma reminiscência dos principais episódios da epopéia das suas origens.

Num dêsses numerosos de dança a mulher do tuxáua local entra no meio da roda dos dançantes e emite um grito longo e agudo, enquanto os homens continuam bailando ao redor dela. Essa solo é dita *yohogo* (52). Não deve tomar respiração durante êsse bailado, mas gritar com um só fôlego. Se respirar no meio do canto, [illegible] que não viverá muito. Nesta dança, diz uma informante Pira-tapuya (Emiliana Castro), imitam o pulo das cotias.

Vão ter início as danças. O caxiri é servido em grandes cuias. Cada indivíduo beberá quanto quiser. Se houver sobejo, o companheiro seguinte esvaziará a cuia, com direito, porém, a servir-se em primeiro lugar da cuia que logo em seguida será enchida. Os que distribuem a bebida representam a borboleta: têm uma pena sôbre cada orelha, simbolizando as asas e uma pequena gavinia do cipó com espiral na testa, à guisa de tromba. Avançam de carreira, com passos curtos, em ziguezague, imitando simultâneamente com a boca o zumbido de um inseto. Trazendo uma cuia em cada mão, dão-na a quem quiser tomar, antes aos homens e depois às mulheres. À medida que se esvaziam as cuias, voltam a enchê-las de novo e a distribuir no mesmo local e da mesma maneira.

---

(52) *Yohogo* é o particípio presente feminino de *yoho*, que parece ser uma onomatopéia do som que ela cantará. Uma informante chamou-a também *yohó bayá*, isto é *bayá* mulher (Vd. VII-6, a (2).

3 — Execução das danças

O tuxaua toma a sua posição inicial de dança, perto da segunda coluna à esquerda da nave central (*baxa phyari borta*). Vd. figura ao lado. Ao seu lado, por ordem de importância (53), se dispõem os outros homens. Todos com lança ou instrumento rítmo na mão direita, porém a esquerda sobre o ombro direito do vizinho e estão mais ou menos em semicírculo. Começa, então, um canto ao som dos instrumentos que batem no chão, simultâneamente com o pé direito (que os também com o crotalo ao tornozelo), num ritmo lento. Dão um passo para o centro do círculo e recuam, depois outro para o lado e vão-se deslocando circularmente, ora para a direita, ora para a esquerda, lentamente. Por vêzes se reunem num círculo que ora se estreita ora se alarga, ora saem rodando. Em dado momento as mulheres, uma após outra, vão entrando, numa posição obrigatória ao menos constante, durante todos os números de dança. Cada mulher cingi um homem e outro, com a cabeça algo inclinada para o lado, apoiando a mão sob o braço de um dos homens e os próprios braços segurando pela cintura os dois homens entre os quais ficam. Os olhares estão voltados para o centro do círculo, para o ponto convergem as pontas das lanças, *põxsc-phiri*, quando se trazem.

A certo ponto o tuxaua local da uma ordem indicando que está no meio da dança. Dois homens, dentre os principais, entram no círculo todos, fazem alguns giros e, por fim, voltam à fileira com

Uma ordem especial as mulheres abandonam seus lugares, gritando como que sua palavra. A dança termina com expressivo vozerio dos homens, todos os armados de lança saem, inclinando-se como a procurar alguma coisa e, avançando para um canto da maloca, dão um golpe com a lança para um ponto imaginário, a um metro de altura do chão. A isto chamam «golpe-ao-branco, *pexkã-à pundo*» (54).

---

(53) Importância que corresponde, mais ou menos, à idade. Não pudemos verificar se se colocam numa ordem rigorosamente correspondente à importância na própria Gens (conforme a classificação — IV-2, a (2), porque regularmente os dançantes são todos da mesma Gens.

(54) Que nos mostraram-se sempre muito reservados em explicar-nos o sentido e a finalidade dêsse "golpe-ao-branco", embora sem acanhamento, alguém nos tivessem revelado o seu nome, talvez supondo que não o soubessemos traduzido. Em outras ocasiões um indígena da tribo Tukano de Cachoeira Tapuia, confirmou-nos que "Não gostam dos brancos e os consideram todos inimigos". Outro indígena, pertencente ainda à tribo Tukano, porém do Papuri, à nossa questão se gostava mais do "branco" ou do "caboclo", indagou-nos o sentido da palavra

SQ.19 Tucano

Essas danças duram cêrca de vinte minutos, e terminam com os assobios, acelerar de passos e avançam para determinado ponto (55).

Seguem-se intervalos, durante os quais sentam-se em seus bancos, a proó então, os homens de um lado, as mulheres do outro, conversam alegremente.

Nesses intervalos é que as mulheres, regularmente um par ou trio, com uma cuia em cada mão, e cantando canções, lhes servem sucessivamente o caxiri, antes dos homens, depois as mulheres e crianças. São canções corriqueiras, ou, antes baqueiras, como dissemos (VII-3, e 2b), melodias, movimentadas, quase sempre de fundo nostálgico. Entremeiam, talvez, canções da tribo do marido às da própria tribo, pois pela lei da exogamia, as esposas serão obrigatoriamente de outra tribo (Cfr. VIII - 1, a (1).

Circula, outrossim, no intervalo um longo cigarro do qual todos fumam, desde o tuxaua até o último menino, passando-o, depois às mulheres. Os adolescentes e as crianças aproveitam dessas interrupções para algumas das suas brincadeiras.

E nesses intervalos, também, que se passam cenas amorosas, em pleno dia, talvez num canto mais escuro ou não, e mais livremente à noite (56) e podem retirar-se também para fora da maloca.

---

"Caboclo". A nossa resposta que caboclos eram os filhos de civilizado com mulher índia, como se dá no Rio Negro, respondeu prontamente: "Tus caboclos minha 'kuatiá', porque são nossos parentes". Porém isso não demonstrava muita consideração pelos próprios caboclos. Armando Sarmento, numa festa dos Kubewana, em julho de 1951, notou que se realizou quatro vêzes o golpe-no-branco, e que só um dos homens fincava a lança no chão, e sempre no mesmo ponto.

(55) O Padre Missionário Dom João Domitrovitsch explicou-nos que as voltas são a provocação do inimigo, e o grito final é o da vitória sôbre o mesmo.

(56) Resulta das informações obtidas que os coitos devem realizar-se fora da maloca (Cfr. VII-5, c). Koch Grunberg viu que os pares já saiam juntos, e foi-lhe dito claramente com qual finalidade (Zwei Jahre, 372). Porém, mais comum saírem os homens pela porta principal, e as mulheres pela do fundo, conforme prevê entendimento e encontram-se fora. Alguns dos jovens que passaram pelos colégios das Missões desprezam a libertinagem das festas indígenas.

Bastaria citar o seguinte episódio narrado por Patrícia Vasconcelos. No Rio Macú, que desemboca perto de Teresita (margem colombiana do rio Papuri) havia uma maloca dos Desana onde se faziam festas com tantas imoralidades que, numa dessas orgias abriu-se a terra e engoliu a maloca e os dançantes, "Bisiu bahudpó bad-peckoupó, Bisiu

O tuxáua dá início à segunda parte do programa pondo-se, como na primeira vez, junto da segunda coluna; seguem-no os outros e recomeça a dança.

Durante os intervalos que se sucedem às danças, aproveitam para dar vazão às suas necessidades, os homens pela porta da frente, as mulheres pela do fundo da maloca.

Há *intermezzi musicali* executados pelos moços que tangem «*flautas-de-pé*» ou *japurutus* (VII - 3, c (3c)). Temos observado que são, em geral, os rapazes mais moços, especialmente os solteiros, que tocam as *flautas-de-pé* e um pouco mais idosos os que tangem os *japurutus*. Os instrumentos estão combinados aos pares, desenvolvendo belos motivos musicais de pergunta e resposta.

49. *Distribuição do kurpi*

Pelas quinze horas serve-se o *kurpi* (Cfr. VI - 4, 1 (4)). Um dos velhos *Kêmü* preparou-o durante o dabacúri. Neste momento, para dar-lhe mais fôrça, êle «sopra» sôbre o *kurpi*. Depois afasta-se do pote, canta uma canção fazendo soar também o *yaí-gö* (Vd. VII - 3, c (3c)). Um índio velho, que simboliza a *borboleta*, pelos seus enfeites, postá-se entre as duas colunas centrais da maloca, sentado em um banquinho, para fazer a distribuição (57). Enche duas pequenas cuias e apresenta-as, com os braços estendidos, começando pelo velho que preparou o *kurpi* e depois aos demais, por ordem decrescente de idade. Quem quiser pode, depois, cuspi-lo fora, conforme indicamos e o demos visto. É, porém, sinal de fraqueza de que geralmente se abstém o índio. Demonstração de fôrça e masculinidade é bebê-lo e não tombar embriagado. Ademais é «a planta que faz sonhar», e o índio a quer, apesar do seu gôsto amargo. Após a ceia, por sua importância, aproximam-se os homens afim de beber o *kurpi* e logo em seguida também caxiri, para tirar o desagradável da primeira bebida, assim parece. Vêm munidos de *jacundá* de cipó (VII - 2, e (1)) e do *pau-da-onça*, se os há na maloca. O *kurpi* será servido ainda mais duas outras vêzes, observando-se o mesmo ritual. Não é, porém, mais obrigatório bebê-lo e muitos de fato, disto se abstêm. Começam os indivíduos a sentir-se entontecidos. Alguns, quiçá, tombem por terra outros vomitam. A êste, parece-lhe ver diante dos pés um pau, uma cobra

---

aparecer e devorar tudo". No dia seguinte ouviam-se as canções e mulheres de dança, no local da maloca desaparecida, local que ainda hoje se pode ver, sinalado por uma depressão do terreno. Aí perto mora, presentemente (1956) a cunhada de Patrícia.

(57) Na festa dos Wenamã de Caruru-cachoeira (rio Uaupés), aos 24 e 25 de abril de 1956, o primeiro *kurpi* foi servido pelo próprio tuxáua-loca, e antes das danças, pelas 13 horas.

os barritos, quer falta-lo e cai. O efeito inebriante varia com os indivíduos e é uma satisfação para os da maloca verificarem que o karpi era forte e os hóspedes estão tontos. Alguns, nesse estado de embriaguez, dão gritos, derrubam objetos, quebram vasos, arcos, flechas, o que encontram à mão. O Kõmã que «soprou» a bebida, [illegible] agora sôbre os indivíduos embriagados e excitados, a fim de neutralizar o efeito da embriaguez. Estas são informações do Tuxáua Antônio Barreto. O último, a bebê-lo será o tuxáua local, qual de lança em riste, dá três voltas dizendo umas palavras ininteligíveis. Enquanto isto um índio bate com uma vara na porta de entrada, gritando, outrossim, umas palavras.

Observando-se semelhante ritual serve-se três vêzes o *karpi*, sendo depois de cada vez, pôsto fora da maloca, ao sol, o vaso que contém a bebida. A última vez é já no coração da noite.

Conforme o costume Wanana, na primeira vez servem-se duas cuias a cada indivíduo, na segunda vez apenas uma cuia, e na terceira, duas cuias novamente. Quando há vários tipos de *karpi*, começa-se pelo mais fraco.

Por entre as últimas colunas da maloca arde uma fogueira, que um velho índio ativara com frequência (58). «É para iluminar os brincos dos bailados», explicam-nos.

Assim passam a noite, e um após outro vai caindo de embriaguez, cansaço e sono, enquanto os mais fortes continuam dançando. Em dados momentos há rumores como brigas, os homens vão bater violentamente na porta de ingresso. Sob a ação do alcool ouvem-se, a intervalos, gritos descompostos, risadas barulhentas, discussões animadas, não raro brigas e violências ou mesmo assassinatos. Aquele ambiente de excitação e de trevas é o mais propício para as práticas imorais (59). «A princípio executam-nas mais discretamente, saindo fora da maloca para essas relações, depois, quando mais alcoolizados, fazem-no mesmo dentro da maloca, nas redes ou pelo chão. Regularmente, porém, não há fecundação nessas relações (60).

---

(58) Nas subdivisões das tribos (Cfr. IV-2, a (2) cabia aos da última categoria manter aceso o fogo.

(59) [illegible] lamentava em fins do século 18 o Cônego André Fernandes de Souza, vigário de S. Gabriel: — "Nos seus banquetes e comezainas sempre há bebidas espirituosas a que chamam caxiri, mucururu, pajauaru e caeçuma, fôlas de mandioca, batatas e frutas, com que se embebedam até chegar à crapula". (O. c. p. 486).

(60) Assim nos asseveraram, e o atribuem à virtude de certas plantas que empregam nesses caxiris. É possível que o seu estado de embriaguez dificulte a fecundidade, como é verossímil, outrossim, que a afirmação de infecundidade resulte tão só da falta de meio de verificação ou de atenção ao problema.

Pensávamos que essas práticas imorais fôssem conseqüência da embriaguez. Assim também supunham os Missionários, embora um dêles nos relevasse que a embriaguez era intencionalmente provocada para satisfações libidinosas. Tivemos, no entanto, muitas e categóricas afirmações que essas práticas sexuais, mesmo os incestos não são ilícitas, senão mesmo estabelecidas pelos costumes, e por isso recomendadas pelos «Velhos», para assegurar a felicidade dos homens e a fecundidade da natureza (Cfr. VII - 5, c).

5º) *Comemorações lendárias — Rito do cigarro*

*Comemorações lendárias*. Temos a impressão que aos elementos primitivos dessas festas, chamemo-los *os elementos rituais*, com o correr do tempo se introduziram outros *profanos*, como os *intermezzi* musicais executados pelos indivíduos da geração môça, ao som das *flautas-de-pã* e dos *zaparutus*. Entre os elementos rituais devem figurar as *Comemorações lendárias*. Após os primeiros números de danças, destacam-se dos indígenas representantes das tribos que participam do *Wuz-tipe barsa*, e sentam-se em banquinhos, em frente um do outro, em a nave ocupada pelos homens. Êstes indivíduos são escolhidos entre os *Komuã*, e devem, naturalmente, apresentar as qualidades necessárias à sua função, a saber, conhecimento das lendas, memória feliz, viveza de fantasia, desembaraço de palavras.

Não vimos, nas várias vezes que nos foi dado presenciar essas festas, nenhuma cerimônia inicial. Sentados um em frente do seu antagonista, à distância de um metro, talvez, põem-se a narrar num tom cantarolado acompanhado de gestos largos e alternados do braço direito e esquerdo. Vão desfiando as lendas da origem do mundo e das tribos, bem como as façanhas dos seus ancestrais. Falam alternadamente, e, às vêzes, também simultâneamente interrompendo apenas para tomar fôlego, e quiçá, em dado momento, para recordar-se de mais algum episódio. O fato contado pelo seu competidor lhe servirá, alguma vêz, para lembrar outro episódio. Assim nos parece.

Se, por acaso, lhe trazem a cuia de caxiri, êle a recebe sem olhar, ficará com ela em mão até terminar o episódio que narra, e depois a sorverá rápidamente, entregando-a vazia a quem lha trouxe, e que ficou pacientemente esperando.

Parece tratar-se de um verdadeiro desafio. Um concurso de oratória e também de tempo, de rapidez de locução, de resistência física, ou melhor, pulmonar. Durante tôdo êsse tempo não se preocupam com os assistentes, seja talvez um branco indiscreto que se avizinhou para melhor observar. A certa altura, porém, interfere

um dos velhos da maloca e interrompe um dos narradores (não sabemos se o faz apenas no da outra tribo ou maloca que veio para o *poosé*, como no caso que nos foi dado observar), dirigindo-lhe umas palavras num rápido diálogo. Informaram-nos que é de praxe, e é um agradecimento pela sua atuação. Mas logo em seguida prossegue a competição com o mesmo ritmo e entoação.

*O Rito do Cigarro*. O ato principal das *Comemorações lendárias* é o *Rito do Cigarro*, que se realiza pelas 9 ou 10 horas da manhã, e que marca, outrossim, o encerramento oficial do *poose*. Dois enormes cigarros, presos cada um em sua forquilha (VI 2, b (5)), começando pelo tuxaua e um dos *Kõmũã*, passarão simultâneamente de bôca em bôca, até o menos importante dos homens que participaram das danças, e que se dispõem em duas linhas, uma em frente da outra, todos, porém, sentados. Cada homem puxa umas fumaças e passa o cigarro ao vizinho, e assim todos fumam várias vêzes, até consumirem-se os cigarros. O tuxaua e o bayá, vão alternando com os *Kõmũã* os episódios da história das origens, *dorporo-kase kezti*, recordando os diversos lugares por onde vieram os seus ancestrais, e as façanhas que sinalaram essa subida. Fazem-no, porém, num ritmo cantarolado, prolongando as sílabas finais de cada trecho que narram.

Concluído êste rito, recolhem-se os bastões e crótalos, os homens devolvem seus enfeites, que são guardados cuidadosamente dentro da caixa a isso destinada (VI - 2, d (7)). O tuxaua hóspede agradece em voz alta: — «Esteve muito bom o *poose*. Nós nos divertimos muito, sim».

Como remate dêsse rito e do *jejum* que devem observar nessas festas, o *Kõmũã* que preparara o *kurpi*, põe na bôsa de cada homem uma pimenta torrada. Para os jovens prepara-se um caldo com suco de limão e pimenta (e às vêzes também sal), e aplica-se-lhes ao nariz por um funil de fôlhas. O jovem deve puxar êsse caldo para a bôca e engoli-lo. Depois dessa cerimônia, podem tomar seu mingau ou outro alimento qualquer.

O divertimento pode continuar, principalmente entre as pessoas mais môças. Ordinàriamente, porém, recolhem-se à rede (freqüentemente duas pessoas na mesma rede) e descansam, para recomeçar os divertimentos com a fresca da tarde, pelas 16 horas.

5) *Brincadeiras*

Falamos dos números de *brincadeiras* que se realizam entre as danças, mas ocorrem principalmente no prolongamento da festa, isto é, do segundo dia em diante.

1º — Alguns dos hóspedes vêm zumbindo, como o carapanã (mosquitos crepusculares) e com um pauzinho na mão, vão picando os demais, que procuram enxotá-los.

2º — Chegam depois outros, fingindo-se *ku'siro* (animal talvez lendário, semelhante ao cachorro, dizem alguns, e que faz barulho na mata), fazendo rumor, arrastando pote ou pau, assim até o meio da casa. Os da maloca batem com um pau no chão para afugentá-los.

Temos assistido por duas horas a semelhante desafio, deixando por fim os competidores que prosseguiam com a mesma animação. Hoje, em dia, muitos da geração môça, em vez de ficar a ouvir aquelas monotonas narrações, preferem dançar animadamente com suas companheiras ao som da flauta-de-pã.

3º — Serve-se o caxiri; alguns não o querem mais. Os companheiros obrigam-no a tomar, sempre por brincadeira.

4º — O chefe dos hóspedes entra com um facho de turi (VI 5 a 4A) aceso, pois já está escuro. Os seus companheiros entram apanhando objetos, tirando frutas, beijú, comendo-os. Tudo fingindo um assalto à maloca. Simulação, de resto, tão bem feita, que os mulheres presentes se assustam, crendo que se trate de um ataque de inimigos e que vai ter início uma briga. Realmente muitas festas degeneram em brigas, e são intencionalmente aproveitadas para as vinganças recíprocas.

5º — Alguns dos hóspedes vêm agora aos saltos, de cócoras, arremedando o sapo, e com a bôca fazendo rumor caraterístico: «[illegible]». Entram na maloca e os que aí se acham perguntam aos sapos: — «Aonde vai?» — «Vou visitar os meus parentes» — «Os parentes morreram todos». E o sapo, a esta notícia, desmaia.

6º — Depois alguns se aproximam munidos de tipitis, para fingirem-se de cobras. Ao chegarem junto dos da maloca manobram o tipiti, encurtando-o e alongando-o sôbre êles como para comer os sapos (61).

---

(61) Wallace (Viagens pelo Amazonas e Rio Negro, pág. 379) descreve a "dança da cobra" que assistiu numa festa em Iauaretê. Duas enormes cobras de 30 a 40 pés de comprimento, feitas de cipó, capim e palha, e pintadas de côres vivas. Cada uma segurada por 12 a 15 pessoas, executaram movimentos de danças como ensaiando arremeter-se uma contra a outra, o que efetivamente se deu após alguns recuos e voltejos, com grande agrado dos espectadores.

— Rapazes e meninos, em número de oito ou dez, dispostos, pelo menos por ordem de tamanho, começando pelos maiores, [illegible] fila indiana, segurando cada qual, com as mãos os ombros do que o precede, e semirecurvados. Tôda aquela coluna humana vai passo a passo, gingando alternadamente para a direita e para a esquerda. O rapaz maior, que abre a fila, vai soando [illegible] denominado «cabeça-de-veado» (vd. VII - 3, c (3c)), [illegible] que tirava daxiri, repetidamente. De improviso êsse guião [illegible] recua, soando kero, kero, kero (depressa, depressa, de[illegible]), arrastando tôda a coluna a recuar. Às vêzes o movimento é [illegible] que alguns, geralmente os últimos, caem ao chão, provocando o brinquedo à hilaridade geral. Assim prossegue o folguedo.

Os que se sentem cansados vão dormir. Pela manhã tomam seu banho, bebem seu mingau e retiram-se à escoteira, isto é, todos de uma vez, sem despedida solene, mas aos pequenos grupos. Stradelli (Vocabulário Nheengatú-português, verbete *Tuucuri*) [illegible] que vai soar todos, solenemente, com nova procissão até o [illegible] na chegada.

*Poose* com os instrumentos misteriosos — *flagelação*

Adiante, com as declarações dos pajés Tukano Henrique de [illegible] e Marcelino de Juquira (rio Uaupés), empregam-se os [illegible] sagrados, ou *mirim* (*jurupari*s), (62), somente nos [illegible] de fruta (cucura, patatuá, cunuri, ucuqui, etc.), [illegible] de peixe (*kuri poosé*). Mesmo naqueles *poosé*, [illegible] pode-se soar a flauta *mirudko* (cfr. 3, c (3c)), como [illegible] fazer os povoados cristãos mais próximos dos [illegible]. Como indicamos acima, há dois tipos de *mandi*, o *mirumbu*, o maior, de seus 30 a 40 cm, como um [illegible] e que se sopra pelo orifício superior, o menor de [illegible] 15 cm com orifício no meio, lateralmente, por onde se faz soar. [illegible] último se realizaram, dois dos *dabucuris* que assistimos em [illegible].

Muito de madrugada, talvez pelas três horas, alguns homens fazem soar no pôrto, os instrumentos misteriosos, a intervalos. É o [illegible] da alvorada *ca ka-ti kifsé*.

---

(62) "Que devem cavar-nos os seguintes esclarecimentos: "Êste instrumento [illegible] antigo quem o encontrou foi um homem que tinha um filho [illegible] filhas. As filhas roubaram o instrumento e um passaro tocou-o [illegible]. Agora, com medo que o roubem outra vez, não o deixam [illegible] nem contam esta história na presença das mulheres". Este informa[illegible] deliciente lembra a lenda de Uaracapã (cfr. "Lendas do Uaupés").

As mulheres e crianças, que vieram para a festa, mal desembarcadas, dirigem-se logo para a maloca e fecham-se dentro (63) enquanto os homens vão preparar a procissão de *Wãr-ti*.

Dirigem-se, então, os hospedes para aquêle local pôrto para onde foram levados os instrumentos que habitualmente se conservam escondidos às mulheres, submerso no rio ou em algum igarapé. Eram os sons dos instrumentos sagrados. Nenhuma pessoa do sexo feminino pode vê-lo. Se o vissem *Wãr-ti* lhes causaria os mesmos males que outrora. Na realidade tal mulher deve morrer (64). A execução será feita pelo próprio pai ou marido, com veneno (raro violentamente), parecendo uma vingança de *Wãr-ti*. Ao ouvir os instrumentos, respondem elas em grito, dentro da maloca: «*ayu! ayú! miri, miri miri! ai! ai!* é o jurupari, jurupari, jurupari!»

Organiza-se a procissão de *Wãr-ti*, que levará a oferta conforme se descreveu acima, do pôrto até a maloca, procissão da qual só participam os do sexo masculino que passaram pelo rito da iniciação puberdária. Caminham nus, todos pintados, à frente, pendurado da cintura, o *warsó-ro* (ou tanga de tururi, vd. VII 3, d (2), cujos instrumentos são ao mesmo tempo agitados para cima e para baixo, e com movimentos laterais e contorsão do corpo. A semelhança do instrumento (65), os movimentos que lhe dão, as contorções do corpo dos participantes, as circunstâncias tôdas desta procissão e as liberdades sexuais que se seguem durante a festa, aproximam das procissões fálicas da antiguidade clássica no culto de Baco, Príapo, etc. Nestas festas indígenas, o nome de «*Phallus*» [illegible]. Nem sequer falta a semelhança das flagelações paroxísmicas [illegible] Cibele de Grécia e Roma, e em geral da civilização [illegible]

---

(63) [illegible] Koch Grünberg (Zwei Jahre, 217) que numa festa no Umari [illegible] Tiquie, havia-se construído uma barraca de palmeiras [illegible] as mulheres e crianças, enquanto na maloca [illegible] os homens, [illegible] nas paredes, faziam soar os *mirú*.

(64) Um dos informantes (Felisberto Kumõdene de Urubucuara, rio Uaupés) afirmou claramente: «se alguma mulher o vir, matá-la-ão». Outras mulheres declararam-nos que não podem ver o tal instrumento, porque se o vissem adoeceriam e haveriam de morrer.

(65) [illegible] envolvido pela entrecasca de tururi, que em Tukano se [illegible] *warsó-ro* (ligação da mesma raiz que *warsó*, semen; vd. N. 41, VI-[illegible]). Koch Grünberg (Zwei Jahre, 69) informa que nas pedras da cachoeira de Hipana (Uaupés-cachoeira, no rio Aiarí, afluente do Uaupés) encontrou uma representação do *Kóay*, filho de *Yapenkuli*, com longo pênis. É uma prova, parece-nos, da ligação entre o culto de *Kóay* ou *Wãr-ti* dos Tukano, e o do phallus. Talvez mesmo autorize a ver no instrumento um phallus, e por isso seja símbolo de *Wãr-ti* ou *Kóay*.

4: Silva SQ19 Tucano

Indio tocando o miri (Juruparí)

Sempre tocando os *miri* os homens rodeiam a maloca, onde se acham fechadas as mulheres e crianças. Tôdas estas saem pela porta do fundo, enquanto os homens penetram, pela porta principal, na maloca. Os homens, então, se fecham dentro, e por uma meia hora soam os *miri*. Não se tocam, nestas circunstâncias, outros instrumentos. Depois os instrumentos misteriosos são escondidos em outra barraca, ou no mato, donde, a intervalos, durante as danças, alguns homens os fazem soar.

Abrem-se, então, as portas da maloca, e regressam a ela as mulheres e crianças e a festa e o banquete ritual realizam-se como se viu acima.

Antes das danças se procede à flagelação dos meninos que não [illegible] da preclusão. Apanham com um caniço, ou com casca [illegible]. Um dos homens toma a criança pelas pernas, outro pelos [illegible] Nas danças lhe aplica umas pancadas nas costas e [illegible] Explicam que é para crescerem depressa, e por isso também, durante a flagelação, cuticam a criança.

A flagelação dos homens realizar-se-á sem interromper as danças. Cada qual, colando de pé, recebe três golpes nas costas e os retribui [illegible] O instrumento desta flagelação é o *adabi*, [illegible] é uma vara de quase dois metros de comprimento, [illegible] de cuja extremidade superior se extraiu a parte lenhosa e [illegible] muito flexível (66).

c) *Conclusão: Que pensar de Wãz-ti e de Wa:kõ?*

Perguntando aos índios da atual geração moça ou adulta quem é *Wãz-ti*, responderão prontamente: — «É o demônio»! — Contarão-se suas aparições e façanhas tremendas, como referimos acima. Aos [illegible] tradições ancestrais, e as leis dadas por êle, as quais [illegible] os costumes das tribos, e não podem ser violadas, a fim [illegible] seu espírito, que ainda sobrevive, e atrair seus cas-[illegible]

[illegible] mesmos índios informarão que *Wa:kõ* é [illegible] e alguns velhos atuais que chegamos a [illegible] nada sabem dizer dêle, nem pensam ou falam em [illegible]

[illegible] tribos, uma religião ou culto dos espíritos. São, pois, [illegible] uma verdadeira legião dêles. «*Wãz-ti* [illegible] *Wa:kõ*» é uma expressão que ouvimos. Há *Wãz-ti* [illegible] caverna, naquela gruta desse igarapé. Admitem *wai marsã*, [illegible] (67), como se fossem sereias ou espíritos que moram

(66) [illegible] *adabis* são bem feitos, e por isso são [illegible] para semelhantes circunstâncias. Nas outras tribos, presen-[illegible] servem-se para o flagelo de uma vara qualquer. Assegu-[illegible] muitas vezes, muitas mesmo a flagelação. Parece-nos [illegible] ao menos enquanto se acha presente [illegible] Os Ruãbãna de Amaduba (rio Querari) mostra-[illegible] como costumavam [illegible] a flagelação. A fim de que os [illegible] o flagelador toma impulso duas ou três [illegible] Alguns dos flagelados, como a [illegible] podemos ver profundas cicatrizes da flagelação [illegible]

(67) [illegible] (rio Papuri, Colômbia) há grutas, e os indígenas [illegible] entrar por dentro das *wai marsã*.

[illegible] Há alguns espíritos que foram encarnados, e outros, não. [illegible] com efeito, que o morto transforma-se em *Wãz-ti*. E mul[illegible] nem o Wãz-ti dos pajés, das p[illegible] das inimizas, e também do [illegible] os consideram inutilmente como inimigo, e, quiçá, [illegible] inimigo [illegible] n. 54 VII 4 e (2 a 3º). Receiam, por isso, [illegible] onde foi enterrado algum civilizado, com medo do seu espí[illegible] Wãz-ti. De uma ave noctívaga, denominada *uruãdi*[illegible] semelhança com o seu pio, dizem que não se lhe deve [illegible] pio, porque o que se aproximará, jogará pedra e fará mal [illegible] a tendou. [illegible] ave, conforme suas crenças, é alma de [illegible] defunto, porque é [illegible] Wã-ti. Há bons e maus espíritos.

[illegible] que estamos diante de uma confusão entre as noções pri[illegible] e as idéias que os viajantes, colonizadores e Missionários, em [illegible] épocas lhe trouxeram e até ensinaram.

Wãz-ti conhecemos nós é um término geral, para designar êsses [illegible] seres, como a nossa palavra «Espírito». Ocorre também o ter[illegible] plural, Wãz-tiã bassã, dança dos Wãz-ti. Provavelmente [illegible] do radical wãz e da determinação substantivante ti. Existe, de fato, na língua Tukano o radical wãz, que indicaria: *imaginar*, [illegible] *idéia*, *modêlo*. Wãz-kũ quer dizer *pensar*, quiçá do radical wãz [illegible]

Entre os diversos Wãz-ti ou *espíritos*, há um por excelência, o [illegible] como nós dizemos «O Espírito Supremo, Perfeitíssimo», ou [illegible] o Espírito.

Wãz-ti como se pode ver das lendas Uaupesinas (que examinaremos [illegible] detalhadamente em outro estudo, «Lendas do Uaupés»), não [illegible] um *Herói* da tribo e o *Legislador*, portanto o Supremo Se[illegible]. Êle pune ou pune as transgressões. A fim de esconjurar os [illegible] espíritos, cumpre propiciá-lo por ritos particulares. Pode-se ver [illegible] ou Wãz-tiã [illegible] sacrifícios de peixe, beijú ou frutas. É [illegible] também uma comunhão do grupo na bebida e no fumo. A *letra dos* [illegible] hoje corrompida e sem sentido, talvez fôssem os hinos sacri[illegible] (68). Aquelas palavras e gritos intercalares, quiçá sejam pa[illegible] e exclamações rituais. Temos assim um culto da divindade.

Mais tarde houve uma confusão entre o *Espírito Legislador* e [illegible] espíritos, isto é, entre o Wãz-ti e os wãz-tiã ou wãz-tiã *massã*.

---

(68) Um dos alunos da Missão de Pari-cachoeira (rio Tiquié), José Barreto, informou, que seu pai, um dos mais famosos bayá, ou cantores das festas e mestre de danças, lhe ensinara que os cantos durante o dabacuri ou posse, lamentavam a criação dos homens.

Qual poderia ser a causa? É certo que uma instrução religiosa não bem aprofundada pode dar origem a grandes confusões, até entre civilizados. E, indubitavelmente, fora de dúvida que tiveram sucessivamente contato com os cristãos, e não houve perenidade na obra de cristianização dos Missionários. O conceito, quem sabe, de um único Deus verdadeiro, que é Jesus Cristo, o «Deus dos brancos» (69) em contraposição aos falsos deuses, ídolos ou demônios, é que trouxe tal confusão. A identificação de *Wai-ti* com o demônio (70).

Tal se confirma-se o termo que a catequese emprega para designar a Deus, *Waskó*, que quer dizer «o que se foi». Faz assim pensar em Jesus Cristo que subiu ao céu (71). De *Waskó*, exceto o que a geração moça aprendeu dos Missionários de Dom Bosco e de Mont-

---

(69) Conversando [illegible] Dr. Pereira Nunes uma entrevista que teve com um [illegible] na Una-mas-fóros (foz do rio Uaupés), quando soube que [illegible] estavam a festa de Jurupari ou *Wai-ti* a pouca distância, mais [illegible] — Vocês acreditam no Jurupari? perguntou-lhe. [illegible] — E Deus? — E Jesus Cristo? — Jesus [illegible] Deus dos brancos), foi a resposta.

(70) [illegible] Yurupari, escreveu Paulo Ehrenreich (Re[illegible] Histórico e Geográfico de S. Paulo, [illegible], vol. II, p. [illegible] cultural, designação tomada [illegible] geral e fal[illegible] pelos Missionários [illegible] identificação [illegible] data da evangelização das tri[illegible] Gaspar Barleus ou Van Baerle [illegible] Marchman, a propósito de um [illegible] "nomen numti erat polysyllabum et ter[illegible] dubius" o nome do monte [illegible] "Jurupari-pukú", isto é, aqui o demônio [illegible] Amazonense", p. 94, Anais [illegible] Janeiro, 1882). Quanto à identifica[illegible] Nota 8, VII-4, c).

(71) [illegible] de 1956) na "Revista Colombiana de Antropo[illegible] um artigo de Marcos Fulop, sob o título: [illegible] "Cosmozonia". Êste artigo parece [illegible] que já conhecíamos em 1948. Depois de [illegible] criadora e de organização social exercida por Yepá Huake (assim grafa o nome da personagem *Waskó*), conforme [illegible] Marcos Sierra do povoado Guadalajara, sôbre o rio [illegible] termina: "Entonces Yepá Huake dijo a todos [illegible] en Diaw, [illegible] todo el mundo. Y Yepá Huake de[illegible] Y así se termina. Y se subió al cielo Yepá Huake". Con[illegible] grupo ao qual pertence Marco Sierra, [illegible] Marcos Fulop, grupo do qual também temos conhecimento, [illegible] dissidentes da Missão [illegible] Pirapuã. Como era de prever-se, a re[illegible] obtida por Fulop, tôda a relação de Marco Sierra [illegible] combinação da tradição das tribos do Uaupés e da Catequese [illegible]

[72] nada mais sabem dizer, nem pensam nele ou dêle se interessam. A conclusão seria, não que êles não conheçam a Deus, nem o venerem. Mas, sim, que desconhecem a Wá-kô, isto é, Jesus Cristo, o Deus dos brancos. Só conhecem, temem e veneram a Wáxiri, o Legislador que lhes pune as transgressões, permitindo-lhes [illegible] ações [illegible].

---

(72) Foi o benemérito Padre Pedro Kuk, holandês, da Congregação de Montfort, em princípios dêste século, quem por primeiro estudou a [illegible] Tukano, nesse idioma, deixou os primeiros livros de Catequese (Catecismos, orações, evangelhos, etc.). Os seus confrades, Missionários no Território Nacional do Waupés (Colômbia) e, ao depois, Missionários Salesianos, na área brasileira limítrofe, seguiram sua [illegible] quanto ao idioma e, consequentemente, também quanto à [illegible] catequética. Quando nos dedicamos aos presentes estudos, procuramos uma entrevista com êsse sábio glotólogo, doublé de Missionário; soubemos que havia falecido pouco tempo antes. Naturalmente ficou sem resposta a primeira questão que, por escrito, lhe fizemos, antecipando uma prometida visita, o saber: a origem da palavra Wá-kô. 1º — teria sido de sua cunhagem? e, neste caso, derivou do verbo wá- (= ser) adotara esta palavra (pròpriamente o [illegible] Masculino singular de wá-) para indicar Jesus Cristo? [illegible] como tradução a palavra Deus? É certo que os indígenas [illegible] não têm absolutamente noção da divindade, porque [illegible] na sua gramática, a palavra/latina *Deus* (ou castelhana [illegible]) para o novo conceito que a ensinar, como se serviu de tantas [illegible] nu castelhana (Virgo, gracia, pecado,=Santu, Anjo, [illegible]).

2º — Wá-kô provém de uma confusão sua com a personagem lendária O'i-kô?

Nunca [illegible] que fizemos ao Papuri, em 1948, expuseram-nos [illegible] Missionários Montfortianos Pe. Humberto Limpens e Pe. Afonso Kuipers, a opinião que explanamos nestas páginas, e [illegible] nos [illegible] "Wá-kô" significava "o que se foi", isto é, [illegible] Cristo que subiu ao céu. E verificamos que ambos eram da [illegible]

[illegible] repetem uma noção que o Catequista lhes fez pròximamente [illegible], as crianças dos Colégios Missionários pronunciam Wá-kô. Em outras circunstâncias, especialmente os que já há anos [illegible] os colégios pronunciam O'i-kô. Esta verificação que [illegible] da nossa primeira viagem ao Uaupés (em 1947), é que nos pôs [illegible] da história ou lenda de O'i-kô (e que hoje possuímos também [illegible] na fez de dois xamãs), e que nos levou a inferir o dilema: ou os indígenas estão identificando o Deus da Catequese, o Deus Cristão, [illegible] mais concretamente, Jesus Cristo, com a personagem lendária O'i-kô, ou, quiçá, o Padre Kuk, de um conhecimento imperfeito das lendas uaupesinas supôs que O'i-kô fôsse o Deus dessas dessas tribos e, por não notar bem a pronúncia (talvez por má prolação do seu informante), começou a grafar viciosamente Wáke, como aparece nos seus livros.

Note-se que os indígenas cristãos, os quais dão a *Deus* o nome de Wá-kô, fizeram um feminino Wá-kô (portanto Deusa), para designar a

É o que pudemos concluir também de uma conversa com um índio velho quase centenário (1947), Casimiro de Ipanuré.

1) *Suas Regras de conduta — Práticas mágicas*

O indígena está persuadido da existência de fôrças extra-humanas, ou misteriosas, tanto pessoais, como impessoais ou cósmicas, que podem ser úteis ou nocivas, e que lhe é possível dominá-las e de-[illegible] aproveitar-se. Isto é o que se entende por *magia* subjetivamente considerada.

Tôda a vida dos indígenas está, por esta razão, impregnada de tantas prescrições positivas ou negativas (73), decorrente dessa sua crença, ou, em outras palavras, está saturada de *práticas mágicas* ou *magia* considerada objetivamente.

Temos, lá e acima, indicado algumas dessas *práticas mágicas*, [illegible] outras, porém. Pelo número de práticas supersticiosas que vamos no nosso conhecimento (e quantas outras haverá?), pela sua frequência e aplicação nos fatos mais comuns de cada dia, tal-vez possa-se concluir que a mentalidade dos índios uaupesinos está dominada pelas crenças e temores mágicos como se fôra uma obsessão, o que, naturalmente, se reflete e manifesta em grande parte da atividade indígena.

Temos *ua-bozufise*, ou *ua-bozkufise*, o mal que pode advir de um dito, uma ação, uma pessoa, animal, ou cousa.

Podem dividir-se as práticas mágicas em grupos: práticas relativas à *lagoa*, à *cousas*, a *animais* e a *pessoas*.

Indicaremos antes algumas dessas *crenças supersticiosas* ou *magia*.

2) *Superstições e crenças mágicas*

A gamas das suas crenças têm sido expostas a propósito de vários assuntos. Nesta altura reunimos outras:

a) É uma crença geral a da existência dos *uai maxsã* ou «gente-peixe», como literalmente se traduz. Não só admitem que as pessoas podem transformar-se definitiva ou temporariamente em peixe,

---

(72) Virgem, Mãe de Jesus, e o plural *Wámãra* (Uaupés *Wámãna*) [illegible] para indicar os Santos. O Bispo de Manáus, Dom Frederico Benício Costa, na sua interessante "Carta Pastoral" (Fortaleza, Ceará, [illegible]) relêva à pág. 186 que os caboclos do Rio Negro, que falavam a Língua Geral, empregavam também o nome *Tupana* para indicar os Santos, e quando os queriam distinguir de *Deus*, chamavam a êste *Tupana-açu*.

(73) Estas prescrições, ou antes, proibições vedando entrar em algum lugar, [illegible] algum objeto ou pessoa, é o que hoje se denomina *tabuísmo*.

4: Silva SQ19 Tucano

como também citam episódios de tais transformações, com indicação dos nomes de pessoas, o local, a data e outras circunstâncias individualizantes. Em dadas ocasiões tais pessoas retomam seu aspecto humano.

Afirmam que os botos (mamíferos cetáceos da família dos delfinídeos) são «gente», «mazsd», e que em muitas ocasiões êles se apresentam sob forma de botos rapazes, a fim de ter relações sexuais com as mulheres, especialmente com as donzelas inuptas.

Não raro se mostram as fêmeas dos botos sob forma de mulheres adultas, a fim de atrair os rapazes. Quando tais aparições se dão à noite, dos rapazes e donzelas, parece-lhes que foi apenas um sonho, no entanto realizaram-se de fato, afirma o índio.

A *cobra-sem-cabeça* (*cecilídeo*) ou *cobra-de-duas-cabeças* (*lacertídeo*) *ozsó*, como se diz em Tukano, pode apresentar-se como rapaz simpático e fecundar as mulheres. Veja-se a lenda de *ozsó*. Porém não se trata apenas de um fato que se deu outrora (e o sabem com a certeza de um fato histórico), pode ainda suceder e, por isso, as mulheres evitam de ver a cobra-de-duas cabeças a fim de não sentirem sua atração.

b) Tamanduai é uma localidade situada à margem do Rio Negro, em posição elevada, com margem formando uma barreira ou rampa. Afirmam que nas vizinhanças dêsse ponto, porém no fundo do rio, situa-se a cidade dos *nat mazsd*.

Contam que, poucos anos faz, na margem oposta a Tamanduai, morava uma mulher. Logo depois do parto, contra as prescrições tradicionais, ela cozinhou e comeu cará. Indo, em seguida ao porto, encontrou um rapaz que lhe perguntou: — porque você está aí? — Quero ir embora, disse-lhe a mulher, porque o meu marido é muito bruto e me bate com frequência. — Vem comigo, convida-a o rapaz. E levou-a para dentro dagua. Lá no fundo ela viu que havia uma grande cidade com casas bonitas, fábricas de sêde (!), e também jardins e mata. Ela ficou aí morando com êsse rapaz. Certo dia ela lhe disse: — estou com saudade do meu filho, vou buscá-lo. O rapaz trouxe-a para fora dagua. Ela se achava recoberta de limo. Lavou-se bem, foi à própria casa, preparou leite (?) para o filho. Perguntou-lhe, então, o marido: — onde você estêve todo êste tempo? Há uma semana que está ausente. Ela, porém, não lhe deu resposta. No dia seguinte ela tomou sua criança e foi para o pôrto, entrou rio a dentro e não voltou mais. Ficou como esposa do rapaz nat mazsd.

c) Ainda de Tamanduai ouvimos relatar outro episódio. Um índio do Uaupés, estabelecido em Tamanduai (e são muitos os que,

à procura de melhores terras, abandonam o Uaupés e vêm se estabelecer nesta região do Rio Negro), saiu certo dia a pescar. Foi descendo ao longo de uma grande praia. Em dado momento vê êle, na beira da próxima mata, uma rede muito bonita, e sentada sôbre a rede uma môça loura, muito bela, com uma criança nos braços e cantando para adormecer a criança. O rapaz prestou atenção no harmonioso canto e pôde ouvir que dizia: — «vou embora para a minha terra, ela é tão bela ... lá não falta nada»... etc. Observou bem e viu que as cordas da rede eram sucurujú. De noite a môça loura lhe apareceu em sonho e lhe disse: — «eu hoje cantei para você, e você nem ligou».

a) Perto de Bela-Vista, no rio Uaupés, uma ex-aluna da Missão de Taracuá sonhou de noite que teve relações amorosas com um rapaz. Pois de manhã, quando foi tomar banho, veio perto dela um bôto bufando, agitando-se nagua, fazendo banzeiro, e querendo ter relação com ela. A môça ouviu também tiros debaixo da terra, sentiu o perfume que usam os moços «botos». Ela até sentiu desejo de morar sempre com os botos.

b) — Conta Patrícia Vasconcelos que sua avó era ainda mocinha e foi procurar ovos de tartaruga numa praia perto de Pinú-pinú (rio Uaupés) com outras companheiras, entre as quais uma que acabava de chegar ao ponto da iniciação puberdária. Foram cavando na areia e tiraram muitos ovos. Porém, em certo ponto a areia foi afundando, ouviu-se certo rumor e sumiu a donzela recem-iniciada. Pouco depois desapareceu a praia. A mãe da donzela desaparecida foi procurar por tôda a parte, porém a donzela não voltou mais. Lamentou, então, a pobre mãe, que os *uai marsã* lhe haviam roubado a filha, dizendo: *mãe, mãe, mãe, mãe-wapé yéõ markõ-ré*, as gentes que foram buscar minha filha».

2. *Práticas Mágicas*

Lugares — Há lugares (recesso das matas, grutas, cabeceiras de igarapés) a que jamais devem ir. Se por acaso passarem perto vizinhanças dêsses lugares, volverão o rosto para o lado oposto.

Abaixo de Ira-igarapé (médio Uaupés) há um lago, os velhos não o atravessam a fim de não terem filho mole e chorão.

Em Ira-igarapé há nagua uns panelões de pedra. Quando um indivíduo mergulha nesses panelões, se êle é preguiçoso ouve, então, um ruído como choque elétrico (rebôo das águas na concavidade? ou mais do puraqué?). Se não é preguiçoso, nada lhe acontece.

Perto de Jandiá (margem esquerda do rio Papuri) vêem-se três pedras achatadas e dispostas triangularmente. As mulheres não

devem olhar para essas pedras, a fim de que seus filhos não nasçam com a cabeça chata.

Não se deve pisar no rasto da onça, pois ela virá, sem ser percebida, sôbre aquêle que o fizer.

III. Uma pedra alta, à margem esquerda do rio Papuri, próxima da foz do ribeirão Cunu-cunú, denominada *Bard ôrtã*. Se uma môça subir sôbre aquela pedra, e algum rapaz, passando por aí, olhar para a môça, sentir-se-á atraído e acabará unindo-se a ela. Es a atração, no entanto, desaparece se o jovem pingar logo nos olhos gotas de líquido do cipó dito *pôrkud-da* (cipó estrêla).

Abaixo da «ilha do cunubi», na cachoeira da Bacaba (rio Uaupés), no lugar denominado *Ro-ñôã* (ponta do picilho), há uma pedra denominada *muhi-pú ôrtã* (pedra do sol ou da lua). Os que navegam o rio, quando por aí passam, depositam peixe moqueado, beijú, banana ou outra fruta. Conforme o wanana Tomás Paiva, o ofertante ao deixar a sua oferta apresenta a seguinte súplica: «meu avô, faça que o dia seja bom, não seja quente, não haja banzeiro (agitação das águas pelos ventos)».

III. Vários processos de lançar maleficios (*dohasé*) no caminho da roça.

1. — enterram alguma vara pelo caminho por onde deve passar o indivíduo desafeto, e «sopram» sôbre a vara; é o *yuzkö dohó-kö*; o malefício atingirá a pessoa apênas passar por aí;

2. — pode também, ao saber que uma pessoa deve passar por um trilho, cercar-lhe a passagem, atravessando um pau sôbre o qual se «sopra»; é o que se diz *kã pe-tpó-kö*;

3. — *Yi kã-pued* se diz quando «soprou» sôbre um fruto ou planta de uma pessoa qualquer (74) comer dêsse fruto, ou mesmo tocar em objeto «ficará retorcido». Crêem que todos os casos de estupefamento com paralisia dos músculos faciais e retorção da bôca, se devem a maleficios de algum inimigo.

Os Tuxano de Pari-cachoeira preparam seu jequí (vd. VI - 5, a ...) em determinada pedra da cachoeira; se o fizessem em casa, não conseguiriam pescar.

---

(74) Êstes maleficios locais, podem prejudicar, por engano, até quem o preparou. Contou-nos Patrícia Vasconcelos que seu tio Marcos lançara um maleficio num cacuri (vd. VI-5, a (2b)) contra quem aí fôsse pescar peixe. Pela manhã se esquecera de neutralizar o maleficio e tirou alguns peixes e dêles comeu. «Começou logo a sentir-se mal: dor de cabeça, vista escura, dor de estômago. Chamou, então ao próprio filho e declarou-lhe: — Meu filho, vou morrer! "Soprei" no cacuri, e por descuido comi dos peixes sem tirar o *dohasé*». Por felicidade escapou, recorrendo a outras práticas mágicas.

b) *Colares* — Stradelli, no seu Vocabulário Nheengatú-portuguêz (verbete *Uira-pura*) fala da crença na virtude protetora do colar, talismã. É provável que não se refira às tribos do Uaupés. Nestas não só não os encontramos, nem nos souberam informar que os houvesse antigos. Em casos muito raros, encontramos colares de sementes tricromiáticas (Vd. — 3, d (1)), com o caráter, parece, únicamente de adôrno feminino.

Põem sementes de determinadas plantas dentro da espingarda, a fim de atrair a caça. Os ovos de pescado, no anzol, têm semelhante valor.

Crêem na eficácia mágica de certas poções que se dizem *oxkó puçanga* (em Língua Geral). Algumas são preparadas pelo pajé ou feiticeiro; outras, por qualquer indivíduo. Há *puçangas* para lavar o paiol e o cacuri, e garantir-lhes abundante pesca.

Os pós para o preparo das *puçangas* são guardados dentro de cabaças, como o tucumã (*bexú*) e o ucuqui (*puxpyá*).

Mostram um asco particular pela defecação humana (75); por isso não capinam aquela parte do povoado que serve de sentina.

As mulheres preparam uma *puçanga*, e dão-na a beber aos rapazes, a fim de atraí-los para fins amorosos.

Na lua nova as mães dão a beber aos filhos chá de uma planta determinada (é *dipá* em Nheengagatú *peri-pirioca; cyperus piptorus*) e a criança «vem a saber tudo», isto é, ficará inteligente.

Há muitas variedades dessa planta, dotadas tôdas de virtudes mágicas:

1.º — de uma delas a mulher rala a raiz, ou esfrega-a nas mãos, antes de ir para a roça, e assim a mandioca dará muito bem;

2.º — outra variedade se esfrega no fio de anzol para atrair os peixes tucunaré (*bá-ú*) e aracú (*bo'tém*);

3.º — com uma terceira variedade a môça esfrega o rosto, mãos e seios, a fim de atrair a si os rapazes.

A primeira vez que usam uma calça nova, deve ser por cima de outra já velha.

Com relação aos fenômenos atmosféricos há muitas práticas e prescrições:

1.º — não se deve mostrar o arco-íris com o dedo; se o fizer, o dedo apodrecerá;

---

(75) Temos observado que, praticamente, a sentina é aquela parte menos profunda do pôrto, onde costumam tomar seu banho. Como já se acham mesmo nagua, fica facilitado o asseio pessoal.

4: Silva SQ19 Tucano

2º — quando há eclipse de lua, e enquanto durar o fenômeno todos se põem a trabalhar ruidosamente: o homem rachará lenha, a mulher limpará rumorosamente a sua casa, etc.; a finalidade dêsses rumores, já o revelava Wallace, é afugentar *Wãr-ti* que julgam estar matando a lua.

3º — quando aparece a lua nova, as crianças fazem ginástica, abrem as pernas, estendem os braços, etc. Dizem que assim o praticam para crescerem.

Põem-se a soprar para o céu, a fim de afastar as tempestades ou a chuva.

Quando as mulheres não querem trabalhar na roça, batem com a mão aberta nas orelhas, com o fim de chamar a chuva.

c) *Animais.* Se canta o *serê'nõ* (Uaupés *sene'nõ*) (um pica-pau pequeno) quando estão plantando, dizem que a roça será bem viçosa: *«serê'nõ uukã, komã-ro a'tirosa* (quanto canta o pica-pau, chegará o verão).

Atiram ao rio as cobras que matam; o enterrá-las atrairia outras cobras.

Quando encontram um pinto pelado de asas para cima, crêem que é porque êle viu o *curupira*.

Quando as mulheres vêem uma cobra-cega ou cobra-sem-cabeça, então elas volvem o rosto para o lado, a fim de que não venha à noite fecundá-las.

Quando alguem é mordido de cobra, os seus parentes devem abster-se de sal, pimenta e de peixe.

Quando uma criança é tarda para aprender a falar, dão-lhe a comer a carne moqueada do sapo *nãrterõ*, afirmando que assim começará logo a falar (76).

Fazem talhos no corpo dos filhos, quando ainda são pequenos, com dente de peixe, especialmente da piraíba, para que êle se torne *nãrapã* (em Nheengatu *marupiára*), isto é, feliz na pesca e na caça.

*Urukã-tufu* é o nome onomatopaico, em Língua Geral e em Tukano, de uma ave notívaga, cujo pio não se deve remedar, porque ela vira vingar-se de quem o fêz, atirando-lhe pedradas. Afirmam que essa ave é o espírito desencarnado de algum branco ou civilizado, *pezkõ-sã uè'ri wãr-ti*.

---

(76) Patrícia Vasconcelos, tukano do S. Luzia, rio Papuri, afirma que assim se passou com ela. E pouco depois de haver comido a carne do tal sapo, pôs-se a falar.

Queimam a casa do cupim e põem as cinzas nas feridas, a fim de não deixar cicatriz. Explicam que como os cupins refazem perfeitamente o seu ninho, quando arrebentado, as cinzas do seu ninho operam o mesmo resultado nas feridas humanas.

Se o cachorro entrou nágua na qual se espalhou o timbó para a pesca, o veneno não terá mais fôrça.

As senhoras, no estado de gravidez, não devem comer os peixes pirarucu e pirandira, nem a pirara, porque «êste come defunto», é a explicação que fornecem.

a) *Pessoas*. Tôda mulher grávida, *nihi-pazkó* (depois do quarto mês, mais ou menos), é um ser perigoso. São várias as prescrições referentes à mulher gestante. Por exemplo, não pode comer do peixe do espinhel (VI — 5, a (4 d)), do cacuri, nem participar da grande pescaria com o timbó. Se o fizer, a pescaria será infrutuosa, e o espinhel ou cacuri não apanhará mais peixe (77). Não deve tocar no arco ou flecha, a fim de não «estragá-los».

Do pai da criança recém-nascida diz-se também que está em estado de gravidez, *nihi-pazkó* ou *nihi-pkó*. Deve, então, pôr-se de resguardo «*ãtpoã*» (cfr. «Couvade, VIII — 1, b (3)), para que a criança fique forte.

Entre as mulheres é lícito assistir ao parto; os homens devem retirar-se. Se acaso há hospedes homens na maloca, então a parturiente fica em algum apartamento bem fechado, se houver. Ou retira-se, para dar à luz, em alguma barraca isolada ou mesmo no mato.

Antes de tomar seu banho de puerpério, a mulher não pode ver arco nem instrumento algum de ferro (facão, machado, azagaia, etc.).

Se o homem parar de braços abertos na porta da casa, durante a gravidez da mulher, ésta terá um parto difícil.

Se durante a própria gravidez a mulher se assentar para comer ou assentar-se à rede com as pernas pendentes, será difícil o seu parto.

A primeira vez que vão à roça, depois do nascimento de algum filho, praticam um rito especial denominado «*mirpi puri-ré dõ'tekũsé*», isto é, enlaçamento das fôlhas do açaí. O pai vai à frente e, atrás, a mãe carregando a criança. O pai, mais ou menos cada dez metros ou passos, amarra dois a dois os folíolos do açaí, e os atira sôbre o caminho. Se devem atravessar algum ribeirão, e a criança é do sexo masculino, faz com as fôlhas uma espécie de canoa e a põe sôbre a

(77) A Dom José Domitrovitsch estragaram o espinhel. Queixa-se o Missionário e indaga a razão. O espinhel "não presta", diz-lhe o índio, porque minha mulher comeu do peixe prêso naquele espinhel e está grávida.

4: Silva 8 SQ19 Tucano

água. A finalidade dessas práticas é assegurar que a criança e os da sua casa nunca errem o caminho, *wiseri-khára-re mir'pi pùri-ré* (literalmente).

A mulher recém-casada, que procura muito outros homens, transforma-se durante à noite em anta e sai pela mata a pastar (78). É o que se diz «kerko dohogo» (literalmente: estragada em anta). De madrugada transforma-se novamente em mulher e volta tirando ainda dos dentes os restos de capim. Indício dêsse fato é o empallidecimento da esposa. Porém, quando ela sai à noite, deixa as pernas na rede. Quando o marido o percebe, vira-lhe as pernas em posição contrária, isto é, para a cabeceira da rede. Por causa disso a mulher sentirá no dia seguinte fortes dores nos quadris. Em a noite seguinte o marido vira-as em sentido contrário ao da primeira vez, e cessarão as dores da esposa.

A fim de fazer *marupiara*, *mó'sipõ*, ao próprio filho, logo depois da imposição do nome, começam a dar-lhe a beber, em cada lua nova, a infusão das fôlhas de algumas plantas, como o *bará*, *peripiroca* e de uma variedade de *arucea* (de fôlhas menores que as da maloca). O mesmo resultado se obtem, esfregando as mãos, na mesma ocasião da lua nova, com tais fôlhas.

Há uma planta denominada *ká'nd pùri* (Uaupés *ká'nd*) cujas fôlhas tem um longo pedunculo, e das quais se servem para enxugar as mãos, como nós de uma toalha. Quando a esposa está no período de gestação, nem ela, nem seu esposo podem comer da fruta preta dessa planta, porque o filho nascerá com pescoço comprido. Ambos terão, igualmente, cuidado, durante a gravidez, de apanhar o ápice dessas fôlhas que usarem. Se o não fizerem, o filho nascerá com cabelo comprido sôbre o rosto ao longo das orelhas.

Os rapazes e môças quando se encontram fora da maloca, volvem as costas um para o outro, e dizem-se desaforos (79).

Cospem de lado quando passam perto de alguma pessoa com quem não se simpatizarem.

---

(78) Foram-nos indicados dois casos de semelhante transformação, ambos sucedidos pouco tempo antes desta informação (1953), um que se teria passado em Urubucuara, e outro em Iauarete, citando-nos o nome dessas esposas "sem vergonha", conforme a expressão de um dos informantes.

(79) Até os meninos e meninas dos colégios da Missão, quando se encontram em grupos, nos passeios, trocam desaforos entre si. Por exemplo, quando lhes dizem: — Vocês são preguiçosas! E elas revidaram: — Vocês são sujões de roupas (as meninas ajudam a lavar as roupas também dos meninos internos da Missão).

Se se casarem entre si os da mesma tribo, não terão filhos (80).

Admitem uma fôrça particular no «sôpro», capaz de operar curas (81).

Para ter filhos do sexo masculino, a mulher não deve tomar banho durante a última gravidez.

A mulher grávida quando trabalha, procura não fazer muito barulho (por exemplo evitar o rumor da cuia dentro do pote quando vai buscar água). Em caso contrário o seu filho será chorão.

Enquanto o homem queima a sua canoa não deve comer, nem beber, nem ir à sentina, para que se não fenda a embarcação.

Quando se está preparando o pari, não se deve comer carne.

Os Makú, no dia em que preparam o «curare» devem jejuar; diversamente o veneno não terá fôrça alguma.

Os defuntos transformam-se em mãz-ti (cfr. abaixo Festa Fúnebre). Êsses espíritos desencarnados, quando o são de um pajé, de indivíduos de tribo inimiga ou dos civilizados, são muito perigosos. Por essa razão não dormem perto do lugar onde foi enterrado alguém civilizado.

### 3) O culto dos mortos

Como consequência das duas crenças tão firmemente radicadas: a da alma dos indivíduos de cada grupo, que se julgam e denominam [illegible] e da existência e imortalidade da alma, era de prever um culto social dos mortos. Manifestações dêsse culto são o *chorô-elegia*, o *enterro*, o *banquete* e *festa fúnebre*.

1) *O chorô-elegia*. É impressionante a frieza e insensibilidade (82) com as quais êstes indígenas do Uaupés vêem definhar um membro qualquer da família, mesmo que seja o próprio pai, mãe ou filho. O doente acha-se numa rede, armada a um canto mais escuro; a poucos metros distantes, os habitantes da maloca ou casa

---

(80) O Pe. Afonso Kuipers, de Teresita (Colômbia, Rio Papurí) promoveu dois matrimônios de casais Pirá-tapúya, e foram fecundos, nascendo filhos sadios. Apesar disto não perderam a própria crença.

(81) Em setembro de 1947, de uma briga entre os Makú, nas proximidades do Igarapé, por ocasião de uma festa, um índio recebeu 5 grandes e profundos golpes de facão (nos dois ombros, testa, mão e nádega direita). Um mês depois estavam quase cicatrizadas, e explicaram-nos que o único processo de cura foi o seguinte: antes de tomar o seu mingau todos os homens sopravam sôbre o alimento que o doente devia comer.

(82) Por vezes parece-nos até uma crueldade, negando-lhes até a comida e a bebida. (Cfr. V-17).

nem conversam, comem, divertem-se, como se nenhum doente ali estivera.[83]

No entanto, mal advertem que faleceu — (talvez já se deu o decesso há algum tempo, e não o perceberam, ou houve engano [...] não faleceu) — homens e mulheres presentes iniciam o chôro-elegia uarirá.[84] Os homens emitem gritos e imprecações contra os causadores daquela morte, pois, tôda morte, assim pensam, é um verdadeiro assassinato perpetrado por algum inimigo, por meio de um malefício. Também as mulheres, denominadas justamente [...] (Uaupés uarirá), carpideiras, entre exclamações e com pen-

---

(83) Indagamos quando a pergunta do Missionário se há algum doente (vd. V-16) na maloca ou povoado, respondem sistemàticamente que não. Talvez o silêncio, ou a negativa, tenha sua causa numa crença ou conceito — algo qualquer, que nos é desconhecido. E desse mesmo conceito deriva a insensibilidade, quiçá apenas aparente, que nos causa espécie. Ao Padre que repreendia a um indígena que deixava sem alimentos o velho pai, respondeu: — "prra que dar-lhe comida? êle vai morrer!"

O Pe. João Marchesi escreve (op. "Os Tucanos "do Pe. Antônio [...] pag. 13): "Na mesma casa, às vezes agoniza um parente, mas [...] não terão o menor cuidado para poupar-lhe a algazarra de [...] trabalho de dois dias. Diante do próprio irmão morto prorrompem em chôro desesperado, e com a mesma naturalidade passarão [...] brincadeiras mais sonoras e descompostas".

(84) O Pe. Humberto Lummens, Montfortiano, nos primeiros tempos da Missão de Teresita (Colômbia, rio Papuri) viu um "chôro" no qual primeiramente os pajés reprimiram longamente fumaça sôbre a defunta, [...] casa, enquanto os homens gritavam ameaças contra os inimigos que, [...] causa da morte. Depois vieram as mulheres, e, ponde-se em círculo, iniciaram as lamentações.

Interessante, outrossim, o chôro que se realizou a 24 de junho de 1956 no hospital da Missão de Pari-cachoeira (rio Tiquié), e que presenciaram as duas Irmãs Enfermeiras. Uma jovem espôsa morrera, como conseqüência de um parto natimorto. Era enteada do falecido [...] Pari-cachoeira, Julio, pai do atual chefe local. Houve prévio [...] com os pajés, e mesmo depois que já em estado de extrema [...] fôra recolhida ao hospital, sua mãe, da tribo Tuyuka, tentara arrancá-la de aí para, novamente, submetê-la aos ritos dos pajés. Apenas se deu o desenlace, teve início na própria sala do falecimento, no hospital, o chôro, pelos homens e mulheres, acompanhado simultâneamente de dança, aos lados da rede que continha o cadáver. Entre os participantes do pranto e danças se achava uma jovem Tukano, que fazera o curso de parteira em Manaus. Distribuiram-se os dançantes aos pares, do mesmo sexo, e entremeavam as danças com pequenos [...] batendo, nesse momento ora nos braços, ora nas pernas. O [...] também presente, não participou das danças, porém, sim, do [...]. Transportado mais tarde o cadáver para a sala de entrada do [...], a velha mãe deitou-se no chão, debaixo da rede onde se deu a morte da filha, com as pernas e braços abertos, cantando o chôro-elegia.

[illegible] muito sentimentais, fazem o elogio do morto e imprecam contra as [illegible] ou pessoas que lhe lançaram o malefício reputado [illegible] morte. Abaixam-lhes a cabeça, atiram os cabelos para o rosto [illegible] lágrimas lhes vêm abundantes e a cada momento as recolhem com o indicador da mão direita e as sacodem ao chão. E [illegible] em longo tempo, numa tonalidade característica em que passam das notas mais graves às mais agudas. E as carpideiras sucedem-se por turno neste chôro panegírico-imprecatório. Mal se perderam no ar as últimas notas do seu pranto e suas últimas lágrimas se infiltraram no chão da maloca, as sombras da emoção desvaneceram-se-lhe do rosto, e a carpideira passará a conversar alegremente com suas companheiras, com seu habitual bom-humor e [illegible] gargalhadas.

A mãe ou esposa, estará, durante o pranto, de cócoras ou sentada nos banquinhos ao lado do defunto, e com a mão direita fazendo traços no chão. Em outros momentos roçam as mãos pelo cadáver e alongam depois os braços em uma direção do espaço, como se para lá estivessem projetando as pragas ou o malefício que vitimou aquele defunto.

Por vezes três ou mais mulheres se reunem num círculo fechado em que as cabeças se tocam, e a principal carpideira estende os braços, como a abraçá-las tôdas pela nuca: é o que se diz *ÿc'ô-[illegible]* chôro abraçado. A primeira carpideira começa, então, a fazer o elogio do morto, como dirigindo um diálogo com as demais que lhe repetem as palavras finais: ou dirigem interlocuções, tudo entremeado de soluços e gritos.

Findado o chôro-panegírico, que pode durar minutos ou horas inteiras [illegible] volta a serenidade, como se nada de anormal houvera acontecido. [illegible] Retomam seus trabalhos, alimentação ou conversas com as típicas gargalhadas habituais.

Se por acaso foi durante a noite que se deu o passamento, costumam [illegible] o chôro, velar porem conversando alegremente e bebendo chicha sem mais se preocupar com o morto.

Os parentes, à medida que vão chegando para visitar a família, casualmente ou porque souberam do falecimento, têm o mesmo desabafo de pranto rumoroso e laudativo. Por ocasião do entêrro rei-

---

[illegible] O outro pela morte de Julio, tuxáua de Pari-cachoeira, a 5 de julho [illegible] durou das 6 da madrugada até as 10 horas do dia, quando se [illegible] sepultamento.

[illegible] Se é um dos esposos ou filho que morreu, o pesar às vêzes, é sincero [illegible] relembrando, e para distrair-são vão passear por outras malocas.

miam o choro. Quando algum parente que morava mais distante, mesmo que seja meses depois, encontra o viúvo ou viúva, pela primeira vez, depois do falecimento do cônjuge, põe-lhe as mãos sôbre o ombro e não raro se renova a cena do pranto.

A simples notícia de algum falecimento é capaz de provocar também o pranto oficial. Note-se que, embora o morto seja da tribo do marido, muitas vêzes êste não dará nenhum sinal de pesar, continuará tranqüilo sua alegre conversa, deixando à sua mulher (que é de outra tribo) o encargo de prantear o morto.

Eis uma dessas elegias (87).

Paxkõ uxtigo —
a mãe que chora

Yoõ maxkõ! yoõ max-kõ! yoõ max-kõ!
meu filho! meu filho! meu filho!

Dexkõ yoõ doxporõ wẽ'ritohati mãã!
tudo eu antes não morri de ti?

Mãã ahũ-buxtyãgo, tuxtwãgo ritohapõ,
tu muito bem (belo), forte criaste

Mãã yoõ yukõse yoõ ekatise, yoõ maisé-mẽra,
minha alegria, meu amor-também (eras)

Mãã oyépo-a-ré, yoõ tisomẽ, mãã buhise-ré,
tu eu não verei, teu sorriso,

Mãã boxsoto-ré tisomẽ
tua voz não ouvirei?

Dexa-mãã marisé-mẽra até nãxkã-põ, até dyá-põ?
sem (também viverei) nestas matas, nestes rios?

Até wẽ-põ ya'ã-tuxtyasé-mẽra kaxti-maxsisari?
Nesta casa tão triste viver-poderei?

Mãã mãgo oxku-ré, poxkõ-mé-ré yoõ-ré axpo-yúgõ
tu carinhoso água, fogo para-mim aprontaves.

Mãã paxkõ wẽ'rise-re nãxkãtise-re dorétohapa.
tu pai a morte não pesada tornaste-me.

Mãã yoõ-re wai-re dyá-põ-ré yúgõ
tu para mim peixe do rio trazias

Mãã nãxkã-põ yuxko-dõxka-re yúgõ
tu da mata os frutos trazias

Mãã marisé-mẽra ỹoé-ré wẽ bésari?
tu sem que coisa farei eu (agora)?

Mãã-kori nãxkã uxtigo, mãã-mẽra maxsã-pé-põ sooseré.
os dias todos chorar, contigo no sepulcro descansar

Yoõ max-kõ! yoõ max-kõ! yoõ max-kõ!
o meu filho! meu filho! meu filho!

(87) Fornece-no-la o Missionário Salesiano, Pe. João Marchesi.

2) *O enterro*. Não há intervalo fixo entre a verificação da morte e o sepultamento. Nota-se mesmo certa ansiedade de sepultar o cadáver quanto antes. E não são raros os casos em que os preparativos para isto começam quando o indivíduo está ainda em vida, e antes em uso dos seus sentidos (88). Embora conheçam a cerâmica, e saibam executar vasos de grandes dimensões, não costumam sepultar os cadáveres em vasos, nem há indícios de que tenha havido tal costume.

O sepultamento é definitivo e a forma tradicional é o féretro-canoa, *puzko-so-koro*, isto é, dentro de uma canoa (89). Será a velha canoa, fruto do seu trabalho, companheira de suas viagens e de suas pescarias, ou alguma arranjada para essa finalidade. Serram-na em duas partes. Não pudemos saber como fariam antigamente, antes de possuírem serrote ou facão, para partirem a canoa em duas metades. Se o faziam, então, com o auxílio do fogo, ou se empregavam duas canoas pequenas como féretro. Sôbre uma metade depõe-se o cadáver com sua rede, arco, flecha, sua cuia com um pouco de farinha, um cigarro, e algumas brasas num pedaço de pau-d'arco (hoje uma caixa com alguns palitos de fósforos). Cobrem com a outra metade da canoa, fechando os orifícios, presentemente com pedaços de madeira, trapos ou qualquer cousa, e amarram as duas partes com fortes cordas de tucum.

O sepultamento com parte dos objetos de uso, costuma ser sobrevivência de nomadismo. Hoje explicam-nos os índios que é «para usar na outra vida». Outros objetos (canoas, facões, machados, redes, etc.) são herdados pela família; ou, mais pròpriamente, pelo

---

(88) Uma das Irmãs Missionárias Salesianas, de passagem por Umari (rio Uaupés), vê na maloca 4 buracos no chão. Surpreendida indaga o motivo. Disse que havia quatro crianças com coqueluche e, prevendo a morte, havia já preparado as covas.

Outro episódio impressionante deu-se em Taracuá (rio Uaupés), em 1954. Estava à morte o taxinda Miguel, da tribo Tukano, e os seus companheiros prepararam a canoa-esquife, e aí depositaram o enfermo quase sufocando-o com suas roupas, rede, cuia de comida, etc. Chegaram ainda a tempo os Missionários e observando que ainda estava vivo, transportaram-no para o hospital, e só veio realmente a falecer três dias depois.

(89) Ocasionalmente, na falta de canoa, soubemos de sepultamento dentro de tronco de caxari, em Teresita (Colômbia, rio Papuri). O Pe. André Lambert, Missionário da Congregação de Montfort, em Acuaricuara (Colômbia, rio Paca) fêz sepultar em esteira. Hoje, ouve-se muitas vezes "puzko-so mãri" não há canoa (pois não querem inutilizar as canoas boas que possuem), e sepultam em algum pau ôco, ou pedem um caixão aos missionários.

4: Selva SQ19 Tucano

filho mais velho. É símbolo de uma ligação que anda perdura entre os membros que estão vivos e os já falecidos (84); embora o motivo aparente seja a ambição e o interêsse do índio. E têmo-los visto fazer longas viagens, a fim de se apossar de algum objeto que pertenceu ao defunto.

A cova, suficientemente longa e pouco profunda, aberta outrora com simples pau de ponta e as mãos, se faz em a nave central da maloca (91), sem nenhuma orientação obrigatória. Naquele local, precisamente, onde êle passou as horas mais alegres da sua vida, preparando seu arco e flecha, adornando-se com os enfeites, em palestras interminas com os irmãos de tribo, e dançou nas longas noitadas da *poosé* (dabacuri), como se os vivos quisessem manter-se em união com os mortos.

É então, deposta na cova a canoa, renovando-se pelos presentes, coletivamente, o «chôro-panegírico» (92). Todos lançarão sôbre o féretro punhados de terra, até que a cova fique completamente cheia. Dentro em breve, pelo pisar dos transeuntes, o terreno estará tão firme como o restante do piso, e nada revelará que ali foi sepultado alguem (93).

---

(90) Dos *Kubéuãna* Koch Grunberg informa que queimam e lançam fora os objetos que pertenceram ao morto, a fim de que seu espírito não venha castigar os sobreviventes por sua negligência e cobiça (Zwei Jahre, pág. 314).

(91) Em Ambalha (Colômbia, rio Querari) os *Kubéuãna* estavam preparando, em janeiro de 1948, nova maloca, quando se deu o falecimento de um índio. Sepultaram-no, então, na área da nova maloca. Como, porém, esta estivesse ainda sem cobertura, improvisaram pequena coberta de palha sôbre a cova, à distância de um metro do solo "para o morto não tomar chuva".

Perto de Matapi (rio Uaupés) há uma ilha conhecida justamente como "ilha do cemitério", porque aí os Wanana sepultavam seus mortos. Não sabemos se isto se deva à influência dos civilizados.

(92) Isto se verifica até nos sepultamentos que se dão nos cemitérios das Missões, com a assistência do Missionário, o qual, muita vez, se vê obrigado, após alguns minutos, a pedir que cessem o chôro, a fim de proceder à absolvição litúrgica. Ao sair do cemitério foram vistas as mulheres fazendo gestos largos, com os braços, como para afastar o espírito maligno, ou projetar as maldições sôbre o causador da morte. Foram, outrossim, observadas queimando urtiga ao redor da casa onde se deu o falecimento.

(93) Não é verossímil o que informa Wallace (Viagens pelo Amazonas e Rio Negro, 637): "Em algumas das maiores casas há, às vêzes, mais de cem sepulturas, e quando as casas se tornam pequenas, e já estão cheias, fazem-se, então as sepulturas fora". Trata-se, com efeito, de pequenos grupos humanos, que muito raramente superam uma centena de pessoas; portanto não haverá, regularmente, nem meia dúzia de

Não se percebe manifestação alguma de mêdo pela vista ou contato do cadáver.

3) *Libação e festa funebre*. Pouco depois do sepultamento (talvez em a noite imediata), conforme as circunstâncias e o espaço necessário para os preparativos, realiza-se uma festa na maloca. Constando obrigatòriamente, como sempre, de abundantes libações de caxiri e das danças tradicionais, sôbre a tumba do companheiro.

Não consta, porém, que nesse caxiri funebre haja menção particular do finado. Quiça um dos convidados seja aquêle, a cujo maleficio se atribui a morte. Convidam-no para, na exaltação alcoólica, vingarem-se da morte do «*irmão*».

Note-se que não há repugnância em falar do «morto», *mihi* (finado).

Não há prova, nem, portanto, sinal externo de luto, que seja observado durante algum tempo. Nem vestígios de comemoração dos mortos, como poderíamos esperar de tanta união em vida, e de algumas circunstâncias do sepultamento, que já salientamos. A não ser que isto ocorra nas danças e cantos dos *poosé*. Porém não souberam, ou não quiseram esclarecer-nos os nossos informantes indígenas.

Em contradição com esta aproximação ou ligação com os mortos, existe a crença que o morto se transforma em *Wãx-ti* (espírito desencarnado) e que pode assustá-los ou até prejudica-los, como foi dito precedentemente (cfr. VII — 4 e 2 c — Que pensar de Wãx-ti?).

Outrora, entre os Taryana, informou Felisberto de Urubucuara, se, após a morte de um tuxáua, ou de algum *kõmũ*, realizava-se o caxiri (festa funebre) com «*dança de máscaras*» ou o «*chóro grande*».

## *CANIBALISMO*

Denomina-se *canibalismo* ou *antropofagia* a praxe de comer a carne humana.

Na América é costume verificado entre os *Karaiba*, donde a tendencia de incluir-se neste grupo tôdas as tribos canibais.

É provável que tal prática, em origem, se deva à falta de alimento. Veio, no entanto, mais tarde, pela orientação tôda da mentalidade do primitivo, a tomar um sentido mágico. Cumpre, pois, distinguir o *canibalismo econômico* e o *ritual*.

---

óbitos por ano. O clima quente e úmido provocará ràpidamente o desfazer-se dos restos mortais. E, ademais, não fica sinal algum denunciador de sepulturas.

4: Silva SQ19 Tucano

1. *Canibalismo econômico*

No canibalismo econômico ordinàriamente consome-se carne dos inimigos fresca ou conservada por vários processos que conhecem: é a *exoantropofagia*. Donde expedições guerreiras a fim de prover-se de carne humana.

É o que nos afirma Wallace (o. c. 639) dos Kubewana: — «Em Uaupés somente os Cubeus é que são verdadeiramente canibais. Êles comem os das outras tribos, aos quais matam em batalha. Para obter carne humana ainda fresca, fazem mesmo guerra com êsse fito proposito. Quando a carne ultrapassa o que podem comer de uma vez secam-na e enfumaçam-na ao fogo e assim pode ela ficar guardada por muito tempo. Êles queimam as cabeças dos mortos e bebem-lhe as cinzas com caxiri da mesma maneira que já foi escrito acima».

Quanto aos Kubewana ou outras tribos do Uaupés, parece-nos boa essa informação obtida por Wallace. Talvez em Wallace se baseie por sua vez Bento de Figueiredo Tenreiro Aranha, Diretor do «Arquivo do Amazonas» (1907, vol. 1, n.º 3, p. 80), no seu artigo por título «As explorações e os exploradores do Uaupés» onde afirma também: — «Quando na guerra fazem um prisioneiro, se é homem, massacram, se é mulher ou rapaz vendem, quando encontram comprador senão matam e comem, repartindo os pedaços por todos os da tribo».

São ainda recordados os recontros e represálias que se passaram há dois vinte anos entre os seringueiros colombianos e indígenas das margens do Cananari, afluente do Pirá-paraná (informação do colombiano Napoleão Estrada, em novembro de 1953, e de outros). Ainda em 1954 ouvimos falar de quatro colombianos trucidados, «moqueados» e comidos pelos índios *Pamõd-mazsã* (Tatú-piranga) dessa região, e de como lhes apetecem particularmente as pernas e os pés das vítimas. Aceitando, embora, a exatidão da notícia, parece que se trata de especial irritação e vingança, e não de antropofagia como um hábito tradicional, e muito menos de iniciativas coletivas com a finalidade de obter carne humana.

Koch Grunberg em várias passagens da sua obra *Zwei Jahre* fala do canibalismo dos *Hyanakoto*. Está, porém, apenas relatando informações de indígenas, e os Hyanakoto são Karaíba e residem fora da área que estudamos aqui. Temos também ouvido indígenas de várias tribos falar de *índios antropófagos* (94). Um velho Tukano

(94) O tuxaua Kumõdene de Urubucuara, Mandú, sabendo que havíamos feito longa excursão pelas cabeceiras do rio Tiquié, apresentou duas questões bem interessantes: se havíamos encontrado os índios antro-

de Pari-cachoeira, Gabriel Costa, informou-nos que há três tribos canibais, ou *Bauri-marsã*-se, a saber: 1º — os *Yat-peri marsã*, 2º — os *Pitt-parod*, 3º — os *Yourieã*, e que moram «lá para cima», isto é, nas cabeceiras do rio Tiquié.

Outros indígenas indicaram-nos os ferozes índios do rio Cauaburi, afluente da esquerda do médio Rio Negro, como sendo os famosos *Yat-peri marsã* ou Gente dente de onça. Êstes, porém, parecem ser apenas entes lendários (cfr. «Lendas do Uaupés»).

Dos índios *Pitao* da Colômbia, lemos que vendiam nos seus mercados carne humana dos seus escravos de guerra. Refere-se dos *Panches*, também do território Colombiano, que vendiam seus próprios filhos para serem comidos. Dessas tribos antropófagas narra-se que engordavam as vítimas destinadas a servir de alimento. Comiam-nas cozidas com milho em grandes panelas, ou mais comumente assando-os vivos num espêto que os atravessava pelo ânus.

*Canibalismo ritual*

Nas tribos que praticam a antropofagia é mais frequente encontrar o canibalismo mágico ou participativo.

Deriva da crença que, pela manducação das carnes de um indivíduo, se dá a mais íntima união possível com êle, e, portanto, a participação de suas boas qualidades: coragem, vigor, destreza, e até mesmo de suas qualidades psíquicas ou de seu poder mágico. Daqui os repastos sagrados, em que eram comidos (não raras vêzes em antecedência de festas, homenagens e solene imolação) as personagens tidas como superiores: o chefe, o pajé, os guerreiros valentes, etc. Mais comumente são personagens da própria tribo, é a endo-antropofagia.

Do tal conceito mágico se impregnou, entre alguns primitivos, o culto dos mortos. A fim de se revestir das qualidades desejadas que possuiam os próprios antepassados, surgiu o costume de ingerir-lhes as cinzas com especiais bebidas, por ocasião de particulares comemorações funebres.

Afirma Wallace (o. c. 638) que «Os Tarianos e Tucanos, bem como algumas outras tribos, cêrca de um mês após o funeral, desenterram o cadáver, que já está em adiantadíssimo estado de decomposição, e põem-no em uma grande panela ou forno sôbre o fogo, até que lhe extingam as partes moles, e o que se faz com o fétido

---

pofagos e se viramos os índios de cauda. Respondemos negativamente a ambas questões e aproveitamos para indagar dêle se acaso também já os vira, quem eram e onde residiam. Respondeu-nos também que não sabia, tão só ouvira falar dessas cousas.

[illegible] inteiro, ficando por fim apenas os ossos carbonizados, que são [illegible] cuidadosamente triturados e reduzidos a pó. Este pó, em seguida, é [illegible] em vários cochos (cubas ou tinas feitas de madeira) enor[illegible] de caxiri. O grupo presente, então, bebe o caxiri até [illegible] a última gota. Eles crêem assim procedendo que as virtudes do morto se transmitem a todos os que ingeriram esta be-

É costume que se encontra entre outras tribos da América, e [illegible] do Amazonas, conforme as informações dos antigos explo[illegible] por exemplo entre os *Warekena* dos rios Içana e Xié os *Ko*[illegible] do rio Japura, etc. (cfr. «Roteiro» do Pe. Noronha, 222). E. [illegible] me foi informado em Urubucuara, rio Uaupés, até co[illegible] vigorou até fins do século passado entre os *Taryana*, até pri[illegible] dêste entre os *Kubeuana*, conforme depõe Koch G. e no-lo [illegible] ram, outrossim, os Wanana de Carurú-cachoeira, em 1955, e e[illegible] xe atual das tribos do rio Cauaburi entre as quais os Pes. Miguel [illegible] e Antonio Goes presenciaram tais fatos.

O mesmo costume existiu também entre os Wanana asseverou-[illegible] Tomás Silva, filho do tuxawa de Carurú-cachoeira, e outros jo[illegible] Wanana, porém há já duas gerações caiu em desuso.

Entre o *Kubeuana* Koch G. (Z. I 310) presenciou um dêsses [illegible] maloca de Namacomba (?). O Tuxáua desenterra a cinza [illegible] predecessor, falecido 15 anos antes, e queima-a diante da ma[illegible] Os ossos carbonizados são, ao depois, limpos e postos num pi[illegible] fogo, dia e noite, por um mês, até que se reduzem a cinzas. [illegible] por ocasião de um solene caxiri, que se realiza com grande [illegible] de pessoas, são pisados, peneirados e misturados a uma be[illegible] preparada em grande abundância com milho. O Tuxáua, com um bastão, procura espalhar bem as cinzas na bebida e depois, com uma grande cuia, a distribui aos homens postados de pé ao seu derredor. É uma bebida reservada aos velhos e aos pais e mães de família que, embora não sejam idosos, já tenham três filhos.

Completa Koch que, nessa *festa cambalesca*, houve danças de [illegible] nas quais pôde verificar o seguinte particular: os parti[illegible] cipantes traziam uma faixa de casca amarela como estola, ao pescoço, e no braço esquerdo um estandarte de casca, na mão direita um tubo-de-ritmo (VII — 3, c (3 c) de embaúba com pinturas representando peixes. Avançam e recuam e vão marcando com o pé direito um monótono canto com inúmeras repetições.

A origem desse singular costume, que se encontra também em outras tribos tropicais da América do Sul, ensina Koch, podemos procurar na crença que os ossos que ficam depois da morte são o

último lugar em que residem os espíritos. E com a ingestão das cinzas incorporam os indivíduos a si a substância e o espírito dos antepassados.

5) *Moralidade*

Ao tratarmos dêste assunto, impõe-se a necessidade de umas advertências prévias.

1º — Limitamos a amplitude do têrmo *moralidade* ao sentido comum e vulgar, como se fôra sinônimo de moderação da concupiscência carnal, ou ainda como sinônimo de costumes vigentes nas relações sexuais.

2º — Apresentamos, naturalmente, aquêles pontos em discrepância com as normas da moral cristã e que, por isso mesmo, mais impressionam.

3º — Muitos dos costumes que conseguimos recolher não vigoram, evidentemente naqueles grupos, ou entre aquêles indivíduos que estão sob a influência das Missões Católicas. Mas os próprios Missionários são os primeiros a confessar, as modificações dos costumes ancestrais que conseguem no campo da moralidade, são fruto de muitas exortações, vigilância e da freqüência dos sacramentos e práticas religiosas.

a) *Conceito de procriação e matrimônio*

O conceito de procriação pela participação dos dois sexos, e tanto entre os homens como entre os animais, é conhecido por todos, até pelas crianças.

Parece, por outra parte, que não é igualmente tão conhecido o espaço de nove meses, como período de gestação (95). Nem sabem como se dá a fecundação ou se anima e se desenvolve o feto.

Vigora a lei mais rigorosa de exogamia de tribo (VIII — 1, a (1). É considerado mal e impossível o matrimônio entre «irmãos» de tribo (96), e *a fortiori* entre os irmãos de sangue. Se se lhes indaga o motivo da proibição, respondem simplesmente: — «Porque é mal».

---

(95) Uma moça Tukano de seus 20 anos, de S. Tomé, rio Tiquié, respondeu-nos que o período de gestação eram cinco meses.

(96) O Pe. Afonso Kuipers, de Teresita, rio Pauri, Colômbia, fêz dois casamentos entre *Piré-tapuias* que se tinham libertado, pela instrução religiosa, dêsses preconceitos, e se queriam como esposos. Deu-se, no entanto, grande reação dos índios que tentaram queimar a casa do Missionário. Mas, sob a proteção dêste, continuaram os dois casais a morar dentro de Teresita (1947), e com filhos sadios.

Alguns acrescentam: — «Porque não terá filhos», ou: — «Porque os filhos morrerão».

Dentro do matrimônio concebem como regulares as relações entre esposo e esposa, e como fim dessas relações, ou melhor, como fim do matrimônio, a *procriação de filhos* para a tribo.

Não reconhecem, porém, o direito exclusivo de um cônjuge sôbre o outro, quanto a essas relações. Não há, pois, falar sôbre a *fidelidade conjugal* (97) como não se fala de *virgindade* (98) da noiva. Legalmente nem pode existir a virgindade, como adiante se verá (VIII — I, b (7)). A Catequese, ao referir-se à Virgem SS. Mãe de Deus, emprega em Tukano, a expressão latina «Maria Virgo».

Supunhamos de início (e assim o manifestamos), que os fatos, por nós qualificados de *infidelidades conjugais*, não eram punidos porque o marido receiaria a vingança do rival ou que a mulher o abandonasse. Temos que reformar esta opinião, ante numerosas e categóricas afirmações de indígenas de oito tribos diversas (Tukano, Taryana, Pirá-tapuya, Ipeka, Tuyuka, Bará, Desána e Wanána), al-

(97) Um dos Missionários, com 30 anos de permanência entre os índios, em conversa com o autor dêste trabalho, mostrava-se impressionado por episódios de indivíduo que chegava a abusar da mulher de outrem, sem que isto causasse repulsa ao marido, nem estranheza aos demais.

(98) Na combinação de um vocabulário, havíamos notado vários fatos significativos. Muitos indígenas consultados por nós dentre os mais instruídos ex-alunos das Missões, não achavam um correspondente ao têrmo português *fornicação*, isto é, que exprimisse as relações sexuais ilegítimas. Indicavam os mesmos têrmos que para as relações legítimas entre os esposos, afirmando positivamente que não existiam têrmos diferentes para essas diversas relações. Igualmente desconheciam uma palavra correspondente à portuguêsa *adultério*, afirmando, outro sim, que não existe na língua Tukano. O Veterano Missionário Pe. Pedro Kloe, por necessidade de seu ministério, criou dois têrmos descritivos do fato, a saber, *Wodkise manapo-tipo-ne* e *Wodkisé nõmõ-tipõ-ne*, para exprimir respectivamente adultério por parte do homem ou da mulher. De acôrdo com consultas feitas a nove pessoas dos dois sexos, em diversos lugares, resulta que êsses têrmos combinados constituiam uma redundância inexpressiva. *Wodkise* ou *Wodkahise* significa simplesmente relação dos sexos, sem a qualificação da nossa moral cristã de legítima ou ilegítima. O acrescentar à palavra *Wodkise* o têrmo especificativo "com a que tem marido", *manapo-tipo-ne*", ou "com o que tem mulher, *nõmõ-tipõ-ne*" não lhe traz a noção de ilegitimidade que os indígenas nem concebem. Como também não existe na língua Tukano (e outrossim nos demais idiomas indígenas) um têrmo correspondente ao conceito de *virgindade*. Já em nossa primeira estada entre aquelas tribos, em 1947, a Irmã Superiora de uma das escolas femininas da Missão contava-nos como, ao ouvir tanto falar sôbre a Virgindade, com dificuldade de aprender êste conceito, algumas alunas vinham pedir-lhe mais esclarecimentos.

guns dos quais, bem informados sôbre outras tribos, com as quais convivem na mesma maloca ou povoado, nos afiançaram que o mesmo se passa com tôdas as tribos dessa região.

Depois que os indivíduos de ambos sexos passaram pela iniciação pubertária, — sejam êles casados ou solteiros —, lícitas lhes são as relações sexuais com grande número de pessoas da tribo e, sob certas condições, também com os de outras tribos, e com os próprios civilizados.

Concebem êles as relações sexuais entre os dois sexos (99) como um prazer normal para os indivíduos que atingiram a *maioridade* legal pelo rito pubertário, e, por isso, praticam-se tais relações publicamente, diante dos próprios pais ou do próprio cônjuge (100), como diante de qualquer pessoa realizam as várias ações fisiológicas de comer, beber, ou outra qualquer (101).

Só há uma e severa interdição de relações sexuais (e a mesma para as diferentes tribos das quais falamos nestes estudos), as que se passam entre irmãos de sangue, ou irmãos no sentido estrito, pelo e, entre filhos dos mesmos pais. Estas, bem como as relações entre pais e filhos, revestem-se de um caráter religioso, por essa razão são lícitas, ou mesmo aconselhadas e impostas em dadas circunstâncias (rito pubertário, eclipse, lua nova, caxiris e na roça) e fora disso se veladamente.

A mulher pode, legalmente, tomar a iniciativa para essas relações, o que sucede freqüentemente entre solteiros. Na prática, especialmente entre casados, pelo sentimento de inferioridade que a cultura à mulher dispensa quase sempre o convite dos homens. Jamais, porém, pode peremptòriamente recusar-se mesmo diante da proximação do seu estado físico e da multiplicidade dos pretendentes.

Cumpre ainda mencionar que também vigora entre os Uaupesinos o *Pirauíra* australiano. A saber, quando o marido deve ausen-

---

(99) O homossexualismo masculino ou feminino, parece, sempre foi tido como algo reprovável e, por essa razão, praticado sempre veladamente. Oficialmente, ao que consta, só existe no rito pubertário dos meninos.

(100) É compreensível que as relações embora legalmente lícitas, nem sempre sejam prudentes, e, por isso, não se realizem publicamente. É o caso do indivíduo que tendo brigado com o espôso, diante dêste não lhe toca a espôsa. Assim resulta de positivas informações obtidas.

(101) Por um sentimento misto de desconfiança e hostilidade para com os civilizados, ou mesmo por saberem direta ou indiretamente que sua moral condenam essas liberdades, não praticam diante dêles relações sexuais lícitas ou ilícitas. Talvez, sim, diante de alguns mais conhecidos, e com os quais quiçá tenham tido relações. *Cfr.* o que se dirá sôbre a iniciação feminina.

4: Silva SQ19 Tucano

tar-se, convida um seu irmão de sangue (é o primeiro indicado, a não ser que com êle o marido esteja brigado, assim resulta das informações), ou de tribo, para substituí-lo nas relações conjugais habituais (102).

Todos os informantes foram concordes em declarar que êsse substituto poderia procriar filhos com a mulher do ausente (103). Quanto à paternidade, no entanto, não foi concorde a resposta. Dois asseveraram que a criança será tida como filha do verdadeiro pai; enquanto os demais declararam que se considerava filha do marido ausente. Alguns até acrescentaram que se êste é «bom» (sic) agradece o serviço que lhe prestou o substituto, satisfazendo à sua mulher e dando-lhe um filho. Releve-se bem que ao substituto não advém nenhuma obrigação financeira, de manutenção da família do esposo ausente.

Parece-nos poder concluir que essa parcial discrepância das informações se explica sabendo-se: 1.º — que outrora não deveriam ser muito prolongadas as ausências, de sorte a criar o problema cuja solução pediramos; 2.º — que é frequente o uso de esterilizantes e abortivos, e que a mulher procura regularmente espaçar de dois ou mais anos o intervalo entre os seus partos.

Das informações supra pensamos se deva inferir que o *matrimônio oficial* visa apenas a *determinação da paternidade* e, portanto, a determinação da tribo a que pertence a criança, e de quem pessoa (pai e mãe) à sua criação.

O matrimônio é, pois, no regime que vigora entre aquelas tribos, uma *instituição social* destinada a assegurar a perpetuidade da tribo. Não visa atender a interêsses particulares dos indivíduos: tendências de perenizar-se, inclinações afetivas, *sedatio concupiscentiae* ou outros. Por isso, na realização do *ato matrimonial*, mais exato seria dizer do *contrato matrimonial*, não se consulta a vontade dos indivíduos, a qual, no restante da vida indígena, tem campo tão

---

(102) Dois informantes declararam que cabia à espôsa convidar êsse cunhado. Parece que essas informações se baseiam em fatos quiçá explicados por esquecimento ou precipitação de partida do marido ausente. A êste cabe o aviso oficial ao seu substituto.

(103) Em setembro de 1956, o Missionário Salesiano, Pe. João Marchesi, em uma viagem de assistência religiosa e sanitária ao rio Papuri, encontrou, entre os indígenas cristãos da localidade denominada Melo Franco, um episódio que confirma as informações acima que obtivéramos dois anos antes. A saber, um índio Tukano, casado, ausentara-se por dois anos, a fim de trabalhar nos seringais da Colômbia. Durante a ausência dêste, seu irmão mantivera relações sexuais com a espôsa do ausente, vindo a nascer um filho dessas relações adulterinas.

4: Silva SQ19 Tucano

amplo. No assunto matrimonial tem-se mais uma grande prova da «absorpção dos individuos pelo grupo», que caracteriza as tribos do Uaupés. Quase a cada ato da praxe indígena tem-se uma comprovação que entre êles não há *individuos*, só há *membros*, não há *pessoas*, só há *celulas do corpo social*. A própria vontade do individuo parece não saber querer senão o que o grupo quer!

b) *Conceito de pudor*

É difícil responder a estas três questões: 1.º — se o índio tem realmente noção de pudor, 2.º — como o manifesta, se por vestes ou pinturas, 3.º qual seja a parte pundonorosa.

Diante do civilizado é admirável a atitude de respeito e recato que mostram, sobretudo as mulheres. Atitude tanto mais perfeita quanto mais frequente seu contacto com os civilizados.

Enquanto os homens se apresentam com a máxima naturalidade e sem acanhamento algum, apenas com o seu «*Warsó-ro* ou cobre-sexo, diante dos brancos, sejam êstes homens ou mulheres, as índias, hoje em dia, só se apresentam vestidas, ou ao menos com uma saia, raríssimamente um saiote ou tanga. Porém, entre si não observam tal recato. O civilizado tem muitas provas de que a mulher se vestiu para recebê-lo (104), já o relevava Wallace, há um século. Muitas vezes, ao aproximar-se inopinadamente, percebe o civilizado correria de mulheres para algum canto escuro da maloca ou para a mata vizinha, a fim de se vestirem. Nos trabalhos da roça, de ordinário as mulheres estão nuas. É frequente deixarem suas saias na canoa, no pôrto de algum ribeirão onde desembarcaram em demanda da roça.

Muitas tribos andavam completamente nuas, depõem os primeiros exploradores, como o Padre Acuña (1637). O Vigário Geral, Dr. José M. de Noronha (1759) falando da nação Tecuna escreve: — «As suas mulheres não tem compostura alguma. Os varões todavia cobrem as partes destinadas à geração com franjas largas, feitas de [illegible] de certa estopa branca que tiram de cortiças de pao» («Roteiro», n. 139). O Poeta Gonçalves Dias, que foi Inspetor Escolar no Amazonas, escreve: — «Os homens que entre êles parecem ser os mais pudicos, usão no Uaupés, de uns como suspensórios a que dão o nome de *cucios*, semelhança ou arremedo das *tocambobas*

(104) Pensando não ser observada, em Montfort, rio Papuri, uma velha, ao voltar da roça vestida de saia e carregada com seu aturá cheio de mandiocas, tirou a saia, saltou da canoa, lavou as raizes na praia, depois, com a saia na mão prosseguiu para sua casa, arcada sob o pêso do aturá.

4 Silva SQ19 Tucano

dos primitivos Tupis. A imitação delles, também as mulheres usam "saias de uns cuelos de contas (puericuelos)". (Manaus 23 de out. de 1881 — Relatórios da Presidência da Província do Amazonas, vol. II p. 700). Com a saia na mão prosseguiu para sua casa, arcada sob o peso da atura.

Já dissemos (VI-3) o *Waxsó-ro* não parece ser para os homens uma «veste de cerimônia». Com efeito, encontram-se meninos grandes sem o *Waxsó-ro*, apenas com o cordel como cinta. Os homens com facilidade o tiram em presença de outras pessoas. Alguns o tem tão pequeno e imperfeito que mal cobrem, nem se percebe a preocupação de ajustá-lo bem. Por isso concluimos que é apenas uma veste de defesa na mata (105).

Quanto ao *Waxsó-ro* feminino, opinamos seja «veste de adôrno» ou «de atração». 1.º não só porque são artísticos, os de tucum, como especialmente os de missanga; 2.º quanto pelo fato de serem tão pequenos que não cobrem suficientemente; 3.º e de serem usados exclusivamente durante as festas, juntamente com as pinturas (106).

Das pinturas sabemos que as consideram apenas como adôrno, adôrno.

Quanto às partes pundonorosas, não parece que sejam os seios. Com efeito, sem acanhamento algum apresentam-se com o busto descoberto. Nas danças adornam os seios com circunferências vermelhas que permanecem ainda por muitos dias. Nem há também grande recato com as pernas, pois quando se sentam, ou se põem de cócoras, puxam a saia para o vão das pernas, deixando porém descobertas pernas e coxas.

Parece que mais se impressionam com o busto das pessoas, donde maior esmêro por parte dos indígenas, mesmo dos que já estão

---

(105) Em maio de 1954 expusemos a um índio Karapanã, por nome Vicente, residente havia vários anos em Uaracapá (rio Pupuri), nosso desejo de visitar a região dos Karapanãs, das cabeceiras do Aua. Espontâneamente, como a prevenir-nos o espírito, êle nos informa que por lá ainda não usavam veste alguma. Depois dessa excursão, conversando com uma senhora Tukanó, já cristã e que desde 1920 vive com as Irmãs Missionárias, à questão por que os homens usavam o Waxsó-ro e as mulheres, nada, ouvimo-la responder que as mulheres "não precisavam de uma proteção" física como os homens.

(106) Fomos informados pelos próprios indígenas que, enquanto os homens nas festas, além do pequeno *Waxsó-ro* se adatam o grande, próprio das danças, as mulheres, hoje em dia, raramente usam *Waxsó-ro*, nem sequer como enfeite da dança. Algumas pessoas declararam-nos que nunca haviam visto um *Waxsó-ro* feminino de avelórios, o *Yarkê Waxsó-ro*, e que as mulheres andavam sempre desprovidas de veste.

em relação com os civilizados, em tê-lo descoberto e pintado para as danças (107) talvez enquanto o resto do corpo está coberto com calça ou saia. Alguns indígenas afirmaram-nos positivamente a atração que os homens sentem pelo busto das mulheres.

c) *Incontinência extramatrimonial*

É conhecida a liberdade com que o índio trata de certos assuntos, com um realismo por vêzes grosseiro. E isto não apenas entre si, senão também com o civilizado. É sabida igualmente a imoralidade das conversas entre si nas viagens, como no interior das suas malocas, nas horas de descanso, intercaladas de frequentes e devastas gargalhadas. Há no seu vocabulário não só palavras ambíguas, como todo o conjunto de palavras e frases de calão imoral.

Sobram, outrossim, provas de incontinência prematrimonial e extramatrimonial. *Wodkise, toodkahise, yõdsé* ou *nõdsé* (108).

d) *Liberdades prematrimoniais*

Nota-se alguma vigilância dos pais, particularmente das mães (ao menos diante dos civilizados), sôbre as filhas que atingiram certa idade. Não basta, porém, máxime se atentarmos às circunstâncias de sua vida, seus trabalhos e costumes. É é manifesto um maior impuso sexual nas meninas que alcançaram certo desenvolvimento fisiológico, levando-as, não raro, à provocação (109) e convite aos rapazes.

---

(107) Sem perceber que estava sendo observada (assim nos parece), pudemos notar uma jovem Baré, logo após o rito de sua iniciação puberdade, absorvida em pintar os próprios seios, com o pó vermelho de urucú que tinha embrulhado em uma folha. Uma menina de seus 5 ou 6 anos procurou logo imitá-la, com desenhos semelhantes.

(108) Já o revelava o Cônego André Fernandes de Souza, Vigário de S. Gabriel, em 1793 — "Pelo que respeita aos dois vícios da incontinência e da gula, vícios tão genuínos à gente índia, que parece terem-lhe já sufocado e extinta tôda a liberdade" (o. c. p. 499). O mesmo depunha Frei Gregório de Bene, Missionário Apostólico do Uaupés de 1850 a 1852, explicando o motivo por que, especialmente em alguns lugares, devia diferir a administração dos sacramentos.

(109) As moças, durante o banho, movimentam a água com a mão aconcavada de baixo para cima, com rumor característico. A êste sinal responden os rapazes abanando diante do peito as mãos abertas, uma mais alta que a outra, de sorte que se cruzam sem se encontrarem, e como estão quase à flor dágua, produzem um rumor que é ouvido a distância de duzentos metros ou mais. Diz-se *Pixtwase* êsse rumor provocador.

4: Silva .SQ19 Tucano

Embora os velhos costumes estatuam que o banho das mulheres preceda o dos homens, e seja antes de clarear o dia, algumas vêzes se surpreendem os índios, nas horas quentes do dia, em banhos mistos.

As môças preparam filtros ou poções, conhecidas pelo nome Nheengatu de *Paçanga* (em Tukano *Or-kó*), que dão a beber aos rapazes para atraí-los a si, ou, ante os olhos dêles, trazem ou esfregam em si raízes e plantas às quais é atribuída uma virtude afrodisíaca.

Não são raros os casos de gravidez ilegítima de donzelas, embora conheçam (110) e empreguem meios anticoncepcionais e abortivos. A própria mãe (ou sogra quando se trata de recém-casada) ensinará êsses meios.

O filho ilegítimo se diz *Ko-borkáko* (literalmente significa "achado por ela ou dela"; no feminino *Ko-borkáko*), e não vem a constituir um obstáculo para o casamento da mãe solteira (111), nem cria problema para a mãe casada (112).

É considerado vergonhoso ter filhos logo no primeiro ano de casado, informou-nos o Pe. Humberto Limpens, de Acuaricuara, rio Paca. Querem filhos apenas dois ou três anos depois do matrimônio, e êste é também o intervalo entre os filhos. Uma demonstração de isso é artificial o dá a boa mãe cristã, ex-aluna da Missão, com filhos sucessivos e logo desde o primeiro ano. Compreende-se a dificuldade da mãe indígena que, além do cuidado e amamentação do filho, arca com o trabalho da casa e da roça, se não tiver o auxílio das filhas maiores.

Pelo conceito elevado que têm do *Branco*, não excluindo a influência das suas crenças mágicas, e pelos presentes que lhes pode

---

(110) Havíamos recolhido para o "centro de Pesquisas" de Iauaretê, algumas plantas havidas como esterilizantes e abortivas. Ao organizar o herbário, caíram algumas etiquetas identificadoras. Recorremos a três donzelas, e, com tôda a facilidade, ao verem as plantas, indicaram o nome e a finalidade, precisamente como constava nas etiquetas.

(111) Em Pari-cachoeira pudemos ver, em abril de 1954, uma jovem Tukano (só depois casada com um Desana de Iraití, rio Tiquié) carregando um filho ilegítimo, das suas relações com um rapaz Tuyuka, o qual, na Páscoa dêsse ano, casou-se com uma jovem Tukano de Pari-cachoeira.

(112) Com tôda a naturalidade, Maria Game, uma jovem *Ipeka* de Urubucuara, falando conosco sôbre a sua família, informou-nos ter um irmão menor *ko-borkáko*.

dar, as mulheres facilmente cedem aos desejos dos civilizados, e até orgulham-se de ter filhos com êles (113). Infelizmente entre os civilizados que alcançam aquelas regiões há aventureiros sem nenhum conceito moral, sem família constituída (114) ou com família regular da qual se acham afastados por longa temporada.

No rito de iniciação pubertária, a donzela não só tem uma instrução teórica das obrigações matrimoniais, mas também uma prática imediata com o pajé ou Kõmũ, e com outro rapaz de sua escolha ou da escolha do próprio pai (conforme a tribo).

Tôdas essas relações prematrimoniais (115) passam-se pública e oficialmente dentro da maloca ou casa, assim como as matrimoniais. Dão-se comumente entre elementos da mesma tribo, e, em alguns casos, também entre tribos diversas.

As donzelas e mulheres *Makú*, enquanto estão trabalhando para os residentes da maloca, acham-se na situação legal de concubinas de todos êles. É uma forma de serviço que devem prestar, sem que possam recusar, nem por êle receberão paga alguma.

Quando excepcionalmente, para a *amõsé* da donzela serviu um índio de outra tribo (sabemos de vários casos em Urubucuara, Pinúpinũ, Pari-cachoeira), ou algum civilizado (estamos igualmente informado de casos com indivíduos colombianos e brasileiros), também com êstes são lícitas indefinidamente as relações, e não apenas por parte da donzela. «Êle ficou da família», foi a expressão que ouvimos.

A afinidade que o matrimônio legal acarreta com a tribo da esposa torna, outrossim, legais as relações sexuais com os «parentes

---

(113) Em Urubucuara e Carurú-cachoeira, rio Uaupés, duas mulheres declararam-nos, em conversa, com certo orgulho, que não eram filhas de índio, porém de civilizados. Observamos aqui que, para o efeito de classificação social e de futuro matrimônio, eram consideradas da tribo a que pertencia sua mãe. Por exemplo, Antônia de Carurú-cachoeira, falecida em 1956, filha de paraense e tida como *Taryana*, casada mais tarde com Wanana.

(114) Não raro suas ligações com mulheres índias são de certa duração, a saber, todo o tempo que ficarão entre os índios, talvez a serviço público, ou são relações casuais.

(115) Desde 1947 sabíamos dêsse caráter oficial e público das relações das donzelas com o pajé, o Komũ, o rapaz do seu *amõsé* (VIII-1, b (7 b) e o seu noivo, *Mã-ra-pö nÿãkhõ*. E assim o informamos desde aquela época. Hoje sabemos que essas licenças legais tem uma extensão muito maior.

4: Silva SQ19 Tucano

da mulher); parentes no sentido amplo da expressão indígena, isto abrangendo todos os do seu povoado ou «*Gens*».

Às vêzes, participando dos caxiris e dabacuris há indivíduos de tribos diversas, e entre êles se passam, então, regularmente as mesmas liberdades sexuais (116).

No regime moderno de casas familiares (e o problema evidentemente só se pode pôr para êste regime) são raros os casos de uma aberta e duradoura vida conjugal fora do matrimônio oficial (117).

Mais raro ainda (é verdade que usam de tantas liberdades sexuais e são grupos tão pequenos que não poderiam ser numerosos tais casos) os concubinatos incestuosos entre pais e filhos (118). Nestes casos sempre evitam filhos, não só com auxílio das *puçangas* senão também por processos físicos e mecânicos (119).

2) *Liberdades extramatrimoniais*

Pensamos a princípio, e assim também os Missionários, que eram apenas eclipses na vida sexual reta e normal dos indígenas, a devassidão dos periódicos caxiris.

Já foi notado que nos mais solenes, os Dabacuris, as pinturas do corpo são executadas por pessoas do outro sexo.

---

(116) Koch Grünberg em várias circunstâncias ressalta as liberdades sexuais das môças até com indivíduos de outra tribo (*Z. I.* 189). Um Tuyuka declara-lhe sem rebuços a finalidade dos pares que saem da maloca: é a satisfação dos seus apetites (*Z. I.* 372). Uma jovem Tukano adiantou que nos Dabacuris, quando uma môça é convidada ao mesmo tempo por homens de diversas tribos, atenderá antes aos de outra tribo. Talvez seja uma forma de cortesia para com os visitantes.

(117) Embora se conheçam também exceções, em que intervém o Missionário para acelerar o matrimônio. Em Acuariçuára, 1946, rio Pàca, uma môça da tribo Suryana órfã de pai, passou a morar com um rapaz da sua tribo, em casa dêste que vivia em companhia de sua mãe viúva. Diante de tal fato bem conhecido, o Missionário observou-lhe que deveriam realizar o matrimônio religioso. O môço mostrou-se disposto e pede ao Padre que fale com sua mãe. Esta, porém, não só não consentiu por serem os môços da mesma tribo, mas expulsou imediatamente a môça da sua casa. (Fato referido pelo Missionário Montfortiano, Pe. Humberto Limpens).

(118) Um caso público em Teresita (rio Papuri), entre um indivíduo Desana, que não encontrava mulher, e sua própria mãe.

(119) Soubemos de um homem em Urubucuara, rio Uaupés, que teve dois filhos das relações com a própria filha: um foi abortado de alguns meses, e o outro pouco sobreviveu ao nascimento.

Em qualquer caxiri, quando exaltados pelas bebidas, sobrevém as liberdades. Fora do caxiri, depunha o Pe. Afonso Kuipers, de Teresita, «têm consciência (120) que é mal *ya'd*, e são, por outra parte, muito cheios de vergonha (?), por êsse motivo procuram esconder suas misérias e se embriagam a fim de agir com mais liberdade».

Não se pejam, porém, (confirmava outro veterano e igualmente benemérito Missionário Montfortiano, Pe Humberto Limpens, de Auaricuara, o qual passou quase 40 anos entre aquelas tribos), dos fatos imorais ocorridos nessas circunstâncias. Algumas vêzes até se gabam como sendo conquistas.

Qual conclusão dos depoimentos e inquéritos feitos, em várias circunstâncias e em lugares diferentes aos indivíduos mais fidedignos dentre êles, podemos afirmar que julgam *lícitas, boas* e *aconselháveis* as relações sexuais durante os caxiris, também aquelas que qualificamos de *incestuosas* (121). Revestem-se mesmo, conforme pensam e o depuseram, de um caráter religioso. Com efeito alguns informantes responderam que essas licenças sexuais se davam «para felicidade da tribo», «para que a roça desse melhor».

Confirmando essa opinião está, primeiramente, o fato que, as relações durante o caxiri se devem realizar por terra, fora da maloca (122), e que, em algumas tribos, a mulher deve antes beijar a terra, ao passo que as relações ordinárias se dão dentro da maloca e na rede.

Outra confirmação, parece-nos, dêsse caráter sagrado, é a opinião que têm como boas e aconselhadas as relações, mesmo incestuosas, quando as mulheres vão à roça. Relações até obrigatórias quando se trata de roça nova, à qual a mulher vai pela primeira vez.

Enfim, o caráter religioso das *relações incestuosas públicas*, documenta-se ainda pela circunstância de sua indicação na ocasião da lua nova e dos eclipses lunares.

Pode-se, pois, concluir que as liberdades sexuais, incestuosas ou não, nessas circunstâncias, têm o caráter de um rito em conexão com

---

(120) Êste conceito do Missionário só se pode aplicar, evidentemente, aos índios cristãos, instruídos na moral cristã; mas de nenhum modo aos demais.

(121) Na lenda dos instrumentos misteriosos narra-se o incesto do pai com as próprias filhas. E o mesmo se encontra em outras lendas. Não ouvimos em lendas casos de concubinato entre "irmãos de sangue" ou irmãos germanos. Parece que êsse, sim, lhes cause horror.

(122) Quando já se acham mais embriagados e excitados, violam também êsse costume, dando-se relações mesmo dentro da maloca. Assim referiram alguns dos indígenas.

a fecundidade da terra e da natureza em geral. Temos assim, entre as tribos do Uaupés, a noção e prática da *infichiume* que vigora também entre outros grupos humanos, isto é, as liberdades sexuais são cerimônias mágicas para garantir a reprodução da natureza animal ou vegetal. Aliás são práticas muito comuns, denunciadoras de crenças e cultos lunares, de origem matriarcalista.

E constituem, por sua vez, uma prova do caráter religioso das suas festas.

d) *Educação sexual*

É notável a precocidade das crianças, especialmente do sexo feminino, quanto a êsse assunto. Causa-nos admiração ver como são submetidos ao rito da iniciação pubertária indivíduos que, pelo exterior, parecem ainda crianças (Vd. foto).

Maior admiração ainda, o quanto mostram saber. Crianças bem tenras ainda, conhecem perfeitamente todo o mistério da vida, como qualquer adulto.

As meninas entram com sete ou oito anos para os colégios da missão e, nessa idade revelam não raro pleno conhecimento dêste assunto. Algumas vêzes o pensamento que já as absorve e preocupa é o do matrimônio, revelou-nos uma Irmã Superiora Missionária. Dêle falam amiúde, e talvez já saibam até com quem se vão casar, conforme os costumes da tribo e a vontade dos pais.

A escola dessa disciplina — é a maloca com o seu regime de vida, onde não há separações entre as famílias, onde tôdas as liconsiosidades se dão aos olhos de todos e por isso é de todos conhecida a vida íntima de cada um. Consoante informações obtidas, a própria mãe dará esclarecimentos às filhas e lhes ensinará os recursos esterilizantes e abortivos.

Por exemplo, na intimidade das malocas ou barracas, durante as horas quentes do dia, desprovidos de qualquer veste, o marido se divertirá, não raramente, defumando o corpo de sua esposa com a fumaça do seu cigarro. Dizemos se divertirá, porque o fazem entre sonoras gargalhadas, como pudemos ouvir, sem excluir que admitam neste rito alguma virtude mágica.

O nudismo, especialmente aliado à sujeira, apresenta algo de repugnante. Ademais, é bem verdade o axioma psicológico «*ab assuétis non fit passio*». E assim parece algo atenuada a influência do nudismo.

Talvez, porém, venha agravar êste estado de cousas, renovando sempre a ação degeneradora do nudismo, sua alternância com períodos em que se acham vestidos. Desta sorte as próprias roupas se transformam em excitação, máxime algumas mal ajustadas ao corpo.

Não se estranhará, pois, que nesse terreno medrem, outrossim, costumes antinaturais, como a masturbação (*swesé, pa-daresé, daraçáse*), a bestialidade (*dyayo-mêra wórátise* (123)), a sodomia (*nd-sirotise*), o homossexualismo masculino (*ó'mã-se'sarõ*) (124) e feminino (*nũ'mpo se'sarõ*), e a pederastia. E parece que semelhantes fatos se verificam mesmo onde é possível a satisfação instintiva natural.

5. *Conclusão*

Em conclusão, verifica-se entre essas tribos grave degeneração dos costumes, em confronto com os chamados «primitivos» humanos.

Presentemente grupos mais ou menos numerosos e frequentes de índios, homens e mulheres, são levados, especialmente os solteiros, para a extração da cuquirana, balata, chicles, seringa, castanha, piaçaba, tanto em território brasileiro como para o colombiano, ou como marinheiros das lanchas. Vão vendo, ouvindo e praticando vícios e imoralidades (125).

Observa-se uma tendência a baixar para S. Gabriel (hoje cidade de Uaupés) e Tapurucuará. Para Manaus não tanto. Por enquanto a noitada os traz periodicamente aos lugares natais. Até quando durará este estado de cousas? São raríssimos os casos conhecidos de doenças venéreas, embora a elas já aludam as lendas. Essa raridade talvez se explique pela simples malárioterapia espontânea (cfr. VII - 2 e (4 1).

É certo que há séculos estão em contactos mais ou menos frequentes e duradouros com os civilizados. É difícil determinar se nos cabe alguma responsabilidade em tal estado de cousas, e até que ponto. O problema é grave.

Compreende-se também daqui, que não sempre podem ser de boa harmonia as relações entre os Missionários, que vivem entre os índios, procurando trazê-los ao seio da civilização e à prática da

---

(123) *Dyayo-mêra wórátise* significa, propriamente, couto-com-cachorro, talvez por ser a única forma de bestialidade que praticam.

(124) Lembram-se alguns dêsses episódios nos piaçabais, em que grupos de rapazes passam meses, frequentemente em companhia dos civilizados, ocupados na extração da piaçaba, ou outros produtos, em lugares distantes dos seus povoados e aonde apenas uma vez por mês, quando muito, vem uma lancha trazendo mercadoria ("aviamento", dizem), pesca e sua alimentação, etc.

(125) A um índio cristão de Urubucuara, rio Uaupés, o Missionário chamava à ordem, porque apesar de casado vivia com outra mulher. E quando lhe recordou o mandamento de Deus, ouviu do índio essa expressão certamente aprendida de algum civilizado: — "Mandamento não dói".

verdade e moral cristãos (126) e algum civilizado que, por outros motivos, (talvez em contraposição aos dos Missionários), aparece ou reside por aquelas regiões. Qual a atitude verdadeiramente humana e patriótica? A que se decidirão os responsáveis?

6) *Festas e Desportos*

a) *Festas ou Caxiris*

1) *Caxiri*. Apresentamos o «poosé» ou *Wãz-tiye bursá* (em Língua Geral, *Dabacuri*) como um rito religioso. Não parece, porém, que tôdas as suas festas e danças sejam cerimônias religiosas. Antes, algumas são, evidentemente, simples divertimentos, e dizem-se pérú-siniri-nâmã (Uaupés, pêru-sini-nâmã) ou *caxiri* (em Língua Geral) (127). Com efeito, em alguns casos são quase improvisadas, bastando para a festa um motivo qualquer, ou mesmo um simples pedido de um visitante civilizado. Em tais danças não é obrigatória a participação, mas, enquanto alguns se entretêm divertindo, os outros continuam sentados nos banquinhos ou deitados nas redes, conversando e rindo, e, por vêzes, zombando dos que dançam, por alguma inexatidão dos movimentos.

Dêsses bailes, alguns são divertimentos estritamente familiares, dos quais só participam os da família (maloca ou casa), e não há convites a estranhos. Para outros são convidados também estranhos à família, sem, no entanto, a importância nem o número dos participantes do «*Poosé*».

Conforme a importância de tais divertimentos, será também a preparação, os enfeites, as pinturas e a quantidade das bebidas. Para (caxiri) vd. VI - 4, h). Esta nunca faltará; os enfeites podem faltar, ou serão usados os mais simples. Iniciada a festa, prossegue ininterrupta até que se acabe a bebida. Os que são vencidos pelo sono, cochilam um pouco, porém apenas despertos, continuam a dançar. É questão de orgulho e capricho mostrarem, as pessoas de ambos sexos, a maior resistência.

2) «*Bayá*». — Nas danças, tanto nos *Dabacuris*, como fora dêles, aparece uma personagem em destaque, denominada *Bayá*. Quase

(126) É grande a dificuldade com que defronta o Missionário para implantar a moral cristã. O Pe. Antônio Giacone lembra: "Essa crença (imortalidade da vida material, VII-2, e (1) os torna quase insensíveis e apáticos aos ensinamentos das verdades eternas. Dificilmente abandonam a corrupção em que vivem" ("Os Tucanos", p. 31).

(127) É também a opinião de Koch Grunberg (cfr. *Zwei Jahre*, pág. 372, cfr. N. (39) VII-4, e) 2 e 2°).

sempre terá um assistente oficial, com a denominação de *baya-re* ne-tandpô (auxiliar do Bayá).

O de *Bayá* é um cargo vitalício, no qual quase sempre lhe sucede o filho, porque vai aprendendo com o próprio pai, de quem, talvez já era o *assistente oficial*. A função de *Bayá* pode ser cumulada com de *tuxáua* ou *pajé*. É o caso de Júlio, de Pari-cachoeira (do Tiquié), de Vicente, Desana do Umari-igarapé, de Henrique Tayuka do ribeirão da onça (afl. do Tiquié), de Mandú, Makú das proximidades de Iauaretê, etc. Não há, porém, exemplos que tenha sido exercida pelo pajé.

Cabe ao *Bayá* dirigir os *cantos* e *danças*, nas festas, tanto religiosas, como profanas. Deve, então, sabê-los muito bem e zelar pela exatidão das danças ensinando-as à geração nova e corrigindo os defeitos. E témo-lo visto exercer com autoridade e garbo a sua função de mestre-sala em solenes *dabucuris*.

Quando não é êle o tuxáua, será, ordinariamente, um dos *ko-mú* (vd. VII - 2, e 3) e cabe-lhe o primeiro lugar imediatamente ao lado do tuxáua. Como êste terá os mais belos enfeites e, em certos números de dança na mão direita o «pu-pú» (vd. abaixo) danças *sa* parte, cujo significado não nos foi possível obter. Consta de uma pequena vara, tendo na ponta um cordel, de cuja extremidade pende um aro de cipó de seus 15 cm de diâmetro. Cordel e aro são ornados de delicadas e vistosas plumas de tucano. Com êste apa-rato «marca as danças», isto é, movimenta-o ritmadamente, mais ou menos como faz com a sua batúta o maestro que dirige uma orquestra.

3) *Variedade de danças* — Não se nota variedade nos passos de dança, são precisamente os mesmos para os mais solenes *Poosé*, como para os mais simples baxsari-nâmâ (literalmente quer dizer dia de dança).

Não há têrmos distintos equivalentes a *canto* e *dança*. A palavra *baxsasé* traduz as suas idéias, porque sempre cantam nas danças; e as palavras correspondem ao ritmo dos pés e à coreografia das evoluções executadas.

Distinguem variedades de *baxsasé*, conforme o instrumento musical que usam; cada uma terá a sua letra ou canção. São, nas danças religiosas, palavras ou sons articulados sem sentido algum, e repetem-se muitas vezes até que dura a evolução dos passos. O tuxáua-baya de Pari-cachoeira, Júlio Silgueira Machado, declarou-nos, e muitos outros com êle, que não entendem o que estão cantando.

Variam também as melodias que, de ordinário, são lentas, tristonhas, embora algumas sejam agradáveis e bem melodiosas. Por

[illegible] recem diversas denominações para as danças, algumas vêzes até nomes poéticos.

Em tribos diversas temos verificado a semelhança nas festas, os mesmos adornos e instrumentos. Cumpre relevar êste particular: as melodias das músicas instrumentais são quase idênticas, ao passo que a das danças-canções diferenciam-se um pouco mais. Nos passos das danças é que se não percebe diferença alguma de tribo para tribo. Isto, mesmo nos dois extremos da hierarquia indígena uaupesina, a saber: a nobre tribo dos *Tukano*, e a tribo escrava dos *Yaxu* dos arredores de Iauarete.

O tuxáua-baya Júlio deu-nos os seguintes nomes de danças, que se executam nos mais solenes *Poosé*:

1º com o *tubo-de-ritmo* ou *ahũnõ*:
*Ixki pũri bórosé barsá* — dança-canção «o cair das fôlhas do *Ixki pũri barsá* — «dança-canção» da folha do inajá», ou «inajá».

2º com o *maraca* ou *yarsá* (*ya'sá* ou *ñarsá*)
*yerkó barsá* — «dança-canção» da lenha»
*kari barsá* — «dança canção da massa do umari»
*kenó barsá* — «dança-canção do jatobá».

3º com um simples bastão-de-ritmo ou *yurkó*
*Poori barsá* — «dança-canção da oferta» (do dabacuri).
*Iuá barsá* — «dança-canção dos peixes»
*Wáx-ti barsá* — «Dança-canção dos Wáx-ti»

4º com a pequena flauta denominada *buá* (cotias)
*buá barsá* — «dança-canção das cotias».

Cantou-nos Júlio, o tuxáua-bayá de Pari-cachoeira (rio Tiquié) as várias canções, cujas palavras ou articulações damos a seguir, relevando uma vez ainda que todos os «versos» eram repetidos muitas vêzes (128).

---

(128) Lamentamos não ter tido uma máquina gravadora de som, no momento em que êsse tuxáua, com a sua melhor disposição de espírito, nos fornecia estas informações. Mais tarde, de posse de tal aparelho nos dirigimos duas vêzes a Pari-cachoeira, onde aguardamos longamente a oportunidade de ouvi-lo e gravar-lhe as canções. Não foi, porém, possível, o velho Tuxáua estava nos últimos meses de vida, atormentado, parece por uma úlcera interna, vindo a falecer a 5 de julho de 1954. Pudemos, [illegible] presenciar e filmar o sonoro funeral de um Tuxáua muito estimado. Obtivemos, no entanto, outras preciosas gravações e entre estas, as várias canções dos Wanana, executadas pelo tuxáua Mandú, de Caruru-cachoeira (rio Uaupés) e dos pajés de várias tribos (cfr. a "*Discoteca Etno-linguístico-musical*").

1 Dança-canção com o tubo-de-ritmo, ahú-wõ; 1.ª parte (129)

Ya, yá, kapikwa
Yaka peri kapikwá
Nuyaka peri
Dwika peri deyú deyú ayá
I royé
Má i-i, i-i-i (assobio final) (esclareceu que o assobio é para indicar que vai terminar)

2.ª parte

Ma-ri-a i-i-i (assobio)
De-yá ya-yó mari
Ikawé yo
Yoa mari ikawé yó
Yo mari ikawé dyakó
Dyaku i-i
Yo yó yó mari
Kawé mari i-i-i (assobio)

3.ª parte

Mi i-i, i-i-i (assobio)
Yoé marwé kana
Kawa do mariwi akawó-ro
Mariwi mariwi akawó-ro
Yé mariwi a-a-a akawó inawé
A mariwi a-a-a akawó inawé
Yoa kawá inawé
Yoa kawá inawé uu uu
Mari mari
Mari akawá inawé mari i-i-i (assobio)

2 Dança-canção com o yaxsá (maracá grande)

Ée-ya éóyá má

---

(129) Procurmos ser bem exatos na reprodução dos sons. Conforme nos parece resultar da prolação de Júlio, fomos separando as palavras e distinguindo os versos. Pode ser que alguma separação tenha sido um vício de cantor. E o cometem muitas vêzes, tomando fôlego ou respiração indevidamente entre articulações que deviam estar unidas, e vice-versa. Temos verificado que, com cantores de outros lugares, embora nos repitam a melodia de Júlio, não há coincidência perfeita, com os sons articulados que aqui publicamos. Êste fato não é de se estranhar, se nos lembramos que aprendem de oitiva e que são sons articulados sem sentido algum. Quando se atenta bem, nota-se que numa mesma dança não há rigorosa coincidência entre os dançantes. Observa-se pequena diferença de compasso e discrepância dos sons articulados.

Dyaka a pi kapi
Wamá kapi kapi yuamá
Ya mari wemá a-a kapi kapi
Ye kapi nemá yá wamá
Kapi kapi nemá yá wamá
Ye kapi kapi nemá wamá
Ey-a ey-á (assobio)

3 Dança-canção com o yarsá nas outras danças (fora do poosé)
Dyá ya i-i-i dyá yá i-i-i
Yé a marikêna
Mariwé mariwé ya mariwé
Marikenõ ka-yá yá
Marikenõ mariwé marikenõ mariwé
Mariwé mariwé mariwé
Marikenõ ka-yá (abaixa a voz, sons muito graves)
Mariwé yá-yá i-i-i
Mariwé yá-yá i-i-i (observou-nos que êste canto termina sem assobios).

4 Dança-canção com o bastão-de-ritmo, yuxkõ
Yá-yá yá-yá (assobio)
Yé kapité
Mari kwá yá kuyá-yari
Kapité mari kwá yakorõ yalima
Korõ dikuya ayá kwá-yari
Kapité mari apiná
Kapité mari kapité mari kuyá-yá kuya-ari
Kapite mari kuyá-yá yá yá-yá (assobio)

5 Dança-canção com o yuxkõ (130)
Yá yá-yá yá-yá (assobio)
E yá yá periku êê perikwé
Yaká yõ kayó yuai
Yá piré-ku-ii nomé-nõ
Perikwé pyaká wamé tyá
Pami kwai peri-dikú êê yó
Peri-ku-ii yá-yá yá-yá (assobio)

---

(130) Estes sons *Perikuii* (7.º) e *kuai* (5.º), são exatamente os nomes dos personagens principais das lendas Arwáke, correspondente respectivamente a *Buzpó* e *Oú-kõ* das lendas Tukano. Seria mera coincidência de sons, em línguas diversas? seriam canções arwáke aprendidas pelas tribos do grupo Tukano? Não seriam de origem Arwáke tôdas as danças destas tribos?

6 Dança-canção com o *yuzkó*
Ma dyá pa-wó (assobio)
Dyá diká apyá kapí akapyá
Kapí pawí diká yukú kapyá
Kapyá dewá yuku
Wapyá yuku deye-we
Kapyá kapí pawí dewá yukú
Kapyá kapí pawí dewá jukú
Wapí-a yukú nomã-a yavi
Wapí yá yú mã-di-yá
Wapí yá yú mã-di-yá
Sawé sawe (assobio)

7 Dança-canção com o *bied* (flauta ou pífaro pequeno)
Mã-á-á Eyari mamã eyari mamã kapinã
Periků yavi-i-i davyá (Yavi = comprido, delgado?)
Davyá yavi
Davi kawa-á nomã yavi-nõ
Davi kawá yaú; davi kawá yaú.
Kapina perikuli
Davyá yavi yú
Kawa-yavya mã-á-á (sopra a flauta longamente)

8 Dança-canção com o *yarsá* ou maracá pequeno.
(Por exemplo, disse Júlio, «Tuyuka convida Tukano para a festa. Os Tuyuká cantam dentro da maloca, quando acabam de cantar, os Tukano, do lado de fora cantam» o seguinte:)
Yé-é dyá yuké mari
Kemé maryé-é
Kemé maryé-é kenani
Wekã-ni kená amyá
Weka kená maryé pyá
Kená yá maryé
Wekã-ne ma-yá axpekã ané
Wekã-re kenani wekã-re
Kená tsé! tsá!
(Repetem alternadamente, ora cantam os Tuyuka, ora os Tukano)

4º *As danças*

a) *Preparação.* Descreveremos um dos bailados de simples diversão, executados, porém, com grande solenidade, e como se apresentavam, então, a personagem mais importante do grupo, o tuxaua

Mandu de Iauarete, e o mais simples dos comparsas, um rapaz de 18 a 20 anos, por nome Marcelino.

Mandu (131) trazia à cabeça um *acangatara* larga com plumas de arara, uma peruca com tranças de pêlo de macaco e com duas longas penas vermelhas de arara e um osso de onça. Da peruca, inclinada para cada orelha havia uma longa pena branca de garça. Pendente sôbre as costas o cangatá, cordel com penas de tucano. Ainda sôbre a peruca, junto à nuca, o *penacho* ou tecido retangular com longas penas de garça. Ao pescoço três longos colares de missanga e um colar de semente com a pedra-do-mando. Das orelhas brincos de meio cartucho de fuzil brunido. Como pintura na testa um semicírculo vermelho voltado para cima e grande cruz do pescoço à cintura (132), também com tinta vermelha. Ao cotovêlo esquerdo, um braçal de pêlo de macaco. Em forma de cinto, sôbre as nadegas, um colar de dentes, ao qual prendeu mais tarde dois galhos daquele arbusto mágico e intensamente perfumoso denominado bará. No decorrer da dança ajustou ao tornozelo direito um colar de sementes (*Kirpo*).

Marcelino usava uma *grinalda* de palhinha, pequena, denticulada, com penugem amarela de arara; à nuca o *penacho* com plumas brancas e uma pena longa rodeada por um cordel de plumas coloridas. Ao cotovêlo esquerdo a *braceleira* de pêlo de macaco. Pendente às costas, tranças de pêlo de macaco adornadas de penugens de arara.

b) *Execução*. Realizou-se um pequeno ensaio a fim de verificar se combinavam entre si os *japurutus*, bem como os *cariços*. Bebeu-se um pouco de caxiri.

O tuxaua executa o *pai-pô pasé*, isto é, faz vibrar várias vêzes ao músculo direito do braço o bastão de ritmo chamado «pau-da-onça», ornado de penas. Dá uns passos ritmados com o tubo-pilão de embaúba, e tomou posição diante do segundo poste à esquerda, na

(131) O tuxaua, que nos recebera vestido de calças, porém sem camisa, a fim de preparar-se para as danças tirou as calças e continuou com o seu Warso-ro de pano, nem pôs, como em outras ocasiões, o grande Warsó-ro de entrecasca pendente.

(132) Em uma dança que assistimos na maloca dos Tuyuka no igarapé da Onça, alto Tiquié, da pintura do Kômũ resultava uma cruz no rosto com grande traço da testa ao longo do nariz e lábio superior, e os braços da cruz recurvados para cima quase num semi-círculo.

nave central (133). Imitam-no nos passos os homens, que, à sua esquerda, se vão formando em semi-círculo aberto.

*1.ª Parte*: Cada qual põe a mão esquerda sôbre o ombro direito do companheiro (*Pá-bkase* é o nome Tukano dêsse gesto). Executam algumas pancadas rítmicas com o tubo-pilão (é o que se diz *gurko-kera dorkese*) e uns passos com o pé direito para diante e para trás (*dartise*). Em seguida a ala se desloca (*nikã-ká eheanõ-kuiyara bersase*) para a direita e para a esquerda até que se fecha a circunferência, fazendo algumas voltas da esquerda para a direita (*saloase*) (134). Ao mesmo tempo os homens cantam lentamente palavras ininteligíveis, com um ritornelo freqüente em que soam muitas vezes as sílabas «*pata-pata*». O ritmo se acelera no final, e um grito e pancada forte dos tubos-de-ritmo encerra a primeira parte. As mulheres, nesta parte, mantiveram-se sentadas em conversa, vizinhas da porta, à esquerda de quem entra (135).

*2.ª Parte*: Tomada de posição, como na primeira parte. A mão esquerda sôbre o ombro direito. Inicia-se a dança com um ritmo acelerado, um grito fino e assobio alto (*Wytisé*) (136). Depois o canto toma ritmo lento, ouvindo-se no ritornelo, com freqüência, as sílabas «*kapu-kapu*». Uma circunferência pela direita desfeita por outra pela esquerda. Vão entrando uma a uma as mulheres: a primeira se coloca à esquerda do tuxaua, com a nuca toca-lhe o braço esquerdo (*pohòase*) estendido ao ombro direito do vizinho, e abraça pela cintura os dois homens entre os quais se acha. Assim sucessivamente. Dão apenas duas voltas completas e as mulheres saem. A dança termina com um ritmo acelerado do canto, dos passos e com um assobio final. Seguem-se minutos de descanso e de caxiri.

*3.ª e 4.ª Partes*: São números em que participam só os mais jovens tocando a *flauta-de-pã* (3.ª parte) ou o *japurutú* (4.ª parte),

---

(133) A sua maloca retangular, embora de não grandes dimensões, correspondia a uma divisão de cinco naves: nave central alta, sob a cumieira, dois espaços laterais e, ao longo das paredes laterais, o espaço reservado às famílias. Note-se, porém, nenhuma divisão interna entre família e família.

(134) Explicaram-nos que estão imitando o peixe *bavari* o qual, antes de pôr seus ovos, faz umas voltas.

(135) Os três observadores civilizados nos achávamos do lado oposto, à direita.

(136) Estranhara que até então não ouvira os índios assobiar, quando esperava ouvi-los assobiando sempre na mata, nas caminhadas, nas viagens, quando remavam, e só havia silêncio ou conversa em tom secreto.

com um intervalo em que se fuma e se bebe caxiri. São números muito graciosos êstes de *intermezzo*. Cada rapaz traz o seu instrumento que se harmoniza bem com os outros, executando um dêles o contracanto ou resposta ao motivo que o primeiro executa. Êstes motivos são pequenos cânones muito melodiosos, em escala floreada, com notas ascendentes e descendentes. Algumas vêzes dançam apenas os rapazes e, então vão aos pares, o da direita um pouco mais atrás, segurando com a direita o seu instrumento e com a esquerda o ombro direito do outro (*pdbuasé*), o qual também tange o próprio instrumento e tem a esquerda ao quadril. Ao chegar ao fundo fazem uma evolução e trocam posição, vindo à frente o da direita com a mão esquerda ao quadril e o seu companheiro mais atrás, com a mão esquerda sôbre o ombro direito do primeiro.

Se há também mulheres, dispõem-se os casais de modo que o rapaz retém o instrumento com a direita, e, com a mão esquerda acima do próprio ombro (é o que se diz *iñatusé*), segura a direita da môça, a qual, apoia a esquerda na própria cintura (*pá-su'sûsé*). Os dançantes iniciam avançando apenas os homens, para o interior da maloca e, como crótalo, um colar de pequenos cocos de tucum ao tornozelo direito para marcar o ritmo. Rodam em círculo, um após o outro, para a direita, depois em sentido contrário para a esquerda, em seguida, abrindo mais o círculo, avançam quatro vêzes com o pé direito para o centro e voltam à posição inicial. Quando os rapazes se dispõem a caminhar, apresentam-se as suas companheiras. Organizam-se os casais. Às vêzes os casais, um após o outro, fazem evoluções desenhando o número oito (*barsá-mâhâmi bétod*) ou um caracol (*barsá so'tód*) para a direita ou para a esquerda. Outras vêzes se dispõem em círculos que se alongam ou apertam, rodam para a direita ou para a esquerda. Em tôda essa evolução com uma pancada mais forte do pé direito (*dó'pó-tisé*) vão marcando o ritmo. As mulheres se retiram antes do final. As execuções findam sempre com um *fortissimo* de todos os instrumentos.

São melodias muito agradáveis, porém não raro tão prolongadas as evoluções, que parecem uma competição de resistência. Os assistentes desde as suas redes, observam complacentes, rindo e comentando, provàvelmente, a inexatidão dos passos dos mais bisonhos.

*5ª Parte*: Enquanto se desenvolvem êstes números, um dos bailantes foi preparar o «*Yu'yiri-tiró*». O tuxaua com o seu tubo-de-ritmo toma a posição e desta vez os homens se distribuem simètricamente à sua direita e à sua esquerda, em semi-círculo. Iniciam com ritmo acelerado, depois assobiam, seguindo-se uma dança lenta ao canto de uma nênia. Um dos índios traz dois *yu'yi* e entrega

um dêles ao tuxaua que é também o *Bapá*, o outro, ao irmão dêste, *bapá-re uetamõpõ* e que está imediatamente à esquerda do tuxaua. Seguram o *yu-yu* com a esquerda e com a direita batem o tubo-de-ritmo.

O yu-yu das danças

Fôrma de tabaco

Os bailantes dividem-se em dois grupos, que evoluem avançando e recuando (*barsá potari*), um em frente do outro. Depois põem-se em fila, cada qual com sua dama, descrevendo circunferências. Tornam a dividir-se em dois grupos que avançam e recuam. Agora se dão as costas, sempre com avanços e recuos. Parece que o novo canto consta de várias estrofes, terminando cada uma com gritos e assobios. Em dados momentos alguns dizem palavras em voz alta, como o faz o marcador de quadrilhas. Seriam palavras cerimoniais e, por exemplo, ordem das evoluções a serem executadas? As mulheres, por fim, abandonam a dança e os homens continuam em fila indiana, com a mão esquerda sôbre o ombro direito do que o precede. Essa fila vai descrevendo círculos, parando de vez em quando, sempre, porém, cantando e ritmando com as pancadas do tubo-de-ritmo.

6.ª *Parte*: Executada só pelos homens, como a primeira parte. Após esta parte um dos bailantes avança para distribuir o caxiri com uma cuia em cada mão, resmungando algumas palavras e batendo mais forte o pé direito, numa marcha coleante como a da cobra. Dá uma cuia ao tuxaua e a outra ao mais importante. Numa segunda vez traz a mais dois, e assim a todos. Corre também, de bôca em bôca, o longo cigarro de fôlhas.

7.ª *Parte*: O tuxaua amarra ao seu tornozelo direito um colar de cocos secos (*kirfyo*). Toma, em seguida, posição com o seu tubo-de-ritmo. Os homens distribuem-se à sua direita e à sua esquerda, cada qual com o seu tubo-de-ritmo na mão direita e a esquerda sôbre o ombro direito do seu vizinho. Ao tuxaua e ao seu vi-

zinho são trazidos os *pu'pus*. Inicia-se com um ritmo de pancadas e passos no mesmo lugar, gritos, assobio e depois uma nênia em *pianissimo* à qual vai crescendo lentamente, enquanto se deslocam para a direita e à esquerda de alguns passos. Param algumas vêzes para dar um passo para dentro do círculo e outro atrás e ao lado. Por mais prolongada esta parte e no ritornelo ouviam-se muitas vezes as sílabas «*tpuko-malta*». O grupo de dançantes encaminhou-se para fora da maloca, em cujo pátio executou os mesmos passos que dentro (*poha-tahpá*). Torna de novo à maloca, as mulheres abandonam sua posição. À conclusão estão só os homens que após pequena evolução tomam a posição inicial, em semi-círculo, e encerram o canto com pequenos saltos (*bu'pusé*) e gritos seu tanto cômicos.

5) *Danças-canções Wanâna*

O Wanâna Tomás Paiva, filho mais velho de Mandú, o atual (1957) tuxáua de Carurú-cachoeira (rio Uaupés), e seu presumível sucessor, confirmou que as canções rituais eram «língua antiga», e por isso não as entendiam. Pelo desejo de aprendê-las bem, e manter as velhas tradições, procurou indagar de seu pai, estimado tuxaua-baya local, e dos «velhos», e escrevê-las. Seriam talvez umas 45 canções, disse-nos. Opinamos que êsse número abrangeria não apenas as *canções*, mas sim tôdas as *partes* ou *estrofes*; ou, quiçá mesmo, as repetições de uma mesma parte ou estrofe. Sucedera-lhe, porém, que indo trabalhar como carpinteiro na Venezuela, os da sua casa serviram-se dos seus escritos como de *papel de cigarro*.

Com a colaboração de outro Wanâna, Maximiano de Sá, indicou-nos a seguinte ordem para as danças:

1.ª *Dança* — com a flauta *bud*, donde o nome *bud bazsá* (dança das cutias) (137). No intervalo das *estrofes* ou *partes*, os dançan-

(137) Uma grande festa realizou-se em Carurú-cachoeira (rio Uaupés), nos dias 24 e 25 de abril de 1955, com a participação de uma 250 pessoas de ambos os sexos e de tôdas as idades e representantes de várias tribos, especialmente *Wanâna*, *Kubéwana* e *Hohódene* (esta do grupo Arwáke, de Uaupuim-cachoeira, rio Aiari, afluente do Içana). Nesta festa os primeiros números de danças foram no som dos *bud*. Eram pequenas flautas de taquara, de uns 30 cm de comprimento por uns dois de diâmetro, um só orifício lateral, a uns 10 cm da embocadura que era vertical. A parte inferior dêsses pífaros terminava com duas pequenas varetas de taquara, com duas pontas ou chifres (simbolizando quiçá os dentes da cutia). Como adorno dessas flauta havia dois cordões de plumas brancas presos à flauta pela extremidade superior e livre a outra extremidade. Em certos números de danças, alguns indivíduos atiravam ao chão a sua flauta, recolhendo-a logo em seguida.

tes fazem soar suas flautas. Consta de quatro partes a saber: 1.ª) *wuñu barsu* (dança-canção do carajurú); 2.ª) *pinó barsá* (dança-canção da cobra); 3.ª) *karpi barsá* (dança-canção do Caapi); 4.ª) *uo-phi barsá* (dança-canção do ganço de colhér fruta).

*2.ª Dança* — com o tubo-de-ritmo, *ahũ-wõ* (em wanãna *wanõ*) (138). Consta também de várias partes, as principais são: *saudrea barsá* (dança-canção do calango dágua); *ahũ-a barsá* (dança-canção do beiju); *ki barsá* (dança-canção da mandioca).

*3.ª Dança* — com o maracá, *barsá*. Chama-se *pwá barsá* (*pwá* é o nome de um peixe que os Wanãna, em seu idioma, denominam *dũrkudna*). Todos os homens, do começo ao fim desta longa dança, agitam contínua e ritmadamente o maracá com a mão direita (a esquerda segura a própria dama pelo ombro, e esta abraça-lhe a cintura). Soam também ritmadamente um apito de dois tubos, que deixarão pender do pescoço, quando devem cantar. É o mais interessante número de danças indígenas que temos assistido. Evoluem primeiramente fora, no pátio, depois entram em casa e após alguns minutos de coreografia no interior, saem novamente ao pátio de dança. Há evolução *em ala* que aos poucos se fecha *em círculo*, que ora se estreita, ora se alarga. Em dado momento os pares de dançantes, cada homem com a sua dama, se dispõem em coluna, voltados para o nascente, depois em direção oposta, para o poente. Dispostos assim em coluna, o último par sai ziguezagueando entre os outros pares, do penúltimo ao primeiro, como se estivesse *cosendo*. Explicaram que é a «dança da colheita do caroá» (fibra que se emprega como linha de anzol). Quando terminou sua evolução, o último par volta à sua posição inicial, e, então o par da outra extremidade, a saber, o primeiro, faz a mesma *costura* e volta à sua posição. Cabe, agora, ao penúltimo par evoluir, e depois ao segundo, e assim passam todos os pares, por seu turno, executando a costura ou colheita do caroá. Durante esta, vibram apenas os apitos e o maracá. Em outros momentos desta dança também se canta.

*4.ª Dança* — denomina-se «*Pwá* da noite», porque já sobrevieram as trevas. Saem ainda fora, como homenagem à noite e à lua.

---

(138) Nessa mesma festa dos Wanãna de Carurú-cachoeira, os tubos-de-ritmo, medindo aproximadamente um metro de comprimento e 10 cm de diâmetro, estavam pintados de branco (com sorva), tendo uma barra inferior preta de uns 10 cm e o cabo, por onde se segura, enfeitado com penacho de penas de gavião com o feitio de um ipsilon grego.

muhi-pú (disse Tomás Paiva). Variam as toadas destas canções que se compõem tôdas de varias partes com muitas repetições.

6) *Canções das mulheres*

Já observamos (cfr. VII — 3, c (2 b) que as canções das mulheres são *profanas*, ou com mais exação, *canções baquicas*; isto é, regularmente as cantam quando distribuem o caxiri, ou nos intervalos quando tomam a sua bebida. Além de mais movimentadas, há motivos mais variados, do que nas canções religiosas dos homens. Outra diferença bem marcante, é que, enquanto estas são, presentemente, articulações sem significado algum, as das mulheres apresentam um sentido claro. São *recitativos* de frases maiores ou menores, com argumentos de oportunidade e alusões à própria pessoa ou àquela com quem está dialogando.

Pela lei da exogamia, no mesmo povoado há mulheres da tribo dos habitantes locais, e de uma ou mais tribos diversas, tomadas como esposas. E, casualmente, em trânsito ou passeio, ainda outras suas parentes ou «irmãs». Por essa razão e também pela frequência de dapacuris com participação de dançantes de tribos distintas, uma mesma canção pode ser conhecida e executada por mulheres de varias tribos. Donde se infere a dificuldade que há de determinar de qual tribo seja originàriamente a *melodia* de uma canção. A questão, propriamente, é da *melodia*, e não da *letra*. Pois, como dissemos, esta é um *recitativo de ocasião* que a cantora pode dizer no proprio idioma ou no do marido ou da tribo onde se faz o *poosé*. E como presentemente a lingua Tukano se vai generalizando, muitas vêzes será neste idioma; como realmente são em Tukano as canções que gravamos, embora executadas por môças não só do grupo de tribos Tukano, como até por uma donzela do grupo Arwáke, da tribo *Kumádene*.

b) *Desportos*

O índio leva uma vida no contacto com a natureza majestosa e silente da selva amazonense, cortada por inúmeros caudais. Isto nos explica porque se apresenta assim forte, ágil, alegre, embora retraído.

Caminha quase diàriamente grandes distâncias através da mata para a sua roça, a qual não raro dista vários quilômetros da maloca, ou para a caça ou à procura de frutas. A mulher, além do grande movimento dentro da maloca, a que a obriga o preparo da alimentação, quase todos os dias fará longa caminhada pela mata, em

demanda da sua roça, onde, ao sol, trabalhará três ou quatro horas a fio. Alpinismo não há, porque a região, em geral, é plana. Não se conhecem exercícios de ginástica ou lutas corporais, como em outros grupos humanos (139). Nem tão pouco a equitação. Ainda não há cavalos por aquelas alturas, nem para serviço dos civilizados.

Os esportes diàriamente praticados são os aquáticos, a saber, a natação e o remo. Pela manhã, antes de clarear o dia, todos, sem exceção, encaminham-se para o rio, pouco distante da maloca ou povoado, e tomam o seu banho. Até as crianças de braço são conduzidas pelas mães e banhadas. Êste banho é rápido, imergindo-se dentro dágua três ou quatro vêzes e passando a mão pelo corpo. Algumas vêzes firmam-se com os braços a alguma canoa amarrada e agitam os pés na água. Mais tarde, pela metade do dia, isto é, nas horas quentes, quando voltam suados da mata ou da roça, tomam novo banho. Esta freqüência ao rio faz com que todos aprendam a nadar. Nadam bem, mas, sem grande resistência. Nunca atravessam nadando grandes distâncias. Talvez mesmo ninguém nadará, por mero exercício, uma centena de metros.

Um dos divertimentos aquáticos das crianças é o que se denomina *Wãx-ti Mux-kõ*, o filho de Wãx-ti, de evidente alusão à lenda de Nhamacuru (cfr. «Lendas do Uaupés»). A saber: duas crianças postas uma em frente da outra, com os braços para trás, imergem-se simultâneamente nagua. Instantes após, emergindo ao mesmo tempo, abraçam-se rápidamente. Depois novamente os braços para trás, imergem-se, para novamente emergir, abraçar-se e aprofundar-se nágua. Assim certo número de vêzes até que se cansam e cessa o divertimento.

Outro exercício freqüente é o do remo. Desde crianças, de três ou quatro anos talvez, aprendem a remar e têm os seus remos pequenos. Não raro saí uma criança sózinha ou duas remando e se afastam quilômetros da própria casa. Muitas vêzes são as crianças que remam, enquanto os homens atendem à pesca desde a canoa. Êste hábito lhes confere habilidade e resistência surpreendentes. São capazes de remar dez ou mais horas por dia e assim seis ou oito dias consecutivos, nas longas viagens.

A pancada com o cabo do remo no bordo da canoa marca o ritmo, e quando são vários remadores, levam a capricho a exatidão

---

(139) Temos visto crianças que, brincando, se agarram como se fôsse para uma luta livre, sem, no entanto, atirar ao chão o companheiro.

4: Silva SQ19 Tucano

das pancadas, como se fôsse um só golpe. Observam-se três ritmos diversos: 1.º — um mais apressado, quando têm urgência de alcançar algum ponto, e nas correntezas; são mais ou menos três remadas profundas em dois segundos; 2.º — quando não há correnteza, passam a um ritmo mais lento: um tempo sim e dois não, de sorte que se ouvem dois rumores na água (de duas ondas que se formam e batem contra a canoa), havendo três remadas em cinco segundos; 3.º — por vêzes tomam outro ritmo: duas remadas apressadas e uma lenta e mais profunda.

Pode-se observar o seguinte particular: a mão que segura o cabo do remo descreve uma circunferência perfeita; e depois que dão uma pancada no bordo da canoa, o remo fica um instante deitado sôbre esta, paralelo à água. Para alívio do esfôrço, passam a remar do outro lado da canoa, cabendo agora à mão que segurava o cabo puxar a pá do remo. Quando alguém se sente fatigado, interrompe o exercício, deixando que os companheiros prossigam no labor. Nos trechos remansosos do rio, ou quando descem a favor da corrente, (é o que se diz descer de bubúia), pode acontecer que todos cessem de remar e se entretenham em animada conversa.

O contínuo viajar por rios de cachoeiras perigosas não só lhes da extraordinária resistência, como os torna corajosos e fa-los habilíssimos navegadores. Uma coragem superior e serena, de quem confia no conhecimento dos lugares perigosos e do processo a empregar em cada uma das correntezas ou vórtices, e, portanto, não teme surpresas. De quem confia na propria fôrça, tantas vêzes provada nos momentos mais dificeis; de quem sabe que, na pior das hipoteses, se a canoa virar, ao choque de uma onda, continuará ainda a flutuar, e poderá alcançá-la a nado, alguns metros mais adiante. Se alguma carga se perde com êste acidente, na primeira maloca terá beijú e peixe moqueado; até que sua mulher lhe possa preparar novo beijú e êle apanhe alguns peixes ou mate alguma caça. É o mais perfeito domínio dos nervos que se possa conceber, em qualquer perigo que a navegação apresente. Com estas qualidades compreende-se que são os navegadores indispensáveis daqueles rios, e nos infundem grande tranquilidade quando os temos como marinheiros. Freqüentemente, nas vizinhanças das cachoeiras, existem habitações indígenas ou estão índios entretidos na pesca, sempre prontos a prestar auxílio, se fôrem solicitados.

Conforme o nível das águas, sabem se a canoa deve procurar um canal de preferência a outro, se uma pedra está suficientemente encoberta, se é preciso servir-se do varejão. Em alguns casos, o índio

4: Silva SQ19 Tucano

saltara rapidamente da canoa para uma pedra (140) que emerge proxima e, com um empuxão pelo bordo, fá-la vencer a correnteza, e depois, num ágil salto, volta outra vez para dentro da canoa e empunha o seu remo. Em outras circunstâncias todos os passageiros devem costear por entre o serrado da margem, enquanto os marinheiros empurram a canoa correnteza acima; ou, por meio de espias, fortemente puxadas desde as pedras, obrigam-na a escalar as pequenas cachoeiras. Ou ainda, descarregam tôda a bagagem, e tanto a carga como a canoa será transportada por difíceis atalhos até a parte superior das cachoeiras e daí se retoma a navegação normal.

(140) Os que já estão vestidos, às vêzes saçam da camisa, e pulam prontamente nágua, com sua calça ou calção. Os que se acham ainda em estado mais primitivo, nem recelo têm de molhar a própria roupa...

[p. 407]

## Cap. VIII

# ORGANIZAÇÃO SOCIAL

### 1. — Grupo familiar

A família indígena do Uaupés, no sentido mais estrito e perfeito, consta de *marido, mulher* e *filhos*. Vigora entre êles a *monogamia indissolúvel*, isto é, cada homem terá á sua esposa legítima e estão ligados até a morte por vínculo indissolúvel, uma vez satisfeitas as condições prescritas pela lei da tribo.

Tal será a família, quer viva cada qual na sua casa, conforme a tendência moderna, quer se reunam várias famílias na vida comunitária da maloca.

Frequentemente como adidos, ou melhor, incorporados a uma família, viverão a mãe que enviuvou, algum parente órfão ou solteiro, e destarte o *grupo familiar* se torna maior que a *família*. Como veremos (VIII — 2) o *grupo local* era constituído originàriamente pela família, identificando-se, portanto, com o *grupo familiar*. A necessidade de defesa e auxílio nos trabalhos (construção da maloca, pescaria, etc.) é que favoreceu o *grupo familiar* ou *local* de preferência à família isolada.

Por outro lado há, entre as nações uaupesinas alguns fatôres que certificam a *organização* ou *grupo familiar*.

1.º — Em primeiro lugar está o *instinto* e o *direito de propriedade*. Há, efetivamente, alguns bens (canoas, barraca, cerâmica, etc.) que constituem propriedade da família, e passam qual herança aos filhos.

2.º — Como entre os primitivos Romanos, os pais uaupesinos dispõem de um exagerado poder sôbre os filhos. Essa *patria potéstas* reserva exclusivamente ao pai as *tratativas matrimoniais*, mediante a permuta das donzelas, como esposas, de uma tribo para outra, e robustece, outrossim, o regime familiar.

3.º — Além da permuta das filhas, vigora ainda uma *oferta de dons nupciais* ao pai da futura esposa. Esses dons, por seu lado, consolidam o poder pátrio e o regime familiar.

4.º — A inexistência de um poder político forte e organizado é, por sua vez, efeito e causa do acréscimo dos poderes paternos e fator de consolidação do grupo familiar.

a) *Matrimônio*

Já relevamos que o matrimônio entre tôdas estas tribos é uma instituição social que visa imediatamente (e talvez não seja exagerado dizê-lo exclusivamente) a *perpetuação do grupo*. O primeiro interessado em sua realização é o grupo, não os indivíduos que se casam, pois não se lhes observam as afeições, não se lhes consulta a vontade, nem se lhes atende à idade (1).

Não se exige a *virgindade*, pois, como diremos, legalmente não pode existir; nem há outras condições senão o acôrdo dos pais dos nubentes, uma vez observadas as leis da tribo, que exporemos em seguida.

1) *As leis do matrimônio*

a) A primeira e inviolável lei, que se observa no matrimônio indígena do Uaupés, é a da exogamia de tribo, *Arpé mazsã nõ'mõ-fise*.

Notamos (IV — 2, a) (2) que há subdivisões nas tribos. Porém, ao menos no regime atual, não é subdivisão para efeito matrimonial (2). Os de uma tribo devem obrigatòriamente buscar suas esposas em outra tribo. Não afrontamos, por ora, a questão se essa lei se tenha impôsto como medida política, a fim de impedir guerras e assassinatos entre as tribos. Sabemos, sim, que, apesar da troca de mulheres entre duas tribos, são freqüentes as contendas entre elas.

Há, como vimos (IV — 2) três grupos de tribos, aos quais denominamos grupos *Tukano*, *Arawake* e *Makú*. A obrigação grave é a da exogamia. Observadas, porém, as interdições que enumeramos na Classificação das tribos, a mulher pode ser de outra tribo do mesmo grupo ou de outro grupo de tribos. Por uma questão de orgulho, nenhuma tribo se casará com Makú, que se considera escravo, e infe-

(1) Não raras vêzes os Missionários têm que intervir, afim de que se não realize, mesmo entre cristãos, matrimônio de crianças que ainda não atingiram a idade núbil de acôrdo com as legislações brasileira e canônica.

(2) Até onde alcança a tradição, pode-se afirmar que sempre vigorou a exogamia tribal. E, de acôrdo com as lendas, parece que se pode avançar que a obrigação da exogamia remonta à origem das tribos; ou, ao menos, ao estabelecimento dessas nações no seu habitat atual.

rior, nem é «gente», dizem (3). Se conseguem, no entanto, pegar alguma môça Makú, podem tê-la como concubina, ao lado da legítima esposa. Evitarão, entretanto, ter filhos com a Makú; e se, apesar disso, os tiverem, (por exemplo a avó de Maria Gama de Urubucuara) são considerados legítimos e pertencentes à tribo do pai (4).

Não se dão matrimônios entre *Taryana* e *Desána*. Desconhecemos, porém, as razões; não parece ser motivo de orgulho, porque os próprios Tukano, considerado o grupo mais nobre, casam-se com Desana, como também com Taryana. Note-se que pertencendo os idiomas Taryana e Desána a famílias linguísticas diversas, fazem-nos pensar em grande afastamento dessas tribos. No entanto respondem-nos que não há casamento entre êles porque são «irmãos».

Igualmente os *Tukano* não se casam com os *Bará*. Explicam os Tukano que os Bará são seus avós, *Paz-kõ-Ro*. Nem os *Pirá-tapuya* com os *Wanana* e *Arapásu*; ou os *Arapásu* com os *Miriti*, *Wanana* e *Desana*; nem os *Taryaná* com *Ipeka-tapuya*; nem, enfim, os *Desana* com *Taryana*, *Tuyuka*, *Pira-tapuya* e *Arapásu*.

Entre os *Miriti-tapuya* é que vigora o maior número de interdições, a saber, não podem casar-se com os *Desana*, *Tuyuka*, *Arapásu*, *Pira-tapuya*, *Ipeka-tapuya* e *Taryana*.

b) A segunda lei é a da *troca das mulheres* de uma tribo, pelas mulheres de outra. Ou, com mais exatidão, um pai cederá sua filha como esposa ao filho de outra família, para ter uma irmã dêste como esposa do seu filho. É o que se denomina *Podpari* ou *Podpoieri*. E a môça chamará tal rapaz de noivo isto é, *Mã-ra-pó nyãkho* (futuro marido) ou mesmo *Põrã-kõ nyãkho* (futuro genitor); e, vice-versa, êle a «*No'mó nyãkho* (futura esposa) ou *Pórã-ko nyãkho* (genitora futura).

Tal costume é impôsto pelo desejo da tribo de se perpetuar.

---

(3) Conhecemos poucos casos de conúbio de homens de outras tribos (Tukano, Tuyuka, Desana, Ipeka) com mulher Makú. Nenhum, de homem Makú com mulher de outra tribo. Entre êstes poucos casos, o de uma môça, porém já órfã em 1947, residente na maloca Tuyuka da localidade de S. Pedro, rio Tiquié, cujo pai era Tukano e a mãe, Makú. Não pudemos averiguar se sua mãe era legítima esposa ou uma simples concubina, ou ainda se nascera de uma relação casual. Nem sabemos, na primeira hipótese, por quais razões se dera tal matrimônio. Talvez falta de mulher? ou por defeito físico do homem (note-se que a môça era estrábica)? ou por viver entre os Makú do Ci-paraná ou Komé-ya (afl. do Pirá-paraná)?

(4) Em Parajba-poço, rio Tiquié, um Tukano, ao apresentar, para ser batizada, uma criança que tivera de uma Makú, a princípio nega sua paternidade, informando que "não tinha pai".

Não se conhece o *matrimônio ambiliano*, isto é, não é o moço que vem morar em casa dos sogros; porém a môça é que, pelo casamento, se afasta da sua e vai constituir família em outra tribo.

Desejam, pois, que para seu povoado venha uma mulher de outra tribo, a fim de aí constituir nova família. A troca, parece-nos, não equivale a uma depreciação da mulher e reduzi-la à condição de cousa negociável. É uma medida de precaução para que o grupo não se extinga, mas, ao contrário, os varões se conservem sempre unidos e se mantenham vivas as tradições da tribo e as relações cordiais entre os seus componentes.

Dêste conceito e prática seguem-se algumas conseqüências:

1.ª — A primeira é que de fato vigorá entre êles, o denominado *casamento preferencial*. As trocas não só estabelecem relações sociais entre duas malocas, mas, como adiante veremos, concebem o parentesco como *bilateral*. Porém, não só os *primos maternos* no sentido estrito (isto é, os sobrinhos da própria mãe), mas todos os da geração da *Gens* materna (IV — 2, a' (2) se dizem noivos, *Barsúkára* (os que nos são destinados para matrimônio).

Concretizemos um exemplo: os *Tukano* do Pari-cachoeira costumam buscar suas esposas entre os *Tuyuka* das cabeceiras do Tiquié. Então, para os moços de Pari-cachoeira, noivos ou *Barsúkára* são todos os Tuyuka da geração môça do povoado materno. Ou, mais exatamente, são seus noivos todos os moços da *Gens* materna — porque a cada povoado corresponde ordinàriamente *Gens* diversa — e que entre si se tratam de «irmãos» (*Mami* ou *Arkabi*, vd. VIII — 1, c).

De regra um ou uma dentre os *Barsúkára*, é que será o *Mã-ra-ia-nyákho* ou a *Nõ'mõ nyákho*.

Os que pertencem a geração dos pais dos *Barsúkára* (isto é, todos os que são considerados «irmãos» da própria mãe), são denominados «tios», *Mãr-kã* (se homem) (5), ou *Mã-gõ* (se mulher).

A todos os *Barsúkára*, no *tratamento direto*, isto é, conversando entre si (vd. adiante Nomenclatura do Parentesco) se chamará primo, *Meõ-kõ* (filho da tia, contração de *Waméõ mar-kõ*), e, a prima, *Meõ-kõ*. Releve-se que a môça não pode tomar a liberdade de dizer abreviadamente *Méõ-kõ*, *Méõ-kõ*; dirá sempre por extenso, *Waméõ mar-kõ*, *Waméõ mar-kõ*.

Depois que um indivíduo se casou, todos os primos ou *Barsúkára* (6) ficam, naturalmente, sendo cunhados seus, e assim efeti-

(5) Note-se que a sobrinha deve chamá-la *Mãr-kã-sa*.

(6) Recorde-se que dentro da tribo os indivíduos que pertencem a uma mesma geração se dizem "irmãos".

4: Silva SQ19 Tucano

vamente os denomina quando se exprime em português. Quando se exprime em Tukano, prefere continuar a chamá-los *Méõ-kõ* ou *Méõ-kõ*, e, aos cunhados no sentido mais estrito, a saber, os irmãos de sangue da própria esposa, tratará de *Pé-ñã* (7).

Excepcionalmente o indivíduo, em vez de desposar uma da geração dos *Bazuãdra*, talvez se case com alguém da classe dos «tios», *Méz-kã-ra* ou *Mã-pó*. Os componentes desta classe é que são, agora, seus cunhados, *Pé-ñã*. Em Tukano pode continuar a chamá-los «tio», *Méz-kã* ou (se se trata da sobrinha) *Méz-kã-sa*, e no tratamento direto empregará o nome *Piri* para os cunhados no sentido estrito.

2ª — Uma segunda é que as tratativas e acordos se realizam entre os pais sem que intervenham ou sejam consultados os nubentes (8). É grandemente estranhável que, enquanto os filhos gozam de bastante liberdade na família indígena, (pode-se afirmar que os do sexo masculino gozam de absoluta independência dos pais), neste assunto tão grave, pois o matrimônio é indissolúvel, não têm liberdade alguma (9), e mostram-se da máxima docilidade à vontade dos seus pais.

Não se conhece entre êles o matrimônio de amor, nem a prática do namôro. Parecê mesmo que são indiferentes à beleza física, e é certo que em todos os grupos humanos há indivíduos mais simpáticos ou menos. Sem dúvida esses motivos pessoais influirão nas relações que e extrumatrimoniais; nunca, porém, no *matrimônio* (10).

O matrimônio não representa a satisfação do instinto sexual, como de início pensávamos e escrevemos, pois verificamos que esta satisfação tem a mais ampla oportunidade imaginável. O matrimônio para o indivíduo é a solução do seu *problema econômico*: ter quem lhe proporcionará o alimento. Mas é especialmente a solução do problema social: a continuação e propagação da tribo.

---

(7) A mulher usará o tratamento *Nihi-so paz-kõ* para os cunhados mais velhos que seu marido e *Buhi-bakõ*, para os mais moços que êle.

(8) Tem acontecido que o pai traz espôsa para o seu filho que é aluno no colégio da Missão, obrigando-o a deixar o banco escolar para casar-se. "Casamento escravo" foi a expressão de um Missionário, citando exemplos do absolutismo da vontade paterna contra a vontade manifesta dos jovens.

(10) Por influência do Missionário vão se libertando dêsses preconceitos ancestrais, e já se conhecem casos de matrimônio por iniciativa dos nubentes ex-alunos das Missões. No entanto acontece (relator Pe. Afônso Kuipers, de Teresita, rio Papuri), que o moço pedindo a intervenção do Padre para ajudá-lo a arranjar uma esposa, mostre-se indiferente sôbre a pessoa. Dirá por exemplo: "Padre, faça o favor de perguntar a Joaquina, Amélia ou Maria se alguma delas quer casar comigo".

E' de admirar-se que, não obstante isto, a vida familiar decorra bastante normal. Única explicação plausível é o grande respeito às leis tradicionais fixando as relações entre os esposos, e seus deveres; leis que são fielmente observadas.

3.ª Uma terceira é que, a fim de obter atualmente uma espôsa para um filho mais velho, talvez uma criança recém-nascida (11) seja prometida em matrimônio a outra família. Na prática serão noivos, com direito a relações entre si (com as precauções, porém, para não ter filhos), talvez desde muitos anos e com grande diferença de idade entre os nubentes. E a criança, mal atinge o uso da razão, sabe que deverá casar-se com tal pessoa.

4.ª Uma quarta é que, um pai viúvo cederá uma filha para arranjar uma segunda esposa para si, embora com grande desproporção entre suas idades, antes que procurá-la para seu filho.

5.ª Uma quinta é que uma mulher, ficando viúva, pode passar como espôsa ao seu cunhado, se o houver viúvo ou solteiro e sem noiva desde que seu pai tenha obrigação de dar uma mulher a tal família, em troca de outra que de ali obteve. Embora não exista entre nossos índios a lei do *levirato* (12), temos assim a sua prática.

6.ª Uma sexta, é que desta troca de mulheres de uma tribo *A* com as da tribo *B*, visto como os filhos se consideram da tribo do pai, podem casar-se entre si os primos. Por exemplo, de dois pares de irmãos *M* e *N* da tribo *A*, e dois *P* e *Q*, da tribo *B*, a mulher *M* casou-se com *P*, cuja irmã *Q* se uniu em matrimônio a *N*. Os filhos dêsses dois casais são, evidentemente «primos irmãos» ou «primos em primeiro grau». No entanto os filhos de *P* são da tribo *B* e os de *N*, da tribo *A*. Êles se consideram reciprocamente *Bayaikúra*, e podem casar entre si.

Em conclusão o casamento *preferencial* destas tribos é entre primos no primeiro grau.

c) A falta de mulher pode tornar impossível a permuta ou *Pauper*. Como o pode também um excesso de mulheres sôbre o número de filhos varões. A aquisição de uma esposa se fará, então, com a doação de algum bem material; é o que se diz *Nó'mõ duusé* (compra da esposa).

---

(11) Não parece que haja acordos dos pais sôbre os filhos nascituros, pois isto é contra a psicologia do índio que é homem da realidade.

(12) Isto é, o dever de um indivíduo desposar a cunhada que enviuvou sem filhos, para ressuscitar a descendência do seu irmão falecido, costume que vigorava entre os judeus.

Parece-nos, contudo, que não se trata de uma verdadeira compra do cônjuge, apesar do têrmo *Duusé*, que nos forneceu um intérprete Tucano. Uma tribo se enriqueceu de uma família, enquanto a outra perdeu um elemento: é de justiça uma compensação. Com a ausência da filha môça, o pai, e sobretudo a mãe, perdeu um elemento de valor pelo seu trabalho, para a economia doméstica, haverá uma indenização econômica por parte do futuro genro.

São duas as razões para tal dedução. A primeira é que mesmo quando há o *Podperi*, ou permuta de mulheres, o môço fará algum presente ao futuro sogro. A segunda é que não existe, como em outros grupos humanos, um preço fixo de indenização; ou uma tabela de preços pela categoria das mulheres. O môço dará de acôrdo com suas posses e os desejos do sogro. Sempre objetos de utilidade: enfeites, canoa, facão, calças, machado, fumo, sal etc. (13).

Nestes casos é que se nota mais liberdade do môço que procura uma espôsa e, com frequência é sua a iniciativa na escolha da môça e nas tratativas com o pai dela. Às vêzes os pais e irmãos o ajudam na obtenção dos presentes que o sogro exige, porém com direito a serem indenizados mais tarde (mais uma prova do instinto de propriedade).

Em geral o pai da môça entrará em acôrdo. Receia sempre que o môço se vingue com algum maleficio. E o rapaz fá-lo-á certamente ou, ao menos, espalhará que a môça tem o *dohasé* (maleficio) da esterilidade, e ninguém a procurará por espôsa. E' uma vingança temível, porque assim corta o futuro da môça e sacrifica também os interêsses econômicos do pai.

É natural que o interêsse (inato e exagerado no índio) aproveite dêstes costumes. Um pai por exemplo, que tiver mais de uma filha, talvez procure ceder uma delas a algum rapaz Tuyuká (para ter uma

(13) Wallace traz um particular do qual não encontramos confirmação nem remiscência alguma no Uaupés: "Em algumas tribos, diz, como a dos Wakarás, o môço tem de submeter-se a uma prova que consiste na demonstração de sua habilidade para atirar de arco e flecha. Se o rapaz não acertar no alvo, a môça o recusa, pois êle assim demonstra ser incapaz de atirar em peixes ou de caçar para o sustento da família". Já o vimos (II-6, b) não conseguimos localizar tribo alguma sob a denominação de Wakará, afim de verificar seus costumes. Porém a afirmação de Wallace (o qual também não visitou os Wakará) está em absoluta oposição aos costumes uaupesinos. Com efeito, o casamento é reciproco entre os dois pais, não entre os nubentes. De resto, não depende do bom manejo do arco a alimentação. Entre as tribos do Uaupés, ao contrário, a caça é escassa e os peixes se apanham mais ràramente com flechadas. A base da alimentação é a mandioca, e quem a providencia é a mulher e não o marido. Pode-se afirmar que, entre estas tribos, é a mulher e não o marido, quem sustenta a família.

hor canoa, pois são canoeiros especializados), uma segunda a um Pirá-tapuya (peritos fabricantes de redes e pestos de pesca), exigindo dêles os produtos de suas especialidades.

Mais ainda, essas relações de afinidade lhes propiciam o ensejo de passar uma parte do ano em passeios: uma temporada em casa de cada genro. Pois o matrimônio cria estreitas relações de afinidade, tanto mais singulares, quanto se sabe que são pessoas de tribos diversas e tôdas elas com mentalidade tão profundamente racista.

2) *O Rapto — Nû'myó ʒerôsé ou Nû'myo mydsé.*

Apesar dêstes precedentes de negociações, conserva-se, ainda hoje, um rapto simbólico da môça, sobrevivência, conforme se pode pensar, de costumes antigos em que o jovem devia dar prova de valor, arrebatando sua esposa, depois de lutar contra os que procuravam defendê-la.

Ou, quem sabe (é o mais provável quando se fala de outros grupos humanos; não, porém, os do Uaupés), são clãs de uma mesma tribo, transformados em inimigos pelas dissidências e que deveram, nesse período, recorrer ao rapto a fim de manter a antiga lei da exogamia do clã.

Entre os nossos índios do Uaupés não há luta alguma, embora se registrem casos de disputas e exaltação eventual de ânimo. O pai do môço, com mais alguns remadores apresenta-se no povoado da môça. Talvez esta, já ciente, se achará nas vizinhanças do pôrto e será enfim carregada para a canôa. Ou os homens pedem licença ao pai, que nada diz (assim o relato de Dorotéia Brito) e apoderam-se da môça. A mãe, ao invés, protestará em altos brados e imprecações, lembrando os trabalhos da filha (sempre o aspecto interesseiro), que ela é quem toma conta das crianças, trabalha na roça, faz beijú, etc. Ninguém, no entanto, impedirá o rapto.

3) *O Ato do matrimônio*

Os raptores (14), quiçá depois de vários dias de viagem de canoa, trazem-na môça à maloca do jovem e lha entregam com êste formulário e voto (que nos forneceu Dorotéia Brito): — «Fomos buscar môça para você; agora tome conta dela; que seja boa mãe, que não fuja». Não praticam nenhum outro rito por essa ocasião, foram as declarões positivas que todos fizeram.

---

(14) Alguns indígenas informaram-nos de relações sexuais que se passam entre as raptores e a donzela e alguns acrescentaram que tais relações são sempre lícitas para o futuro. Pode ser que originàriamente se tratasse de um privilégio dos raptores. Privilégio, porém, que hoje perdeu sua razão, nivelado praticamente na grande liberdade geral.

Com frequência, por essa circunstância tem lugar na maloca uma festa. Não parece que tal festa seja rito religioso do matrimônio. Não se não tem data bem determinada, como talvez nem se realize o matrimônio. Nem há, no desenrolar-se da festa, alusões ao casamento. Gostam muito de festas, e a desta ocasião tem o alcance psicológico de dispor o ânimo da môça a fim de não sentir muito o afastamento da sua família. Tanto mais que ela se acha em tribo diversa da sua, cuja língua quiçá desconheça totalmente.

Se a môça não pode tomar diretamente nenhuma iniciativa, mostrando suas preferências, goza, ao menos, do «direito de veto». Isto é, falando em tese, ela não se casará com quem não deseja. E' verdade que ela pensará bem antes, pois rejeitando essa proposta, talvez não venha outra. E, ademais, ela sofrerá os maus tratos dos seus, os quais pelos compromissos do *Pódpem* devem dar uma espôsa à outra família.

Quem sabe até, se ela será vítima de maleficio, *dohasé*? Todavia se ela absolutamente não deseja casar-se com tal rapaz, sobram-lhe dois recursos: o primeiro não se deixar raptar, e às vêzes ela foge para outra maloca vizinha, quando sabe que vêm buscá-la. Ou foge da casa do môço (15).

4. *Estabilidade*

A existência do matrimônio e sua estabilidade ainda não está estabelecida. A môça dará prova de boa vontade e capacidade para ser dona de casa.

Se não vivem no regime de maloca, talvez mais tarde o môço constrói a sua habitação independente; por ora continuará na casa de seu pai, e a sogra manda a môça preparar a manicuera e as bebidas para a festa de nupcias.

Muitas vêzes, principalmente no regime moderno de habitações familiares, o môço, como preparativo do matrimônio, já fêz a derrubada com o auxílio dos amigos. Levará, então, a môça para ver o local e dirá: «Eu fiz a derrubada, é para você fazer a plantação» (16).

---

(15) Uma mulher Taryana, Teodora de Iauareté, informou-nos que a mulher nada pode dizer. Porém, se gosta do rapaz deixa-se roubar; em caso contrário, fugirá da maloca do môço.

(16) Foram as expressões da Taryana Teodora de Iauareté. Ao passo que o Tukano Antonio Barreto declarou que o pai, quando entrega a esposa ao rapaz diz-lhe: "Eu trouxe mulher para você. Vai pescar para ela". E acrescentou: "Este vai entrega-lhe o pescado, ela recebe, quer dizer que aceita o rapaz". Não se poderia, quiçá, nesses diversos formulários ver uma alusão ao fato que originariamente a Civilização Taryana era essencialmente agrícola, e a Tukano, civilização da pesca?

Nesses primeiros dias terá a jovem esposa, não só a assistência da sogra, como o esposo procurará insinuar-se, proporcionando-lhe bom pescado ou boa caça. Se ela, porém, não quiser adaptar-se a essa nova ordem de cousa, recorrerá, então, à fuga (17). No ambiente em que se acham e com seu regime de vida isto não lhe é difícil.

Se não se der a fuga, considera-se realizado o matrimônio.

Costumam, pouco tempo depois, fazer uma viagem de núpcias em que o môço em companhia de sua espôsa, vai visitar o sogro, levando-lhe presentes (peixe moqueado, fruta, etc.), e assim se vão estreitando as relações amistosas. Aparecem, outrossim, nas lendas essas viagens nupciais.

A esposa levará consigo, para o novo lar, como dote ou propriedade o seu *pikamã*, isto é, um pequeno cesto de cipó, com seus enfeites, objetos de uso e um amarrado de fôlhas contendo pó de onõña (carajuru).

Logo nos primeiros tempos de casado o marido dará uma surra na mulher. Bater-lhe-á, porém, com as mãos, assim nos asseguraram; ela não pode reagir. Embora se trate de um costume que visa experimentar a boa vontade da môça e sua capacidade de sofrimento, parece, no entanto, que a circunstância de algum desentendimento entre os esposos é que dará o ensejo a essa surra.

*a) Relação entre os esposos*

As relações entre os esposos são bastante normais. Talvez se possam dizer amistosas (18) embora sem carícias e outras manifestações de afeto, pois é certo que do convívio nasce certa familiaridade. O marido recearà que os maus tratos afugentem a mulher (19), especialmente se ainda não tiverem filho algum, pois não está ainda estabelecido o matrimônio. E, enfim ela é que trabalha para êle na roça e em casa.

---

(17) Sucedeu, informou-nos a Tukano Dorotéia Brito que a vão procurar uma segunda vez. Compreende-se que assim seja, pelos acordos que precederam o casamento e suas conveniências para ambas as famílias. Se, porém, ela fugir uma segunda vez, não será mais procurada. Mas neste caso o seu pai restituirá ao môço os presentes recebidos.

(18) Tivemos a oportunidade de viajar com uma família Karapanã das cabeceiras do Papuri, e presenciar a esposa em longa e cordial conversa com o marido.

(19) Constatamos vários exemplos. Em princípio de 1954, quando de nossa viagem em Puri-cachoeira, uma Desana, casada com um Tuyuka de Cabeceiras (acima de Puri-cachoeira), em vista dos maus tratos do marido, abandonou a êste e uma criancinha de meses e retorna ao seu povoado no baixo Tiquié. Até julho dêsse ano o Missionário ainda não havia conseguido que ela voltasse para junto do seu marido.

Embora não haja lei alguma que impeça o divórcio, ou que impossibilite o divorciado de passar a outras núpcias, ambos têm sempre os olhos à dificuldade de um segundo matrimônio.

Isso não impedirá que haja desinteligências, e o marido, especialmente se embriagado, bata na mulher. Das muitas que interrogamos sôbre êste assunto, tôdas nos afirmaram os maus tratos e mesmo sevícias da parte dos seus maridos.

A mulher, porém, jamais reagirá, pois assim o mandam as leis do costume (20).

Há um costume original e seu tanto estranho, como resulta do relato da índia Taryana Teodora de Iauareté, confirmado por indígenas de outras tribos. Durante o dia e nas primeiras horas da noite, os esposos se entretêm em longas conversas, na maloca, cada qual, por exemplo, deitado na sua rede; entretanto não se falarão, pela noite a dentro. À noite são permitidas apenas as conversas de homem com homem e mulher com mulher. Se o marido chegou da sua pescaria ou caçada, já noite avançada, dependura o peixe ou a caça no vão de duas estacas ou da parede, ou em outro lugar qualquer sem dizer palavra à sua mulher, à qual só pela manhã fará entrega do fruto do seu trabalho.

*Poligamia e Poliandria*

Quer entendamos êstes termos como a possibilidade de um indivíduo ter várias esposas simultânea ou sucessivamente, e, vice-versa, uma mulher mais de um marido, não vigora presentemente entre as tribos do Uaupés.

Em conversa, vários dentre êles afirmaram que antigamente podia o homem ter duas ou três mulheres, especialmente o tuxaua (21).

---

(20) Temos tido notícia, outrossim, de alguns episódios de reação por parte da mulher, especialmente quando percebe que o marido está enfraquecido pela embriaguez. É mais um golpe que vão sofrendo seus costumes e crenças.

(21) Em 1849 Wallace depunha (o. c. 636): — "Os homens, por via de regra, têm apenas uma mulher. Não há, porém, para isso um limite especial, pois muitos deles têm duas ou três. Alguns chefes têm mesmo "muitas mulheres". É o que se passa ainda com algumas tribos, por exemplo, os Karutana do Içana, os Kanu do Aiari, afirma o autor de "Pelo Rio Mar" (p. 18). Concorde é a afirmação do Cônego André Fernandes de Souza quando diz (o. c. 486): — "São dados à poligamia ou pluralidade de mulheres e há principal dentre elles com duas e três mulheres, e algumas vezes innãs uma das outras".

nunca, porém, uma mulher ter vários maridos. Nas lendas há exemplos de poligamia, não só, mas também de poliandria.

É verdade que, tendo por finalidade a procriação, o matrimônio não se considera perfeito senão após a concepção do primeiro filho. Desde os primeiros sinais de gravidez, ficou firmado o casamento.

Se após dois ou três anos de convivência, a mulher não deu à luz filho algum, o marido a considera vítima do malefício de esterilidade (22) e procurará outra espôsa.

Regularmente, porém, a mulher considerada estéril, prefere ficar com o espôso. Todos os interêsses dêste levam-no a retê-la, embora já tenha contraído um segundo matrimônio. Estamos assim diante de uma poligamia não de direito, porém de fato. Nem tal fato parece causar estranheza (23).

O fato de se considerarem os filhos como pertencendo à tribo do pai, parece revelar, como em outras nações, o conceito que tôda a capacidade reprodutora é exclusiva do pai. No entanto, sempre se atribuirá à mãe a impotência de procriar, nunca aos homens.

No período histórico, como resulta dos primeiros exploradores, já havia essas tradições. A grande revolta do ano 1757, em que foram assassinados pelos índios os povoados de Moreira e Thomar, e ameaçado o de Barcelos, teve por origem o rapto da irritação do índio Domingos Inhamuncu, do qual o Missionário fizera separar-se uma concubina (Cfr. Navio Sampaio, Diário, n. 1334). No mapa de suas atividades, datado de Caruru-cachoeira, a 1º de abril de 1853, Frei Gregorio de Bene informa: — «Será mui difficil por algum tempo unir no Santo Matrimonio e mesmo converter êstes indios por motivo que havem em poligamia e outros em concubinato» (*Archivo do Amazonas*, V. II, n. 4, p. 324). Ainda em princípio dêste século Koch Grünberg (Z. 7, 178) depõe que a poligamia é uma prerrogativa do tuxaua e cita o exemplo de José, tuxaua Tukano de Pari-cachoeira, com duas espôsas, uma Tuyuka e outra Taryana.

7) *Posição doméstico-social da mulher*

Num primeiro contacto com os indígenas do Uaupés, estranhamos a situação da mulher, parecendo-nos de evidente inferioridade.

---

22) Parece que não há possibilidade de reabilitação para a mulher, isto é, casamento com outro homem, embora um Tukano por nome Mario Chaves, em resposta à nossa indagação, afirmasse a possibilidade de novas núpcias para a mulher tida como estéril.

23) Conhecem-se dêstes fatos atualmente (1947) em Taracuá e Urubucuara.

4: Silva SQ19 Tucano

O seu nome talvez nem seja conhecido (24). Dirão simplesmente para identificá-la: — «A mulher de fulano» ou «A mãe de sicrano». O marido usará esta expressão: «*Yo pórd-kó*», «a mãe dos meus filhos» ou «a que me dá filhos», ou «a mãe de N» e diz o nome do filho mais velho.

Seus trabalhos são constantes, pesados e de grande responsabilidade. Quiça em estado precário de saúde, por exemplo na gestação e no parto, assim mesmo ela os cumpre perfeitamente, sem se queixar, porque são prescrições da tribo, portanto procedem de uma vontade superior (25). A ela cabe o plantio e a limpa da roça. Ela passará horas inteiras ao sol, entre o fogo e a fumaça, preparando a coivara, cavando e enterrando a maniva, limpando a roça pelo processo de extirpação das ervas à mão. *Tod kuresé*. Ela é que arranca a mandioca, recolhe-a nos aturás e traz para casa, onde, depois, descasca, rala, espreme e peneira para fazer farinha. Ela é quem prepara os alimentos e os caxiris, toma conta da casa e da criação dos filhos. Isto tudo enquanto o marido talvez esteja longas horas ocioso em conversa com outros homens (26).

Ela é uma estrangeira sem nenhum direito sôbre seus filhos. Pertencem êstes ao marido, ou antes à tribo do marido. Se acaso ficar viúva poderá continuar a morar na maloca, e assim o fará ordinariamente, maxime se idosa e não pode esperar novo matrimônio. Ou voltará para a sua tribo, sem no entanto levar consigo os filhos. Na hipótese que seu marido tivesse casa isolada ou na vizinhança de outra tribo, virão os parentes da tribo do marido buscar os órfãos para a própria maloca. Se algum dos órfãos for ainda

---

(24) Acontece com freqüência que o índio traz um filho para ser batizado. Quando, a fim de fazer os assentamentos, o Padre começa a indagar os nomes e pergunta como se chama a mãe da criança, o marido responde-lhe — "Não sei, pergunte a ela".

Observa-se em alguns grupos humanos, por exemplo os do rio Canabur (não porém os do Uaupés, vd adiante VIII-1, b (4) a interdição de pronunciar o nome de algumas pessoas. Explicam alguns êsse tabú do nome pela "mentalidade entelequica" dos primitivos, isto é, o nome não é algo secundário, exterior, mas *essencial* e se identifica com tal pessoa (ou objeto). Pronunciar êste nome é tornar presente aquela pessoa ou objeto sagrado, o que não é lícito (tabu religioso propriamente dito). Ou pronunciar o nome de uma pessoa (por exemplo o do próprio marido, entre tribos da Índia meridional — Cfr. Gordon, o. c. 132) e fará morrer (é o tabu mágico).

(25) Se diante do marido propositalmente manifestarmos estranheza pelos seus grandes trabalhos, a mulher sofre e nada diz.

(26) Em outras horas ela estará conversando alegremente, enquanto o homem está trabalhando.

criança de perto, talvez atendam até que a criança possa dispensar os cuidados maternos, e então, irrevogàvelmente lhos tirarão.

Quando se tratava de casá-la, foi negociada uma permuta ou noivado, sem que ela fôsse consultada. Ao instalar seu novo lar teve a prova costumeira de uma sova, e talvez, por mau caráter do marido se tenham seguido muitas outras, contra as quais ela nada pode redigir. Conforme os costumes da tribo, jamais comera com o marido; separa sua parte e, só depois que êle com seus amigos e convivas se saciaram e abandonaram o local, é que tomará seus alimentos.

Tudo isto causa espécie principalmente se atentarmos para a importância do seu atelier; isto é, ela é que executa os trabalhos necessários para a vida: planta a roça, trabalha com a mandioca, que constitui o prato cotidiano indispensável, tece as redes para dormir, fabrica os vasos para água, prepara os caxiris e a cozinha.

Deixamos, *Dio-volente*, para uma monografia o estudo dos indícios de uma civilização matriarcalista entre as tribos uaupesinas. Por ora, sabemos, com os estudiosos que passaram por essa região, que cabe ao marido a honra e a responsabilidade de chefe do grupo familiar. Quanto aos trabalhos, porém, uma observação mais atenta vem atenuar a impressão de inferioridade da mulher.

Na realidade existe uma divisão dos trabalhos entre o homem e a mulher, fixada pelo costumes. Os conceitos de importância e gravidade, peso e responsabilidade dêsses trabalhos não podem ser ponderados conforme critérios da nossa cultura, porém, sim da mentalidade indígena.

Como impressões antigas que são, talvez fôssem mais fácil de compreender-se outrora do que hoje, pelo mudar-se das circunstâncias. Atualmente são observadas ainda com grande rigor, pelo espírito de apego às tradições, característica dos indígenas, embora os dentistas tenham aconselhassem nova revisão dos costumes, e diversa distribuição dos trabalhos.

Compreende-se que o marido em épocas mais difíceis de luta entre os grupos ou contra os animais, devia estar sempre em condições físicas de poder fazê-lo e dispor do tempo necessário, sem que por isso algo viesse a faltar à sua família. Donde a conveniência de serem, esses trabalhos diários, inadiáveis, atribuídos à mulher. Com isso se provia também ao repouso indispensável à robustez física do varão o qual, em dados momentos, seria submetido a provas difíceis.

Esta observação faz-nos compreender melhor a divisão do trabalho. Aqueles labores que exigem destreza, coragem, e, até certo

4: Silva SQ19 Tucano

pento, fôrça física pertencem ao marido. São os homens que escolhem, cortam, transportam troncos, vigas, estacas palmas, para a construção da residência, bem como executarão todo o trabalho de construção da casa de moradia e outras barracas, auxiliares. Cabe, outrossim, ao homem a barragem dos rios com grossos troncos para a grande pescaria. A êle a caça exclusivamente, e, em grande parte a pesca, à qual as mulheres são admitidas apenas a título de auxiliares. Previamente o homem confeccionou armas e aparelhos para uma e outra coisa: canoa, cestos, redes, arcos, flechas, armadilhas, etc. Na roça coube-lhe o trabalho prévio da escolha do local e da derrubada. A defesa da roça contra os animais daninhos ou outras pessoas, é também dever seu. Dos utensílios domésticos êle é que fabrica o tipiti, balaios e peneiras, para o tratamento da mandioca, bem como os banquinhos. Quanto à alimentação, êle é quem providencia a caça, pexe e traz os frutos da mata para os cariris. E para as manifestações sociais e religiosas, êle preparou os enfeites e os instrumentos musicais. Reconhecendo, pois, o grande pêso de trabalho que recai sôbre a mulher, para a manutenção da família, pensamos que só êle não demonstra uma situação inferior da mulher.

O *Pôapéra*, em si, não é uma depreciação da mulher, já o notamos. Os presentes de núpcias, mais do que o dote dos costumes europeus, representam propriamente uma valorização da esposa. Ela é sobretudo considerada grandemente útil, não só sob aspecto da maternidade, tão desejada e apreciada, pois o índio deseja ter filhos, mas até no econômico.

Quanto a desconhecer o nome da mulher e as maneiras de a ela se referir, não parecem indicadores de inferioridade. Ela veio de outra tribo e outra língua, quiçá nome estranho. De resto não se costumam chamar pelo nome, como veremos. Em geral, ao referir-se à espôsa, o marido usa a expressão: — «A mãe de N.» e diz o nome do filho primogênito e isto parece uma associação afetiva. Ela também dirá do marido: «O pai de N.», que nos seus lábios, tem um sentido particular, como afirmação de que é filho legítimo.

Quanto aos filhos, vale a afirmação: mais do que aos pais, os filhos pertencem à tribo. Tanto a espôsa, como o marido exercem pouca autoridade sôbre os filhos, pois são criados com grande autonomia. Talvez tenha ela ainda maior ascendente do que o marido, pois, ao menos quando pequenos, estão exclusivamente a seu cuidado e chegam até a aprender o seu idioma.

Mesmo já crescidas, as filhas estão sempre a seu lado, auxiliando-a nos trabalhos.

Uma prova a mais de certa equiparação ao marido, embora à tribo dêste pertençam os filhos (27) é que se estabelece o *parentesco bilateral*, como o prova a *Nomenclatura de parentela* (28). Tanto mais notável êste fato se atentarmos ao espírito dessas nações, e como os sogros, cunhados, etc., entre os quais se passam relações amistosas, são necessàriamente de outra tribo.

É reconhecido à esposa o direito de propriedade do seu enxoval e do que fabrica, e tal direito cada vez vai tendo maior campo para se exercitar. Hoje em dia é comum ver a mulher vendendo ao civilizado a farinha que fabricou e comprando para si fazenda, linho, botões, agulha, tesoura e até objetos que diríamos de luxo, fitas, grampos, brilhantina, etc.

A mulher pode até exercer as funções de Tuxaua (29); não, porém, as de pajé. Talvez determine esta exclusão não tanto um desprêzo quanto o conceito de que não seja dotada de poder mágico necessário para o exercício da pajelança.

No casamento ela parece gozar ainda de maior liberdade que o rapaz, podendo abandonar o marido. Deve-se, pois, concluir que reconhecendo embora a primazia do marido (como também se dá em nossa civilização), considerando sob o ponto de vista doméstico-sócial, a esposa situa-se num plano de igualdade com o marido (30).

*Condição moral da mulher*

Ouvimos certa vez a uma donzela a expressão: «a mulher não vale nada». Indagamos a muitas outras mulheres, solteiras e casadas, e todas confirmaram a exatidão dêste conceito, sem saber dar maio-

(27) A [illegible] apresenta o costume europeu: a mulher, ao casar-se, [illegible] o nome de família, para adotar o do marido, cujo nome será [illegible] de todos os seus filhos.

(28) [illegible] qualificar de bilateral a nomenclatura e portanto também o parentesco. Com efeito a certos termos de consaguinidade correspondem outros de afinidade.

(29) A [illegible] tal questão aos índios [illegible] uns responderam sim, e outros [illegible] não. Como não há [illegible] escritas, só podem deduzir dos fatos. Ora, muito dêles, jamais souberam de fato algum de mulher Tuxaua. Alguém respondeu-nos precisamente que ela pode ser Tuxaua, porque nunca ouviram falar de mulher Tuxaua. Note-se que existe na língua Tuxaua o feminino *Wpopo*, têrmo que se aplica ordinàriamente à esposa do Tuxaua (*Wpopo*) e, nos centros Missionários, também à Irmã Superiora do colégio feminino. O exemplo de Caridade (p. 370) parece autorizar-nos a afirmação supra.

(30) Verificamos recentemente que esta é também a opinião de Koch Grunberg, o qual, após demorado contato com os Kubewana pôde concluir que a mulher não é a bêsta de carga, mas a inteligente dona de casa. Z. I, 354.

4: Silva SQ19 Tucano

tes estabelecimentos. Apenas uma acrescentou: «a mulher deve sair da propria tribo».

Não se trata de uma inferioridade, parece-nos, resultante dos seus trabalhos mais constantes que os dos homens, nem sob o aspecto político, de não exercer uma autoridade político-social mais de título que de fato, como presentemente o é o tuxáuaua.

Verificamos, sim, um grande sentimento da propria inferioridade no ânimo das mulheres. Não saberia se é exato aplicar-lhes uma expressão tão ao sabor da psicanálise freudiana, dizendo-as dominadas por um «complexo de inferioridade».

Mas lhe ratou a razão, a obrigação de trabalhar o dia todo, ao lado da propria mãe, enquanto os seus irmãos entregavam-se o dia inteiro à ociosidade e aos divertimentos, lhe terá gerado a noção dessa situação masculina privilegiada.

Entre povos de uma mentalidade racista exagerada, como são todos êles, deve ela abandonar sua tribo. Quem seria capaz de avaliar êste sacrifício? Deve viver entre estranhos, cuja língua talvez no princípio desconheça, e quiçá nunca logre possuir. Ouvindo, quem sabe quantas vêzes, metejos por êsse seu defeito, e zombarias contra a sua tribo. Com frequência se passam episódios de hostilidades entre os seus parentes e os do seu esposo, e dêsses episódios ela sofre com a notícia e com as exprobrações.

O sentimento da própria fraqueza da psique feminina, engrandecendo saber que se acha separada dos seus, talvez num ambiente de franca hostilidade à sua tribo (pois não há casamentos de amor, por eleição e tratativa dos pais). Manifestações quiçá do caráter rude do seu marido e dessa hostilidade racial serão os maus tratos.

Não tudo, muito conhecido e experimentado pelas casadas, exaspera na alma feminina o conceito da propria fraqueza. A menina que ainda não o experimentou, presencia-o, ouve-o, e espera ansiosamente sorte igual, e o seu ânimo se vai enfraquecendo e avaliando-se sempre mais.

Na grande festa de Wáx-ti, a parte mais solene lhe é interdita. Não pode assisti-la, não pode ver o instrumento misterioso sob pena de morte.

As grandes notícias das origens da tribo ela deve desconhecer. Temos a impressão que as mais perspicazes das mulheres, saibam quase tudo o que os homens mais afiliados conhecem das lendas, porém, com a convicção dolorosa para elas, de ignorar muito e o principal. De fato, temos ouvido as mesmas lendas contadas por

homens e mulheres (31). A totalidade dos homens nada mais sabem do que as mulheres. Sòmente lhes levam uma vantagem: o haver visto o instrumento misterioso, sagrado, o *Miri*, e tê-lo feito soar. Por seu lado talvez *tôdas* as mulheres supõem que o instrumento que os homens soam, seja realmente *Wãz-ti*.

Mais que tudo, porém, a decadência moral, esta sim, é máxima na mulher indígena das tribos uaupesinas. Carregando as taras de uma perversão moral, quiçá milenária, sente imperiosos os impulsos sexuais. Os costumes lhe facilitam a satisfação, e, portanto, também o seu agravamento. Mas, por isso mesmo as põe à mercê dos varões, aos quais sempre devem atender.

*Filha*, e, ao depois, *mãe*, os costumes lhe impõem até o *incesto* com caráter religioso. No exercício dessas relações, não faltarão, é natural, práticas aviltantes.

Essa decadência moral não é apta para gerar no ânimo masculino o respeito (como de fato não há) à mulher, seja ela sua irmã, sua espôsa ou sua mãe. Qualquer mulher representa para êles apenas uma empregada para os trabalhos diários, e um instrumento de prazeres muito baratos e comuns.

A mulher sente essa situação real, e quanto mais se prodiga, por impulsos íntimos, por obediência aos costumes, pelo desejo de agradar, ou por medo dos castigos, mais se avilta perante si própria.

O pouco ou nenhum hábito de ponderar as situações, a vida agitada de trabalhos e festas que leva, o saber que idêntica é a situação de tôdas as mulheres, e que se trata de um fato não susceptível de mudança, porque criado pelas leis invioláveis da tribo, mitigam um tanto seu sofrimento, gerando uma quase conformidade e aceitação dêsse estado de cousas.

Porém, quando alguma delas se põe em contacto com os civilizados, tem noção de uma melhor situação para a mulher, ouve quiçá apelos para a virtude e o próprio enobrecimento, começa, então, a avaliar o estado de decadência da mulher índia e exclama pesarosa: «a mulher não vale nada».

31. *Divisão do trabalho*

Vigora, entre as tribos do Uaupés uma divisão rigorosa dos trabalhos, de sorte que os de um sexo não farão os trabalhos mar-

(31) Nenhuma mulher nos soube contar a origem do instrumento *Miri*. Para não ferir as susceptibilidades dos indígenas, não as deixamos ler essa lenda que os homens nos contaram em confidência, nem ver o instrumento tabuado para elas.

dados para os do outro (32). Nota-se igualmente que, embora um trabalho seja complementar do outro, não o executam juntos, porém um sexo fará a sua parte antes ou após o outro.

1 — *Cabe ao homem:* construir a própria casa e providenciar todo o material ocorrente para a construção;
- a escolha do terreno para roça a derrubada e a queima;
- a caça e a pesca;
- o preparo das armas (arco, flechas, sarabatana);
- o fabrico do tipiti, balaios e peneiras para a preparação dos alimentos da mandioca;
- a preparação do ralo (33);
- a confecção dos enfeites de dança e instrumentos musicais;
- o fabrico das redes e cestos de pescas e das armadilhas;
- a execução do trocano e dos cochos de caxiri;
- a colheita do arumã e fasquias para a fabricação da cestaria, das fôlhas para a extração das fibras de tucum; bem como do barro para a cerâmica;
- a colheita das plantas venenosas e seu preparo para a pesca.

2 — *Cabe à mulher:* o plantio e limpeza da roça e a colheita da mandioca;
- a limpeza do terreno adjacente à maloca;
- carregar o aturá com a carga;
- confeccionar e queimar a cerâmica;
- fazer as redes de dormir;
- executar os serviços domésticos (acender o fogo, fazer a comida, trazer a água, a lenha, carregar os filhos, catar piolho, etc.)

b) *Os Filhos*

Os indígenas desejam filhos, donde o fato geral de todos constituírem família regular. A fecundidade do matrimônio é condição essencial para a sua validade. O nascimento do primeiro filho sela o contrato implícito de casamento e estabiliza o matrimônio, não sendo mais possível trocar de espôsa.

---

(32) Esta afirmação vale, não padece dúvida, para os trabalhos tradicionais e para os indígenas com poucos ou nenhuns contactos com a civilização. Na aculturação que se vai processando, êste conceito de divisão das ocupações vai evoluindo. Com tôda a naturalidade, hoje em dia, um rapaz serve de cozinheiro para os civilizados. E' comuníssimo, igualmente, ver um homem lavar a própria roupa, como o é também, adatar-se um aturá às costas, como o fazem as mulheres, para transportar uma carga para os brancos.

(33) Vimos no Içana que cabia ao homem o preparo da tábua para o ralo, e, à mulher, a incrustação das pedrinhas.

Desejam, porém, filhos alternadamente homem e mulher, aquêles são os perpetuadores do grupo, estas, além do trabalho que produzem facilitam o casamento dos filhos homens, pelo processo de troca. Se nascem seguidamente três mulheres, o índio repreenderá a esposa, achando que é culpa dela (34).

Quanto ao número de filhos, pelas dificuldades de criá-los (máximo porque todo o pêso recai sôbre a mãe), não se encontra prole numerosa. Com alguma freqüência ocorrem 6 ou 7 filhos (35). O intervalo, já o notamos é regularmente de dois ou três anos entre os partos.

1) *Abôrto e infanticídio*

Apesar de desejarem filhos, provocam o abôrto e praticam o infanticídio. Quando não bastaram as poções esterilizantes, recorrem ao abôrto: para isso há as *Piçangas*, que a própria mulher ou sua sogra prepara. Quando nem estas foram eficientes, tenta-se o processo mecânico para matar o feto e abortá-lo até pisando no ventre da gestante. E se, apesar disso, nasce vivo o filho indesejado, elimina-se, enterrando-o vivo (36). E será de regra a própria mãe que o fará. Talvez o enterrar vivo denote certo sentimento, considerando-se, como morte mais suave. De feito forram delicadamente a cova com fôlhas de bananeira (37).

São quatro os casos regulares de infanticídio: 1.º — o do *filho ilegítimo*. Tais são todos os que nascem fora da legítima união conjugal. A razão é a vergonha que daí advém (38). Os filhos só podem derivar de matrimônio legítimo. É grave insulto dizer a alguém

(34) Um exemplo dêste foi relatado em Teresita, rio Papuri, Colômbia. Ao nascer, a mãe, primeira do sexo feminino, a mãe a enterrou viva. O Missionário indagou "Por que fez isto?" — "Porque meu marido me xingou".

(35) Note-se que nem sempre a moça se casa cedo. E, por outra parte, o género de vida envelhece-a precocemente, e talvez bem prematuramente cesse a sua fecundidade. Não nos foi dado verificar em qual idade terminam as regras na mulher. Sabemos, sim, que a menstruação inicia pelos 14 anos e que conhecem e empregam plantas para a regulação do catimônio.

(36) O missionário Pe. João Marchesi, com um tirocínio de quase 40 anos entre as tribos do Uaupés, estigmatiza "o cinismo com que enterram vivos os recém-nascidos, sufocando-os como se faria a qualquer animalzinho" (ap. "Os Tucanos", p. 26).

(37) Dentre os mais repugnantes, o episódio narrado pelo Pe. Afonso Kuipers, ocorrido ho...ovendo de Africa, margem esquerda do Papuri, Colômbia. Ele, enterrando que uma criança de seus oito anos, deforme, de cabeça grande, e como a cova era pequena, a mãe pisava na cabeça, fora da terra "para enterrar mais e não continuar chorando".

4: Silva SQ19 Tucano

que êle não tem pai. Há uma exceção: em geral são poupados os filhos dos civilizados (39).

Objetos da maior vergonha são os filhos incestuosos. Com o máximo segrêdo será provocado o abôrto ou executado o infanticídio.

2.º — *do quarto ou quinto filho consecutivo do mesmo sexo.* Especialmente se forem mulheres (40).

3.º — *dos filhos gêmeos.* Um dos dois será eliminado; Regularmente o segundo a não ser que outro motivo aconselhe o contrário. Por exemplo, eliminarão de preferência o defeituoso, ou a menina. Parece que a razão dêsse crime é a dificuldade, para a mãe, de criar dois filhos simultâneamente, com todo o trabalho que lhe cabe; e não outro motivo de carater mágico ou supersticioso (41). Informou Patrícia Vasconcelos que o marido bate na mulher quando dá à luz filhos gêmeos.

Entretanto causa espécie êste diverso modo de agir: quando uma criança ficou órfã de mãe não será morta, porém passará nos cuidados de outra mulher. Quando, ao invés, se trata de gêmeos, nenhuma mulher tomará a si o encargo de criar um dos recém-nascidos, mesmo quando haja alguma recém-lactante que acabou de perder o seu filho (42). Ainda nestes casos não transparece motivo algum supersticioso, senão apenas o egoísmo das mulheres e a nenhuma amizade entre si. Se tomam cuidado do órfão, é por imposição inviolável dos irrevogáveis costumes da tribo.

4.º — *dos filhos defeituosos.* Qualquer defeito físico notável é fatal ao recém-nascido. Nem se pode crer que se trate de razão mágica, senão, por um lado, a grande vaidade dos pais, sobretudo da mãe; e, por outro o pensamento que será de pêso à tribo, a qual

---

(38) Não constitui, porém, impedimento matrimonial para a donzela-mãe. É um sinal de que não tem "malefício de esterilidade".

(39) Conhecem-se casos em que os avós da criança se orgulharam, porque os netos eram "filhos de branco".

(40) Em março de 1957 uma mulher ainda moça recolheu-se ao hospital de Parachoeira, rio Tiquié, em estado grave, em consequência de um abôrto. Inquérito posterior apurou que se tratava de abôrto criminoso, com expulsão do feto em dois pedaços, com intervalo de dois dias. E o caso fôra o recebe de uma criança do sexo feminino, como as duas precedentes. Não conseguimos apurar se no caso teria intervindo algum pajé, que premira o sexo do nascituro.

(41) Os Missionários têm conseguido salvar e criar alguns gêmeos, e, quando crescidos, isto depois dos quatro ou cinco anos, os pais os recebem de bom grado, antes os exigem.

(42) Confirma-o o Pe. Antonio Giacone dizendo que viu mulheres recém-parturientes descarregando os peitos, ou amamentando algum cachorrinho, antes que alimentar um filho alheio ("Os Tucanos" p.53).

precisa de indivíduos perfeitos e fortes, e só a êstes deseja. Mais fàcilmente escapam (como se comprovou) os surdos-mudos, por que só muito mais tarde conseguem verificar-lhes o defeito.

2) *O parto*

O parto considera-se uma operação fisiológica da mulher, como qualquer outra, e que não despertará atenção ou cuidados. Apesar da falta de higiene e de medidas preventivas, estas filhas de Eva parecem ter o parto mais normal do mundo. Muitas vêzes continuam trabalhando até aquêle momento (43), e reencetarão pouco depois sua vida normal trabalhosa.

Os homens, porém, sairão da maloca (ou de onde se der o parto), abandonando, quiçá, a parturiente entre dores, porque está determinado que não podem assisti-lo. Por esta razão, se há hóspedes na maloca, a parturiente se recolherá dentro de algum apartamento, se houver, ou o prepararão a tempo, para essa finalidade, ou então sairá da maloca para dar à luz no mato. Como também não deve haver no local machado, fação ou qualquer outro objeto de ferro ou metal.

Entretanto, na maioria dos casos, a mãe terá convidado outra mulher para assisti-la. Esta, como se fôra madrinha da parturiente, adquire sôbre ela alguns direitos: chamá-la-á *Mar-kôá* (*afilhada*), e, por seu turno, di-la *Pax-koá* (madrinha), e deve prestar-lhe os serviços pedidos.

A fim de esconjurar qualquer mal para o recém-nascido, o paje ou um *Kamã* vira «sopra-lo» e a sua mãe, com a fumaça do seu cigarro, informou Dorotéia Brito. Como preventivo de doenças marcará o rosto da criança com numerosas mas pequenas manchas vermelhas da substância mágica carajurú.

3) *Nhã-pkô* («Couvade» ou chôco)

Vigora o chôco (*Couvade*) entre as tribos do Uaupés (44). Mal nascida a criança, a mãe, com auxílio da *Pax-koá*, corta-lhe o cordão umbilical. Outrora faziam-no batendo entre duas pedras, hoje com uma graminea cortante, a tiririca, ou uma fasquia de taquara, ou

(43) Foi-nos relatado pela Irmão leigo Salesiano, o Agrônomo Teotônio Ferreira, no caso de uma índia em S. Gabriel, a qual trabalhou na roça pela manhã, à tarde teve criança, e do dia seguinte veio retomar seu trabalho. São freqüentes os casos em que os Missionários mandam-nas tomar repouso e elas recusam.

(44) De algumas lendas de evidente origem patriarcalista, resulta que não mais existe o chôco. É que a mulher é que se recolhia à rede nos seus incômodos. A narradora, Dorotéia Brito, a certa altura da lenda

4. Silva SQ19 Tucano

mesmo uma tesoura (45), e leva a criança ao rio para o banho.

Salvo raros casos de parto difícil (raríssimos os de morte) a mãe retoma logo os cuidados e trabalhos da casa. O marido, porém, se considera em estado de gravidez, *Nihi-pkô* de *Nihi*, criança, e *pkô* (*-kô*, pai). Por isso deve pôr-se de repouso ou resguardo, *Sihyogo*, durante seis dias (46): não trabalhará, evitará sair de casa, de tomar sol, passará a maior parte do tempo na rede e sujeita-se a uma rigorosa dieta. «Se o pai trabalhar a criança adoece, chorará dia e noite», assim nos explicaram.

É o conceito da ligação do pai com o seu filho, como sendo o próprio pai que se reproduz. Tudo, pois, o que acontece ao pai, não pode deixar de afetar a criança. Como o esfôrço, uma alimentação mais grosseira prejudicaria a criança, o pai deve abster-se dessas coisas (47). A espôsa, então, é que servirá ao marido cuidadosamente.

Tanto o pai, como a mãe, durante quatro dias só se alimentarão de mingau, sendo vedado o uso do peixe. É o tabú da alimentação.

O recém-nascido é uma reprodução do pai. A mãe faz apenas o papel da terra em que germinou a semente: quem produziu a semente foi a árvore, cuja natureza a semente reproduzirá. Desta concepção (48) derivam lògicamente duas conseqüências: a primeira é o chôco ou resguardo do pai, a segunda, é que o filho pertence a tribo paterna e não à de sua mãe.

4) - *Imposição do nome*

Pelos três anos de idade, quando a criança já caminha desembaraçadamente e começa a falar e dar os primeiros indícios de com-

---

acrescentou espontaneamente que "antigamente era a mulher que se deitava na rede".

(45) O Tuxaua da tribo Jue-masã das cabeceiras do Komé-ya, afluente do Piri-paraná, pediu-nos com instância que na visita sucessiva lhe trouxessemos uma tesoura, de cuja utilidade ouvira falar.

(46) Temos visto alguns dos índios que freqüentaram as escolas da Missão submeterem-se a tal costume. E a palavra do missionário que tenta mostrar a inutilidade do costume, respondem: "Os velhos assim o querem".

(47) Esta crença da ligação íntima entre a saúde e bem-estar do pai e do filho, não vale apenas nos primeiros dias do recém-nascido, senão também que dura tôda a vida. D. José Domitrovitsch, quando superior da Missão de Pari-cachoeira pôde assistir o seguinte episódio: Julio, o Tuxaua Tukano local, ao saber que seu filho Mandú (o atual tuxaua, 1956) fôra mordido por uma jararaca, abandona o trabalho, vai para a sua casa, põe-se na rede e de regime, a fim de que não se agrave o estado do filho, o qual se salvou graças à injeção anti-ofídica que imediatamente lhe aplicou o Missionário.

(48) É um conceito evidentemente patriarcalista. Note-se que afirma o Pe. João Marchesi haver ouvido do Tuxaua Tukano Julio, de Pari-cachoeira, expressões semelhantes às dos Judeus (que eram patriarcalistas): "Os filhos do meu útero".

prensão, procede-se ao rito de *imposição do nome*, rito que termina com um caxiri.

Até esse momento a criança é *Oé*, isto é, «sem nome». Assim no-lo traduzem, nem sabem dar outra explicação dêste têrmo.

Cabe ao pai, conforme o relato da Taryana Teodora, escolher um nome. Uma circunstância qualquer do momento, ou certa particularidade notada na criança, inspirará o nome. Percebe-se que assim os nomes podem se repetir, e efetivamente se repetem com grande freqüência, embora não haja obrigação de impor o nome dos antepassados (49).

Com a mentalidade realista do indígena, podem aparecer não só nomes belos e poéticos, mas também ridículos e até indecorosos.

A convite do pai, dois velhos, possivelmente o pajé e um *Komũ*, ou dois *Komũ*, munidos de cigarro, e um dêles também com uma panela (como informou Dorotéia Brito), com brasa e resina, no próprio local do nascimento sopram a fumaça e defumam o ambiente em derredor, bem como a mãe da criança, «para não ficar doente», explicam. Por isso se diz «Nome Soprado, *Baxéke Wamê*». É um rito que valoriza o nome imposto e tem a fôrça mágica de esconjurar da criança qualquer malefício.

Esta função dura um dia inteiro de sol a sol (50). Aparece ainda neste rito uma mulher com a função de *Pax-koi*, que nos traduzem por *Madrinha*. A criança é deixada à vontade, divertindo-se dentro da maloca, porém a intervalos sua *pax-koi* derrama abundantemente sôbre ela um corante preto, preparado com a planta [illegible], deixando-o escorrer pela cabeça e o corpo do bebê. Os *Komũa*, e todos os presentes servem-se em profusão da bebida (caxiri) preparada para esta circunstância, e que é dada também à criança.

Não sabemos se no nosso conhecimento o que Stradelli escrevera sôbre a imposição do nome e o lemos a Dorotéia Brito, a qual confirmou que não se passa atualmente como foi escrito por aquêle autor no fim do século passado. Por essa razão transcrevemos o que se lê no seu Vocabulário Nheengatú-Português, ao verbete *Mainã* (p. 307):

«A de dar o nome, é uma das bonitas cerimonias indigenas, a que tenho assistido mais de uma vez. A imposição do nome se effectua

---

(49) A obrigação de dar aos recem-nascidos os nomes dos ancestrais, é costume dos *Juruna* a reencarnação, e tais não são os destes tribos.

(50) Em junho de 1955, o seringalista Armando Sarmento, pôde assistir semelhante cerimônia entre os *Kuikúruna* do alto Uaupés. Observou, entretanto, que entre as cinzas de caxiri e as fumaças do cigarro ritual, os *Komũa* iam narrando a história das origens do grupo, com o particular que, em se tratando de crianças do sexo feminino, os narradores omitem as passagens referentes a *Wáx-ti*.

4: Silva SQ19 Tucano

quando o menino, que deve recebê-lo, já começa a fallar e já anda por si, — entre os dous e três annos de edade. No dia aprazado os vizinhos se reunem todos desde a madrugada, logo depois do banho matinal, na casa dos paes. O pagé, o pae do menino e o mais velho dos parentes, que tomaram banho mais cedo, estão desde antes do levantar do sol fechados num repartimento especial, preparado *ad hoc*, na extremidade opposta à entrada. Cada um tem na mão uma cuia de carajuru da luz, e no chão, no meio dos três, está fumando o cigarro ceremonial. Os que chegam se assentam em bancos dispostos de forma a deixar no centro entre a porta da frente e a dos fundos uma passagem livre e desempêdida. As mulheres vão para a cozinha. Os três que estão fechados no quartozinho, depois de ter cada um enchidas as bochechas de fumaça, logo ao nascer do sol assopram por cima das cuias de carajuru em todas as direções, invocando pelos seus nomes as mães das cousas que vivem no ceu, nas aguas, nas mattas e sobre a terra, para virem e prestar attenção ao nome, que o menino vai receber, para protegê-lo e acompanhá-lo na vida, como protegeram e accompanharam os paes e os avós delle, que nunca faltaram com o que é devido às mães das cousas. A litania não é curta, e levam horas na invocação feita em voz alta, mas sem acompanhamento por parte dos assistentes, que sentados nos bancos, nas redes, em terra como podem, enchem a casa, e bebem caxiry, que é servido largamente pelas mulheres que estão na cozinha e somente vem para este serviço. Quando o sol chega a pino, isto é, ao meio dia os officiantes, que ficaram fumando e bebendo calados desde que acabou a primeira invocação, recomeçam outra vez. A terceira invocação começa umas duas horas antes de deitar-se o sol; mas então já não se acham na casa somente os homens, mas tambem todas as mulheres e todas as crianças, e todos repetem em altas vozes o nome de cada mãe das cousas que os três velhos invocam. A criança que deve receber o nome é deixada a brincar à vontade no meio do quarto, com os outros meninos se os ha, e quando está para desapparecer o ultimo raio do sol, o pagé, que com o pae do menino e o parente mais velho saiu do quartinho onde passou o dia, o pega nos braços e apresentando-o ao sol, de modo a fazer-lhe receber os ultimos raios diz o nome, e este é então repetido por todos em altas vozes. O nome que o menino recebe é muitas vezes o nome, que já trouxe algum dos avós ou algum outro nome de que ao momento se agradem, e isto especialmente se trata de filho do chefe. Muitas vezes, todavia, o nome do menino é escolhido e lhe é dado em attenção ao objecto que estava pegando no momento em que o pagé o pegou para apresentá-lo ao sol, ao gesto que fez, à palavra que disse, porque então é como se o proprio sol lhe

[illegible] o nome. Isso, pois explica como em muitos casos, quando se procura a significação dos nomes indígenas, se tem a surpresa de encontrar significações as mais disparatadas.

Observa-se atualmente que, mesmo antes do batismo, além do *Barzéke Wimé* dado pelo pagé, recebe outro nome cristão, ou melhor um nome que costumam usar os civilizados. Em geral não se nomeiam senão por êste nome cristão.

Muitas vezes recusam revelar ao civilizado o «nome soprado». Não é provável que nesta recusa entre um terror supersticioso do tabu do nome (31), como se o nome representasse parte da personalidade, e, por isso, revelá-lo seja prejudicial ao indivíduo. Com efeito tratam-se pelo nome cristão, e, com relativa facilidade indicam o próprio «nome soprado» e os dos companheiros. As crianças no colégio por brincadeira e zombaria chamam os companheiros pelo *Barzéke Wimé*. Ocultam-no por vergonha, seja indecoroso ou não a fim de parecerem civilizados.

Observa-se uma tendência a abreviar os nomes: Candi (por Candido), Bepe (Bernardo), Mandu (Manoel). E muitos, pela dificuldade de pronúncia, adulteram os nomes: Sahá (Sebastião), Puluno (Paulino), Burigurio (Gregório), Dui (Luiz), Inhú (João), Dafik (Manoel), etc.

Gostam outrossim de dar alcunhas grotescas aos companheiros, mais nos colégios.

Vejamos alguns dos nomes mais usados entre as tribos do Uaupés:

| Nomes de homem | Nomes de mulher |
|---|---|
| [illegible] | Anodiro |
| [illegible] um passaro preto | Bu[illegible] (o peixe Tucunaré) |
| Di[illegible] (dente-de-gato) | Dieiro |
| [illegible] | Dutiko (sentada) |
| [illegible] (um peixe) | Dumuha |
| K[illegible] | Koá |
| Kahar | Nemé paxko (mão do veado) |
| Nema suaro (chifre do veado) | |
| Sykã (preto, negro) | Sykã (preto, negro) |
| Omõs | |

(31) Pierre Gordon ("L'initiation sexuelle et l'évolution religieuse", p. 132) explica pelo tabu do nome a "teknonimia", isto é, o costume (de resto bastante espalhado: Asia, Africa, América, Oceania), de não proferir o nome do pai e designá-lo pela expressão: "o pai de Fulano" (dizendo o nome do filho). A omissão do nome seria um sinal de respeito, como se dá, em muitos lugares, o nome dos objetos sagrados e a Judeus, o de Jeová. E assim relata que entre os Gala há interdição de citar o nome do pai, pois, pronunciá-lo, porém, o ser o da própria mãe ou esposa, porque estão em posição inferior. Igualmente entre as tribos do Caburi a mulher jamais pronuncia o nome do marido, dirá sempre "o Pai de N."

| | |
|---|---|
| [illegible] (frieira) | Ori pex-kô (mãe das flores) |
| [illegible] (grande, grosso) | |
| [illegible] (cobra sentada) | Pirô dohoo (cobra sentada) |
| [illegible] (calvo, sem cabelo) | |
| [illegible] (espuma) | Semé (paca) |
| [illegible] | Sumé |
| [illegible] pôrã (filhos do sibya) | Supyá |
| [illegible] tuãni | |
| [illegible] | |
| [illegible] (rouxinol) | |
| [illegible] (cacho de pupunha) | |
| [illegible] (vento) | Wexkoryó (um pássaro) |
| Yupu-kúnyá (pessoa lendária) | |
| Yuxxá-ro (uma madeira) | |
| Yuxuri | Yu'sio |
| Entre os *Tuyuka* também | Entre os *Baré* |
| Tunu (flauta) | Dwenomyo |
| Kafini | Kamoã |
| [illegible] (pé) | Nuã |
| | Nemi |
| | Yawira |
| | Yexpádwa |

5) *Designação dos filhos conforme a idade*

É variada a nomenclatura que usam para designar a criança, de acôrdo com o seu desenvolvimento:

1.º — Até o dia da imposição do nome diz-se *bê*;

2.º — «*Mani*, parece, é um têrmo usado em alguns lugares equivalente a *bebê*;

3.º — Nos primeiros meses, visto que o bêbe tem a epiderme mais clara e avermelhada, dizem-no *Sodpêxkô*, isto é, vermelhinho (Fem. *Sodpêxkô*; pl. *Sodrá-kô*);

4.º — Quando já tem o corpinho um pouco mais firme, de sorte que já pode ficar sentado no colo, carregado ao braço ou reclinado no ombro, dizem-na *Duhipó* (F. *Duhípó*, pl. *Duhirá*), (que quer dizer «o que se senta», ou *Dóxpó-peopo* (F. *Dóxpó-peopo*, pl. *Dóxpo-pirá*), i. e. «reclinado ao ombro»;

5.º — Diz-se *Dóapô* ou *Buapó* (F. *Buapó* ou *Dóapó*, pl. *Dúdrá* ou *Pádrá*), quando já engatinha (de boa, engatinhar); isto é «o engatinhante»;

6.º — Quando já começa a firmar-se sôbre as pernas dizem-na *Nú'kûpó* (F. *nû'kûpó*, pl. *Nû'kû-rá*), i. e. «o que está de pé» (de *nû'kû*, estar de pé);

7º — Quando já caminha dizem-na, por isso mesmo *Syagõ* ou *Sihyãgo* (F *Syago* ou *Sihyãgo*, pl *Saúrá* ou *Sihyãrã*), i. e «o caminhante» (de *sihyã*, caminhar).

8º — Pelos dois ou três anos se diz *Bũrkõdikõ* ou *Bõrkõdikõ* (F *Buxkõdikõ* ou *Bõrkõdikõ*, pl. *Buxkõrikã* ou *Bõrkõrãs kã*), i.e «cresidinho» (de *bũrkõ*, crescer), ou *Bũrko-po*, pl. *Buxkõrã-põ*).

9º — Após a imposição do nome é *Buxtuyãgõ* ou *Buxtuyõgõ* (F *Buxtuyãgõ*, *Bũxtuyõgo* pl. F *Buxtuyãrã*, *Buxtuyõrã*).

10º — Dos seis anos mais ou menos, até a iniciação é *Wi'nãpõ* (F *Wi'nãpõ*, pl. *Wi'nãrã*).

11º — Desde a época da iniciação pubertária, o rapaz se diz *Ni'nã* e a donzela, *Nõ'nyõ*. (Não se confunda com *nũ'nyõ*, mulher).

12º — Para indicar que já está ficando mais encorpado, usam as expressões *Niri-bũrkõ* ou *Niri-bõrkõ*, para o rapaz, *Niri-buxkõõ*, para a donzela (pl. M. e F. *niri-buxkõrã*).

C — *Educação dos filhos*

Em toda a primeira infância as crianças de um e outro sexo estão dos cuidados maternos. O bebê passará da rede para os braços maternos ou de uma irmã mais velha, e dormirá na mesma rede com sua mãe. Dar-lhe-á esta do seu leite, mais tarde mingau de farinha ou de banana.

Levará a criança ao banho, pela manhã, depois à roça, onde ficará deitada a uma pequena rede à sombra de uma árvore, ou de algum modo espetado no chão, ou sob as vistas de alguma irmã, enquanto a mãe trabalha.

Sol, chuva, banhos, picadas de insetos, tudo contribuirá para ir endurecendo a delicada epiderme e habituando aquêle organismo à resistência.

Voltando para casa, com um aturá às costas, cheio de raízes de mandioca, a mãe trará sua criança de encontro ao peito, com auxílio de larga embira, que lhe pende do pescoço, (é o processo que se diz *sã-tõa*) ou acavalada ao quadril, *sã-rõã*.

Estando sempre em companhia da própria mãe, a criança aprenderá antes a sua língua (52), se a mãe ainda não aprendeu o idioma do marido. Os meninos, apenas crescidos, pelos cinco anos, se emancipam dos cuidados maternos e seguirão de preferência o pai

(52) — Acontece que os meninos logo seguirão o pai e se esquecerão da língua materna. A própria mãe, depois de algum tempo de casada, talvez se fará o idioma dos habitantes da maloca. Por isso raramente os filhos saberão o idioma materno. Temos verificado que, no máximo, êles conhecem apenas alguns vocábulos.

4: Silva SQ19 Tucano

à caça ou à pesca ou ficam brincando em grupos pelo mato, à procura de frutos ou pelos rios, nadando e pescando.

As meninas, ao contrário, continuam ao lado e sob a vigilância da própria mãe (53), ajudando-a, conforme a sua capacidade, nos seus trabalhos. Vão com a mãe à roça, arrancam raízes de mandioca, voltam com seu fardo de mandioca ou de lenha, ou carregando algum irmão menor, tomam conta das crianças e até ajudam na preparação dos alimentos.

A menina embora destinada a abandonar a nação e, como esposa, fundar uma família em outra tribo, é contudo elemento de grande valor econômico para seus pais. Em alguns casos os pais a cedem aos civilizados, para os serviços de casa, em troca da conveniente recompensa; ao atingir porém, a puberdade, buscá-la-ão para o rito da iniciação e depois para o casamento conforme os costumes da tribo (54).

Se, por acaso, um indivíduo morre deixando filhos em outro povoado ou maloca, um seu «irmão» (será um parente próximo, o tuxaua ou outro qualquer) fazendo longa viagem, se necessário for, irá buscar os órfãos de cuja manutenção e educação se encarregará.

É extraordinàriamente grande o espírito de liberdade em que são criados os meninos. Vão aonde querem, sem licença dos pais ou sequer aviso prévio (55). Agem como lhes apraz. Não atendem aos pedidos que lhes dirigem os pais. Não executam os trabalhos pedidos. Os mínimos caprichos da criança (56) são atendidos. Desde cedo oficialmente fumam e bebem as bebidas fermentadas nos cauins. Com tal independência poder-se-ia prever o desenvolver-se de tipos revoltosos e briguentos, o que efetivamente não se dá. É que, contrabalançando ao espírito de autonomia existe o de absoluta adesão às leis disciplinares da tribo, espírito que se desenvolve com

(53) Notava um Missionário que à menina, habituada a estar sempre ao lado da própria mãe, custa-lhe muito a vida do internato no colégio das Missões, ao passo que os meninos se adaptam mais fàcilmente, nem pensam em voltar para a casa.

(54) O Pe. Humberto Limpens citou-nos um caso sucedido pouco antes de 1947. Até a época do casamento a menina ficou trabalhando com os brancos. O pai o havia permitido como paga de uma espingarda.

(55) Frei Laureano da Cruz narra como uma imprudência do capitão João Palácios, na denominada "Província dos Encabelados" (por trazerem os índios cabelos muito compridos) provocou o ressentimento dos indígenas que trucidaram o capitão e muitos civilizados. E explica: "É gente tão fidalga que até dos próprios pais não toleram um piparote" ("Descobrimentos" p. 98).

(56) O menino é que decide se se vai internar no colégio, se não voltará no ano seguinte, se quer sair no decorrer do ano, etc. Os pais nada fazem ou dizem para essas decisões.

+ Silva SQ19 Tucano

as crenças, e firma-se pelo exemplo dos velhos e as práticas cerimoniais.

Não há realmente nenhuma escola ou instrução oficial, a não ser o «curso de iniciação pubertária». Porém, a maloca quer com sua vida habitual, ou a extraordinária das festas, é tôda ela uma escola prática e social.

Um «curso de profissão doméstica», a filha o faz ao lado da mãe, vendo-a trabalhar, ajudando-a, recebendo as suas correções. Ao chegar à idade núbil, estará perfeitamente preparada para organizar e dirigir o novo lar, como dificilmente uma sua coetânea dentre os civilizados o conseguira. Atualmente, nos educandários das Missões, não se freqüentam um verdadeiro «curso de economia doméstica», mas até algumas se habilitam em trabalhos que são especialidades de outra tribo (57).

Preparando seus pequenos arcos e flechas para os divertimentos, ou vendo trabalhar os homens e, algumas vêzes, auxiliando-os espontâneamente, os meninos também se habilitam nos diferentes trabalhos masculinos (58). É todo um processo intuitivo de aprendizagem, despertando o interêsse das crianças, desenvolvendo a capacidade de imitação que possuem bem radicada, num ambiente de liberdade, alegria e bem-estar. Um conjunto, enfim, de condições de acôrdo com a psique indígena, e por isso asseguradoras de um feliz resultado. Não raro os rapazes se tornam mais hábeis que os próprios pais.

Há certos trabalhos que executam coletivamente, ou, ao menos, com auxílio de outros, como as derrubadas, as limpas da roça, a construção das casas, a fabricação das canoas. Êsses se fazem com desenvolvimento de uma maior alegria e emulação, que favorecem o crescimento do amor ao trabalho e ao seu aprimoramento.

Pode-se, sem receio, afirmar que os pais se interessam pela educação material dos filhos. É ambição do pai que seu filho seja um guapo pescador, marinheiro ou caçador (59). Não lhe negará para isso os seus conselhos e sua experiência.

---

(57) Contudo êstes trabalhos, que estão fora do padrão primitivo da tribo, constituem conhecimento que a mãe ou não ensinará ou talvez a filha não queira aprender. E' fato que muitas verificamos: as filhas não sabem tudo o que sabe e faz sua mãe.

(58) Nunca, porém, nos femininos. Riam-se, a princípio, contou-nos o Pe. João Marchesi, quando viam o Missionário acender fogo e preparar a própria comida, porque "é trabalho de mulher". Hoje em dia já se vê um homem da geração môça, que passou pelas escolas da Missão, carregando um seu filhinho, quando a mulher está onerada com um alguém nas costas ou outros grandes pesos.

(59) Hoje muitos pais já se interessam por algo mais, e trazem seus filhos à Missão para que os faça "brancos". Um pai trazendo uma menina de seus oito anos para o colégio, recomendava à Diretora que a "instruísse, ensinasse o português, a fim de que depois pudesse casar

7) *Iniciação puberfaria*

Por iniciação puberfaria ou «rito de passagem» entende-se a entrada oficial do indivíduo que atingiu a puberdade, para a vida social da tribo, passando a tomar a responsabilidade de suas ações. Para isso recebera também a devida instrução sôbre o «direito costumeiro» do grupo a que pertence, às obrigações e direitos dos indivíduos. E também, só para os rapazes, a explicação de certos costumes e as lendas que constituem o patrimônio histórico e cultural do grupo.

Tanto os do sexo masculino como os do feminino devem submeter-se ao «rito de iniciação puberfaria» (60), após um curso teórico-prático. Trata-se de uma função religiosa, como se fôsse a consagração ou santificação do indivíduo, que é integrado no grupo dos cultuadores de Wáx-tí.

a) *Curso de iniciação masculina — Mirí-mêra d'mó-yesé* (61)

Conforme o número de habitantes de uma maloca, os jovens, ao atingirem a puberdade (62) (pràticamente quando começam a mudar de voz), são reunidos em grupos, em lugar apartado, para o curso de iniciação, que se denomina *Mirí-mêra d'mó-yesé*, isto é «rito de iniciação com os instrumentos sagrados ou *Mirí*». Em muitos casos improvisam-se para isso barracas mais no interior das matas.

---

sem branco". Depois que passou alguns anos no colégio, a criança se considera superior, e como tal é tida pelos outros. Passou a ser "branco".

(60) Os Missionários com ação paciente e prudente vão conseguindo alterar os costumes "malévolos" embora lentamente, com adoção dos costumes cristãos e extirpação dos que se opõem à moral do Evangelho, ficando tão só os que não ferem a esta moral. Por exemplo, muitos dentre os rapazes se acham internados nos colégios da Missão na época da iniciação puberfaria. São poucos os casos em que os jovens, em tal época da vida, deixam de voltar ao colégio, a fim de passarem pelo "rito da iniciação". E alguns afirmam que o rapaz pode casar-se mesmo sem se haver submetido a tal rito.

(61) Estes dados se baseiam em descrições feitas por indígenas das tribos Tukano, Wanana, Pirá-tapuya, Taryana, Tuyuka, Desana, Baré, Kumãdene e Baré. Este último informante fê-lo conforme reminiscências de sua iniciação, mais de trinta anos antes, em Tamanduá. É, porém, um costume geral de tôdas as tribos da região do grupo Tukano, como do Arawak e do Maku, assim afirmaram os próprios indígenas.

(62) O Baré Plácido de Melo informou-nos que, quando da sua iniciação eram ao todo uns 20 rapazes, e os instruíam umas dez pessoas, entre pajés e Komãã. Era, porém, tremendamente enfadonho. Quando um pajé acabava de falar, vinha outro, repetindo as mesmas coisas. Alguns já bêbados. Eles ouviam com medo, acreditando em tuco. Lembrava-

O curso que dura várias semanas, ou até dois e três meses, conforme o aproveitamento dos alunos, é dirigido por um ou mais pajés e *Komdá* simultâneamente. Há um conjunto de provas dolorosas (63) para verificar o espírito de sacrifício e resistência dos rapazes. Desprovidos de roupas, ficam sujeitos às intempéries, quatro vêzes são açoitados pelos *Komdá*, nas costas com caniço, mantendo os braços cruzados no peito e não podem chorar (64). Alguma criança disfarça para enxugar as lágrimas, disse um informante.

Põem-lhes punhados de pimenta na bôca e ordenam que as mastiguem. Quando são vários, estão dispostos em linha, e, com um pau cavam um buraco no qual cuspirão depois. O não acertar com o orifício, será motivo para castigo. Pela madrugada tomam banho no rio, ao regressar bebem um pouco de *Kazpi*.

São obrigados a grande jejum, *bo'tsó*, e seu alimento obrigatório são as larvas das cabas.

Passam horas inteiras sentados ao chão, ouvindo os pajés narrando as tradições, contando as lendas, ensinando as obrigações como membros da tribo, esposos e pais, dando conselhos, fixando as relações com as tribos vizinhas. Estas instruções são entremeadas de cantos e do aprendizado de fabricação dos cestos, redes de pesca, e outros trabalhos dos homens.

Ao narrar as histórias dos *Mi-ki*, põem ao lado de cada menino um dos instrumentos misteriosos, a fim de poder observá-lo bem (65). Não consta que haja o instrumento «serra-bois» (*bull-roar*) entre êsses índios.

Devem dar prova de aproveitamento dessas instruções, diversamente são batidos pelos *Komdá*. Êsse curso, embora curto, é, porém, intensivo e exerce grande influência nos jovens. Cresce no-

---

se de um velho pajé que sabia muitas histórias e as contava muito no início nas reuniões. Nos povoados menores, será talvez um único candidato a iniciação, como foi o caso de Felisberto de Urubucuara, e do jovem Gracciano Carvalho, Pirá-tapuya de Tuiá-punha. Êste ficou dois meses isolado numa casa e ali vinham os velhos durante as lições e contar-lhe as histórias que êle devia repetir no dia seguinte.

(63) Parece que há campo para a inventiva na aplicação das provas. Num povoado de Tiquie, encontramos dois rapazes que traziam em cada braço uma ferida do redor do punho, como se fôra produzida por uma algema.

(64) Constatou-nos de um jovem que não resistiu aos golpes e sentindo-se humilhado e desprezado pelos da tribo, teve que retirar-se pôr-se a serviço dos brancos em S. Gabriel.

(65) O instrumento é elemento essencial para a iniciação masculina. Além das informações positivas obtidas, dá-lo o próprio nome do rito: "No pera-ré mi-ki-mãra a'mo-yérú" exprimem-se os indígenas, isto é, iniciação dos filhos com instrumento. Esta é também a opinião de Koch G. (Z. I, 320).

4: Silva SQ19 Tucano

os o temor do pajé (66), tomam consciência que deixaram de ser meninos, tornam-se sérios, graves, ostentando certa altivez no seu procedimento, pois agora são cidadãos perfeitos e habilitados a constituir família.

Termo dêsse curso é o incesto com a propria mãe, com a assistência do pai e do pajé ou *Kowú*, assim depuseram indigenas de varias tribos. Êsse rito marca o início da vida sexual pública, porque até essa época só podem praticá-lo às escondidas.

*(b) — Curso de iniciação feminina — Mó-yóãsé* (67)

De modo semelhante a menina «quando fica môça», conforme a expressão indígena, isto é, quando atinge a idade das regras (68) e lhe vem o primeiro mênstruo, *a mósé*, deve passar pelo rito de iniciação pubertária.

Naturalmente não se pode com antecipação marcar data para isso. Compreende-se igualmente que é praticamente impossível realizar-se êsse rito com um grupo inteiro, como na iniciação masculina se atentarmos que são pequenos povoados ou apenas uma maloca.

---

(66) Nota: instiu muito um dos informantes, grande medo do pajé, pois, [illegible] não lhes bater diretamente, cremava que os velhos, os *Kumãã* o fizessem.

(67) Corria que se pratica também, e com especial solenidade, entre os Cubeos descendentes dos índios Coiana, no interno da mata a uns três quilômetros de S. Joaquim do Cuanê (foz do Uaupés). Ouvimos a desmentida que seria diretamente de pessoas que passaram pelo rito, duas delas logo imediatamente após a iniciação, podendo não só fotografar [illegible] os cabelos cortados, mas alcançando até mediante a [illegible] um vestido, os seus cabelos. Pertencendo os informantes a [illegible] tribos (Tukano, Pira-tapuya, Taryana, Kumãdene, Karapanã, Tuyuka, Desana, Wanana, Bará e Makú) pudemos verificar que [illegible] é o mesmo. O que de particular havia em uma narração se [illegible] no conjunto, e talvez se dera com tôdas, embora alguma se [illegible] de narrar aquêle pormenor. Mais ainda, afirmaram-nos que em tôdas as tribos se realiza de modo semelhante o *mó-yóãsé*.

(68) Denominam-no "doença da lua, Mihã-pã dur"ã". É uma prova a mais entre tantas que tivemos, de como a vida íntima de cada qual é perfeitamente conhecida de tôda a comunidade. O primeiro mênstruo se dá pelos 12 anos, embora a criança aparente, pelo seu desenvolvimento físico, apenas uns dez. As crianças de ambos os sexos só alguns anos após a idade pubertária é que se encompam, isto é, só depois dos 14 ou 15 anos é que se dá, e de maneira quase sensível, o desenvolvimento do corpo, "tornam-se moços". No aparecimento do mênstruo, como na idade crítica da mulher, e pubertária do homem, não se notam perturbações fisiológicas anormais. A menstruação, como a concepção, sobrevém com regularidade durante todo o ano. De ordinário o catamênio é pouco abundante e não ultrapassa um dia.

A primeira menstruação é um fato perigoso para a jovem, ela pode ser vítima de Bisiu (VII — 4, d (5 c), *Bisíu a'mõsé-re bodsami*, [illegible] isto é Bisiu come o mênstruo. Conforme explicam, como quer dizer que viria fecundá-la (69). (Vd. «*Lendas do Uaupés*»). A donzela será, então, a primeira a anunciar o fato e pedir a intervenção do pajé [illegible] Kamã (70).

Ademais, o rito é desejado pela menina, não só porque lhe dá liberdade para as relações sexuais públicas, como também porque, conforme as suas convicções, êsse rito lhe vai assegurar [illegible] felizes, como depuseram várias jovens. Por essa razão nenhuma donzela ousaria casar-se sem o rito pubertário e o *pió-podsé* (couto de iniciação). Alguma donzela nubil especialmente as educadas nos colégios, talvez diga, por acanhamento (71) que não praticou o rito. No entanto, ela mesma afirmará, em consonância com as outras, que uma mulher não se pode casar sem se haver submetido a essas práticas.

Patrícia Vasconcelos deu a seguinte explicação da necessidade do rito, conforme instrução obtida do seu tio Marco de S. Luzia, rio Pa-

---

(69) Vários dados singulares fenômeno de aculturação ou adaptação. Uma jovem por exemplo, [illegible] no colégio na época da primeira mestruação. Ela realizará o rito talvez muitos meses depois, quando volta ao [illegible]. Nem [illegible] conforme informação das próprias jovens, [illegible] mãe [illegible] instruir para realização do rito. Quanto ao [illegible] que [illegible] os costumes.

(70) [illegible] jovens informantes asseguraram que será mais feliz a donzela [illegible] rito com um moço mais forte. Outra acrescentou que o [illegible] casaria se fosse com um branco.

(71) A jovem Tuxaua Patrícia Vasconcelos, órfã criada na Missão de Iauaretê [illegible] 23 [illegible] 1936, tendo passado a maior parte da vida [illegible] Missão Salesiana, sempre negou haver-se submetido [illegible] Entretanto numa conversa aos 9 de março de 1956, [illegible] todo êsse tempo tenha sido bem a afirmação: "Agora não se [illegible] ação", em muitas ocasiões têm afirmado que [illegible] mesmo [illegible] confissão e comunhão, continuam [illegible] práticas antigas, também os ex-alunos e ex-alunas [illegible] Missão. Em Setembro de [illegible] em Taracuá, a propósito do rito [illegible] pubertária disse-me eloqüentemente: — "Até as cristãs fazem [illegible]". Pelo dia 4 ou 5 de março de 1956 contou um episódio que se deu consigo na última temporada em que estivera com seus parentes de S. Luzia de setembro de 1955 a fevereiro de 1956, episódio que documenta como dos próprios indígenas cristãos só lentamente se consegue extirpar as crenças primitivas. Um dia, sentira-se um tanto mal (os incômodos habituais das senhoras). O seu tio Marco, o qual, embora cristão, continua como pajé a praticar o "sôpro" e os outros ritos de Kamã, indaga se ela já havia feito o rito da puberdade. Respondeu-lhe ela que ainda não, o seu tio continuou: "Pois é, minha filha (sic), isso é porque você não fêz o rito. Vamos fazê-lo agora!" Ela não aceitou (disse-nos). Então o tio dura-lhe a explicação do incômodo e da utilidade do rito pubertário, que transcrevemos.

puri. «A donzela tem o *mihi-koro* (vagina?) invertido e, por isso, não poderá sair a criança. O pajé ou *Ko-mũ* vai pô-lo «na posição conveniente», mediante o rito e o couto. O rito além disso, faz que o *mihi-su ti-ro*, útero, não cresça muito, pois, neste caso, terá dois filhos de uma vez, e isso é uma vergonha para a mulher».

Êste rito equivale essencialmente à «defloração religiosa» que praticam outros grupos humanos. Porém pelas liberdades precedentes, embora sem caráter oficial (antes devem ser ocultas), que se passam mesmo entre crianças e adultos, a menina ao atingir a menstruação já tem o himen rompido. Disto, pois, não se fará questão no rito. Dar-se-á, porém, um couto oficial, *mõ-podsé*, no primeiro dia (e em alguns povoados também nos dias sucessivos) com um rapaz da escolha da môça ou do seu pai (72), e, no último dia do rito, com o *Komũ* ou pajé (73).

Degenerou o conceito de que êsse escolhido devia ser o *herói* do grupo reconhecido depois de uma luta com outros, como se faz entre algumas tribos. Entre os uaupesinos não há prova alguma que determine a escolha, a favor do escolhido só há um título, a sua juventude. Algumas donzelas afirmaram que era um «môço forte». Nos rios frequentados pelos civilizados, também êstes podem ser escolhidos para tal função, e o têm sido. Para tal escolha, pensamos não entra apenas o simples interesseiro do indígena, senão também o supor o branco de uma natureza especial (74), de cuja relação pode vir benefício para a jovem. Esta opinião foi manifestada por várias jovens.

---

(72) A escolha do rapaz é feita pela própria moça (em alguns lugares, e em outros, povoados e malocas, pelo seu pai. Uma jovem Tukano de Parichachoeira declarou que não gostava do rapaz que seu pai escolheu. Parece que onde há mais *Komũ* a escolha do executor do rito é simples do pai da donzela. Se o pai é *Komũ*, êle mesmo executará o rito com sua filha. Não sabemos se rito é também uma obrigação sua. De um *Komũ* de Juquira, rio Uaupés, soubemos que êle pessoalmente o fez com suas três filhas, como uma delas no-lo informou. Os serviços do pajé ou *Komũ* são sempre remunerados, bem como os do *mõ-podsé*, não, porém, os do rapaz. Êste não é o futuro esposo, que deve pertencer a outra tribo, e o rapaz do *mõ-podsé* é da mesma tribo que a donzela. Uma jovem Makú acrescentou que o rapaz era seu parceiro obrigatório de danças, como o pudemos posteriormente verificar.

(73) Note-se que, de acôrdo com as descrições que obtivemos, o primeiro couto não é com o pajé ou *Komũ*, como se poderia prever, porém com o jovem.

(74) Muitas vêzes, e em circunstâncias diversas, o indígena tem manifestado a opinião de ser o civilizado dotado de uma natureza diversa da do índio. Foi essa a resposta que o tuxaua de Parichachoeira, *Sulo* deu ao Pe. João Marchesi, que lhe afirmava não devia receio do *Dohodé* (maléfico), assim como não o temia o Missionário. "O branco é de natureza diversa", respondeu, por isso não pega o nosso *dohodé*.

SQ19 Tucano

A moça deve ser, então, separada dos habitantes da maloca. Não sabem se está parece-nos a hipótese mais provável de não quererem os homens dar o motivo dessa segregação. E' que se considera, nessas circunstâncias (75) perigosa para os demais, uma vez que é procurada por *Bisiu*.

No regime de maloca, faz-se dentro desta um cercado para a moça (*Wó-pazkoa*). No regime de povoado, talvez ela seja isolada dentro de uma cortada (76). Durante êste tempo, que vai de trés a quatro semanas, conforme as tribos, a jovem estará sempre fechada, não pode tomar banho, sairá apenas quando necessário e rapidamente, procurando não encontrar-se com pessoa alguma.

Em seguida a moça se mantem sentada num banquinho, serve-se cortado o cabelo por uma mulher que se diz *wó-pazkoa*, isto é, *mãe da iniciação* (77) e para trocar por um cabelo novo, foi a única explicação. Conforme informações obtidas por Koch G. Z. I. 1907 o cabelo da jovem era aproveitado para a confecção das máscaras de Wax-ti. Aparece assim mais um elemento de ligação entre o *Jurupari* e o culto de Wax-ti.

Depois, especialmente o corpo, são pintados abundantemente com *pega de wax-ti*, por outra mulher, que se considera igual-mente parente, todas as mulheres receberão algum presente da moça e também com direito aos serviços seus. A pintura do corpo é feita remoentemente, por meio do cilindro de molonro.

Para o corte do cabelo servem-se dos dentes afiados da *paca*, *cutia*, de diversas espécies e outros animais. Por essa razão, nas tribos do Rio Negro, que falavam Nheengatu, o dente afiado, a vara de taquara, denominaram-na *Pirá-ti*. O utensílio para o corte dos cabelos entre os Tukano chama-se *Dipopoé-ro*.

A *Wó-pazkoa* ou, em algumas tribos, a própria mãe derrama-lhe pela fronte água com pimenta, servindo-se de um funil de folha de

(75) Parece que é por pura não atingir nos dias do mênstruo, mas até [illegible] prolongam o rito. Com efeito, a reclusão pode dar-se fora do período menstrual, e pode durar tôda uma lua. Parece que só [illegible] consideram [illegible] como perigosos, e por isso sujeitos a [illegible] especial. A [illegible] nas informações, durante as menstruações sucessivas a mulher [illegible] obrigada a abster-se das relações sexuais, como observavam os Juruna.

(76) Uma jovem Makú de Iauaretê, em outubro de 1947, retirou-se, para a [illegible] própria cortada pelo [illegible].

(77) Estas informações trataram a moça de Yé-se-ko, minha cortada de cabelo, e o [illegible] de Yé-se-ko, a que me cortou os cabelos.

[illegible] pum ou pôrsô-puri, «a fim de ficar iluminada» (78), «sair a gordura do rosto, e ficar sempre moça».

Executados o corte dos cabelos e a pintura do rosto, nenhuma pessoa poderá entrar na reclusão senão o pajé ou Ko-mû, o rapaz, e a mãe da moça (e, em falta desta, a avó ou mulher de quem depende a jovem) e a própria Mô-pa-kod. Jejuará muito, únicos alimentos permitidos são beiju, peixes pequenos (jacundá, piramirim), formigas-saúvas (manivura) e sirukaro (beijú de tapioca). Serve-se da manivura (explicou Patrícia Vasconcelos) «porque não tem gordura e o pajé lhe quebrou o ferrão».

Será, outrossim, sujeita a provas dolorosas: passará longas horas sentada no chão e tôda a última noite de vigília. O pajé ou o Ko-mû queruçando-a sôbre o fôgo, cobri-la-á com uma peneira e «sprará» sobre ela, que se mantém sentada com a cabeça abaixada sôbre os braços cruzados.

Traz-lhe durante esta cerimônia uma cuia com pimenta e dá-lhe a cheirar, «para o rosto ficar sempre liso», isto é, não ficar cedo com o rosto enrugado. Simultâneamente a instrui sôbre os deveres de esposa e mãe.

Algumas dessas instruções do pajé, como nos relatam as informantes, são: «ter bom procedimento para com a própria mãe — trabalhar bem — não fazer como fazem as outras (?) — quando moça trabalhar mais — ter caminho para com os velhos, guardar-se do parento — evitar a cobra grande porque engole (isto é fecunda) a mulher — deve fazer comida para o homem — trabalhar na roça — não apanhar muito sol, porque senão ficará velha depressa — trabalhar rapidamente — voltar logo para casa» (79).

Nada, entretanto, lhe diz sôbre a origem da tribo. Depois de defumá-la com a fumaça do seu cigarro, pronunciando ao mesmo tempo longo e ininteligível exorcismo, tem lugar a cópula (80).

---

(78) "Ficar com o rosto ou a pele iluminada" é uma expressão que temos ouvido com frequência, entre as jovens informantes. Parece que quer dizer um colorido sadio da face e, em alguns casos, pareceu-nos ter o sentido de "illuminatio vultus" dos Judeus.

(79) Essas recomendações contra o piraiauto, a cobra-grande, e a proibição de comer do peixe pereiba, são índices de uma penetração das lendas tupi na civilização uaupésina. Como prova e para uma melhor compreensão dessas recomendações recordem-se algumas lendas especialmente as de Tinduam e as do Jurupari das versões Bare, a Taryana de Iziz ("Lendas do Uaupés", do autor).

(80) A cópula, conforme revelou o pajé Marco, de S. Luzia, rio Papuri, tem entre os Tukano, a finalidade de pôr em posição o nihi-kbrô, que se acha invertido. Mas tem, de ordinário, em semelhantes ritos, o simbolismo de uma união de fôrças e propriedades preservadoras dos ma-

O rito se encerra com um banho da alvorada, *Wuita-kisé*, que [illegible] pensar no banho da alvorada dos homens na festa de *Wáz-ti* (VII-4 e 2 b). Cfr. Lenda do rapto dos instrumentos *mirid*). Organiza-se uma procissão dessas mulheres que se associaram ao rito, que é também outros parentes mais próximos da donzela. A frente vai o pajé defumando o caminho com um pedaço de panela *Ki-pu-to* [illegible] com brasas, breu e pimenta, e exorcizará o rio jogando nele o conteúdo da panela, a fim de afastar o bicho que está no rio (81). A mãe empurra a filha à água e todos tomarão seu banho (82).

Em algumas tribos Arawáke realizar-se-á depois um cauiri, é a festa que se dá *Kanpamã*, (83) a qual pode durar até quatro dias (parece que é o mesmo número de dias da reclusão da jovem). Então, dançará ela com todos, inclusive com o pajé, e fumará com êles no cigarro feito de folhas de bananeira e de tabaco. Parece que nessa

---

[illegible] não vão escapar. Talvez por isso tanto o [illegible]je ou *Komã*, [illegible] pria com mestruação a cópula não só com a moça, se[illegible] mãe [illegible] e a sua *paxkod*, conforme declararam [illegible] no Uaupés.

[illegible] que [illegible] o *pirulop*. Ora, tal mamífero não [illegible] muito menos nos roçados *karapés*. Estamos [illegible] de crianças e lerdas.

[illegible] particular que não nos foi con[illegible] esse prazo (um mês) reunem-se [illegible] um dêles um pedaço de cipó (trepadeira [illegible]). A mãe o pega, trazida para fora da casa, perfeitamente [illegible] que se acha no terreiro fronteiro à habi[illegible] nessa ocasião, e obrigado a dar-lhe [illegible] chicotadas, no peito e nas costas, de [illegible] sem sentidos acontecendo disso re[illegible] contentar-se em receber o animo ainda [illegible] cinco vêzes com intervalo [illegible] grande ofensa nos pais, quando as [illegible] Depois [illegible] e [illegible] todas as espécies de carne e de peixe. [illegible] presentes mojam nelas os cipós que são dados, logo em [illegible] a mamma para as lamber. Dali por diante, ela poderá comer [illegible] que desejar. E desde êsse momento é, então, considerada mu[illegible] para o casamento (o. c. 634).

Talvez seja uma confusão com o que se passa entre as tribos do Içana e entre os Kubewana do rio Uaupés, por ocasião dos dabacuris. Conforme nos disseram os Kubewana da maloca Ambaiba, fez do Queri[illegible] o pai de um rapaz trata de arranjar uma esposa para o [illegible] no dabacuri e [illegible] a moça escolhida três chicotadas [illegible] VII-4 e 2b). Se ela suporta fortemente as nancadas, é indício [illegible] está madura para arcar com as responsabilidades do lar.

(83) Kanpamã é o nome do tipo de beijú prescrito para essa circunstância.

4: Silva SQ19 Tucano

[illegible] há jogos e brinquedos entre os indivíduos moços da malocas.

Por algumas dias se verifica a abstenção de trabalhos, por exemplo não pegará no fogo «para não se queimarem». A seguir a moça retoma a vida normal, trabalhará na roça e em casa com sua mãe. Por um mês ainda, consoante informação de Dorojéa Brito, não poderá provar sal, nem comer piraíba ou carne de animais grandes, «para não afinarem os dentes» (85).

Na instrução imediata renova-se o rito da reclusão da jovem. Na segunda etapa da iniciação pubertária denomina-se *Mahã-mi-[illegible]*. É idêntica à primeira, porém com o corte do cabelo. Na mensstrução sucessiva, *Mahã-ka-[illegible]* realizam-se ainda as práticas da iniciação pubertária. Desta vez, porem, não há segregação da jovem, e todos os atos se dão com mais solenidade, à vista de todos.

c) *Nomenclatura do parentesco e da afinidade;*

1) *Parentesco*

Entre as tribos do Uaupés é a geração que estabelece verdadeiro parentesco. Reconhecem-no não só entre ascendentes (*mõr-kãkõro*, [illegible]) e descendentes (*inari-bero-mazã*), como também em linha colateral. E o parentesco impõe duas obrigações gravíssimas a saber, a de defesa (*indaia*) e a de interdição matrimonial.

Os componentes da mesma tribo, embora nascidos e residentes [illegible] povoados diversos, consideram-se *axkauerõra* (86); [illegible], pelos que se exprimem em português por «parentes» [illegible] vezes, também por «irmãos». Por essa razão opinamos [illegible] que inicialmente o grupo local coincidia com a *família*.

Os de outra tribo, mesmo os ligados por algum grau de *afinidade* ou [illegible] e também os *casticidos*, são todos «*arpura*» (87), isto é, *estranhos, estrangeiros*.

---

84) Encontramos uma das informantes em «jejuo do limão» por esta circunstância. Soubemos de uma menina Mhau, por nome Teresa, que, nessa ocasião fugiu com o rapaz, com quem passou algumas dias. Parece que se trata de uma fuga convencional, porque, na realidade retiraram-se para uma barraca a vinte ou trinta metros da maloca.

85) A um jovem Baré, cunhado de um Karapanã, em cuja maloca, nas cabeceiras do Aiá, ela se sujeitara ao rito pubertário, pudemos observar que, efetivamente, se sujeitava a uma severa dieta alimentar, não aceitando os nossos alimentos salgados, nutrindo-se de beiju, tapioca e fruta. Vimo-la, porém, aproximar-se do fogo, ativá-lo e pôr a assar para si algumas bananas verdes.

86) Chega a estender-se o termo *axkauerõra* também aos indivíduos de outra tribo ligados pelos vínculos de afinidade e de sangue.

87) *Arpura* propriamente é o plural do pronome-adjetivo *arpi* (masculino) e *arpego* (feminino, outro.

Verdadeiro parentesco, portanto, só existe entre os indivíduos da mesma tribo e com todos êles.

2) *Afinidade*

Embora vigore rigorosa *exogamia de tribo*, o matrimônio estabelece, entre os filhos e os parentes, tanto do seu pai, como de sua mãe, relações de *afinidade*, semelhantes às de *parentesco* (não, porém, as outras relações de *tiriôdn* e de *interdição matrimonial*) e com uma nomenclatura especial, conquanto menos rica de têrmos que a do parentesco.

Como vigora o «*casamento preferencial*» (regularmente com os primos de outra tribo) i. e. com os primos por parte de mãe ou *barsukára*. Mas e sing *barsuko*, Fem sing *barsuko*), admitem relação de afinidade dos *barsukára* entre si, como também entre os pais e a classe dos «possíveis esposos» dos filhos. Há têrmos proprios para êsses «possíveis esposos», «possíveis sogros» e «possíveis genros».

Talvez mesmo não exista um têrmo para exprimir a relação de afinidade, empregam, então, um termo da relação de *parentesco*. Por exemplo, não possuem, os idiomas indígenas do Uaupés, têrmos para pretendentes, a *padrasto*, *madrasta*, *enteado*, *enteada*. No tratamento indireto descrevem a relação que se passa, a saber, se diz: «marido da minha mãe» (padrasto) «mulher do meu pai» (madrasta) «filho ou filha do meu marido, ou da minha mulher» (enteado, enteada). E no tratamento direto rhama-lo-ão pelo nome do parentesco (tio, avô, etc.), e aos *enteados* dirão «*filhos*».

Há, em, têrmos, embora também *classificatórios*, i. e. aplicáveis a tôda uma classe de indivíduos, correspondentes a *genro* e *cunhado*, porém usados quase só para o tratamento *indireto*. Para o *direto* preferem os termos do parentesco *social*, dêstes têrmos indiraremos apenas o mais comum, isto é, o que ocorre na generalidade dos casos. Por exemplo, ordinariamente o sogro «*ma-dix-kâ* pertence à classe dos «tios maternos» e se chamará *mel-kâ*. Excepcionalmente poderia ser da classe dos «primos» (*meõ-kõ* ou *tê-nõ*) ou dos *avós* (*nõx-kâ*), e seria, então, chamado por êstes têrmos, e não por *mèx-kâ*.

Igualmente o «genro», *buhi*, no tratamento direto é chamado *pa-kõ* pelo sogro e *para-maxkõ* pela sogra, porque ordinariamente é um dos sobrinhos (cuja mãe é «irmã» do sogro e o pai, irmão da sogra).

Do mesmo modo o «cunhado» *nè-kõ* é, por via de regra, um dos *barsukára* ou primos, e por isso, no tratamento direto será chamado «um primo» *meõ-kõ*, ou *tê-nõ*, novo. Por via de exceção poderia ser da classe dos «tios», *mèx-kâ*, ou dos «avós», *nõx-kâ*. Não indi-

raremos, por razão de brevidade, êstes outros têrmos que já estão incluídos entre os do parentesco.

NB — A Mulher emprega no tratamento indireto, um têrmo especial: nihi-so-païkõ, para designar os cunhados que são *mami* da mãe do seu marido. Ao passo que o têrmo *nihi-so-païko* (pl: nihi-so-païko-ro-pa) equivale a «concunhada».

3) *Nomenclatura classificatória*

A nomenclatura do parentesco, usada não só pelos Tukano, como também pelas outras tribos do Uaupés, é essencialmente uma nomenclatura classificatória. Trata-se, com mais exatidão, de um *parentesco* que se poderia qualificar de *social* ou *tribal*, antes que de relações pessoais (88).

Êstes termos realmente *individualizantes* parece que sejam os correspondentes a pai, «paï-kos», e mãe, «païko» (89), os quais se aplicam aos próprios genitores no sentido estrito. Todos os demais termos de parentesco, como irmão, tio, cunhado, etc., aplicam-se a uma classe de indivíduos, sejam êles ligados entre si por vínculo de consanguinidade ou afinidade ou não. Basta que sejam da mesma tribo e da mesma geração (embora com grande diferença de idades) de um que é realmente irmão, tio, cunhado, etc.

Por exemplo, dentro da tribo a todos os indivíduos do sexo masculino da própria geração, denominam *mami* ou *aïkabi* (irmão, traduzem-nos para o português). Dizem «meê», tio, aos da geração do seu pai, tio e aos irmãos do próprio pai (a saber, a todos os *mami* do próprio pai) e por êstes são chamados «mê-kõ», sobrinho. E aos da geração dos seus avós dizem avô, «paï-kõ-ro», e são por êles denominados «*paramia*», netos ou *max-kõ-kõ*, «filho-do-meu-filho».

(88) Começamos verificando várias vêzes que um rapaz dizia seu "tio", "mãe" (dizem indivíduo da sua tribo ao qual uma indagação posterior apurava não ser irmão do seu pai.

(89) Quer dizer, portanto, que "pai" e "mãe" são os únicos termos de parentesco da língua portuguesa que têm perfeitos equivalentes em Tukano, e nas demais línguas indígenas do Uaupés. Todos os demais, quer de consanguinidade (como avô, avó, irmão, irmã, tio, primo, etc.) como de afinidade (sogro, genro, cunhado, etc.) não tem perfeita tradução nesses idiomas indígenas. Max-kõ, por exemplo, que traduzimos por "sogro" não é para a esposa apenas o pai do seu marido, são todos os homens da tribo do esposo, que integram a categoria dos que êste chama "mãe" (tio). Os próprios termos correspondentes a "filho", "max-kõ" "filha", max-kõ "aplicam-se também a tôda uma classe de pessoas.

Quanto aos «irmãos», se o são no sentido estrito (isto é, filhos do mesmo pai e da mesma mãe), o mais velho se diz *mami* (traduzem-nos «irmão-maior») e o mais môço, *arkabi* («irmão menor»).

Quando se trata de «*irmão de tribo*», isto é, dos indivíduos da tribo que compõem uma mesma geração ou camada, os têrmos *mami* e *arkabi* independem das idades, estão, ao invés, em função do grupo. A saber, todos os da «*Gens*» (vd. VIII-3, cf. (empregamos o têrmo latino «gens» para designar as subdivisões da tribo ou *sib* dos Etnologos Americanos» mais importante, qualquer que sejam suas idades, são *mami*; todos os da «*Gens*» inferior são *arkabi*. Isto é, uma «*Gens*» inteira, (sem levar em conta as idades dos seus membros) se diz *mami* ou *arkabi* de outra.

Figuremos o caso do indivíduo *X* que tem cinco filhos, sucessivamente *A,B,C,D,E*, dos quais *B,C,D* são do sexo masculino, e *A,E*, do sexo feminino. Observe-se: 1º que cinco é realmente o número médio de filhos conforme nossas «*tabelas antroponométricas*»; 2º que desejam ter filhos de ambos sexos, e que uma filha mais velha é preciosa auxiliar da mãe na criação dos filhos menores. A filha mais velha *A* será *mampó* de todos os irmãos, a mais môça *E* será igualmente *epsebpo* de todos. Se considerarmos o filho *C* será *mami* de *D* e *E*, e *arkabi* de *A* e *B*.

Suponhamos ainda que os irmãos *B, C, D* se casem (90) e venham a ter igualmente cinco filhos cada um: os filhos de *B*: *Ba, Bb, Bc, Bd, Be*; os de *C*: *Ca, Cb, Cc, Cd, Ce*, os de *D*: *Da, Bb, Dc, Dd, De*.

Teríamos a árvore seguinte:

(90) *A* e *E* casam-se obrigatoriamente com esposos, *barakó*, de outra tribo; os seus filhos podem não pertencer à tribo X (avô), e sim à do pai, *Ba*. Os filhos de *A* e *E* (e todos os jovens de sua tribo e camada) integram, por sua vez, a classe dos *baitukóro* ou "possíveis noivos" (), e dos que podem ser tomados como esposos dos filhos de *B, C* e *D*.

a) *X*, nessa árvore, com relação à primeira geração é *paz-kô*, pai; com relação aos da segunda geração é *paz-kô-Ro* (lit. pai-velho, isto é avô).

b) A 1ª geração *A,B,C,D,E* entre si são *mami*, *mamyó*, *azkabi*, *akabyó*, como vimos acima.

c) Em relação a *X* serão «*maz-kô*», *filho*, ou «*maz-kô*», *filha* (no plural «*pêra*», filhos, filhas).

Relativamente à 2ª geração, são «*paz-kô*» pai, ou «*mêê*», tio; *B*, por exemplo é «*paz-ko*» para os da série *B*, e «*mêê*» para os da série *C* e *D*, êstes chamarão a *B* de «*mêê*» e *B* os tratará de «*mê-kô*», sobrinho (*NB*: a sobrinha chamará «*maz-kô*», filha, e a sobrinha tratará de «*mê-pâ*», porque «*mêê*» é têrmo usado pelos homens, e «*mê-pâ*» só pelas mulheres).

d) Na 2ª geração (*Ba, Bb, Bc, Bd, Be; Ca, Cb, Cc, Cd, Ce; Da, Db, Dc, Dd, De*) entre si distinguem-se em *mami*, *mamyó*, *azkabi*, *akabyó* conforme as idades, dentro da mesma série. Porém independentemente das idades, os da série *B* todos são *mami* (ou *mamyó* se 2ª mulher) para os das séries *C* e *D*, porque *B* é *mami* de *C* e *D*. Os da série *D* são todos *azkabi* (ou *azkabyó*, sendo mulher para os das séries *B* e *C*, sem levar em conta as idades dos indivíduos porque *D* é *azkabi* de *B* e *C*. Os da série *C*, também independentemente de suas idades, são *mami* para os da série *D*, e *azkabi*, para os da série *B*.

Com relação a *X*, todos se dizem «*paramêra*», *netos* (*paramêra* é plural. Masc. sing. *paramêi*; F. sing. *paramyó*). Note-se que todos os homens da geração de *X* (seus *mami* ou *azkabi*) são considerados *paz-ko-Ro*, avós, da 2ª geração.

4) Variações na nomenclatura.

a) A nomenclatura de *parentesco* e *afinidade*, como se verá a seguir, varia conforme:

1º — As *relações de consanguinidade* ou *afinidade* entre as pessoas nomeada e nomeante;

2º — A *posição hierárquica* da «Gens» a que pertencem as pessoas nomeada e nomeante;

3º — O sexo das pessoas nomeante e nomeada (a letra *m* indica que o têrmo é empregado exclusivamente por pessoas do sexo masculino; *f.* só por pessoas do sexo feminino, *m, f.* quando por ambos sexos).

4º — A *idade social*, ou melhor, a *geração* de quem nomeia.

5º — Há, em alguns casos, termos diversos para o *tratamento direto* (apelativo ou vocativo), isto é, entre os dois parentes; ou para o *tratamento indireto* (designativo ou nominativo), a saber entre o parente que fala, referindo-se ao seu parente, e uma terceira pessoa. Por exemplo, «*arkabi*» é o termo que significa «*irmão menor*» (mais moço), entretanto, no tratamento direto, isto é, ao chamar o irmão mais moço, dirá o mais velho: «*a'tyá nihyá*» (venha cá, irmão menor). Igualmente *arkabyó* quer dizer «*irmã menor*» (mais moça), no entanto, o mais velho chama-lua: «*a'tyá nimpó*» (venha cá, irmã mana).

6º — Em muitos casos, ao falar de algum parente, com alguém (tratamento indireto), descreve-se a relação de consanguinidade ou de afinidade, por isso registramos também a *nomenclatura descritiva*.

Quando não há termo próprio para indicar relação de parentesco, especialmente de afinidade, recorre-se ao *termo descritivo*. Muitos indivíduos, ou por ignorância ou por facilitação, recorrem aos termos descritivos, mesmo quando há os termos próprios ou adequados.

Destes conceitos originou-se uma *nomenclatura* assás complexa, e mais rica de termos, que a da Língua Portuguesa (ou dos costumes europeus), embora não chegue a perfeito rigor lógico.

3. *Os termos de parentesco e afinidade*

(conforme os costumes Tukano)

Observações preliminares:

1ª — De acôrdo com a pronúncia indígena, os *termos* parecem-nos compostos (cfr. *Observações Gramaticais da Língua Daxseyé* ou *Tukano*), por isso, separamos com (hífen-) os vários elementos que compõem as palavras.

2ª — Além do *termo descritivo* (ou *explicativo*), daremos o nominativo (indireto ou designativo), isto é, quando em conversa com uma terceira pessoa se quer indicar o parente (ex. «*N.* é meu primo»), e o termo vocativo (direto ou apelativo), isto é, quando se chama o parente (ex. «ó primo, vem cá»).

3ª — A tribo Tukano (como em geral tôdas as do Uaupés) divide-se em grupos (cfr. IV — 2, a, (2 b)), a êstes é que denominamos com o termo latino «*Gens*».

4ª — Não nos souberam explicar porque ao «primo» da própria tribo dizem *mani mar-kõ* ou *arkabi mar-kõ*, isto é, «*filho do irmão*». Responderam tão só que o costume é êsse. Confundem-se, pois, os

termos descritivos de «primo» e «sobrinho». É verdade que, na prática, nunca usam o término descrito para os «primos».

5ª — A nomenclatura abaixo vigora dentro da tribo *Tukano*, e nem sempre corresponde ao término semelhante (quanto ao *radical*) em outra tribo de língua irmã.

6ª — Os esposos se chamam por *mãã-ba* (você), enquanto não tem filhos. Depois do nascimento do primeiro filho (ou filha) e até a morte deste, se chamam respectivamente por: «*N* (nome do filho) *pãr-kõ* ou *N. pãr-ko*, isto é, «*Pai* (ou mãe) de *N*». Quando morre o primeiro filho, dizem o nome do seguinte. Se não têm mais filhos, voltam a tratar-se por *mãã-ba*.

| Cunhado | yõõ pó'mõ mami (xabi) (irmão de minha esposa) | | | |
| | a) casado com meu kõ | pé-ñã (pl pé-ñã-komõa) ou pé-ñãkõra) | yõõ meõ kõ (primo) | m |
| | b) casado com ti-ñõ | pé-ñã | yõõ té-ñõ (noivo) | m |
| | c) casado em tribo diversa da do "noivo" | pé-ñã | yõõ piri (91) (pl pirikõra) | m |

(91) Pelas nossas informações atuais, o término piri é recente e empregado em tôdas as línguas indígenas do Uaupés brasileiro. Parece-nos seja uma tradução do término português "primo" que por defeito de pronúncia costumam designar em "pirimo". São os seguintes os argumentos que autorizam esta opinião: 1.º Alguns dos informantes desconhecem o término piri, mais raros ainda os que ignoram piri-mo ou piri-mõ e piri-ma. 2.º Dos que conhecem êstes têrmos, ninguém sabe indicar o plural de piri-mo e de piri-ma, e raros os que apresentaram o de piri. 3.º De acôrdo com o espírito da língua Tukano piri-mo deveria ser forma feminina.

É fácil esta aceitação de têrmos de outra língua. Por exemplo, Antônio Barreto (Tukano) informou-nos que uma sua tia materna (ti-ñã-kõ) que no primeiro matrimônio tivera por esposo um Tukano (meõ do informante), tendo-se em segundo matrimônio com um homem da tribo Yebá-masa. Não podendo, naturalmente trata-lo por "meõ", chamava-o seu novo marido por "ti-ñã", término desconhecido de outros informantes e que, com tôda a probabilidade, é forma do português "tia" (pois seria abreviação de yõõ 'tio, meu tio').

| Parentesco | Término vocativo | Término vocativo | Término vocativo | |
|---|---|---|---|---|
| | | | ou yõo sẽi-mõ (92) | m |
| | yõo mã-ra-põ-mani (irmão do meu marido) | | | |
| | a) casada com wameõ-maxkõ | nihi-so-paxkõ (pl. + s'õmõa) (só os mami da "Gens") | yõo wameõ-maxkõ | f |

| | yõõ mã-ra-põ syõ (cunhada do meu marido) | nihi-so-paxkõ (pl. + sa-nõ'mya) | | f |

(92) Alguns falaram o termo "sẽi-mõ" (F. sea-mõ) como equivalente a cunhado de tribo diferente da dos baxubõra. Não sabem, porém, como seria na forma plural. De acordo com outro informante "sẽi-mõ" seria término recíproco da língua Nheengatu, equivalente a "primo" i.e. membro da mesma tribo ou nação.

2) *Grupo Local ou Territorial*

a) *Grupo-local*

Demonstração de grande espírito de sociabilidade dão os indígenas do Uaupés. Vivem, a pequena distância uma da outra, tribos diversas pela origem e pela língua, ligadas entre si pelos laços do *cauinagem* e *cropaméro*, a cordialidade (93) em suas relações sociais, convidando-se reciprocamente para as grandes festas e guardando a tradicional de hospitalidade generosa. Mais ainda, num mesmo povoado encontram-se hoje indivíduos ou famílias de outra tribo, quase sempre para facilitar a aplicação da *cropaméro*. Uma mesma tribo, como se viu (Cap. III) acha-se dispersa ao longo dos rios, em amplo território, subdividida em grupos que se alternam com os de outra tribo.

Primitivamente cada grupo ou *Gens* morava em comunidade numa grande habitação dita maloca, *Wii pahiriwi*, que quer dizer casa grande, habitação coletiva. Além das vantagens de ordem econômica, isto facilitava a defesa contra os animais e os homens.

Com o avanço da civilização, a segurança vai crescendo e aumentando, por outro lado, as exigências de confôrto. Por isso as malocas primitivas vão desaparecendo e sucedem-lhe os *povoados* ou agrupamentos de residências familiares.

Não raro as dissensões, dentro de um grupo provocam cismas, trazendo como resultado a retirada dos dissidentes que vão construir uma nova maloca ou povoado mais distante.

É provável que, em origem, cada maloca fôsse, no sentido rigoroso, uma família, na qual, ao lado do pai, e sob sua direção, continuavam os filhos mesmo depois de casados. Concebemos assim o grupo local como sendo ordinàriamente uma *comunidade agnática*. É bem viva uma expressão corrente entre os indígenas: «Eu sou pai de N.», e diz o nome do próprio tuxaua.

Distinguem-se, atualmente, as duas formas de agrupamento local: ou moram todos debaixo de um mesmo teto, a *maloca*; ou cada família possui sua residência, resultando os *povoados*. Note-se porém, que só há povoados à margem dos grandes rios e por influência e sob a proteção da catequese.

---

93) Parece-nos poder avançar esta afirmação, sabendo embora que não [illegible] um ressentimento e outrem desejos de vingança contra outros indivíduos, até de sua mesma tribo, lembrando-nos, [illegible] que há grão nosbi a outro da mesma tribo. As vinganças e brigas, especialmente nos ocasiões do cauim, revelam essas inimizades e aversões que os indígenas sabem ocultar sob a máscara de uma externa cordialidade.

Numa ou noutra forma as *famílias* constituem, porém, grupos autônomos e, o que é ainda mais admirável no regime de maloca, autônomos. Compreende-se a razão dessa autonomia: há nas tribos do Uaupés uma fusão dos dois «ateliers», o masculino (de pesca) e o feminino (agrícola), que se completam e bastam para a manutenção da família.

b) *A organização social*

A vida gregária que vivem os silvícolas exige a observância de certas normas fixando as relações entre os indivíduos, ou, faz-se mais certa organização social.

Essas relações são, de resto, bastante naturais, pela simplicidade mesma da vida que levam; e, por outra parte, religiosamente respeitadas. São tôdas *costumeiras*, isto é, praticadas por costume, nem se pode saber se foram dadas um legislador, Wax-ti, como ensinam lendas, ou se, ao contrário, foram costumes introduzidos naturalmente e que a experiência aprovou, finalmente tornou inviolável. Ou seja talvez distinguir entre as diversas relações, algumas das quais, por exemplo, a do matrimônio exogâmico, tenham tido uma origem positiva, e as outras sejam de origem consuetudinária.

É facilmente perceptível, mesmo nos pequenos grupos, embora perfeita e suavemente harmonizados, a distinção de conjuntos sociais com seus deveres, suas atribuições características, suas diretivas peculiares. Em cada grupo local podemos distinguir quatro categorias de indivíduos: 1º o tuxaua, 2º os *Komuã* (anciãos), 3º os homens (mais ou menos escalonados por suas idades e experiência), 4º as mulheres e crianças.

Essas diversas categorias estão, porém, bem ligadas entre si por princípios unificadores e estabilizantes: 1º uma coisa comum é o regime de maloca, o qual, ao menos de início, vigorou como norma rígida, e sem exceção; 2º as *provisões em comum*: costume que se mantém no regime de maloca e, de modo mais atenuado, também no sistema de povoados; 2º a *herança comum*, da maloca, de canas de pescaria e caça, e de tudo o que é propriedade do grupo; 4º o *medo dos espíritos*, com grande poder unitivo, conforme a mentalidade indígena; 5º a *vindita*, que o grupo exercerá contra quem se supuser o causador da morte de um dos seus membros.

Convém uma palavra ainda sôbre as duas primeiras categorias de indivíduos.

c) «*Buzxôrd-kurá*» — (*Conselho dos anciãos*)

Velando pela observância dos costumes e das festas existe um Conselho de anciãos, o *Buzxôrd-kurá* (dito *Modcaroá* em Nheengatú).

Compõe-se do Tuxaua que é o seu presidente-nato e também porta-voz e executor das suas decisões, o *Pajé* e mais dois ou três

homens de maior ascendente. Êsses homens são os *Komũã* (pl. de *Komũã*, como se exprimem os indígenas, e que vimos figurar (VII - 2, e (3) como «iniciados» e, até certo ponto, auxiliando o pajé.

«Os velhos assim o querem», é uma expressão que se ouve com frequência, quando se indaga do indígena a razão de alguma prática que nos causa estranheza. Essa expressão é a manifestação de uma tonidade impessoal (nunca se revela o nome de algum dos componentes, como responsável pela decisão), a qual é sempre acatada. Êsse termo «velho», *Buzko*, aplicado aos *Komũã*, é antes indicador de autoridade do que de idade, pois vêem-se indivíduos de talvez 30 anos ou pouco mais, integrando o Conselho.

Atua o Conselho como colégio eleitoral do Tuxaua, *Wyõra bezsese* e como tribunal que se pronuncia sôbre as omissões e transgressões dos costumes.

Vice-versa, conforme resulta do relator Tukano Antônio Barreto, cabe ao Tuxaua a escolha dos membros do Conselho. O zêlo de algum da maloca pelos interêsses do grupo, seu amor às tradições, sua facilidade em recordá-las, são, parece, as qualidades requeridas para ser admitido entre os *Komũã*. Torna-se, no entanto, necessária a apresentação por algum membro do conselho, talvez o próprio pai do candidato. Sua admissão, porém, depende da opinião favorável do Conselho, depois que o candidato deu provas de sua idoneidade, por exemplo, repetindo as lendas da tribo, ou os cantos das danças ou mostrando a eficácia dos seus «sôpros». Foi-lhe necessário para isto um curso prolongado à escola dos antigos *Komũã*, como vimos acima (VII - 2, e (3).

O de *Komũã* é um título vitalício, e que lhe grangeia o respeito dos seus conterrâneos. Os *Komũã* exercem, outrossim, suas atividades como «esconderos», especialmente no parto, na imposição dos nomes, como instrutores nos ritos puberários, e como auxiliares do Pajé no tratamento dos doentes. São frequentes as reuniões. A Tuxaua Patrícia Vasconcelos assegurou-nos que às vêzes se reunem quase tôdas as noites.

d) «*Wpogo*» ou *Tuxaua* (Chefe local)

Em cada maloca ou povoado há um chefe ou Tuxaua, em Tukano *Wpogo* (ou *Vpogo*), termo que provavelmente deriva de *Wpi*), casa (94).

---

(94) O título de Capitão foi, no tempo das Capitanias, outorgado pelo Govêrno provincial aos Tuxauas, como estímulo para chamá-los ao contacto com os civilizados e aproveitar sua influência afim de obter índios para os serviços de utilidade pública. Em certas épocas davam-lhes até uniforme militar, espada e uma paga mensal.

Ordinariamente seria o chefe da família, continuando o seu poder paterno ou autoridade doméstica. A sua é uma autoridade privada e de tutela sôbre o grupo local de família.

Além de seu poder e suas obrigações, como esposo e pai da sua família, se fará todos os trabalhos, como qualquer outro chefe de família, tem a incumbência de velar pelo cumprimento das leis tradicionais, de prevenir e dirigir as funções sociais. Cabe-lhe, pois, a direção na construção da maloca, na limpa dos terreiros adjacentes, do pôrto e das estradas de acesso a êste (trabalhos às vêzes executados pelas mulheres da maloca sob a direção da esposa do chefe), nas pescarias gerais e coletivas, como nas festas religiosas e profanas e nos bailes periódicos.

Êle é o representante do grupo local para as relações com outros grupos, com outras tribos ou com os civilizados. Estipula as condições e, depois, escolhe e manda os homens pedidos para os serviços dos brancos. É sempre obedecido, e, talvez por isso, nunca usa tom imperioso, cominativo.

Dentro sua posição, no entanto, não lhe advém isenção de trabalho ou direito de exigir tributo ou pagamento em espécie ou em trabalho dos outros componentes (cfr. Nota (102) abaixo), nem de ter mais esposas (95).

O poder do Wbôpo depende não tanto de um costume, como de sua influência pessoal, e está lhe pode derivar de vários títulos: regalias oratórios, prudência, habilidade técnica, inteligência, conhecimento de várias línguas (Português, Nheengatú, etc.).

Outrora achavam-se investidos de maior poder (96). Citam-se nomes de Tuxauas conhecidos, respeitados e obedecidos não só nas

---

(95) Da aognamos à poligamia de outros tempos (VIII-1, a (6)). Ainda mais recentemente citam-se casos (informação do Pe. João Marchbs.) que além de sua esposa retinham, como concubina, alguma mulher que ficara viúva. Bem como de tomar uma segunda esposa, porque "a sua mulher era doente, e êle desejava ter filhos". Recorda-se também de um com uma mulher só e duas filhas, o qual toma mais outra esposa, não pelo desejo de ter um filho homem, "para que a sua família não se apodrecesse com êle". Efetivamente, após o nascimento de um filho, varão, remandou a mãe dêste. Não logramos apurar se foi espontânea ou não esta atitude.

(96) Parece que o mesmo se possa afirmar de um passado mais longínquo. As relações do sec. 18 (Pe. Noronha, Ribeiro Sampaio, Rodrigues Ferreira) mostram-nos principais deslocando grandes grupos, fundando novas localidades a convite dos civilizados, organizando entre si alianças defensivas e ofensivas. Donde o interêsse dos Governadores de tê-los aliados, conferindo-lhes o título de Capitão. Ficaram famosos Caboquena, Ajuricaba, Camanaus, Comandre, Carunama, Cabacaburi, etc. Nos primeiros anos, como nos do meio do sec. passado, o Governador,

[illegible] pelas malocas ou povoados, como também em malocas e povoados [illegible] Por exemplo, ainda em princípio dêste século, [illegible] de Para-cachoeira, pai de Julio e avô de Mandú, o atual chefe [illegible] 1950) entre os Tuxaua, respeitado e temido em todo o rio Tiquié e Uaupés, o Uapadino de Inauaríte entre os Taryana.

Compreende-se a necessidade de maior poder, sendo malocas de [illegible] população e mais isoladas da que hoje estão. A evolução na[illegible] que segue a tribo explica-nos o enfraquecimento do poder do TUXAUA. Indígenas que passam vários anos na Missão, onde fazem um curso primário, aprendem o Português, a ler, escrever, contar, [illegible] um ofício, e se encaminham para a civilização; os civilizados que [illegible] e que muitas vêzes se relacionam diretamente com os índios são outros tantos fatos que vão minando a autoridade do chefe indígena. O Chefe do SPI (Serviço de Proteção aos Índios) e o Missionário são fundamentos, pelo conceito mesmo que o índio tem do branco.

A esposa do tuxaua goza também de certa primazia e autoridade entre as mais mulheres, e, por vêzes, chamam-na *Wyógo*. Cabe-lhe a presidência nas recepções sociais (97), dirigir o trabalho coletivo das mulheres, sobretudo na preparação dos caxiris e dabacuris. Toca-lhe saudar e agradecer, em nome das mulheres, os hóspedes

7. o índio João Bernardo, Principal de Tucurimachi
8. o índio Antônio José, principal de Cuiá-Ir[illegible]
Francisco do Rio Xiara
9. o índio Silvério Antônio, de Tunui
1851 — 10. o índio Alexandre Correia, de S. Bento.

(97) Mesmo quando recebe algum visitante civilizado, ela é a primeira e [illegible] vêzes a única que o vem cumprimentar.

...ram para a festa da maloca. Em certas danças tem o papel ...ado de solista, *Yohogõ* ou *Nomó-Sapá* (VII - 4 e 2 a 2º).

Por ocasião da morte do Tuxaua de Pari-cachoeira, o Tukano ... 5 de julho de 1934, tivemos o ensejo de ver alguns documentos ... cuidadosamente pelo extinto e sua família, a saber: ... manuscrito com a nomeação sucessivamente de seu bisavô, João ..., e avô, Manoel Silgueira, para o cargo de *Capitão* de Pari-cachoeira, nomeação feita pelo Missionário Capuchinho Frei Venâncio Zilocchi, em 5-12-1882, com o visto datado de 7-8-1923 do Padre João Balzola, Salesiano. Outra carta de nomeação com cabeçalho impresso, firmada pelo Capuchinho Frei Gesualdo Marchetti, em 13-5-1885, também com o visto do Padre João Balzola, de 7-8-1923. São os seguintes os dizeres dêsses documentos:

«Eu, abaixo assinado, Frei Venancio Zilocchi, Missionario Apostolico Franciscano do Rio Tiquih, affluente do Rio Uaupés, e Director das Missões nelle estabelecidas, nomeio Capitão da Missão de S. Pedro d'Alcantará ao Senhor principal da dita Missão João Silgueira, e em sua ausência ao filho Mor, Manoel Silgueira, impondo-lhe as seguintes condições:

1º — Cuidar da Capella e casa do Missionário.

2º — Obrigar aos moradores da dita Missão, a que acabem as casas principiadas, mesmo a fazer aquellas que não ha tem feitas.

3º — Arruar, na construção das casas, a Missão.

4º — Cada 3 meses, mandar (se o P. Missionário não está presente) um morador de cá donde acha-se o Padre para notificar os obitos, nascimentos e as novedades habidas nos ditos tres meses.

5º — Obrigar a todos fazerem suas roças para o proprio mantenimento, e para prover-se das suas necessidades.

6º — Proibir absolutamente a venta dos indigenas Macú, como tambem impedir de modo que poder as assim ditas pega-pega.

---

(28) Numa grande festa a que tivemos a oportunidade de assistir entre os Maiuna de Caruru-cachoeira, rio Uaupés, vimos a esposa do Tuxáua bem dos intervalos das danças, dirigir-se ao grupo de mulheres que se estavam sentadas e reprendê-las. Supomos que seja pela indecisão das mulheres em se apresentarem para o número de dança que precedera.

7º — Finalmente, em caso de necessidade, dar gente para o serviço publico, e dizer, cuando chega o Missionário, tem que dar a gente que ele quer, para seu transito.

Na firme confiança que dito Sr. Principal cumprirá as condições assima indicadas, passo-lhe este documento, na Missão de S. Pedro d'Alcantara aos 5 dias do mes de dezembro de 1882

Ass. Frei Venâncio Zilocchi
Miss. Ap. Fno

Ao Capitão João Silgueira, Sr. Principal da Missão de S. Pedro d'Alcantara (a lapis).

Visto P. João Balzola Salesiano
7-8-1923

(impresso)

FREI GESUALDO MARCHETTI

da ordem dos Menores Observantes de S. Francisco, Prefeito das Missões, etc. Considerando as boas qualidades e bom comportamento do neophito João Silgueira — o nomeamos Capitão da Missão de S. Pedro d'Alcantara, devendo cumprir as ordens do Rendo Missionario respetivo ou do mais proximo.

Esta nomeação durará um ano, acabado o ano o mencionado Missionario o tornará a confirmar não tendo motivos encontrario.

Hospicio da Propaganda Fide em Manaus 30 de maio de 1885
(Prefeitura de Missões. Provincia do Amazonas, Fr. Gesualdo Marchetti)

(Manuscrito) O abaixo assignado, em vista da morte do Capitão João Balcana Silgueira da Missão de S. Pedro d'Alcantara, passa a sobredita patente ao Indio Manoel Iepassonia filho legitimo do sobredito Capitão

Com fé do que me assigno
Missão de S. Pedro d'Alcantara de Pary Cachoeira 29 de janeiro de 1886

Frei Matheus Canioni
Miss. Apost. Franc.

(a lapis) Visto Pe. João Balzola 7-8-1923

*e) A sucessão*

O tuxauato foi sempre uma posição e titulo vitalicios, nem consta de fato de deposição de um e eleição de outro. Esta só se dava após a morte (quiçá provocada) do antigo tuxaua. Em caso de reconhe-

pela invalidez, continua ainda a reter o título, e o seu filho mais velho exercerá as funções interinamente.

Não se conhecem regras fixando a sucessão do tuxaua ou a sua escolha. A única norma rigorosa, seria talvez a observância da jerarquia das subdivisões nos povoados em que há famílias pertencentes a várias subtribos — IV 2, a (2), conforme as informações de Patrício Vasconcelos e Antônio Barreto. Assim o exige o espírito democrático-aristocrático dêsses pequenos grupos. Processo muito natural, dentro de tal espírito, é a sucessão do pai pelo filho, especialmente o primogênito, processo que se verifica na maior freqüência dos casos. Determinava êste fato o ascendente talvez grande do pai, bem como a circunstância de muitas vêzes o filho, em vida do pai, tê-lo ajudado ou substituído em tantas ocasiões.

O ascendente reconhecido, as qualidades pessoais, e entre essas o acatamento das tradições e o respeito às autoridades, é que indicam como candidato o filho. Ou, na falta ou a não idoneidade dêste, outro qualquer, preferìvelmente da família do Tuxaua extinto.

A violação dos velhos costumes e a desobediência ao pai têm sido, não raras vêzes, a causa da preterição de algum jovem, de muito bem prendado, para suceder ao próprio pai no tuxauato.

Tal escolha é uma das principais funções do conselho de Anciãos, o *Buzkóru-Kúrd*, (99), de acôrdo com informações obtida de alguns tuxauas: Júlio, Tukano de Pari-cachoeira, Henrique Resende, Tuxaua do Iauaretê (Tarapé), Fernando, Yurupari de S. Ana no rio Içana; Mandu, Kumádene de Urubucuara; José, Huhudeni de Uapuim-cachoeira no rio Alari).

Sendo assim atenuado o poder social do tuxaua, e com essa mentalidade democrática indígena, infere-se a não repugnância de alguma mulher *Tuxaua*. Cita-se o exemplo de *Caridade* (ou *Cari*, conforme a denominação comum), da tribo Tukano, a qual exerceu em Piracuara (rio Papuri, Colômbia) o *tuxauato* reconhecido por todos e em circunstâncias muito singulares, pois sucedera a seu irmão Estevão, o qual, ao morrer deixava dois filhos (100).

---

(99) Por ocasião da morte do tuxaua Tukano de Pari-cachoeira, Júlio Silveira, aos 5 de julho de 1954, o Conselho de anciãos ficou três dias deliberando sôbre as qualidades e méritos de Mandu, o filho mais velho do defunto chefe, antes de reconhecê-lo como sucessor.

(100) Cari fôra antes mulher pública em S. Gabriel, no rio Negro, e nunca se casou. Não foi possível verificar se o seu ascendente tivesse origem de tal ordem. Seria um problema semelhante ao das Heteras. Ou se, ao contrário, como parece mais provável, se deva à sua inteligência, por ser mulher muito esperta, com a vantagem de conhecer bem o Português.

A situação de Cari talvez se explique pela longa convivência com os civilizados, de modo que como tal fôsse considerada, sendo, por outro lado, filha do antigo e conceituado tuxaua (101)

*f) Govêrno e justiça*

Mesmo antigamente o poder do tuxaua era temperado pelo poder dos chefes de cada família, a qual, como dissemos, é autônoma quanto à sua vida normal, seus interesses, seus negócios, sua roça, etc.

Era, outrossim, moderado pelo ascendente dos *Komùd*, os «Velhos», os quais ainda hoje presidem às danças, tomam parte na imposição do nome à criança, na iniciação dos rapazes, praticam o «Sôpro», etc. Os «Velhos» constituiam um verdadeiro Conselho ou Senado do Tuxaua, o *Burkôra-kurd*, e ainda hoje continuam com tal função e escolhem o novo tuxaua.

Os chefes absolutos sempre foram exceção que algumas vêzes provocou a reação dos seus subordinados (102). Vigorou sempre entre tôdas as tribos do Uaupés um *regime democrático*. Recorda-se contudo de alguns tuxauas que, no contrato de serviço com os brancos, — uma das funções do tuxauato — pretendiam paga sem trabalhar, ou até ficando com quase tudo para si e pouco distribuindo aos outros, de sorte que os indígenas vinham pedir ao Missionário fizesse êle mesmo a distribuição do pagamento.

Não cabe ao tuxaua a administração da justiça, no sentido rigoroso. Nem há mesmo um *Direito judiciário* ou *penal costumeiro*. As questões que surgem entre os componentes do grupo são resolvidas entre êles, sob ditame da vingança ou do temor recíprocos. O tuxaua, no entanto, agia com freqüência como árbitro repreendendo os culpados, ameaçando-os, impondo-lhes a restituição do objeto roubado ou uma indenização e, como punição máxima, expulsando da maloca os indesejáveis, sempre porém de acôrdo com os *Komùd* componentes do *Burkôra-kurd*. Jamais conheceram a pena de pri-

---

(101) Sucederam-se em Piracuara desinteligências entre Colombianos e indígenas. As autoridades colombianas mandaram desfazer a maloca e Cari foi municiada, bem como o pajé local. Algum tempo depois o Pe. João Marchesi, que nos forneceu esta informação, foi chamado para assistir religiosamente, na hora da morte, a Cari que se mostrava bem disposta.

(102) José, tuxaua Tukano de Pari-cachoeira, morreu envenenado pelos da sua maloca, propriamente pela sua segunda esposa Tuyuka, com conivência dos demais habitantes da maloca. No tempo do encarregado dos índios Higino Albuquerque, do SPI, José exerceu, na verdade, poder despótico, constrangia os índios a trabalhar para alguns civilizados, espancava as mulheres para que fizessem mais depressa a farinha, etc.

4: Silva SQ19 Tucano

são ou os castigos corpóreos. Convém ter presente que não cabem, no seu gênero de vida e na mentalidade indígena, um sem-número de casos que enchem os nossos códigos penais.

g) *Associações*

Nos colégios das Missões observa-se que, embora na convivência amiga das várias tribos com representantes entre as crianças escolares, separam-se facilmente os grupos de cada tribo para brincar entre si. Informava-nos uma Superiora Religiosa das Filhas de Maria Auxiliadora (Irmãs Salesianas), com mais de 25 anos (103) de permanência entre aquelas tribos, que havia sempre uma menina convascendente sôbre as mais, uma verdadeira «tuxaua», a cujas ordens as demais obedeciam prontamente, transgredindo embora o regulamento colegial e as ordens das Irmãs Superioras, e a essa colega traziam os presentes recebidos. Tal deferência, porém, não parecia fruto de amizade, e sim do medo. A menina índia que dificilmente chora, fazia-o quando admoestada por essa companheira, cuja repreensão (104) temia mais do que a das Superioras Religiosas.

Já ressaltamos a grande sociabilidade dessas tribos, no entanto parece não existir entre os uaupésinos *Sociedades secretas*, ou mais ou menos públicas das várias espécies que proliferam entre as tribos norte-americanas, especialmente entre as matriarcalistas. As causas podem ser várias: 1.º vivem, ordinariamente, em pequenos grupos humanos; ao passo que os grandes agrupamentos é que favorecem as subdivisões em sociedades menores; 2.º vivem a vida comum de uma maloca, sendo cada qual observado em todos os seus atos; 3.º a vida familiar é bem autônoma, mesmo quando várias famílias moram na mesma maloca, sem separações de espécie alguma; 4.º a quase inexistência de tabú separativo dos homens e mulheres.

1) Índice de uma separação maior dos sexos, e de uma sociedade que hoje só reúne poucas vêzes e rapidamente, temos nas festas de Wãx-ti. Os homens congregam-se para a precissão fálica, como descrevemos (VII - 4, e (2 a 1º) e as mulheres ficam fora da maloca, com proibição sob pena de morte, de olhar o instrumento.

2) Relevamos nas malocas e povoados a existência de um Senado, o *Bũrkõrakurá*, que se reúne com freqüência, gozando de

(103) Depoimento semelhante deu-o a Superiora da recém-fundada Missão Salesiana de Assunção, entre os Arwake do Içana, situada na localidade conhecida por Carara-poço, em agosto de 1957, portanto cinco meses tão só desde o funcionamento do internato feminino local.

(104) Entre os insultos recíprocos, alguém disse: — "Você não tem pai", e outra respondeu-lhe: — "Sua mãe é uma ladra".

grande ascendente, impondo e exigindo a observância dos costumes ancestrais, com a competência de escolha do chefe.

3) Outra sociedade existente, parece, é a dos *Xamãs* ou *Pajés*. O processo de preparação do paje é, sempre, frequentando a escola de outro paje, mesmo por turmas de alunos-xamãs. Até depois de formados, e no exercício de sua profissão, encontram-se periodicamente, convidados para solucionar os casos mais difíceis. Não se sabe, contudo, se há reuniões mais frequentes, em determinadas epocas, se há ritos nem quais atos pratiquem então. Sabe-se, sim, que o pajé convoca muitas vezes os *Komũã*, para resolver os problemas sanitários da maloca ou povoado (vd. VII - 2, e (3).

4) Uma informante Tukano, Dorotéia Brito, falou de reuniões das mulheres dentro da maloca, nas quais revelam entre si os maus tratos que recebem dos homens. Não conseguimos, porém, verificar se se trata de verdadeiras reuniões de sociedade secreta, como defesa de classe. Ou, ao invés, como mais parece, encontros casuais, embora frequentes, de mulheres, nos quais se desabafam revelando as próprias mágoas. É certo que, pela lei da exogamia, sucede às vezes tôdas as mulheres são de determinada tribo, à qual vão referir o que os seus maridos dizem de mal contra ela, donde surgem contendas e vinganças. Isto acontece de uma maneira muito regular, e com entendimento prévio das mulheres entre si. Dizem-se *ukhá* êsses mexericos das mulheres.

h) *Classes sociais*

Verdadeira *estratificação social*, ou *Classes sociais*, no sentido que traz posições privilegiadas, talvez vitalícias e hereditárias, com diferenciação de trabalhos, diversidade de direito e até de costumes peculiares (na habitação, vestes, distintivos, emblemas, etc.), como se dá em forma culturais mais complexas, não há entre êsses índios. Dentro da maloca não há senhores e nobres, como não há escravos (105), porém, uma admirável igualdade de direitos e deveres, como de propriedade e de trabalho.

Várias circunstâncias justificam tal inexistência de classes: 1.º trata-se de grupos numericamente pequenos; 2.º o clima quente e úmido, se facilita a provisão de alimentos necessários em tôdas as

(105) Praticamente servem de escravos os Maku. Trata-se, porém, de outra tribo, racial, linguística e culturalmente diversa. Talvez nem se possa dizer verdadeiramente escravos, pois em troca do trabalho recebem proteção e alimentos. Terminados os trabalhos (roça, aturás, etc.) os Maku podem retirar-se, como também podem constituir sua malôca com seu tuxaua.

épocas do ano, não permite abundante aprovisionamento e o desenvolvimento de riquezas. Ora, onde não há ricos, não há classes, nem senhores nem escravos; 3º a vida em comum, que as condições introduziram e a tradição firmou; 4º o medo da inveja que o bem-estar de um pode causar em outrem, e que tantas vêzes se manifesta até nas pequenas desigualdades (vd. V - 14); 5º a falta de um tribunal para restituir os direitos e indenizar danos.

3) *Grupo linguístico*

a) *Grupo linguístico*

Acima do *Grupo local* só existe, entre as populações do noroeste amazônense, o *grupo linguístico*. Consta de vários grupos locais, perfazendo às vêzes um total de milhares de indivíduos, com os seguintes elementos em comum: 1º dizem-se de uma mesma tribo ou nação, e, por isso, se consideram «irmãos»; 2º falam uma mesma língua; 3º entre si é terminantemente proibido o matrimônio.

Trata-se, pois, de uma *unidade étnica*, apenas. Os grupos que a constituem nunca se unem, nem possuem propriedades que se possam dizer em comum: casa, terreno, águas de pesca de tal tribo, etc. Por causa das distâncias são mais freqüentes as relações entre grupos de tribos diversas, do que entre grupos da mesma *tribo*.

Não há, pois, *organização social* ou *política* de tôda uma tribo; nem se recordam os mais velhos de ter ouvido falar em tal organização. Houve, sim, algum tuxaua com maior ascendente e ao qual, outros tuxauas consultavam e seguiam-lhe os conselhos, nas questões mais graves, que envolviam as relações com outras tribos ou com os brancos. Cada qual, porém, julgando-se perfeitamente independente e até com bem pequeno poder sôbre os outros homens da sua própria maloca.

Consta, sim, da fusão temporária de vários grupos, para uma expedição militar agressiva ou defensiva, às ordens de um único chefe (106).

---

(106) Assim o famigerado Ajuricaba, da nação *Manao*, com seus dois milhares de arcos, navegando em verdadeiras flotilhas sob a bandeira holandesa, dava caça aos índios de outras tribos para vendê-los como escravos aos holandeses da Guiana (cfr. Xavier Sampaio, "Diário", n. 336). Em 1658 o Pe. Romualdo Gonçalves de Azevedo (archivo do Amazonas, vol. II, n. 7, p. 80), narrando o episódio do "Cristo de Juquira" (cfr. VII-4, b) avalia em mil pessoas, de várias localidades e tribos, reunidas em Juquira em declarada hostilidade aos civilizados. Alexandre R. Ferreira ("Diário" de 1783) a propósito da lendária cidade de Manoa, extensa capital dos Manao esclarece-nos que no rio Urubaxi onde estavam outrora os Manao: "a referida aldeia

Nunca houve uma verdadeira *autoridade*, mas apênas ascendente de um tuxaua sôbre outros. Esta, é mais ou menos, a situação atual de um Missionário, e, com certas reservas, podemos falar de um seu *hipertuxauato*.

b) *Tribo ou Nação?*

No conceito de *Tribo*, como comumente se entende, incluem-se e associam-se três elementos, a saber, certo grau de coesão política, uma concentração de poderes na mão dos chefes, e uma identidade de cultura. Ora, os dois primeiros elementos não se encontram entre os grupos humanos no noroeste amazonense. Não se pode, portanto, falar em *Tribo*. Talvez melhor fôra denominá-las *Nação*. Temos, na realidade, vários *grupos nacionais*, cada qual com sua língua, apresentando traços somáticos característicos, apesar do regime de exogamia que entre êles vigora.

Todos êles, porém, constituem um único *grupo cultural*. De fato, possuem tradições e práticas comuns, a saber, um *padrão* de vida semelhante, e o conjunto de observâncias que, estranhas para nós, são comuns a todos, como sejam as regras do matrimônio, da exogamia, da iniciação de puberdade, etc.

c) *Famílias Linguísticas*

Aguardamos a decisão dos especialistas sôbre várias questões fundamentais: 1.º as que geralmente se elencam como línguas, merecem assim denominadas? ou, talvez, algumas delas seriam apenas variações dialetais? 2.º qual a relação entre elas, quiçá uma derivada de outra? quais seriam as derivadas? 3.º seriam os idiomas atuais línguas-mãe, provenientes de idiomas antigos já desaparecidos? quais seriam êstes? 4.º e, nesta última hipótese, qual dos idiomas atuais do Uaupés mais se aproxima da língua mãe original?

Atribuindo, a título provisório e hipotético, a cada uma das «*Tribos*» uma «*Língua*», podemos dizer (como o temos feito *passim* no presente estudo) que as tribos da área uaupesina brasileira se dividem em três *Famílias de línguas* distintas e irredutíveis: a *Família Tukano*, a *família Arawake* e a *família Maku*.

Sôbre os componentes destas famílias linguísticas e sua localização, bem como seus vocabulários comparados, veja nosso trabalho «*Idiomas Indígenas da Amazônia*».

---

(Iranamuoca) nem tinha as qualidades e grandezas com que se fingiu a cidade de Manoá, pois não obstante serem estes todos *confederados*, eram contudo as suas aldeias independentes uma das outras e muitas delas tão populosas como a Iranamuoca".

d) *Kurá ou Gens*

Indicamos em capítulo precedente (IV - 2-a(2) as divisões das tribos, divisões que na língua Tukano se dizem *Kurá*. De acôrdo com a mentalidade indígena, essas divisões remontam à época da origem da tribo, por vontade mesma de Wãx-ti. Daremos em outro lugar (na obra do autor «Lendas do Uaupés») a lenda das origens conforme o relato do velho *Komã* Gabriel Costa de Puri-cachoeira.

Emergem tantas questões à espera de uma solução: quando se deram essas subdivisões? por qual razão? qual a sua base ou fundamento? Verificamos hoje um fenômeno de dispersão de uma nação em pequenos grupos, teria havido uma fusão em tempos idos ou podemos prever uma futura? As duas primeiras questões são de natureza histórica e falecem-nos dados para responder-lhes. As duas últimas talvez se possam aduzir elementos elucidativos.

1º Desde que um grupo humano se radica num local que lhe proporcione os meios de subsistência necessários ou até abundantes, torna-se naturalmente prolífero. O nomadismo, ao mesmo tempo causa e efeito de uma alimentação deficiente, é que reduz a natalidade: 1º pelo depauperamento orgânico dos pais; 2º obrigando a uma amamentação prolongada das crianças (até quatro ou mais anos); 3º favorecendo certas práticas criminosas (abôrto, infanticídio canibalismo das crianças).

Os grupos humanos crescendo em número não podem continuar na mesma maloca. Além das dificuldades de alimentação, a que já aceno, a própria dificuldade técnica de ampliar a maloca existente ou a construção de novas e maiores impõe a divisão do grupo primitivo (107). Enquanto o filho primogênito continuava ao lado do velho casal com sua família, os outros filhos do fundador tornavam-se por seu turno, fundadores de novas malocas, que iam crescendo com a fecundidade natural da mulher indígena. Esta hipótese, a mais de acôrdo com a natureza das coisas, vem confirmada, parece, pelos costumes.

1º — Um primeiro é a denominação de «irmão» para todos os indivíduos da mesma nação (isto é, que se reconhecem de tal tribo e falam a mesma língua), denominação correspondente, de resto, aos sentimentos (não podem casar entre si, mútuo auxílio e entendimento, pranto na morte e a vindicta do irmão vítima de outra tribo).

Se todos são irmãos, há, porém, uma distição entre *Mumí* (irmão maior) e *Axkabí* (irmão menor). Dentre os irmãos germanos, isto é,

(107) É possível que hajam interferido outras razões, como as desinteligências que ainda hoje se verificam.

filhos do mesmo pai os termos *mami* e *arkabi*, correspondem às idades. Fora dêsse caso, não correspondem mais. Ouve-se, por exemplo, um adulto qualificar uma criança de *mami*. Trata-se, portanto, de uma classificação hierarquica.

Um Tukano Tra-pé informou que considerava como *Mami* os *Wau-ro* e *Ôpi* ouvimos, com relação aos *Wau-ro* a expressão «Tukano da cabeça. *Dersed na dempega*, como equivalente ao ramo principal, como no-lo explicou logo em segunda Patricia Vasconcelos. Temos, pois aqui indícios de uma aristocracia (108) cuja principal consequência atualmente, parece seja a *precedência* quer nas danças, quer na preferência para o tuxauato, no caso de coexistência de várias subdivisões na mesma maloca ou povoado. Em base de tal costume pode-se organizar uma tabela classificatória, a qual, por exemplo, para a tribo Tukano, ficaria constituída como se viu IV. - 2-a(2), conforme a enumeração dada em dezembro de 1953 pelo octogenário Tukano de Puré - cachoeira, Gabriel Costa (pertencente à 11.ª divisão dos *Bati-tóró*), ordem que, de resto, corresponde a informações que obtivemos de outras fontes e em diversos lugares (109).

2.º — Um segundo é o atribuirem-se uma superioridade jurídica, derivante da prioridade de tempo, algo correspondente ao brocardo: «*qui prior est tempore potior est jure*.» Quem se estabeleceu mais recentemente num povoado, está em certa inferioridade, é um «passageiro. *Sihpari-mogód*», como dizem.

---

(108) A existência dessa aristocracia era já conhecida em 1755 pelo Pe. Nóbrega Xavier de Sampaio no seu "Diário" de 1774 (n. 381) informa: "A mais celebre (das nações do Rio Uaupés) he a Uaupés por causa da differença que entre si admittem de varios graus de nobreza, a que serve de distintivo, como de uma ordem militar, uma pedra branca muito lisa, de figura cylindrica e furada para lhe passarem um cordão com que a trazem pendente ao pescoço. As dos principaes chegam a ter meio palmo de comprido. São menores as dos nobres e muito menores as dos plebeus. Trazem também os Uaupés as orelhas e beiços inferiores furados".

(109) Quando se fala a respeito das últimas subdivisões, com indivíduos das primeiras, ouve-se com frequência esta expressão: "São nossos escravos". Seriam acaso grupos de origem diversa que foram dominados e absorvidos? Em alguns casos parece-nos isto admissível. Por exemplo, os *Juruá* apresentam diferenças somáticas bem notáveis dos outros Tukano. Conforme as lendas não teriam saído de *Tóni-pamari*, e sim de outro orifício à bôca de um vizinho igarapé. Os rios de águas pretas, como o Uaupés, formam característica e abundante espuma quando batem nas pedras das cachoeiras. Indagando de certo indivíduo porque havia essas divisões inferiores, êle respondeu que é porque não saíram da água, mas da espuma, como se fôsse de uma bôrra de depuração.

Os dois costumes indicados se harmonizam perfeitamente; podemos pensar que o segundo é uma derivação do primeiro. Indagando de um índio Tukano de um povoado do baixo Tiquié, aos habitantes do qual povoado êle considerava *Mamiá*, respondeu-nos que aos de S. José. Indagações posteriores feitas a outros índios vieram esclarecer esta resposta. Um dêles informou, ouvira ao próprio avô narrando que os Tukano outrora não moravam aí, porém residiam no Papuri. Dêste rio, sendo o próprio avô, ainda menino, portanto cousa de uns 100 a 120 anos atrás, foram expulsos pelos Taryana e vieram estabelecer-se em S. José. Êsse informe faz de S. José o primeiro núcleo Tukano no rio Tiquié.

Um argumento a mais de probabilidade dá-nos o nome Tukano da localidade, que é *Mazkõ*, a vila, como se fôsse a *urbs* por excelência dêsses Tukano. Tanto mais provavel, enquanto tal denominação além de não ser atribuida a nenhuma outra localidade, foge ao costume das denominações pelos acidentes geográficos (ponta, igarapé, pedra, cachoeira, buraco, etc.), ou outras circunstâncias. Nas vizinhanças de S. José há um local que em Tukano se diz *Buzkõrã bahã*, literalmente «nado dos velhos», isto é onde os velhos atravessaram o rio a nado, fugindo dos inimigos. Nas proximidades dêsse local, vai para 30 anos os velhos mostraram ao Pe. João Marchesi um trecho de mata menos densa, como sendo o local por onde passaram os primeiros Tukano vindos do Tiquié em suas expedições guerreiras.

Em conclusão, opinamos:

1º — A multiplicação natural dos índios impõe uma divisão em grupos, que se estabeleceram em lugares mais vizinhos ou mais distantes, conforme as circunstâncias; por isso encontramos hoje grupos de uma mesma nação dispersos pelos três rios (Uaupés, Tiquié e Papuri).

2º — As denominações (110) que caracterizam cada grupo (*Wanano Opi*, etc. cfr. IV-2-a(2), são nomes ou alcunhas pelos quais foram conhecidos os respectivos estipites, ou algum tardio descendente mais famôso, que provocou a separação ou construiu a nova maloca ou praticou outra proeza qualquer.

3º — As relações entre as malocas, e a situação social dos que

(110) O afastamento dêsses grupos vai acentuando cada vez mais a separação. Se é verdade que cada indivíduo, mesmo as crianças, sabem o nome da própria e das subdivisões vizinhas (e até de outras tribos), poucos sabem fazer uma elencação mais completa das Gentes que constituem a sua tribo.

hoje a habitam são as mesmas que se passavam entre os fundidores, donde a presente hierarquia que vigora entre os índios.

4º — Não datam da mesma época as malocas, uma são anteriores e outras mais tardias, originadas, quiçá, de algum cisma. Os grupos que se organizam mais recentemente respeitam sempre a primazia dos mais antigos, chama-los-ão *Mani*.

5º — O grande número de grupos que foi aparecendo, no entanto complicou essa hierarquização, daí a dúvida prática que assalta o índio, em algum caso, não sabendo dizer quem terá a precedência.

(2) Com o avançar da civilização para aquelas regiões, acentua-se a divisão e pode-se descobrir dupla causa para tal fato. A primeira é o estreitar-se dos laços da família e sua valorização cada vez maior, graças ao apôio das autoridades religiosa e civil, e por isso, o grupo familiar já pode bastar-se a si mesmo. A segunda são os povoados que surgem constando de famílias de diferentes subtribos ou até de tribos diversas. Pode-se prever, se as cousas marcharem como vão, que não se dará mais uma fusão de tribos, mas, ao invés, um nivelamento e amalgamento na nacionalidade brasileira.

Favorece êsse amalgamento não tanto os matrimônios com os civilizados, que até o presente são fatos raríssimos, quanto à exogamia tradicional e o conhecimento e amor à pátria brasileira que germina terreno entre êsses filhos da selva, graças à ação das Missões Religiosas e das suas escolas.

c) *Fratrias (sibes) ou clans totêmicos*

Como a *Tribo*, melhor dita *Nação* não tem um chefe, nem sequer o possuem as suas subdivisões ou *Subtribos* (111), quais as encontramos atualmente. Não são unidades políticas, porém apenas comunas.

Se por *Fratria* entendemos qualquer subdivisão da tribo (mesmo que não constitua verdadeira comunidade, porque não possui um chefe), a estas Subtribos ou *Kurá*, poder-se-ia chamar *Fratrias* (ou *Sibes*, como preferem alguns etnólogos modernos). Coincidem com as *Fratrias* da antiga Grécia, enquanto, como aquelas, são também exogâmicas e de descendência paterna. Note-se, porém, que não é permitido o matrimônio entre uma fratria e outra da mesma tribo.

(111) Evidentemente é impróprio o têrmo *Subtribo*; como o de *Tribo* não se aplica com rigor ao conjunto nacional dêsses indígenas.

A *Maloca* ou *Kurá*, que a princípio se identifica com a maloca, encontra-se, com o decorrer do tempo, em vários *grupos locais*. Nesses grupos, entanto, nenhum vestígio há que se trate de um *clã totêmico*, são apenas *grupos familiares territoriais* ou *grupos de parentesco* específico que poderíamos chamar com o termo latino *Gens*.

1) *Totemismo?*

São diversos os indícios que fazem pensar na vigência do *totemismo* com seus *clãs* e *costumes totêmicos*.

1.º — Os grupos (tribos e subtribos) trazem nomes de animais (tucano, arapaço ou pica-pau, juriti, jibóia, etc.) ou de vegetais (miriti, camuri etc.) como costumam os clãs totêmicos.

2.º — Nos adornos de danças figuram penas de garça, arara, tucano, gavião, pêlos de macaco e de onça, dentes de onça ou de outros animais, vértebras de cobra, etc. Êsses adornos lembram o lugar em que o animal foi ferido, como se fôsse uma exaltação do animal sacrificado e uma identificação entre o indivíduo e o animal outrora sacrificado por Deus ou (?) a Deus.

3.º — Nas danças há personagens e máscaras (onde as usam, a saber entre os Kubewâna do Uaupés e os Arwake do Içana), que figuram a borboleta, a cotia, etc. e estas personagens procuram imitar os movimentos dêsses animais e há pios ou cantos também correspondentes.

4.º — O tucano pelo peso e volume desproporcional do seu bico, não tem grande autonomia de vôo, que tende a abaixar-se cada vez mais. Quando deseja atravessar um rio sobe a uma das árvores mais altas da margem, assim nos afirmam, e daí desfere seu vôo que, aos poucos, vai perdendo altura e, alguma vez, nos rios demasiado largos, não conseguem alcançar a outra margem. Foi observado que os índios Tukano, vendo um tucano sobrevoar o rio Uaupés num dos pontos mais largos, emitiram gritos, como de apreensão, com receio que o pássaro não lograsse atingir a margem oposta.

São vestígios apenas, que no máximo levaria a inferir uma forma social anterior de *clã totêmico*, se é que não são elementos tomados de empréstimo (é tão notável o instinto de imitação dos índios) a outros grupos. Não se nota, porém, nenhuma atenção (respeito, temor, prazer) para com o animal ou planta cujo nome levam; nomes de resto, sem importância econômica (exceto o *Bunivo* ou outro), contra o que de regra acontece aos nomes totêmicos.

Não se nota que evitem matá-lo ou procurem, ao contrário, comê-lo em algumas circunstâncias especiais. Se o encontram morto,

nenhum sinal de surpresa. É certo que às vêzes o matam para aproveitar suas penas nos adornos de dança. Mas, ao menos na forma atual (112) os enfeites são os mesmos para as várias tribos, chame-se ela Tukano, Arara, Tuyuka, Pirá-tapuya, etc. Pode-se mesmo assegurar que a sua atitude é de perfeita indiferença diante do animal do próprio nome, mais ou menos como diante de outro animal qualquer.

Nem há *clãs* tucano pica-pau, juriti, etc. São considerados nações ou tribos diversas, cada qual com sua própria língua e peculiares traços somáticos. É verdade que uma mesma tribo subdivide-se em grupos, com nomes que poderiam parecer *clânicos* (cfr. IV-2-a(2). Já não são, porém, os animais que aparecem nos enfeites de dança. Além disso tais grupos, ou *Gentes*, afastam-se do tipo clássico de clã. Por exemplo, não se admite o matrimônio entre as *Gentes*, mas apenas entre uma e outra Nação.

Os adornos de penas de tucano, arara, garça ou pêlo de macaco prendem-se com a lenda de Wãx-tí a qual, pela relação mútua entre as tribos, passa a figurar na história de cada tribo. Os enfeites, porém, não são distintivos de família ou clã. São essencialmente os mesmos para tôdas as tribos, sendo objeto de negócio de uma tribo com outra. Só esta circunstância já depõe em desfavor de uma interpretação *clânica*.

Não se nota absolutamente que uma tribo ou grupo tenha representação pictórica, de incisão ou escultória de um animal qualquer, e menos ainda do seu titular.

Quanto às máscaras e personagens de dança, observe-se primeiramente que há a da borboleta, e, entretanto, não há nenhum grupo humano com esta denominação; e nada revela ter existido. Em segundo lugar, há máscara, dança e canto da *cutia* e sob êste nome conhece-se uma subdivisão entre os Tukano, a *Dwá-pôrã*, filhos da cutia e uma tribo Arwaka do Içana, *Awadzirandi* ou cutia-tapuya; e, entretanto, não há tal máscara entre os Tukano e sim entre os Arwaka.

Parece que a mesma personagem ora faz de borboleta, ora de cutia, etc. Ora um, ora outro fará tal papel; e dentro da mesma maloca há as várias personagens, nem se trata de uma função hereditária de pai a filho. Tudo isto depõe contra a hipótese da existência de subdivisões *clânicas*.

---

(112) Tantas vêzes insistimos no conceito que são costumes atuais. É que se torna difícil ou impossível verificar como procediam em outras eras. E os índios respondem às nossas perguntas: — "Foi sempre assim."

4: Silva SQ19 Tucano

Quando ao episódio da atenção pelo tucano que atravessava o rio, pode ser manifestação de simples curiosidade, que entre os índios vem tantas vêzes acompanhada de rumores exclamativos. Os velhos nada contam que prove tratar-se de um *totem* de clã. Ao menos pelo que sabemos até agora.

Como não há indício de um *totemismo clânico*, também nenhum, de *totemismo individual* ou pessoal. Os objetos que fabricam não figuram animais, são de feitio simples, de acôrdo com a finalidade. Em alguns casos bem raros as pinturas das paredes são antropomórficas, parecem, porém, ter apenas o caráter lúdico.

[p. 479]

## Cap. IX

# A VIDA DO INDIO

1) *Ciclo diario*

O tipo e o estilão de vida do indio parece padronizado. Mesmo em tribos distintas encontramos os indios fazendo as mesmas cousas do mesmo modo e até com um horário bem aproximado. É sim, uma vida bem metódica, não, porém, monotona. Ao contrário, bem variada, dentro de uma perfeita naturalidade em que se sucedem dinamicamente repouso, trabalho, refeições, banhos, exercicios fisicos.

O Tukano vive na maloca que lhe serve de dormitorio, de refeitorio pela manhã e à tarde. A maloca é, sucessivamente laboratorio para os trabalhos domésticos, lugar de reunião nas horas de chuva e sala de baile nas grandes festas. É o lugar em que o Tukano vive, morre e é sepultado. Para o Tukano a maloca é o mundo. (Relação do 1º Superior das Missões Salesianas do Rio Negro, Mons. Lourenço Giordano — Boletim Salesiano — fev. 1918 p. 31).

A vida familiar ordinária pode-se assim resumir: o indio dorme pouco, come muito, conversa bem, trabalha quanto é necessário.

Desde as três horas da manhã, ainda fechada a maloca, ouve-se dentro conversa bem animada risadas sonoras e freqüentes. Muitas vezes também o rumor dos ralos em funcionamento: são as mulheres que preparam a mandioca para o beijú. Antes das cinco horas, com chuva ou sem ela, sempre escuro naqueles latitudes, as mulheres saem pela porta do fundo individualmente ou em pequenos grupos de duas ou três, ordinariamente uma criança enganchada ao quadril e com um vaso à cabeça, em direção ao rio. Ou, mais exatamente, àquele ponto do rio que se diz *Porto*, porto de acesso convenientemente preparado, onde se amarram as canoas. Ali tomam seu rápido banho matinal, *Wá-uakáse* de imersão, esfregando rapidamente a mão pelo corpo, rosto e cabelo. O mesmo fazem os filhos menores que a acompanharam; e elas aproveitam, outrossim, para banhar as criancinhas de peito que deixaram à margem. Depois enchem de água as vazilhas e pondo-as à cabeça sobem com agua de volta à maloca. Em seguida preparam a refeição da manhã.

Os homens e os rapazes continuam deitados, por uma hora mais ou menos, conversando de rêde para rêde e, ainda antes das seis horas, vão ao seu banho. Suspendem-se, então, as esteiras que fechavam as duas portas da maloca.

Sôbre pequenas esteiras são postas pelo chão as panelas de *Bydô* (é a quinhapira ou molho de caldo de peixe com pimenta) ou de *Yumû-ku* (mingau) de tapioca, e os baiaios em forma de peneiras bem abauladas com *Ahû-a* (beijú). — «*Badra a'tyd*», venham comer, é o convite da mulher. Os do sexo masculino se põem em círculo, de cócoras e, começando pelo chefe, comem abundantemente, entre conversas e sonoras risadas.

A regra de civilidade é servir-se lentamente e comer sem voracidade. Isto, de resto, está muito de acôrdo com a atitude tôda do índio, normalmente calmo e sereno. As mulheres se encarregam do serviço, trazendo o que ocorre, à medida que for necessário. Não há talheres: corta-se com a mão um pedaço de beijú mergulha-se na quinhapira e leva-se à bôca. O mingau bebe-se (1) com o beijú ou em pequenas cuias à guisa de colher. Ao fim a mulher apresenta grande cuia com *Sôrkd* (manicuera) ou o *Po'kd pcosé* (o chibé, de uso generalizado no Amazonas). À guisa do nosso café, assim ordinàriamente encerram suas refeições com o indispensável chibé, do qual se serve quanto quiser, passando depois a cuia ao vizinho da direita. Por fim mulheres e crianças tomam simultâneamente o seu alimento.

Começa o êxodo barulhento para o trabalho: serão talvez sete ou oito horas. Vão saindo em grupo os homens e as mulheres. Aquêles para a mata para a caça extração de fibras têxteis, de madeira para construção, ou à procura de frutas ou para o rio, com os apetrechos convenientes para a pesca, ou a fim de preparar as armadilhas.

As mulheres com as filhas maiores e as crianças pequenas, vão para a roça, levando pendente da testa para as costas o *Pi'i* (aturá) para trazer mandioca e lenha. Para alcançar a roça quase sempre deverão tomar a canoa, e por isso saem com remos de diversos tamanhos, alguns bem pequenos para as crianças. Algum velho ou doente (muitas vêzes ninguém) ficará como guarda da maloca deserta e silenciosa.

O trabalho durará até depois das onze horas. Pelas 13 horas começa a reanimar-se a maloca. Chegam as mulheres com seus aturás cheios de mandioca e, por cima, feixe de lenha; as crianças menores aos quadris ou seguras ante o peito, e outras agarradas à sua saia. Estão suadas, com o rosto afogueado, se por precaução não

(1) *Beber* é a expressão que usam, embora não muito própria, porque mais ou menos gense — "*Yumû-ku ãrydij? você bebeu mingau?*"

G. Silva SQ19 Tucano

se untaram com carajuru, a fim de não sofrer tanto o ardor do sol. Nos poços vão chegando também os homens com o resultado dos seus trabalhos: frutos, peixe, caça ou fibras e madeiras.

Novo banho virá, com seu frescor, renovar o bem-estar. A mulher moqueará o peixe ou a caça, aprontará beiju fresco saboroso, o mukhapira, o mingau, algum inseto e o chibé. Virá logo o «*Badro*», o peixe, e a refeição da tarde.

Há ainda algumas horas de luz: o homem vai preparar suas fréchas, desfiar o tucum para as redes de pesca ou trabalhar o seu banquinho ou a sua peneira. A mulher tecerá nova rede ou atender-á ao preparo da mandioca para o dia seguinte. Cada qual no seu trabalho.

Entre os indivíduos da geração nova, o homem talvez remendará ou lavará a própria roupa, como a mulher o faz à sua. Trabalhos todos feitos com tranquilidade, na intimidade da vida familiar, ao ritmo de uma animada conversa, com sonoras gargalhadas.

Quando o sol tomba, a lenha já está amontoada dentro da casa e as lanchas estão providas de água. Homens e crianças se acomodam nas suas redes, enquanto a mulher se ocupa em ferver o *Nũrka*, com algum fruto da mata, e todos se servem com suas cuias, como de costume da noite.

Continua mais viva a conversa, são pitorescamente narrados os acontecimentos do dia, as visitas que apareceram, as lanchas que passaram, as notícias de outras malocas. Quando a noite vai mais alta, serão talvez as 21 horas, baixam-se as portas da maloca. O sono vai vencendo primeiramente as crianças, depois os mais velhos. Porém, pelas 23 horas, ou mais tarde, ouvir-se-á uma pergunta que parte de uma rede, um ai e uma resposta de outra rede. Depois o silêncio só interrompido pelo crepitar de tantos pequenos fogos em cada apartamento do grande casarão. O fogo jamais se apaga dentro da maloca; a qualquer hora da noite vê-se algum vulto saltar de uma rede para reavivar o fogo, indispensável para as horas mais frescas da madrugada, e para afugentar as cobras ou outros bichos.

Com o avanço da civilização dá-se o fenômeno de aculturação, novos trabalhos vão ocupando o tempo e a atenção dos índios. Porém o ritmo da vida cotidiana é sempre o mesmo, na maloca como no povoado, para os índios que sempre aí viveram como para os que passaram longos anos no internato dos colégios e retornam às suas casas.

2) *Ciclo anual*

O clima daquelas regiões parece não oferecer mudanças notáveis para que fôsse alterado o ritmo da vida cotidiana do índio. Com

efeito, o termômetro, o barômetro e o higrômetro acusarão sensivelmente a mesma média durante todo o ano. Devido, porém, às chuvas das cabeceiras dos rios, distinguem-se uma estação de enchente e outra de vazante. E o ciclo anual é talvez mais variado para o índio do que costuma ser entre os civilizados.

Além do trabalho que compete a cada indivíduo, para a vida do seu lar, outros há que interessam a tôda a comunidade e que, por isso, são feitos coletivamente sob a direção do tuxaua. Talvez sejam as reparações da maloca ou a construção de outra nova, no mesmo local ou quiçá bem distante da antiga. Ou ainda, será a limpeza das áreas adjacentes à maloca, dos caminhos comuns ou do pôrto. Poderá tratar-se de uma derrubada para algum índio, o qual alcançará o auxílio dos irmãos de tribo, embora para utilidade sua particular. Os indivíduos são avisados com antecedência, a fim de tomar suas providências. Se se trata de trabalho para a coletividade, todos estão obrigados a dêle participar. Se, ao invés, é um auxílio para algum irmão, poderá razoàvelmente eximir-se: não o fará, porém. Em um e outro caso, só há uma paga convencional, suficiente e indispensável, um caxiri que foi também previamente preparado. O trabalho coletivo realiza-se sem necessidade sequer de um diretor técnico, porque sempre de acôrdo com as tradições, sob a simples direção do tuxaua ou do indivíduo interessado. É um trabalho rude, ou, antes, verdadeiras competições de fôrça e atividade, sob o bom humor e alegria do que se denomina *Dará-serôsé*, em Nheengatu *ajuri* ou *mutirão* (2).

Com a enchente ocorre a *piracema*, isto é os cardumes de peixes que sobem para a desova. Na vazante os peixes dos igapós querem tornar aos rios. Nesses períodos realizam-se as «grandes pescarias», constituindo, ao mesmo tempo, um trabalho coletivo, um esporte e uma festa, como indicamos (VI-a(1ª)).

Em diversas épocas do ano aparecem grandes quantidades de insetos, larvas ou voadores, cuja captura e preparo alteram o ritmo cotidiano da vida.

As árvores frutificam em diferentes estações, nas quais o índio realizará colheitas mais abundantes, e de muitas preparará saborosas bebidas, consumidas invariàvelmente entre música, cantos e danças.

---

(2) *Ajuri* será propriamente o convite e *putirum* (donde o têrmo aportuguesado "mutirão") o trabalho coletivo. Stradelli, no seu vocabulário Nheengatu-Português ensina: — "*Ajuri*. É o mesmo que no baixo Amazonas chamam *mutirum*".

4 Silva SQ19 Tucano

Além dessas «festas das árvores» ou «das frutas», anuais e regulares, não faltarão outras pelo nascimento, iniciação, casamento de algum membro do grupo. Haverá talvez algum morto a lamentar com o *pranto social* e a *festa funebre* de tradição.

Índice de um caráter nômade ocorrerão oportunidades durante o ano para viagens de divertimento. Será a procura de uma noiva, um motivo de comércio, pescarias a realizar, *Pcosé* a que foram convidados, visitas a outras malocas, mesmo aos de tribo diversa, à qual está ligado pela afinidade. E o índio com tôda a sua família redes, aturás, e outros apetrechos, e até algum cachorrinho, abarrota uma ou várias canoas e segue horas ou mesmo dias em demanda de outros povoados ôndé passarão dias ou semanas despreocupados (3). Quem navega aquêles rios encontra invariàvelmente canoas, rio acima e rio abaixo, de índios turistas. Alguns passam meses visitando conhecidos e parentes pelos vários povoados.

3) *Ciclo da vida*

Conhecemos os ritos que acompanharam o nascimento das crianças. Sob os cuidados e desvelos de sua mãe, ao contacto com a natureza, elas vão crescendo e enrijecendo-se. Ao atingir o exercício dos seus músculos elas tentarão andar e são lançadas ao chão para engatinhar. Sofrerão, então, o ataque da verminose. Tornam-se pálidas, inchada, barrigudas e muitas sucumbem. As que conseguem vencer a doença e atingir a adolecência, estão salvas.

Em falta de dados positivos estatísticos sôbre o desenvolvimento orgânico da criança indígena, tem-se a impressão que êste se processa em saltos mais característicos do que entre os civilizados do sul do país.

A menina deve habituar-se ao trabalho e, à escola de sua mãe, aprenderá as várias habilidades que a farão, um dia, boa mãe de família. Os meninos correrão soltos pela mata procurando frutas, vagarão pelos rios entretidos a nadar ou a pescar, exercitando-se em flechar peixes ou aves, e assim se habilitarão para a subsistência da

(3) Atualmente duas ou três vêzes por ano os índios dos diversos povoados não raro com vários dias de canoa, deslocam-se para as aldeias das Missões Salesianas, a fim de aí assistirem às grandes solenidades religiosas (Natal, Páscoa, etc.). Passam dias e semanas alegres em contacto com a civilização, instruindo-se nas verdades religiosas e divertindo-se como se fôssem meninos de colégio, com brinquedos coletivos. Procissões, cantos, projeções luminosas, representações teatrais, até as comidas, doces, presentes que recebem nessas ocasiões, tudo corresponde à sua psicologia e lhes torna gratas e indispensáveis essas festas.

família. Nos sports, nos trabalhos tradicionais, adquirirão ao lado do pai aquela habilidade que fará dêle um grande canoeiro ou um perito ceteiro.

Crianças de ambos sexos vão tomando consciência de si, como membros da tribo, de que aprenderão a orgulhar-se. Anelarão sôfregamente tornar-se membro integrado dentro da sua vida e das suas tradições, isto é, sonham com a *iniciação*.

Desenvolvendo-se-lhes os instintos, compreendem que lhes cabe perpetuar a existência do grupo, e aspiram ao matrimônio. Os costumes nacionais lhes indicam os meios de realizá-lo; não lhes faltará nesse passo a intervenção e auxílio do pai.

Experimentou, naturalmete, até agora o amor e a atenção dos pais e a camaradagem dos coetâneos. Agora liga-se a uma companheira para a vida inteira. Desconhecida, talvez, e estrangeira, mas seus cuidados, seu espírito de trabalho, a longa convivência, vicissitudes, alegrias e tristezas condivididas, tudo acaba por uniformizar os ânimos dos esposos, ligados especialmente pelo vínculo do amor aos filhos comuns. Em condições mais difíceis, porque obrigada a abandonar a casa paterna e a seguir para outra nação como esposa, a mulher sentir-se-á ainda vivamente ligada à tribo de origem, como a nova malôca na qual é esposa e mãe.

Com os anos se enrijecem os laços que prendem o índio ao grupo no qual nasceu, que o educou, que lhe deu assistência e amparo, para o qual também trabalhou alegremente nas empresas coletivas. Grupo que lhe proporcionou alegrias frequentes com suas festas tradicionais, e, com suas lendas misteriosas, deu satisfação às suas aspirações íntimas para algo que êle não compreende, mas palpita existir além-tumba.

O velho índio tornar-se-á continuador zeloso das tradições ancestrais, e ver-se-á rodeado dos jovens que ouvirão com delícia (4) as suas palavras descrevendo os tempos antigos, as suas proezas a vida e a história da malôca do povoado ou da tribo. E, com o respeito de geração nova, êle presidirá os nascimentos, com a fumaça do seu cigarro afastando da tribo que renasce nas crianças, as desgraças e as doenças; instruirá os jovens nos deveres e mistérios da vida do grupo, será figura marcante nas danças sagradas.

Com a idade quebram-se as suas rijas fibras e sobrevem a velhice com seu cortejo de tristezas, mais acentuadas para o índio que

---

(4) A Irmã Diretora de um dos colégios Missionários revelava-nos com qual surpreendente atenção as suas jovens alunas bebiam as palavras de alguma velha índia, quando aparecia no colégio, sendo logo envolvida, pelas colegiais.

4 Silva SQ19 Tucano

para os civilizados. Torna-se inútil ao grupo e de pêso à família. Recolhe-se, então a um canto escuro da maloca, deitado em sua rede, fraca sem fôrça para levantar-se e sentar-se em um banquinho. Ali, no silêncio, tomará sua refeição e passará longas horas, alheio à alegria barulhenta da maloca que talvez estue de vida nas orgias dos Poose's.

Um único companheiro, que jamais o abandonou, desde que viu a luz da vida, estará ainda a seu lado, dando-lhe calor e conforto nos membros que se vão esfriando, é o fogo que arde próximo da sua rede.

Quando as fôrças lhe não bastare mpara tomar por si o seu alimento, esquecido, abandonado sem que alguém dêle se ocupe, definhará à míngua, resignado, sem uma palavra de queixa, sem um gemido de dor até que a morte lhe venha abrir as portas misteriosas do além túmulo, onde defrontará com Wãx-ti, a grande Idéia, o grande Espírito, em quem êle sempre creu, a quem respeitou e temeu e procurou propiciar, como lhe ensinaram os seus antepassados.

Quando se derem conta do desenlace manso e recolhido, a maloca se alvoroçará no pranto clamoroso da nação no membro que acaba de finar.

Não está, porém, completo o ciclo da vida indígena. Todos dos sinos do Cabari, estão hoje em dia em relação direta ou indireta com a «Civilização de Cristo». Os pais, sob impulso do amor paterno, querem fazer do seu filho um civilizado, filho do Brasil e da Igreja. No íntimo de cada jovem acende-se êste fogo sagrado e por êsse motivo matricula-se nos colégios católicos. Aí passam longos e alguns anos, sem dissociar-se, porém, da sua nação. E voltam entre os seus «irmãos» com a mente mais esclarecida, um confôrto material maior, uma crença no Deus Criador do céu e da terra, Senhor, Juiz e Pai, e uma esperança de uma velhice menos triste, alentada pelas esperanças de uma vida futura feliz e sem têrmo.

E os anciãos, a quem não foi proporcionado tal ensejo, terão, talvez, uma assistência nos hospitais que a caridade de Jesus Cristo levantou em cada centro Missionário e os carinhos maternos de uma Religiosa que lhe procura minorar as dores físicas e confortar a alma. E sobretudo terão a esperança da assistência de um Missionário que nos últimos momentos da vida, mediante a eficácia infinita dos Sacramentos, o faça filho de Deus, enriqueça a sua alma com a graça e lhe abra as portas da bem-aventurança eterna.

# ÍNDICE

*Capítulo I.* O HABITAT ..... 9

*Capítulo II* AS TRIBOS DO UAUPÉS NO PERÍODO HISTÓRICO 15

1. Dados da História dos Rios Negro e Uaupés ..... 15
2. Os primeiros Relatórios ..... 20
3. Informes Etnográficos do século 18 ..... 21
4. Lugares do Rio Negro no sec. 18 (com indicação das Tribos) ..... 24
5. Dificuldades de identificação das Tribos ..... 25
6. As Tribos do Uaupés e sua localização ..... 28
   a) Listas do século 18 ..... 28
   b) Listas do século 19 ..... 39

*Capítulo III* MALOCAS E POVOADOS ..... 57

1. Do rio Uaupés ..... 58
2. Do rio Tiquié ..... 61
3. Do rio Papuri ..... 63
4. Observações ..... 65

*Capítulo IV.* DISTINÇÃO E CLASSIFICAÇÃO ..... 69

1. Distinção ..... 69
   a) Pelo elemento somático: (1) tipo Tukano; (2) tipo Pirá-tapuya; (3) tipo Taryana; (4) tipo Maku; (5) observação geral ..... 70
   b) Pelos elementos culturais (trabalho e indústria ..... 77
2. Classificação (a gente, o hábitat e as divisões) ..... 78
   a) Daxseá ou Tukano ..... 81
   b) Bará ou Barasána ..... 87
   c) Bá-re-masá ou Têmyú-tapuya (gente comida) ..... 89
   d) Doxká-poará ou Tuyuka (gente greda) ..... 89
   e) Eúúrya ou Erúlya ..... 91
   f) Emôá-masá ou Wariwa-tapuya (gente guariba) ..... 91
   g) Hanéra ou Panenôá ..... 92
   h) Ide-masá ou Aó-nirá, Makuná, Yi-tapuya (gente água) ..... 93
   i) Ihwana ou Yona ..... 95
   j) Koneá ou Arapasú (gente pica-pau) ..... 96
   k) Kótirya ou Wanána ..... 97
   l) Mõxtá ou Karapanã-tapuya (gente mosquito) ..... 99
   m) Neenoá ou Miriti-tapuya (gente buriti) ..... 101
   n) Oá-mahá ou Mikura-tapuya (gente gambá) ..... 102
   o) Pábca-maxsá ou Tatu-tapuya (gente tatu) ..... 102
   p) Pamiwa ou Kubewána ..... 103
   q) Roéra-masá ou Taraira-tapuya (gente traíra) ..... 108
   r) Surirá ou Suryana ..... 109
   s) Tsêna ..... 110
   t) Yebá-masá ..... 111
   u) Wahyára, Waiana ou Yuriti-tapuya (gente pomba juriti) ..... 112
   v) Wai-khana ou Pirá-tapuya (gente peixe) ..... 113

w) Winá ou Desana ..... 115
x) Kumãdene ou Ipeka-tapuya (gente pato-dágua) ... 117
y) Talyaseri ou Taryãna ..... 118
3 Nomes das Tribos do Uaupés nas diversas línguas indígenas da região ..... 134
*Capítulo V.* OBSERVAÇÕES SÔBRE A PSICOLOGIA DO ÍNDIO ..... 137
*Capítulo VI.* CULTURA MATERIAL ..... 171
1. Habilitação — a maloca ..... 171
2. Alfaia de casa e objetos de uso ..... 179
a) Cerâmica: (1) Potes e panelas; (2) Fogão; (3) Forno ..... 179
b) Utensílios de madeira: (1) Canoa; (2) Remo; (3) Raio; (4) Banco; (5) Cigarreira; (6) Cocho de caxiri; (7) Pilões; ..... 183
c) Fiação e tecidos: (1) Preparo do fio; (2) Redes de dormir («de 30 fios», «puçá», «batida»); (3) Redes de pescar (puçá); (4) Outros tecidos ..... 189
d) Cestaria e trançados: (1) Tipiti; (2) Peneiras; (3) Cestos (aturá, paneiro); (4) Abanador; (5) Aljava; (6) Suporte de panela; (7) Caixa de enfeites; (8) Outros trançados. ..... 194
e) Armas: (1) Armas como adornos de dança; (2) Arco; (3) Zarabatana; (4) Flechas; (5) O Curare 198
f) Outros objetos de uso doméstico: (1) Tripé e moquem; (2) Aparelhagem do ipadú e do caapi; (3) Maracá; (4) Cuias e cabaças; (5) outros objetos de utilidade; (6) Brinquedos e jogos ..... 203
3 Vestes e Calçados ..... 208
a) Vestes — b) Calçados ..... 208
4 Alimentação ..... 211
a) Mandioca: (1) Farinha; (2) Tapioca; (3) Manicuera e tucupim; (4) Beijú e outros alimentos similares; (5) Mingau; (6) Arumbé; (7) Chibé ..... 211
b) Milho ..... 215
c) Peixe e iguarias de peixe: (1) Peixe; (2) Farinha de peixe ou piracuí; (3) quinhapira e maniçoba; (4) Os peixes ..... 216
d) Carnes e animais comestíveis ..... 218
e) Tubérculos e verduras ..... 219
f) Insectos: (1) Termitas e formigas; (2) Larvas; (3) Cabas (vespas); (4) Coleópteros e outros alimentos animais ..... 220
g) Frutas ..... 223
h) Bebidas ..... 224
i) Excitantes e entorpecentes: (1) Tabaco; (2) Pimenta; (3) kaxpi; (4) ipadú ..... 227
j) Conclusão ..... 233
5 Caça e Pesca ..... 234
a) Pesca: ..... 234
(1) Com veneno: (a) Timbó; (b) Wai-nimá; doénimá; (c) chu-pu ..... 234

(2) Com armadilha: (a) Bùxkoá-wõ ou matapi; (b) Wai-ro ou cacuri; (c) Imi-nõ; (c) Ewá ou cajá ..... 236
(3) Com flecha e redes: (a) Com flecha; (b) Com redes ..... 239
(4) Com anzol, azagaia e arpão: (a) encandeamento; (b) iscas; (c) anzóis; (d) espinhel ..... 240
b) Caça: ..... 242
(1) Caçada de perseguição ..... 242
(2) Caçada de tocaia ..... 243
(3) Caçada de mundéu ..... 243
(4) Caçada de armadilha ..... 244
(5) Caçada de canoa ..... 244
6. Agricultura ..... 245
7. Indústria e Comércio ..... 248
8. Vias de comunicação ..... 251
*Capítulo VII.* CULTURA DO ESPÍRITO ..... 253
1. Escritura ..... 254
2. Ciências ..... 256
a) Geografia — Topografia ..... 256
b) Matemática ..... 257
c) Cosmografia e Astronomia: (1) O mundo; (2) Constelações; (3) O Tempo e as Estações; (4) Horas do dia — Cômputo das horas ..... 262
d) Ciências naturais: (1) Idéias sôbre a natureza; (2) Fisiologia e anatomia Humanas; (3) Classificação dos animais ..... 263
e) Medicina ..... 267
(1) Origem das doenças ..... 267
(2) O Xamã: (a) Seus poderes; (b) Meios de cura; (c) Algumas plantas da terapêutica xamanística; (d) Seus métodos de cura; (e) Suas qualidades psíquicas; (f) Preparação do xamã; (g) Sua influência; (h) Sua posição; (i) Seu papel social; (j) Conseqüências dessa crença; (k) O xamã convicto ou impostor? ..... 269
(3) O Komã, um «Iniciado» ..... 284
(4) Doenças e curas: (a) Verminose; (b) Gripes e pneumonias; (c) Anemia; (d) Framboesia tropicalis (bouba); (e) Impaludismo; (f) Tuberculose pulmonar e laríngea; (g) Mal-de-olhos; (h) Disenteria; (i) Doenças venéreas; (j) Ataques epilépticos ..... 285
(5) Remédios caseiros ..... 288
(6) Higiene: (a) Na maloca; (b) Na pessoa; (c) Na alimentação; (d) Nos atos ..... 290
3. As Artes ..... 292
a) Tecidos ..... 292
b) Desenhos: (1) murais; (2) sôbre o corpo; (3) sôbre os objetos ..... 293
c) Música: (1) Senso musical; (2) Canções (a. religiosas, b. profanas, c. do Xamã); (3) Instrumentos mu-

4: Silva SQ19 Tucano

sicais (a. idiófonos, b. membranófonos, c. aerófonos); (4) Motivos musicais ..... 299
d) Plumagem e adornos: ..... 310
(1) Femininos ..... 311
(2) Masculinos ..... 312
4 Religião ..... 316
a) Dificuldades ..... 316
b) Influências cristãs — Os «Cristos» indígenas ..... 318
c) Conceito de Religião ..... 321
d) Pontos doutrinais: ..... 323
(1) Conceito de um Ente Supremo ..... 323
(2) Imortalidade da alma ..... 325
(3) Princípios morais ..... 327
(4) Prêmio e castigo ..... 328
(5) Existência dos Espíritos: (a) Wâx-ti ou Jurupari; (b) Boraro ou Curupira; (c) Bisiu ou Jurupari; (d) Nâxkâ Wâx-ti; (e) O'môâro Wâx-ti ..... 328
e) Práticas do culto ..... 331
(1) Culto local, litobolia? ..... 331
(2) Festas religiosas, com oferta das primícias .. 336
(a) Poosé (dabacuri) sem os instrumentos misteriosos: ..... 341
1) Procissão e banquete rituais ..... 341
2) Preparação para as danças ..... 343
3) Execução das danças ..... 346
4) Distribuição do *kaxpi* ..... 348
5) Comemorações lendárias — O rito do Cigarro ..... 350
6) Brincadeiras ..... 351
(b) Poosé com os instrumentos misteriosos. A flagelação ..... 353
(c) Conclusão: que pensar de Wâx-ti? .... 356
f) Suas regras de conduta — Práticas mágicas ..... 360
(1) Superstições e crenças mágicas ..... 360
(2) Práticas mágicas: (a) Lugares; (b) Cousas; (c) Animais; (d) Pessoas ..... 362
g) O culto dos mortos ..... 368
(1) O chôro-elegia ..... 368
(2) O enterro ..... 372
(3) Libação e festa funebre ..... 374
h) Canibalismo: ..... 371
(1) Econômico ..... 375
(2) Ritual ..... 376
5 Moralidade ..... 378
a) Conceito de procriação e matrimônio ..... 378
b) Conceito de pudor ..... 382
c) Incontinência extramatrimonial ..... 384
d) Educação sexual ..... 389
e) Conclusão ..... 390
6. Festas e Desportos ..... 391
a) Festas ou Caxiris ..... 391
(1) Caxiri ..... 391

(2) O Bayá ..... 391
(3) Variedades de danças ..... 392
(4) As danças ..... 396
(5) Danças-canções Wanâna ..... 401
(6) Canções das mulheres ..... 403
b) Desportos ..... 403

*Capítulo VIII* ORGANIZAÇÃO SOCIAL ..... 407

1 O Grupo Familiar ..... 407
a) O Matrimônio ..... 408
(1) As leis do matrimônio ..... 408
(2) O rapto simbólico ..... 414
(3) O ato do matrimônio ..... 411
(4) Estabilidade ..... 415
(5) Relações entre os esposos ..... 416
(6) Poligamia e poliandria ..... 417

BIBLIOGRAFIA ... 487

Para a conveniente leitura das palavras da língua Tukáno convém ter presente a seguinte convenção:

1º *Vogais* — *a, e, i, o, u* — abertas como em Português e Latim
*ä* — como o *a* inglês em *word*
*ö, ü* — respectivamente como os correspondentes em alemão, isto é, mais ou menos como *eu* francês de *peu*, e *u* de *lune*
*y, ü* — respectivamente como *i* e *u* breves

2º *Consoantes* — como as correspondentes Latinas ou Portuguesas, com as seguintes exceções:
*x* — aspirada velar, diante de consoante
*h* — fricativa glotal surda, diante de vogal
*bh, kh, gh, ph, th,* — ao som ordinário dessas consoantes segue-se uma leve aspiração

3º *Símbolos* — (') é o *glottal stop* (interrupção da prolação)
(-) hífen, separação dos elementos na palavra composta
(~) indica o som nasal

I wish to thank the Social Science Research Council of Columbia 122
University for financing my field work in Colombia. I am indebted
to the Colombian government under the administration of Dr.
Eduardo Santos for extending every courtesy and aid. The adminis-
tration of the *Comisaria del Vaupés* was most generous with its hos-
pitality, counsel, and aid. I owe a great deal to the distinguished 000
Colombian educator, Dr. Augustin Nieto Caballero, for sound and
friendly advice. To my teachers, Franz Boas and Ruth Fulton Bene-
dict, I owe more than I can express in words. Finally, I can never
thank enough the subjects of this study for their friendship, their
patience, and their tact.

For encouragement in writing this work I wish to thank Dr. Alfred 128
Métraux. I am grateful to Professor Oscar Lewis of the University
of Illinois for a critical evaluation of the manuscript, as well as to
Dr. Donald Lathrap, also of the University of Illinois, for helpful
suggestions.

# *Introduction*

No region of the South American tropical forest can claim greater anthropological interest than any other. The entire area of the two great river basins, the Orinoco and the Amazon, is still an anthropological terra incognita. Of its hundreds of tribes most are known only by name, and where more than the name is known it is not the full life but a scattering of information about assorted customs and a handful of word lists that is most often available. The region is an ethnographic swamp where few features rise clearly and vividly above the surface. Whoever undertakes to survey the data confronts a morass of customs dispersed over the vastness of the Amazon Basin with no easily discernible patterns. A few major studies are landmarks and serve as guides to social systems and to cultural patterns. Yet many of these landmark studies are but the surveys of explorers and museum collectors, indefatigable and observant, but understandably preoccupied with the survey in space more than with the study in depth. More recent studies have greater depth, revealing more fully the structure of social life. But of such studies there are few. So slight is our knowledge of this, one of the great natural areas of primitive man, that both kinds of study, the survey of traits and the intensive study of a society, are eminently justifiable. The survey plots the broad features and their variations; the intensive study provides the patterns of tribal life.

One of the astonishing and saddening oversights of twentieth-century anthropological research has been its still-continuing neglect

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBE

121 of the lowland South American tropical forest and savannah. Before too long we shall recognize this oversight as tragic, because Indian life in the entire area is rapidly disappearing. When it is gone what will anthropology have lost? It will have lost patterns of cultural life, forms of religious life, forms of social structure, and profiles of personality types, not to mention knowledge of countless customs that have no precise counterpart elsewhere in the primitive world. From what we now know, the Amazon Basin, taken as a whole, contains an extraordinarily wide range of variations on every human cultural institution. It represents countless combinations of a common pool of similar cultural traits spread over its area of over 2,500,000 square miles.

The region of the two river basins, really one great Amazon Basin, provides a common lowland setting within which to study human and cultural variability and potentiality. Here we find a common economic adaptation of root horticulture with its strong emphasis upon bitter manioc (*Manihot utilissima*) as a source of carbohydrate, supplemented by fish protein. For more refined ecological analysis the region also offers the distinction between tropical forest and open savannah as well as gradations in form of forest and in elevation of land. Throughout the region a common economic base supports a variety of social and cultural systems with the exception of states or protostates. For the student of social structure the great attraction of the region is its variety of "smaller" structures. Relative simplicity of social structure cannot be explained away simply as a tropical forest adaptation. The West African states and the example of lowland Maya indicate that a tropical forest environment can support complex social and cultural systems. Even more pointedly, the archeology of the mouth of the Amazon suggests some "high" culture phase in the region even if only relatively short-lived (Meggers and Evans, 1957). The Amazon Basin may, indeed, have supported far greater populations in favored areas than is indicated by present Indian populations. Orellana, the first to descend the Amazon from the headwaters of the Napo River in Peru, was impressed by the unbroken line of houses along the river. He noted villages of 500 houses and unbroken lines of dwellings up to five leagues (15 miles) long.[1]

[1] Friar Carvajal, who accompanied Orellana, reported: ". . . the territory occupied by the subjects of this great overlord named Machiparo, which in the opinion of all extended for more than eighty leagues . . . there was not from village to village (in most cases) a crossbow shot and the one which was farthest (removed from the next) was not half a league away, and there was one settlement that stretched for five leagues without there intervening any space from house to house" (Medina, 1934, p. 198).

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

Thus, if we are to answer the evolutionary question of how complex social systems develop we shall have to turn to a more thorough study of social structures. In this respect, the Cubeo, who inhabit the northwest corner of the Amazon Basin, offer an example of a social structure with "advanced" features of integration and hierarchy that have, however, never quite taken hold. 121 [131]

Tropical forest life is not so much sylvan as it is riverine. The rivers facilitate the ceaseless flow of peoples, of splinters of communities, and of tribes along an intricate water network that binds together a virtual subcontinent. Thus, in the Amazon Basin one finds cultural traits and languages far from their ancestral sources. Not only are tropical forest cultures composite, but occasionally the tribes themselves are made up of ethnically and linguistically distinct segments. Along the river routes there are few barriers. Tribes that have adapted themselves to one corner of the basin have little difficulty in adjusting to a new location a thousand miles or more away, for even where ecologies differ the changes are neither abrupt nor drastic. Forest peoples moving on to the plains along the Orinoco Basin, for example, still have the familiar river and sylvan pattern along the river edges. Climate, vegetation, and fauna are everywhere about the same. The ease of movement and the similarity of environment account for the deposition of a common groundwork upon which all Amazon cultures are built.

One of the features of the common groundwork that defines the tropical forest as a major culture area includes slash-burn horticulture with bitter manioc as the principal but by no means the only crop. Bitter manioc offers a high yield per acre but it exhausts the soil after three to five years and demands, therefore, some kind of community circulation in which people move on, or recirculate within, a fixed zone, until new forest growth has replenished the soil. Bitter manioc, a perennial, grows readily in the Amazon Basin, but it demands a complex and time-consuming procedure for removing its poisonous prussic acid content. Manioc cultivation is almost everywhere women's work. Thus it sets a common pattern of sexual division of labor as well as a basic technology. Along the margins of the Andes, maize supplants or supplements manioc as the food crop and sets its own patterns. Maize, for example, may be regarded as a masculine crop, in which case its cultivation is more readily ritualized. But whether maize or manioc is the staple of plant diet, the tropical forest tribes, with the exception of many Ge-speaking peoples, are given over to chicha, a beer of manioc, maize, or other carbohydrate plants. Almost

5: Goldman. E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

121 everywhere narcotics and excitants, stimulants and vision-producing drugs are valued for their ritual effects.

No common psychological pattern, to be sure, encompasses the area. Yet the Cubeo ritual pattern, with its exaltation of intoxication and of frenzied emotional experience, is far from uncommon in the tropical forest. In religion the Amazon Basin is a region of the shaman and of minor cults rather than of priests and of the worship of important deities. Tropical forest religion is small in scale, a feature that is parallel to and assuredly related to the decentralization of social life.

Compared with the Andes, tropical forest communities by and large are small. In many regions community size is unduly small because of severe population decline since white contact. In the Northwest Amazon, the subarea of the Cubeo, the multifamily single house is the common residence. The sense of family and of kinship are very strong, making of religion and ritual largely domestic affairs, with cults of the dead and initiation rites of outstanding importance. Considering the importance of crops, horticultural ritual is strikingly undeveloped. Here we can point to a fruitful field for the study of the commonly accepted functionalist doctrine that magic and religious ritual tend to surround areas of uncertainty such as farming. [241] In the case of the Cubeo one can state with confidence that the lack [796] of rite in farming is related to the strongly secular position of the women as horticulturists and not to the lack of hazard in farming. [462] Manioc cultivation is no less uncertain than yam cultivation in the Trobriand Islands. Uncertainty, after all, is not necessarily an objective condition. Existence is uncertain for all peoples and each society has the choice of underscoring those areas of life where it believes the fears and uncertainties to lie. Since the tropical forest is one of the major world areas of the *couvade*, the rites by which the father plays a part in parturition, it might seem as though it were the fate of the newborn infant more than the fate of the crops that is at the heart of their concern.

There is the fundamental question of the relation of the tropical forest to the "high" cultures of South and of Central America. On this there is still not much to say. Yet the problem of relationship cannot be ignored. One cannot divide lowland and highland into totally distinct and unrelated worlds. The archeology of the lower Amazon calls attention to cultural developments either related to or parallel to the marginal areas of the Andes. Highland and lowland share many traits such as maize, chicha, coca, textiles, and complex basketry. The jaguar "cult" of the Northwest Amazon may well be

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

part of the Central American and Andean jaguar distribution; perhaps the Cubeo ranked clans and ancestral cult are also part of the Andean picture. However, where there is a cultural relationship it is probable that it moves in either direction. The lowlands took from the Andes, it is likely that they gave as well. Perhaps a close study of social conditions in the tropical forest could shed specific light on the spectacular historical developments in the Andes. The way in which the Cubeo maloca, the multifamily residence, tends to become a sib ceremonial center for those sib members who have broken away from it illustrates, for example, a possible process of ceremonial center formation.

Questions of culture history are inevitably to the fore when one compares the tropical forest with the Andes. But even as a separate entity the tropical forest area commands culture historical interest. Cubeo social structure, for example, suggests some of the ways in which small social units such as extended and joint families and lineages grow into and combine to form more complex and more highly integrated social systems. Segments of one tribe attach themselves as entities to other tribes adopting a new language. Federations of segments are formed by various combinations of adoption, adhesion, and fission, these bind themselves together by ceremonial ties and not by ordinary political means of suprachieftainship. Other processes are at work elsewhere in the region. Thus it is not difficult to imagine that detailed comparative studies of tropical forest social structures could provide a rich foundation for the reconstruction of modes of social evolution, within a fixed range of social integration. As native Africa is a natural laboratory for the study of nascent states, the South American tropical forest as a major culture area is a natural laboratory for the study of variations in a small community, and lineage and clan organization.

In the foregoing discussion my intent was to provide the reader with a broad problem setting in which the Cubeo are viewed generally as a tropical forest culture. Since tropical forest anthropology is not too widely known this seemed a useful thing to do. However, the Cubeo are more specifically a part of the Northwest Amazon subculture area. The Northwest Amazon is designated as a subarea of the tropical forest in the *Handbook of South American Indians*. Not a sharply delineated area, it includes several of the major languages of lowland South America: Arawakan, Cariban, Tucanoan, Witotoan, and Macú. Of these language groups, Tucanoan (the language of the Cubeo), Witotoan, and Macú are restricted to the Northwest Amazon and were until recently listed as unclassified languages

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

121 (Beuchat and Rivet, 1912; Mason, 1950). A new classification now
197 places Macú with Tucanoan in a Macro-Tucanoan subfamily, and both, together with Arawakan, in a larger Andean-Equatorial family. In this new classification Witotoan is, together with Cariban, part of a Macro-Cariban subfamily under a larger Ge-Pano-Cariban family (Greenberg, 1960). Culturally, the Tucanoans fall into two groups, an eastern one to which the Cubeo belong and a western one about which we know relatively little. Information on the Arawakan and Cariban tribes in the area is somewhat fuller, but still lacking in necessary detail on social structure and cultural patterns. The Witotoans are somewhat better known through the work of Whiffen and of Preuss, while the Tucuna, who speak an isolated tongue, have been professionally described by Nimuendajú. The present volume on the
121 Cubeo attempts a more comprehensive account of the social life and social structure of a Northwest Amazon tribe. Thus the characterization of the area based upon criteria other than those of material culture rests mainly upon our knowledge of the Witotoans, the Tucuna, and the writer's field work among the Cubeo. The presence of well-developed patrilineal sibs among the Cubeo, Witotoans, and Tucuna, elaborate initiation rites, secret rites involving sacred trumpets, the use of bark cloth masks in mourning ceremonies, and the single large house constituting the community are some of the traits that set this area apart. All of these traits, it should be said, occur outside the area as well but not in quite the same combination.

By cultural criteria the Achagua also belong in the Northwest Amazon area. This large group of Arawakan-speaking peoples, occupying an extensive area on the Colombian-Venezuelan border along the Meta, Vichada, Guaviare, and Orinoco rivers, bears some striking resemblances to the Cubeo (Steward and Faron, 1959, p. 356 ff.). These Arawakans share such traits as the exogamic patrilineal sibs, the communal dwellings, and the secret male cult of the Tucanoans. Economy and material culture are also similar, although in the tropical forest such similarities are of no great significance since they seem almost to blanket the region. Even so, on the score of subsistence the Achagua have the distinctive maize and bean complex of the highlands while the Tucanoans and their Arawakan neighbors have maize but not beans. Since patrilineal sibs are not common in the tropical forest, the Northwest area stands out strikingly in this respect. Prior to 1950 patrilineal sibs had been identified among the
[614] Witotoans only (Whiffen, 1915). The writer reported them for the Cubeo of the Cuduiari on the basis of his field work (Goldman, 1948). Nimuendajú, in a report published in 1950, independently

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CLEFO

Nimuendajú, in a report published in 1950, independently identified the social organizations of the Vaupés River as patrilineal sibs, and more recently a young Colombian anthropologist, Marcos Fulop (1954), described a patrilineal sib organization with a phratric grouping among the Tucano Indians. Work on the patrilineal Yagua and the Tucuna was also done after 1940. Before 1940 Kirchoff (1931), using the then best available information, had incorrectly characterized the Northwest Amazon region as based upon bilateral kin-groups that favored patrilocal residence. [121] [614] [615]

If we are to conceive of the Northwest Amazon as a geographic region then the Macú must also be included. Macú is a catchall name for very simple nonhorticultural peoples whose center seems to be the Rio Negro but who have been moving westward into the Vaupés-Caquetá area (Métraux, 1948). There they have either been assimilated in the Tucanoan- and Arawakan-speaking tribes or have lived among these more powerful tribes as servants or "slaves" or in some other symbiotic relationship. The *Bahúkiwa* sibs of the Cubeo acknowledged Macú ancestry and may well have been, as Koch-Grünberg has claimed, one of the assimilated Macú groups. The Macú are shorter in stature than the other Indians in the region. They lack fixed residences, the hammock, and the canoe. If the Macú languages are truly, as Greenberg (1960) has suggested, Macro-Tucanoan, they are not an altogether alien group among their more culturally advanced neighbors. The Macú, however, have not been studied at all so that we do not know whether they are to be considered a remnant of very early nonhorticulturists or as uprooted people who had given up farming. The tropical forest has a number of examples of the latter case. *Bahúkiwa* traditions, on the other hand, refer to a prehorticultural period. [614] [174]

Since our knowledge of the tribes of the entire Northwest Amazon drainage, including the basin of the Rio Negro, is so slight, too much importance cannot be attached to "Northwest Amazon" as a subculture type. However, the entire Northwest Amazon region, which includes an area somewhat greater than the cultural area designated in the *Handbook of South American Indians* (Steward, 1948), has unusual potential interest, potential in the sense that the ethnological problems it poses can become real only after further field work has clarified the state of cultural patterns and cultural institutions there. This northwest quadrant of the Amazon Basin is open to the entire lower Amazon and has, at the same time, contact with the eastern margins of Andean cultures as well as with the southern margins of the Circum-Caribbean cultures. That is to say, on its northern and western flanks it is subject to influences from more highly developed

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

121 societies. In reconstructing tropical forest culture history, note must be taken of the extraordinary ease of cultural transfers over the entire area. For this reason alone knowledge of total cultural systems seems essential. As matters stand now, much reconstruction must be based upon the very unreliable foundation of trait comparisons. What has [177] been of special interest in my study of the Cubeo has been the way in which some widespread cultural traits, particularly masked dances, harvest rites, and sacred trumpets, have been taken up and fitted into distinctive cultural patterns with a focus in an ancestral cult.

133 The Northwest Amazon region is bounded on the south by the Amazon, from where it is joined by the Rio Negro eastward to where the Marañón issues from the Andes. The Guaviare River is its northern boundary, the Andean cordillera bounds it in the west, and the Rio Negro in the east. The principal rivers of the region are the Caquetá, Apaporis, Tiquié, Papurý, Isana, Vaupés (known in Brazil as the Caiarý), Cuduiari, Querari, Ajari, Tie, and Guainía. All drain into the Amazon. Ecologically, the Northwest Amazon is sharply differentiated only from the neighboring Andean region to the west and to a lesser degree from the open prairie or llanos on its northern [137] side. Eastward it fades into the flatter and lower-lying forests of the Amazon. Its southern margin is fixed only by an arbitrary river boundary. It is a densely wooded region of tall trees closely packed and interlaced with vines and lianas. At the river edges the forest growth is lower and more brushlike. It is also an elevated region whose streams are punctuated by hazardous cataracts. On the Vaupés, between Yuruparí and the Rio Negro, Dr. Hamilton Rice (1910) counted 90 major cataracts and 60 small ones. The cataracts (*cachoeiras*) are for the Indians focal points of residence. Traditional sites, they often mark tribal and sib boundaries. Every cataract has its petroglyphs that depict mythical figures still known to the Indians. In some areas, as I have observed, the residents of the *cachoeiras* freshen the petroglyphs from time to time with deepening incisions. The rapids are more of a navigational hazard to the European traveler than to the Indians, who are expert canoemen and whose light craft [502] is easily portaged. Dr. Rice, who knew a good deal about the Amazon, [501] declared the Cubeo to be the most expert canoemen on the river. I can also testify to their coolness and skill in navigating their small dugout canoes, that have only an inch or two of freeboard, through the twisting boulder-strewn channel of a thundering rapids.

The land slopes abruptly eastward. In its western part the area is often a tumble of ravine-cut hills, exposed rock, and swamp. The Vaupés flows past high, open, uninhabited mesas. Scattered hills of

CUBEO

133 igneous rock dot the country. These hills seem to have little interest for the Cubeo, but the mesas with their sandstone caves are held to be the dwellings of dangerous demons.

136 Fishes are generally abundant and are represented by hundreds of
(251) species. The favorite of all tribes is the aracú, which the Indians commonly smoke to preserve. The piranha and the river anaconda are the constant river hazards. The piranha seem always to be present, as can be proved by throwing animal entrails into the river. The waste is hit by the fish almost instantly and devoured within minutes. The Indians, however, do not dread either the anaconda or the piranha, but when preparing to bathe they circumspectly drum the surface of the water with their cupped hands to drive these creatures off. The river anaconda reaches a length of over 20 feet and is regarded as dangerous only in the vicinity of submerged trees, which it uses for leverage in seizing a victim and pulling him under. However, children who play constantly in such waters are aware of the hazard but are not afraid, nor are their elders anxious for them. I heard of no specific cases of injury from either piranha or anaconda. The man-eating cayman of the sluggish llanos rivers is absent here and the smaller cayman is a minor hazard.

The Northwest Amazon has its share of tropical forest game, although, as Lord Wallace observed (1870, p. 446), the Amazon is a mammal-poor region. The jaguar is feared in its supernatural aspect only. The peccary, until recently hunted by a group of men armed with spears, is acknowledged to be dangerous and aggressive when challenged. The tapir will also charge when annoyed, but neither animal fills the Indian with dread. For the rest, the forest game is small and shy. It consists of the small red deer, the rodents such as paca, capybara, and agouti, the raccoon-like coati, monkeys, and armadillo. River otters are common but are not molested. When they surround a canoe with their excited barking the Indians greet them with a discreet silence and wait for them to submerge again. Bird life is rich but of small economic importance.

All visitors to the region have described vividly their unpleasant encounters with its insect life. The Indians are made equally miserable by the swarms of pium gnats and sand flies. Careless scratching
(164) of an insect bite produces dangerous ulcerations. I have seen Indians who had lost several square feet of skin from such spreading ulcers. Chigger (*neguas*) hygiene is a preoccupation of all residents of the Northwest Amazon. The Indians are expert in expelling the spherical sacs with a deft pressure from a stick or knife blade. In the forest the sting of the red ant bothers the naked Indians more than the clothed

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBFO

visitor. On the other hand, the leaf-cutter ant is a specialist on 136
clothing. I was once covered by a swarm of these ants while asleep. [114]
When I had carefully removed the last of them I was left with but a
leather belt and a few tatters of trousers and shirt.

The anopheles mosquito is generally absent in the Cuduiari region [114]
where I did my field work. On the whole, the health of the Cuduiari [101]
Indians is good. Carate (*puru*), a skin pigment disorder apparently 164
of pinoche origin, common everywhere else in the Northwest
Amazon, was far less in evidence on the Cuduiari. Children suffered [165]
from worms and other intestinal parasites but infant mortality was
not particularly high. There were no epidemics during my stay. The
recollections of the Indians about serious illness go back to the 1918
influenza epidemic that apparently ravaged the native populations in
the region. Women, in particular, suffered from the painful purulent
conjunctivitis, which they attributed to insect molestation in their 146
[illegible] gardens. The bloated abdomens of children whose diet is too
generous with carbohydrate and deficient in protein is a common
sight along the Vaupés, but is less evident on the Cuduiari, where 614
native life and diet is still almost intact. As for the C[illegible] itself,
the people at the mouth of the river, the higher ran[illegible] Tucano 142
subs, seemed generally more sturdy, vigorous, and aggressive than the
Indians who lived upstream.

Dr. Hamilton Rice, who explored the Vaupés in 1907–08, observed 142
that the most physically powerful Indians came from the Cuduiari.
He noted men who were six feet tall and over, strongly built with
thick arms and powerful torsos. Actually somatological variability
is considerable on the Cuduiari, ranging from marked mesomorphy
to moderate ectomorphy. But this observation of mine is not based on
measurements. Dr. Rice (1910) has published a physical description
of the Cubeo based upon anthropometric observations. I quote from
it:

> Their color is an olive brown corresponding to No. 4 of Broca's scale and seems invariable, a conclusion based on a comparison of the scale with many hundreds of subjects on parts of the cuticle least exposed to sun and pigmented decoration. The eye is dark, palpebral fissure narrow, not oblique, pointed at its external aspect, and the upper lid so heavy at times as to suggest the puffiness of oedema; but the eye by no means conforms invariably to so Mongolian a criterion, closely resembling the European eye in many other cases. The hair is black, lanky, coarse in the male, fine and glossy in the female. The faces are escutcheon shaped and hairless, the chins rounded and receding, noses from straight and busque to hooked and Chinese flat types, region of cheek bones flat, lower lips large and inclined to turn slightly downward. The ears are not large, lobes absent or slightly devel-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

142 oped heads of the brachycephalic type; though I have noticed cases of extreme dolichocephalic variations. Teeth are generally poor.

147 Dr. Rice also commented on the capacity of the Cubeo Indians for great exertion on a minimum of food and rest. I can corroborate this judgment. I accompanied Indians on canoe trips when we paddled for as long as 17 consecutive hours with little rest or nourishment other than a handful of manioc meal in water. There was usually no urgent necessity for such exertion or privation. The Indians cus-
[484] tomarily eat lightly when traveling, and if there is any chance of
[261] reaching home rather than camping out or imposing upon the hospitality of another sib they prefer to keep going. However, it was not unusual for strong young men to topple from their canoes in a dead faint upon reaching home. Revived by the river they scrambled
[157] ashore, secured the canoe, and entered the house with the appropriate vigorous air, effectively concealing their acute fatigue. It is in fact characteristic of the Cubeo to make light of their accomplishments and not to yield readily to physical weakness.

114 Ethnographically, the Northwest Amazon was first fully brought to light by Dr. Theodor Koch-Grünberg, ethnographer and museum collector. Koch-Grünberg's systematic survey of the region at the turn of the century covered all main tribes and their settlements along the principal rivers. He spent many weeks on the Cuduiari among the *Hehéneua* sibs of the Cubeo, and ascended the Cuduiari to the limits of its habitation (1909). His published reports are invaluable even though he never stayed long enough in one place to get a deep grasp of the culture. He was, however, an excellent observer and reported
114 fully on language, custom, and material culture. I did not read Koch-
127 Grünberg before going to the field so that my observations are totally independent. It is a source of satisfaction, therefore, that our observations agree closely on most details. Koch-Grünberg's information was deficient on social structure and ceremonial patterns. It is in these two respects that my study represents a carrying forward of the work he so ably began. I have drawn freely upon his published works to fill in gaps in my own information on the Cubeo and of course for the rich data on surrounding Tucanoan, Arawakan, and Cariban tribes.
114 His was the pioneering survey of the entire region, whereas mine is a relatively limited study of a single community. Koch-Grünberg died among the Indians of the Northwest Amazon in 1924, his ethnographic work prematurely cut off.

The first scientific observer to report on the Indians of the Vaupés was Alfred Russell Wallace (1870), who was there in 1853. While his interests were mainly those of the naturalist, he found Indian life to

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

be interesting and he recorded tribal distributions and physical conditions of life as well as many customs. It is to Wallace that we owe the first report on mortuary endocannibalism among the Cubeo. Curiously, this information has never been properly authenticated. Wallace learned about it at second hand, as did Koch-Grünberg many years later. I observed what I thought to be this custom, but I could not verify that the bones being prepared for imbibing with chicha were human. The annoyance of the Indians when I accidentally came upon them while they were reducing bones to meal and pouring it into the chicha at the conclusion of a mourning ceremony led me to suspect that the bones were human. In response to my questions, however, no Cubeo would confirm my conjectures.

Wallace (1870, p. 354) traveled up the Vaupés to the mouth of the Cuduiari River at the rapids of Uaracapurí, where he observed a community of several malocas. He did not enter the Cuduiarí, reporting only that to his knowledge no European had ever gone up that river. As for the Vaupés, this river, particularly in its Brazilian reaches, had in Wallace's time already become an important artery of European trade. Along the Isana River Wallace noted that the Indians were living in European-style dwellings. The Cuduiarí then had the reputation of a totally wild region. The Cubeo Indians seen by Wallace were still wearing large circular woolen plugs in their ears. By 1905, in the time of Koch-Grünberg, this form of male ornamentation had already been given up.

Curt Nimuendajú surveyed the Isana, Aiari, and Vaupés rivers in 1927. In his notes, published posthumously in 1950, it is revealed that he correctly identified Tucano and Cubeo descent groups as patrilineal clans. He did not, however, enter the Cuduiarí, and his information on that river, being secondhand, is not too reliable.

My own field work on the Cuduiarí began in September 1939 and continued through June 1940. (Goldman, 1948, is a preliminary report.) The Cuduiarí had the advantage of being relatively accessible and as yet almost completely unacculturated. I decided upon the Cuduiarí after a survey of the Cubeo communities along the Vaupés.

## CULTURE CHANGE

Cubeo culture has been subjected to acculturative influences from two sources, one from other Indian tribes and the other from European, Colombian, and Brazilian missionaries, settlers, traders, and latex extractors. Cultural interchange among Indian tribes in the Northwest Amazon region is, of course, an old and intricate process,

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

177 the details of which are as yet incompletely known. At one point or
[171] another Cubeo culture resembles virtually that of any other tropical forest tribe of the Amazon Basin. But to point this out is simply another way of calling attention to the common underlying character
[342] of all tropical forest cultures. More specifically, one is aware of the
[712] strong Tupian influences observable in such traits as the large com-
[567] munal house, a system of fortification, slavery, extended patrilineal families, and the practice of giving a child the name of an ancestor.
[596] The Tupian intrusion up the headwaters of the Amazon and its tribu-
[553] taries is probably quite old. Of more recent date and a more striking example of acculturation from native sources is the Arawakan influence. In the relationships between Arawakan-speaking tribes and Tucanoans there has been the opportunity for massive interchange of cultural features, for apart from the ordinary modes of cultural influence, of trading, visiting, and intermarrying, entire social seg-
[614] ments, usually sibs, it would seem, have been accepted as entities into one another's tribal organization. Since sib relations in the region are
[796] founded upon intensive reciprocal ceremonial participation, it is inevitable that entire ceremonial complexes will be exchanged once a foreign group has been drawn into the social structure. That the social structures will also become mutually compatible may be taken for granted. The student of Cubeo is almost instantly aware of the Arawakan influence, in vocabulary and in religious concepts. The
[773] Cubeo culture hero *Kúwai* is the Arawakan *Kówai*. The term for jaguar and for shaman, *yaví*, is shared by Tucanoans and Arawakans.
[197] As Koch-Grünberg was the first to observe (1909, I, 129 ff.), the com-
[765] plex mourning ceremonies among Cubeo and among Arawakan-speaking tribes are also remarkably similar.

177 It was Koch-Grünberg who called attention to the rapidity of cul-
197 ture interchange in the Northwest Amazon. On the Papurý River he encountered Tariana Indians who were giving up their native Arawakan, having just arrived from the Isana, and were beginning to speak Tucanoan (1909, I, 116). Similarly he reported that a Carib-speaking Umana group had settled among Cubeo of the upper Vaupés and had begun to speak Tucanoan (1909, II, 65). On the Cuduiarí River the *Hüröwä* had given up Arawakan in favor of the dominant Tucanoan (1909, II, 81). On the Querarí River the *Djuremawa* had also yielded up Arawakan for Tucanoan (1909, II, 66). Macú also had assimilated both to Arawakan and to Tucanoan (1909, I, 50, II, 98). How fleeting these language shifts can be is brought out by Koch-Grünberg's example of an Arawakan group that had assimilated to Tucanoan and was almost immediately shifting

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

back to Arawakan, so that the young people were still Tucanoan speakers while their elders were already back to Arawakan (1909, I, 116). Where Arawakan and Tucanoan coexist, Koch-Grünberg has observed, Arawakan becomes the language of ritual and Tucanoan the everyday language (1909, II, 182). 177 177

In general the region of the Vaupés, the only part of the Northwest Amazon that I can speak of from personal knowledge, exhibits a high degree of cultural cosmopolitanism. Many Indians are multilingual because of the frequency of intermarriage with other linguistic groups and the love of the Indians for travel and intertribal trade. Not only do the Indians have some knowledge of the standard languages in the region, but they also employ the *lingoa geral*, a lingua franca based on Tupian, and many are conversant with Spanish and Portuguese. As they adopt languages the Indians also adopt new customs; these are always welcomed, almost in the same way in which women eagerly acquire from one another new varieties of manioc, or in the way in which men and women collect and try to cultivate almost anything that grows. This, in short, is not a region of cultural conservatism. Having freshly arrived from an ethnographic survey in the Colombian Andes, I was literally overwhelmed by the contrast between the secretiveness and wariness of the highland Indians and the openness and friendliness of the Cubeo. 177

Of course, the question of cultural relations between Tucanoans and Arawakans is one of great complexity and uncertainty. We have only the most general knowledge of these relations; but even this provides a very useful background for understanding the nature of Indian-white relations and of Cubeo acculturation. The essential point in this background would seem to be what I have called the Indian's cosmopolitanism. I speak now only for the Indians of the Cuduiari. There, it has seemingly provided a strong measure of immunity against the potentially overwhelming effects of European contacts.

The Northwest Amazon has been subject to persistent white influence from the sixteenth century onward.[2] As early as 1557 Francisco Pérez de Quesada founded the community of Moxoa on the Caquetá River. The Dominicans entered the region in 1550, the Franciscans some 20 years later. Prior to their expulsion in 1767 the Jesuits founded many missions on the Orinoco, on the Meta, on the Casanare, on the Guaviare, and on the Vichada. On the Vaupés proper the first mission was founded in 1852 at Carurú by P. Gregorio, a Carmelite. 175 177 177

[2] For historical background consult: Archivo do Amazonas, 1916; Bauer, 1919; Coudreau, 1886–87, II, 153 ff., for missions on the Vaupés; Gumilla, 1791; Koch-Grünberg, 1909; Martius, 1867, I, 591 ff.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

He succeeded in bringing together a village of some 300 Indians. By 1881 the mission was disbanded and the Indians returned to their original communities. At about the same time the mission of Santa Cruz dos Cobeus was established at Mitú *cachoeira* near the Cuduiarí. Missionary activity in the region has been generally discontinuous but nonetheless energetic; and while Christian doctrine has left only a vague imprint in native religious practices it has succeeded in acquainting the Indians with new ideas of dress and in disturbing their convictions about some practices such as cannibalism. For a period between 1875 and the early 1900's there was a flurry of nativist agitation in the Vaupés. Between 1875 and 1878 an Indian from the Isana River, called Anizetto, reportedly a hermaphrodite, led a messianic movement against the whites until he was arrested by the Brazilian authorities. In 1880 a shaman who called himself Vicente Cristo led another messianic movement along the middle Vaupés. Koch-Grünberg observed that the native messianic leaders were always Arawakan-speaking (1809, I, 99). There is nothing to suggest that any of these movements ever took strong hold on the Indians. On the Cuduiarí tangible evidences either of Christian influence or of native messianism were slight in 1940.

European commercial penetration started slowly but reached a sudden expansion with the rubber boom that subsided shortly before World War I. The Putumayo, where thousands of Indians perished in the rubber camps, was a notorious and baleful focus of white influence (Hardenburg, 1912). From then on the Indians and the whites along the Vaupés were in constant contact and in frequent conflict. On the lower Vaupés in Brazilian territory many Indian tribes had taken on the outward appearance of the mestizo, or caboclo as he is called in Brazil, as early as 1852, when Wallace was there. The upper Vaupés in Colombian territory retained its true Indian character for very much longer. The Cuduiarí was still very strongly native at the time of my field work in 1939–40.

Only close study will reveal how far acculturation has gone even among those Indians most closely associated with the whites on the main streams. There the Indians wear the dress of the mestizo, live in European-style shacks, and celebrate the Christian holidays. They also carry out native ceremonials, not, to be sure, with the traditional elegance, but strongly enough to suggest that a good deal of native life goes on beneath the shabby surface of ragged clothing, poor housing, and the litter of cheap manufactured utensils and ornaments.

The resistance of the Indians of the Cuduiarí to cultural loss and breakdown may be attributed in the main to relative isolation, but

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

in part, I believe, to cosmopolitanism, to the capability of the Indians 177
to adopt foreign objects and foreign customs without losing their 182
sense of identity as Indian. As long as the point of view remains Indian, the culture may change but it will still retain for the Indian a distinctive and satisfying pattern. It is when the clear identification as Indian in the cultural sense is lost that change is likely to mean breakdown.

Cosmopolitanism is but one general factor in a process of culture change that is exceedingly intricate and subtle, in which there are no clear-cut stages but endless gradations in the transition from Indian to the new cultural and psychological entity that emerges. Another general factor is the white agent. On the Cuduiari the white man does not intrude directly upon the Indian's daily life. The missionary ex- 177
pects the Indian to come to him at the mission station. Even then 797
the missionary effort is a patient one. Mainly it goes through the children who are educated at the mission school. Mission Indians and tribal Indians lead different lives but they are not mutually antagonistic. Between them there is a gradation but not a gap.

The commercial white man, the rubber collector (*balatero*), or the 177
trader has only a limited interest in the Indians. The Indian, having 464
completed his contract work in the rubber forest, returns to his own community and is instantly enmeshed in the tribal life. But even in the rubber forests his associates have been fellow Indians, of foreign tribes, to be sure, but to this experience the Indian has been well accustomed. As for the white employer, he is often less a carrier of European culture than he is a frontiersman, a distinct tropical forest product himself. He is partly Indianized and he is generally the husband of an Indian wife.

Among the Mundurucú of central Brazil, as vividly described 171
by Robert Murphy (1960), an anthropologist, work in the rubber 177
forests and the contractual production of farinha, a manioc flour, 182
for the white man were potent factors in the disruption, indeed in the virtual obliteration, of the native culture. To compare Mundurucú with Cubeo is to set off a society that has become ugly and disordered with its meager hoard of cheap objects of white manufacture with a well-ordered and fundamentally satisfying way of life. Unlike the Mundurucú, the Cubeo have succeeded in withstanding both the rubber forest and manioc trade. Far from being overcome, the Cubeo have been able to use the income from labor in the rubber forests and from the sale of farinha to further their own cultural objectives. Murphy tells of the insatiable longing of the Mundurucú for the trinkets and gadgets of the white trader. For these objects of intrin-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

177 sically little value the Mundurucú yielded up much of their freedom
182 and culture. Perhaps, in their case, the addiction to the white man's
[171] trinkets was already a sign of social disorganization, a substitute for the native values that had already been lost. The Cubeo, too, desired trinkets, but in moderation. Native ornaments were still preferred. As for household utensils, the Cubeo were spared the degradation of the five-gallon gasoline-tin water bucket and the flimsy metal pots. With only minor exceptions all native crafts were fully alive. What seems to have immunized the Cubeo against the pernicious effects of overtrade with the whites was the vigor of the social system, that demanded a heavy commitment of time and effort in the production of manioc beer for intersib gatherings, and the binding nature of ceremonial gift exchanges. When the basic patterns of Cubeo social life are broken they, too, will undoubtedly follow the miserable road of the Mundurucú, who once shared a common culture with them.

Throughout the region a first step in culture change is observable in dress and in housing. When the Indian takes to living in a small mestizo-style house and to wearing European-style clothing he has taken a long step toward cultural transformation. Dress and housing impress him as key signs of cultural identification. On the other hand,
[342] when he acquires a steel machete, a shotgun, fishhooks, or ornaments
[796] he usually does so to enrich his own way of life. The change in house form is the more significant because the long maloca is not only a
[346] residence but a ceremonial center to which most of the traditional ceremonies have been adapted. These ceremonies cannot be easily conducted in the small square house. With respect to dress there are stages of acculturation. Nudity is a mark of total unself-consciousness.
177 As late as 1909 there were still sizable Indian populations in the upper
291 Vaupés and all over the Cuduiari where the women were totally naked
182 and the men wore only the perineal band of dark bark cloth (Koch-Grünberg, 1909). In the first change that occurred, the women began to wear petticoats in the presence of white visitors. This concession to the white man's sensibilities involved no important change in outlook. It was, if anything, a reflection of traditional cosmopolitanism. Subsequently, the women accepted the petticoat as ornamental, wearing it constantly and dressing up in a fresh petticoat for native ceremonies. This is the present situation on the Cuduiari and along much of the upper Vaupés. Those women whose outlook had become more Europeanized turned to the dress and to covering their breasts. Men's clothing styles followed a similar sequence. Most men who have worked in the rubber forests have acquired trousers and have learned to wear them when they visit the administrative center of Mitú. Some

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

men have learned to wear trousers and a cotton tunic at home. For ceremony, however, they wear only the perineal band, now made of trade cloth. For women the skirt has replaced the ornamental ceremonial apron, but for men ceremonial participation in trousers means an important change in outlook in which the ceremony has become secularized. I learned this from young Indian men, visitors to the Cuduiari, who, wearing the cotton trousers and tunic of the mestizo, insisted in explaining to me that they were taking part in dances "just for fun." In the truly solemn ceremonies on the Cuduiari I saw no man in European dress. 177 291 182

The use of Spanish or Portuguese is another sign of change in cultural identification. But here, too, the process is complex. Indian cosmopolitanism is traditionally multilingual. Wives often speak distinct dialects of Tucanoan or else speak Cariban or Arawakan. Children learn the language of the mother first and then learn to speak Cubeo. The Tupian lingua franca has been a traditional trade language between Indians as well as between Indian and white for a very long time. Thus, the Indian who has learned Spanish and Portuguese is simply extending his multilingualism. These European languages have also come to play an important role in native interrelationships. Spanish and/or Portuguese has become the customary language of violent drunken quarrels among men at a drinking party. Used in this context the insults and threats in a foreign language are less ominous, and easier, therefore, to disregard than the same words uttered in the native language. The Cubeo usage is as with us: the foreign phrase used scatologically modifies the impact. Thus, in this respect the Cubeo adoption of foreign European phrases is a matter of enriching the native culture and is far from being a mark of cultural breakdown. I met only a few Indians on the Vaupés and none on the Cuduiari who had given up their native speech in favor of Spanish or Portuguese. 177 182 191

The use of European personal names offers another example of adaptation to the native cultural pattern. Among the Cubeo, personal names come from the traditional genealogy of the sib. They have a sacred character and are not used freely. Knowing a person's sib name is a sign of intimacy and such intimacy is not readily yielded up. I did not learn native personal names for weeks, and even at the end, one of the more embarrassing questions I could ask was simply a person's sib name. In common discourse kinship designations were used. The native name is not so much an appellation as it is sib identification. The headman of the *Bahukiwa* sib was the first to tell me his name. He uttered it in a whisper close to my ear. Thus, for the Cubeo, 177 551 182 614 [123]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

177 Thus, for the Cubeo,
551 being endowed with a Spanish or Portuguese name is one of the most
182 exciting and valued gifts he can get from a white man. It is a benefice he cherishes far more than the white man can possibly appreciate. It
[553] has a double value, as a gift and as a free medium of appellation. I met no Indian no matter how unacculturated who did not have a
[123] European name. To have value the name should be bestowed by a white man. When I bestowed names upon newborn children, as well as upon youngsters who were still unnamed, I was asked to give the genealogical references for the name from my own family line. I learned of no Indian child on the Cuduiari who had a European name that had not been bestowed upon him by a white man, and the Indians remembered the genealogical references. It cannot be said that the possession of a European name gave the Indian an actual sense of kinship with the white man, for which far more than a name would be required. But the name did serve to offset to some degree the conventional estrangement between Indian and white.

177 On the whole, culture change on the Vaupés and along its tribu-
[797] taries has been gradual except for those instances where missionaries have brought Indians together into a mission village. In 1940 the European economy of the Vaupés had no strong interest in a "civilized" Indian. The exploitation of wild rubber – there were no cultivated rubber plantations in the region – was on a small scale for which the labor of "wild" Indians was altogether suitable. Nor did
[464] the undeveloped economy of Mitú call for disciplined Indian labor. At the level at which the economy of the Vaupés had developed in 1940 the Indian was of greater value in his native state, simply because as an Indian and completely self-sufficient he was at least no burden upon the meager resources of an underdeveloped frontier area.

177 Many Indians of the Cuduiari had visited Mitú, the capital of the
648 *Comisaría* of the Vaupés. Mitú was established as the capital in 1936. Before that it was a small trading center and missionary station. After 1936 it began to acquire the features of an important administrative center (Plazas Olarte, 1944). By 1939 it had an administration building, a school for Indian children, a medical dispensary, a new missionary order, partly Colombian and partly French, a radio station, a landing wharf for a monthly military hydroplane, and a police garrison. The population, numbering about 1,000, consisted mainly of Colombians, a few Brazilians, and a floating group of Indians drawn to the administrative center by curiosity or by some business. Many Indian women lived there as wives of white men.

While the Indians of the Vaupés and of the Cuduiari were not altogether comfortable in Mitú, because of their shyness in dealing

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

with its white residents, they had no reason not to regard it as a 177
friendly place. The *Comisaria* protected their labor rights, supervis- 648
ing terms of contract and entertaining their complaints of unfair treatment. When an Indian completed his term of labor he was "paid off" in the presence of an official in charge of Indian affairs. The Indians regarded the government as fair. The *Comisaria* provided medical aid to those Indians who came to seek it. At the same time it respected native life and interfered with the Indians as little as possible. Although the Cuduiari is readily accessible from Mitú it was [114] entered only rarely by administrative personnel. When I lived among the *Bahúkiwa* some 15 hours by canoe from Mitú, I had the sense of total isolation from this administrative center. The normal everyday life on the Cuduiari was completely Indian. In the time of Wallace there had been bad blood between Indians and Colombians, but by the time Koch-Grünberg arrived relations between the Cubeo and the government had already become peaceable. )

In Mitú I met Mandú, headman of the *Bahúkiwa* sib of the middle 122
Cuduiari. He had come to seek medical treatment for his young son, 123
who had injured his knee in a fall. The headman and I became friends [614]
and he invited me to visit. When I promptly accepted his invitation I was surprised to find that he had already begun to build a house for me and that the Indians had expected me to settle among them. He had discussed the matter with his people, he told me later, and they had agreed that it would be good to have me live among them. The reasons for wanting me never became too clear, but I came to believe that they thought I would offer them some protection from the pressure of the labor recruiters.

I was informally "adopted" as the younger brother of Mandú. For 123
a white people were amused to address me by an appropriate kinship [597]
term. In time this jest lost its freshness and I came to be regarded simply as *pakomá* (kinsman). Nevertheless, I was considered to be a member of Mandú's household even though I had a house of my own alongside the maloca. Mandú sent his older wife, with whom he was no longer living, to serve as my cook. With Mandú's household I had all the privileges of informality. My relations with other households were friendly but more restrained. Since I did not contribute an appropriate share of fish and game to the household, or to the maloca as a whole, I felt obliged to reciprocate food and services with periodic gifts of cloth, tobacco, fishhooks, and ammunition. At one time during a drinking party at which I was not present, a son of Mandú distributed all my trade goods to the guests "in my behalf." However, during the period of many weeks when I no longer had trade goods

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

123 my status in the community was as before. I still could count upon
[122] food and services.

I participated to some degree in the male life of the community and came to learn the language and the culture as much by slow enculturation as by questioning. I had no principal informants because no
123 124 one would serve in that capacity. All were willing to talk, to explain matters to me, but only in the accustomed atmosphere of easy and genial chatter. The people I knew best and the household of Mandú, in particular, were paradoxically the poorest systematic informants. They were most impatient and most *easily vexed with the informant* role. They regarded the open notebook and the persistent line of questioning as counter to our relationship. For prolonged and probing investigations I called upon the head of a *Bahúkiwa* subsib. Even this man was a very patient informant only when he was my guest among the *Bahúkiwa*. On his home grounds we were back on small talk. In Mitú I could talk to Indian women more freely than I could on the Cuduiari, where my relations with them had to be more correct. My house alongside the maloca was an informal social center which children and unattached women felt free to visit without invitation. The children taught me things they thought I ought to know about native customs. This was a privilege they had which adults, with their acute tactfulness about criticizing, intruding, or imposing upon others, could not exercise.

The Indians placed no serious obstacles in the way of my studies. They would not explain or discuss openly a ritual act at the time it was going on because to do so would be to counteract its effects.
[831] They did not, however, mind answering questions later and in a more
[521] general context. Moreover, they expected me to preserve the proprieties of tact in asking questions about domestic matters. Sex was a difficult subject, as were invidious comparisons. The Cubeo are not eager purveyors of gossip. After trouble had erupted in the open one could ask for and receive a discreet and sober account of some domestic difficulty. At the same time that the Indians imposed upon me their own reserve they were also sensitive to any evident disappointment which my questions went unanswered. Thus, if I persisted I often could get an answer, but I had to follow protocol, since personal rela-
[831] tions among adults are rich in decorum and social etiquette. I also had available to me the more informal channels of the play pack of children, which delighted in passing on some household gossip, as well as of old women, whose verbal bawdiness was in marked contrast to the customary verbal restraint of the men on sexual matters.

114 I chose to stay in one community and to benefit from the intimacy

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CLPEO

that such an identification gives one. Had I chosen to move from one sib to another I would have had a better account of the formal principles of social structure but at the expense of a knowledge of the patterns of cultural life. My choice of the *Bahúkiwa* among all the Cubeo sibs was partly, as I have explained, fortuitous, but the site, halfway up the Cuduiari, had its advantages in giving me some command of events along the entire river. 114

The reader, however, will understand that this study has a special perspective. Although I have made some effort to present "Cubeo," the point of view is unavoidably that of the *Bahúkiwa*, a low ranking sib and perhaps even an alien sib of probable Macú ancestry. Strictly speaking, a Cubeo perspective can be only an artificial composite pieced together and generalized from the distinctive perspectives of each of its principal sibs. I would imagine that the Cubeo presented from the point of view of the *Hehéneiwa*, a high-ranking sib, would bring out somewhat more emphasis upon social status and upon the authority of the headman. One wonders how the Cubeo would appear if studied from the point of view of those of its sibs now along the Querari that were once Arawakan speaking, or if studied from the point of view of those Cubeo speaking sibs that now form one of the phratries of the Tucano tribe. 121 614

The theoretical position of a study is best understood from what the writer does with the material. What he claims to be doing with it is far less important. My own theoretical viewpoint will emerge from the text and more explicitly from the final summation or conclusion. At this point it should be sufficient to say that my purpose is to present the Cubeo in terms of fundamental principles of social structure and in terms of basic cultural patterns. I have chosen a level of description and of analysis that lies between the idiosyncratic and the universal. The detailed account of person and of personal reaction is an example of the idiosyncratic, and the analysis of a culture as an apparatus for the satisfaction of "basic human needs" is an example of the universal. The idiosyncratic and the universal approaches are pancultural. One deals with individual responses that can occur in any society, the other deals with cultural functions that are true of all societies. The level of description chosen here is intended to set the Cubeo apart as a particular social and cultural type and yet to allow bases for cross-cultural comparison with other societies on its cultural level. 121

Finally, it is necessary to say that this study is incomplete. It had been my hope to do a restudy. When this hope did not seem realizable it was obviously better to submit an incomplete report on the Cubeo than not to submit one at all.

## *The Cubeo Community*

361 The Cubeo Indians occupy a string of settlements along a small stretch of the Vaupés River from Uarúa Lake upstream to Uaracapuri and downstream to near the Brazilian border, as well as along several of the Vaupés tributaries, namely the Cuduiarí and the
[61] Querari and Pirabatón. The tribe consists of some 30 or more patrilineal, exogamous sibs[1] that are grouped into three unnamed confederations or phratries of unequal size that are also exogamous. Although the bulk of the Cubeo now live on the smaller streams – the Cuduiarí, in particular, being heavily populated – the broad
[614] Vaupés, that joins with the Rio Negro to enter the Amazon, is regarded by the Indians as their main stream and as their source. Their
173 leading sibs still live there. Native traditions place the emergence of
614 all the Cubeo sibs at two Vaupés sites, at the turbulent cataracts of
361 Yuruparí and of Uaracapuri. From there the people moved up the nearby tributary streams, the Cuduiarí, the Querari, and the
173 Pirabaton, a tributary of the Querari. The traditions record that
361 the first people displaced groups that were already living along
[174] these streams and, in this respect, square with historical observations that pressures of enemy Indian tribes, and, lately, the more potent pressures of white colonizers, have been forcing the Indians to leave the main rivers and take shelter in the more
361 distant and constricted feeder streams, or else face physical or cultural
614 extinction. The more timid and the more humble of the sibs have

[1] Following the usage of Lowie (1920, p. 111), "sib" is synonymous with "clan."

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

always tended to occupy the narrow headwaters of tributaries while the strong and the top-ranking sibs have favored the large rivers and their mighty cataracts. But while these strong and proud sibs in their exposed positions were able to withstand enemy Indians, they have succumbed more to Colombian and Brazilian missionaries and traders. Thus, the sibs that the Indians refer to as our "head" are now the most acculturated, and the low-ranking sibs the least.

I estimate the population of the Cubeo at under 2,500. This is a crude figure based on a calculation of somewhat under 100 persons per sib on the Cuduiarí, the only river that I had occasion to explore along its entire length. Population was undoubtedly greater in the past. On the Cuduiarí there were 29 main residence sites,[2] each averaging some 30 to 35 people, some only a few minutes by canoe from their nearest neighbors, but for the most part they were separated by at least an hour of steady canoeing. This is high population density for the region. On other rivers in the region, houses are separated by at least half a day's journey by canoe. A severe influenza epidemic swept the region in 1917–18 and took a heavy toll of lives, the Indians say. A number of sibs whose names are still remembered are now extinct. The Colombian government census of 1938, which did not tally tribes, listed some 7,000 Indians for the entire *Comisaría del Vaupés* (Colombia, 1942). This figure, too, is surely an estimate, since an accurate head count is virtually impossible. During the period of my stay among them, the Indians, in a state of alarm over rumors that their young men were all to be conscripted for labor in the rubber forests, were understandably nervous about censuses and genealogical explorations so that my own efforts at counting were severely handicapped.

The term "Cubeo" is a Europeanization of the Tucanoan word *kebéwa*, that means, literally, "the people that are not." It is a jest name applied to them by some other Tucanoan-speaking tribe. Most Indians were not aware that they were called "Cubeos," while those who understood what it meant did not like the name. Strictly speaking, there is no tribal name. A man will always identify himself by his sib name, never by phratry and never by tribe. In the course of discussions with the ethnologist on native conceptions of "tribe" the Indians offered some self-designations. The most common was *pamíwa* (first people). They also offered *pwãnwa* (people), and then referred to other tribes as *apépwãnwa* (other people). I doubt, however, that any Cubeo Indian has ever spontaneously declared himself to be a

[2] There is a list of these communities at the end of this chapter.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

61 *pamiwa* or a *pudiwa*. The group of exogamous sibs that form a phratry are spoken of as *kwináwü*, *ünhiwü*, or *kwinánokauwü*, all terms with the general meaning of "one kinfolk" or "the same kinfolk." However, I have also heard the expression *nuhénokauwü* (my own kinfolk) used to refer to both tribe and phratry.

61 If tribal designation is vague, the native concept of tribe is only a little more definite. Tribe refers more or less to a common identity of language, descent, and custom. One of the Cubeo phratries was, in fact, once Arawakan. To become tribesmen they adopted the language, customs, and traditions of the Cubeo. Other sibs appear to have been at one time Macú as well as sections of the Tucano "tribe."

614 There are no formal bonds of tribe and there is no acknowledgment of tribal overlordship. Cubeo social structure is segmentary, the patrilineal sib being the basic segment. Every sib has established relationships with other sibs to regulate marriage, ceremonial participation, friendships, and hospitality along traditional lines, but also to some degree along lines that suit its own particular interests.

615 The phratry is a more sharply defined and a far more important
614 social aggregate than tribe. A phratry is a confederation of sibs that are closely bound by rules of exogamy, by common residence along the same river, by a tradition of common origin and descent, by a graded order of rank that assigns to each sib its place in a social hierarchy, and, finally, by a series of ceremonies, solemn as well as secular, such as drinking parties at which each sib entertains its fellow sibs. Withal, there is no phratric overlordship, no phratric council or other agency to consider policy for the phratry as a whole.

What gives a phratry cohesiveness is the pattern of relations that the individual sibs, each acting individually, have formed with one another. The most important of these relationships is the rule of exogamy. By adhering to a rule of exogamy the sibs regard themselves as "brothers," for fraternity is based on the kinship principle that brothers cooperate and share the same rules of exogamy. Most sibs in a phratry have been joined together from the traditional beginnings or the time of first emergence, others are newcomers who have been adopted into the cofraternity of sibs. Adoption is the prerogative of an individual sib. A sib adopts an alien group as a subsib and automatically gives it a place and rank in the phratry. The phratry is no homogeneous federation of fraternal sibs. It is differentiated by rank, by historic background, and by geography. Sibs of the same historic background and of similar rank who are neighbors on the river feel closer to one another and form, therefore, an unofficial but still evident inner circle. Normally, rank, historic background, and propin-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

quity coincide and so the informal clusterings are strengthened. Thus, when one speaks of sibs within the phratry it is necessary to distinguish between "close" sibs and "distant" sibs. As the discussion of kinship will show, these distinctions between "close" and "distant" sibs are formally expressed in kinship usages. Among the Cubeo, relative ranking of sibs is not as formally expressed as it is among the Tucano tribe. Among the latter, all the lower ranking sibs of a phratry are junior siblings and are addressed by the term "junior sibling." The highest ranking sib is "older brother" to all the other sibs (Fulop, 1955). 615 614 614 615 601

The basic segment is the sib. A sib is an exogamic, patrilineal, and patrilocal descent group that claims to share a line of descent through males (with some exceptions) back to a founding ancestor at the beginnings. The sense of sib is that of a local group capable of sharing a common residence and of regarding itself as a fraternal kingroup. Sib members may be, and often are, dispersed. This, however, is, in the Cubeo view of things, an abnormal situation. Sib identity, in any case, is never lost. Even women who must marry "out" are forever [illegible] parental sib. The sib, as we have already said, has a name. It has a headman, a common residence or sib center, and is on any critical issue autonomous politically and economically. It may break out of the exogamic grouping of the phratry by moving away and joining another phratric organization. This, however, it will be very reluctant to do. Sibs are not static entities and that is why one cannot obtain an exact count of their number. Fission is an ever active process and reveals itself in what may be called "phases of separation." Within a common residence site most families live in a long house, called in the region a maloca. Others live alongside the maloca in smaller houses. I have called the occupants of the smaller houses "Independents" because of their expressed intention to remain somewhat outside of the jurisdiction of the sib headman. 614 592 614

Some sib members live at a nearby but distinct site with very considerable autonomy, but recognize the main maloca as their sib center. These people are still more estranged from the sib and I have called them "Satellites." The Satellites may estrange themselves to the point of complete separation. They then assume a sib name that is a compound of the original sib name with a new designation and so take on the status of a subsib. A subsib has a strong sentimental attachment to its parent sib, but in all other respects it is autonomous. A Satellite may also give up its satellite standing by rejoining the parent sib. Subsibs are held together by sharing a common sib name and a common genealogy. This is true whether subsibs have been 614

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614 formed by fission or are aliens who have been adopted by a "parent" sib.

[613] A sib is formed of patrilineal lineages that go back no more than three or four generations. Since a sib itself is small, a lineage is of minor importance. The most significant component units of a sib 614 are the fraternal joint families and the nuclear households. A group 592 of brothers of the same father are held together by very firm ties of common upbringing and regard themselves as very close to one another. The households of this fraternal group are distinguishable, not jurally but *de facto*, as separate entities within the sib. When a sib splits, it is the fraternal group that offers the most ready line of 614 cleavage. Finally, there is the nuclear household, a most important 594 unit that occupies its own "compartment" in the maloca, maintains its own hearth, and is capable also of asserting its autonomy. A nuclear household may break from the common residence group of the maloca and establish itself as an Independent, but that is about as far from the sib as it can go. It is not a truly self-sustaining unit. When it does break away, the separation is a consequence of serious disaffection, from the Cubeo point of view, an example of social pathology. Detached nuclear households often become vagrants, imposing upon the hospitality of related sibs.

121 What I have presented is an outline of Cubeo social organization 61 that encompasses a descending order of subordinate and component 621 segments, from tribe to nuclear household. There is another social concept that falls somewhat outside of this structure. That is the concept of community. The community is the common residence group, based, to be sure, upon the sib, but not exclusively so. Common residence creates its own norms of behavior.

## THE COMMUNITY

621 The concept of community offers perhaps the most advantageous 182 entry into the character of Cubeo social structure; it exemplifies almost all social relationships and relates them to the physical factors of location, economy, and material culture.

361 From the air, a community appears as a small semicircular island pressed against a thread of river in an otherwise unbroken expanse of tropical forest. The air view emphasizes the isolation and self-containment of each community. Along a well-populated river such as the [615] Cuduiari the communities resemble rough-shaped beads widely spaced along the thin strand of the sinuously curving river. The river literally binds the communities since, in the main, communities

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

along the same river belong to a common phratry and share, therefore, rules of exogamy, origin traditions, and mutual obligations of hospitality. 361 [615]

Close up, a community is revealed as a clearing of a dozen acres or so hacked out in a crude semicircle from the banks of the river. Since the river may rise some ten feet or more in the rainy season the clearing is always on the high bank and will necessarily follow in its shape the contours of high land. The maloca stands toward the river. A house is not aligned according to absolute directions, but always with reference to the river, which the Cubeo, in contrast to other tribes in the region, insist upon keeping in view. No house will have its front door facing the forest, though its rear door may. In some cases the rear door abuts almost on the very edge of the manioc cultivations. 361 342

A residence site is commonly called *tawá*, a term that appears in the naming chants and that I have rendered in free translation as "soil." A related term that is also used is *taibo* (a made place), a clearing. These two terms refer then to that part of the territory that has been prepared both for cultivation and for housing. A more inclusive territorial term is *makanu*, that embraces the uncleared forest and can also mean "forest." Still another term for a residence site is *hobanu*, based on *hoba*, a cleared place for planting. More commonly, however, the manioc cultivations are called *hawabó* (food place). 361

Within the requirements of contour and with leeway granted to accommodate individual community preferences, clearings tend to conform to a common plan. The maloca is the hub from which the outer edges of the clearing are plotted with approximately equal radii—footpaths—leading to the bitter manioc cultivations. The manioc cultivations form a broad outer belt of the clearing that, in poorer communities, begins very close to the rear or rear side wall of the house and that in prosperous and more prideful communities is at some distance. In the latter communities, the zone of plantings begins far enough away so that the women at work in their manioc gardens are out of sight and out of sound, only the plumes of white smoke from each garden signaling silently that a woman is at work there. No matter how confined the total clearing, the house rests within an inner clearing of secondary cultivations and, ultimately, within a totally cleared space or plaza. The maloca is more or less at the center of these three concentric zones. The river (*hya*) itself is a fourth zone. [342] [351]

These four zones have their social counterparts in that they may be identified as male and female, although, it should be said, the Cubeo do not themselves make this identification. [562]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

CLEE

361 Cubeo do not themselves make this identification. The outermost
462 zone, that of manioc cultivation, is largely a female province. Men
244 make the clearing, but women work in the gardens. A woman's garden is virtually her private domain. A man enters it upon a woman's invi-
[83] tation. A husband goes there to help with some heavy task or for casual sexual intercourse. There is extra spice to marital coitus in the garden because it is the traditional place for adultery and so the
123 Indians associate it with licentious passion. Men do not ordinarily
361 wander over to the manioc gardens. When I wanted to see the women
831 at work in their gardens I was not free to go without an escort, who
244 was usually the husband himself or sometimes the headman. In the latter case, the headman courteously informed the husband, and everyone else if the husband was away. Frequent visiting was definitely discouraged. Women could not help but attribute sexual significance to a man's visit and would deride the notion that a man was interested in watching them farm.

244 This outer zone, then, has a decided sexual connotation that is
361 both erotic and social. Women give birth in their manioc gardens
831 and during male cult ceremonies they may take shelter in the gardens. Nursing babies are brought to the manioc gardens regardless of sex,
[844] but from walking age on, no boy will think of playing in the vicinity
[854] of the gardens. Manioc is a strictly secular crop for which there are no rites, despite its overwhelming nutritive importance and the usual hazards of cultivation.

361 From the sexual point of view, the zone of secondary cultivation
241 is a mixed one. Secondary crops include sugar cane, tobacco, *mihi*
462 (*kaapi*, a vision-inducing narcotic), coca, calabash, gourd, squash,
[270] melons, yams, sweet potatoes, and sometimes maize. There are also
[248] cultivated trees – orange, lemon, pupunha (*Guilielma speciosa*), pineapple, plantain, and banana. Men exclusively cultivate tobacco, *mihi*, and coca, women exclusively cultivate bitter manioc; all other
[77] plantings are mixed. If a plant, onions, for example, is taken from the whites and the Indians have seen a white man grow it, they then regard it as a proper male cultivation. Maize is an old crop that belongs to women but not all communities grow it. Among the *Bahuiéton* and its neighboring subsibs no maize was planted.[3] This

[3] When Koch Grünberg was on the Cuduiari, in 1905, he observed that the upriver communities grew only maize and no manioc. For bitter manioc, he said, they came to the lower Cuduiari communities (1909, II, 8a). During my survey of the river I found no community without manioc. On the other hand, maize, which had already begun to disappear in the time of Koch Grünberg, had become quite scarce and no longer entered into the regular diet. On certain ceremonial occasions it was made up into tortillas. Mainly it was used in native beer and as

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

secondary zone produces supplemental crops only. Gourd provides 361
household dishes, while tobacco, *mahi*, and coca are for ceremonial 241
purposes. 462

The plaza consists of two clear spaces, a front plaza that is at the 351
entrance to the house, and a rear plaza that is an extension of the 361
kitchen area. The front plaza is a ceremonial site. It serves for the 562
staging of dance formations and is a gathering place of the men.

Ideally, a front plaza is large, clear, and clean. Its appearance speaks [622]
for the quality of the house, for its prosperity, for its high morale, and
for the excellence of its headman. It is the headman who will insist
that the plaza be kept clean. Women are not barred from the front [778]
plaza, but it is definitely a male zone with sacred connotations. The [755]
medicine man does his curing on the front plaza. By contrast, the rear
plaza is a female zone and is secular. It is often littered with the debris [521]
of past meals and abandoned and broken household utensils, shards,
and frayed basketry. The women assemble here for their own gossip.
During important ceremonies, when the sexual demarcation is ac-
centuated for ritual purposes, it is the rear plaza where women guests
are received. The rear plaza is demarcated even when the house is still 351
a mere skeleton under construction. A visitor then may have no ob- 361
vious clue as to which is front and which is back. If he should make 562
an approach by way of the rear plaza he will not be received until he 574
realizes his error and comes around to the front. In just such a situa-
tion I have seen the occupants of a house ignore a guest who made
this *gaffe*. When he did recover and came around to the front he was
received with as much formality at the bare frame of the house as
he would have after it had been fully completed.

Finally, the river. The river is sacred to the sib, and is in that sense 361
a male zone. Men fish in the river and hunt along its shores. They hide 562
the sacred ancestral trumpets along the shore and bathe to the music 823
of the trumpets before dawn to receive strength from the ancestors. [614]
Ordinary connubial coitus takes place well before dawn at the river's [534]
edge, where chances for conception are considered to be better. Again [515]
to call the river a male zone is not to say that it is restricted against [833]
women. Women have access to the river for bathing and for washing. [842]
But it is not their domain.

During the early part of the day, from just after sunrise until the 621
high heat of the early afternoon, a community gives the appearance 512
of being altogether deserted, or, if the men are not hunting or fishing
that day, it appears to be an all-male community. The men are then

chicken feed. The *Bahukina*, cited by Koch-Grünberg as maize growers, had no 361
tradition of having cultivated anything but bitter manioc as their principal crop. 241
462

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

621
512 in or around the maloca, loafing, jesting, or in jovial groups working at small manufactures such as basketry. It is the wives and their daughters who are dispersed, each in her separate garden, and who then return in the heat of the day, tired and subdued, to a house that is gay with the laughter and chatter of the men.

712
[361] In the recent past, no more than a generation or two ago, the inner zone of the community was separated, indeed virtually isolated, from the manioc gardens by a ten-foot-deep defensive moat set with sharpened stakes. Tree trunks crossed its steep walls to serve as narrow foot walks for the sure-footed women. At night, or in anticipation of an enemy, the footbridges were withdrawn. The house and the plaza then were an inner citadel. The moat protected against surprise at-
712 tack. When enemies were sighted or their presence announced by the
725 angry growling of the dogs they were met as far from the residence as possible, and the moat served as a defensive line to cover retreat. The strategy then was to lure the attackers to fall into the moat while the defenders slipped across their secretly placed bridges. If the people felt themselves to be overwhelmed they scattered to safety through the dense forest, abandoning house and possessions. (Houses still have an escape port at a side wall facing the forest.) But if they were confident they left the women and children behind in the house with
[123] a small guard. I had the privilege of this guard duty on one occasion. I was instructed to cover the escape of the women and children if need be. Fortunately, there was no need.

361
504 The canoe landing is little more than a level stretch of beach where a canoe can be pulled up out of the water. It is also the site for bathing, for drawing water, for washing manioc roots. It is a port. One rarely comes upon a community by land. Visitors pause at the landing to wash, adjust their apparel, and freshen up face and body paint before beginning the climb up the path leading to the plaza.
504 Like the plaza, the orderliness of the canoe landing denotes the state
574 of morale of a community. Some householders have carved steps into the clay bank, lined them with split logs, and provided a rail. Guests
[417] are never received at the landing. Courtesy requires that guests be al-
[576] lowed the privacy of arrival, and the hosts discreetly retire to the plaza to await them. There are ceremonies in which the arrival of spirit beings is an important feature. On such occasions the men
504 who are to enact these beings use the canoe landing for donning
796 masks and for other preparations. On these occasions, too, the canoe
[778] landing is a sanctuary from which all unauthorized persons discreetly retire.

504
833 Before dawn the canoe landing is the favored place for marital

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUIEO

coitus. First building a small fire, the couple bathes; they have coitus and bathe again. The ancestral spirits add power to the water, that promotes pregnancy. Because of its connubial use the canoe landing is thus a sanctuary of another kind, at night restricted to those who are going to use it for the proper purpose. When the last married couple has left, the young men take over. They bathe off the canoe landing, sounding the ancestral trumpets that have been hidden somewhere along the river bank. Regular bathing with the horns gives strength and sexual potency.

People arise for the day's activities sometime before dawn. Thereafter, the canoe landing is the scene of secular activity, women and girls drawing water, men readying their canoes for fishing, and the young play pack frolicking. In the high heat of the day the women return from their manioc gardens to bathe and refresh themselves. In effect, there is a secular and a sacred period in canoe landing activities. The secular part of the day is from dawn to a tropical four o'clock in the afternoon, when the first guests may be expected to arrive if there is a drinking party or a ceremony. The sacred part is from after four o'clock until dawn. Even on ordinary days, activities slacken at the river by late afternoon. On ceremonial days the distinction of a sacred and a secular period holds strongly.

## BOUNDARIES

The clearing delimits the effective area of habitation, but not the full area of a community. This territory runs along a stretch of river and is usually demarcated by a *caño* or creek. On the Cuduiari these small tributaries run into the main stream at almost regular intervals. A principal habitation is ordinarily along the main stream, which is the preferred site. However, the requirements of slash-burn horticulture necessitate a periodic circulation allowing for three to five years at each site. Depending upon the particular conformation of the land with respect to the danger of flooding, a community may be able to move along the banks of the main stream, preparing its new clearing adjacent to the old. It may, on the other hand, be forced to move up a *caño*, with its connotation of lower status. If it is required to spend a period in a *caño*, it has a cyclical existence, of being in a relatively poor state when it is off the main stream and returning to an epigone when it re-establishes itself on the main stream. When I came to live among the *Bahükiwa* they had just come from a *caño* phase and were in an expansive mood at having moved onto the Cuduiari proper again. *Caño* dwellers are self-conscious; they enter-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

361 Caño dwellers are self-conscious; they enter-
554 tain less and are reluctant to have visitors. I was never invited or en-
[157] couraged to visit a *caño* dwelling house. I was always told that they
[123] did not care to have visitors.

When a headman dies his house is ordinarily abandoned and the
342 new headman undertakes to build a new maloca, since one require-
361 ment of the office is his ability to enlist his sibmates in working with
622 him. Abandonment of a house, however, changes mainly the outlines
768 of the clearing if a new site is chosen for the new maloca. A new ma-
loca may be built alongside the old, in which case there is no change
at all. Sometimes the new headman decides that the old site was the
victim of evil forces and a new clearing is built. But against such a
361 fear is the desire not to abandon still-productive manioc plantations.
244 At all events, a new clearing is normally close enough to the old to
768 ease the transition from last harvest to new harvest. When a site is
moved the last harvest is drawn from the old, and cuttings from the
old *chagra* (plantation) are planted in the new. Thus there is a transi-
tional period when the community is actually working both clearings.
The Cubeo regard this transition period as a difficult one, and until
they are drawing a bitter manioc harvest from the new clearing they
will be too preoccupied to hold drinking parties. Fruit trees on the old
*chagra* are harvested as long as they bear fruit.

361 The extent of a community's territory is such that it will be able to
[311] circulate within it more or less permanently, reoccupying after some
15 years land that has become reforested and so workable again.
Boundaries are along a river only. Past the line of cultivation the
forest is an undifferentiated darkness.

[173] The traditions of the Cubeo indicate that they were originally
dwellers along the Vaupés, the main stream, and that they later
moved up the smaller tributaries such as the Cuduiari and the
361 Querari. The present distribution of sibs is also interesting in this
614 connection in that high-ranking sibs live along the main stream or
554 along the mouths of the tributaries, whereas the lower-ranking sibs
occupy the headwaters of smaller streams. Sib status is definitely
associated with location along a river. The back reaches of creeks
deep in the forests are the refuge of the weak, whereas the strong oc-
cupy a stretch of river that has majesty either by sweep of water or
by the character of its rapids. The main site of a sib that has become
dispersed is always in a conspicuous part of a river whereas Satellites
and Independents often move up small creeks. Father Antonio Gia-
361 cone of the Salesian Mission has observed that the Tucano (refer-
554 ring to the tribe) never constructed their malocas in creeks but only
along the main river. Occupying the main streams, he noted, they

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

regarded themselves as the superior of all other Indians who were driven back into the headwaters (Giacone, 1949, p. 5). 361 554

Thus the movement of Colombian settlers down the Vaupés River had a markedly disturbing effect upon the Cubeo by dispossessing them from their ancestral river. The first-ranking sibs, however, did not leave their sites at the rapids from whence their ancestors are supposed to have emerged. But in staying on they succumbed most rapidly to the European influence. 361 554 648. 177

Despite their strong orientation toward the river the Cubeo also make use of footpaths. Near the mouth of the Cuduiari, for example, a trail leads to the Querari. There are, in fact, many paths in the region that provide short cuts between rivers. Raiding parties come on foot to avoid detection, and paths are used for short journeys. The Cubeo Indian, however, is not, by preference, a walker. 487 [721] [481]

## SIZE

The size of a clearing is variable, to a degree, depending upon the number of households and their ambitions for entertaining and for trade with the whites. A headman's household, which is always the most ambitious and is, therefore, the most productive, requires approximately two acres of manioc land for an annual yield of 300 baskets (50-60 pounds per basket). Most households among the *Bahikiroa* averaged only 200 baskets of manioc a year and utilized accordingly a manioc garden of one acre. A sib center community of 12 households requires more than 12 acres for manioc cultivation as well as several acres more for the plaza and subsidiary cultivations, if the full burden of entertaining is left to one or two households, as is often the case. Satellite communities are often as small as three households and their clearings are proportionately smaller. 621 311 453 244 [622]

The Cubeo community is always small, rarely reaching a population beyond 16 households, a household in every case being limited to a nuclear family. The size of community seems to be a result of a complex series of adaptations of many elements to one another—architectural, ecological, sociological, and psychological. The architectural factor is that a community must be dominated by a single maloca. The largest maloca in the Northwest Amazon region is a 16-household dwelling with eight compartments ranged along each long wall. The smaller dwellings of the Independents can augment the size of a community. The fact is, however, that an Independent household has usually been formed for personal reasons, such as a quarrel with the headman, rather than for reasons of crowding. 621 592 [162] [342] [578]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

621
592 the headman, rather than for reasons of crowding. The Cubeo believe that one roof unites a community while several roofs divide it.

621
311 Size of maloca is adapted in some measure to cultivable terrain. We have already noted that seasonal flooding and the requirement of good river frontage limit the availability of land for relatively permanent cultivation. But these are highly variable factors. Along the Vaupés, a deep river basin that can carry a great volume of water, there are vast stretches of dry land that have become the sites of civilized population centers. There is no doubt that from terrain alone the Vaupés could have supported far greater Indian populations than it did at the time of first contact. Along the Vaupés the limiting factor seems to have been social. On the Cuduiari, on the other hand, land contours are such as to divide frontages into much smaller segments. On this smaller stream, terrain has been a more significant factor in limiting community size. But even on the Cuduiari, land utilization is subject to strong social considerations. One consideration is that sibs
[614] must retain their traditional boundaries. This means that with slash-burn horticulture the sib territory must provide, as a minimum, a three-step cycle in which a community returns to its original land after 10 to 15 years. The well-situated tract must then be at least three times the average land requirement at any given time.

361
244 There is still another consideration, and that is the distance of manioc gardens from the residence. When they prepare a clearing, the Cubeo bear in mind the distance a woman will have to trudge with her burdens of manioc, a baby, and firewood. That is why the gardens are laid out along a semicircle. Bitter manioc is a cumbersome crop. It needs reasonably dry soil and it makes heavy demands upon the time and energy of a woman for its cultivation, transportation, and preparation. Whatever can be saved from travel time is an advantage.

621
182 The thesis of ecological adaptation, however, can be argued most successfully in the abstract. If one notes the actual events in the life of a community, then the processes of community growth and community fission appear in quite a different light. The balance of forces of fusion and of fission that hold community size to its stable limits in harmony with the natural environment are not entirely economic. They often include personal factors. To state this more precisely: the economic factor affects fusion strongly but has less direct bearing upon fission. Satellites, for example, are urged to return to the fold, guests are urged to stay on, and daughters are invited to take up residence
[578] in their own sib if there is ample land. Splitting, on the other hand, occurs because of personal quarrels and rarely because of a feeling of land shortage.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

of land shortage. A social structure, to be sure, that facilitates fission by providing a place for each new segment within a phratry is well adapted to the ecology of rivers of the size of the Cuduiari; but the adaptation may well be fortuitous. The Cubeo do not plan it that way. 621 182

Among the factors affecting community size the tradition of the maloca appears to be the most significant. Whatever the terrain, there it stands as a maximum dwelling for 16 households. It would be of value to study the distribution of such single-house communities to determine the conditions to which they may have been originally adapted. Giving, as they do, maximum occupancy for a minimum of space they seem well suited to the relatively cramped terrain of small rivers along a flood plain. 621 342 182 [592]

The problem the maloca poses for community growth may be put this way. A single maloca in the Cubeo view is an ideal community. As the community grows, the maloca is enlarged to its maximum size. Any further increase results in the construction of a small-size dwelling nearby. But now there are two social units of unequal size and the small unit stands apart. Its ultimate fate can be only reabsorption or further cleavage. The construction of equal-size small malocas only emphasizes fission more strongly. It would thus seem that while a tradition of small dwellings lends itself to expansion by aggregation, a tradition of unity based upon common residence under one roof must devise a new tradition if it is not to impose thereby a rigid limit to community size. In the Northwest Amazon region a tendency can be observed for one maloca to become a social and ceremonial center for scattered smaller groups who are themselves incomplete communities. Among Tucanoan- and Arawakan speaking peoples in the region Koch-Grünberg often found such scattered small communities that identified themselves as belonging to a main maloca some distance away (1909, I, 58, 332, II, 21). But while a maloca may become a center for dispersed sibmen, who owe it nothing but an affiliation by sentiment, it cannot, in traditional Cubeo terms, become the center of a large community made up of many houses. [171]

In this respect, however, native attitudes seem to be changing. The *Bahúkiwa* headman, for example, who was interested in adapting the life of the community toward the standards of the white man, described himself to me as *capitán y generál*. He then added that he planned to have a community of many houses and he would be chief over them all. He used the term *habókū*, which means a man of great influence, rather than the milder term *kenámi upákū* (owner of the house). He was not the only one to speak this way. Elsewhere along 178 342 621 614 [177]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

the Cuduiari I met Indians who spoke of the advantages for personal autonomy of smaller residences. The Satellite community of the *Bahukiwa* subsib was in the process of establishing itself fully in small, square shaped, individual household residences.

## SANITATION

A well-run community, as we have already observed, is clean and orderly. The maloca is swept regularly and is neatly maintained. Except for an accumulation of kitchen debris at the rear of the house, the grounds, including the plaza, the canoe landing, and the path from the canoe landing to the house, are kept orderly and clean. The headman, responsible for the appearance of the community, commands the women to clean up house and grounds in anticipation of visitors. Normally, the women of his household, wife and daughters, sweep the central corridor as well as the kitchen zone at the rear and the front reception area. A headman's wife does not command assistance in general cleaning chores. She requests it and it is most unlikely that a woman asked to help would refuse. When the women take to cleaning they do so with gaiety and vigor, as is appropriate for a collective undertaking.

The Cubeo regard disorder as a sign of low morale, so that a house that has become untidy will surely be restored to order in expectation of company. A large maloca is almost invariably clean if only because it is a firm and effective headman who will have founded a large maloca in the first place. When a guest arrives unexpectedly, the woman who first presents him with the formal offering of boiled capsicum peppers apologizes for the condition of the house. Since there is always some advance notice of a guest's arrival, the women have some time for tidying. Cubeo etiquette is rather demanding that guest and host make the effort to appear at their best when they meet.

Sanitary standards of a Cubeo community are very high. The Indians protect the river from pollution. They dump in it only waste meat such as entrails – but these are immediately devoured by the piranha fish. No one defecates near the river. People go off into the brush, that lies at no great distance from the house. When a child has been toilet trained it, too, will go off to the brush for its excretory functions.

A dump is maintained near the river bank. During the rainy season the household waste products are washed into the river. But at that time the volume of water is high. During the dry season the dump is

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

364
at a distance from the water and is kept sanitary by action of the sun. [514]
The dump receives the body wastes of the very young children.

## THE MALOCA

342
The maloca (*kenámi*) is no mere shelter or sleeping barracks. It is a [796]
vital social center, the very focus of social and religious life. Under its [764]
great gabled roof all ceremony takes place, the dead are buried, food [252]
is prepared, and almost all implements and articles of use are manu- [32]
factured. The Cubeo are largely an indoor people. Children play out- [517]
side and there are occasions when the older men sit on the plaza
in the shade of the house. But in the main, adults spend their leisure
time indoors, lounging in hammocks. Guests are received at the door- 342
way of the house, the hosts standing always within, in the formal 574
exchange of greetings. Having been welcomed at the door, guests 576
are ushered to low benches set at an angle near the doorway and
facing inward.

342
When I came among the *Bahúkwa* they were on the upswing, hav- 622
ing come from a creek site to the main stream. In the new site they had [114]
put up several smaller houses and the framework of a large 12-com-
partment maloca was in place. This large house, of standard size, was
75 feet long, 55 feet wide, and 21 feet high. The eaves of the hip roof
extended six feet past the low side walls. The new house is always the
work of the headman. It is started on his initiative and the work is
carried on with his active encouragement and under his direction.
The leadership qualities of a headman are precisely reflected in the
maloca, in its size and in the care that is taken in its construction. The
headman is known as *kenámi upáku* (owner of the house). The house
is his, in the sense that one who is not willing to accept the authority
of the headman will not live in the house. A house, the Cubeo be-
lieve, cannot tolerate dissension. Whatever the genealogical relation- 342
ships of its residents, they are the equivalent of a joint family. The 578
Cubeo are decidedly uncomfortable if the atmosphere of a house 592
is lacking in familial warmth. If necessary, they will overlook dis-
courtesy, uncooperativeness, and sullenness in the expectation that
such behavior will be only a passing phase. Nevertheless, they are
acutely sensitive to one another's moods and before too long one
sullen individual will have infected them all. Then someone will
move out and all sense the impending dissolution of their community.
The smaller house that will now be built alongside does not remove
the source of dissaffection. It stands rather as a reminder that they
have not been able to get along with one another. The headman is

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
Cubeo

342 The headman is
[592] responsible for the morale of the house. He is aware that its architec-
[622] tural features contribute positively to morale.

The larger the maloca the more comfortable it is. It is cooler, less smoky, freer of insects, and, offering more space per inhabitant than smaller houses, it presents a more orderly appearance. In my observations along the river I have found the smaller malocas to be less tidy than the larger ones.

342 A sib center, unless it is in a state of perilous social disintegration,
614 will have a large maloca with some 12 compartments. Such a maloca
[615] provides minimum accommodations for dances and for ceremonies that will draw upon all or a large part of the phratry. Since higher-ranking sibs entertain more than do lower-ranking sibs they must
342 have larger malocas. Thus, size of maloca tends to correlate with the
614 social standing of the sib. The small maloca is an open acknowledg-
621 ment of social inferiority. The Satellites all have small malocas hous-
554 ing from four to six families. Such a community may be economically
(592) self-sufficient, but it is socially and ritually underprivileged. It can attend ceremonies but is unprepared to carry out ceremonies on the proper phratric scale.

285
342
857

SQ19 Tucano SQ19
CUBEO

614
proper phratric scale. Some Satellite communities have small 621
malocas of the standard design, but most build a house that has a 342
square floor plan with a four-sided roof and a single entrance. The
distribution in the region of this square type of house is not well [177]
known. It is an old design but it may be of European origin. The advantage to a Satellite community of the square house is that it cannot be mistaken for a small maloca; its identity as Satellite is clear. It expresses in a more subtle way the point of separation from the parent sib house without conveying any implication of total cleavage. When a Satellite puts up its own standard-design maloca it is usually on the way to achieving social and ceremonial autonomy that will qualify it as a subsib. The square houses lack a dance floor and must regard the main sib house as the ceremonial center.

The oblong design of the standard maloca provides the following 342
spaces: living quarters along the side walls, a dance floor down the central corridor, a reception foyer and burial ground at the front end, a communal kitchen and women's quarter at the rear. The living quarters are formed by the uprights supporting the roof. A 12 household house has two parallel rows of seven uprights each along each side wall. These uprights are placed so as to form a series of living spaces along the sides. At the center of each such space is a [354]
hearth formed of three pottery cylinders with pinched-in sides that resemble hourglasses.

Each family hangs its hammocks from its posts, which are shared 342
with the adjacent families on either side. Each person has his own 513
hammock; and at night each compartment is blocked off by the 352
hammocks that have been strung at all angles from the four posts. The hammock arrangement is not formal. Children's hammocks are lower, and husband and wife are apt to take a parallel position from outer post to inner post as being least subject to disturbance. The rule is not invariable. However, once a hammock position is set it tends to remain fixed. During the day all but one or two lounging
hammocks are rolled neatly and tied to a single post. There are no [353]
partitions of any kind, and no provision for privacy. Coitus, as we [833]
have already noted, takes place outdoors, as do all toilet functions. [514]
The privacy of the space of each household is, however, fully recognized, even by toddlers. People visit one another and lounge in one 342
another's hammocks, but usually by invitation. Freest in the in-house [572]
sociability are blood siblings. Each household has its own storage [574]
facilities, a shelf built above the hammocks just under the roof, and [352]
the thatch of the sloping roof, which is a repository for any article
that can be thrust into it. From the posts are hung plaited or bark- [353]

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

CUBEO

342 cloth baskets, and calabash bowls in which the people keep their small
353 possessions. Most houses have a flooring above the main supporting beams to provide storage space for farinha.

342 Maloca are commonly decorated. The front walls at the narrow
353 end are painted with representations of bark-cloth masks that are
531 used in funeral ceremonies, while the interior posts flanking the
532 dance floor receive geometric designs. The *Bahukuwa*, whose ancestry
[184] may have been that of the more primitive Macú, do not decorate
[184] their houses. The bark-cloth mask designs depict spirit beings, and while their representations on house walls have no specific magical function they do convey to householders the atmosphere of contact with friendly beings. Similar representations are common as petroglyphs. The geometric designs on the house posts are similar to those on dancing tubes, and portray simply an atmosphere of ceremonial gaiety.

342 Ordinary cooking is done over the household hearth, and simple
252 meals are eaten around it. Manioc is prepared at the rear end of the central corridor, where the women wait their turn to share the large communal manioc oven, a circular ceramic plate on pottery supports,
[264] that has been provided by the headman's wife. Most evening meals are eaten communally in the central corridor.

342 Allocation of space in the maloca follows no precise order of
554 status, but as a rule older and socially less active households occupy the rear compartments near the kitchen area, while a headman prefers a central location on either side.

342 At night a fire is kept going at the center of each compartment, and
354 on chilly nights the occupants vie for the comfort of the space just
[513] above the fire. The people sleep fitfully. Someone is always up to tend
[512] the fire and to crouch over it for extra warmth. The day begins several hours before dawn and ends several hours after nightfall.

## THE FACTOR OF CORESIDENCE

621 While community and sib are normally coextensive insofar as their
614 male occupants are concerned, there are, nevertheless, permanent
591 male residents of alien sibs in many communities. Widows, for example, return to the parental community with their children. There
[768] are some cases of matrilocal residence as well. These exceptional but not rare cases provide information on the role of coresidence in regulating social behavior. The question of coresidence is of special interest in the Northwest Amazon region because among tribes that do not have sibs but are organized on the basis of patrilocal families it is

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

CUBEO

621
coresidence rather than kinship that has been reported to be the 614
governor of exogamy (Kirchhoff, 1981). In a sense this seems to be true 591
of the Cubeo as well.

Among the *Bahukiwa*, for example, a widowed younger sister of 621
the headman had taken up residence with her sons and daughters 614
and had assumed, as was her right, the status of household head. She 589
prepared chicha for the in-house drinking parties and she contributed 592
chicha to the drinking parties organized by the headman for the [591]
entertainment of the phratry. As a consequence she had a voice in
sib affairs. Her children were cross-cousins to their *Bahukiwa* generation 621
mates and, therefore, according to the rules of kinship, marriage 614
partners. They were, in fact, addressed as *tema* (cross-cousin). The 589
boys, however, were reared with the male play pack, normally a sib- 592
ling group, and were initiated into the *Bahukiwa* ancestral cult. Be- 582
cause of the close association of these boys with their *Bahukiwa* age
mates, the expectation in the sib was that the widow's boys would not
marry *Bahukiwa* girls but that the widow's daughters could, if they
wished, marry into the *Bahukiwa*. One of the widow's sons, a boy
reaching marriageable age, explained his position as follows: "How
can I touch the sister of one who is like my brother?" The headman
thought that such a marriage was possible, but it would be em-
barrassing because the boys were living together "like brothers." The
widow thought it was all foolish. Her fondest hope was for all her
children to marry right into the sib or at least into the phratry and
so be with her. However, she, too, conceded that it would probably
not happen that way. I also heard of the case of an orphan who had 621
come to live in his mother's sib and who later eloped with a girl of 736
his mother's sib. This marriage proved to be unpopular; some people 588
called it "incest." The older men considered it to be proper but awk- 614
ward. Apart from this case my list of marriages documents only com- [591]
munity exogamy.

Community exogamy is not a "law" but a convention that has 621
grown out of the tradition of the localized sib. The rule of sib ex- 614
ogamy, on the other hand, is inviolate regardless of residence. The 582
Cubeo invariably identify social intimacy with fraternity. They 571
have granted asylum to alien groups on their river by adopting them
into the phratry on the theory that aliens intermarry but truly
friendly people do not. Ceremonial friends become as "brothers"
and will avoid sexual relations with one another's sisters. Within a
community, the only fully established patterns of behavior are those
of fraternity. Thus, a sib alien can be either a guest, that is, a transient,
or become assimilated – not adopted – into the fraternal group. It is

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

621
614 the men who are drawn into the sibling group. The position of a
582 girl resident in an alien sib depends upon whether she has a brother.
571 If she has a brother, his associates, who regard him in a brotherly way, will probably respect his sister as one of their own. If she has no brothers in the community she has still to overcome the reluctance of men to take a wife from nearby. This, too, is no minor obstacle, since an orthodox marriage must ceremonialize the tearing away of a woman from her own community.

## THE COMMUNITY OF THE RIVER

361
614 The river forms a wider community of related sibs. With some ex-
554 ceptions the sibs have aligned themselves along a river on the basis of degree of closeness and of rank. Sibs that have segmented from a parental sib ordinarily occupy an adjacent site. The river is the most
[823] important territory. It is a highway and a link between related sibs, the source of ancestral power, and the economic zone of the men, fish
[146] being the main source of animal protein. Even most land animals
[224] are hunted along the river banks.

The orientation of the Cubeo is toward the river and not toward
361 the forest. Whereas the forest is undifferentiated terrain, the rivers
823 are known to every turn and outcrop of rock or other feature. The river is the source of the ancestral powers, of benefits as well as of dangers. The forest is a source mainly of dangers. The river is literally and symbolically a binding thread for the people. It is a source
[103] of emergence and the path along which the ancestors had traveled. It contains in its place names genealogical as well as mythological references, the latter at the petroglyphs in particular. For these reasons of
361 sentiment and of symbolic association as well as because of the clear
614 economic value of the river – hunting as well as fishing – the Cubeo
615 have cause to feel that those living along the same river should be people of common descent and, therefore, of common exogamic grouping. It is not accident but strong intent that has grouped the phratries along the same river. Those who join a river will accept membership in a phratry. On the other hand, it is accident that has interrupted the sib homogeneity of the rivers. The *Hürüwd* sib is an intruder on the Cuduiari River and belongs more properly on the Querari. It is now the only large alien group on the river. Since it is an established affinal sib it cannot be incorporated into the Cuduiari phratry as were the apparently alien *Bahükiwa*. But the *Hürüwd* are drawn into the round of drinking parties and so have slid into what is a pattern of intraphratry activity. Here again we have an example

5: Goldman-E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

of the pull of propinquity. The Cubeo welcome and respect neighborliness. 361 614 615

The river has its natural boundaries. These are the segments of river demarcated by rapids and by the tributaries or creeks. A boundary is from one such feature to the next, from a *cachoeira* (rapids) to a creek, from a creek to a creek, but rarely from *cachoeira* to *cachoeira*. A boundary defines only sib territory. There is no phratric territory as such. If there is phratric and tribal territoriality it is because each of the sibs undertakes to defend the principle in terms of its own interests. A sib may adopt a stranger and in this way incorporate it into the phratry. It needs no permission to do this. On the other hand, a sib may appeal to phratry mates for help in warding off by force unwanted intruders. Boundaries do not close a river to traffic. The river is always an open highway for travel, and travelers may fish and hunt along it freely. They may not put up fixed installations such as weirs or show other signs of residence such as fishing a particular spot with regularity without permission. Men regularly fish only within the sib limits. The discussion of boundaries, it should be explained, does not flow naturally from the Cubeo. It is drawn out by the ethnographer. The Cubeo are not jealous of boundaries and they rarely have issues over them, but they do know them. Occasionally someone violates the common law of courtesy of the use of fish weirs and keeps the barrier closed beyond the allowable period. The Cubeo cannot and do not attribute this unmannerly act to gluttony. Gluttony is an incomprehensible notion to them. They attribute it either kindly to forgetfulness, in which case there is no issue, or to unfriendliness, in which case there is a quarrel and an effort is made to tear down the barrier. On the forest side there are no boundaries at all except for the clearing itself. It is not land but river frontage that is valued.

131 614 423 615 131 614 423 131 423 578

## CANOEING

So much of a man's time is spent in a canoe that no description of native life would be complete that did not relate the Indian to the river as a canoeman or that failed to bring out the motor rhythms of canoeing. Motor rhythms are patterned, the rhythm of paddling and the characteristic rhythms of the dance showing particularly striking parallels. 501 516

Paddling follows a definite though irregular rhythm. The prowsman on a long trip is keeper of the stroke. Paddling is noisy. On the downstroke the stem of the paddle just above the blade is struck

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

501 against the gunwale to set the rhythm. Frequent changes of stroke
516 are common. In pulling away, the first stroke is slow and strong. This is followed by a brief pause, the blade just out of the water, the stem resting against the gunwale. The helmsman, who steers with a broader-bladed paddle, uses powerful slow strokes that are one to two or three to those of the prowsman. When inertia has been over-
[461] come the stroke is accelerated, often to a furious tempo. The oarsman's back bends lower and his stroke is sharp, fast, and shallow. A fast beat is not kept up for long. The paddlers rest, permitting the canoe to continue on its own momentum. Unless exhausted from a
501 long trip the mood of men in a canoe is gay. They burst into spon-
461 taneous shouts of *he ee ee*, sing, and joke loudly. Each passing bird is addressed, as "Where are you going?" With the paddle held as a gun they aim at the bird, pretend to shoot, and shout, "Now he is dead!"
501 On one occasion we chased a covey of herons downstream for about
517 two hours for amusement. The birds followed the river course, flying
[123] some 100 yards before settling on a branch. Striking paddles against the canoe and beating an empty gasoline tin, we drove the birds to the communities. The Indians shouted, "We sent you herons, why didn't you shoot them?"

501 The most important canoe positions are those of stroke and of
462 steersman. A woman traveling with men always steers, the lighter work. She may even nurse her child while steering. Among boys, each wants to be a steersman because it is easy. When the people are
[857] in no hurry canoe positions are informally assigned; children then occupy the stroke position, in a large canoe sitting side by side. They also steer. On a long journey the prowsman or stroke is always the strongest man, while a woman, or the oldest or weakest man, is at the helm. Intermediate positions are filled by considerations of balance, each canoe known for its own balance characteristics.

502 All the Indians know the river and its currents. Downstream the
[823] canoe is piloted along the currents that sweep out from creeks, calling for frequent crossovers; the center of the river is usually avoided because of the sun, the Indians preferring the shade of the shoreline. Going upstream the canoe hugs the shore and in rapid currents the men pull it along by seizing creepers. During low water, punting poles replace paddles, and sometimes the riders get out and push. High water offers cuts through the forest. I have timed these short cuts against the regular passage downstream and found that there is no actual saving. Threading through jungle lagoons in a large canoe is time-consuming, but is less monotonous and tiring than the direct passage. These passages lead often through dense brush that

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

tears the skin, and where a clumsy move shakes down hordes of stinging ants, or the canoe has to be pushed through narrowly spaced trees. Sometimes the canoe is portaged across a hillock. The forest passage is made with light, quiet strokes in keeping with the silence Indians observe in the forest. 502

Canoes range in size from a one-man capacity to up to one ton. 501 Each man makes a personal fishing canoe. Some prefer a four-man capacity, but the small one-man canoe is most popular. Every community has at least one large cargo canoe with a capacity ranging 501 from a half to a whole ton. Usually made by the headman, it is for 505 the use of all, for long trips, for transporting cargo such as farinha or palm leaves for roofing, and is the festive canoe that transports women and children to drinking parties. The headman is the owner [422] but the canoe is taken freely by sibmen. Paddles are individually [622] owned and are kept in the house, never in the canoe, but are freely [422] borrowed. [427]

Women do not own canoes, a canoe belonging always to its maker, 501 but women have use of the large canoe. They do little unaccompa- 562 nied traveling. I have rarely seen a woman alone in a canoe; she is [422] accompanied at least by a child. A woman in a canoe alone is suspected of running away or of a rendezvous with a lover. Women walk [481] great distances, but a man is ashamed to walk if he can go by water. [422] A man who does not own a canoe is regarded as lazy and inept, [558] and some boys who have never learned to make a canoe are scorned by the girls and find it difficult to marry.

Canoes don't last long. Unless properly seasoned, the wood is 396 cracked by the sun, and such canoes split quickly. Short splits are calked with pitch, stuffed with a rag, or smeared with clay. I have 501 been in canoes that required constant bailing; but as a rule an old canoe is left at the canoe landing house for the children to play in. [857] Finally it is sunk in shallow water at the canoe landing, where it [415] serves as a receptacle for manioc set to soften. Good canoes are [252] brought into the house and are used as chicha containers during a [273] drinking party. On the Cuduiari, Koch-Grünberg saw canoes ornamented on the inside with painted designs, as well as paddles with [531] painted motifs on the blades (1909, II, 89). By 1939 such embellish- [178] ments had disappeared.

The Cubeo are careless in mooring canoes, and they float away but 501 are always recovered. No canoes have ever been reported as stolen. 504 A week may pass before an owner of a lost canoe goes to look for it. [685] He waits until he needs it, for there is never any doubt that he will

5: Goldman E-5 (1939-1940) 1963

CUBEO

501
504

recover it. Away from home, a canoe is moored completely out of the water.

# *Economic Life*

## ECOLOGICAL SETTING

The Northwest Amazon region abuts on the eastern slopes of the Cordillera Oriental and has an average elevation of some 200–300 meters. Many of its rivers flow quickly and the terrain generally lacks the flat and swampy character of the lowland Amazonian rain forest. The headwaters of the Cuduiari are within the territory of the Cubeo and apparently arise in a high savannah, an eroded plateau laced with caverns and supporting on its remarkably flat surface only a meager xerophytic vegetation. There are other highlands in Cubeo territory along the Vaupés. Of no economic value to the Indians, the highlands form for them a setting of mystery because of their strangeness and their desert quality, and are held to be the domain of mythological beings. 133 [823]

The Cuduiari is a narrow river that runs swiftly past several cataracts into the Vaupés. At the peak of the dry season it is barely navigable along its full length. At that time a large canoe is pushed across several inches of water and the river course is beset with sandbanks. The smaller tributaries or *igarapés* dry up altogether, stranding their low status occupants seriously. Perhaps this is one reason why the Cubeo associate social standing with frontage along a big river. [361] The Cuduiari is an intimate river—along much of its length the trees and creepers that line its banks reach overhead to gridstream to form a bower. The opposite shore is close at hand and the entire [554]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

133 The opposite shore is close at hand and the entire
[484] river can be traversed downstream in two days and upstream in four.
[502] The Vaupés, the main stream, is a mighty river, also swift, roc'
and guarded by cataracts than can be perilously "shot" in high wa
and portaged at other times. It is a deep river with distant banks,
in places resembling a sea.

361 During the two "dry" seasons, *ihibo* (October–December, February
132 and March), the Indian communities are perched on high banks, in
[317] many places clayey and sources of ceramic clay. Access is difficult;
[417] the steep, often slippery slopes are hard to manage unless the people
have troubled to provide wooden steps or a handrail. At the height
of the June, or great, rains, the flood reaches to the clearing, and the
river is brought close. A community with its plantations is then an
island; the low-lying country a vast lake.

221 The Cubeo are more pleased with low water than with high. High
132 water, to be sure, does not threaten cultivations, which are always
on high ground, and flooding facilitates river travel, yielding shorter
routes over ordinarily sinuous turnings of the river. But the seasons
of high water (*ilákoro*) (May–August and January) bring relative
scarcity even though bitter manioc is an unfailing crop. Fish and
game are then most difficult to catch. At the bottom of low water,
fish are scarce but game, drawn to the dwindling streams, is now
abundant. The peak seasons, when game and fish are both abundant,
are after the beginning of the rains, when the rivers are filling in
November, and at the conclusion of the rains in July, when the rivers
have begun to fall off. The Cubeo render *ihibo* as summer and
*ilákoro* as winter. They also refer to seasons as *kwaino* (falling river)
and as *edáwaya* (growing river).

221 Thus, while the Cubeo normally do not experience famine or,
261 for that matter, serious deprivation at any season, the periods of
132 glut are short, one falling roughly between October and December,
and the other a minor dry season between February and April. During
these seasons fish need only be scooped out of the drying streams,
game – tapir, peccary, deer, capybara, and paca – crowds the river
banks and the manioc yield is at its peak. These are favorable seasons
for ceremony – initiation into the ancestral cult, fish dances, deer
dances, mourning rites, and the most frequent round of drinking
parties.[1] The seasons, however, lack abruptness. The rains increase
and then decrease. Neither economic nor ceremonial life need be
524 precisely geared to a season.

222 While the Cubeo are a true riverine people, knowledgeable about

[1] The year is reckoned from the dry season, since this is the time when manioc
[805] gardens are extended or new clearings started.

5: Goldman E-5 (1939-1940) 1963"
SQ19 Tucano SQ19
CUBEO

every turn and landmark of the waterways, their utilization of forest products is also extensive. From the forest they derive mainly raw materials for construction: woods, fibers, and leaves for roof thatching; and some food produce: wild fruits and berries, ants and grubs. Forest foods are supplementary and minor contributions to the diet. In a sense, game are riverine too because they are hunted along water courses. Only occasionally do hunters enter the forests on foot. They prefer to go by canoe, entering the smaller *caños* to catch animals as they come to drink. Hunting is important; the flesh of game animals – the tapir in particular – is highly appreciated and never fails to add a festive note to a meal. On balance, however, it is fish and other water creatures that furnish the main source of animal protein to the diet.

Fishing is the daily masculine routine; hunting is spasmodic, undertaken according to circumstance, as when someone has observed a herd of wild peccary or fresh tapir dung. As a break in the monotony of everyday work, and when the appetite has become jaded with fish, a hunting party is an enlivening experience.

The Indians do not complain about the corner of nature they occupy. They recognize and accept periodicity, times of glut and times of scarcity. Abundance is pleasing to them and scarcity does not alarm them. They expect it to pass. The Indians believe that they are living now in a "golden age." In the past, before they had learned farming and all the techniques of hunting and fishing, they were always on the verge of starvation and lived on tree saps and bark, their traditions say.

Once, while gathering roots, according to one tradition, they came upon the *aunhoku* (manioc) tree, a tree that had leaves of the manioc plant. Manioc tubers fell from it. They had never encountered such a tree and did not know what to do with it. Agouti (*Bucu*) came along eating. An old man asked him what he was eating and Agouti replied he was eating manioc. The manioc at that time had no skin. The tree grew in a clearing with no growth around it. It was guarded by many animals. The old man thought, "What are we going to do?" Then along came *Hubukoku* (a rodent), and he told the people to clear a *chagra* and to plant. "Now, let us cut down the tree," he told them. The old man made a *chagra* and the people cut down the tree with stone axes and puño teeth. When the tree had fallen, all the animals came to eat. The old man then saw that one branch held plantains, another sugar cane, another *turii* (poison), another *pudpii* (a potato-like tuber), and another *yapika* (sweet potato). They then cut off each limb and planted it.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

773 From *Kuwai*, the culture hero, the people learned how to fish with
226 hook and line and how to hunt with bow and arrow and with the
224 blowgun. The Indians say that in ancient times they did not hunt the
[177] tapir. It was not until they acquired guns that they learned how to
[411] kill tapir. Other animals they did not eat because of religious taboos
that are no longer in force. Paca and armadillo were devourers of
262 human corpses and were hence forbidden; eating sloth would make
[614] people lazy; and finally, all animals whose names were represented
in the sib genealogies were taboo to members of that sib.

## PRODUCTION

261 The Cubeo do not value abundance of food for its own sake.
433 Plenty is, to be sure, widely enjoyed as a break in the daily routine.
It is not valued for its promise of satiety, for the Indians customarily
eat moderately, but for the opportunity it offers for a gay feast. A big
catch of game or of fish excites the people because it does not occur
[251] often. There is no desire to overdo, however, and no more is brought
in or will be consumed directly or can be safely preserved by smoking
and drying. Since, at best, smoking preserves meat for only a week or
[554] two in the tropical climate there is not much point in increasing
[614] a fisherman's or a hunter's "take." Social status is a minor issue in
[574] food production since feasting is essentially intrasib, whereas social
status comes into play most sharply between sibs.

433 In short, there are no strong motives to stimulate hunting and fish-
ing other than appetite and desire for variety. The pressure in pro-
duction falls upon the women. If we are to speak of "surplus" at all in
244 Cubeo food production it can be only in connection with the manioc
433 crop, which is regarded as the woman's contribution, even though it
is the men who make the clearing. The limiting factor in manioc pro-
[462] duction is not land as much as it is labor and morale. A large com-
munity under a forceful headman can clear a good deal more land
than is needed for subsistence. In the case of manioc, subsistence can
244 be measured precisely by the amount that is converted directly to
433 manioc cake (*aiuno*) and to tapioca porridge. "Surplus" is what is
252 converted to chicha (*unkündye*) and to farinha. There can be no
[177] doubt but that the machete, now universal in the region, improved
[412] the standard of nourishment considerably. The real limitation upon
production is woman power. Since women carry through all phases
[462] of manioc production, from planting and harvesting to conversion
into the final product, they are the ultimate "bottleneck." A woman
working only to prepare manioc as food is already fully occupied.

CUBEO

433
244
252
461
462

To produce farinha, which is mainly for trade, and chicha, which is mainly for sociability, she draws upon what is normally her "spare" time. She gives up the evening hours of rest, moments of gossip, play with her breast baby, and food foraging in the brush, which she regards as a pleasant diversion from the back-breaking manioc routine.

433
593
461
571
626

A Cubeo woman cannot be coerced to work any more than a man can be. Her willingness to work hard depends, in the case of a married woman, upon her regard for her husband in the first place, but also upon her general relations with the community at large. The Cubeo know that a lazy woman is a disaffected woman and they are conscious, accordingly, of the social importance of marital felicity. The only control the community has over a domestic situation is by maintaining a generally high level of good feeling. Needless to say, Cubeo women are not and do not consider themselves to be abused. A woman who does not care for her husband will leave him or, if her laziness is deep-seated and represents a grievance against the community as a whole, she will urge her husband to leave with her. The fact is, the feeling against indolence or apathy toward work is so strong that even a thick-skinned person can sense the unvoiced community disapproval. Thus, in the absence of strong political authority the productivity of a Cubeo community depends in the main upon all of the subtle factors of kinship, sexual attractiveness, and satisfaction, and of public morale. An unproductive community is normally not underprivileged by virtue of location or of tools but simply by its own lack of social health.

[578]

## FISHING

226
[262]
[462]

Fish are abundant and there is hardly a day when fish are not part of the diet. The basic Cubeo meal consists of manioc cake and fish. Every male, from puberty to the grave, is a fisherman. Fishing is the regular masculine routine. Most fishing is individual – a man sometimes accompanied by a young son in a small canoe fishing with hook and line, or a man (also accompanied by a young son) fishing in shallows with bow and arrow. An Indian fishes his own stretch of river at a preferred place. If a man wishes to join another at the same place there is no quarrel, since fishing is never competitive. There is some rivalrous display of a catch but only a good-humored kind. Unlike gardening, which follows a rigid routine, fishing is flexible; a man follows his hunches and preferences, the seasons, and the species of fish and their habits. Some fishing is by torchlight, at night. The men do not necessarily leave for the river at the same time,

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

226 nor do all the men fish on the same day. A man who has had no luck one day temporarily loses interest in fishing. He turns to other activities, perhaps to hunting or to making household implements, or he may do nothing. As the season begins to taper off one fisherman after another gives up. The last to stop is the most successful. The Cubeo believe that a dispirited fisherman will catch nothing anyway. [261] When all have stopped fishing the community hungers. After about a week of poor meals the women nag, but the men do not move until 226 they have received a sign. The sign usually comes from the young 857 male play pack. When the men have retired to the maloca to sulk, the youngsters turn their play fully toward the river. They take out canoes, and they set lines along the shore. For this they win immediate praise from the women, who say, "Look, the boys can catch fish but the men cannot." The boys patrol the river. One sights a school of fish and rushes into the house shouting, "The fish are coming." The men run to the bank to see. Then with great hilarity and good-natured pummeling of the boys they take to their canoes and the fishing cycle resumes.

226 Periodically, the routine of individual fishing is interrupted by organized collective fishing parties. The organizer is often the headman, but any man who has a plan will enlist a party. Summer is the season for fishing parties, when fish can be trapped in a shallow pool and stupefied with fish poison. Fishing parties are festive and noisy. The young play pack attends them, and the catch, which may be large, is collective. Each fisherman secures his own catch. When the party returns they distribute the total catch to all households. The [183] distribution, according to an important Cubeo principle, is personal and never anonymous or generalized.

Fishing a shallow pond requires equipment and preparation. One man locates the place and asks his fellows to join him in fishing it. Several, or all, contribute sections of splint fencing that forms the weir. One party undertakes to put up the weir while another manages to gather and prepare fish poison. The men, as always, work efficiently together with a minimum of formal direction. Most have been members of a common play pack so that teamwork is automatic. Each household head has brought his own canoe into which he loads his "own" catch. Some shoot with bow and arrow, others use a dip net, and some thrash about seizing the dulled fish with their hands. Such fishing is never solemn. The men joke, they address each fish, and when they have tired of the sport they stop. A man may take secret pride in his individual catch, but he is expected to behave as though he were lampooning rivalry.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

226

Another and somewhat more restrictive form of collective fishing is with basket traps in conjunction with a weir. Some household head may have traditional rights to a *caño*, inherited from his father or uncle. He invites men of the sib to place their baskets at the *caño* when the fish are running, usually at the start of the dry season. All sibmen may share this privilege although the obligation to invite holds strictly only within the joint family of brothers. In any event, the catch from the basket traps is eventually shared among all households in the sib. [423] [428]

The technology of fishing is fairly complex, involving skills in making and in maintaining equipment and, of course, expert knowledge of fish and their habits. Nowadays all Indians use commercial fishhooks. All else is native. A father teaches his son by explaining, by showing, and primarily by allowing the boy to accompany him. The basic instruction is individual and direct. A boy who has no father learns from a paternal uncle or grandfather, but he will often not be as deft as one who has his own father as a teacher. An important supplementary mode of learning is within the play pack. Here, unsupervised by adults, the boys practice what they have learned from their fathers, listen to one another's criticisms, and exchange information. The laggard has a chance to catch up. [177] 226 868 [593]

Because the best fishing is during low water, great stress is laid upon skill in handling the fishing bow and arrow. Every boy toddler is provided by his father with a miniature bow and set of arrows and is set to practice at a fixed target on terra firma. Grown boys practice with adult equipment along the river bank, aiming, if they possibly can, for fish. A boy is always welcome to accompany his father as a companion on a fishing trip, but if he wishes to be a partner he must be reasonably adept. The Cubeo may treat some work as fun but they never confuse it with play. Needless to say, the boys attend very closely to the task of learning river skills. [224]

Every man makes his own equipment – a fishing canoe, line, fish net, basket traps, splint weirs, bow and arrows. There is some trade in these items, but no one is regarded as having reached adult status who is unable to equip himself with these necessities for fishing. Skill in making equipment is acquired by careful observation of others and by helping. As a boy reaches manhood he prepares his equipment, calling upon and freely receiving assistance from elders and from more deft age mates. Fishing lore is acquired gradually. [438]

The Cubeo say that all men are equally skilled at fishing, although to an outside observer differences seem obvious. Leadership in fishing is to them a matter of initiative and personality, not of skill. 226 554

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

226 554 Yet a leader of a fishing party may, indeed, ask an elder to come along as an expert. The fact is that expertness is very casually shared, as each fisherman narrates at the end of a day what he accomplished and how he accomplished it.

226 796 After a great catch, fish are dried and smoked for several days on wooden racks set up outside the house. The entire sib gathers, each [251] man selects a dried fish, mounts it on a stick, and dances with it. The [417] dancers wear a headdress of splints that is shaped to resemble a fish [614] basket and is called *nyukáro*, and also carry dance staffs decorated with feathers of the great fishing birds, the heron and the river eagle. [237] They sing songs (*máopuwa*) honoring the fish. There may be as many as four or five such festivals during the course of the year. I was [114] told the greatest come when the winter rains have stopped. After the dance they feast on the fish. Curiously, I never witnessed this fish festival, called simply *upaúrteno* (festival). The Indians explained that they only have the festival when they are in the mood. The dance is not intended to increase the supply of fish.

226 484 Not all communities were as well situated for fishing as were those of the Cuduiari, a well-stocked stream. Other tribes in the area often used distant streams, camping out for long periods of time, living on fish and preserving some of the catch for use at home. Koch-Grünberg, in his travels, encountered many Indians far from home, fishing strange streams (1909, II, 27 ff.). On the Cuduiari the problem of shortage was felt mainly by the upstream communities at the very bottom of the dry season. These people, however, were then free 226 to fish along unoccupied stretches of the Cuduiari, camping out or 484 accepting the hospitality of phratry mates for fishing sites and for 574 shelter. If they went to another stream it was generally to the sites 602 of in-laws, where they also had hospitality rights. Thus, kinship, including the affinal and the maternal ties, provides a completely reliable mechanism for interchange of territorial resources.

## HUNTING

224 [462] Hunting is a secondary masculine pursuit. Whereas every adult male is a fisherman, not all are hunters. Hunting attracts naturally the most vigorous age groups, men in their late teens to about 30, [178] although there are no age restrictions that would bar an old man from joining a hunting party. Hunting may have been more prominent in the past, when only native weapons, spears and blowguns using [177] curare-tipped darts, were fashionable. Today the Indians hunt with muzzle-loading shotguns that only a few possess because of the ex-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

pense and trouble. A hunter is not disposed to take risks with his small store of shot, powder, and percussion caps, and, since a man does not like to return empty-handed, a hunting party is formed only when its organizer is reasonably certain of success. As in any collective undertaking, any man who wishes to may join a hunting party. However, most parties that I have observed consisted of blood brothers or other sibmates who habitually hunted together. Hunters, of necessity, have a strong feeling for teamwork. The Cubeo are excellent marksmen, cool and courageous.

The big game is the tapir (*vekú*), who is awaited at a salt lick near a small stream. The tapir follows a customary route to the salt lick, arriving quite late in the afternoon. He has worn a trail as deep as a ditch in the soft earth. Among the maze of these deep pathways fresh tracks and fresh dung are the signs of current use. A man who has seen fresh tracks reports it. The hunters go out to kill a particular tapir who has already been observed, so that they may speak of him in personal terms.

Communities differ in hunting customs. Some use dogs to chase the animal through the forest. The *Bahúkiwa* method, which seemed quite successful, was to rendezvous with the tapir at his salt lick. The Indians are fond of tapir flesh, which is tender and tasty. I participated in only one tapir hunt with the *Bahúkiwa*. A large female was killed, toward dusk, as she nibbled on salted earth. We camped nearby, spending a good part of the night eating spit-broiled steaks and cutting up the animal for transportation home. The limbs came as entire pieces, and the rest of the flesh was cut into strips and neatly packaged in palm leaves. The men were very gay. They amused themselves by inserting sticks into the tapir's vagina. As the animal had been killed in the territory of another sib we stopped at the sib house and, as is customary, gave away about half the meat. The *Bahúkiwa* hunters were pleased at the opportunity to display both generosity and evidence of success. The remainder of the flesh was distributed at the home sib, each hunter making a personal presentation of a portion of meat. The Cubeo utilize nothing but the flesh of the tapir.

Hunting, in summary, is a distinctive pursuit and marks one for prominence. An aspirant for the headmanship is ordinarily a hunter. He pleases the community because he enlivens the diet and has surrendered some of his leisure in its behalf. In a special category is the hunter of the dreaded jaguar. Such a man is interested in sport and in prestige. The jaguar hunter may be solitary or he may invite a few close friends to accompany him. He brings home the hide for a

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

He brings home the hide for a
224 trophy, for which there is no further use, but the teeth form a girdle
[237] that is a mark of high status. Jaguar hunting is strictly voluntary
[554] and is not a formal test of manhood. During my stay among the *Bakukwa* the headman's son – an aspirant for the position – killed a jaguar with a steel-tipped lance and accepted modestly the moderate acclaim of the community. His explanation was that he wanted to experience what it was like to kill a jaguar.

## GARDENING

462 I have no statistical means for comparing the relative contributions
262 of men and women to the food supply. The general rule is that men provide the bulk of the protein, women the bulk of the carbohydrates.

The Cubeo unhesitatingly regard the man as economically most important. This is surprising, since manioc in its multiple uses as food, chicha, and trade goods is not only the staff of life but the source of intrasib activity, status, and general well-being. My informants pointed out, however, that it is fish which is the important food, and besides, they added, it is the men who make the manioc clearing. Nutritionally they are right. Bitter manioc is a poor food, rich in starch and deficient in protein.

462 An important distinction between the labor of men and women
461 is in the nature of their economic effort. That of the woman borders on drudgery. Hers is the steady routine of planting, harvesting, washing, scraping, grinding, operating the tipiti press, and, finally, forming the manioc cake and baking it.

462 On days when only subsistence manioc – that is, the manioc cake
461 – is to be baked, a woman devotes half of all the daylight hours to its
252 preparation, including time in the garden. Her preferred routine is
244 to spend six hours on alternate days in gardening. On the day she gardens, she also spends two or more additional hours in processing the roots. On the second day, however, she works only four hours on manioc. She spends, on the average, 12 hours on manioc over a two-day period. If to this is added hours spent in preparing chicha and farinha, the annual average comes close to nine hours a day. By contrast, men's labor is more flexible in its demand upon time and the quality of effort. However, it would be erroneous to overstress the distinction. There is, after all, variety in the manioc cycle as well.

462 Women customarily go to their manioc gardens at the same time,
244 leaving the maloca an hour or so after daybreak and after breakfast.
[512] Each smears her face with red pigment both as ointment against
[751] sunburn and as preventive magic against the jaguar. A woman is
[789]

SQ19 Tucano SQ19
CUBEO

 462

usually accompanied by an unmarried daughter, who is both helper and chaperon, a dog, and her breast baby. Her equipment is a machete (in the past it was a digging stick), a portage basket, and a tray upon which she rests her baby. 244 [412] [178] [415]

With the machete she cuts the long root at the base of a mature manioc plant and then loosens the earth so as to pull out the cluster of tubers. Each root yields an average of six tubers, two of which are large, two medium, and two small. This phase of the work is difficult but the woman moves quickly and silently. She does not sing at her work. Her daughter, assistant and apprentice, tears each tuber from the root, scrapes it clear of earth, and drops it in the basket. When a basket has been filled the woman gathers up the stems of the manioc plant, trims them of their leaves, and stacks the cuttings neatly in small heaps. She burns the leaves to add ash to the soil. She does not replant the cuttings immediately, but allows them to lie for several days. After an accumulation a woman devotes a morning to replanting. She breaks up the soil of the segment she has harvested and forms it into small mounds, into each of which she puts a number of trimmed cuttings, setting them in at a sharp angle. She works segments of garden that are about 25 yards square. After replanting, the earliest harvest will be after half a year, but full maturity takes two years. Each 25 square yard segment yields from 50 to 60 pounds of manioc, or one basket load. [461]

Among the *Bahukuan*, for whom I have productivity figures, the household of the headman harvested 400 baskets of manioc annually. Another household that had three adult women harvested 500. One old woman had a minimum yield of 150 and all other households averaged close to 200. Ten households produced 2,550 baskets, or some 75 tons of manioc a year. A basket of manioc converts into two large manioc cakes. In the headman's household of seven people three cakes were eaten every two days, leaving a "surplus" of close to 50 per cent for use as chicha and as farinha. On the other hand, households producing 200 baskets annually are close to the subsistence line. 244 433

The point of this digression into production figures has been to show how exigent are the demands upon the woman's labor. The women feel that they cannot afford to interrupt their labors or they will fall behind. Nevertheless, childbirth, illness, ceremonies – women do not garden on the day of a ceremony – and the press of other activities such as accompanying men on prolonged trips for hunting (in the nature of a respite for a woman) take their toll of labor time. Women do not complain of having too much to do. On the contrary, I have heard the grievance that the manioc garden is too small. 244 433 461 462

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
Cubeo

244 433 [462] A woman is proud of two aspects of her work in gardening: total productivity and the quality of her manioc cake. Productivity reflects favorably upon her own efforts and, even more important, upon the efforts of her husband, who makes the clearing. The quality of manioc cake depends upon the quality of the tubers and upon the variety of manioc cultivated. Women are knowledgeable about manioc. They 244 242 [571] are familiar with many varieties, their food qualities as well as their characteristics of growth. They are experimental as well. When women from different communities meet, they talk about manioc farming, exchange information, and very often exchange cuttings. Thus, a garden includes five or six varieties of manioc. The *Bahukiwa'* cul- [439] tivated eight varieties, one of which, a yellow variety, they had obtained from Indians on the Amazon below Manaos. Like any good farmer, a woman in the course of time eliminates poor strains for [252] better ones. Many women have personal recipes for a manioc cake 244 blended from several varieties of tuber. Gardening, being a woman's 462 domain, is a totally secular activity. If crops grow poorly the women

SQ19 Tucano SQ19
TUBER O

place the blame upon the material conditions. The woman, then, is more than a mere toiler in the garden. She qualifies as agronomist as well. 244 462

Women return from their gardens in the very early afternoon. They pause at the rear door of the house only long enough to drop the machete, and without putting down their burdens of manioc and infant, go directly to the river to bathe themselves and to wash the tubers. This is a pleasurable hour. Refreshed from the heat of the morning, the women play with their infants and jest with one another. Washing the tubers is a simple task of dipping the entire basket into the water. A light midday meal follows the washing, and the routine of processing the tubers begins. The woman may start with fresh roots, but for a more tender manioc cake she will allow the roots to soften for several days either in the house or in the river. 512 462 252 [515] [264]

The first step is peeling. The woman seats herself at her own household compartment, her back braced against a post, her legs stretched out stiff and straight before her into the dance corridor – the public alley of the house. The manioc basket is at one side and a tray at the other. She bites the butt end of the tuber to break the skin, and using teeth and fingers pulls off the readily peelable skin. This phase of the work is leisurely. Women who are not at the moment occupied come by to chat and help casually in the peeling. A woman's daughters sit with her and help. Enough is peeled for one manioc cake – that is, one half of a basket. 462 252 461 [516]

The next step is the most arduous and least liked – grating the peeled tubers on a wooden board (*pediba*) that has been set with abrasive stones. A woman can usually shift this work on to her daughter or her daughter-in-law.

The scraping process is as follows. The woman sits with her feet stretched out straight before her and slightly spread. She sets the grate on her legs with its far end braced against a house post, the forward end pressed against her abdomen. She takes up two large manioc tubers from a tray, one in each hand, and scrapes vigorously with alternate arm movements with the hardest pressure on the forward stroke. The action is vigorous, involving not only full arm movements but the bending of the back from the hips. Young women of marriageable age work rapidly and continuously until bathed in sweat. When worn down to a size where it cannot be conveniently scraped any more, the tuber is thrown aside and two others taken up. Finally, a collection of scraps is assembled into a single bunch clutched in both hands and scraped down virtually to the very bottom. This is a break in the work rhythm since both hands are used together and the move- [516]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

462 ment is slower and altogether less vigorous. Usually, except when she
461 is very strong and young, the woman interrupts her scraping for a
252 rest or change of occupation. For example, the work may be staggered. If the mother begins the scraping and the daughter continues with the peeling, the daughter, when she has finished peeling, will take over the scraping, while the mother prepares to begin the next process. The manioc mash that has accumulated at the far end of the board is removed by hand and thrown into a basket tray, and the liquid drained off into a pot to be poured out.

A substantial part of the poisonous liquid of the manioc has been
[415] removed in the scraping on the grater; the mash is further dried by pounding it through a tightly woven basket sieve. A tripodal frame is set up and the sieve set on it at a woman's waist level. The pounding, also strenuous work, requires vigorous motion of the arms, back, and shoulders. With both fists clenched the woman attacks the mash,
[516] using her arms as pistons in a crisscross motion. The mash is frequently turned. As this work is done standing up, the woman has a chance to limber her legs. Because of the height at which the sieve is set, little girls are not very efficient at the pounding, and only help out for a little while. When the mash is relatively dry after a thorough pounding it is put into a long tubular squeezer (the tipiti). The woman grips the lower end of the flexible tube between her knees, and bending the top toward her, fills it with the mash from the sieve. When full, the squeezer is hung from a projecting beam at one of the house posts. Through a loop at the lower end of the squeezer a long pole of heavy wood is inserted, the fulcrum end going through a few twists of heavy rope around the post. This phase of the work affords the woman a rest from the strenuous labor of scraping and pounding. She may sit on the pole, adjusting the pressure by the distance from the fulcrum. A woman is sometimes joined by another, who helps her sit on the pole. The liquid starch that runs down the sides of the squeezer is collected in a pot set for it. The pot is covered with a layer of ash that absorbs the volatile prussic acid, and the clear starch is used as the base for a porridge.

The mash, free of much of its prussic acid content, is finally formed into a cake upon the flat circular oven at the rear of the house. The baking is leisurely and as women wait their turn at the communal oven they enjoy some sociable moments.

462 A good housewife prepares a fresh manioc cake daily since the
252 cake tastes best when fresh, moist, and warm. On the second day a cake is dry and considerably less palatable. Thus, under ordinary con-
[512] ditions, the routine of manioc preparation is daily. However, a wom-

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

an who has daughters to help her can prepare a surplus of mash 462
that, covered with banana leaves or stored in a circular bark bin, holds 252
over to the next day. Whatever time a woman spares from manioc cake preparation is immediately absorbed by other duties, among them the making of chicha and farinha, which is simply the manioc routine all over again. When a woman prepares manioc for chicha, however, she has the help of her husband, but only at those stages that are totally distinct from manioc cake preparation. The Cubeo tradition is for men to take no part in *ãnno* production, once they have made the clearing. Still, men do help their wives in peeling the manioc tuber. Since the knife has begun to supplant the teeth as a peeling implement, men, who are the most expert in handling knives, (412) (178) feel somewhat more free than formerly to help — but not without embarrassment. I once walked into the house and saw the headman sitting amicably beside his wife and peeling manioc with a knife. Were I a proper Cubeo I would have managed to appear as though I had seen nothing. But the sight was so unexpected I stared. The man flushed and dropped the knife and tuber. Then he collected himself and explained that his wife was not well and so he felt he should help her. He assured me, as his wife smiled, that he never did this ordinarily. 123 462 252

Whereas all women share the same general manioc routine, individual circumstances differ. A young married woman with young 461 462
children has no one to help her and must work very hard in contrast 252
to an older woman with several daughters who can relieve her of much 592
of the work. A woman with many sons and no daughters has a very heavy burden. The men provide her with a very large garden; they eat heavily, they are sociable and plan drinking parties. An old woman living alone prepares her own small manioc cake ration, and worries rather that she can call on no man to enlarge her manioc garden. Yet in all these individual circumstances one observes leveling factors as well. The household with very young children eats less, has less need to entertain, and has smaller trade needs. The household with grown daughters eats more, entertains more — suitors and their parties for example — and has great needs for trade goods, skirts, and ornaments for the girls. The household with many men has greater access to trade goods through their wage labor and saves on farinha. An old woman living alone may eat with her close kin and so devote her manioc production entirely to farinha, if she desires. There are no significant differences in manioc cake consumption. Families dif- 592
fer only in the rather small prestige of owning trade goods and in 554

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

CUBEO

592 providing drinking parties. While prestige is not a negligible factor
554 in motivating production it is secondary to subsistence needs.
[433]

Compared to manioc, all other subsistence horticulture is of trifling
291 significance. The list of Cubeo cultivations besides manioc is a lengthy
262 one, but except for the pupunha palm there is nothing on it that adds bulk to the diet. Crops cultivated by the Cubeo include bitter manioc (*kerika*), yam (*uydmu*), sweet potato (*yapika*), maize (*kaiaive*), and tabena (*mwa*), as well as the following unidentified tubers: *kwaiwáryo*, *waiwari*, *mod*, *pudyú*, *kanéka*, and *kabéka*. In addition there are sugar cane (*kavámene*), pineapple, (*ihíbo*), banana (*ápuéve*), plantain (*óne*), pupunha (*une*), gourd (*horóbe*), calabash
[273] (*bahamu*), coca (*patú*), tobacco (*butei*), and capsicum (*bya*). The
[415] pupunha palm is important only as an ingredient in chicha. Gourds serve as vessels, and yams, sweet potatoes, sweet manioc, and maize barely supplement the diet. Sugar cane has become a most important ingredient to chicha, and every community grows several varieties of
[273] melons. Most of the starchy tubers the Cubeo grow are used to lend variety to chicha, not to the solid diet.

241 The Cubeo, as I have already observed, have a very strong feeling for domestication. This covers plant as well as animal life. They are eager to plant anything that comes recommended and to follow the
[272] advice of experts. Some have planted coffee shrubs, although no one drinks coffee and they have no other use for the bean. One man built an immense box on stilts which he filled with earth so that he could plant onions safe from pests. Neither he nor anyone else in his com-
[462] munity cared for onions. Sugar cane, as already noted, is mainly a male cultivation, but all other food products except for manioc may be grown equally by either men or women. No plant is neglected and the busiest woman seems to have time to look after her plantings, which may be scattered all over the secondary clearing or inner plaza.
[431] The produce of these scattered plantings, a melon or two, a handful
[621] of sweet potatoes, are often given as gifts from one household to an-
[857] other. Children, too, have their plantings.

Finally, every household has chickens, descended from stock
235 brought in by white settlers. Chickens belong to women, mainly, I believe, because that is what the Colombians and Brazilians thought
[262] was proper. Although the Indians take good care of the chickens they
[439] do not ordinarily eat them, regarding them either as pets or trading them to the occasional white man who comes by. In some communities, chickens roost in nearby trees – others provide roosting places in the maloca. A few communities rear ducks in the same manner,

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

CUBEO

A few communities rear ducks in the same manner, 231
and some Indians have experimented valiantly with rearing pigs as 235
pets.

The trade element in Cubeo experimentation with plants and 123
animals is important but not, to repeat, the exclusive interest. I had 245
been living among the *Bahuéneo* a short time when they learned of 439
my liking for fruit. I was constantly presented with fruit, some wild and some cultivated. I usually made some payment in the form of a small gift. Word spread along the Cuduiari. One morning I saw a fleet of a dozen canoes or so, each heaped high with bananas, plantains, pineapple, lemons, and oranges, coming to the community. It was all for me, brought in the expectation that I would reciprocate with a gift. This transaction, however, was an unusual one, for normally the Indians have no market for any food product but dry manioc – farinha. They have no great taste for fruit and grow more [262] than they normally consume for the sheer satisfaction of growing it. [302] Lemons, for example, are used by women to prepare a hair wash.

## MANUFACTURES

Cubeo material culture is rather elaborate for a tropical forest 121
tribe, but not as fully developed as is that of the more westerly tribes 28
that have a cotton technology. Material culture has been treated by 32
Koch-Grünberg and is, moreover, fully covered in the *Handbook of South American Indians*. I shall confine myself then to a discussion of manufactures as it bears upon an understanding of Cubeo social life.

There are few products made jointly by men and women. Men 28
ordinarily make all objects that are of wood or fiber, while women 32
specialize in ceramics. Thus the great bulk of material equipment 462
has been made by men. This includes the house, all baskets and trays, hammocks, canoes, signal drums, ceremonial objects, musical instruments, weapons, and fishing gear. Women make pottery, including the large ceramic plate of the manioc oven and the hourglass-shaped pottery hearthstones. They also prepare gourds as dishes and water containers since these supplement pottery dishes. There is a [415] small basket, *pohiro*, in which personal articles are kept, and this is made by young girls as well as by men. The only product that is jointly made is the *pediba*, the manioc grating board. Men make the board, execute a design on it, and women insert the bits of stone that form the grating surface. Whatever is made is either as a specific gift or to replace an object or utensil that is no longer serviceable. Men 462
work slowly and for short intervals, so that the completion of a 461

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

462 simple basket is often a matter of several weeks. Every man has at
461 his side, so to speak, a number of unfinished objects which he hopes to get at before too long.

462 The sexual division of labor in manufactures is rather firmly main-
323 tained. I learned of few objects in use that were not made by a member of the proper sex. Young men are drawn to pottery making, but they may handle clay in a playful manner only. They make pots and dishes in strange shapes, working rather expertly. Such dishes are given to children as toys and are soon destroyed. Children, boys and girls, play with clay, making small animal or human figures and quickly destroying them. No permanent clay figures are ever made. Serious pottery work is an annual affair, undertaken by the women when the falling river has exposed the clay banks. All at once the women working together renew the household ceramic ware.

342 Manufacture is most often a group activity, and like all group ac-
[461] tivities is regarded by the Indians as a pleasurable recreation. The
[476] exception to this rule is perhaps housebuilding, which is often strenuous. Even then, when the exertion of the task has broken the spell of good feeling, the men stop and turn to another task. A large maloca can be a very long time in building. Among the *Bahukiwa* a house begun when I arrived was not yet complete when I left almost a year later. A house must be built by a group working together not only for technical reasons, but in obedience to the principle that all who are going to live in it must work on it.

Building the communal house is a major technical and social enterprise. It tests the capabilities of the headman and the morale of the community. The true maloca is a solid structure built with great care, skill, and concern for details. Temporary houses may be slipshod in construction, but when a house is slipshod it is either clearly designated as temporary or it will be a cause of shame. Every
342 part of the house is built with the greatest care, but nothing reveals
284 more clearly the Cubeo concern for combining structural integrity and aesthetic design than the lashings that hold all the materials together. The most conspicuous lashings are those that bind the main beams. The builders start with temporary house posts and with temporary lashings. Finally, when the entire structure is in place, an expert lasher goes over the entire inner structure, replacing the beams and rebinding them in a consistent pattern, using carefully chosen
342 lianas. The Cubeo are painstaking in all crafts, but the maloca is
[114] their supreme creation. I was able to observe almost every stage in
[461] the construction of a maloca among the *Bahukiwa*. I do not recall that a single bundle of roofing thatch was laid under pressure or

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

under duress. Men worked on the house only when they felt cheerful and dedicated to the work. The man who felt out of sorts dropped away and returned only when his spirits had improved. Dependency upon mood was one of the most important factors delaying completion of a house. 342 461

Even so, the magnitude of the technical problems is not to be underestimated. The mere assemblage of material is a complex, arduous, and time-consuming task. Construction materials are not always close to hand. The *Bahükiwa* fetched roofing thatch from the mouth of the Cuduiari in what was technically the territory of the *Hehénewa* sib. Their house of 12 compartments consumed 3,60 bundles of thatch, and, since each canoe could transport only five bundles, over a hundred canoe loads were needed, a task that would normally be spread out over many months. The *Bahükiwa* headman was able to borrow from the *Comisaria* a large cargo barge and in this way a great deal of time was saved. Even so, a large party of several households camped for weeks on the lower river during a dry season, gathering and preparing the parana palm thatch (*teimá*). Altogether, thatch gathering consumed 50 days of the time of at least half the community. The practice is for the headman to institute a "crash program" to get each phase of the work well under way. His problem is to fit each phase of construction into the routine of daily and of seasonal life with minimum disruption. Strictly speaking, the decisions are not his. His is the technical voice, but he will do nothing without discussion with the household heads. Roofing can be cut during the two dry seasons and can never be finished in only one. Gathering, trimming, and binding the parana palm leaves into sheaves is the only housebuilding task in which women share. [427] [505] [462]

The headman, together with his firmest supporters, that is, his own sons and blood brothers, has the specific responsibility for erecting the central framework, the three pairs of heavy posts that will support the main weight of the roof. Others may help in this if they wish but they have no specific obligation to do so. The inner framework of three pairs of heavy posts forms the inner box around which the rest of the house is built. The timbers must be carefully chosen and then well dug in, while the parallelogram must be very carefully laid out. The floor plan is laid out with long sticks, and right angles are very accurately estimated. The rest of the framework including the ridgepole is a collective enterprise and is the second stage of construction. Roofing is the third stage. When enough roof has been laid down to provide even a bare shelter, the close kin of the headman move in. 342 335 [622] 342 [622] [602]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

342 move in. The walls and the two great doors that can be swung up are built long after the house is fully occupied.

283 824 Much of a man's spare time is devoted to preparing string of one sort or another – fishline, hammock strings, binding ropes. The most common material is from the miriti palm. The palm leaf is boiled in water and allowed to soak until long, strong fibers can be drawn from it. These fibers have extraordinary tensile strength and, therefore, have wide use among the Indians. The lower and thicker part of the leaf is slit with a knife or broken by hand to expose the fibers, which are then stripped off in one smooth, continuous motion. The man holds the leaf pinned to the ground with his great toe and pulls [462] the fibers upward. Essentially it is men's work but women and children help in pulling out the fibers. After the fibers have been allowed to dry by exposure to the air, several are joined together and rolled on the thigh into a string. Occasionally a woman helps her husband roll fishline. The end of the string is gripped between the great toe and its adjacent member and allowed to pass under the frontal arch of the foot and so is held firm. Rolling twine is leisurely work. Men rarely make more than they need for a particular pur- [314] pose. Fishline is coated with resin. This will not only strengthen it and make it easier to handle, but, the men told me, the resin darkens the line so that it will not be seen by the fish.

463 The Cubeo have no true category of specialist. That is to say, they expect all adults to possess the skills for making all ordinary household articles that are on the roster of sib manufactures. They must, of course, contend with differences in aptitude. They do so by giving the inept the fullest technical help, either by advice, or, if necessary, by virtually making the article. But even when total aid is given, the object is considered to have been made by its owner with help. 463 Items of public use, and these include ceremonial equipment and 622 musical instruments, require special proficiency and are made by the headman and by aspirants to the office. The headman then is a specialist, but his specialty is in esoteric objects for public use.

## TRADE

439 The entire Northwest Amazon area is a vastly complex trading network. Objects of every description, household implements, ornaments, musical instruments, ceremonial objects, plants, pets, and magical substances are in constant circulation from tribe to tribe, from sib to sib. Indians who are in contact with the trading centers of Colombians and Brazilians are often middlemen, pumping manu-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

factured goods into the stream of trade – cloth, salt, fishhooks, guns, 439
machetes, as well as cheap ornaments. There are at least three kinds of trade. One, with the whites, is commercial and is of increasing importance. A second is intertribal, in which specialties are exchanged. Each tribe has its recognized expertness and its products are [438]
sought after. The third, intratribal, is less economic and more in the nature of a social exchange in which people acquire objects they can readily make for themselves.

Trade with the whites is centuries old in the Amazon Basin. Since 439
World War I it has been largely stimulated by European interest in 464
Amazon rubber. In the Northwest Amazon, rubber tapping is a small 177
enterprise, between wars. Even so, it has exerted a great influence upon native life. Almost every Cubeo adult male on the Cuduiari had [191]
spent some time in the service of a *balatero*, where he learned to speak some Spanish or Portuguese, depending upon which side of the border he worked on, and where he acquired the taste for European manufactures and the wherewithal to acquire them. By now almost every Indian regards the machete, the muzzle-loading shotgun, steel fishhooks, cloth, and even trinkets as necessities. He acquires these 439
objects by selling his labor. Farinha, which represents the labor of the women, provides another source for trade goods. Farinha does 265
not leave the area. It is the main food supply of the Indian rubber tappers. A coarse meal of manioc, farinha is dipped in cold water [262]
to make a moderately nourishing if unpalatable gruel. The Indians use it among themselves only as an emergency ration on a long journey. They dislike it as a food. The *balateros*, admiring it as a remarkably cheap provender, contract with the Indian women for all they can produce. Every grown Indian woman I met was under verbal contract for a number of *paneros* of farinha. Three *paneros* of farinha, representing 12 baskets of manioc or the equivalent of about three weeks of manioc cake supply and about 12 days of labor, are traded by women for objects that have cost the trader about 50 cents. One woman showed me a pair of cheap metal earrings for which she had paid two *paneros* of farinha. The more experienced and the more extroverted women do better. They have learned to bargain and they enjoy this form of trade. Farinha has become an integral part of the Cubeo economy and of its social life, as later chapters will show. There is also some minor Indian-white trade in other foods – chickens, fish, and fruit.

This commercial trade has come to develop standard values, partly 439
because of administrative measures to protect the Indian against 648
undue exploitation but mainly because of the nature of European business.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

439 business. The Indians are now aware that in their dealings with the whites their labor and their products have a fixed value with some
[462] leeway for bargaining. Direct commercial trade, object for object, is almost exclusively the province of the Indian women. This is not a new role for them because they also are active in intertribal and intersib trade. Because women do not have as much contact with whites as do their men they still inject into the commercial trading much that is traditional.

439 The traditional attitude is that any exchange is part of a patterned
571 social relationship. An exchange establishes a linkage between the principals and each is aware of his obligations and of the showing he must make. The obligation is of generosity, the temptation to give somewhat more than one has received. The impression to be made
[831] is that one does not haggle over objects. An exchange between a man and a woman who are sexually eligible to one another introduces the additional element of flirtatiousness. All of these elements enter into and complicate and enliven the farinha trade. The more experienced men are able to adapt to commercial methods, but since it is improper for a man to conduct his wife's business for her he will stand aside when she is trading her farinha.

439 I never witnessed the intertribal trade, but when I pointed to an object and asked who had made it or where it had come from, its provenience and the nature of the transaction were always known. Manioc grating boards, for example, generally come from the Isana River. The Cubeo often traded European articles for tribal manufactures, less because they needed the tribal object than to satisfy another Indian's need for the European article. A Macú once wanted matches and gave a small basket for a box. The Macú baskets are highly valued, but in this case the initiative was with the Macú. An
[183] important principle of native trade in the area is that an object asked
[576] for must be surrendered. One must be careful, therefore, not to ask for something the owner might be reluctant to part with. Thus the
[123] *Bahiykwa* headman asked me as a condition of my staying in his community not to offer to buy ceremonial objects. "If you ask for them," he explained, "we shall have to give them to you. How shall we replace them?" Thus, there is an element of delicacy in intertribal trade. At the same time there is a compulsion to engage in trade so as to give significance to the meeting of people of different tribes. In sum, while intertribal trade eventually satisfies the requirements of the Indians for specialized objects they would not ordinarily have, each individual transaction responds to motives that are often only indirectly economic. Trade objects circulate readily. Thus, a set of

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

calabash dishes that had only just been acquired from the Karapana Indians was traded to the Desanas for a tray. The Cubeo seem to prefer the trade article to the domestic product. Finally, it should be said of intertribal trade that much of it follows the lines of intermarriages, in which objects are transferred in the course of normal affinal exchanges. 439 [582]

Within the tribe, objects tend to be exchanged largely in accordance with principles of kinship and blood brotherhood. However, as submen visit along the river they learn which objects and whose skills one may properly admire. The object is asked for, or in a sense contracted for, and a genial nonhaggling discussion settles the terms of the exchange. Apart from farinha, a special case, food rarely enters the channels of native trade. Koch-Grünberg's information that upriver people acquired manioc from the downriver *Hehénewa* does suggest trade in food. He gives no details, however (1909, II, 82). I never observed or heard of native trade in food, other than casual and small-scale exchange of secondary crops. Maize, for example, is a trade item, but then it is hardly a foodstuff on the Cuduiari. 438

## PROPERTY

With respect to land it is dominion rather than ownership that we deal with. A tribe has dominion over a territory, a phratry over a river or over sections of a river, and a sib over a smaller segment of river frontage. Dominion is sanctioned by traditions of origin which narrate precisely where the first ancestors came from, and their subsequent travels and settlements. On the strength of these traditions people can say, "This is our land." A group that has been displaced from a traditional territory may adapt its traditions to new conditions, giving itself a new origin myth. But as long as the traditions hold, the claim to dominion over the territory is not surrendered. Place names are part of the traditional claim to a territory. They identify ancestral sites, and, more particularly, fishing sites, old orchards, and manioc plantations. 423 [61] [103]

Since there is no tribal or phratric administrative organization, concepts of tribal or of phratric dominion are matters of general sentiment rather than of concrete claims. Only a sib is truly concerned with its territorial integrity. There is little cause for a sib to fear encroachment on its territory. There have been instances of one sib taking over the territory of another, but these instances, as the Cubeo interpret them, were of hostility against the people, not of desire for their land. I found no evidence of land hunger among the Cubeo. 423 614 [615] [619]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

423 The phratry, with its extension of kinship along a large section of
615 river, provides for amicable settlements of boundary disputes; these
[578] arise, however, over river use only, never over cultivated land. There is no thought more repugnant to the Cubeo than that one should cultivate land that has been cleared by another. When a woman dies
[768] her manioc plots are left to be grown over after the mature tubers have been harvested, so strongly do the people feel about the intimate relationship between land and its cultivator.

241 Within the sib territory, male household heads arrive at individual
614 or, more often, joint decisions as to the total clearing and the alloca-
361 tion of household manioc plots within it. An individual may select any part of the sib territory for a clearing, although by tradition and for reasons of convenience the plots are contiguous and the clearing
241 is one large space. Preparation of a clearing is most often a collective
614 effort supervised by the headman. Even as they begin to prepare a
361 clearing the household heads discuss their individual allocations and
622 stake out allocation. There are two ways in which the cultivation of
476 a clearing can be organized. The preferred way is for the headman to organize a collective work party, including all household heads. If this cannot be arranged, either because of lack of agreement about a joint move or because some male household heads are away in the rubber forests or in some other work, the move is made gradually. Then the headman and his close associates are the first to move to the new location. They start the clearing by preparing their own plots, establishing a bridgehead, so to speak, for the rest of the sib. This method of moving over to a new location indicates how little anxiety the Cubeo feel about getting a choice location. When the later arrivals come they can count upon help from the headman and the earlier settlers in preparing their own clearings. The general clearing begins initially as a narrow semicircular band so that each plot is about the same distance from the house. The band is then widened by each household in accordance with its needs for new land. Annually, during the short dry seasons, a household head and the other adult males cut down and burn over the timber, outward from the *chagra*, to extend the cultivations. Manioc can be harvested at from six to 24 months. A providential family allocates one section of a field for a two-year harvest.

244 A manioc cultivation is always spoken of as belonging to a woman.
423 A woman says, "This *chagra* was made for me by my husband" (or "my son" or "my brother"). She is the sole administrator of the plantation and may assign sections of it to her daughters, to her daughters-in-law, and to guests who have come for an extended visit. The

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

The relation of the men to the manioc cultivations is as follows. By working jointly in making a clearing the men are fulfilling, in part, a sib obligation. This is of minor importance, however, as compared with the specific obligations and the ensuing relationship between a man and a woman. No bond between a man and a woman is of greater importance and richer in sentiment than that set up by the making and cultivating of a manioc garden. Every garden plot defines a relationship between a specific man and a specific woman. A woman without a man can have no garden. A man without a woman has no clearing to make; he can have subordinate status only in another household. Each side gains status from the arrangement. The only firm bond is that between husband and wife. A widow has only a frail claim upon the labor of her brother, whose primary obligation is to his own household, where his wife keeps jealous watch over her own *chagra*; for a woman's pride is deeply involved in the size of her manioc clearing. The Cubeo regard the size of clearing as a sign of a husband's affection for his wife. A widow has a better claim upon an unmarried son. As we shall see, between unmarried brother and unmarried sister a semiconjugal relationship develops over the material holding of land. 244 423 593 571 [614]

We have spoken of a reciprocity in status involved in the manioc *chagra*. There is also a specific and related economic reciprocity. By making a clearing a man obligates his wife's production. The preparation of manioc cake is never spoken of as a wifely obligation, but chicha and farinha are. The point of economic reciprocity as it sometimes emerges in the course of conjugal quarrels is entirely one of status and not of so fundamental an issue as food. If we are to speak of male female reciprocity on matters of food the issue is between the male flesh foods and the female cultivated foods. Although a man obligates his wife's labor for chicha and for farinha he evidently does not obligate all of it, for a woman will suddenly declare that she is cosponsoring a drinking party by a contribution of "her" manioc. Moreover, it is part of the status of a wife that she can freely contract part of her farinha production for personal objects, such as cloth and trinkets. If there is a formal principle governing this kind of connubial economic arrangement I did not learn what it is. 244 423 462 593 [261]

The point to emphasize with respect to manioc cultivations, then, is that the issue in possession of land is not simply that of subsistence. It would be unthinkable for a Cubeo to allow a yibmate, or phratry mate for that matter, to hunger if he had any food for him. When a solitary woman laments that her *chagra* is exhausted and no kinsman is moving to make another for her, the fear she voices is not that she 244 423 261 602

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

244 423 will lack food, but that she will lack a role in chicha preparation and be deprived of trade goods. Her fear is for loss of status.

[261] [602] [558] The *chagra*, to summarize, is a well-defined item of property. It is the domain of a particular woman, in the sense of economics, in the sense of status, and, as mentioned earlier, as a kind of sanctuary. No other land in the community has this character of particularity. All other cultivations, including pupunha orchards, belong to the cultivator, but the land on which they are grown has no standing as personal property. Whereas the manioc gardens of a household have contiguity, to the point where a son clears a plot for his wife adjacent to that of his mother, the variety of its other cultivations are scattered over the entire settlement.

241 423 With respect to all secondary crops, there is also very clear recognition of ownership. Each planting has its known owner, who may be a man, a woman, or a child. Ownership rights are scrupulously respected, and no one would consider disturbing another's plantings [622] without permission. Tobacco, coca, and *mihi* are generally grown for the community by the headman, but are recognized, nevertheless, [431] as his plantings. He also contributes to the community all of his pupunha harvest. But it is precisely because he contributes to the community that his ownership is clearly acknowledged. The point, [183] of course, about Cubeo property relations is that generosity and sharing go along with the assertion of individual rights. The privilege [431] of the individual as a *giver* is thereby respected. The least formal 249 sharing involves sugar cane. It is understood that everyone is entitled 422 to the simple refreshment of a freshly cut stalk of cane. Even so, 431 adults who do not have cane of their own prefer an invitation. Children, on the other hand, do not stand on ceremony. Yet even a very young tot who is cutting a stalk does so with the announcement, "I am now cutting the cane of my older brother," or whatever the kinship connection may be.

226 423 614 On the river, the masculine domain, the men have staked out sites for placing weirs and fish traps. The setting of weirs is the one territorial issue that disturbs the harmony between sibs along a river. Weirs are commonly set in a *caño*, in which case they are a purely intrasib matter. If, however, men block the main stream they are obligated to allow fish to pass through periodically. "Sometimes they [578] forget," I was told, "and then we go and tell them. But if they are mean then we go at night and break up their weirs." Such disputes 423 are not common. Within the sib the issue is not of weir rights but of 226 specialization in fishing methods. A man develops a preference for weir fishing, he troubles to prepare the cumbersome equipment and

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

use it, and, as the others do, he shares his catch with the community. 226
Weir sites are inherited by a son so that there is some tendency for 423
this specialty in fishing to descend in certain families and not in [428]
others.

In objects there are two main kinds of property rights, those of 421
the community and those of the individual. Community rights are in all objects made for public use by the headman or his wife, such as a large canoe, great chicha urns, the manioc oven, the sugar cane press, and guest benches. Of a somewhat less public nature are ceremonial objects and musical instruments also made by the headman or by an aspirant to his office. The first group of objects are fully in the public domain and subject to constant use. The second group are in the possession of their maker and are brought out by him alone on the proper occasion. Full individual ownership resides in all other personal possessions: household utensils, canoes, weapons, trinkets and ornaments, all trade goods from Europeans, and items of clothing. Disposition of these objects is subject entirely to the discretion of the owner.

Infants also own property and their rights are more or less respected. 858
Sometimes a planting is set in an infant's name by the parent or 421
grandparent. A mother commonly dedicates a brood of chicks to her nursing child. The feeling is that, as with ornaments, possessions confer human status. That is, a person should own things. If the child is 858
old enough to understand possession it assumes charge, more or less, 421
otherwise its possessions are administered by its mother. I have nego- 593
tiated, for example, the purchase of chickens owned by children. In 123
one instance a mother prevailed upon her little boy to sell me a 425
chicken. After the sale was made, however, the child wailed miserably 867
so that I felt obliged to make him a gift of it. His mother kept the purchase price and announced that she owed the child the value of the chicken. When the child does not understand the transaction, its mother announces publicly the facts of ownership and her intentions to make restitution.

The attitude of the Cubeo toward personal possessions is best 421.
described as casual. They are not indifferent to objects but they regard strongly proprietary feelings as improper. Their attitude toward ownership is governed by the important status principle that giving is honorific. Among sibmates objects circulate freely, the closer the tie between people the more active the exchanges. Sisters exchange orna- [602]
ments and trinkets and men borrow freely from one another with [593]
or without permission. They seem to be most free with objects of economic utility, such as a canoe, weapons, implements, and somewhat

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

more possessive with objects of personal adornment. While the former objects circulate most freely within the sib, the latter tend to circulate more among blood siblings. Consonant with this attitude of casualness is an almost total lack of anxiety about loss of property. An improperly secured canoe drifts away and the owner makes no immediate effort to retrieve it. It will come to rest somewhere downstream, he reasons, where a sib or phratry mate will secure it or even bring it back. Children have access to cherished possessions of their parents and when there is damage or loss it is considered improper to scold. The young son of the *Bahukiwa* headman asked for a prized clasp knife. The father, reluctantly to be sure, gave the child the knife. The next day the child had lost it in the river and the father accepted his loss without comment.

On one occasion a visitor from an upriver sib rose to leave, after having spent most of the day in amiable talk, and in a most casual voice said, "I will take my spear with me." A young man then went to his quarters and fetched the spear, which the visitor took as he departed. The young man explained that he had been at this man's house during a drinking party. He saw the spear and admired it and took it home without saying anything about it. Theft to the Cubeo is not a matter of purloining an object. It is entirely a matter of attitude. They ask, in a manner of speaking: Is the taking of an object an act of friendship or of hostility?

## INHERITANCE

Land, as already mentioned, is not an important issue in inheritance, mainly because the question of who has prepared a clearing for whom is too vital a matter for the Cubeo. A woman would find it unsettling to work land that a man not of the proper relationship had prepared. Daughters, of course, will work the land of a dead mother as they had worked with her when she was alive. Some personal objects are buried with the deceased; others, such as a woman's pots and a man's fishing gear, are destroyed. Some property, however, is inherited. Sons inherit from the father, daughters from the mother. Valuable and important objects go in inheritance, minor objects are destroyed, and symbolic objects are buried with the dead. The right to bequeath an object within the family is fully recognized. Ceremonial objects confer status and must go to the proper heir. I learned of no irregularities or disputes in the inheritance of ceremonial regalia. A man's gun and machete are valuable items and go to the son, but if the widow should remarry it is proper for the son to

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

present them to her new husband on the principle that the economic balance of the household should be maintained.

## FOOD

Food passes among close kin and rarely goes outside the sib. The household is, of course, the primary food-sharing unit. Its members eat all informal meals together and up to a point where it becomes arrant discourtesy the members of a household are privileged to take all their meals separately. The maloca group, nevertheless, is the common body that shares the formal evening meal. The setup of the maloca is such that only small quantities of cooked food can be prepared over a household's hearthstones. Manioc cakes and large quantities of food call for the use of equipment that is the property of the maloca, having been presented to the maloca by the headman or by some aspirant to headmanship. No household, however, has to share food merely because it has been prepared on common equipment. The common equipment stands as a reminder that the maloca is indeed a single house occupied by a single family. People eat together because they are conceptually a single family. When members of a household are cross with others in the maloca they prefer to eat alone, for it seems absurd to the Cubeo to eat with someone with whom you are angry. Ordinarily, however, households breakfast alone; they may or may not have a midday bite with other households, and they will ordinarily take the evening meal, the major meal of the day, together. Unmarried girls eat with their parents; young men, however, enjoy the hospitality of each married brother's household. Independents, those members of the sib who are of the community but not of the same maloca, eat their ordinary meals separately and join the maloca for a gala feast, when there has been a great catch of fish, or when tapir or wild pig has been brought in. On such occasions a portion of the food may be sent to the Satellite communities, or the Satellites may be invited to come and take part.

The following observed event illustrates some of the principles of distribution of game. Four hunters had shot and brought back four peccary, one animal each, as is customary. Three of the hunters were blood brothers, but of two different mothers, and the fourth was their father's brother. Among the brothers, two were unmarried. The youngest of the unmarried men presented his peccary to his mother, who singed it for him before he took it down to the river for butchering. The others made no formal presentation of their game but did their own singeing and proceeded to the river's edge to prepare their

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

animals. When the animals had been butchered, the wives of the married hunters and the mothers of the unmarried hunters carried off the first cuts of meat, the internal organs, and scraps. (The stomach and intestines are not eaten and are thrown immediately into the river.) Each woman took the meat from the animal belonging to "her" man and boiled it at her own hearth. Then all the boiled meat was heaped upon clean banana leaves at the household of the mother of the older unmarried hunter. She was an old woman no longer a part of the household of her husband. She was chosen to be honored by her son because of her ordinarily underprivileged situation. The entire community was invited to eat. The hosts and their households took a portion of this meat aside and ate alone, to emphasize clearly that they were givers. When this meat had been eaten, portions of the remainder, haunches, were distributed to those households that did not ordinarily provide animal game, in this case the household of a widow and the household of an old man. The older woman who had been honored gave, on her son's behalf, to the widow; the elder of the hunters presented a haunch to the old man. The greater part of the meat was appropriated by each hunter's household for smoking. This meat belonging to its respective hunter was then shared with the rest of the community at the collective evening meals. Each of these households, however, had the privilege, of course, of eating as much of the meat as it wished at any other time.

Wild fruits, grubs, and ants, that is to say, foodstuffs foraged by women, are consumed more informally. Fruits are simply heaped up on the floor of the maloca to be eaten at will. When women bring in grubs and ants, that are commonly roasted on the communal manioc oven, those who wish to join the informal feast gather about the oven and help themselves. Foraged foods are not regarded as meals but as tidbits. There is still another form of informal eating. When a man returns home from any strenuous activity he is immediately given some food by his wife or mother.

Food has symbolic significance for all people. The Cubeo always attach social meaning to the exchange of food. Food does not pass casually from person to person merely as a means of assuaging hunger. People visiting other sibs carry food with them because unless they are drawn into the life of the host sib in such a way as to give them true family status they cannot count upon being fed. The *Bahúkiwa* were endlessly annoyed with me because a visiting trader or labor recruiter could count on having a meal with me. "Why do you feed him when you don't even know him?" they would ask incredulously. For some time thereafter the attitude toward me would be one of re-

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

serve, perhaps of suspicion, as though the meal had established a relationship between me and the "enemy." Because, at their insistence, I lived among the *Bahúkiwa* as an "Independent" in a small hut of my own I shared only in the festive meals. But when I traveled with them and took part in what they were doing I shared in the food of whatever household I happened to be most closely associated with in the current activities. 261 574 123 [122]

Men give game and fish to their wives and to their mothers. If there is to be a further distribution to other women the wives and mothers usually make it. When a man gives fish or game to a girl whom he may marry he will have declared his intentions. In ceremonial friendship, food exchange between men and women is a most important token of closeness of relationship. In food preparation the Cubeo follow the common tropical forest pattern: women boil, men bake and broil. 261 431 [584] [572] 252

The visitor to a maloca is given a pepper pot (*bya*) in which to dip a bit of manioc cake. This offering of the pepper pot is a token of feeling, it may even be refreshing to a weary traveler but it is not food; it is in lieu of food. The casual visitor is received into the coolness of the house and is offered the visitor's bench near the door. When he is seated, the headman's wife appears with a small pot of boiled capsicum peppers which she sets on the ground before him. She withdraws after inviting him to eat. She then comes back with a tray on which is a manioc cake or a portion of one, sets this before the pepper pot, and withdraws. Then each woman of a household brings forward her own pot of peppers and adds manioc cake to the tray of the headman's wife. When the guest is alone with the pepper pots he leaves the bench, and, crouching, dips small bits of manioc into the pepper pot, taking care to taste of each. He does not eat as though hungry, but solemnly, just tasting. He returns quickly to the bench and the women come forward and remove the pots. That is the extent to which a guest is fed. The offering of *bya* and manioc cake has a precise meaning. It is enough food to betoken hospitality. On the other hand, the peppers are of a class of excitant substances that are suitable for the atmosphere of excitation when guests are entertained. 462 261 574

Food formality is most marked among the elders and most relaxed among younger men either not yet married or newly wed. I have seen such young men visiting another sib mock the formalities of the pepper pot with their age mates and even join in a family meal. When they do so they make it clear that they are jesting. 261 561 522

Within the maloca there are two eating arrangements. One, within the household, is informal, and the other, collective or maloca-wide, is formal. In informal eating, husband, wife, and children of both sexes 264

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

264 eat together, crouched about the small pot of prepared food or sitting
in a hammock. Such meals are usually light and rarely consist of
264 fresh fish or freshly caught game. It may be a pepper pot into which
262 preserved fish or meat has been flaked or a dish of dried meat chopped
fine with dry peppers. If it is the morning meal, taken just upon
arising an hour or so before dawn, it is a *mungau*, a tapioca porridge
sometimes mixed with crushed pineapple. There is not much eating
between meals. If men have been working hard they refresh them-
selves with sugar cane. Youngsters, however, eat as often as they like,
and that is most of the time. Youngsters are free to draw upon the
household larder, but much of what they eat they have foraged for
themselves, fruits, sugar cane, small game, and fish. A youngster,
however, will take only manioc cake prepared by his own mother.

264 The main meal, taken just before sunset so that it concludes shortly
after sunset, is usually formal and separates men and women. A col-
lective meal, it is eaten in the center of the dance corridor. The men
crouch in a tight circle around the cluster of pots that each woman
has set down. Their sons are before them in an inner circle. Women
and girls sit in an outer circle behind their fathers and husbands.
The men eat first and when they have finished they rise and return to
their hammocks while the women and girls then move in to finish
what is left over. The Cubeo are not voracious eaters. They eat almost
261 daintily and are amused at the uncouthness of those who eat as
264 though they were hungry. When I ate with them I always left the
table hungry. I never saw any Indian eat to repletion even when great
quantities of food were available. The method of eating, with the
women waiting hungrily behind them, is perhaps a deterrent to gorg-
ing. It is my impression, however, that the Cubeo associate excess
only with drink and associate food with moderation. That is to say,
[183] excess is pertinent to intersib gatherings, moderation is the keynote
[64] within the closer community of kin that is the sib.

264 People eating together are gay, though not boisterous; even the
522 older men, ordinarily solemn, unbend. The younger men laugh,
tease one another, remember with amusement an incident in the
catching of the food they are now eating. The women join in the
laughter most generously and the men gallantly pass back to them
morsels of food on bits of manioc cake. The normal movement of
food at this point is from a man to his wife, daughter, or sister. But
in the spirit of jest he will pass food to another woman. This will
provoke mirthful calls of "ha, sour sweetheart." No man would be so
foolish as to pass back food to a woman with whom he might be
having an affair even though this is a permissible jesting occasion. If

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

he is really "cutting up" he will choose an old woman and so draw upon truly licensed ribaldry. When the women are left with their portion they carry on in the same convivial spirit. Household meals by contrast are solemn. When a meal is finished they rinse the mouth with water, using the fingers to scrub the teeth, and finally they wash their hands in a "finger bowl" of water. In some upstream houses, though, I noticed hands being wiped on the house posts. 264 [522] [184]

Guests who have come for a drinking party or other ceremony will ordinarily eat very little for the duration. At the mourning ceremony, which lasts three full days, the hosts prepare a few corn cakes and tie these to the house posts for a hungry guest. But they prepare no more than about one corn cake for every three guests or so. Moreover, by tying the cakes to the house posts rather than serving them in a dish they are clearly indicating that this is not a meal. If people wish to eat during these three days they must bring their own provisions. Needless to say, a person hungry enough to ask for food will be fed, and at the protracted mourning rites there is a certain amount of scrounging upon the food resources of the hosts, but of an informal and almost underhanded nature. Women feel free about passing food to one another and the men surreptitiously nibble at it. The Cubeo expect an adult male to tolerate hunger under any circumstances, and not to feel hunger at all during a ceremony. They expect women to live up to this standard but partially, and they are completely tolerant of the young, who may or may not eat on these occasions as they see fit. 264 765 261 [574] [796] [273] 261 264 577

Eating is considered a social activity occurring in a number of specified social settings, all of which involve Cubeo notions of intimacy. The sib is the normal outer limit of intimacy with respect to eating. However, guests may be temporarily assimilated into the sib if they take part in all of its activities, such as the woman cultivating a borrowed manioc garden and the man hunting and fishing. When they have been so assimilated they may eat as sib members do. The eating problem involves the overnight guest. There is no taboo against inviting even an overnight guest to join in a sib meal. It is rather that host and guest alike regard this as a most delicate matter. It is embarrassing to eat with people who are not intimates. Most often I have seen guests huddled in a corner eating a cold supper of old manioc cake and some dried fish they have brought with them. They are surrounded by a wall of privacy since the hosts will not look at them and they will not look at the hosts while they are eating. Before I understood the Cubeo sentiments about eating I inadvertently caused a visiting woman acute embarrassment. She and her husband, 264 574 [614] [123]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

264 passing by downstream, had paused among the *Bahúkiwa* to pay a
574 courtesy call. The woman was hungry and drew some provisions to
123 eat. She then noticed that I was looking at her as she ate, so she turned her back. Puzzled by this, I asked the *Bahúkiwa* headman what it meant. He said, "That is the way some people are." When the woman heard me ask, she reached in among her things and fetched out a mat which she set around her like a screen. From behind the screen she completed her meal.

261 The Cubeo seem to regard food as markedly secular, and this may
758 explain why the sick who are supernaturally afflicted must avoid all foods except for some manioc cake.

261 The play of young boys often involves food. The young male pack
571 fishes for minnows, traps small game, and forages in the nearby forest
866 for ants, grubs, and fruits. They share all food equally, except that a boy aspiring to be a leader takes a smaller share for himself. This
[857] attitude of leadership has its counterpart among adult males. Within the maloca a leader – not necessarily the headman – makes a point of sharing the food he has with the sib even if it is no more than a small fish. Those who are not leaders and who do not aspire to leadership consume small catches of game and fish in the household, reasoning that they have only enough for one family.

261 In view of the symbolic significance of food, its involvement in
183 leadership and in social intimacies, it is not surprising that a good
571 part of social and individual pathology should involve disturbances
431 of conventional patterns of sharing. Two kinds of disturbance came to my notice; one, the more common, a pathological nonsharing, and the other a pathological stealing of food. Nonsharing appears early in the male play pack and continues, I suspect, into adult life. Food disorders affect males far more because only they are expected to uphold the amenities of food sharing. Like their mothers, girls are attached only to a household, forming no play pack. If they forage for foodstuffs it is in company with their mothers and for the use of the household or the sib. Some boys in a play pack take the share of food that has been given them and hide behind a tree, crouch behind a bush, or turn their backs while eating. They are even stealthy in eating food that they have obtained by their own efforts. A boy
[123] once came to my hut and asked for food. I gave him a banana. He crawled under a table, turned his back to me, and gulped it, while his companions were outside the door waiting for him to come out. I am certain they knew what he was doing, but even the youngest Cubeo boy has learned the courtesy of ignoring poor manners in

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

others. I doubt that any nonsharing goes unobserved and I expect 261
that the nonsharer is not too concerned with being unobserved. Often 183
enough, boys will quarrel about the distribution of food, but never 571
with a nonsharer. They sense the significance of the gesture and are 431
embarrassed by it, waiting for the delinquent to finish. He rejoins them and their play resumes as though nothing had happened. Elders will not correct nonsharing among children because they regard what the boys do in the play pack as a matter of no adult concern. I was never aware that the children themselves ever rebuked or punished a nonsharer in their midst. The nonsharer always received his portion. The play pack leader, who does not hesitate to censure a member for indecent sexual behavior, is comfortable in his role as a giver and will not censure a nongiver. He understands, to be sure, that nonsharing is a form of deliberate estrangement from the intimacies of the group, but he also knows that no headman will censure a household head who chooses to become an Independent or a Satellite. Similarly, the nonsharer may estrange himself from the play pack but the play-pack will not ostracize him. Among the *Bahiukwa* the flagrant nonsharer was also the boy who ran away during the ancestral whipping rites. Every example of a case of nonsharing that came to my attention (five or six only) was that of a boy who had no father. Orphan boys are deprived of one of the more pleasurable in- [736]
timacies of receiving a portion of fish or game that a father brings
home. A man's son is the first to greet him when he beaches his canoe. [593]
He is given a fish or a bit of meat, which he prepares by broiling or baking and shares with his play pack. He has the status of a giver. The orphan child, in these circumstances, has the lower status of a receiver and is denied a food intimacy. The nonsharer acknowledges at the same time a status of subordination as well as of estrangement.

Among adults, nonsharing is more disturbing and more consequential. A man who does not share food eventually refuses to do his share of work. Such a person is called "one who does nothing." A [578]
household head who is angry or out of sorts will not join the sib meal but will gather his family around him at the household hearth for a private meal. A mood is respected and the incident passes with little notice. If it is repeated, it is assumed that the nonsharer will soon move out and become an Independent. Nonsharing does become a touchy issue when food is scarce. We were experiencing hungry days during the height of the rainy season, most meals consisting of manioc cake dipped in peppers, fortified occasionally with a minnow. One late afternoon a household head entered the maloca with a

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

261 string of two fish. Momentarily all eyes turned hungrily and happily
183 toward him, only to encounter the averted eyes that told plainly that
571 he was not going to share. The man walked directly to his own
431 hearth and gave the fish to his wife, who was awaiting him there with the children. She took the fish in silence and quickly set about preparing it, never once turning her eyes out upon the maloca. The house filled with an appetizing aroma that it had not experienced for many days. Everyone pretended not to notice it. The little family sat glumly around its pot of fish, eating in silence and with averted eyes, observed only by the young children, who did not, however, venture near. One man made an effort to break the melancholy spell that had fallen over the maloca. The effort failed. A visitor to the maloca the next morning, however, would have been unaware that the previous night had been a miserable one.

261 During this same period of hunger I also saw a household head
183 prance into the house holding before him one little minnow. He
571 chanted in a comic vein a little ditty to the effect that he had singly
431 caught this monster of a fish and that now his wife would prepare it and all would feast, putting an end to their hunger. With a grand
522 gesture he gave the fish to his wife, who giggled merrily and, helped by the women, prepared it. The meal that followed was about the gayest I had attended. This is correct procedure. A responsible household head does what he can to boost morale. The nonsharer has a deadly influence upon a house and in the end he will have to leave. The Cubeo know very well what nonsharing means: He does not like us.

261 No one will be asked to leave his own kingroup except in a fit of
183 anger. Just as the boys of the play pack will only stand aside as their
571 nonsharing comrade gulps his food privately, so the adults will do
431 nothing but pretend not to notice the nonsharer in their midst. "He
578 does not have to share his food if he does not want to," they say in extenuation. When the nonsharer refuses to do his share of the common work, he adds to the sense of grievance against him, but the crisis is subacute. It becomes acute when his wife no longer goes to the manioc garden and asks other women for manioc cake. Then it will be said, "He has a lazy wife, they are not good." At the next drinking party they quarrel, all the resentments are aired, and the dissatisfied household departs. I was told, but could not verify it,
[754] that in the end chronic nonsharers are killed by sorcery. Such people, it is said, become wanderers, imposing upon the hospitality of kin and of friends. Since they are basically uncooperative they annoy everyone until someone in a fit of anger decides to put them to death.

CUBEO

## THE ECONOMIC SYSTEM

The Cubeo economy may be characterized as essentially inelastic, sustenance-oriented, and egalitarian. In these respects it contrasts with parallel root horticulture economies in other parts of the world, such as in Oceania and Africa. In those areas economies are generally in the service of social status and of political power and are, consequently, dynamic, fostering social and economic inequality. Among the Cubeo, on the other hand, and in the South American tropical forest as a whole, social status is a minor issue in production, while the headman, who in Oceania and in Africa plays a commanding role in economic distribution, has here only the most diffuse economic functions. 433 171

The relative inelasticity of an economy is, needless to say, a function of many factors. In the case of tropical forest horticulture, the nature of crops, soils, methods of cultivation, and tools are all relevant. Even more significant, however, are such factors as the social organization of production, including such fundamental matters as the division of labor, as well as the nature of political controls. The motives of production are of greatest importance. Motives of status and of political power provide, all other factors being equal, for an expanding economy. When the aim of production is mainly to provide sustenance and to maintain a limited network of lateral (as opposed to hierarchical) exchanges the economy tends to remain in equilibrium with its customary standards of community size. Such an economy is conservative and traditionalistic. 433

With respect to physical factors, Cubeo manioc horticulture has come close to reaching a productive limit in terms of yield per acre. The yield from *Manihot utilissima* normally ranges from six to ten tons per acre. Among the *Bahiikiwa* I estimated the acreage yield to be between five and six tons, a productivity that reflects considerable agronomical skill and effort. Any substantial increase in aggregate production would have to come more from expanded acreage, for which the land is available, than from more intensive cultivation of present plots. Acreage expansion, however, is limited by a combination of social and cultural conditions as well as by the peculiar nature of bitter manioc itself. As is well known, the ease of cultivation of bitter manioc and its relatively high yield is offset by the great effort required to rid the tubers of hydrocyanic acid. I have already described the processing of manioc from raw tuber to a cake and its heavy demands on the time of the women. Bitter manioc is a cumbersome crop and the load of 50–60 pounds that a woman carries home from the garden represents her carrying capacity. 244 433 [147].

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

244 home from the garden represents her carrying capacity. These are
433 the technical problems. They are not inherently formidable, except
in terms of the traditional sexual division of labor of the Cubeo. The
244 men who make the original clearing can call upon group labor and
433 they have the spare time. If increase in manioc cultivation were only
462 a matter of preparing a clearing it would be relatively easy for any
461 community to double its present zone of planting. The Cubeo, however, must calculate the size of a clearing in accordance with how much land the women of a household, working independently, can cultivate. On her part, the woman does not cultivate more than she can handle in the course of her accustomed routine. In manioc cultivation each household is autonomous; and while a woman can call upon the help of another woman when she is not well there is simply
[622] no collective or cooperative organization to help harvest, bring in, and process the crop. The headman who has the authority to direct the masculine work party that prepares the clearing has no jurisdiction over the work of the women. And neither does anyone else.

433 Nor does the nature of demand place much pressure upon manioc
434 production. Under ideal conditions at least two-thirds of the man-
244 ioc crop is for food. The rest is divided between chicha and farinha.
[261] Since the Cubeo are moderate eaters and do not have the custom of
[273] feasting outsiders, the demand for manioc as food is inelastic. There
[614] is only a little more elasticity in the demand for chicha. Although the
[182] drinking party is a principal means for binding the sibs it cannot be said that increasing the quantity of chicha consumed at a party or adding to the traditional number of parties would promote additional sib cohesiveness. In this instance a law of diminishing returns may be said to operate.[2] In any case, since each sib assumes some of the re-
[614] sponsibility for entertaining the others, the burden of supplying the
[554] chicha is pluralty-wide. The poorer sibs entertain less often than do the richer ones.

43 It is in the production of farinha that some elasticity in demand may be expected. Farinha, as the Cubeo equivalent of a "cash crop," pays largely for vanity articles, ornaments that have no traditional sanction, but also for cloth petticoats, that have now become customary apparel. However, this aspect of production for the market is also socialized. The goods a woman acquires from the sale of her farinha are largely committed to the intricate network of gift exchanges that apply between husband and wife, brother and sister, and between ceremonial friends of opposite sex. In a general way

[2] See the chapter on the drinking party.

S. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

the production of farinha by women is a partial counterpart to the work of the men in the rubber forest. The man takes most of his earnings in "capital goods," muzzle-loading guns, machetes, fishhooks, matches, knives, thread, needles, ammunition. The remainder goes to a few vanity items for himself and in gifts for his wife, sister, and female ceremonial friend. It is these gifts that a woman is obligated to reciprocate through her farinha trade. Since these gift exchanges involve traditional relations of status equality they quickly achieve a relatively stable equilibrium. Only a small part, then, of commercial exchange leaves the traditional channels of lateral circulation of goods. As for "vanity" purchases, they form no part of any institutionalized expression of social prestige. The issue for the Cubeo is rather one of a limited degree of self-indulgence. For a woman, in particular, the privilege of indulging a fancy for some trinket and freely contracting her farinha for it is an essential part of her sense of domestic well-being. It is an expression, on the one hand, of her autonomy, and, on the other, of domestic felicity. A dissatisfied wife does not indulge her personal vanity more; on the contrary, she produces less.

Another important element in production is the attitude toward labor. For the Cubeo all effort must be inherently satisfying. Women accept more drudgery than do men, but they no more than the men would accept the bitter peasant philosophy that hard and unrewarding work is man's lot. Men and women alike are accustomed to a variety of effort. They do not care to drive themselves beyond the onset of boredom or of fatigue. All work patterns are based upon short and diversified rhythms. I have demonstrated this in the work cycle of women. It is even more marked in the work cycle of men. Food gathering and preparing does demand continuity and completion. The hunter must complete his chase, the fisherman must return home with a suitable catch, and the housewife must complete her daily ration of manioc cake. Even so, there are many opportunities for rest and diversion that the Indians take. They would rather eat less than work more. In the course of a year there are many holidays. Among the *Baluhiwa* these averaged almost one a week. On the occasion of a drinking party women do not go into the fields either on the day of preparation or on the day after. In manufactures, which form part of the domestic economy, the pace of work is very slow. Men, who make the baskets that are important home utensils as well as major items in trade, work very sporadically. There is no compulsion to finish something quickly. Thus, on the whole, the Cubeo work habits also contribute to general economic inelasticity.

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

433
184
361

There is no formal provision in Cubeo economy whereby foodstuffs, utensils, or productive equipment can accumulate disproportionately in any one household or in any one community. There are well-to-do communities and there are poor communities, the differences between them being due, however, almost entirely to their own

361
614
433

state of morale, but also to differences in location. Location, as has been noted, follows the formal but functionally inconsequential ranking of the sibs. Upriver sibs may have some disadvantages in fishing during the dry season. On the other hand, they have advantages in hunting. Tapir, for example, are more numerous upriver on the Cuduiari than downriver. Moreover, occupants of a river do have the privilege of fishing anywhere along its length. In this respect, the most important point to emphasize is that the Cubeo acknowledge the right of all who are not enemies to the available food resources. The economic domain of the tribes in the Vaupés area is, in fact, an extensive one. The sib territory is of course the economic center, but there is also available a vast periphery of supplementary economic zones. On the scale of friendship and of bilateral kinship men acquire hunting and fishing rights in many different rivers. Thus, in his trip to Koch-Grunberg met sections of tribes, including Cubeo, very far from their home base. The hospitality of the house is proverbial

614
433
574

in this region and such domestic hospitality has its counterpart in a hospitality of the river or of the forest. It is the privilege of families to travel about visiting community after community where they have either a kinship claim or a friendship claim. Everywhere the men are welcome as fishermen and as hunters and the women are assigned gardens. So long as visitors join the economic round they are welcome. It is even more accurate to say that they are eagerly welcomed, for nothing contributes more to the state of contentment of a community than the desire of others to join it. The issue, of course, is economic hospitality and not freedom of trespass. The right of trespass is the

[421]

right to enter and to use an economic domain without taking formal cognizance of those who have a stronger or more traditional right to it. Such rights among the Cubeo are nonexistent. The rights of hospitality, on the other hand, obligate those who have entered a nontraditional economic domain to engage in the traditional forms of reciprocity that bind siblings and phratry mates. When hunters kill a tapir in the domain of another sib they are not obligated to "pay tribute" but they do have a sense of obligation to give some of the meat to the host sib as part of a pattern of food reciprocity.

[431]

433
261
57

Underlying this relatively unrestricted access to food resources are two cultural conditions. One is that food for the Cubeo symbol-

5 Goldman E-5 (1939-1940) 1953
SQ19 Tucano SQ19
CUPEO

433
571
(261)

unity of the highly knit sib community; the other, and a related condition, is that the total economic product is divorced from considerations of status and power. Thus, the Cubeo cannot think of economic advantage as a political advantage over others, and, conversely, they cannot regard the economic advantage of others as a threat to their own autonomy. Economic equalization through the various formal channels of distribution is taken for granted. There are no sanctions or techniques deliberately designed to promote equality, but simply provision of sustenance for all persons within the network of kinship and friendship.

## *The Sib*

614

The Cubeo sib is a unilineal descent group whose members regard themselves as being descended from common ancestors but cannot [illegible] an actual genealogical relationship. Sibs are named, nor-
(615) [illegible] exogamic, patrilocal, and patriarchal. They are bound [illegible] exogamic rules within which they occupy an order [illegible] reflects the sequence in which they emerged during [illegible] emergence. Sib members claim descent from the [illegible] brother-sister pair. Each sib bears a name that in [illegible] is the name of the sib founder, but in any case is the name [illegible] that is an early ancestor. The first ancestors are called [illegible] the Ancients. The sib is the center of the social struc-
(622) [illegible] and regulation of all main social, religious, and eco-[illegible] activities. It is the only true political unit since only a sib has [illegible]. A person's identification as only by sib. The strongest [illegible] the Cubeo have for the sib is that it is a family in which [illegible] the strongest solidarity because they are the ones who [illegible] together. The women never lose their sib identity. [illegible] married woman returns home, as a widow, divorced, or [illegible] she may take up a position in the sib that is [illegible] equivalent to that of a male head of household. She [illegible] place in the informal council of household heads and takes [illegible] in giving drinking parties to her sibmates.

[illegible] Since my details of the Cubeo sib system is incomplete, being based [illegible] information from a few sibs only, the principles of sib nomen-

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

clarifie can only be hinted at and not definitely established. One principle, that of eponymy, seems to hold for sibs of high social standing. But my information on this point is limited to only one of the phratries. In this phratry, composed of sibs along the Cuduiari and the Vaupes, the two top-ranking sibs bear the names of Ancients who were the very first men to emerge from the traditional emergence site. The founders of the *Ovobawa* and of the *Aunbwawü* were, respectively, *Ovobaku* and *Aunku*.[1] These men, it is said, named all the other sibs of the phratry that emerged after they did. I could not discover the source of these names. They may have been from the genealogical list of the two top-ranking sibs, in accordance with the current principle that when a new sib is adopted into the phratry the adopting or sponsoring sib endows its members with names from its own genealogical list. However, Cubeo traditions suggest diverse origins for the sibs so that it is unlikely that a single principle will explain the sib names.

The first ancestors of the sibs, other than the top-ranking two, had names that were not the same as the sib names. The founder of the *Bahükiwa*, for example, was *Buü* (Agouti) and the founder of the *Hehénewa* was *Dputedo*, but later Ancients took as personal names the sib name itself, thus establishing in subsequent generations the principle of eponymy. In later generations, *Bahüküü* becomes a leading *Bahükiwa* Ancient and *Hehenaku* a leading *Hehénewa* Ancient. Any Ancient may also be referred to generically by the sib name, so that one may speak of a specific *Bahüküü* or *Bahüko*[2] or of a generic *Bahüküü* or *Bahüko*, meaning in the latter instance an Ancient man or woman of the *Bahükiwa* sib.

A proper sib name must have some eponymous quality. Some sib names are descriptive, such as *Manapawawa*, meaning "Trail People," a derogatory reference to people who arrived on the Cuduiari overland like the Macu instead of decently along the river by canoe. These people reject this name in favor of a subsib name which has the orthodox merit of having been bestowed by the founders of the phratry. Cubeo sib names are normally descriptive only insofar as personal names are descriptive. The legendary method by which the first sibs got their names from a higher-ranking source stands for the Cubeo as the model by which newcomers are brought into the phratry. An adopted sib is given a name that has in its stem the name of the adopting sib. All the sibs of the *Hehénewa* are differentiated by a descriptive prefix, while the sibs of the *Bahükiwa* are differen-

[1] There is a full list of sibs following the present discussion.
[2] The suffix *ko* is masculine, *ko* is feminine.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614 193 tiated by a suffix. From the *Hehénewa* traditions it seems likely that they were originally an independent tribe, probably Tucano, that had joined in with the group of sibs that were headed by the *Órobawa* and the *Aunbwawu*, bringing with them their associated sibs. The sibs that carry the *Hehénewa* stem with their descriptive prefixes are also known by names that are compounded of the prefixes as well. Thus, the *Byari-Hehénewa* are also known as *Byaridowa*, and the *Pyéndo Hehénewa* as *Pyéndowa*. According to Koch-Grünberg, the 614 *Órobawa* regard themselves as a branch of the *Hehénewa* and are also known as *Ólaba Hehénewa*. His information was that the *Hehénewa* were the "true" Cubeo and that the *Bahúkiwa* were intrusive Macú (1909, II, 87). The actual history of the sibs is clouded in uncertainty. We can be reasonably sure only of a composite of several distinctive peoples or "tribes." The few *Wathariwa* sibs in my list are also named in a fashion similar to that of the *Hehénewa*.

614 551 Each sib also possesses a list of personal names that constitutes its traditional genealogy.[3] These are names that all sib members must bear. They are called *ainheme* (*ain*: anaconda; *heme*: tongue) to indicate their origin from the speech of the anaconda, the animal form in which all first ancestors emerged from the earth. In these names there is a note of prestige, in that some names are illustrious, being part of the earliest genealogies, while others, having been added later, are less important. Since only one name can be held at a time, names are allocated in order of seniority, but not, insofar as I know, within a senior line. Names with an honorific connotation circulate within [613] the sib, and not by lineage. They are transmitted in alternate gener- [424] ations, going from a deceased grandparent to a grandchild. It should be said at once that while the notions of sib rank and of the distinction between more honorific and less honorific names suggests a structured system of social status, the social significance of status hierarchy is not great. The Cubeo have the skeleton of an aristocratic system that is fleshed with an egalitarian ethos.

Personal names are often those of birds, insects, and beasts, less commonly of fish. In the recent past, it is said, sib members did not eat the flesh of any creature whose name was then being carried by a sib member. This taboo is no longer in force. The explanation given is that hunting is more important now and they do not wish to deprive themselves of animal meat.[4] Without a proper sib name,

[3] There is a list of *Bahúkiwa* names at the end of this chaper.

[4] On the other hand, there is the tradition that in the past they lived by hunting, fishing, and gathering rather than by farming. If this taboo did indeed exist it may have lapsed for the same reason that other ceremonial observances have

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

Without a proper sib name,
a child will not grow, the Cubeo say. Growth is an attribute of the 614
Ancients. The giving of a name is one of the ways in which the growth 551
magic of the Ancients is utilized. These names from the sib genealo- [856]
gies are not used freely, the Indians preferring to use Christian names [601]
and to address one another by a kinship term.

The sib has permanence and it has continuity with the past. The 614
"history" of each sib is known and is recited at all major ceremonial occasions.[9] In narrating sib "history," distinctions are drawn between original sibs, later comers, and the newest-formed sibs. Since ancientness is honorific and the Cubeo have a sentiment of egalitarianism, these distinctions are underplayed. But when people have been drinking and quarreling the matter of ancestry will be brought up. [578]

The tradition of phratric organization is that all its member 614
sibs are kin. Tradition holds, too, that once all sibs of the same 615
phratry were united under a single headman. But this tradition may refer to the scheme of sib rank and the acknowledgment of the leading sib as the "head" rather than to an actual political organization. On the other hand, since there is little doubt but that tribal organization in this region of the Amazon is highly fluid, with smaller segments forming new enlarged formations and enlarged formations breaking up again into smaller and relatively more stable sib segments, the tradition of the phratry as a political unit cannot be dismissed.

The Cubeo distinguish between *kwinâwü* (one kin) and *abéwetema* (they are not ours) in referring to their own phratry and to an opposite phratry. In the past, there may have been at least four phratries, since the traditions speak of one group of sibs as having amalgamated with another. Previously, these two groups had intermarried, it is averred. According to one version of the origin myth the sibs of a phratry are all descended from a single water anaconda called *Pwénte ainku* (Anaconda person), who divided himself into segments, the head becoming the leading sib of the phratry, and each subsequent segment forming the remainder of the sib hierarchy. A variant version states that pairs of anacondas emerged from a crevice among the rocks of a rapids, shed their skins, and formed a brother-sister pair. Subsequently, the sisters married out and the brothers took wives from people they met in their wanderings. The first pair to emerge were the head sib, and they gave names to all that followed

lapsed, out of simple neglect. Also to be considered in this connection is the common Cubeo view that the life of past generations was more severe than it is today.

[9] The text of the *Bahúkiwa* "history" follows the sib list in this chapter.

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

615 614 them. Either version accounts for sib hierarchy. In the first version the Cubeo visualize the phratry as the body of the anaconda spread along a river with its head anchored at the site of emergence and its tail lying upstream to form the lowest-ranking sib. In the second version the sib parts moved upstream and located themselves according to the sequence of their emergence. The theme of common descent that sanctions exogamy and confraternity is conveyed not by a common anaconda ancestor, for the Cubeo would not doubt that all human beings were descended from anacondas, but rather by common emergence from the same site. All sibs of the same phratry should ideally have emerged from the same rapids. But even among those having emerged from the same rapids there are still distinctions of relative closeness depending upon whether they emerged from the same hole or from adjacent holes. It would seem that the origin myth must be in harmony with current social relationships and that a particular version is employed depending upon the present state of affairs. When a sib is newly admitted into the phratry it must adapt its own origin traditions to the common mythical theme of emergence in the form of an anaconda at a preferred emergence site.

From the *Bahukewa* I heard at least three versions of the story 614 that placed the *Hehénewa* within the phratry. One said that the *Hehénewa* were really strangers, having emerged somewhere along the Papury River. They heard the *Orobawa* sounding the ancestor trumpets, and attracted by the music — a sign of identity — they came

532

Fig. 4. Petroglyph: *Kuaori* and *Anku* (scale: 1" = 6').

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CLPED

614
[114]

to the true emergence site of Uaraquiri, where they were received by the *Oiobawa*, who bestowed upon them the name *Hehénewa*. This version would account for Koch-Grünberg's information that the *Hehénewa* are also known as *Olaba Hehénewa*. Another version suggests a closer relationship by making the point that the *Hehénewa* had wanted to emerge in the same place with all the others of the phratry, but because other sibs were hostile to them they came out instead at the Papuri and then journeyed to join their kin. A third version is simply that the *Hehénewa* and *Bahukiwa* were once alien groups that joined into a confederation after the *Hehénewa* had befriended the *Bahukiwa*.

The theme of hostility in the *Hehénewa* emergence was explained by informants in the following way. The first people were very fierce and those that came out of the emergence hole wanted to prevent others from emerging. The *Oiobawa*, having come out first, made a hole for the others to come out of. Those they willingly allowed to come out formed with them one group. Those that came out despite opposition formed another. Subsequently both divisions were reunited.

But *Pedikwa*, a branch of the *Hehénewa*, also tell that they had been prevented by the hostility of the other sibs from emerging at Uaraquiri and so they emerged at the Papuri. They came out in the form of a single macunaíma who cut himself into many parts, each of which became a parakeet (*kudiaru*). The parakeets flew about looking for food and settled at a lagoon at *Yaibabu* near the Mitú (*gaiupe*), an affluent of the upper Cuduiari. After a time, they cut a path through the forest and arrived at *Pediwa*, a rock on the Cuduiari where they built a house and became the *Pedikwa*. A more honorific version of this tale that the *Pedikwa* also tell is that, having come to *Pediwa*, the site of a major rapids on the Cuduiari, they re-emerged. Since, they insist, they had never taken human form until they had re-emerged at *Pediwa*, they feel justified in claiming that rapids as a true emergence site and they have the distinction, therefore, of now residing as does the *Oiobawa* kinship, at an original emergence site. An unknown people, the tradition relates, had been living at *Pediwa*, now known as *Pondibu* (Painted rocks – petroglyphs) but moved away when the *Pedikwa* re-emerged.

The *Bahukiwa* explain their relationship to the *Hehénewa* as follows. *Bua* (Agouti), the Ancient of the *Bahukiwa*, was leading his people from the Vaupés up into the Cuduiari when they encountered the *Bwari Hehénewa*, a now extinct subsib of the *Hehénewa*. They fought and all the *Bahukiwa* were killed except for one boy, who

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614 came to be known as *Buabekudjo* (*Buea* the Ancient). The *Byaru-Hehenewa* took him captive. Sometime later, the *Hehénewa*, coming to visit their kin, determined to rescue the boy. They did so, killing off the *Byaru Hehénewa* who were holding him. They released
614 *Buabekudjo*, giving him two *Borõwa* (Macú) women as wives. The
648 *Borõwa* were then servants of the *Hehénewa*. The Macú women bore *Buabekudjo* ten children. It was from the males of this sibling group that the *Bahukiwa* sib was reconstituted.

614 This concession of kinship alliance with the Macú stigmatizes the
648 *Bahukiwa* as an inferior sib even though the descent is still in the
554 male line. Normally, Cubeo used *Borõwa* women sexually but did not marry them. The *Bahukiwa* do not concede that they are *Borõwa*.
[611] And I learned early in my stay among them that nothing was more offensive than to even hint that someone was *Borõwa*. The *Hehénewa* had told Koch-Grünberg that the *Bahukiwa* were *Borõwa* who had assimilated themselves to the Cubeo and were still to be regarded with contempt (1909, II, 186). No *Hehenewa* made this observation to me, but possibly out of courtesy since I was living with the *Bahukiwa*.

614 The origin of the *Bahukubuanawa*, a subsib of the *Bahukiwa*, is also attributed to an act of kindness by a fellow sib, in this case at the hands of the second ranking *Aiuhuanawa*. In the course of an attack on them, all but one *Bahukiwa* girl were killed. She was sec-
614 cured by the *Aiuhuanawa*, among whom she lived until she married.
611 The narrator claimed that no one knew whom she had married, a lapse of information of utmost importance, since the point of the story is that despite patriliny a woman can also re-establish a sib. She bore eight children and they and their descendants took the name of *Bahukubuanawa*. Descent then reverted to patriliny.

65 The Cubeo view of the phratry, as revealed by the traditions, is
4 of a grouping of essentially autonomous sibs into a loose fraternity that takes its sanction not from descent from a common ancestor but emergence from a common place. The genealogical relationship determines sib identity, but it is geography that determines phratric identity. The principal idea that is expressed is that the closer the sibs were spatially at the time of emergence the closer should be their present fraternal bonds. Thus, the traditions draw fine distinctions between emergence from the very same crevice on the rocks, from the same rapids, and from the same river. Unfortunately for our in-
615 terest in reconstructing tribal history, the traditions lack consistency.
614 This inconsistency reflects perhaps the ethnic heterogeneity of the
174 region, which, together with the lack of a central source for tradition,

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

places upon each sib the responsibility for describing its own history. To be sure, the custom of resiting a sib origin tradition at the regular drinking parties that bring the sibs of a phratry together has probably had the effect of eliminating major discrepancies. I suspect that there are two kinds of sib traditions, those that are recited publicly and so have official standing and those that are talked about and ruminated about within the privacy of the sib or at small multi-sib gatherings. I do not, however, have a collection of official origin traditions. Another reason for discrepancies is that the origin traditions are the most important sanctions for regulating current relationships among sibs. If sibs are close now it is, in Cubeo thought, because they were close in the past; if they are distant now it is surely because of some event in the past, at the time of emergence. The more friendly sibs feel toward one another the closer do they bring together their first origins. When they quarrel they call attention to the initial distance in their origins.

Nevertheless, there are orthodox versions of sib histories that do acknowledge differences in origin. The sibs of what I call Phratry I form two divisions, according to some traditions. One group of sibs is sometimes referred to as *Yaimanawa* (Children of the jaguar).[a] This group, consisting of *Oyobawa*, *Aunbwawu*, *Hehenewa*, *Wathariwa*, *Bya Wathariwa*, and *Bya Heheneiwa*, is supposed to have emerged together at *Yaibebo* (Place of the jaguars), a site at the Uaracapuri cataract. The remaining sibs of the phratry had different origins and are not, as far as I could learn, identified by a distinctive name. The *Yaimaniawa*, according to this particular tradition, form the core of the phratry, while the others are secondary members. The distinction is not without significance. The rule of exogamy, of course, holds for all members of the phratry. All phratry mates will refer to one another as *pakoma* (kinsman), and will entertain one another and offer ready hospitality. Sibs that are close in origin entertain one another more frequently and can depend upon one another to honor drinking party invitations.

In short, the relationship among the sibs of a phratry is far from uniform, but ranges from a degree of closeness akin to that holding among common residents to such distance that the rule of exogamy can be called into question. The *Hehenewa*, for example, discounting *Bahukiwa* assertions of closeness, claim that they are so distant from

[a] This reference to "Children of the jaguar" has of course, an honorific reference. There is, however, another usage that is derogatory and that is when it is applied to the Macú. Giacone (1940, p. 88) reports that Tucanos, Tarianas, and Desanas say that the Macú are not people at all but are *filhos da onca*.

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

615 the *Bahúkiwa* that intermarriage is possible. The *Bahúkiwa*, for their
614 part, deny this. I could obtain, however, no record of a marriage between the *Bahúkiwa* and *Hehénewa*. I am inclined to attribute such discrepancies to considerations of prestige. The high-ranking *Hehénewa* emphasize distance, the low-ranking *Bahúkiwa*, closeness, between their respective sibs.

615 The Cubeo phratry is particularly interesting because of its hier-
614 archical organization. Ranked sibs suggest a hierarchical social structure and hence a political organization of some complexity. Neither,
554 as we have already observed, is actually present among the Cubeo.
[301] Insofar as I could determine, the leading sibs of a phratry had no actual jurisdiction over any of the lower-ranking sibs, nor was there any formal way in which the rank order of sibs was expressed other than by listing, and by some prestige privileges that allowed only the high-ranking sibs, up to and including the *Hehénewa*, to wear the quartz cylinder pendant on their breasts. Among the low-ranking *Bahúkiwa* no one possessed the jaguar-tooth or the armadillo-vertebrae girdles either.

The hierarchy of sibs is consistent with a kinship stress upon seniority of birth that distinguishes older and younger siblings, but it begins at variance with a very strong feeling for equality, with the absence of deferential behavior, and with other marked symbols of social status. There are, nevertheless, intimations of rivalries within the phratry among sib headmen, in which one accuses the others of
[177] seeking power over the phratry. White influence may be responsible for this, since the authorities hope to be able to deal with a single chief rather than with each small sib. Even so, it may well be that
[721] the groundwork for phratric leadership has been laid down by the hierarchical organization. We do have a tradition that the *Hehénewa* once made an unsuccessful military effort to establish political authority over the entire Cuduiari.

614 The character of the Cubeo sib is such that it is a moot point
[613] whether we are dealing with a true patrilineal sib or with a patrilineage. From the Cubeo point of view, the descent group has lineage features. It is small, it is generally localized, its members have the strongest feelings of kinship identification, and they claim not merely descent from a common ancestor but they produce genealogies to establish such a connection. At some time during the year, an old
[867] man gathers all the young males, from the age of six on, together in the evening and each night for a month teaches them the sib genealogy. The genealogies, however, begin from the past and never actually connect with the present. The interest of the Cubeo in present

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

genealogies is not strong, so that they have only a general, albeit a strong, feeling that the family lines presently in a sib are related. What keeps the sib from being a lineage is then the technical fact that the Cubeo cannot link up their present descent lines with their ancient descent lines. 614 [829] [613]

One is tempted, therefore, to think of the Cubeo descent group as a transitional form, hovering between sib and lineage. At first glance the distinction between sib and lineage seems to hang by the technicality of how sophisticated a people are about genealogies. Yet this sophistication is a matter of major importance. Sib continuity and growth is a relatively simple matter of transmitting a sib name and a line of descent with an origin myth to give historical sanction. Lineage continuity and growth, on the other hand, demand motivation as well as the capability for maintaining accurate or presumably accurate genealogical records. Societies organized upon aristocratic lines can do this readily. Egalitarian societies, on the other hand, can have small lineages or large clans and kindreds but they cannot readily support large or historically deep lineages. The Cubeo have a shadow aristocracy only, not enough to sustain the necessary degree of genealogical sophistication. On the other hand, if the Cubeo could not sustain the growth of lineages neither could they sustain the growth of sibs. Two social conditions seemed to stand in the way of the enlargement of sibs. One was the inherent fissility of the sib, the other was the organization of the phratry. The phratry allowed the sibs to split without endangering their survival by virtue of being too small. 614 613 614 615 182

The basic social organization that provides for autonomous confederation of small units conforms readily to the requirements of easy absorption of new groups. The modes of group-binding, such as exogamy, the cycle of drinking parties, and the segmented forms of ceremonial participation that allow each sib to function as a ceremonial unit, are also admirably adapted to rapid assimilation of foreign tribes without benefit of a central administration. In case of assimilation, all the necessary joint activities to which the sibs of a phratry are bound will inevitably encourage a common language. Just as the phratric organization allows for easy binding of autonomous sibs into a convenient fraternity that provides for peace, cooperation, and sociability, it allows as readily for fission without serious disruption. From these observations it may be inferred that the history of the Northwest Amazon region has been one of constant formation and disruption of sociopolitical entities. What a tribe is at any time is a core of sib segments that may have persevered through [174] 614 619 174

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614 time. And then have drawn to them new sibs from peoples speak-
69 ing the same as well as other languages. The Cubeo tribe, as we have
74 already observed, seems to be an aggregate of Tucanoan-speaking, Arawakan-speaking, and "Macuan"-speaking peoples. A particular sib that belongs to one tribe today may incorporate itself into another tomorrow.

614 It is possible that sib formation in the Northwest Amazon region
74 has been an outgrowth of this process of repeated assimilation of new groups. The reasoning behind this assumption is as follows: patrilocal extended families need only assert and maintain a tradition of common origin and then live up to the requirement of maintaining a firm group identity, within a confederation, to make the transition to sib or clan. The suggestion is, however, that sib formation cannot be accounted for merely by the growth of extended patrilocal families or by the enlargement of lineages – because of the ease of fission – but, rather, as a response to quite another process, that of confederation in which the identity of the joining segments is retained. A confederation of descent groups heightens the probability that all will defend their autonomy by asserting their identity of common descent.

## THE SIB AND PHRATRIC ORGANIZATION

614 The sibs are listed in approximate order of rank. This rank order
615 should be considered as provisional, since it represents mainly the
554 *Hehenewa* view of sib rank.
361

### PHRATRY I

*Orobawa*. The leading sib; they still live at Uaracapuri on the Vaupés, the site of a rapids from which they first emerged. Their first male ancestor was called *Orobaku*. According to one version of the origin tale, he was the head of the anaconda from which all Cubeo are descended. He then named all the sibs of the phratry that followed after him. Koch-Grünberg identified them as *Olabá Hehenewa* and hence as a branch of the *Hehenewa*. Nimuendajú listed them as *Orobawa*. According to my in-
[114] formation, they are most closely linked with the *Hwani-Hehenewa* and with the *Aunuewa*, the easternmost or most downstream community of the Cubeo.

*Aunkuwa*. The second sib, occupying the next site upstream on the Vaupés at Urania. Their first ancestor was *Aunku*. Some informants said that *Aunku* was the last to emerge but was granted second place by *Orobaku*. In any case, their position on the Vaupés gives them second rank. They are regarded as very closely linked with the *Hehenewa*. In 1940 they were reduced to four households. Some had taken up residence

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

at Pindaiva on the Cuduiari. Nimuendaju's reference to the *Ambomamara* on the Cuduiari, whom he did not visit personally, may refer to this Cuduiari group. The Vaupes group is not mentioned in either his or Koch Grunberg's lists. 614 615 554 361 [114]

*Heheneuwa*. In the present social structure, the *Hehéneuwa* represent the largest grouping of sibs of this phratry. From the traditions, it is not unlikely that the *Heheneuwa* were once an independent tribe which joined with other groups to form the present phratry. When Koch-Grunberg visited them in 1903 he came to regard them as the "true" Cubeo. They have, even today, the highest prestige on the Cuduiari and are, to my knowledge, the only group on this river authorized to wear the quartz cylinder pendant. According to native traditions, they came originally from the Papuri River and were not Cubeo but Tucano, known as the *Xweve-Heheneuwa* or *Toucan Heheneuwa*. Their origin site on the Papuri is known as *Wahudja impemáni*. They were adopted into the phratry by the *Orobawa*. The story goes that the *Heheneuwa* heard the *Orobawa* sounding the ancestor trumpets. They were attracted by the music – a sign of kinship – and when they came close they were adopted. Another version of the tradition emphasizes the close kinship of the *Heheneuwa* with the other Cubeo sibs that emerged at Uaracapuri. This notes that the *Heheneuwa* had the intention of emerging at the traditional site but were prevented from doing so by the hostility of others. Therefore they emerged at a distance and came to join their rightful kinsmen later. The *Heheneuwa* now occupy sites all along the Cuduiari, but are concentrated at the lower Cuduiari and have a maloca on the Vaupes near Uranta close by the *Aunbwawu*.

*Bya Heheneuwa*. A subsib of the *Heheneuwa* who live at the mouth of the Cuduiari.

*Wathariuwa*. The *Bahukiuwa* regard them as distant members of the phratry, linking them rather more closely with the *Heheneuwa* and the *Aunbwawu*. They emerged at *Byatankwe*, a rapids on the Vaupes. Their first Ancient was called *Kwabebo*. They still live on the Vaupes at *Uacuiuwa*, near Tatu *cachoeira*, and at *Umari* just below. Koch-Grunberg located them above Uaracapuri falls, an upstream location more appropriate to their standing in the phratry.

*Bya Wathariuwa*. A subsib of the *Wathariuwa* on the Vaupes.

*Ureiariuwa*. Perhaps a subsib of the *Wathariuwa* on a small stream of the Vaupes.

*Bahukiuwa*. They list their emergence site as *Impenani* on the Uaracapuri falls of the Vaupes. Their first Ancient was *Bucu* and his sister was *Onpucendoka*. They now consist of several subsibs occupying sites along the middle Cuduiari. Koch-Grunberg referred to them as *Bahuna* and identified them as a Macú group (*Boroca*) who wandered into the Cuduiari and became fully assimilated into the Cubeo, giving up their original language. *Bahukiuwa* traditions do, indeed, refer to an episode in the history of the sib when, having been virtually wiped out by an enemy raid, the last survivors married *Boroua* women and so regenerated the sib. They deny any imputation, however, that they were ever low-caste *Boroua*. The term Macú, which is the colloquial form of *Boroua*, is commonly used in the region as an epithet. [563] [648] [186]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614
615
554
361

is commonly used in the region as an epithet. The *Bahukiwa* regard the *Oriobana* as their "head."

*Bahukipahuwa*. A subsib of the *Bahukiwa* living just downstream from the *Bahukiwa*, at a site commonly known as Yasitara. They had originally been one with the *Bahukiwa*, but separated from them when they came up the Cuduiari and established a Satellite community up a small tributary, Cucura *igarapes*.

*Bahukuamuwa*. A subsib of the *Bahukudgauwa* living near Yasitara on the Cuduiari.

*Bamukubuawa*. A subsib of the *Bahukiwa* who are also known by the derogatory connotation of *Manapuawa* (Trail people) or *Manawa*. According to the traditions, they were not Cubeo but a nomadic group, perhaps Macu, who had come to the Cuduiari overland, and whose emergence site was the Querari *miri*, a small tributary of the Cuduiari. The *Bahukiwa* adopted them and gave them personal names from their own sib genealogy.

[648] [563] [551]

*Pedikiwa*. A subsib of the *Hehenewa* on the Cuduiari above the *Bahukiwa* sites. According to the traditions, they came originally from the Papuri River with the *Hehenewa* and then settled at Itapinima or *Toidibu*, at which rapids they had a second emergence. Thes say their first Ancient was *Dyaredu* of the *Hehenewa*. They did not like him and so they separated. They are also known as *Pedi Hehenewa* because they emerged at *Pedikiwa*, a rock at Itapinima. Koch Grunberg encountered them in the same site they now occupy. He says they were once enemies of the Cubeo. They now include five Satellite communities living upstream from them on the Cuduiari. They are also known as *Piatokawa*.

*Kemamikiwa*. A subsib of the *Pedikiwa* on the upper Cuduiari at *Piramiri* and at *Ibahaka*. They used to live at *Toidibu* but broke off and moved upstream. They do not appear on either Koch Grunberg's or Nimuendaju's lists.

*Kehomiwa*. A subsib of the *Pedikiwa* living on the upper reaches of the Cuduiari.

*Uteiwawa*. Their emergence site was the Yurupari *cachoeira* that is upstream and at some distance along the Vaupes from Caracapuri. Having come from a different emergence site, they were originally not in the phratry. They were drawn into the phratry by a pact of friendship with the *Bahukiwa*. They now live at the mouth of the Miriti *igarapes* below the Yurupari falls on the Vaupes. Koch Grunberg found them on the Dyi *igarapes*, an adjacent tributary of the Vaupes. They may be the same as the *Bacchawa* mentioned on the Vaupes by Nimuendaju. Their first ancestor was called *Uteiwehuedi*. They are also included as a sib in one of the phratries of the Tucano tribe.

*Baryawawawa*. A sib that emerged from Yurupari *cachoeira* on the Vaupes and is related to the *Uteiwawa*. They are also known as *Baryawa* and still live on the Vaupes.

*Piarawa*. A sib that emerged at Caracapuri rapids, from a particular site called *Mumiku*. They live at Miriti *cachoeira* on the Vaupes and at the headwaters of the Muchu, a left bank tributary of the Vaupes. They have some personal names in common with the *Hehenewa* but are most closely associated with the Kompainyewa.

[551]

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

 614 615

associated with the *Kompainyewa*. Koch-Grunberg found them on the left bank of the Vaupés at a site called *Naiho*, where they were known in the longest geral as *Tukandira Tapuyo*. He recorded their self name as *Ura Pinawa*. Nimuendajú incorrectly placed them on the Cuduiari. 554 361 [101]

*Pyendo Hehenewa*. A dissident sub of the *Hehenewa* group, maintaining no friendly relations with the other *Hehenewa*. Their close sib ties are with the *Pelikwa* and the *Kenanikauwa*. They occupy several sites above Pari at the headwaters of the Cuduiari, the main maloca being at Querari (see *Empanaue*). They are also at *Abahudja* on the Yuruparí [114] and are known also as *Pyendokauwa*.

*Huam Hehenewa*. A *Hehenewa* subsib on the Vaupés at Paraná *picuna* and at Tukano *rachoeira*. Their origin site is *Impenani* of the Uaracapuri *cachoeira* and they are, therefore, closely related to the *Orobawa* and the *Ituyewa*, in contrast to the *Hehenewa* proper, whose emergence was Sirigüi on the Papuri.

*Aunweua*. A subsib of the *Aunowauu* on the Vaupés at *Upuaria* just above Mitu. Nimuendajú incorrectly placed them on the Cuduiari and referred to them as *Iucca*. They are also listed as a sib of a Tucano phratry. [114]

*Kompainyewa*. Closely linked with the *Piaroawa*, they live at Pindaiva on the Vaupés just above Uaranía near the Yuruparí falls. Their emergence site is Uaracapuri.

*Pelikwa Hehenewa*. A subsib on the upper Querari mentioned by Koch-Grunberg, for which there is no information.

*Kenanikauwa*. A subsib on the Cuduiari mentioned by Nimuendajú, on which there is no information. From the name it would appear to be a subsib of the *Aunhauwa*.

*Bya Hehenewa*. An extinct subsib of the *Hehenewa*, who had lived on the Cuduiari as well as at Carará Lake on the upper Vaupés. They were also known as *Bya Pinawa*.

*Papuri Hehenewa*. A sib living on the Cuduiari during the time of Koch-Grunberg's visit at Surubarigá but now extinct. They came from the Papuri and were closely linked with the Tucano tribe of the Tiquie River.

*Kenanikauwa*. A sib on the upper Cuduiari, presumably a subsib, along with the *Kenanikauwa*, of the *Pelikwa*.

Phratry I consists of two divisions that represent distinct origins. In the past these two divisions may have been intermarrying, because even now, although the entire phratry is exogamic, informants disagree as to the propriety of intermarriage between the two divisions. The dominant division from the point of view of prestige and of numbers is known as *Yaiumanawa* (Children of the jaguar) and includes the *Orobawa*, *Aunhauwa*, *Heheneuwa*, *Wathariwa*, and their subsibs: *Bya Heheneuwa*, *Bya Wathariwa*, *Pelikwa*, *Kenanikauwa*, *Ituyewa*, *Pyendo Heheneuwa*, *Huam Heheneuwa*, and *Aunweua*. The second division has no name and consists of the *Bahukwa* groups, the *Piaroawa*, and the *Kompainyewa*.

361

PHRATRY II

*Bahukiwa* The leading sib of the phratry, living at Muchú on the Vaupés. According to tradition, they came from the Isana River originally. They emerged at a rapids called *Aindoribo* at a site called *Hobonoburúno*. Originally they fought with the *Byowa*, now a sister sib of the phratry. Koch-Grunberg encountered an abandoned maloca of theirs at Uarúa Lake, where they had been living adjacent to the Tucanoan-speaking but non-Cubeo *Pamoa*. The indications are that they had moved in recent years considerably downstream on the Vaupes.

*Byowa* A group occupying all of the Pirabatón, an affluent of the Querari. Koch-Grunberg placed them at the headwaters of the Querari, but since he had not identified the Pirabatón that may be the river that he called the upper Querari. They are strongly intermarried with *Bahúkiwa*.

*Huruwa* Members of a foreign phratry living on the Cuduiari, where they occupy a number of upriver sites, having replaced a *Heheneuwa* subsib. They emerged from a site called *Kohedariwa* above Uaracapuri on the Vaupes. Koch-Grunberg met them in the same locations on the Cuduiari. He claimed they were originally Arawakan-speaking Baniwa who had wandered in from the Vaupes.

*Wadia Huruwa* A subsib of the *Huruwa* at *Kuitoro* on the Cuduiari.

*Kowiwa* Primarily a Querari River sib that had spilled over onto the Cuduiari at one time. Wallace reported them there in 1853. They are closely linked with, and according to Koch-Grunberg politically subordinate to, the *Byowa*. In more recent times they have settled on the Vaupes, where they have also been reported by Nimuendaju. They also had a house on the lower Cuduiari. They are known as *Korokoro-Tapuyo* (Green Ibis Indians).

(101)

*Waigoja* A group mentioned by Nimuendaju as living on the Vaupés. Presumably a subsib of the *Kowiwa*.

*Mianawa* A group occupying several sites in the vicinity of the Tukunaré igarapes on the upper Vaupes – *Makakinyo*, *Jacare*, *Seima* – as well as at Pirabatón igarapes. Koch-Grunberg found a small group of only four families living at the Yúrupari falls on the lower Vaupes. Nimuendajú also found them on the Vaupés.

PHRATRY III

*Djuremawa* Nimuendajú has identified them as the *Yiboya-Tápuyo* of the Atari River in Brazil. He says they came to the mouth of the Querari on the Vaupes in 1901. According to Koch-Grunberg, they were once hostile Arawakan Baniwa who had assimilated to Cubeo and are close kin of the Kaua of the Atari. The Uanana, Koch-Grunberg reports, call them *Maxka-Pinopona* (Boa).

(101)

*Tuniawa* A sib on the Querari, originally Arawakan-speaking, that claims to have come from the Isana.

*Kowitarabowa* According to Koch-Grunberg, who referred to them as *Kowitalapoawo*, they were Baniwa Arawakans who settled on the Querari and assimilated to the Cubeo language. He noted that they were intermarried with the *Heheneuwa* of the Cuduiari. The *Bahúkiwa* also married them. Nimuendajú mentions a *Kowitarabewa* on the Querari, perhaps the

CUBEO
MACU 5.10

T 615 614 554 361

same people, or possibly a subsib, since I have in my lists an unidentified *Kowetarabawa* on the Querari.

*Yaniwa*. A sib at the mouth of the Querari. Nimuendajú also noted them on the Querari as *Dyaniwa*.

*Yukukubewa*. A sib on the lower Querari.

UNIDENTIFIED SIBS

T 614 361 114

*Batowa*. Koch-Grünberg found them at the mouth of the Cubiú *igarapes*, a tributary of the Vaupés, and called them a small "horde" that had come from the Querari. I did not hear of them. Nor are they mentioned by Nimuendaju.

*Ilheadowa*. A group mentioned by Koch-Grünberg and later by Nimuendaju, but not on my lists. Nimuendaju says they were once Macú and placed them on the Cuduiari, which he did not explore, but which Koch-Grünberg and I did. Koch-Grünberg did not locate them on the Cuduiari, but recorded a visit of some from Puranga *parana* on the Vaupés to the *Hehenewa* of the Cuduiari.

T 614 361

*Kawa*. A Cubeo group whom Koch-Grünberg encountered on the upper Ariari. They lived in a maloca at Yurupari *cachoiera*. The Siusi called them *Mauheni*. They were, said Koch-Grünberg, originally Arawakans from the Querari and then became Cubeo-speaking. Since moving to the Ariari near the Siusi they have returned to the use of Arawakan. They are closely related to the *Djuremawa*, but they are not in my lists.

## THE *BOROWA*

M T 648 464 T 563 M [101] [754] T [592] T [582] [614] [592] T [435]

The *Borowa*, who are more generally known as Macú, were once servants or menials of various sibs of the Cubeo. This is no longer the case since, as many Cubeo informants said, the *Borowa* came to be too troublesome and they were allowed to leave. There was fear of *Borowa* sorcery and that was another reason for sending them away. The Cubeo say that the *Borowa* had come to them voluntarily and offered to work for them in return for food, shelter, and protection against enemies. Individual household heads took in individual *Borowa* or a man and wife pair. The *Borowa* did all the everyday work. They fished, their women worked in the manioc garden, they fetched water and firewood. They lived in the house with the Cubeo and were to all intents and purposes members of the household. They even made their own chicha. The Cubeo claim they did not intermarry with *Borowa*, although this statement is belied by a sib tradition that the *Bahukiwa* were once given *Borowa* wives. The view is that it was improper to marry such lowly people. One man not very long ago had eight *Borowa* men and women attached to his household.

Once the practice of keeping *Borowa* had become established, they

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO
MACO SQ10

were bought and sold in exchange for ceremonial objects, such as wooden dancing staffs. I was told that a *Borówa* was worth one *behorú* (a ceremonial staff). Since the *Borówa* were nomadic and had no strong attachments to any particular place they did not mind moving from one place to another. It would seem that far from being slaves there was a symbiotic relationship between these very crude nonfarming people, who had no settlements or permanent houses of their own, and the Cubeo. The Cubeo do not stress the economic advantages to them of the *Borówa* other than to point out that they helped with all chores. In any case, no Cubeo was released from any of his normal tasks because of the presence of the *Borówa*. The *Borówa* were skilled basketmakers and it was in this economic field that they were most important. Nor was social status too important an issue in maintaining *Borówa*. They were valued mainly because they increased the household. The fact is, the *Borówa* consumed a good deal of manioc produce in the form of chicha. They were notoriously heavy drinkers and when drunk were very quarrelsome.

The question of relationship of the *Borówa* to the Cubeo is still not clear. There is an origin tradition that says that the *Borówa* were the last to emerge from Uaracapuri and for this reason they were held to be the servants of the others. However, this account may simply reflect the Cubeo tendency to relate all people with whom they have close and persistent connections to their origin myths. If the *Borówa* came from Uaracapuri that would be reason also for the ban against intermarriage with those groups that had settled among the Cubeo. As against the tradition that would make the *Borówa* a lowest-ranking Cubeo sib is the information that they spoke a different language and only adopted the language of their households. Along these lines is also the comment that the *Borówa* were a people "without shame," because among them brother and sister (presumably parallel cousins) were permitted to marry. There is still another explanation given by the Cubeo of *Borówa* status and that is that they had been conquered. The *Borówa* are said to live at the mouth of the Querari but I had no opportunity to visit them.

The *Borówa* have been house servants or field slaves to most, if not all, the Arawakan and Tucanoan tribes in the region. My own information on Macú "slaves" is entirely hearsay, since, as far as I could learn, all the Cubeo sibs on the Cuduiari had already given up keeping *Borówa*. In 1905 Koch-Grunberg observed Macú "slaves" among the Tucano of Parý *cachoeira*. In this community there were three men who "belonged" to the chief. They lived in a hut of their own in the woods, together with their wives and children. Every

day the *Borówa* men came to the main house bringing game, fish, and fruits. They did household chores. The Tucano treated them well, like tame animals, Koch-Grunberg commented (1909, I, 269 ff.). The Macú took part in the small drinking parties. They were not given coca, however (women among the Cubeo are also not given coca), but were given tobacco and chicha. They took no part in the dancing and (this is a very important note) they wore no ornaments. Little Macú girls took care of the children and brought firewood. The girls were at the sexual disposition of the men. The Macú were sold by the Tucano to other Indians. The Tucano told Koch-Grünberg that the Macú "were not people." They did attribute to them, however, the very human arts of black magic.

**BAHÚKIWA NARRATIVE OF THEIR EMERGENCE AND WANDERINGS**

The text is chanted and narrates mainly place names. Thus the narrative is mainly evocative and is only barely a description of events. The chant is referred to as "a good mouth that is talking" (*meákamóteewu yeiaiwu*). It means simply that the people are talking good things. In the following rendering of the text, information in parentheses is explanation and not translation. A free translation follows the text.

*pueniewu* – the people came out
*feuniauwa* – and shed (their anaconda skins)
*hahadamu* – they went forward
*ware borikapindo* – the place of the star ray (the name of a rock that has a hole through which a star ray entered)
*opéko tamana* – crossing over the milk (a reference to a rock forming a bridge over rushing water called milk [*opéko*])
*eminiakori* – the passage of minnows (the name of a rock)
*kanuiubo* – (a hill named after the kánuku tree) and the rapids of four channels
*buuhũrukuwu* – the rock where *Bwũ* (Agouti) jumped (a good jumper is now referred to as *Bwu*)
*bvaiakue* – the rapids of the pepper plant (a reference to a rock that was once a pepper plant)
*kuubebo* – the place of *Kuákũ* (a name in the *Hehéneua* genealogies)
*borikabo* – the place of *Borikakũ* (a name in the *Hehéneua* genealogies – it means the aracú fish)
*opéko tawa* – the milk of the tree (a reference to a tree called *wanumu* that gave milk. *Borikaku* drank this milk and some of it spilled here)
*nahó puãnua* – the place of the worm people (the *nahó* is a worm used as bait in fishing; the reference was not explained)
*buutaunru* – the tree beneath which *Bwũ* passed (a tree had fallen across the stream and *Bwu* passed beneath it)
*buũtaunrũ* – the tree beneath which Bwũ passed (a tree had fallen across it and it turned into a rock)
*waokun* – the beach of the monkey (a monkey passed by; an Ancient killed it and it turned to sand)

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
C.S.O

614
539

[illegible] – the river bank of the jaguar (a jaguar tried to climb the high bank and failed; an Ancient came along and the jaguar, frightened, slashed into a tree where it became transfixed)

[illegible]kun – the beach of the kumari plant (there was a kumari [[illegible]] bush here; an Ancient cut it down and it turned to sand)

*pupe[illegible]* – the place of the war club (an Ancient arrived here to drink and met one of his own kinsmen; they quarreled and the Ancient killed his kinsman with his war club [*popebul*])

*opeko [illegible]* – the milk of the tree (a reference to a place when an Ancient passed among the others a small calabash of palm milk)

*opeko [illegible]* – (the name of a rock where they paused again to drink milk)

*ok[illegible]* – the whirlpool of milk (a reference to a rapids, the place of white waters)

*[illegible]* – the place of the dove (a rapids where a dove flying by fell and turned into a rock)

*[illegible]kun* – (the name of a beach where there were many small fish)

*[illegible]* – the rock of the [illegible] tree

*[illegible]* – (a reference to the part of the rock that projects into the river [*[illegible]pindo*])

*[illegible] [illegible] kiwu* – there the Ancients crossed to the other side to live

*[illegible]* – they made pottery vessels

*[illegible] [illegible] kitamada* – they crossed a hill and there they [illegible]

*[illegible] [illegible]keruku* – the hill of the han han bird (a fish-catching bird)

*[illegible] [illegible]* – milk of the mountain of rock (a rocky outcrop where they paused to drink milk)

*[illegible]* – the place where the han han played (the name of a rock)

*[illegible]* – the rock of the [illegible] monkey (they killed this monkey and it turned into a rock)

*[illegible]kun* – the high bank with the great round eyes (when one of the Ancients saw this place he looked at it with huge round eyes of astonishment)

*[illegible]* – they came upriver

*[illegible]* – they passed

*[illegible]* – the narrow passage of the *[illegible]* spine

*pidari [illegible]* – the burrow of *pidari* (a reference to a place at the headwaters of the *[illegible]* creek where the water is as black as *pidari* [a dark liquid formed when manioc is left in the water to decay]; here an Ancient made a burrow such as an animal makes and in it left the calabash of milk as a cache)

*[illegible] pidari kubo* – at the forest of *pidari* he made the cache

*[illegible]* – at the milk trail he went out of the river

*[illegible]* – to live on a high hill

*[illegible] kitarebo* – the bend of *kitarebo* (a rock at the mouth of the Cuduiari where it enters the Vaupés)

*[illegible]da* – (a lake near Urania on the Vaupés)

*[illegible]* – (the sandy beach of that name)

*nyemi hwaimendi* – (the place name for what is now Mitú, the capital of the *Comisaria del Vaupes*)
*opeko'tokoie* – the small stream of milk (a creek that was then pure milk but is now only water)
*dyaridu* – the slippery rock
*tuwaria hiveda* – the stream of blood (*hiwé*, a reference to waters that run red)
*rotenekoiba bekedoua* – there the Ancients arrived to stay
*pitoanimeda* – there they explored upriver
*nenbudpa* – and then back
*nomd hiyoderi* – to *hiveda*
*kempaimeda* – they returned
*opeko'lavatemi* – they drank milk
*hoiwi opeko* – the cold milk
*tawé wena pimitani* – the rapids where they emerged
*dimanikiuia* – they came to live
*opeko tesibubu* – where the waters were like milk
*kenahamedo* – the lake of *kenahume* (yellow clay used in dyeing the ceremonial ligatures, the lake is just above Santa Marta)
*nangukoriliana* – the place of the *namukoriba* fish (near the mouth of the Guainia)
*[illegible]* – they reached
*[illegible]* – and then they passed
*opeko [illegible]* – an urn of milk (a reference to water that looked like milk at the Rapids)
*[illegible]* – they came upon
*[illegible]* – their in laws
*-[illegible] nehoriam* – and already at the creek of grease (a reference to its waters, which were then pure grease)
*kenari kemoiki'pora* – the place of the closed-off creek (a site above Curaíto Lake)
*nehisa paipubu* – above them the whirlpool of Guaui
*pa'i kenikarina* – and the fast black waters
*opia'kepora* – the whirlpool of the tree trunk
*[illegible]* – (a place name)
*mikaricku* – the place of parrots' wings
*[illegible]* – they portaged overland
*pa'i mirakobe* – and quickly arrived at
*hiveda bupeku* – the place of the *bupeku* butterflies
*peombu* – the lake shaped like a *peombo* (a container for curare)
*djuiana mano* – the place of the many grubs (a reference to a thick mass of grubs they found and cooked into a stew)
*mi'ikia tonicendo* – the high bank where the water rushes with a lucking sound
*mumbaia* – the place of the tangle of roots
*yeriekamu* – the house of the jaguars (a reference to their having encountered many jaguars here)
*mahopanua warindo* – (a place name)
*wamikeiaua* – the place of the *tawu* fish (a reference to fish that resembled *tawu*, bark cloth masks worn in mourning ceremonies)

*mumikutcendu* – the creek of the *mumiku* bird
*unenjkubo* – the place of the pupunha trees
[Then they began to return and they came to]
*wakudjari* – (a creek named after the *wakudjari* fruit)
*teipidikoriba* – (a place name)
*teipeu tavano* – (a place name)
*pauddjaribu* – the slippery place
*kenoha mututu* – the bank of the yellow clay
*tuibu* – (a place name)
*xupando* – (a creek named after a red fish)
*xenbokutcendu* – the hill of the háku fish
*hororakipuru* – (a place name)
*puunaku* – the high bank of mud out of which water seeps
*xekuku* – the place of the parrots (the present site of the *Bahukiwa*)
*xekuro* – the creek of the parrots
*nomi tavibo* – the circle of women (a reference to a circular trench around a house, built by women to ward off enemies)
*kuhuatha hutchindu* – he untied himself and escaped (a reference to an Ancient who was tied up by enemies during a fight but who untied himself [*kuma huku* to untie oneself] and escaped)
*kanjapika* – the place of the sweet potato (*yapika*)
*huanotia* – the creek of the pigs (*huani*)
*enubiba* – the lake of the birds
*mumice* – the bird place
*emihenia* – the creek of the sweet waters
*huredo* – the place of the doves
*takuindia* – the place where the maize grew
*yaxibu kuddibu* – the buttocks of the jaguar rock (a reference to a sharp rock upon which an Ancient sat down to rest, the rock penetrated his rectum and killed him)
*teriaria* – the place of the milk palm
*yaxibota* – the garden of the jaguar
*kumine* – the place where the *kamindu* turned to stone
*kuinuu dntoto* – the place where *Kuinkuu* settled (a reference to an Ancient who decided not to be human and so turned himself back into an anaconda)
*xeabo mumburu* – (a place within a creek where there are háku and puño fish)
*wari pani* – the place of *Wari* (a forest monster, addressed by an Ancient as "in-law" [*pani*])
*kumenioba* – the hill of the woodpeckers
*komoru kenuiakue* – the rocky rapids where *Komóri* lived (a reference to a *Bahukiwa* Ancient)
*makipunbo* – the parrot beak rock
*uho* – the place of *U* (the sloth)
*tukin* – the place of the bark cloth trees
*xiberbo pediwa* – the rocks carved with manioc graters (*pediwa*)
*mamuua* – the place of the deer
*kudupanua* – the place of the small parakeets
*Opumbibeku* – (a dwarf whose penis was the length of an arm)

*kenánokaku* – the place of the stone people (a reference to figures of people in stone in the highlands of the Cuduiari)

FREE TRANSLATION

The people came out and shed their anaconda skins. They went on to the place of the star ray rock, where they crossed over the milky waters. They came to the rock where the minnows pass, to the hill called *kanúrubo*, and then to the rapids of the four channels. They came to *bwahúrukuwú*, the rock where *Bwu* [Agouti] jumped across the rapids of *byatakwe*, at the place of the pepper plants. They came to the place of *Kwaku* the Ancient, and then to the place of *Borikaku* the Ancient, at the place where he spilled the milk of the tree as he was drinking it. They came to the place of the worm people, and to the tree across a stream under which *Bwu* passed. They came to the rock of the jaguar, where an Ancient killed a jaguar and it turned into a rock. They came to the beach of the monkey, where an Ancient killed a monkey and it turned to sand. They came to the river bank of the jaguar, where a jaguar, failing to scale the high bank, took fright at the sight of an Ancient and dashed into a tree, where it became transfixed. They came to the beach of the kumari plant, where an Ancient cut down a kumari bush and it turned to sand. They came to the place of the war club, where an Ancient, coming for a drink of water, met a kinsman. They quarrelled and the Ancient clubbed his kinsman to death. They came to the place called "milk of the tree," where an Ancient passed out a calabash of palm tree milk. There, at the rock called "drinking milk," they drank it.

They came to the place of rushing waters, a whirlpool of milk, to the rapids of the dove, where a dove dropped into the water and turned into a rock. They came to the beach of the many small fish, and to the rock where the umari tree grew. They came to the point of the rock, and there the Ancients crossed over to reside. They stopped here and made pottery vessels. Then they crossed a hill and there they resided, at the hill of the hán han bird. They paused at the rocky hill of ipilk, the place where the han han birds played. They came to the rock of the marúku monkey, where they killed a marúku and it turned into a rock. They came to the high bank which the Ancients looked upon with the rounded eyes of wonderment. They went upriver and they passed through the passage of spume, out into the black waters of *pidari*, at the head of the *wanindo* creek. Here an Ancient made a burrow and left in it a calabash of milk. At this place, called "the trail of milk," they left the river to reside on a high hill at the bend of *kwaieba* [where the Cuduiari enters the Vaupes]. They went on and came to *kwitotedo*, to *kwitoiekú*, and to *nyemi hwainéndi* [where Mitú now stands]. There, at the milky creek, at the slippery rock, at the stream of blood where the waters are reddened by the rays of the sun, there the Ancients arrived and there they lived. From there they explored upriver and then came back to *hweda*.

They returned and drank milk, the cold milk at the rapids from which they had emerged. There they came to live, at the place where the waters were like milk, at the lake of the yellow clay. Then they went on until they came to the place of the *nanúkoriba* fish [near the mouth of the Cuduiari]. And then they passed a rapids that was like an urn of milk. There they came upon their in-laws. They were already at the greasy creek, at the

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614
539

place of the closed-off creek [a site above Garaffo Lake on the Cuduiari]. Above them was the whirlpool of Guassi and the fast black waters. There, at the whirlpool of the tree trunk, at *hiwakapunawü*, at the place of parrots' wings, they portaged overland and they quickly arrived at the place of the *bupekü* butterflies, at the lake shaped like a container for curare.

They came to the place of many grubs which they cooked into a stew. They came to the high bank where the water rushes in with a sucking sound, to the place of the tangle of roots. They came to the place of the jaguars, to *mahópanwa warindo*, to the place of the bark cloth fishes, to the creek of the *mimíkü* bird, and then to the place of the pupunha trees. From there they returned and they came to the creek of the *wakúdjari* fruit, to *tcipedikoriba* and *tcipéü tawéno*, and then to the slippery place, and then to the bank of the yellow clay, and then to *tuibü*, where the creek of the red fish is, and then to the hill of the háku fish. Then, at a place called *hororákipúru*, they came to the high bank of mud, and then to the place of the parrots [the present site of the *Bahúkiwa* sib]. At the creek of the parrots they came upon the circular trench called "the circle of women" [because it is the women who dug this trench]. There an Ancient who had been tied up by his enemies managed to free himself and escape. Now they continued up the creek to the place of the sweet potato, and they came to the creek of the wild peccary and then on to the lake of the birds and the bird place.

From there they went up the creek of the sweet waters to the place of the doves. And then they went to the place where maize grew and then to the sharp jaguar rock. Here an Ancient, sitting down on the rock, pierced his rectum and died. They went on to the place of the milk palm, to the garden of the jaguar, to the place where the *kamindü* turned to stone. They came to *kuunkuúntoto*, where *Kuúnkuü* the Ancient decided to settle down. [This is the *Bahúkiwa* Ancient who later decided that he did not care to be human and turned himself back into an anaconda.]

The Ancients moved on to the place of the háku and puño fish, to the place of *Wari* the in-law, the hill of the woodpeckers, to the rocky rapids where *Komori* the Ancient settled down, then to the parrot beak rock, then to the place of the sloth, then to the place of the bark-cloth trees, then to the rocks of the manioc graters, then to the place of the deer, and then to the place of the small parakeets, where *Opómbibekü* lived [a dwarf with an enormous penis]. Finally, they went to the place of the stone people [at the head of the Cuduiari].

## *Kinship*

The focus of Cubeo kinship is the sibling group, of which the brothers form a permanent body, the hard core, so to speak, and the sisters an emotionally close but separable group, since they are the ones who marry out. The sibling group is the model for the extension of terms of consanguinity throughout the phratry.[1] More people are addressed and referred to as "sibling" than by any other term. When the Cubeo speak in Spanish or in Portuguese they identify all their age mates within the range of patrilineal consanguinity as "my brother" or "my sister." Their own language differentiates degrees of sibling closeness, distinguishing lineage brothers, sib brothers, and phratry brothers. But the linguistic device for drawing these distinctions, by manipulating prefixes and suffixes without altering the stem itself, seems to be a finely contrived compromise between the desire to embrace all patrilineal consanguineal kin within the bonds of brotherhood and the need to deal with the actualities of relationships. The Cubeo are very sensitive to terms of address and so they use terms not merely to designate a precise degree of relationship, but diplomatically to create a mood of closeness or of distance. I believe this diplomatic use of kinship draws mainly, perhaps exclusively, upon the sibling terms, since all other terms of consanguinity are by comparison of far lesser significance. A phratry brother may be called by the term appropriate for sib or even lineage brother and vice versa. When this is done, the speaker indicates by his manner

[1] There is a list of relationship terms at the end of this chapter.

SQ19 Tucano SQ19
Cubeo

or tone of voice that he is being flattering or is jesting. In the solemn terms of address that people use on ceremonial occasions, relationships, however, are used correctly.

The stress being on patriliny and on patrilocality, brothers are permanently held together by common residence in the respective degrees of closeness extending outward from hearth, house, community, adjacent community, and the common river as the usual territory of the phratry. Depending upon the degree of physical closeness, brothers share joint economic and ceremonial activities. In any case they share common traditions and the highly significant bond of common exogamy. The Cubeo offer hospitality to any kinsman whether consanguineal or affinal. However, when men are traveling along their own river they are made more comfortable by the thought that they will be stopping over at the house of a "brother." Kinsmen, in contrast to in-laws, are *hiwa*, an ego term that means literally "my group." (*Hi* is the possessive pronoun, *wa* is the suffix indicating the animate collective.)

Brothers of the same mother are, contrary to the traditions of pat-

Fig. 5. Sib group at mourning ceremony.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

593 rilny, the closest of all. On occasions uterine brothers form a common front from which brothers of the same father but of different mothers are excluded. A father expects his sons to stand by him and not by their mother, who is a sib outsider. Yet the simple fact that a woman keeps her own children close to her side, lavishing upon them all her attentions and affection, and ignoring, as much as she can afford, the other of her husband's children by other wives, creates a basis in sentiment for a maternal attachment that no amount of official sib doctrine can override. The attachment to the mother is recognizable in modes of behavior, such as intimacy or susceptibility to cleavage. Uterine brothers also quarrel and part, but they are unlikely to drift apart as readily as can mere agnatic brothers. However, kinship terms draw no distinction between uterine and agnatic brothers. A woman addresses all her husband's sons by the same term, just as her husband does.

593 601 The term for brother of the closest degree embraces lineage as well as blood brothers. Still, a distinction of sorts does enter into kinship usage, through a sister. A girl, as a mother's helper, has a very important role in looking after younger children of the household. Her first responsibility is to her uterine siblings. Like her mother she favors the boy child over the girl. In later years she still calls her younger uterine brother by the affectionate term *teumi*, while reserving the conventional term, *hoyokii*, for an agnatic younger brother. Women, however, take more liberties, generally, in the use of kin terms than do men. They are particularly free with terms that define nearness and intimacy. Thus, a sister's discrimination between uterine and agnatic brother may be regarded not as official usage but as a special female prerogative.

As to formal principles of kinship, the distinction between uterine [595] and agnatic brothers is of no great importance. Most marriages are monogamous and in most families there are no stepchildren. Headmen, however, are generally polygynous, and it is in their households 622 that the distinction assumes some importance. Since a headman's 593 household is a focal point of sib activity, whatever occurs within it 595 will affect the state of being within the sib and ultimately its unity. 614 Should a cleavage develop among brothers of different wives of the headman it could split the sib. Cleavages develop around rivalry for position. A headman's sons are inclined to model themselves after the father and to seek leadership of the community. Since the mantle of leadership will in any case fall upon one of them they are, in any case, virtually obligated to seek leadership. Thus it appears, paradoxically, that the line of cleavage in a sib tends to form at its very

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

center in all respects, among the blood brothers, who are the sons of the headman, the very symbol and guardian of the unity of the sib. The Cubeo attribute the source of this "fault" in the sib to the unruly and passionate nature of women, that does not adapt itself readily to the requirements of the sib. The women are said to be at fault in having drawn their sons too closely to them and in having divided the sons of one wife from those of another. Men deplore this, yet they concede that it is in the nature of a woman to do so. Much of the formal and ceremonial relationship between men and women seems to be designed to overcome this femigine and maternal influence.

All sibling terms indicate relative seniority. If the terms refer to near siblings, that is, to siblings of the same sib, their seniority refers strictly to relative age. When sibling terms are used among members of different sibs in the phratry, then the forms of senior-junior indicate respect. An older person may then use the senior term in addressing a younger person. Men may use the senior term in referring to a member of a higher ranking clan, or, apart from formal rank, to pay respect to a phratry mate who has been generous. Among the Cubeo rank and seniority are marked by giving more than receiving. Thus, a generous and hospitable person can come to be an "older brother." Women pay respect to men by using the senior term—outside the sib—rather freely. It is a pleasing relationship for a woman to have an older brother and for a man to have a younger sister. When a woman addresses a man as "younger brother" she cannot help but endow the term with an almost maternal tenderness. She finds it more comfortable, one might say, to address a more distant sibmate as "older brother."

There is a more formal usage of terms of relative seniority that acknowledges the ranking of sibs. My information of these seniority usages, coming only from the *Bahukiwa*, is therefore incomplete. According to the *Bahukiwa*, all men of the head *Órabawa* sib who are of one's own generation are addressed as *mamũ*, the stem term for "older brother," while the reciprocal term that is applied to them by the *Órabawa* is *hwa*, the stem term for "youngster." In the case of the *Bahukiwa* relations with three sibs of the phratry, the *Pedikiwa*, the *Kenãnikauiwã*, and the *Piarãwa*, the women of the *Bahukiwa* address the women of these three as *amikõ*, the somewhat more distant form for "older sister," and are called in turn *hwamyõ*, or "youngster." Though in the case of the *Órabawa* the seniority usage applies only to the men, in the latter case the usage applies only to the women. My informants could not account for the latter usages

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

601
614 although they understood the *Órabawa* usage very well. The *Pedikwa*
[554] are, of course, a sib with high status because they occupy a cataract on the Cuduiari that they regard as an original emergence site. The *Kenánikawu* are a subsib of the *Pedikwa*. In the case of these two sibs I would hazard the guess that it is their present association with an emergence site that warrants this respect usage. In the case of the *Piaráwa* I have no explanation other than the suggestion from Koch-Grunberg's information that since they call themselves *Clá-Piaráwa* they may actually be a subsib of the *Órabawa* and hence have a special claim to respect.

In the neighboring Tucano tribe the seniority usages among the sibs of each phratry are very systematically developed (Fulop, 1955). By comparison the *Bahúkiwa* seniority respect usages with other sibs are only fragmentary.

561 Distinctions of relative age have their counterparts in behavior.
571 Seniority commands precedence in succession to the headmanship
[622] in the household of the headman. In all households seniority is ac-
[857] corded respect and ritual precedence. Among children, the eldest of a play group is expected to be leader. When members of a sib come
[614] to attend a ceremony at another sib house they present themselves
[796] at the door in order of seniority and are greeted by a receiving line also formed in order of seniority. During the early stages of a cere-
[622] mony, when all is still formal, chicha, coca, tobacco, and *mihi* are also passed among sibmates in order of seniority. Seniority cannot be said to confer authority, however, since the Cubeo are reluctant to endow anyone with authority. Even the headman governs by a principle that is not quite that of authority.

561 As between men and women, seniority has a different significance,
562 because of the ritual separation of the sexes. In the etiquette of cere-
796 mony women take precedence according to the order of precedence
[622] of their husbands and not by their own relative age. The wife of a headman has a position vis a vis the women of the house as her husband has in the sib generally. An older sister who has been a substi-
[593] tute mother to all her younger siblings is regarded by them with a mixture of respect and affection. In later years, should she return to
[614] the sib as a widow, a divorcee, or with her husband, a ceremonial
[553] role is open to her as sib "mother," from whose breast may be drawn the ritual milk that an infant drinks at the time a sib name is being bestowed upon it.

593 A younger sister has a special role with respect to an older brother.
561 She is often assigned to him for use in an exchange that will bring
584 him a bride. As an older sister is a "mother" to her younger brother

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBE

so an older brother is *amyobaku* (older brother-father) to his younger sister. He is her guardian. He may arrange her marriage, or offer her sexually to a friend, if she is willing. It is a special relationship in many respects. 593 561 [584] [836]

Seniority is of consequence only in the sibling generation. There is no concept of senior line and no recognition in terminology of descendants of older or younger siblings.

Apart from sex and seniority, Cubeo sibling terms also demarcate social distance. They differentiate, as already noted, three degrees of sibling closeness: lineage sibling, near phratry sibling, and distant phratry sibling. They do so, ingeniously, by the linguistic device of using a common root for sibling – this usage is only in the senior term, because only the senior term is important – indicating distance or closeness by the use of appropriate prefixes and suffixes. The root for senior sibling of either sex is *ame*. With the possessive prefix *hi* and the gender suffix *ko* or *ku* (*himámiko*, *-ku*) it connotes utmost closeness and is applied to older brother and sister of one's own family, including the extended joint family or lineage. Since sib and lineage may often be coextensive these terms are also sib-wide. The term *himámiko* (my older sister) does not apply to a mother's sister's daughter unless she happens to be – via brother-sister exchange marriage – a father's brother's daughter as well. The intimate usage, that is, must also correspond with coresidence. One's own sister, to be sure, does marry out, but in the meantime there has been a long period of coresidence. In any case, there is not the slightest tendency to slur over a nuclear kinship relationship. In the case of father's brother's daughter the intimate term applies only when she is still a coresident. After she has married she falls into the next more distant category. 601 [614] 601 193

The second range of kinship intimacy is the most widespread of all, including sib, subsib, and all close sibs within the phratry. It may even be applied to all members of the phratry of one's generation, in which case the third and most distant form of sibling terminology is reserved for those people whom one does not know well. The terms used in this second range are *amiyo* and *amiko*. The suffix *yo* conveys the meaning of "such as" or "one who is of the class of." It is also used in the term *bakudyo* (father's brother) and means literally "one who is in the class of a father." In *amiyo* it means, therefore, "one who is in the class of an older brother." Strictly speaking, the suffix *yo* has no sex gender and if it were applied to a woman would constitute no major linguistic blunder. But since one's contacts are almost invariably with male siblings, the sisters normally at a distance, the [614] [615] 601 193

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

601
93

term has apparently taken on a masculine meaning and *amikó* is used to specify the female. A term *amikû* does not exist to my knowledge. With the loss of the possessive prefix *hi* some of the intimacy has gone out of the term. Nevertheless, being diplomatic in their use of kinship terms, the Cubeo sometimes employ the form *himamiyo* and so give the term a warmer tone.

Finally, the most distant usage is to employ only the stem *mamû* ("older one") equally to male and female to connote the barest sibling relationship. I never heard this term used because, I suppose, the Cubeo find it too formal. Rather than call a person *mamû* they prefer the more cordial *pakomá* (kinsman). The special respect use of this term for men of the head sib has already been described.

601
[554]
[614]

The junior sibling term is rather unusual. I am inclined to regard it as a quasi-kinship term because it has equally a kinship and an age-grade connotation. *Hwainyó* means literally "one who is in the class of youths." Like *amiyó* it can refer to females, but *hwainkó* is the special term for a younger sib and phratry sister. Because it is an age grade term, the kinship meaning of *hwainyó* is so wide that it has come to mean any person of sib or phratry who is younger either by relative age within one's generation or is of a younger generation. When it is used as the reciprocal for *amiyó*, as a respect term, it refers to one to whom one condescends somewhat as a donor or good Samaritan. It would seem that the Cubeo have developed only the senior term as a true kinship term and have given seniors the prerogative of addressing all their juniors, whether by age or status, simply as "youth." Nor is the term bound by phratry, since it is applied to all grandchildren (male or female) who are not of the lineage. *Hwainyo* also means son-in-law and any nephew or niece. *Hwainko* is the daughter-in-law. *Hwankû* is a serviceable male form giving it somewhat greater intimacy and thus is limited generally to younger men of one's own sib or of closely related sibs. The abbreviated form *hwa*, a more jocular term, is also used.

## BROTHER-SISTER RELATIONSHIP

614
613
602

Lineage brothers and sib brothers are joined by all the strong bonds of a localized patrilineal sib organization. The obligations of lineage brothers toward one another are very little less binding than those of blood brothers, and the obligations of sib brothers, while somewhat less binding, are still considered to be strong. But these brotherly ties are general and taken for granted, whereas the relationship between brother and sister, as indeed that between husband

[593]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

and wife, is based upon complementarity. Complementarity of necessity entails more precisely structured relationships than does a homologous relationship as prevails particularly among brothers, the importance of seniority notwithstanding.

Among the Cubeo, the brother-sister relationship is modeled rather closely upon the husband-wife relationship, particularly in respect to forms of economic reciprocity. Even in sexual respects there appears to be a quasi-conjugal relationship. The conjugal division of labor is that a man clears a garden and his wife cultivates it. He provides fish and game, she provides the staple, manioc. She brings in forest products that can be gathered, such as grubs, ants, wild fruits, and he supplements it further by such extra cultivations as pupunha, sugar cane, squash, gourd, coca, tobacco, and *mihi*. She makes pottery and he basketry. Under more modern conditions the women secure trade goods from the whites by bartering farinha, while the men barter their labor in the rubber forest for trade goods. The women acquire, in the main, trade goods for themselves, but will always barter something for a husband, son, or brother. Similarly, a man works primarily for his own wants, such as a muzzle-loading shotgun, but will always take part of his wages in goods for his wife, daughter, or sister.

To carry this account of sexual economic complementarity further, we might add that the women prepare all the regular everyday meals while the men take over the food preparation – with the assistance of the women – for the great events when big game (e.g., tapir) or a spectacular catch of fish has been brought in. In ceremonial life it is the role of the men to astonish the women with the mysteries of the ancestor cult and the role of the women to be astonished. One of the functions of ceremonies that maintain mystery between the sexes is to augment the tension of complementarity.

Sexual complementarity is an aspect of adult status. The young are attached to generalized groups only, the boys in a young male pack that attaches itself only loosely to the adult males, while the little girls are charged with household chores under the direction of their mothers. Adult status is reached by a woman when she has a manioc garden of her own, by a man when a woman is cultivating particularly for him. From this point of view, full adult status is gained only at marriage. The Cubeo brother-sister relationship provides for adult status in advance of marriage and, as we shall see, serves to facilitate marriage and often to protect the stability of marriages. Above all, the brother-sister relationship seems to satisfy a very strong need for particularized relationships.

5. Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

593 A brother and a sister who are close to one another in age and who show a fondness for one another are regarded as being linked in a bond that is both warmer and more specialized than the normal bonds between a brother and a sister. The girl is spoken of as "belonging to her brother. The boy prepares a manioc garden for his sister [244] [437] and she in turn barters a good part of her farinha production in his behalf, getting him fishhooks, ammunition, jewelry, and items of clothing. He will always bring something for her. If he wishes to act [273] as host in a drinking party his assigned special sister has a particular [261] obligation to assist in the preparation of chicha. They do not ex- [592] change, the ordinary male-female foodstuffs since that is strictly a connubial form of reciprocity and the unmarried are part of their parents' household. They do simulate a conjugal relationship, [835] though in that they reportedly allow themselves the intimacy of external coitus (i.e., without intromission). On the other hand, since [836] the girl has been allotted to her brother to be part of an exchange [583] marriage, he assumes the right to offer his sister's sexual favors to persons of his choosing, although, as in the case of an exchange marriage, he cannot force her to accept a man against her will.

593 As the Cubeo explain it, the purpose of the brother-sister relation-
583 ship is to provide for the boy's marriage. Since the most desirable marriages are those in which brothers exchange sisters, a boy, they say, must have a sister assigned to him if he is to have a strong bar-
583 gaining position. The Cubeo do recognize the validity of a material trade price, but very few families will readily yield a daughter merely for siliqueta. They want a daughter-in-law to replace a daughter. Exchange marriages are complicated because it does not often happen
58 that the exchange can be immediate. The delay in completing an exchange transaction calls for a reliable guarantee that the agreement will be adhered to. For this, several recourses are available. The ultimate recourse is force. The aggrieved party will raid a household [593] [illegible] renegade and hope to abduct a bride, or, more commonly, love magic will be used to lure the girl away. The most assured contract is one involving cross-cousins, since it draws upon the absolute probity of relationship between a brother and a sister, who are always principals in such a marriage negotiation. But even this has a loophole in that the girl must be willing. By and large, it is the attitude of the bride-to-be that the Cubeo regard as unpredictable. If she enters upon a marriage with reservations that are not removed soon after she has been taken to her husband's community she can be [593] counted upon to run home and stir up complications. The special brother-sister relationship is intended to guard against this. On one

5 Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

hand, the assigned sister can be counted on to act in her brother's behalf and to accept the exchange marriage. On the other, if his bride should leave him he believes that he can ask his sister to leave her husband so that accounts will be squared. This arrangement does not work perfectly, but it works well. 58 593

Not every young man has a sister assigned to him. The son of a headman who is in line for the succession has preference, as has a favored son, since it is the parents who play an important part in establishing this relationship. In the case of an apparent heir to the headmanship the assigned sister enhances his status in two ways. It makes him part of an adult status economic relationship in that he has a woman "working" for him and it smoothes the way for his marriage. 593 622 [182] [885]

I could get no term for this rather specialized brother-sister relationship. Ordinary relationships between brother and sister lack the specific economic exchange features. Lacking the intensity of the paired relationship, the ordinary relationship is still charged with considerable emotion. 593

From the point of view of the sib, the brother-sister relationship may be considered as a source of holding women to the sib even after they have taken up residence in another sib. There is the curious expectation that a woman will some day come back to her own sib. She will do this as a widow or after a break in her marriage. When a young man is on his way to his "alloyal" sib to bring back a wife his parents say to him, half in jest, "Try to make your sister come home." The symbolic act of marriage for the Cubeo is the drama of a "marriage by capture." The groom seizes the bride, who protests, and carries her forcibly to the beach and into his canoe. Her outcries bring her kinsmen on the run, who then try to prevent her "abduction" by cudgeling the groom. This dramatic enactment makes the point that the bride is unwilling to leave her sib and that her kin are determined not to let her go. It is a strong demonstration of attachment that soothes the feelings of the sib and particularly of the brother. It satisfies the sentiment that no one wishes to leave the sib. 593 614 182 582

The relationship between brother and sister may also be considered in the context of the sib origin myth which states that the founders of a sib were always a brother-sister pair who only later entered into exchange marriages. The tradition of the *Bahükiwa* sib that a woman re-established the sib after all her brothers had been killed by enemies illustrates still again the Cubeo sentiment that a woman really belongs to her sib. Thus a sib has a female ancestress as well as a male ancestor. 593 614

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

## PARENT-CHILD RELATIONSHIP

593 604 [601] The Cubeo distinguish between father and father's brothers, but do not distinguish between mother and mother's sisters. The term *bakũdyó* means "like a father."[2] This distinction conveys rather precisely the actualities of the relationship. Relations between fathers and sons (the daughters are linked in household duties with the mother) are intimate, and one important sign of intimacy is the privilege that a youngster has of taking food from his father before it is brought into the maloca or into the individual household. Boys value this privilege enormously when they are preadolescent. Without a father a boy will be fed by his father's brother but will lack this privilege with food that he had with his own father. The relationship between paternal uncle and nephew is a strongly supportive one, but with restraint in it. A boy does not take or handle objects belonging to his father's brother without permission. With his father's possessions he has the same freedom as with the possessions of his sibmates of his own generation.

593 601 604 [587] [595] 593 [601] [595] Parents and children share an exclusive set of kinship terms and thereby set themselves apart from the fraternal joint family. Even though mother and mother's sister are equated, a woman distinguishes, as does her husband, between her own and her sister's children. The equation of mother and mother's sister is normal clan usage in a classificatory system. Among the Cubeo, this equation is not related either to the sororate or to sororal polygyny. It would seem to correspond rather to the principle of generalizing relationships that are less important and differentiating very sharply relationships that are most important. With respect to the term for "mother," this is not to say that the actual relationship between children and mother lacks real importance, but only that from the point of view of patriliny of the sib the incoming females, such as mothers, are less important. Actually, the feeling for one's own mother is very strong, not only on the part of the daughters but on the part of the sons too. In a polygynous household the sons of the same mother share a close link with one another; and as we have

[114] [2] Koch-Grünberg, who stayed with a *Henéneva* group at the mouth of the Cuduiari, reported that father and father's brother were equated, as were mother and father's sister (1909, II, 82). Since he did not use the genealogical method it is likely that he was in error with respect to both reported usages. The equation of mother with father's sister controvenes, of course, the patriliny of the sib. On the other hand, the grouping of father and father's brother is conceivable since the distinction between *bakũ* and *bakũdyó* is not great for the Cubeo. In calling attention to this difference of information I should add that the nature of the Cubeo tribe is such that variations in minor usages are perhaps to be expected.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

already noted, cleavages between siblings commonly occur at this point, the sons of one mother breaking with the sons of another. Thus, the distinction between terms for father and father's brother is associated with subtle differences in behavior, yet the grouping of mother with mother's sister ignores even greater distinctions in behavior.

The father's sister is *panimó*, a term built on the root *pani*, which means "in-law." Although a woman of the sib, she rates as an in-law because her daughter is normally eligible as a cross-cousin marriage partner. *Panimó* also means "mother-in-law." There are no formal avoidances with a mother-in-law. Ordinarily, because of the rules of residence, a man sees little of his mother-in-law.

Mother's brother (*paniyó*) is a parallel relative to father's sister. He is father-in-law. There are no formal avoidances in this relationship. The important relationship is between a woman and her father-in-law. There is a good deal of restraint between these two. The father-in-law is her mentor on moral issues, and if she commits adultery he will often act in the matter before his son does. Reserve between father-in-law and daughter-in-law is eased after a time but never lapses. The Cubeo defend the unity of the sib by regarding the in-marrying women as permanent strangers. It is the father-in-law as a sib elder who is expected to enforce the separateness. Coupled with this reserve and, in a sense, counteracting it, is the fact that he calls her *hwainkó*. Reserve prevents sexual joking, licentious bodily contact, and other undue levity. It does not bar the father-in-law from beating his daughter-in-law. Father-in-law and son-in-law may refer to one another by the common term, *pani*. Between father-in-law and son-in-law there is only the reserve of unfamiliarity. But when a man does come with his wife to visit her parents he is warmly welcomed as a son and is drawn into all common activities. The visit of a daughter is so exciting an occasion for the Cubeo that the son-in-law is readily tempted in the aura of warmth and good cheer to prolong his stay.

The terms that siblings apply to one another's children are only partially based on considerations of the marriage possibilities between their young. Primarily, the children of siblings are regarded as "youngsters." As juniors they merit generalized terms. Thus, the common terms for nephew and niece within the sib are respectively *hwainyó* and *hwainkó*. The son of a sibling of opposite sex is *pani* — an in-law — but the daughter is not. She enters the household as *hwainkó*. Again we notice the neutral character of the term. *Hwainkó* is not a term of the sib necessarily. The point is, rather, that it is not

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

604
614 a term that connotes out-of-the-sib, as does *pani*. Thus, Cubeo usage
[601] with respect to daughter-in-law points up again the strength of their feelings about membership in the common residence group.

The problematical relatives are the mother's sister's children. There is no problem if they are also father's brother's children, or if
[615] they have been born within one phratry. But since mother's sisters marry into other phratries or into other tribes, their children are in
[582] effect strangers who belong to their paternal sib or tribe. They are not included in the kinship system, they are lost sight of, and such parallel cousins one may marry since they do not belong to the phratry.

## GRANDPARENT - GRANDCHILD RELATIONSHIP

603 The two grandparent terms, *nyéko* (*kü*) and *nyekundjó*, refer to
601 all kin of the generation of grandparents and beyond, irrespective
614 of sib or phratry affiliation. Correspondingly, their reciprocals
615 (*panaihinkü*, *-ko* and *hipanimekü*, *-ko*) do not differentiate between a child of the sib or phratry and a child outside the sib or phratry. The grandchild terms are all formed of the *pani* stem from which affinal terms are constructed. *Panaihinkü* means "my very little in-law," and *hipanimekü* means "of my in-law line." The ignoring of sib lines for grandparents seems to follow from the simple fact that at this generation level exogamy is not an issue.

603 I could get no explanation from the Cubeo as to why the grand-
601 child should be classed with the affinal line. It may result from the
[593] Cubeo interpretation of cross-cousin marriage. Brother and sister negotiate for the marriage to one another of their children and so
[584] would be inclined to regard the offspring of that marriage as a con-
[614] tribution from the affinal line to the sib. Often enough, however, I have encountered the use of the descriptive terms such as *himákü-makü* (my son's son) to distinguish between a lineal descendant of the sib and other grandchildren.

601 Elders of a distant sib of the phratry may be addressed and referred
[614] to as "grandparent" even if of one's own generation. Their children consequently are called "father" or "mother." In these usages the
[615] reciprocal is always *hwainyó* or *hwainkó* and never a specific "child" or "grandchild" term. Among the Tucano, Fulop (1955) has noted that one of the sibs of a phratry is the "grandparent" to all the others so that all persons of one's own generation in that sib are "grandparents." If this is also the case among the Cubeo of the Cuduiari then the fact must have escaped my notice. This usage of grandparent

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

This usage of grandparent terms is different from the seniority respect usages previously discussed, because "older sibling" among the Cubeo has a formal connotation of respect, whereas the grandparent term is a genial one as in English. 601 561

## CROSS-COUSINS

Cross-cousins of the same sex often have a relationship that is formed by the fact that they have been principals in a brother-sister exchange marriage. Since their parents, who were siblings of the opposite sex, were also principals in arranging such a marriage, they have shared in some of the intimacy of relationship between these two. Cross-cousins of the same sex have, of course, little contact with one another, but having so much in common, their relationship tends to be a warm one. It is a curious relationship, in that it also has in it a latent threat of trouble, trouble that arises from marital discord. As already noted, one of the expectations of a brother-sister exchange marriage from the male viewpoint is that if his wife leaves him he can get his sister to leave her husband in retaliation. He believes that he can apply pressure upon his cross-cousin brother-in-law to send back the runaway wife or face the breakup of his own marriage. Thus, what begins as a family squabble in one community may embroil a happy marriage in the affinal community. The expectation that a woman will leave her husband only because her brother wants her to is in practice a vain hope, unless he has the cooperation of his male cross-cousin brother-in-law, who urges the woman, his sister, to return to her husband. 605 605 586 593

Cross-cousins of opposite sex refer to one another as *hitcimako* or *hitcimakü*, the possessive prefix connoting closeness. By contrast, *tcimá* has the connotation of distance. The relationship between cross-cousins of opposite sex is governed by the customs of courtship and is, therefore, an individual matter. 605 [601] [193]

## THE AFFINAL GROUP

Among affinals there are two principal relationships. The most important is that between parents and children-in-law, the *pani* relationship. This relationship is both consanguineal and affinal since it includes the children of siblings of opposite sex and reciprocally the cross aunt and uncle. The Cubeo draw no distinction, incidentally, between parents and their children-in-law who are of the consanguineal kin and those who may be complete strangers. The emphasis in 606

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

606 [591] [601] this group is on the affinal relationship. Because of patrilocal residence it is the daughter-in-law who occupies a special position. She is *hwainkó* (younger female), a term that receives her with familiarity and some condescension as an in-group member. A daughter-in-law is considered to be at first a replacement for a daughter who has married out, and she lives for a time under the jurisdiction of her mother-in-law, helping her in gardening and in all food preparation. A woman tries to keep her daughter-in-law within her household as long as possible, speaking of her not as her son's wife but as a replacement for her daughter who has been lost to her by marriage. One aspect of the relationship between mother-in-law and daughter-in-law is stereotyped, and that is the tug of war between a woman's desire to keep her daughter-in-law within her jurisdiction and the desire of the young wife to win autonomy by cultivating her own garden. For the rest, the relationship depends upon the interplay of personalities and upon the circumstance of whether the bride is a foreigner or a brother's daughter or a member of the brother's sib or phratry. When a child has been born and a woman has her own garden, she and her mother-in-law achieve a relationship of greater equality. Terminology [601] does not change, even though the reference to an elderly woman as *hwainkó* may seem incongruous. The term defines the relationship at its inception.

[867] [868] It is the role of a woman to introduce her daughter-in-law to the economic routines and to the local customs of the community, a task that would be inappropriate for her husband. Since the Cubeo often marry women who do not even speak their language or dialect the initial period of tutelage is most important, even though the Cubeo do not stress this feature of what is really an apprenticeship.

The relationship with a son-in-law is governed by the circumstance that he normally does not become a member of the community. At best he will be a visitor who joins in the male activities. His relationship with his mother-in-law is one of restraint rather than of formal avoidance. It is perhaps for this reason that she addresses him as [601] *hwainyó*. His relationship with his father-in-law, on the other hand, borders on intimacy and is predicated upon the equality of men engaged in their common tasks of hunting, fishing, and the conduct of ceremonies. Perhaps it is this equality that governs the use of *pani* or *paniyó* as a reciprocally used term between father-in-law and son-in-law.

607 601 The other set of affinal relationships recognized by the Cubeo are those involving spouse's siblings, for whom a variety of terms are applied. The general affinal term is *kodjú* or its plural form *hikódju-*

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

*mana* (my in-law group). These generalized terms are most appropriate in referring to members of a phratry into which one has married. They have a connotation of a claim to hospitality and of expectation of further intermarriage. Of this group of terms there is also *hikódjumu*, that is used reciprocally between men – sister's husband and wife's brother as well as sister's husband's brothers and brother's wife's brothers. Across the sexes women call their sister's husband's brothers as well as their husband's brothers *hikápenámu* and are called by these men *hikápenamo*. Women call their husband's sisters *hiwemu* and are called by them *dyáko*. *Dya* is a very general term that may be applied reciprocally between any actual in-laws of the same generation. Finally, I have an alternate term for spouse's siblings, *hibáwükimana*, and the term *kibü* for brother's son's wife. What may be observed about the affinal terms in own generation is that affinals are generally not confused with cross-cousins. As we have noted, the *teimá* usage, which has the connotation of "sweetheart" for the Cubeo, is entirely inappropriate when one of them has married. Should a man be courting his brother's wife's sister, who is his cross-cousin, she is his *teimá*, or rather *hiteimako*. If not, courtesy calls for the use of the affinal terms.

## ORPHANS AND STEPCHILDREN

The treatment of orphans and stepchildren underscores the importance of the actual blood tie for the Cubeo. Parents lavish affection only on their own children. While a woman is obligated to look after all her husband's children, this need mean nothing more than that she feed them. That she will favor her own children and neglect or treat the others harshly is more or less expected. A man does not expect his second wife to accept as her own his children by another wife. A girl with a stepmother has a more difficult time than a boy, since women generally favor their sons and are harsh with daughters. The mother is her daughter's disciplinarian in household work. Her son is the little lord of the household, his sister its slavey. Stepdaughters are set the most burdensome tasks while own daughters are then freer to play. Own daughters then make common cause with their mother at the stepdaughter's expense. Since the father does not mix in the female side of the household he can do little to improve his daughter's lot with her stepmother.

A boy with a stepmother is less underprivileged. His is the male prerogative of being looked after by a woman, his mother or his sisters. He has his male play pack for companionship and can look

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

593 to his father for personal attention. On the whole, a child is at a greater disadvantage if it has lost a parent of its own sex, that is, a girl with a stepmother, a boy with a stepfather. A girl with a stepmother has a hard life of chores and of open neglect. A boy with a stepfather does not have a hard life at all in the material sense. He is deprived more subtly of intimacy with a paternal figure, and this usually shows itself in his own reserve with respect to his fellows. If he has no father at all the effect upon his personality is even more marked.

593 736 [597] My direct acquaintance with the situation of a true orphan is limited to the observation of one case among the *Bahükiwa*. This was a girl from another tribe who had lost both parents and was adopted by the *Bahükiwa* headman as his "daughter." The little girl, about nine, was addressed as "daughter" but held the status in the household of a servant. She took on the heaviest chores and was almost never free to play. Her lowly status was truly stigmatized by [301] her lack of possessions. She was the only child among the Cubeo [123] whom I had ever seen unadorned, until I gave her a necklace which she was allowed to keep. The children of the household enjoyed beating her as a way of teasing her, rather than wickedly. She took their pinchings and cuffings good-naturedly, on the whole, and had learned to pretend not to notice. Once, in the presence of the headman, her "father," the children were overdoing their teasing. She looked imploringly at the headman. Finally, she caught his eye and he said to her, "It is all right for you to run away." He saw no need to reprimand his own children.

[114] In reading Giacone (1949) on the Tucano tribe I found my observations on orphans corroborated. He, too, reported that orphans do not lack food but that they appear to be melancholy.

## CEREMONIAL FRIENDSHIP

572 193 A parallel to the brother-sister relationship is the *hikü-hiko* relationship, a ceremonial friendship. These terms, formed by combining the possessive prefix with the gender suffix, connote a relationship of exceptional closeness. The linguistic significance of possessive prefix and gender suffix for kinship terms has already been brought out. The curious feature of *hikü* and *hiko* is that these terms are composed of the two intimate-indicating particles.[8] The ceremonial

[8] *Hi* is also the verb stem "to give," but if *hikü* were translated as "giver"—a feasible rendering—it should be possible to say *hihikü*. But this form does not exist.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

The ceremonial
friendship is an intimate relationship, indeed. The Cubeo expectation of it is that it have a quality of warmth and of privilege, if not beyond, then at least equal to a close, recognized kinship relationship. Since ceremonial friends are already sib or phratry mates, their relationship, if it is to have any meaning at all, must make them at least the equivalent of lineage kin; and that is what it is intended to do. Ceremonial friendship gives vividness and exclusiveness to sib and phratry relationships that are often too tepid and too generalized for Cubeo tastes. 572 614 615 572

When ceremonial friends are of opposite sex they forgo the erotic play that even brother and sister are supposedly allowed to indulge in, asserting, thereby, that theirs is the closest bond of friendship attainable. The relationship is often a substitute for a brother-sister pairing. Not every sibling line is so conveniently arranged as to provide for a brother-sister pairing. Hence, if no sister is allowed to a man he casts about for a girl of his age group and asks her to become his *hiko*. If she agrees he acquires the equivalent of an assigned sister, and she of a brother. They will form a team in an exchange marriage and they will exchange products. She will provide him with manioc for chicha, if he wishes to sponsor a drinking party, and she will prepare farinha for him, which he will use to trade for objects of white manufacture. He will reciprocate with appropriate gifts and with making household implements for her. When he is paid for his labor in the rubber forests he will surely bring cloth and trinkets for his *hiko*. 572 [832]

To cite one specific example of gift exchange between ceremonial friends: A man of a *Bahikiwa* subsib took a sib sister as his *hiko*. He gave her, immediately, cloth for two petticoats, two boxes of matches, two decorative combs, two small hand mirrors, thread and needles, two tins of brilliantine hair dressing, and a bar of soap. In return she gave him four big chicha serving calabashes, two balls of miriti twine, and a valuable necklace of silver triangles known as "butterflies." In addition, her father gave her two fishing bows to give to her ceremonial friend. 572 431

The relationship between *hikū* and *hiko* does fill the gap left by the normal imbalance between male and female siblings. But the Cubeo do not regard it as a mere substitute for a missing brother or a missing sister. Men who have sisters assigned to them still seek a *hiko*, if only to enjoy an individualized relationship of their own choice. If exchange marriage is not to be a central feature of the relationship, the *hikū* is still entitled to a gift from the groom at his 572

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

572 *hiko*'s marriage and he will expect to have been consulted so that he may consent to her marriage.

[775] Ceremonial friendship should be permanent, the Cubeo say. Whoever breaks it has become an enemy and his soul after death will be that of an insect and not of a human being. Marriage, of [574] course, separates *hikū* and *hiko*, but they visit one another, as do [431] brother and sister, bringing gifts, and they try to arrange the mar- [584] riage of their children to one another. The *hikū* has the first claim upon his *hiko*'s daughter as a bride for his son.

[431] Between members of the same sex, ceremonial friendship is also the equivalent of a blood sibling relationship except that they exchange gifts in a formal manner. Whereas a man has reason to suspect 572 that his own brother might commit adultery with his wife, he be- 684 lieves that his *hikū* will never cuckold him. Still, when it comes to adultery even ceremonial friends sometimes succumb. Adultery or even flirting with a ceremonial friend's spouse is a principal cause for a break in this otherwise very stable relationship. A ceremonial friend who has been wronged by his partner retaliates by entering the offender's house to break or carry off everything belonging to him except the hammock. This act of vandalism declares the friendship broken. Eternal animosity succeeds it. Women are less inclined 572 to seek a ceremonial friend among their own sex. When they do, they have acquired mainly a confidante. Since women are likely to be dispersed at marriage the pledge against adultery with one another's husband is of no great consequence.

Ceremonial friends advise and assist one another. They feel that they actually have more freedom in their relationship with each other than they do with their own siblings. This may be correct, but I suspect that the Indians exaggerate the closeness of the relationship when talking about it. Ceremonial friends give up the use of their normal kinship designations in favor of the more intimate term.

Most ceremonial friendships are based upon simple reciprocity and so are modeled very closely, or I should say precisely, upon the sibling relationship. They satisfy in the main the longings of youths just before marriage and apparently fade with age. I was told that not everyone has a ceremonial friend but I could get no figures on its extent. Some ceremonial friendships model themselves after unequal kinship relationships, such as uncle-aunt or nephew-niece and grandparent-grandchild. These, I gathered, were not common and were rather aberrant forms of the true relationship. An older man takes a little girl as his *hiko* and is content with an unbal-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

anced relationship in which he lavishes gifts upon her. "When she grows up," the Indians say, "she will repay him." A young man enters a friendship pact with an elderly widow because she has no one to look after her. This relationship, though, is like mother-son, and the woman will provide the young man with chicha and farinha if he has provided her with a manioc garden. 572

The Cubeo believe that ceremonial friendships persist in the afterlife. As spirits, they walk about arm-in-arm, one informant said, rapturously. The spirit of the friend who dies first hovers about the house until the other dies. It then leads its spirit friend away. 572 775

The ceremony for inaugurating ceremonial friendship is a simple one. At a drinking party, friends paint one another with red pigment which they refer to as "blood." Applying body paint to another, picking lice, or removing insect-bite scabs from the body is a gesture of intimacy normally confined to the immediate family. It is this intimacy that makes it appropriate between ceremonial friends. 572 302 515

Ceremonial friends tend to form a network. When a man has taken a girl as his *hiko* he is likely to take her brother as his *hikü*; his own brother will then take her sister as his *hiko* and so on. There are many network possibilities. Men who are *hikü* encourage their children to become ceremonial friends. The friendship network encompasses the phratry, giving to people special privileges of hospitality along the river. The network of kinship already encompasses the phratry, to be sure. But ceremonial friendship interlaces these bonds with the quality of close kinship. This seems to be its special significance. One may also look at the relationship from an economic point of view, noting the circulation of goods through its requirement of gift exchange. The Cubeo, however, are not so much property-minded as they are person-minded. The Cubeo joke about the gift aspect of ceremonial friendship and laughingly say that some people enter into the relationship with many people in order to acquire gifts. They are amused at the thought that a girl with many ceremonial friends will be a burden upon her suitor, who must make a gift to each ceremonial friend. The parents of young people are also burdened because they will be asked for something to be used as a gift. However, it is not goods they seek but intense relationships. It is not that the sib and the phratry fail to provide people with warmth and mutual assistance. The ordinary organization does this to a high degree. It seems, rather, that being virtually surrounded by "brothers" and "sisters" the Cubeo have exalted expectations of warmth and assistance which ceremonial friendship helps satisfy. 572 571 572 431 571

601

KINSHIP TERMS

*nyéko* Grandmother and all old women of grandparent generation of maternal and paternal lines, as well as older women of an opposite phratry, regardless of generation.

*nyékundjó* Grandfather and all old men of grandparent generation of the lineage and of the sib, including maternal or paternal lineages.

*nyékü* "Grandfather": all old men of own phratry or of opposite phratry regardless of lineage.

*bakó* or *hipako* Mother, mother's sisters, all women married to father's brothers, and all mothers of sib brothers.

*bakü* or *badjü* or *hipakü* Own father, as well as sons of men of the phratry who are called *nyékü*. (*Badjü* is the affectionate term.)

*baküdyó* Father's brother and all father's sib brothers.

*himámiko* My own and lineage older sister.

*himámikü* My own and lineage older brother.

*hiyoko* My own and lineage younger sister.

*hiyokü* My own and lineage younger brother.

*amiyó* My older sib or phratry brother; includes all male parallel cousins, but only those mother's sisters' sons who are of the phratry.

*amikó* My older sib or phratry sister; includes all female parallel cousins, but only those mother's sisters' daughters who are of the phratry.

*hwainyó* "Youngster." It is applied to all children of siblings, to all younger male parallel cousins of the sib and phratry, to all children of sib brothers, and to all of grandchild generation of the phratry who are outside of the lineage.

*hwainkó* The female counterpart of *hwainyó*. It is also the term for daughter-in-law.

*hwankü* An alternative form of *hwainyó* generally restricted to younger men of a close sib in the phratry.

*hwa* A short and colloquial form of *hwainyó* used between younger men of same generation of the phratry without necessary regard for relative age.

*mamü* A variant form of amiyó that is used only between members of different sibs of the same phratry.

*mamüko* The female counterpart of *mamü*.

*amyóbakü* Literally "older brother-father." A special respect term a woman applies to an older brother.

*himako* My own daughter.

*himakü* My own son.

*hipanimeko* Granddaughter of the maternal or paternal lineage.

*hipanimekü* Grandson of the maternal or paternal lineage.

*panaihinko* Granddaughter (literally "my little in-law") and alternative and more affectionate reference.

*panaihinkü* Grandson, counterpart of *panaihinko*.

*tcumi* Generalized affectionate term for male grandchild (literally "little one"). Can be extended as an affectionate term toward any younger male, but only by a woman.

*tcumiko* Female counterpart of *tcumi*. Only a woman would use it for a younger sister.

SQ19 Tucano SQ19
CUBEO

601

*pakomá* Kinsman (male or female) of my own phratry.
*tcimá* Cross-cousin of my own sex.
*hitcimako* Female cross-cousin (m.s),* wife's sister.
*hitcimakü* Male cross-cousin (w.s.),* husband's brother.
*hipánimo* Mother-in-law, father's sister (m.s., w.s.).
*hipániyo* Father-in-law, mother's brother (m.s., w.s.).
*pani* Generalized term for parent-in-law or child-in-law.
*himanipako* Wife (literally "my children's mother").
*himanipakü* Husband (literally "my children's father").
*tcumipako* or *tcumipakü* These are alternative terms for husband and wife with colloquial connotations.
*kodju* Generalized term for members of a phratry into which one marries.
*hikápenamu* Husband's brother, sister's husband (w.s.).
*hikápenamo* Wife's sister, brother's wife (m.s.).
*hikódjumana* My sibling's spouse, a generalized term.
*hikódjumu* My sister's husband (m.s.).
*hikáwükimana* My spouse's sibling.
*hikópwimana* Wife's brother in an exchange marriage.
*hiwemu* Husband's sister.
*dyáko* Reciprocal of *hiwemu*.
*dya* Any in-law of one's own generation.
*kibü* Brother's son's wife.
*hiwá* Any relative (literally "my people").

CEREMONIAL FRIENDSHIP TERMS

601
572

*hikünahu* A very close friend.
*hihwimu* My male friend (w.s.).
*djuré hwiyo* * My female friend (m.s.).
*hikü* Generalized term for male friend.
*hiko* Generalized term for female friend.
*adjuré hwinomwa* Ceremonial friendship between two women.

* Man speaking.
* Woman speaking.
* *Djuré* has the connotation of "sweetheart."

## *Marriage*

614 615 The rule in marriage is that a wife cannot be taken from within the sib or phratry. She may be taken from another tribe and, of course, from any of the other two phratries. There is no actual prohibition against marrying a woman from one's own community if she belongs to a group that is outside the phratry. As I have already noted, such marriages are not common because of a preference for marrying someone from a distance. Since true friendship is apt to mean brotherhood [626] for the Cubeo, and so is identified with exogamy, the parties to a coresidence marriage, the man in particular, are made to feel as though 614 they were behaving indecently. The only case of a coresidence 597 marriage that I learned about was complicated somewhat by an issue of adoption, but it illustrates the ambiguity of feeling the Cubeo have about such marriages, nevertheless. A boy, born a *Bahúkiwa*, was orphaned and adopted by the *Hürüwá*, a sib of the opposite phratry. He then married a *Hürüwá* girl. Opinion was divided. The boy and his supporters claimed that he was *Bahúkiwa* and so the marriage was proper. The other side argued that since he was raised by the *Hürüwá* he had no business marrying a *Hürüwá* girl. Since the girl's family allowed the marriage to stand we must assume 582 that the boy's position was legally sound. Marriage is preferred between age equals, and since a groom must be forceful enough to make a good impression he will not marry until his very late teens and so 192 neither will the girl. The term for marriage is *nomíkükü*, meaning simply "woman getting."

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

There is a strong preference for taking a wife from the same sib 614
from which one's mother has come. This establishes a pattern of cross-cousin marriage and creates a very close bond between the maternal and paternal sibs. The *Bahúkiwa*, for example, are closely intermarried with the *Byówa*[1] and the relations between these two sibs accordingly are cordial, even warm, in contrast to the stiff relationships that generally prevail between sibs of opposite phratries. Preferential marriage into the mother's sib arises naturally from the strong bonds of affection and of formal relationship between brother and sister. The principal way in which brother and sister maintain their ties even after marriage has separated them [593]
is by arranging for the marriage of their children to one another. We have seen that the grandchild is called a "little affinal," a designation that I have taken to mean that a man, having arranged for his son to marry his sister's daughter, regards the offspring as a contribution by the affinal sib to his own. He has the satisfaction of regarding his sister as responsible for this. She has succeeded in getting something from the "other" sib over to his sib. In this way, exchange, which is the greatest of human binders, is kept active.

From the point of view of the boy, marriage with a father's sister's 614
daughter also seems most natural and certainly convenient. Having 584
had virtually no opportunities for courtship, he does not know where to go for a bride. His father suggests that he visit his aunt in his mother's sib and his mother is delighted that her son will visit her kin. There is no more desirable guest than a boy who is visiting both his father's sister and his mother's kin. The warmth with which he is received should put even the shyest boy at ease. There are, to be sure, other opportunities for finding a bride, but by and large even the most aggressive young men still prefer to go to a community where the way has been smoothed for them. Since Indians travel mainly to visit kinfolk they are more or less bound to marry a woman from a sib from which, if not the mother, then a brother's wife has been taken.

Work in the rubber forests has broadened opportunities for mar- [464]
riage because men from different tribes are brought together and [571]
form friendships that allow them to visit one another and to exchange sisters. But even with these opportunities the preference for marriage into the mother's sib is still strong. A boy's parents will have opened the negotiations for him. There is no formal betrothal, but there is a kind of understanding that a particular marriage will

[1] There is a list of *Bahúkiwa* marriages at the end of this chapter.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

take place, although, it must be emphasized, these are never binding. Marriage is always thought of in terms of a boy getting a wife. A girl thinks a great deal about getting a husband, but her parents prefer not to think about that. The Cubeo know bachelors but not spinsters. Parents of a boy have in mind a little girl somewhere, usually in the maternal sib, as a wife for their son. Unable to bespeak her – a girl is bespoken only as a result of a brother-sister exchange marriage in which her brother has already taken possession of his wife – they keep an eye on her, waiting for her to grow up. She may marry someone else, in which case their disappointment will be keen although they will have no grounds for complaint.

There comes a day when a boy's parents say to him that there is a girl ready for marriage and that he ought to go and see if he can bring her home. If it is not the second stage of a brother-sister exchange marriage they will not say to him that they have already pursued the matter with the parents on the other side, through earlier exchanges of visits or through an emissary. Out of deference for his feelings should he fail to get the bride, they may instruct him as though he were going to broach marriage for the first time. If the girl is "vowed" to the sib his instructions are simply to bring her back, or, failing that, to take back his sister.

The young man sets out with a party of sibmen, some of his age group and some of his father's age group. The parents may come along, because a woman welcomes this chance for a home visit. A party does not necessarily announce itself as a wedding party. They prefer to announce upon arriving that they have come only to visit. If the parents are not to accompany the party, the father assembles the marriage party in the plaza and, in the presence of the entire community, instructs his son in the exchange procedures. If it is the completion of an exchange marriage he recapitulates the history of the earlier marriage, the promises of exchange that have been made, and declares what is due the sib. In an exchange marriage a particular girl has been promised and a substitute has usually been indicated if the girl who has been promised is unwilling. There is also the question of supplementary gifts to the bride's parents, such as a small canoe, a gun, ornaments, and the like, that the father authorizes his son to offer. If this is to be the initial marriage, from which an exchange will follow, the boy is instructed to say which sister or other girl of the sib will be offered. Under any circumstances both bride and groom have the option of deciding that they do not care for one another. This option is no mere formality and many a marriage party has had to settle for a social visit alone because the prin-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

cipals in the marriage were not attracted to each other. It is to avoid 614
this embarrassment that the marriage party does not declare its in- 583
tentions. They announce that they have come to visit relatives. They 584
are made welcome, assigned to sleeping quarters, and are drawn into 574
the general round of activities of the house. They may stay for many weeks. The groom-to-be joins in the activities of his age group, hunting and fishing with them. He spends part of his time in making gifts for his host's wife, who need not be the prospective mother-in-law, and for the mother-in-law-to-be as well, if he has been a guest in her household. He may make baskets, trays, or a hammock. Every woman treasures an object that a suitor has made. These objects, however, are not presented as marriage gifts but as offerings in return for hospitality.

The courtship itself is a slow process. For some time the prospective bride and groom virtually avoid one another. The young man is attentive to the other girls of the sib, and his own age mates, if single, act as though they are courting the prospective bride. They are all looking one another over. The young man's personality is evaluated, and his skills in hunting, fishing, and crafts are observed. The visiting party, for its part, makes close observations on the bride-to-be. The nature of this opening phase of the courtship in which bride and groom are being "looked over" is such that unexpected matches are sometimes made. It has happened that a boy who has been flirting with his bride-to-be's sister to divert attention from his real objective falls in love with her. Or the sister falls in love with the suitor and seeks her betrothed sister's permission to marry him. This happened among the *Bahúkiwa*. A man, having reached the final stages of courtship with a girl, had arranged the formal elopement tryst with her. At the end it was the sister who appeared, explaining that it was she who wanted to marry him, with her sister's consent. The suitor was not disappointed, and all went well.

If the young man is satisfied with the bride-to-be the party prolongs 614
its stay. Otherwise it leaves quickly. Once it has decided to stay, the 584
groom awaits a sign of acceptance from the girl. One of the first in- [574]
dications of sexual interest that she shows is to run rather than walk [481]
in his presence. When the older folk see a girl running when she should be walking they smile knowingly at one another. One day she throws a handful of manioc mash in his face in the presence of company and laughs at him. He pretends anger and moves upon her. She pretends fright and runs off to her manioc garden, where he overtakes her. They have coitus and they are then engaged. She may [836]
show her interest in other ways, pinching him or cuffing him as she

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

614 584 walks by. If she runs from him toward her manioc garden his quest
[836] is over. Since it is the girl who must indicate acceptance by inviting
[832] coitus, the young man comes prepared with love charms. One of
these is an extract of *ũwe*, the plant associated with the ancestral cult,
[789] a symbol of power and virility, which he sprinkles upon her when she
is unaware. This makes her desire him very passionately. After marriage a man uses what is apparently an antiaphrodisiac charm to keep his wife faithful.

614 583 584 [601] Actually a wedding party is engaged in three levels of negotiation simultaneously, all three of which must be successful. The first is the courtship, the second is the discussions going on between the parents and the elders of the party over the terms of the marriage, and the third is the discussion between the groom and his *tcimá*, his male cross-cousin, the bride's brother. The *tcimá* is involved because a daughter will not be let go unless a return bride can be secured for him. It is up to the groom to promise the *tcimá* his own sister in return. Since no marriage is honorable that does not establish a proper relationship with an affinal sib, a man would be a scoundrel if he eloped with a girl without paying heed to these formal matters. Normally there are no difficulties, since the courtship would not get very far if the *tcimá* or the parents were seriously dissatisfied with the terms of marriage.

614 574 583 584 It is typical of the Cubeo that the atmosphere in which these three levels of negotiation are conducted is a genial one. Their mode of hospitality assures this by drawing guests fully into the life of the maloca and of the community – the groom joining the age group of his *tcimá*, the elders picking up corresponding social roles in their age group. The wife of a visiting elder is assigned a section of manioc garden. The point is that a guest who is going to spend more than a few days is as near as possible "at home." It is when the people feel at ease in their familiar roles in a new setting that they get down to business. When the marriage party has left with its bride it has also succeeded in strengthening the ties of friendship with an affinal sib and has overcome in practice the general theory that an affinal is a hostile sib of the tribe.

614 619 574 583 584 This mood of geniality is not achieved, nor is it sought for, in all circumstances. When the marriage is intertribal the courtship is conducted in an atmosphere of strain that is almost impossible to overcome. The bride's sib cannot be easily consoled at the loss of a daughter. When the marriage does occur they feel that they have been tricked in some way. They resent the girl's willingness to go off; they are mistrustful of the bride price and the promised exchange

CUBEO

 619 583 584 574 [614] [114]

marriage. These suspicions are not overcome even though they may already have affinal kin in the other tribe.

Among the *Bahúkiwa*, I was witness to some of the events of the full cycle of an exchange marriage involving the neighboring Tucanoan-speaking *Tatúyo*. The opening wedge for this marriage was made by a *Bahúkiwa* woman who had married a *Tatúyo*. One day she reappeared among the *Bahúkiwa* with her husband and young children and settled down for a long wait. She was given a manioc garden and her husband devoted himself to making household implements for the wife of the headman. The headman had two marriageable daughters and two marriageable sons, to each of whom had been assigned, in the traditional manner, a sister whom he would exchange for a bride. One of the daughters, the elder, was very attractive, vivacious, flirtatious, and ardently desired by many young men. She had been married and divorced several times and was accused of having aborted; or killed at birth, several of her offspring. Because she was headstrong and not very industrious, sober-minded folk regarded her as a poor choice for a bride. Nevertheless, she was assigned to the older son, a very capable young man who showed every promise of becoming a headman. By seniority his was to be the prior marriage. Among the Cubeo the problem is to have the sons marry in proper age sequence and not the daughters. The *Bahúkiwa* visitor stated her opinion that such a girl needed a *Tatúyo* as a husband. "A *Tatúyo* could tame her," she said. The *Tatúyo* indeed had a reputation for ferocity because at the time they were still at war with the whites. By contrast with the Cubeo, those I saw were sullen and certainly appeared to be far more aggressive. She added that the *Tatúyo* also had many fine young girls, girls who had not been spoiled by contact with whites. The headman had no sooner grasped the possibilities of such a marriage for his undisciplined older daughter than a party of *Tatúyo* appeared to visit their fellow *Tatúyo*, who, they remarked jokingly, had lived away for so long that they now thought of him as a *Bahúkiwa*. It was a "large" party of eight men of warrior age. They came in two canoes. They were quartered among the various households and they stayed for several weeks, showing great skill in hunting, fishing, and in making implements. No one spoke marriage; but the signs were soon evident in the flirtatiousness of the daughters of the headman and two of the *Tatúyo* youths. When the *Tatúyo* announced that they were now ready to go home, a drinking party was quickly arranged as a farewell. When the *Tatúyo* party had left, it was discovered that the younger daughter was missing and that the older sister, whose "elopement" was taken [582]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

619 583 584 574 for granted, had remained home. When this was discovered the headman and all the able-bodied men he could muster rushed for their canoes and paddled furiously downriver to intercept the "abductors." The girl's mother sputtered with indignation at the *Tatúyo* who had "tricked them" and at her daughter who had betrayed them. This, it emerged, was a genuine elopement. The older sister, willful as ever, had no intention of being "tamed" by anyone, least of all by backwater Indians. Her younger sister was eager, however, and it was no trouble to get the *Tatúyo* to accept her. In due time the *Tatúyo* were intercepted. Assuredly they allowed themselves to be intercepted. Since the girl would under no circumstances agree to come home, the parties had only to settle the conditions of an exchange marriage. The *Tatúyo* designated a girl, ripe to be taken as a wife at any time, and by way of apologizing for eloping with the wrong daughter agreed to add a large canoe. Back home, the headman berated his sister for thinking more of the interests of her *Tatúyo* husband than of her *Bahúkiwa* people.

The elopement postponed the marriage of the older son, who was eager for a wife and precipitated the younger one into a marriage to which he had not yet been giving thought, so strong is the Cubeo convention of pairing a brother and sister for an exchange marriage. In a few months the younger son was sent to "demand" the bride promised. I did not accompany the marriage party to the *Tatúyo*. But when the party returned with a very attractive young bride they reported to the satisfaction of the headman that the groom, having first offered his sister a chance to return home, asked for the bride. The girl was brought out. He took her by the hand and led her to the canoe. "We [614] did not even stay overnight," he boasted. Such brusqueness and calculated discourtesy would not occur if the exchange were with the maternal sib.

581 Sheer sexual attractiveness is regarded as the wrong reason for choosing a bride. The point is not only that physical sturdiness and industriousness are better traits, but that a sexually provocative woman will be a source of trouble to the sib. A responsibility of an elder accompanying a marriage party is to remind the groom-to-be to pay attention to the sterling qualities of a bride, that do include, however, such erotically desirable features as large, full breasts, a strong back, and a clear skin. They would prefer to have her sullen rather than vivacious.

583 585 614 Formal marriage is signalized by what must be regarded as the "rite of abduction." The groom seizes his bride and runs with her to the canoe. She cries out for help and her male kin rush out and

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

583
beat her "abductor" with sticks or with their bare hands. His own 585
companions aid him, and if the girl is willing, they get to the canoe
landing with no serious damage. This display of ceremonial violence 614
satisfies two Cubeo doctrines, one that affinal sibs are "hostile" and the other that a woman will not leave her sib by her own volition but must be torn from it by brute force. There is also a third notion, namely, that a man be strong enough to capture a bride. I heard many accounts, perhaps apocryphal, of fainthearted striplings who could not bring home a bride. Such stories are often told to tease young bride seekers.

184
Father Giacone (1949, p. 21), who studied the Tucano tribe, re- 583
ported no courtship and no marriage ceremony but did note forcible
seizure of the bride. Father Giacone's information does suggest some 585
variation in practice among the Tucano. There, the bride is not (114)
seized by the groom but by the groom's father, who has been accompanied by some men. They pretend they have come to purchase a canoe. In the midst of their visit for this purpose they carry off the girl and bring her home, unmolested, to the waiting groom. Often, he notes, this is the first time they have met. The girl is timid and retiring, he reports, and the women undertake to cheer her up by inviting her to accompany them on their labors. When the bride begins to work with satisfaction at all her tasks the marriage is considered settled. Some weeks later her parents come to reclaim her and the groom hides her. Her parents are given presents if she is unwilling to return home. At a later visit they repay with gifts of their own.

In general, Tucano and Cubeo marriage practices are alike; the most striking difference is in the fetching home of the bride. Cubeo notions of manhood would be offended at the notion that the father should bring a bride home for his son.

Among the Cubeo, the early stages of marriage are almost invari- 585
ably difficult for the young couple. They are barely acquainted and
the husband is expected to show his wife only the barest semblance of 593
affection so as not to interfere with his mother, whose role it is to 606
assimilate the young bride into her household as a replacement for the "lost daughter." The bride enters her mother-in-law's service, working with her in the manioc garden and in the preparation of manioc. Doing all the chores that she has done as an unmarried girl in her own community but under a strange woman, she is understandably disappointed, even though she is received very warmly. She is immediately locked in a conflict with her mother-in-law for her freedom. The issue is the manioc garden. A woman wants her daughter-in-law to help her in her garden and the daughter-in-law,

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

585 593 606 knowing that her full status as a married woman begins with her having her own garden, must get her husband to get her out of her mother-in-law's household. He, however, knows his mother's will and is also aware that the men of the sib are watching him to see if he will be strong enough to stand up against his wife, the "alien" to the sib.

585 586 593 614 If the stalemate continues too long the young wife has the means to break it. She runs away. It is a married woman's privilege to run away at any time during her marriage. Her husband will pursue her, but she has many sanctuaries. She can get back to her own community, where she is safe and has the certainty that she will not be yielded up to a pursuing husband and that he has no claim against her parents. The common view is that if a man is not strong enough to hold a wife that is his misfortune. A runaway wife may find sanctuary in any sib, even in one that is closely related to that of her husband. A neighboring sib is only a temporary stopover for a runaway wife. It provides a more neutral atmosphere, however, in which she and her pursuing husband can discuss the reasons why she has run away. It is young brides who most frequently run off. Occasionally a girl is seriously determined to leave her husband and she will then most certainly find her way home, even if she has to go afoot all the way. Ordinarily she expects her husband to intercept her. When he brings her back the headman will say to him, "Take charge of your wife," [837] and the husband will proceed to prepare a manioc garden for his wife. Some young wives provoke a crisis by seducing the husband's brother and allowing the community to find out. Again the headman will say, "Take charge of your wife."

585 586 593 614 182 These crises are so common in the early stages of marriage that I am inclined to regard them as quasi-ritual, and as part of a prolonged marriage ceremony at the end of which the wife achieves her proper status as controller of an autonomous zone, her manioc garden, and as female head of household. The act of running away suggests a counterpart to the initial act of "abduction." Both acts acknowledge the unruly role of the alien woman and emphasize the power of the man in restoring order. The man who brings his runaway wife back has scored a victory in the eyes of his sib. This victory absolves him from the onus of seeming to "give in" to the demands of his wife. But if the act of bringing back a runaway wife is a bit of ritual, it must also be stated that it is not devoid of spontaneous and rich human emotion.

595 Monogamy is the rule and is consistent with the preference for exchange marriage. Polygyny and polyandry, however, are not barred.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

Plural marriages are uncommon only because they are not convenient. 595
Polygyny is usually limited to the headman. Two wives (I never heard 622
of any man having more than two wives at the same time) are regarded as suitable for a headman, first because he has the personal qualities to sustain a complex household and second because the maloca will be more orderly if two women are responsible for looking after it. A headman's prospects for getting two wives are enhanced somewhat, since he will almost certainly have had a sister assigned to him as an exchange for his first wife, and his prestige and perhaps affluence will help him get a wife through bride price alone. Brother-sister exchange is preferred, to be sure, but circumstances are such that an enterprising man will find many other ways of getting an additional wife from among widows, divorcées, and orphan children. He will not, however, marry a woman, either widow or divorcée, who has been brought to his community as a wife by a sibmate. A man may well have a surplus sister. These opportunities are available to all men, but it is the headman who is most likely to seize upon them. Koch-Grünberg, noting the common occurrence of polygyny along [114] the Vaupés, commented that plural marriages were harmonious. From what I observed and from what I heard I have a very different impression. Polygynous households are rather turbulent.

If a man has two wives, he must prepare two clearings and set each 595
up in her own household. Even so, my informants told me, the wives quarrel and bear tales against one another to the husband, accusing one another of laziness. The first wife taunts her colleague as being a mere second wife. The second retorts that she would not have been chosen if the husband had really cared for the first wife. Since men take it for granted that women are an unruly element they expect wives to quarrel. A headman, however, should be able to manage [622] them, it is believed.

One man told me that after he had married his present wife he 593
was offered a girl for bride price alone – a shotgun and cloth – and 595
so for three years he maintained a polygynous household. He then [583] decided that it would not work. At first the new wife refused to garden and urged him to come and live at her sib. They did this for a time and he left his first wife at home with their children. After a year he returned with the second wife. He made a large clearing and divided it into two parts, assigning each to one wife. His first wife, he said, cultivated her part but the second did nothing and just sat about the house. One day she departed and he did not chase her. He claimed that he did not understand why she had left since he had not forced her to do anything she did not wish to do.

CUBEO

The *Bahúkiwa* headman also had had two wives. In his case the second and younger wife succeeded in displacing the older woman. The younger woman insisted that her husband give up sexual relations with his first wife. She bothered him so much that he yielded and told his first wife to leave him. She refused, insisting that she would stay on with her children. An old woman now, she has a grandmother role. A son not yet married has provided her with a small manioc garden. Her relations with the headman and her successor are cool but not unpleasant. That women regard polygyny as contrary to their interests is further indicated by the fact that they are reputed to possess an herb (*pedídya*) which, mixed into a husband's porridge, causes him to lose interest in acquiring a second wife.

Polyandry is rare. I knew of only one case, a man who took his brother into his ménage because the man had been unable to get a wife on his own. This occurred in a small Satellite community and seems to have been an accommodation to what might otherwise have been a troublesome situation of adultery. The woman fed both men and was a sexual partner of the junior husband only when her first husband was away.

Common marital difficulties have their counterpart in Cubeo folklore, as these tales reveal. *Kúwai* the culture hero and his two brothers shared the same woman. When one brother was away fishing or hunting, the other two took turns copulating with her. *Kúwai* plotted to get rid of his brothers so that he would have exclusive possession of her. They were then living at Urania on the Vaupés by a lake called *Marúkuwari* [Lake of the marúku monkey]. In this lake grew a great miriti palm. *Kúwai* asked his brothers to climb the tree to fetch a ball of miriti to make a hammock. Both brothers climbed the tree, after warning *Kúwai* not to start anything. As they climbed, *Kúwai* caused the tree to grow higher and higher and the lake to grow wider. When they reached the top, *Kúwai* cut down the tree. Then a great wind blew up and swept the men and the tree away. One brother was blown to the Cuduiarí, where he formed the river. The other was blown to the Querarí, where he formed the other river. As each man fell, his legs formed the mouth of the river, his outstretched arms two creeks, and his head a whirlpool. *Kúwai* then returned to his wife, who was now living alone. Later *Kúwai*, walking in the forest, passed a *wahókakü* tree. Each time he passed it, it made a sucking sound at him. This happened day after day. Then it seemed to *Kúwai* that the tree was human, so he cut it down and carved a woman out of its trunk. *Konéko*, a bird, came and opened up the woman's vagina. The

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

539 woman was very pretty and *Kúwai* was happy. He named her "Carved Woman." He took her home as his wife and drove out the other woman. *Mamûwũ* came along and asked *Kúwai*, "Are you living alone?" *Kúwai* told him what had happened. This made *Mamûwũ* angry and he took "Carved Woman" away from *Kúwai*. Now *Kúwai* lived alone and went about looking for another wife. He sat upon the branch of a tree and wept. Then along came Otter. He asked *Kúwai* why he was weeping. *Kúwai* told him that *Mamûwũ* had taken away his wife. Otter then told *Kúwai* where his wife was living. He led *Kúwai* to a beautifully painted house that was under the river. There *Kúwai* saw his wife. He seized her and fetched her home to Urania. One day *Kúwai* saw an angry *Mamûwu* come after him. In fright *Kúwai* leaped up and fled. He never returned. He is now living at Çarurú on the Vaupés without a wife.

In another version *Kúwai* cut down a tree and carved it into the form of a woman. He brought it to his grandmother and asked her to make all the body parts that belong to a woman. He returned to find that his grandmother had completed a beautiful woman. This woman did not know where she had come from. She went to the river to fetch water. An anaconda came by and copulated with her. Each day when she went for water the anaconda came and they copulated. *Kúwai* noticed this. One day he watched, and when his wife and the anaconda were copulating, *Kúwai* blew a dart from his blowgun very high into the air. It came down with great force, struck the anaconda in the back, and killed him. *Kúwai* seized the anaconda and cut off his penis. He transformed it into four minnows which he gave to his wife to eat. As she ate the minnows, *Kúwai* told her she was eating the penis of her lover. The woman spit out the food and went to the river to look for her lover, but he did not appear. *Kúwai* then threw his wife away and she became a tree again.

In a third version the saddened wife, awaiting the return of her anaconda lover at the river, was disappointed when only a little anaconda "as thin as a string" appeared to tell her that her lover was dead.

[587] It is perhaps indicative of Cubeo attitudes on marital stability that *Kúwai* is depicted as ultimately unsuccessful in marriage, and, disillusioned with the faithlessness of woman, retires to live in solitude on a nearby hilltop.

593 601 The terms for spouse, *himanípako* (wife) and *himanípakũ* (husband), denote the important emphasis in marriage. These terms mean literally "my children's mother" and "my children's father." Before children are born husband and wife address one another simply with the common expression hàpyako (listen!).

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

the common expression *hápyako* (listen!). It would not be correct to say that children "seal the marriage." Children, however, do give a marriage its full status. Until her first child is born a wife may remain as part of her mother-in-law's household. Thereafter she automatically achieves her independence, with her own garden and her own hearth. The equality of the spouse terms is also significant, corresponding to the economic and symbolic complementarity of male and female, husband and wife. Although an outsider in a patrilineal and patriloral sib, the Cubeo wife is not "inferior" to her husband

The relationship between husband and wife depends largely upon personal factors, to be sure. Still, there are some cultural standards for the people to follow. One of these is the keeping of physical distance in public. One does not observe among the *Bahúkiwa* informal or spontaneous gestures of intimacy between husband and wife. They rarely touch one another in public. This lack of physical contact is all the more marked because the Cubeo are in other respects a tactile people. Men embrace one another, women caress one another, and at drinking parties there is a certain amount of heterosexual body contact. But even then, husband and wife keep their distance. There are, however, specific public gestures of intimacy between husband and wife, but these are formal and are in the nature of obligations. A woman applies decorative paint to her husband, delouses his head, and scrapes insect scabs from his skin. These are all intimate gestures to the Cubeo. They are done in public and only in preparation for a ceremony.

The marital relationship is to be understood, I believe, as falling within the range of respect behavior appropriate to members of different phratries. It is incumbent upon the man, furthermore, to uphold his solidarity with his male sibmates by imposing public distance upon his wife. Male solidarity begins early in life and, in any case, is not readily yielded up after marriage. There is a relationship, as well, between connubial distance, as we may call it, and the frequency of tribal exogamy. In many marriages husband and wife cannot even understand one another fully because they speak different dialects or languages. It would seem that the pattern of connubial distance helps make such marriages more tolerable since there is no expectation of sudden intimacy. Lack of privacy makes it easy for public pressure to enforce the rule of distance.

With time, of course, husband and wife develop more ease, more intimacy, and more affection for one another. These new relationships will be revealed in manner of address and facial expression rather than by touch.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

586 Divorce is easy and rather frequent during the early years of marriage. Most often it is the woman who leaves her husband, for the general reason that she does not like him and, more rarely, because he beats her. If a woman has no intention of going back to her husband she returns home, re-enters her parents' household, and her husband has no further claim upon her. If she is undecided, she claims the hospitality of a neighboring sib and awaits a reconciliation. A marriage is not officially severed, on the woman's part, unless she returns home. She cannot run away with another man and expect to avoid trouble. Men send wives away mainly because they are barren. [842] The Cubeo have no other official view of infertility than that the woman is using an abortifacient. They therefore tend to view barrenness as a hostile act. A wife who is asked to leave has no choice but to do so. Her grown children are expected to remain behind in their own sib, while the nursing baby accompanies the mother.

586 684 The most common source of marital discord that may also lead to divorce is adultery. From quarrels that erupt during drinking parties the impression is created that adultery is very common. Almost invariably it is the woman who is blamed, partly because women commonly are sexually aggressive, and partly because that is the least disruptive view to take of the matter; it does least damage to the important male solidarity of the sib.

## *Leadership and Authority*

Leadership among the Cubeo follows a principle that tends to understate authority. This principle asserts that leadership derives from giving more than one receives. Authoritarian relationships, by contrast, follow an opposing principle, that of receiving more than one gives. Authority, to be sure, can be established on a personal basis of personality and prowess. However, societies that have developed strong authority systems have usually done so by economic means, by inequality in the flow of goods. An authority system based on unequal flow of goods upward, from the community to a chief, is likely to respond quickly to economic development, and at the same time to foster economic growth. The Cubeo theory effectively minimizes the economic impact of leadership. The principle of greater flow to the top creates the condition for an expanding economic-political system, whereas the principle of greater flow from the top down creates the conditions for a static political-economic system. The economic role of the Cubeo headman is confined largely to stimulating the production of chicha. In short, the Cubeo headman gives all of his effort and ability to the community. The community, for its part, has no obligation to give anything to him. Since he has no authority to command economic productivity, for he is not an economic redistributor, he is devoid of significant economic function. At the same time the headman is a secular figure; he has no greater magical or religious powers than any other and so he is lacking in sacred authority. He may be a war leader, but he need not be; and even when he is a war leader, it is a very small party that he commands. Thus,

571 433 622 571 433 [701]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

622 571 433 the Cubeo headman is lacking in precisely those attributes that in other parts of the world have traditionally played a prominent part in political evolution.

622 554 The two terms, *habókũ* and *kenámi upákũ*, meaning, respectively, a man of substance and "owner of the house," illustrate the conceptual range in Cubeo leadership. The *habókũ* is the leader, whose presence, enhanced by a muscular physique, commands respect, who has undisputed skill in hunting, in fishing, in crafts, and who commands ceremonial lore. He possesses the full range of ceremonial regalia, feather headdresses, necklaces, and girdles. His equipment [592] is of the best quality and in excellent condition. The *kenámi upákũ*, on the other hand, is simply the head of the maloca. The *habókũ* is apt to be head of the house, but a house head need not be *habókũ*, although as a leader he will possess some *habókũ* attributes. Thus 622 614 554 not all headmen qualify as *habókũ*. Those of higher-ranking sibs, such as the *Ómbawa*, *Aúnbwawũ*, and *Hehénewa*, usually do, and those of lower-ranking sibs, such as the *Bahúkiwa*, usually do not. The existence of a concept of *habókũ* is a spur to the ambition of a headman, although the status is honorific only. The *habókũ* commands respect everywhere in the tribe, but his authority, such as it is, is limited to his own sib. Sibmen share in the prestige of having a *habókũ* as headman. Not every *habókũ* is the head of his sib, for in some sibs several men hold the title and their senior is then the head- [701] man. In time of war the *habókũ* is the natural war leader. Even when not headman his leadership is drawn upon in hunting and in all collective activities.

622 614 554 301 292 In the higher-ranking sibs the insignia of *habókũ* include, first, a quartz cylinder worn as a pendant, a jaguar-tooth girdle, an armadillo-vertebrae girdle, and, finally, *mápena*, the ceremonial headdress of feathers and monkey hair. The *Bahúkiwa*, who are not privileged to wear either the quartz pendant or the girdles, maintain that *mápena* are the principal insignia of *habókũ* status among them, although they defer to the higher status of the insignia of their higher-ranking clans. The *Hehénewa* deride this *Bahúkiwa* claim and insist that without the pendant and girdles no man can call himself *habókũ*. The *Bakúkiwa* define *habókũ* as an achieved status and the *Hehénewa* as a hereditary status, but only in the sense that it pertains to high-ranking sibs. Within the proper sib any man may acquire the insignia and the status of *habókũ*.[1]

[114] [565] [1] Apropos of social status, Martius (1867, I, 596) reported caste distinctions of chiefs, nobles, and commoners on the Vaupés. He gives no details. One suspects an exaggeration, although the bases for his view are understandable.

## INSIGNIA OF STATUS

Ornamentation is for the Cubeo a requisite for basic status; one might say for human status. The Macú, for example, are sometimes derided as "not human," and it is noted in evidence that they have no ornaments. The very first day a newborn infant is in the house, it is painted with a jaguar design and its mother puts twine cord on its wrists and a seed necklace around its neck. An undecorated child is a rarity, an extraordinarily underprivileged creature. The common denominator of personal ornamentation includes face and body painting with red pigment (*urucú*) and a necklace. The wristlets of children have the magical purpose of fattening the arms, but the necklaces are sheer insignia of status. A popular trade item around Indian tribes is a necklace of silver plates in a triangle shape which all the Indians of the region call "butterflies." Necklaces of various seeds are common for men and women. In the past, ear ornaments and lower-lip labrets were common to both sexes. The Cubeo are proud and sensitive about their personal appearance. They apply pigment with great care, using dye rollers to print a design and pigment applicators that will apply parallel lines. Ornaments are always in good condition and of good quality.

The minimum ornamental requirement for full standing as an adult male is the complex feather headdress, *mápena* (feathers of the red *arara* [macaw]), which actually includes feathers of many different birds mounted on a crown of plaited fiber as well as a rope of monkey hair. These feathers, painstakingly gathered and put together, are handled with very great care, kept in a long fiber box where they are laid away always slowly, ceremonially, and in proper order, to be taken out for a dance. A man who does not own *mápena* borrows from the headman or from another sibmate so that he can take part in certain dances. All men possess some part of the full set of feathers, but only a headman will feel the strong obligation to possess the full set. No one among the *Bahúkiwa* owned a complete *mápena*, but this poverty was not too disturbing to them. The downstream *Hehénewa* were well provided. *Mápena*, however, are not a mark of sib rank.

The *Bahúkiwa* attitude toward *mápena* is ambivalent; their joy in possession is tempered by fear of death because of it. They do not make the headdresses but buy them from other Tucanoan and Arawakan tribes, and they suspect that whoever has sold them the feathers has included a spell that will kill the owner if he should own the full set. One informant explained that the feathers have power

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

292 One informant explained that the feathers have power
614 that may be too strong for the owner and that is why it is better not
554 to have too much. Some men accumulate outfits of *mápena*. They
[761] are certain to die from overdoing, it is said. A host at a drinking party may lay out his *mápena* in a tray at the doorway so that guests may wear them for dancing. It is a point of pride to be able to supply guests in this way. He addresses a guest as follows: "Here it is now, this poor thing that I have. When you put this on you may drink. Our ancestor wore this when he made chicha to drink. He became sick when he did this, when he adorned himself. Other people know how to make this [*mápena*]. He bought it from them."

237 The girdles of jaguar teeth and of armadillo vertebrae were also
301 possessed only by the *Hehénewa*. They are worn only during cere-
614 monial dances. These girdles are symbols of shamanistic power al-
554 though they are not shamanistic insignia. The jaguar is, of course,
756 the full-fledged shaman himself. The armadillo claw forms the han-
[789] dle on the special rattle a shaman uses to bring rain. The quartz cylinder (*kénádox*: stone) may also be a shamanistic symbol since
301 stone crystals are part of the medicine man's equipment. But what-
554 ever its symbolic significance, it is for the Cubeo the ornament of major prestige, limited to the high-ranking sibs. The quartz from
[756] which this pendant is laboriously made and drilled is found, I was
[437] told, only on the Tiquié River and is widely traded in the region.
[614] The *Hehénewa* claim that their first ancestors brought the *kenádox* with them and that is why they alone may wear them. Koch-Grün-
[184] berg found these pendants to be widespread among the Tucano, where even children wore them.[2]

## HEADMANSHIP

622 The headmanship, whether of *hnbóhũ* status or *kenámi upáhũ*,
613 normally stays within a particular lineage, although no lineage has a specific and traditional claim to the office. The office may go from a father to his eldest son or from a man to his next younger brother, depending upon circumstances and upon which of these pushes himself forward most effectively. Koch-Grünberg observed that among

[135] [2] Martius (1867, I, 599 ff.) observed that the quartz cylinder is a special trait
[324] of the Vaupés. He put the source of the stone at the Apaporis and Caquetá rivers and reported that it took two generations to make a pendant. The stone is ground into shape with volcanic ash obtained from the Solimoes River and the hole is bored with a bamboo drill. He saw chiefs on the Vaupés who wore pendants drilled through the long way, an exceptional mark of high status. The size of the pendant, according to Martius, was in proportion to the deeds of the wearer in war and in the hunt.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

the Tucano Indians of the Vaupés, succession was from father to son, while on the Aiarí it went from brother to brother (1909, I, 68). The Cubeo combine both methods. The tendency of the headmanship to stay within a lineage conforms to the natural tendencies of sons to model their behavior on their father, and for a group of brothers, who form among the Cubeo a particularly intimate sibling group, to share common interests. Thus, the men of a chiefly lineage behave with a greater sense of responsibility for the welfare of the sib; they follow the pattern of giving and act generally to maintain high morale. If the prospective heirs fail to live up to expectations they cannot succeed to the office. The office is not their automatic due, although coming from a chiefly lineage, their chances for the office are very much enhanced. Competition for the office is regarded as unseemly. Since the Cubeo are most sensitive in their distrust of the authoritarian personality, an overeager contender for the headmanship would most likely jeopardize his chances.

In the case of the headman who is known only as "owner of the house," the model of leadership is, as the title denotes, paternal. His warrant of office is that it is he who has built the maloca. A changeover in the headmanship comes with the building of a new maloca, when a headman has died or when the old maloca needs to be replaced either because of its deteriorated condition or because new manioc gardens need to be planted at a new site. On those occasions, the man who feels confident of his support undertakes to put up the main beams of the new house, with the help of his own brothers and of his sons. For the reasons already cited this man is most likely to be of a line of headmen. When the main posts are in place, the other household heads of the sib are invited to join in the work of completing the house. Those who join will be residents who accept the leadership and authority of the new headman. No man is compelled to join. He may declare himself an Independent, saying he will build his own house. The building of a maloca constitutes an election – one that occurs every five years or so, the period of duration of a house and of a manioc clearing. A headman who has grown unpopular will then find himself replaced, often by a brother or a son. It is as "owner of the house" that the headman is giver, guide, and keeper of order. He is in charge of the hospitality of the house, the receiver of guests, and the main organizer of drinking parties. He is responsible for ceremonies and for all ceremonial equipment, including tobacco, coca, and *mihi*. He is chairman of discussions and arbiter of disputes. He has no authority to order punishment, although his opinion as to punishment carries weight.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

622 692 No Cubeo headman has rights over person, over life, or over property.

622 614 574 273 156 Within the sib, the headman is the firm but gentle father, ever watchful of the welfare of his sibmates. There is, however, another side to the office. As representative of the sib within the phratry he is the organizer of drinking parties in which the prestige of the sib and his own prestige are involved. An ambitious headman urges his people to produce more chicha, to entertain often. His pressure may berome burdensome on the people and his influence within the sib [554] is, accordingly, jeopardized. The *habókũ* with more commanding presence can push people farther, it is said, than the ordinary *kenámi upákũ*. While drinking parties are enjoyed and sibs are conscious of their own heightened prestige as givers of chicha, they suspect that [47K] their headman is pushing himself forward too strongly and they resent it. To forestall such resentment a headman urges household heads to join as cosponsors of a drinking party.

622 614 571 578 156 The headman is charged with preserving the unity of the sib. While concern with personal prestige is not lacking, this consideration of his must be secondary to the welfare of the sib. He must prevent splitting of the sib. If a household leaves, the headman is blamed. He is blamed if sibmen's quarrels reach a dangerous point. When drinking parties erupt in violence the women taunt the headman with his inability to restore order. Yet in asserting leadership the headman dare not be too forceful. Father Giacone has observed [157] about the Tucano Indians that they are docile. The same can be said of the Cubeo. A man will not, in fact he claims he cannot, resist a direct command. He will obey and be resentful. No householder who had unwillingly submitted to a headman's command would long remain in the sib. Moreover, the Cubeo do not easily tolerate social tension. If the atmosphere in the house becomes unpleasant someone will certainly move out. Men will not work, hunt, fish, or join in any collective undertaking if the atmosphere is not cordial. Maintaining this atmosphere is perhaps the most difficult charge upon the headman.

622 648 156 The headman who must deal with white tradesmen and with labor recruiters has the additional burden of representing his community against men of very forceful personality. He finds that he dare not submit to the common weakness of docility and must match their [614] forcefulness with his own. A headman who has learned to deal with the white man on equal terms will tend to be more authoritative within his sib as well.

600 There is much talk in the region about powerful chiefs, but no

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

There is much talk in the region about powerful chiefs, but no one has really seen one. In the past, the Indians say, there were chiefs over all the sibs along a river. Koch-Grünberg was told the same thing (1909, I, 264). One is also told that other people have powerful chiefs. I had no opportunity to investigate this, but Koch-Grünberg, who traversed all the main rivers in the region, was always told that the chiefs along another river were strong. The Desanas had only headmen, but they informed Koch-Grünberg that great chiefs ruled along the Papurý and Tiquié rivers. When he got there he found only headmen. If there has been a stronger political organization among the Cubeo in the past there is no suggestion of it now. 643 622 114

The fact is that leadership follows similar principles among all neighboring tribes from whom we have adequate information. Describing the Arawakan Siusi, Koch-Grünberg notes that the headmanship is a hereditary office, going from father to oldest son or to his younger brother. The headman himself passes on the office to someone in his line. His authority is minor and is concerned only with village affairs. It is based on the respect owed to age. The headman among the Siusi, he adds, is a representative, receiving guests and leading all community activities and discussions. He sees to it that the house is kept in order; and if he leaves for any length of time he turns the command over to his brother. He maintains order but he cannot punish. A headman who had long associated with the whites claimed authority over the entire river but no one took him seriously. Koch-Grünberg had the impression, however, that the oldest man in the maloca was the headman (1909, I, 68). This is not quite true among the Cubeo. The Cubeo respect age, but leadership, to repeat, depends upon ability to be a giver, so that a man who has gone too far past his prime is ordinarily ruled out as a headman. 622 171 [888] [554]

## LAW AND JUSTICE

With respect to the administration of justice and of order the headman is no magistrate. He is a mediator, a counselor, and often a persuasive advocate of his own views. It is the entire adult community that must reach a decison. The headman provides for orderly discussion until a decision is reached. Within the sib a primary objective of the headman's efforts is to smooth over difficulties, calm tempers, and restore the atmosphere of congeniality. There are, however, serious breaches of the peace, such as sorcery, persistent adultery, chronic and malicious theft of food, and murder when punishment is called for. In such cases the aim of the headman is not to calm 622 627 [614]

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

622
627 tempers but to inflame and to focus angry passions upon the culprit. He does so because the Cubeo do not tolerate a judicious and cold-blooded administration of punishment. Their view is that malicious
[673] acts are committed in anger. Such acts provoke anger in return, in the course of which the culprit is suitably punished. Thus, a wrongdoer always runs away. Even if he should regard himself as innocent of the charge, when he learns that charges are being discussed he deems it prudent to leave. He need not be gone very long – perhaps just a few months. When he returns the anger against him has died down and there will be no basis for action. In cases where a sibman
622 is being provocatively uncooperative and the senior households, to-
627 gether with the headman, agree that he should be made to leave,
574 they wait for a drinking party when someone, or the headman him-
614 self, picks a quarrel with the culprit. In the heat of the quarrel the unwelcome sibman is asked to leave. The traditional drinking party
[182] seems to serve as the most appropriate setting for the airing and settling of grievances and of disputes.

578 Fighting is the most common social disturbance and is inevitable
574 during a drinking party. A quarrel between two men draws in others, usually close kin; each man entering the fray loudly proclaims his reason for joining, justifying by anger his right to take part. Members of the same household always have justifiable cause for anger in assisting one another. More distant kin must cite a personal motive. They can claim a past insult. A host or headman is privileged
578 to intervene to stop a fight but will do so reluctantly. In a Cubeo
574 quarrel the detached bystander is not welcome. Women are usually
622 strongly disturbed by fighting. They dread that someone will get hurt and when a fracas becomes bloody they loudly demand that the headman put a stop to it. If he ignores them, pretending to be drowsy with drink, they abuse him and say he is not fit to be a headman. A headman is drawn to anger and to participation in a fray if a cere-
578 monial friend has joined a fight without asking his permission.
574 Ceremonial friends are as one and should share the same quarrels. Fighting at a drinking party, although actually disliked by the Cubeo,
[572] is not a punishable offense, since the angry parties have had full opportunity to retaliate. When the fight is over the issue is usually closed, unless new threats and insults are uttered. Those will be remembered at the next drinking party and serve to start a new fight.

682 Retaliation for murder is the responsibility only of the members of the victim's own household and lineage. Sibmates are under no
[614] obligation to avenge a murder unless, they reason publicly, the mur-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

682 derer, having killed one sibmate, is surely planning to kill others. However, such reasoning is more appropriate in cases of sorcery than in cases of direct assault. [614]

Among the *Hehénewa*, I was told, a man was beating his wife when [593] his own brother, who had no apparent cause to do so, intervened. This led to a quarrel. While they were quarreling they heard a [578] monkey howl, always an omen of the impending death of a kinsman. [763] In alarm, each took his gun and together they went to the river to [825] shoot the monkey. There the wife-beater shot and killed his brother, claiming that it was an accident. However, he decided he had better leave. Later that day, when a third brother learned what had happened, he set out to find and kill his fugitive brother. The police, [625] however, learned of the shooting and induced him to find the killer [697] and turn him over to them. This he did. The culprit spent some months in jail and was released. By that time anger had subsided and the brothers were reconciled.

Should a man kill his wife only her kin will avenge her. There is 682 no one to avenge or punish a father who kills his children. The 593 only example of such crimes that I have is of a madman, but it does illustrate the point. According to the account given me, this man, [266] crazed by hunger, killed and ate his children. He then attacked his wife, cut off one of her breasts, roasted it in the fire, and ate it. No one interfered "because it was his own wife and children." The man then cut a piece from his own thigh. The people watching said, "Let him do this. It is a good thing that he should die." They watched as [762] he then cut his throat and died.

I also learned of another example of unavenged death. An old 683 *Bahúkiwa* man had died and the inquest named a man of a related sib as the sorcerer responsible for the death. The sibmen threatened vengeance. Some days later the alleged sorcerer innocently came to pay his respects to the dead. He was coolly received, but no hand was raised against him. When I asked about it I was told that no one felt close enough to the old man to want to avenge him. The widow was still angry, but women are not avengers even by means of sorcery.

Theft to the Cubeo means stealing food from a garden. Thieves 685 pull up manioc tubers in the dead of night and they steal *mihí*. Both offenses are regarded as serious and incomprehensible. The theft of *mihí* is all the more culpable because it is a sacred drug. Such theft [276] is correctly interpreted by the Cubeo as malice and is attributed only to men. If caught in the act the thief, even if a sibmate, is severely beaten or killed. Theft of objects is simply not acknowledged.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

684 Technical incest, that is, incest outside the nuclear household, does occur and is not necessarily regarded seriously. A man told me that his sib sister, having become a widow, returned home. An ardent woman, she made sexual advances to him. He then told the headman that his sib sister had seduced him. The headman scolded the woman and hastily arranged for her marriage to an elderly *Tatiyo*. In the case of close incest, that is, within the extended family, the offenders are driven out of the sib. I learned of no cases.

[754] Adultery is a common offense and is not very serious unless com-
[562] pounded by fears of sorcery. Only the man will be suspected of sorcery, never the woman. Since it is the women who are commonly regarded as the seducers and the men as innocent victims, the consequences of adultery are apt to be little more than a heated quarrel. An adulterous woman may receive a thrashing either from the hus-
684 band or from her parents-in-law. In charges of adultery a headman,
622 concerned first with harmony in the sib, seeks to placate feelings by
614 emphasizing the culpability of the woman. The following example
574 illustrates this. At a drinking party among the *Bahikiwa*, when intoxication was at its peak some hours before dawn, the headman suddenly began to berate a man of the sib for adultery, accusing him of having seduced the young wife of his (the headman's) son. The son himself did not enter into the controversy, but he explained quietly to those about him that his wife was too passionate. Whereupon the headman shifted his attention to the young woman and began to scold her for wearing love charms in her hair and for enticing men. Then, his anger rising, he slapped the girl sharply in the face. The accused sibman, now ignored, moved away unconcerned. The young wife, for her part, showed no distress at being slapped. A few minutes later she was as flirtatious as ever, this time with another man. The headman, still wrathful, delivered a lecture on the pro-
684 prieties of married life, remarking that it is not fit for a wife to re-
622 quest coitus; she must wait for her husband. The next day a younger
834 unmarried daughter of the headman was assigned to chaperon the
883 errant wife, a task she accomplished with suitable diligence.

The Cubeo regard a woman as unruly and are almost prepared to accept her adultery as inevitable. Nevertheless, an adulteress is re-
684 viled as "a woman without shame." A husband's chagrin and anger
[562] at his wife's adultery are softened somewhat by tales of *Kiwai*'s diffi-
[773] culties with adulterous wives. In one tale, however, *Kiwai* crushes his wife against a tree after she has copulated with a snake in her manioc garden.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
Cubeo

Strongest feelings and strongest actions are provoked by sorcery. 754
Most illness and death is attributed to the evil designs of medicine [753]
men, or laymen who command the arts of sorcery or of administering [761]
mysterious poisons. The Cubeo fear of sorcery and of "poisoning" is acute. They are aroused not only by the illness or death of a sibmate or of a sibmate's wife, but they anticipate that he who has injured or killed one is determined to kill them all. They vow a violent
death to sorcerers either by direct action or by retaliatory sorcery. In 683
all the cases I heard of, the accused sorcerer left in time and when he returned anger against him had evaporated. Countersorcery was the most common form of retaliation. There are also men who allegedly wander about at night killing or troubling people at random. When caught, such men are said to be torn to shreds with fishhooks and then abandoned to die of their wounds.

CUBEO

754 To determine the guilty sorcerer an inquest is held around the
694 hammock of the ill person, or of the deceased, as the case may be. All residents of the maloca gather and wait for the members of the victim's household to make the first charge. The charge is made and evidence is cited in terms of motive and of opportunity. The charge is either corroborated or refuted by any adult in the house, other names are mentioned, and the evidence is sifted. The entire discussion is conducted in a loud and angry tone of voice, and arms are brandished menacingly. Again, we are dealing with the principle
[756] that a serious accusation can be made only in anger. The role of the medicine man in the inquest is usually limited to stating his diagnosis of sorcery. He may offer a clue that the sorcerer is a man
[622] from afar or nearby but rarely does he name the culprit. The headman is usually the last to enter the discussion. He reviews all the evidence and presents his own verdict, which usually is, but need not be, accepted. After guilt has been established in this way, they decide how to act. It is not considered necessary to ask the accused if he can refute the charges.

## WARFARE (*bwaíno*)

721 People of intermarrying phratries often used to fight with one
[615] another. It was less likely, however, for sibs that had recently ex-
[614] changed wives to fight. Not too many years ago the *Djurémawa* from Querarí killed Hühû, an old *Bahúkiwa* who was then living at Guaracú. The headman assembled ten men, who went to the Querari, attacked a house of the *Djurémawa*, killed the occupants, and burned it down. The *Djurémawa*, it was explained, were on a plundering raid. When they killed Hühû and others in his house they carried off the young girls and even the chicha calabashes. One old man escaped to tell what had happened.

Small-scale raids of this sort were apparently common throughout the Vaupés. Most attacks were to seize women, and some were for
[614] revenge. Sibs of opposite phratries feuded, and on one occasion a
[648] *Hehénewa* sib fought an unsuccessful war for mastery of the Cuduiarí; but the main fear of attack came from alien tribes, Cariban, Arawakan, and, in particular, Tucanoan Desanas. The Desanas raided the Cuduiarí annually during the dry season, when they could move overland and escape detection. During every dry season war
[114] alarms spread along the river and the communities are on the alert.
[723] I witnessed one such alert. The dogs had given the alarm toward evening and since Desanas had been reported, a defense was pre-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

pared. The defense leader was the headman's son. An earlier alarm had already brought the Independents to the main house and a boy had been sent to call in the Satellites and to warn the neighboring sibs. The headman's son, after a hasty consultation with the other young adults, decided upon a psychological defense. He fetched a police officer's discarded white tunic with brass buttons and shoulder straps that he had been cherishing, put it on over his bare body, and strode out to frighten the enemey. The women and children were assembled in the maloca with one man as their guard. Other men fanned out through the manioc gardens and into the surrounding brush to search out the enemy. One stray shot was fired by a defender. The house was kept under guard for several nights thereafter and then the danger was declared past. 721 723

An attack by the Cariban Umaua (*Maúnwa*) that occurred three generations ago is still vividly recalled. The *Bahúkiwa*, warned that the enemy was ascending the Cuduiarí by canoe, prepared an ambush. They dammed the river with the bark sheeting of house walls and waited to assail the enemy with bow and arrow. But the enemy were armed with rifles and they killed a great many of the *Bahúkiwa*. 726 648 [173]

When the attackers first came, the Indians on the Cuduiarí did not know whether they were men or women, because they wore their hair long and were dressed in long shirts. The Umaua attacks were so fierce that for several years the Indians were forced to abandon the Cuduiarí altogether. Some gave up farming and lived on the savannah, foraging fruits and nuts and eating tree bark. When they finally returned to the Cuduiarí, the manioc plantations were all gone and they had to resume manioc cultivations from seeds they had preserved. The other Indians of the Cuduiarí gathered on the Vaupés under the direction of a *Hehénewa* war leader, who told them that the white man would save them from their enemies. He made a clay image called a *tupana* (the Tupían and lingua franca for a deity). They danced and sang for two months, until a Colombian came. The idea of the *tupana* came, they say, from a Brazilian caboclo. When the Colombian arrived, he told them that he had heard their singing in Bogotá and had come to rescue them. They then returned to their former homes on the Cuduiarí. 648 722 648 [789] [177]

In past years raids were more frequent and determined.[8] The Cubeo fought with bow and arrow and protected themselves with body-length shields of stiffened animal hide, deer, jaguar, or tapir. The 726 411 714

[8] Tribes with whom the Indians of the Cuduiarí claim to have fought include the Cariban Umaua, all the formerly Arawakan sibs of the Querarí River, tribes of the Isana River, and the *Hehénewa*, after they had arrived from the Papurí. [648]

# *Development of the Individual*

The development of individual character is always relevant to an 121
understanding of social organization. In the case of Cubeo social 621
organization, founded, as it is, upon the lifelong continuity of the sibling group of males, the psychological factors are of particular importance. The following discussion will attempt to show the relationship between some of the experiences of a Cubeo from infancy to adulthood and some of the formal principles of Cubeo social organization. By and large, Cubeo social organization must conform to the direct psychological dispositions of its members for the commanding reason that the people have a low tolerance for psychic discomfort. The sib, as we have noted, is readily split; this means, in [614]
psychological terms, that those who find any cause for dissatisfaction [578]
with life within the community are quick to leave. The community, therefore, is constantly being drained of its malcontents. Those who remain are, in a manner of speaking, in harmony with one another. This harmony, it should be said at once, is not that of homogeneity. It is based rather upon individual complementarities, of extraversion-introversion, active-passive, and leader-follower, as in any community. The harmony is between the requirements of adult life and the experiences of childhood.

The Cubeo use the following age-grade terms. The nursing infant 561
from birth until it learns to crawl is called *abohoidjó* (male) or 192
*abohokó* (female); a crawling infant is *tcumi* (male or female, although *tcumiko* is possible for the female); the walking child who

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

561 still needs help is *tcumíhinkü* (male) or *tcumíhinko* (female); the
192 youngster until puberty is *hwainyó* (male) or *hwainkó* (female); the adult male is *ümü* (male) or *nomyó* (female), and finally, the old people are *bekü* (male) or *bekó* (female).

## BIRTH AND INFANCY

842 The Cubeo believe it is the spermatic fluid (*hürü*) that causes conception. They regard the womb as a ground in which the fetus grows, or is cultivated as seeds are planted in the earth. Since men and women do not discuss together the biology of conception and of
[843] pregnancy, their views differ. Men I spoke to dated conception from the time when the abdomen begins to swell, while women dated it
843 from the cessation of menstruation. Both sexes believe that con-
833 tinued coitus after conception will add to the number of children
842 that will grow in the womb. Stories are told of people who did not heed this so that the woman burst from an accumulation of fetuses. Coitus is stopped, however, by the male reckoning.

842 It is a common view of men that women are not eager to bear
847 children. Women, they say, know how to bring about abortion and frequently resort to infanticide. They explain that women are sexu-
[833] ally too ardent and rather than forgo coitus during the long nursing period they would rather not have a child at all. Moreover, a woman who has not been enjoying sexual intercourse with her husband will abort or kill her offspring. If she chooses infanticide, however, she spares the boy. Women do concede knowledge and use of abortifacients and they acknowledge that others of their sex practice infanticide. They agree that a woman who does not love her husband
842 punishes him by denying him a child. Thus, the Cubeo are disin-
[586] clined to believe in barrenness or in sterility, attributing infertility to female design. A man, therefore, has cause to abandon a wife who bears him no children. One man told that he had abandoned his wife for not bearing children. Later they became reconciled; his wife had a change of heart and began to bear children.

847 Male infanticide, I was assured, was rare, for even the most dis-
[562] affected or self-indulgent woman would not have the heart to kill a male child. Both men and women agreed that a girl was less important. The unwanted child is buried alive, it is said, at the very spot where it was born.

842 The likelihood is very strong, then, that a child is born to a family that desires it, and in which husband and wife are happy with each other. Parturition takes place in the woman's manioc garden. A

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

A

woman is active until the moment her labor pains begin. I have seen 844
a pregnant woman leave for her manioc garden behaving as though it were an ordinary gardening day, and return later in the afternoon with a newborn baby. A man is forbidden to be present at the birth of his wife's first child. At her first childbirth a woman is attended by [606]
her mother-in-law. In subsequent parturitions she may be unaccompanied, but if she does not feel too strong she invites her mother-in-law or any other woman to accompany her. A woman about to give [789]
birth must alert her husband so that he will not leave the house or do anything strenuous that would interfere magically with the delivery and the safety of the infant. The Cubeo give no particular reason for having the child born in the manioc garden. They reveal only a general apprehension that if the child were born in the maloca something would go wrong. Not all children are born in the manioc garden. In bad weather, or at night, a woman settles for the rear plaza as a bi- -ite. Occasionally outside birth is too dangerous and the womar ..ires behind screens at the rear of the maloca. The point the Inc nsist on is that a child must not be born within the domain of tl ı. The infant must be brought from the woman's domain and i... ted by proper ceremony in the male domain. There [591]
is a parallel here, I believe, in the bringing in of a wife from her community to that of her husband.

845
Difficulties in childbirth are attributed to demonic agencies and 776
require the assistance of a medicine man. Human sorcery does not [756]
affect childbirth. The common supernatural enemy of the woman in [754]
labor is the boa constrictor. When a woman dies in childbirth it may [761]
be explained that she had copulated in her garden at one time with a boa. The boa then comes to fetch his child. If he sees that it is a human child after all, he is angered and carries away the mother.

Childbirth (*pwānīadjū*: making a person) is a dangerous period. 844
First the mother and then the infant are subject to supernatural 789
perils that must be warded off. Little can be done, the Cubeo believe, to protect a woman in childbirth. The magical safeguards for the child, however, are elaborate. Primary responsibility for the safety 84
of the newborn infant rests with the parents — with the father, in particular, since it is he who has "made" the child. Some of the pre- [833]
cautions begin well before birth. Extra coitus, we have observed, adds to the number of children. Twins, for example, are regarded as a misfortune. Some said both twins are put to death and others said only one, the last to emerge being the one to be killed. Twins may 846
also be born if the father, during his wife's pregnancy, has eaten 826
plantains. If at this time he should greedily break off a bit of manioc

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

843 826 cake when it is still on the oven, the child will be born deformed. Harelip, for example, is attributed to this delinquency in eating. [302] The pregnant woman, on the other hand, endangers her child by generosity with body paint. Women commonly give one another genipa paint. If a pregnant woman should give genipa paint to another, [763] her child will be born without the blue marking at the base of its spine. A child without such a marking, which is called *vei* – the term for the genipa pigment – will die very soon.

844 854 302 When the mother has brought the newborn infant to the maloca on a manioc tray lined with cloth (in the past with soft bark fibers) she proceeds immediately to bathe it in warm water, washing its body clean. She then paints the infant's face with red spots to make it resemble a jaguar child, and the rest of its body with the same red [789] pigment. The spots will protect the infant against the jaguar, while the red body pigment, which is common ceremonial adornment, [856] gives the infant human status at once. Finally, she ties cord bands on [603] the baby's wrists so that its arms will grow heavy. Having done these [606] things the mother presents the child to its grandmother, her mother-in-law, and goes to her hammock.

546 For the next three days, husband and wife spend most of their time in their respective hammocks. They move about as little as possible, leaving the house only for excretion, and avoid going near the [262] river. They drink little water, eat only stale manioc bread and, if they wish, ants. They talk to no one but are looked after by others [372] in the house, who bring water, keep the fire going, bring them their [828] dry food. If the woman blows at the fire to stir it up she will develop a terrible temper. The grandmother has charge of the infant, giving it up only for nursing. Almost anything the parents might do at this time would be harmful to the infant. If either stubbed a toe it would damage the infant's toe; peppers would burn the infant's insides; it would choke on a fishbone; and so the parents must avoid these foods. This period of three days is an isolation period for the parents. Their other children, if any, are taken into another household. When Koch-Grünberg was among the Cubeo he noticed that the couple was actually hidden behind screens. Among the *Bahúkiwa* the isolation was less complete. Informants had told me that the period of isolation, which is known simply as "resting," lasted ten days. However, the several instances that I observed lasted only three days, perhaps a concession to modernity.[1] But Father Giacone

[1] One informant explained that the restrictions last until the infant's fetal skin comes off, that is, three or four days.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

has reported a similar three-day isolation period among the Tucano Indians. 846

The isolation period concludes with three major magical rites. The purpose of the first is to render all foods safe for the parents and infant, the second is to render the river safe for the parents and infant. The river anaconda and other water creatures, the Cubeo say, are enraged at the birth of a child and must be made to leave. The third is to remove the child's fetal skin (*kūrûdjū*) by painting its body with genipa. The fetal skin, the Cubeo say, is not a human skin; if it is not removed the child cannot grow. [789] [856]

The arrival of an infant to the maloca is a period of grave crisis. It is the principal responsibility of the men of the maloca to dispel the dangers. The behavior of the father comes under the designation, perhaps, of the *couvade* — the practice of the man taking to his bed when his wife is giving birth. Among the Cubeo, however, this is no magical participation in the birth of the child. It is rather part of the rites or the responsibilities of the patrilocal community toward the welfare of a newcomer. The father's brothers bring in each of the foodstuffs that must be blown with tobacco smoke and the dangers chanted away. The headman, or a shaman if one is in residence, is responsible for blowing over the river with tobacco smoke and chanting away its dangers with appropriate spells. The grandmother paints the infant with genipa. The mother's magical responsibilities, apart from the movement and food taboos, is to look after the umbilical cord until it dries and falls off. She coats the stump with wood charcoal to keep it from bleeding. When it falls off she carries it to the spot where the birth took place and buries it there. As already mentioned, both parents must refrain from sexual intercourse or the child will develop a wasting sickness and die. Sexual continence continues until the infant can take solid nourishment as a steady part of its diet, a period of about a year. Male adultery during this period, the Cubeo insist, is equally dangerous to the nursing infant. 846 789 [604] [622] [756] [757] [837]

Every food is a source of danger to the infant and to the parents so that a specific spell must be recited to decontaminate each item. All fish as a class are regarded as bearing the common menace of a lodged bone in the throat, but I did not collect a general spell for fish. Each species must be addressed by name and its specific qualities mentioned. Some have small bones that lodge in the gums. Some have spiny backs or heavy scales. Whether a fish has a particularly troublesome feature or not, as a food it must be mentioned. The spells are highly standardized and vary only by name of fish and its distinguishing characteristic. In the charm it is the children of the 846 789 262

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

846 789 262 fish that are mentioned. For example, a small fish that has many small bones, the *dóthe*, is addressed, "Son of the *dóthe* have no spines. Do not cause harm to our offspring. Allow [yourself] to be eaten."

[603] In the case of the aracú, the most common fish in the diet, the grandfather who is reciting the spells takes up a fish and cuts off its tail. If he did not do this, the tail when eaten would grow into a full-sized fish in the stomach and kill the child. After each spell has been recited the grandfather blows tobacco smoke, wafting his breath by an outward motion of the hand. The magical mechanism, as it was explained to me, is that the recitation invokes the fish and the blowing (*pupúdjü*) has the effect of dispelling the danger.

Capsicum is spelled and blown so that its odor, which has the power to dispel ghosts and spirits, will not harm the child. Manioc has a disturbing odor when raw. This odor will be harmful and the manioc itself will not nourish if the spell is not recited. The child will remain thin. Eating unspelled manioc cake will also cause the child's skin to become as hard and coarse as the bark of a tree. Each variety of manioc, however, must be mentioned by name.

For birds, however, the small white eagle is invoked because this bird, the *towáve*, eats all birds that the Cubeo eat. The spell states that as the "odor of burned birds" does not harm the *towáve* so it will not harm the human young. Similarly, for animals the young of the jaguar are invoked in behalf of all the game they eat. However, whereas the *towáve* is addressed generally in behalf of all birds, the spell for the jaguar must mention each of the animals he eats by name. Again, the danger to be avoided is in each case that of the odor of cooking.

846 789 The spell that is chanted as the river is "blown" refers to the anacondas, asking them not to notice the people who are bathing. The cigarette smoke as it is wafted over the river is told to form a heavy coating as of miriti fibers so that nothing that is below water can come to the surface.

The reference of these spells seems ambiguous for the Cubeo. It is clear, of course, that what is sought is protection for the newborn [551] infant. Since the infant has as yet no name and must be referred to only by the general designation *pwénte hyédokü* (offspring person), the spells, my informant explained, have beneficial effects for all offspring of the sib.

[302] The man who "blows" the river coats his hands and feet with genipa so that he seems to be wearing gloves and stockings. The genipa has magical power to dispel water spirits. He carries a handful of burning faggots from the hearth of the natal household while

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

smoking a bark-rolled cigarette. He steps into the river, an act be- 846
lieved to be dangerous for him despite the magical precautions, 789
scoops up water, rinses his mouth, and spits it out. Then he blows the cigarette smoke and recites his spells. As a last act he throws the burning faggots into the water "to drive away all the dangers."

For the rest of the month the father may not tie, cut, or press any- 846
thing, such as sugar cane. Cutting and tying would prevent the child from urinating and defecating, pressing sugar cane would crush the child to death. One man told that he had forgotten this injunction and had tied together a bundle of sugar cane. When he returned home his infant was ill and died on the same day. Before each of [789]
these activities is resumed an appropriate spell accompanied by cigarette smoke is chanted.

Once the river has been "blown" the father may fish and paddle his canoe, but for five days thereafter he may not kill a fish by clubbing or he will injure the infant's head. He may not scrape scales from a fish or the navel stump of the infant will swell. He may not drink chicha for five days or the infant will suffer from diarrhea. Chicha drinking is the least dangerous act. Should the father get drunk on chicha before the chicha has been properly spelled the infant will get drunk. On the other hand, when he sobers so will the child.

For the first year of its life the infant has no name (*amyá*) and is 551
not fully a member of the sib. I was told merely that if it were given 851
a name too soon it would die. After the name is bestowed, the child [789]
comes under the influence of the Ancients and their growth magic. [856]
To appreciate the significance of growth magic it is necessary to 826
understand the special relish the Cubeo have for body *size*, how much
they appreciate heavy arms and bulging calves. *Size* is a virtue in [192]
itself. Thus it is also interesting to note that the term for body is *bahii* and the term for the self, the person, is also built on this stem, *bahiimikũ* (or *ko*).

The naming ceremony (*amindone hino*: giving a name) is con- 553
ducted by the paternal grandfather, whose privilege it is to give the 603
name. Seated on a bench at the forward and ceremonial end of the 789
house, with his son at his side holding the infant, the grandfather re- 593
peatedly recites a chant over a small calabash of milk. The father
accompanies him. The milk has been drawn from the child's [272]
mother's breast but is referred to as milk from the father's sister, to [614]
emphasize the point that it is the child's own sib that will make it
grow. The chant itself, as well as the blowing, are forms of growth [856]
magic. Each recitation begins with sustained loud whistles followed by the cries *hi i i i i*. At the conclusion of each recitation the grand-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

father blows into the milk, imparting to it his breath (*umé*), which is also his spirit. After several recitations a father's brother brings in *mihí*, in the proper ceremonial manner, tongue lolling and knees bent as though staggering under a great weight. All three drink the bitter brew and the recitation goes on. A naming ceremony I observed among the *Hehénewa* lasted two hours, beginning an hour before noon. It took place on the day of a mourning ceremony but before guests had arrived. The choice of the morning hours, I believe, is to establish the naming as strictly an in-sib affair. In the late afternoon there is a drinking party attended by all the sibs. In the *Hehénewa* case the mourning ceremony took the place of the drinking party. The ceremony concludes with bestowing the name, which is stated simply, "I give you the name ———, which was the name of ———." Then the grandfather blows into a small calabash of genipa with which the infant will be painted and into the calabash of milk. The child is induced to drink the milk. The grandfather now asks the child, "What name do you want?" Its father answers for it and the grandfather acknowledges it. The old man dips his index finger into the calabash of milk and presses it against the infant's heart "to make it grow." Then he asks the child, "What is your name?" The father answers for it. Finally, the old man touches the bridge of the child's nose and the ceremony is over. The bridge of the nose where it joins the forehead is the spot from which the soul will escape at death. By touching it the grandfather has left an opening for the soul to escape at the proper time.

Among the *Bahúkiwa* I had no opportunity to observe a naming ceremony, so the ceremony and the chants had to be described to me by informants. The ceremony as described and as I observed it among the *Hehénewa* was close to identical, but the *Bahúkiwa* chant and the *Hehénewa* chant differ, the latter having more clearly defined references to sib ancestors while the former is more definitely and directly a form of growth magic. In the *Bahúkiwa* chant there is only one reference to an ancestor and that is to a *Hehénewa* ancestor, *Urâhana* (Big one). My informants claimed they could not explain why they used a *Hehénewa* ancestor other than by the obvious reason that they had a right to claim an ancestor of the phratry. It may be, too, that the name, with its connotation of growth, has an irresistible appeal for the *Bahúkiwa*. The *Bahúkiwa* text given by informants is below, followed by the *Hehénewa*.

People of our soil
The milk that is from this place that causes to grow

854
[157] Warm by nature and, at the time, with no rivals for her affection, a Cubeo mother bestows a great deal of tender care upon her nursing infant. The child is rarely out of her sight and is in almost constant contact with her body, slung in a bark-cloth band across her left hip in such a way that it has easy access to her breast. In the manioc garden the child lies in a cloth-lined tray covered with a bit of cloth against the sun and insects. In the house it rests in the same tray or perhaps in a nearby hammock as the mother works. The baby spends much of the night in its mother's arms cradled between her breasts. A father playing with his child also provides it with body contact. There may well be a connection between the infant's experience with body contact and the pleasure young people derive from it.

Infants are bathed often and in circumstances that are pleasurable. Whether a woman bathes her baby from a water basin in the house or at the river she finds it a welcome interruption from arduous and monotonous chores, and she communicates her pleasure to the in-
[515] fant. Women are gayest when they bathe in a group in the early
[296] afternoon after work in the manioc garden. A woman washes her skirt, the manioc roots, and her baby. River bathing is the Cubeo
[252] child's first direct contact with the conviviality of group activity.

An infant is not allowed to cry for long. It nurses on demand and
854 if it whimpers is immediately picked up, fondled, and soothed. I
155 once saw a woman carefully crossing a small stream over a narrow
[853] log, with a basket of firewood balanced on her head, a machete in her right hand, and an infant slung on her hip. The infant reached for her breast; the mother paused, and still concerned with keeping her balance, adjusted the sling so that the infant could nurse. It is virtu-
[853] ally impossible to frighten an infant that is on its mother's hip. Nursing is accompanied by some teasing. A young mother playfully squirts milk over the infant's face or blows cigarette smoke at it to
[831] make it angry. Then she comforts it. When an infant begins to play with its genitals, the mother encourages it. She strokes a male infant's
000 genitals "to give him pleasure." The Cubeo are also fond of the

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

The Cubeo are also fond of the
young of animals and treat them with intelligent solicitude. One man 825
built a long platform in his house so that his dogs would not have to sleep on the ground. Men, having shot some monkeys, found an infant clinging to its mother's dead body. They massaged the monkey's breast, saying, "The baby should have the last drop of its mother's milk."

Toilet training is casual. No one who carries a child about shows 863
annoyance or disgust at being soiled. The Cubeo are reticent about excretory functions but they do not teach by chiding. They have no fixed ideas as to when a child should be toilet trained. The only injunctions a crawling baby is likely to hear are warnings against injury, if it is too near the fire or the liquid starch with its poisonous content of prussic acid. Still, it is rare for a walking child to urinate or defecate in the house.

Walking and talking are actively encouraged. To help the child 856
walk the father provides a harness (*taro*) through [illegible] child's legs pass, allowing it to sit, stand, or walk. The ha[illegible] often suspended from a beam and serves as a tether for the child. Mother and father stimulate the child to talk by fluttering its lips. Lip fluttering is a game that persists into late childhood. Cubeo parents dread passivity in a child. They want to see it stirring about and restless. It is for this reason that the mother teases her infant, stirring it to anger or gaiety. The story is told that *Kiiwai* once observed a passive child. He said, "The child must be made to move about," and so [773]
created the bothersome pium flies.

The crawling baby is still in its mother's charge. When it has be- 85
gun to walk and to take solid nourishment, and its parents have resumed sexual relations, it is transferred to the care of an older sister. Every little girl from the age of six on is burdened with a walking baby that rides her left hip as it did its mother's. At this age, when it is learning to walk, many people look after the child. Its paternal [603]
grandmother becomes a principal guardian and looks after the child's feeding. After a new baby is born the separation of the young walking child from its mother becomes almost complete. A woman [862]
discourages nursing by coating her nipples with a bitter substance even though a boy has casual and playful access to his mother's breast until about the age of six.

## CHILDHOOD

In the life of a boy there is an interval of some four years when he 855
no longer receives the same close attention from his mother and has

not yet joined the male play pack. By the time he is old enough for 855
active play he has been well weaned from dependence upon the mother. In the case of a girl, this "dead" interval is one in which she waits to be useful to her mother. I saw no temper tantrums. Children of this age seem rather passive and steadfastly attached to the little sister.

For the boy, growth means a gain in autonomy, for the girl it [562]
means closer ties to the mother but with ever increased chores. The boy is the favorite of his mother; the girl, who is to become a drudge, receives more severe attention from a disciplinarian mother.

What I have called the play pack, the grouping of boys from the 857
age of six to past adolescence, is the major educational institution of [614]
the sib. It is in a sense an age grade whose members remain closely associated throughout their lives in most cases. The distinctive feature of the Cubeo play pack is that it is an autonomous body subject to virtually no regulation or supervision. A boy occasionally joins his father, but his primary linkage is to the "pack." The pack forms its own leadership, forages for food, plays in the river, roams the bush, attaches itself from time to time to the collective activities of the men, practices songs and dances in anticipation of ceremonies, and spies and reports on lovers. The pack leader assumes responsibility for proper behavior, scolding boys for wayward sexual behavior, that is, breaching the incest rules, and lending assistance and encouragement with skills. The boys are never mischievous and are never scolded or disciplined by adults. A youngster does not actually understand anger directed against him. Only once did I see a father [593]
strike his young son in a fit of temper. The boy neither flinched nor cowered. He merely stared at his father as though waiting for an explanation. The man rapidly regained his poise, laughed, and pretended he had struck the boy playfully. On another occasion, a little girl tipped over a large tray of manioc mash so that it was totally spoiled. Although the accident cost hours of work it provoked only amused laughter. One might add here that even the depredations of [231]
a pet monkey, some of which were quite costly, were met only with amusement.

The pack is not sealed off from adult activities, but its relationship to adult work is voluntary. The Cubeo distinguish sharply between play that is appropriate to young boys and work and ceremonial life that is appropriate to adult males. Thus, whatever work the play pack chooses to help with is welcomed, but when the boys become bored with a task and leave it there is no ground for complaint against them. The young unmarried men who have left the

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

857 [883] The young unmarried men who have left the play pack are a link between the pack and the circle of adults. The older men take no notice of the pack as a group at all. After dark each boy returns to his own household.

The life of the boy is largely collective, that of the girl is individualized. She is bound, so to speak, to the household hearth, and her social or play life corresponds rather closely to that of her mother. Girls have no independent games of their own. They assemble with their infant charges for gossip, looking rather sedate as they admire one another's ornaments. They are not free to mix with the boys unless invited to take part in games. Such games as they join often have a mythological reference and may be interpreted, I think, as children's ceremonies.

524 The Northwest Amazon is rather rich in children's games and toys. Among the *Bahúkiwa* a popular children's game is that of the *abúhuwa*, the forest ogres or demons, and the tem tem bird, the *taíntürü*. Boys and girls, including the smallest toddlers, form a circle around a child, who is always a grown boy. The circle is of the *abúhuwa*, who have surrounded the *taíntürü*. When the game starts the "bird" is crouched in the center, his head resting on his knees, and the circle is dancing around him. From time to time a boy enters the circle to tap the "bird" on the head and to pinch his flesh to determine if he is grown enough to be eaten. Then the children stop circling and several raise the *taíntürü* to his feet, who announces that he is now awake by stopping his ears with his fingers and calling out *hru hru hru*. The *abúhuwa* link hands and again dance around him in a circle. The "bird" must now make an effort to break out. He can easily break out by charging at a weak link. But this he will not do because it would be disheartening to a very little child, who must be part of the game but not a spoiler of the game. As he hurls himself at the line the "bird" hears two kinds of encouragement. One group calls to the line *paré paré* (strength! strength!), encouraging it to hold, another calls at the boy *temúdjo temúdjo* (break through! break through! [as an arrow from a bow]). When the boy breaks through he is called back to the circle where he again frees himself, this time by verbal means. Standing in the center he turns suddenly upon a child in the line and points to part of the child's body. The child must immediately reply, "The [naming the part] of the *abúhukü*." What usually confuses the child is the necessity of saying "of the *abúhukü*." When a number of children have failed to answer properly the child who is the *taíntürü* breaks through the line once more and a new "bird" is chosen.

This game is played only on cool, pleasant evenings and seems to

be a child's ceremony, for it is the acting out of a mythical incident 524
that has great appeal to the children. The children explained the
game, or ceremony, to me as follows. Some children were left or- 524
phaned by the death of their father and they lived alone with their 773
mother, who had very little food to give them. When they asked
their mother for food one day and she replied that she had nothing
for them they ran out of the house. Immediately a great hole formed
in the center of the house. The children sat outside on the branch
of a tree and sang *hmm hmm hmm*. The next morning the children
returned to the house and again asked for food. Now the mother
gave them some stale cassava crumbs. They ate and returned to their
tree branch. Now they began to grow feathers, and after four days
they had become *taíntürü* birds. They returned to the house and
lived in the newly formed hole while the eldest brother flew off each
day to fetch food for them. It is he who is captured by the *abúhuwa*
but manages to escape so that he can return and look after his
younger brothers and sisters. The *abúhuwa* customarily attack and
seize children who are neglected or have been abandoned by their
parents. They are dangerous, but they are also slow-witted and so
can be eluded. Adults, it should be said, pay no attention to this or 524
any other kind of children's game.

There is another game in which a little girl constructs a bower of palm leaves around herself and waits to be flushed out by a boy hunter. As for toys, the boys spin tops of fruits, they make cat's cradles, they walk on stilts, and they make a plaited snake that catches a finger and tightens when stretched. Among the *Hehénewa* Koch-Grünberg observed a ball game played with corn-husk balls (1909, II, 226 ff.). This game, played by older men, I did not observe among the *Bahúkiwa*.

## PUBERTY

The Cubeo do not recognize an abrupt transition from childhood 881
to adulthood in the case of boys. Male maturity is an individual
matter to them, although past the age of 15 a boy will almost surely
be drawn out of the pack into the adult world. Boys, however, are [789]
subject to growth magic from the time they enter the play pack until [856]
they leave it. An account of these rites is reserved for a later chapter.
The ordeal of the stinging ants, a feature of puberty rites elsewhere
in the region, occurs among the Cubeo during one of these rites.

Girls undergo digital defloration at the age of eight, I was told. 852
An old man of the sib who is no longer virile is charged with this 831

852 831 [887] [614] task. He is said to stretch the young girl's vagina until he can insert three fingers. He then announces, "You are a woman." The Cubeo say that if a girl should reach her first menstruation with her hymen [881] [833] intact coitus will ever after be painful for her and she will have difficulties during parturition. Digital defloration is a secret act; offi- [844] cially, the Cubeo credit the moon with the act. The moon copulates at night with a young girl and brings on her first menstruation. Thus, [821] a prepubescent girl is referred to as *paúnwe bebíko* (one who has not [881] yet copulated with the moon).

The pubescent girl (*pupúni*: one who is blown)[3] is said to be 881 secluded for ten days behind screens at the rear of the house, taking nothing but cassava and water. She leaves the house to excrete, [514] through a secret doorway in the side wall of the maloca so that she [826] will not be seen by a man. She uses a scratching stick on her head or else her hair will turn white. Some said her hair would fall out. To [515] develop a tender facial complexion she washes with a leaf that [302] creates a lather and she covers her face with rubber latex and painfully pulls it off. She also pushes dried peppers up her nostrils until her skin burns red with irritation. The pain of this facial treatment is a parallel to the ordeal of the ants and the whipping endured by the boys, but the justification is different. A mother says to her daughter, "You have been accustomed to disobey me. Now let me [515] see how much pain you can stand."

[302] At the end of the ten days her mother paints her body with genipa and she goes to the river to bathe. In the evening a drinking party is [574] held in the girl's honor and her mother pushes her forward to take part in the dances. The period of seclusion is an affair of the women and the men behave as though nothing unusual were going on.
